It is evident that the temple of Demeter and of Core, and the one with the statue of Triptolemus, stood near one another, and apparently a little above the fountain. Here there is still a small chapel, and in the neighbourhood foundations of walls. Whether the Eleusinium was either of these temples, or was situated in this district at all, cannot be in the least determined from the words of Pausanias. In the same neighbourhood was a small Ionic building, which, in the time of Stuart, formed a church, called that of Panaghía on the Rock (Παναγία στὴν πέτραν). It has now totally disappeared, and is only known from the drawings of Stuart. This beautiful little temple was "an amphiprostyle, 42 feet long, and 20 broad, on the upper step of the stylobate. There were four columns at either end, 1 foot 9 inches in diameter above the spreading base. Those at the eastern end stood before a pronaos of 10 feet in depth, leading by a door 7 feet wide into a *σηκος* of 15½ feet; the breadth of both 12 feet." (Leake, p. 250.) Leake supposes that this is the temple of the statue of Triptolemus; but Forchhammer imagines it to have been that of Eucleia. If the latter conjecture is correct, we have in this temple a building erected immediately after the battle of Marathon.

IONIC TEMPLE ON THE ILISSUS.

D. *Third Part of the Route of Pausanias.—From the Stoa Basileius in the Agora to the Prytaneium.* (Paus. i. 14. § 6—18. § 3.)

After speaking of the temple of Eucleia beyond the Ilissus, Pausanias returns to the point from which he had commenced his description of the Cerameicus and the Agora. Having previously described the monuments in the Agora to his right, he now turns to the left, and gives an account of the buildings on the opposite side of the Agora. "Above the Cerameicus and the Stoa, called Basileius," he continues, "is a temple of Hephaestus. . . Near it is a sanctuary of Aphrodite Urania (c. 14). . . . In approaching the Stoa, which is called Poecilé (Ποικίλη), from its pictures, is a bronze Hermes, surnamed Agoraeus, and near it a gate, upon which is a trophy of the Athenians, the victors in an equestrian combat of Pleistarchus, who had been entrusted with the command of the cavalry and foreign troops of his brother Cassander." (c. 15. § 1.) Then follows a description of the paintings in the Stoa Poecilé after which he proceeds: "Before the Stoa stand brazen statues, Solon, who drew up laws for the Athenians, and a little further Seleucus (c. 16. § 1). . . . In the Agora of the Athenians is an Altar of Pity (Ἐλέου βωμός), to whom the Athenians alone of Greeks give divine honours" (c. 17 § 1).

It would appear that the three principal buildings, mentioned in this passage, the *Temple of Hephaestus*, the *Sanctuary of Aphrodite Urania*, and the *Stoa Poecile*, stood above one another, the last, at all events, having the hill of Pnyx behind it, as we shall see presently. Of the celebrated statue of Hermes Agoraeus, and of the gate beside it, we have already spoken. [See p. 294.] Near the temple of Hephaestus was the *Eurysaceium*, or heroum of Eurysaces, which Pausanias has not mentioned. (Harpocrat. *s. v.* Κολωνῖτας.) Eurysaces was the son of Ajax. According to an Athenian tradition he and his brother Philaeus had given up Salamis to the Athenians, and had removed to Attica. Philaeus taking up his residence in Brauron, and Eurysaces in Melite. (Plut. *Sol.* 10.) It was in the latter district that the Eurysaceium was situated (Harpocrat. *s. v.* Εὐρυσάκειον), which proves that Melite must have extended as far as the side of the Agora next to the hill of Pnyx.

In the Agora, and close to the Eurysaceium and temple of Hephaestus, was the celebrated hill called *Colonus*, more usually *Colonus Agoraeus*, or *Misthius* (Κολωνὸς ἀγοραῖος, or μίσθιος), which, from its central position, was a place of hire for labourers. It received its surname from this circumstance, to distinguish it from the demus Colonus beyond the Academy. (Pollux, vii. 133; Harpocrat. *s. v.* Κολωνῖτας; Argum. iii. ad Soph. *Oed. Colon.* ed. Hermann.) This hill was a projecting spur of the hill of Pnyx. Here Meton appears to have lived, as may be inferred from a passage in Aristophanes (*Av.* 997), in which Meton says, "Meton am I, whom Hellas and Colonus know" (Ὅστις εἰμ' ἐγώ; Μέτων, ὃν οἶδεν Ἑλλὰς χὠ Κολωνός). This is confirmed by the statement that the house of Meton was close to the Stoa Poecile. (Aelian, *V. H.* xiii. 12.) On the hill Colonus Meton placed some "astronomical dedication" (ἀνάθημά τι ἀστρολογικόν), the nature of which is not mentioned; and near it upon the wall of that part of the Pnyx where the assemblies of the people were held, he set up a ἡλιοτρόπιον, which indicated the length of the solar year. (ἡλιοτρόπιον ἐν τῇ νῦν οὔσῃ ἐκκλησίᾳ, πρὸς τῷ τείχει τῷ ἐν τῇ Πνυκί, Schol. *ad Aristoph. Vesp.* 997; Suid. *s. v.* Μέτων.) The Scholiast also says, that the Colonus Agoraeus was behind the Macra Stoa (ἡ Μακρὰ Στοά); but as no other writer mentions a Stoa of this name in the Asty, it is probable that the Scholiast meant the Stoa Basileius.

The Stoa Poecile was the Stoa from which the Stoic philosophers obtained their name. (Diog. Laërt. vii. 5; Lucian, *Demon.* 14.) It was originally called Στοὰ Πεισιανάκτιος. (Plut. *Cim.* 4; Diog. Laërt. *l. c.*; Suid. *s. v.* Στοά.) It had three walls covered with paintings; a middle wall with two large paintings, representing scenes from the mythical age, and one at each end, containing a painting of which the subject was taken from Athenian history. On the first wall was the battle of Oenoë in

the Argeia, between the Athenians and Lacedaemonians. On the great central wall was a picture of the Athenians under Theseus fighting against the Amazons, and another representing an assembly of the Greek chiefs after the capture of Troy deliberating respecting the violation of Cassandra by Ajax. On the third wall was a painting of the battle of Marathon. These paintings were very celebrated. The combat of the Athenians and Amazons was the work of Micon. (Aristoph. *Lysistr.* 681; Arrian, *Anab.* vii. 13.) The battle of Marathon was painted by Polygnotus, Micon, and Pantaenus. (Plut. *Cim.* 4; Diog. Laërt. vii. 5; Plin. xxxv. 8. s. 34; Aelian, *de Nat. An.* vii. 38.)

After describing the Stoa Poecile, and mentioning the statues of Solon and Seleucus, and the Altar of Pity, Pausanias quits the Agora and goes up the street of the Cerameicus towards Dipylum. He passes between the Pnyx and the Areiopagus without mentioning either, since the lower parts of both were covered with houses. The first object which he mentions is the *Gymnasium of Ptolemy*, which he describes as not far from the Agora (*τῆς ἀγορᾶς ἀπέχοντι οὐ πολύ*), and named after its founder Ptolemy: it contained Hermae of stone, worthy of inspection, a bronze image of Ptolemy, and statues of Juba the Libyan, and of Chrysippus of Soli. He next describes the *Temple of Theseus*, which he places near the Gymnasium (*πρὸς τῷ γυμνασίῳ*, c. 17. § 2). The proximity of these two buildings is also noticed by Plutarch. (*Θησεὺς—κεῖται ἐν μέσῃ τῇ πόλει παρὰ τὸ νῦν γυμνάσιον, Thes.* 36.) Of the temple of Theseus we have already spoken. [See p. 287.] At this spot Pausanias quitted the Cerameicus and turned to the right towards the east. If he had gone further on in the direction of Dipylum, he would at least have mentioned the *Leocorium*, or monument of the daughters of Leos, which stood near the Dipylum in the inner Cerameicus. (Thuc. i. 20, ii. 57; Aelian, *V. H.* xii. 28; Cic. *de Nat. Deor.* iii. 19; Strab. ix. p. 396; Harpocrat. Hesych. *s. v.* Λεωκόριον.)

It has been already mentioned that the Cerameicus was a long wide street, extending from Dipylum to the Agora, and continued under another name as far as the fountain of Callirhoë, and the temple with the statue of Triptolemus, which Forchhammer conjectures to be the same as the Pherephattium. This street, like the Corso of the Italian towns, appears to have been the grand promenade in Athens. The following passage from the speech of Demosthenes against Conon (p. 1258) gives a lively picture of the locality: "Not long afterwards," says Ariston, "as I was taking *my usual walk* in the evening *in the Agora* along with Phanostratus the Cephisian, one of my companions, there comes up to us Ctesias, the son of this defendant, drunk, at the *Leocorium*, near the house of Pythodorus. Upon seeing us he shouted out, and having said something to himself like a drunken man, so that we could not understand what he said, he went past us *up to Melite* (*πρὸς Μελίτην ἄνω*). In that place there were drinking (as we afterwards learnt) at the house of Pamphilus the fuller, this defendant Conon, a certain Theotimus, Archebiades, Spintharus the son of Eubulus, Theogenes the son of Andromenes, a number of persons whom Ctesias brought down into the Agora. It happened that we met these men as we were returning from the *Pherephattium*, and had in our walk again reached the Leocorium." It is evident from this account that the house of Pamphilus was somewhere on the hill of the Nymphs; and that the Pherephattium was in any case to the south of the Leocorium, and apparently at the end of the promenade: hence it is identified by Forchhammer with the temple with the statue of Triptolemus.

After leaving the Theseium, Pausanias arrives at the *Temple of the Dioscuri*, frequently named the *Anaceium*, because the Dioscuri (Castor and Pollux) were called *οἱ Ἄνακες*, or *Ἀνακοί*, by the Athenians. (Plut. *Thes.* 33; Aelian, *V. H.* iv. 5; Suid. Etym. M. *s. v.* *Ἀνακοί*; Harpocrat. *s. v.* *Ἀνακεῖον*, Πολύγνωτος.) He does not, however, mention either the distance of the Anaceium from the Theseium, or the direction which he took in proceeding thither. It is evident, however, that he turned to the east, as has been already remarked, since he adds in the next paragraph, that above the temple of the Dioscuri is the sacred enclosure of Aglaurus. The latter, as we know, was situated on the northern side of the Acropolis, immediately under the Erechtheium [see p. 286]; and that the Anaceium was near the Aglaurium, appears from the tale of the stratagem of Peisistratus (Polyaen. i. 21), which has been already related. The proximity of the Anaceium and Aglaurium is also attested by Lucian. (*Piscator.* 42.) And since Pausanias mentions the Anaceium before the Aglaurium, we may place it north-west of the latter.

Near to the Aglaurium, says Pausanias, is the *Prytaneium*, where the laws of Solon were preserved. Hence the Prytaneium must have stood at the north-eastern corner of the Acropolis; a position which is confirmed by the narrative of Pausanias, that in proceeding from thence to the temple of Sarapis, he descended into the lower parts of the city (*ἐς τὰ κάτω τῆς πόλεως*), and also by the fact that the street of the Tripods, which led to the sacred enclosure of Dionysus near the theatre commenced at the Prytaneium. (Paus. i. 20. § 1.)

North of the Acropolis there were some other monuments. Of these two of the most celebrated are the portico of Athena Archegetis, erroneously called the Propylaeum of the new Agora [see p. 295], and the Horologium of Andronicus Cyrrhestes. Apparently north of these should be placed certain buildings erected by Hadrian, which Pausanias does not mention till he had spoken of the Olympieium, the greatest of the works of this emperor. After describing the Olympieium, Pausanias remarks (i. 18. § 9): "Hadrian constructed other buildings for the Athenians, a temple of Hera and of Zeus Panhellenius, and a sanctuary common to all the gods (a Pantheon). The most conspicuous objects are 120 columns of Phrygian marble. The walls of the porticoes are made of the same material. In the same place are apartments (*οἰκήματα*) adorned with gilded roofs and alabaster stone, and with statues and paintings: books are deposited in them (or in this sanctuary). There is also a gymnasium named after Hadrian, in which there are 100 columns from the quarries of Libya." The ancient remains north of the portico of Athena Archegetis are supposed to belong to a portion of these buildings. "The Corinthian colonnade, of which the southern extremity is about 70 yards to the north of the above-mentioned portico, was the decorated façade (with a gateway in the centre) of a quadrangular inclosure, which is traceable to the eastward of it. A tetrastyle propylaeum, formed of columns 3 feet in diameter and 29 feet high, similar to those before the wall, except that the latter are not fluted, projected

22 feet before the gate of the inclosure, which was 376 feet long, and 252 broad; round the inside of it, at a distance of 23 feet from the wall, are vestiges of a colonnade. In the northern wall, which still exists, are the remains of one large quadrangular recess or apartment in the centre 34 feet in length, and of two semicircular recesses nearly equal to it in diameter. The church of Megáli Panaghía, which stands towards the eastern side of the inclosure, is formed of the remains of an ancient building, consisting on one side of a ruined arch, and on the other of an architrave supported by a pilaster, and three columns of the Doric order, 1 foot 9 inches in diameter, and of a somewhat declining period of art. . . . . The general plan was evidently that of a quadrangle surrounded with porticoes, having one or more buildings in the centre: thus agreeing perfectly with that work of Hadrian which contained stoae, a colonnade of Phrygian marble, and a library. . . . . The building near the centre of the quadrangle, which was converted into a church of the Panaghía, may have been the Pantheon. . . . Possibly also the temple of Hera and of Zeus Panhellenius stood in the centre of the inclosure." (Leake, p. 258, seq.)

E. *Fourth Part of the Route of Pausanias.—From the Prytaneium to the Stadium.* (Paus. i. 18. § 4—19.)

Pausanias went straight from the Prytaneium to the Olympieium, between which buildings he notices these objects, the *Temple of Sarapis*, the place of meeting of Theseus and Peirithous, and the *Temple of Eileithyia*. After describing the Olympieium, Pausanias mentions the temples of Apollo Pythius, and of Apollo Delphinius. The *Pythium* (Πύθιον) was one of the most ancient sanctuaries in Athens. We know from Thucydides (ii. 15) that it was in the same quarter as the Olympieium, and from Strabo (ix. p. 404), that the sacred inclosures of the two temples were only separated by a wall, upon which was the altar of Zeus Astrapaeus. The *Delphinium* (Δελφίνιον) was apparently near the Pythium. It was also a temple of great antiquity, being said to have been founded by Aegeus. In its neighbourhood sat one of the courts for the trial of cases of homicide, called τὸ ἐπὶ Δελφινίῳ. (Plut. *Thes.* 12, 18; Pollux, viii. 119; Paus. i. 28. § 10.)

Pausanias next proceeds to *The Gardens* (οἱ κῆποι), which must have been situated east of the above-mentioned temples, along the right bank of the Ilissus. In this locality was a temple of Aphrodite; the statue of this goddess, called "Aphrodite in the Gardens," by Alcamenes, was one of the most celebrated pieces of statuary in all Athens. (Plin. xxxvi. 5. s. 4; Lucian, *Imag.* 4, 6.) Pliny (*l. c.*), misled by the name "Gardens," places this statue outside the walls; but we have the express testimony of Pausanias in another passage (i. 27. § 3) that it was in the city.

Pausanias then visits the *Cynosarges* and *Lyceium*, both of which were situated outside the walls, and are described below in the account of the suburbs of the city. From the Lyceium he returns to the city, and mentions the *Altar of Boreas*, who carried off Oreithyia from the banks of the Ilissus, and the *Altar of the Ilissian Muses*, both altars being upon the banks of the Ilissus. (Comp. Plat. *Phaedr.* c. 6; Herod. vii. 189.) The altar of Boreas is described by Plato (*l. c.*) as opposite the temple of Artemis Agrotera, which probably stands upon the site of the church of Stavroménos Petros. To the east of the altar of Boreas stood the altar of the Ilissian Muses. In 1676 Spon and Wheler observed, about fifty yards above the bridge of the Stadium, the foundations of a circular temple, which had, however, disappeared in the time of Stuart. This was probably the Temple of the Ilissian Muses, for though Pausanias only mentions an altar of these goddesses, there may have been also a temple.

On the other side of the Ilissus Pausanias entered the district *Agrae* or *Agra*, in which was the *Temple of Artemis Agrotera*, spoken of above. A part of this district was sacred to Demeter, since we know that the lesser Eleusinian mysteries were celebrated in Agrae, and were hence called τὰ ἐν Ἄγραις. (Steph. B. *s. v.* Ἄγρα; Plut. *Demetr.* 26.) Stephanus (*l. c.*) says that Agra was a spot before the city (πρὸ τῆς πόλεως), but this appears to be only a conclusion drawn from the name, which would seem to indicate that it was in the country, and may be classed together with the above-mentioned error of Pliny about the gardens. The Panathenaic Stadium was also in Agrae, after describing which [see p. 292], Pausanias retraces his steps to the Prytaneium. He has omitted to mention the hill *Ardettus* (Ἀρδηττός), situated above the Stadium, where the Dicasts were sworn. (Harpocrat., Hesych., Suid. *s. v.*; Pollux, viii. 122.) The high ground of Agrae appears to have been called Helicon in ancient times. (Cleidemus, ap. Bekker, *Anecd. Graec.* i. p. 326.)

F. *Fifth Part of the Route of Pausanias.—From the Prytaneium to the Propylaea of the Acropolis.* (Paus. i. 20—22. § 3.)

In this part of his route Pausanias went round the eastern and southern sides of the Acropolis. Starting again from the Prytaneium, he went down the *Street of the Tripods*, which led to the Lenaeum or sacred enclosure of Dionysus. The position of this street is marked by the existing Choragic Monument of Lysicrates [see p. 291], and by a number of small churches, which probably occupy the place of the tripod temples. The Lenaeum, which contained two temples of Dionysus, and which was close to the theatre, was situated in the district called Limnae. It was here that the Dionysiac festival, called Lenaea, was celebrated. (Thuc. ii. 15; *Dict. of Ant.* p. 411, b. 2nd ed.) The Lenaeum must be placed immediately below the theatre to the south. Immediately to the east of the theatre, and consequently at the north-eastern angle of the Acropolis, was the *Odeium of Pericles*. Its site is accurately determined by Vitruvius, who says (v. 9), that it lay on the left hand to persons coming out of the theatre. This Odeium, which must be distinguished from the earlier building with this name near the Ilissus, was built by Pericles, and its roof is said to have been an imitation of the tent of Xerxes. (Plut. *Per.* 13.) It was burnt during the siege of Athens by Sulla, B. C. 85, but was rebuilt by Ariobarzanes II., king of Cappadocia, who succeeded to the throne about B. C. 63. (Appian, *B. Mithr.* 38; Vitruv. *l. c.*; Böckh, No. 357; *Dict. of Ant.* pp. 822, 823, 2nd ed.) All traces of this building have disappeared.

On the western side of the theatre are some remains of a succession of arches, which Leake conjectures may have belonged to a portico, built by Herodes Atticus, for the purpose of a covered com-

munication between the theatre and the Odeium of Herodes. Perhaps they are the remains of the *Porticus Eumenia*, which appears from Vitruvius (*l. c.*) to have been close to the theatre. For an account of the theatre itself, see p. 284.

In proceeding from the theatre Pausanias first mentions the *Tomb of Talos* or *Calos*, below the steep rocks of the Acropolis, from which Daedalus is said to have hurled him down. Pausanias next comes to the *Asclepieium* or *Temple of Asclepius*, which stood immediately above the Odeium of Herodes Atticus. Its site is determined by the statement that it contained a fountain of water, celebrated as the fountain at which Ares slew Halirrhothius, the son of Poseidon. Pausanias makes no mention of the Odeium of Herodes, since this building was not erected when he wrote his account of Athens. [See p. 286.] Next to the Asclepieium Pausanias, in his ascent to the Acropolis, passed by the *Temple of Themis*, with the *Tomb of Hippolytus* in front of it, the *Temple of Aphrodite Pandemus and Peitho*, and the *Temple of Ge Curotrophus and Demeter Chloe*. At the temple of Aphrodite Pandemus, Pausanias was again close to the statues of Harmodius and Aristogeiton. [See p. 297, a.] The proximity of this temple to the tomb of Hippolytus is alluded to by Euripides (*Hippol.* 29, seq.). The temple of Ge and Demeter was probably situated beneath the temple of Nike Apteros. At the foot of the wall, supporting the platform of the latter temple, there are two doors, coeval with the wall, and conducting into a small grotto, which was probably the shrine of Ge and Demeter. It was situated on the right hand of the traveller, just before he commenced the direct ascent to the Propylaea; and from being placed within a wall, which formed one of the defences of the Acropolis, it is sometimes described as a part of the latter. (Soph. *ad Oed. Col.* 1600; Suid. *s. v.* Κουροτρόφος Γῆ.) The position of this temple is illustrated by a passage in the Lysistrata of Aristophanes (829), where, the Athenian women being in possession of the Acropolis, Lysistrata suddenly perceives a man at the temple of Demeter Chloë approaching the citadel:

ΛΥ. Ἰοὺ, ἰού, γυναῖκες . . . .
ἄνδρ' ἄνδρ' ὁρῶ προσιόντα . . . .
ΓΥ. Ποῦ δ' ἐστὶν, ὅστις ἐστί; ΛΥ. παρὰ τὸ τῆς Χλόης.

The *Eleusinium*, which Pausanias had mentioned (i. 14. § 3) in the description of his second route [see p. 297, b], Leake conjectures to have been the great cavern in the middle of the rocks at the eastern end of the Acropolis. The Eleusinium is said by Clemens of Alexandria (*Protrept.* p. 13, Sylburg), and Arnobius (*adv. Gent.* vi. p. 193, Maire) to have been below the Acropolis. The Eleusinium is also mentioned by Thucydides (ii. 15) and Xenophon (*Hipparch.* 3), but without any positive indication of its site.

G. *Sixth Part of the Route of Pausanias.—The Acropolis, Areiopagus and Academy.* (Paus. i. 22. § 4—30.)

The Acropolis has been already described. In descending from it Pausanias notices the cave of Pan and the Areiopagus [see pp. 286, 281], and the place near the Areiopagus, where the ship was kept, which was dragged through the city in the great Panathenaic festival, surmounted by the Peplus of Athena as a sail (i. 29. § 1). He then proceeds through Dipylum to the outer Cerameicus and the Academy. The two latter are spoken of under the suburbs of the city.

H. *Districts of the Asty.*

It is remarked by Isocrates that the city was divided into κῶμαι and the country into δῆμοι (διελόμενοι τὴν μὲν πόλιν κατὰ κώμας, τὴν δὲ χώραν κατὰ δήμους, *Areop.* p. 149, ed. Steph.). In consequence of this remark, and of the frequent opposition between the πόλις and the δῆμοι, it was formerly maintained by many writers that none of the Attic demi were within the city. But since it has been proved beyond doubt that the contrary was the case, it has been supposed that the city demi were outside the walls when the demi were established by Cleisthenes, but were subsequently included within the walls upon the enlargement of the city by Themistocles. But even this hypothesis will not apply to all the demi, since Melite and Cydathenaeum, for example, as well as others, must have been included within the city at the time of Cleisthenes. A little consideration, however, will show the necessity of admitting the division of the city into the demi from the first institution of the latter by Cleisthenes. It is certain that every Athenian citizen was enrolled in some demus, and that the whole territory of Attica was distributed into a certain number of demi. Hence the city must have been formed by Cleisthenes into one or more demi; for otherwise the inhabitants of the city would have belonged to no demus, which we know to have been impossible. At the same time there is nothing surprising in the statement of Isocrates, since the demi within the walls of Athens were few, and had nothing to do with the organization of the city. For administrative purposes the city was divided into κῶμαι or wards, the inhabitants being called κωμῆται. (Comp. Aristoph. *Nub.* 966, *Lysistr.* 5; Hesych. *s. v.* Κῶμαι.)

The following is a list of the city demi:—

1. *Cerameicus* (Κεραμεικός: *Eth.* Κεραμεῖς), divided into the Inner and the Outer Cerameicus. The Inner Cerameicus has been already described, and the Outer Cerameicus is spoken of below. [See p. 303.] The two districts formed only one demus, which belonged to the tribe Acamantis. Wordsworth maintains (p. 171) that the term Inner Cerameicus was used only by later writers, and that during the Peloponnesian war, and for many years afterwards, there was only one Cerameicus, namely, that outside the walls. But this opinion is refuted by the testimony of Antiphon, who spoke of the two Cerameici (ap. Harpocrat. *s. v.*), and of Phanodemus, who stated that the Leocorium was in the middle of the Cerameicus (ap. Harpocrat. *s. v.* Λεωκόριον).

2. *Melite* (Μελίτη: *Eth.* Μελιτεῖς), was a demus of the tribe Cecropis, west of the Inner Cerameicus. The exact limits of this demus cannot be ascertained; but it appears to have given its name to the whole hilly district in the west of the Asty, comprising the hills of the Nymphs, of the Pnyx and of the Museium, and including within it the separate demi of Scambonidae and Collytus. Melite is said to have been named from a wife of Hercules. It was one of the most populous parts of the city, and contained several temples as well as houses of distinguished men. In Melite were the Hephaesteium, the Eurysaceium, the Colonus Agoraeus [respecting these three, see p. 298]; the temple of Hercules Alexicacus [see p. 296, a]; the Melanippeium, in which

Melanippus, the son of Theseus, was buried (Harpocrat. *s. v.* Μελανίππειον); the temple of Athena Aristobula, built by Themistocles near his own house (Plut. *Them.* 22); the house of Callias (Plat. *Parmen.* p. 126, a.; Schol. *ad Aristoph. Ran.* 504); the house of Phocion, which still existed in Plutarch's time (Plut. *Phoc.* 18); and a building, called the "House of the Melitians," in which tragedies were rehearsed. (Hesych. Phot. *Lex. s. v.* Μελιτέων οἶκος.) This is, perhaps, the same theatre as the one in which Aeschines played the part of Oenomaus, and which is said to have been situated in Collytus (Harpocrat. *s. v.* Ἰσχανδρος; Anonym. *Vit. Aesch.*); since the district of Melite, as we have already observed, subsequently included the demus of Collytus. It is probable that this theatre is the one of which the remains of a great part of the semicircle are still visible, hewn out of the rock, on the western side of the hill of Pnyx. The Melitian Gate at the SW. corner of the city were so called, as leading to the district Melite. [See p. 263, b.] Pliny (iv. 7. s. 11) speaks of an "oppidum Melite," which is conjectured to have been the fortress of the Macedonians, erected on the hill Museium. [See p. 284, a.]

3. *Scambonidae* (Σκαμβωνίδαι), a demus belonging to the tribe Leontis. In consequence of a passage of Pausanias (i. 38. § 2) Müller placed this demus near Eleusis; but it is now admitted that it was one of the city demi. It was probably included within the district of Melite, and occupied the Hills of the Nymphs and of Pnyx. Its connexion with Melite is intimated by the legend, that Melite derived its name from Melite, a daughter of Myrmex, and the wife of Hercules; and that this Myrmex gave his name to a street in Scambonidae. (Harpocrat. *s. v.* Μελίτη; Hesych., *s. v.* Μύρμηκος ἀτραπός; comp. Aristoph. *Thesm.* 100; and Phot *Lex.*) This street, however, the "Street of Ants," did not derive its name from a hero, but from its being crooked and narrow, as we may suppose the streets to have been in this hilly district. Scambonidae, also, probably derived its name from the same circumstance (from σκαμβός, "crooked.")

4. *Collytus* (Κολλυτός, not Κολυττός: *Eth.* Κολλυτεῖς), a demus belonging to the tribe Aegeis, and probably, as we have already said, sometimes included under the general name of Melite. It appears from a passage of Strabo (i. p. 65) that Collytus and Melite were adjacent, but that their boundaries were not accurately marked, a passage which both Leake and Wordsworth have erroneously supposed to mean that these places had precise boundaries. (It is evident, however, that Collytus and Melite are quoted as an example of μὴ ὄντων ἀκριβῶν ὅρων.) Wordsworth, moreover, remarks that it was the least respectable quarter in the whole of Athens: but we know, on the contrary, that it was a favourite place of residence. Hence Plutarch says (*de Exsil.* 6, p. 601), "neither do all Athenians inhabit Collytus, nor Corinthians Craneium, nor Spartans Pitane," Craneium and Pitane being two favourite localities in Corinth and Sparta respectively. It is described by Himerius (ap. Phot. Cod. 243, p. 375, Bekker), as a στενωπός (which does not mean a narrow street, but simply a street, comp. Diod. xii. 10; Hesych. *s. v.*), situated in the centre of the city, and much valued for its use of the market (ἀγορᾶς χρείᾳ τιμώμενος), by which words we are probably to understand that it was conveniently situated for the use of the market. Forchhammer places Collytus between the hills of Pnyx and Museium, in which case the expression of its being in the centre of the city, must not be interpreted strictly. The same writer also supposes στενωπός not to signify a street, but the whole district between the Pnyx and the Museium, including the slopes of those hills. Leake thinks that Collytus bordered upon Diomeia, and accordingly places it between Melite and Diomeia; but the authority to which he refers would point to an opposite conclusion, namely, that Collytus and Diomeia were situated on opposite sides of the city. We are told that Collytus was the father of Diomus, the favourite of Hercules; and that some of the Melitenses, under the guidance of Diomus, migrated from Melite, and settled in the spot called Diomeia, from their leader, where they celebrated the Metageitnia, in memory of their origin. (Plut. *de Exsil. l. c.*; Steph. B. *s. v.* Διόμεια; Hesych. *s. v.* Διομειεῖς.) This legend confirms the preceding account of Collytus being situated in Melite. We have already seen that there was a theatre in Collytus, in which Aeschines played the part of Oenomaus; and we are also told that he lived in this district 45 years. (Aesch. *Ep.* 5.) Collytus was also the residence of Timon, the misanthrope (Lucian, *Timon*, 7, 44), and was celebrated as the demus of Plato.

5. *Cydathenaeum* (Κυδαθήναιον: *Eth.* Κυδαθηναιεῖς), a demus belonging to the tribe Pandionis. (Harp. Suid. Steph. Phot.) The name is apparently compounded of κῦδος "glory," and Ἀθηναῖος, and is hence explained by Hesychius (*s. v.*) as ἔνδοξος Ἀθηναῖος. It is, therefore, very probable, as Leake has suggested, that this demus occupied the Theseian city, that is to say, the Acropolis, and the parts adjacent to it on the south and south-east. (Leake, p. 443; Müller, *Dor.* vol. ii. p. 72, transl.)

6. *Diomeia* (Διόμεια: *Eth.* Διομεῖς), a demus belonging to the tribe Aegeis, consisting, like Cerameicus, of an Outer and an Inner Diomeia. The Inner Diomeia comprised the eastern part of city, and gave its name to one of the city-gates in this quarter. In the Outer Diomeia was situated the Cynosarges. (Steph., Suid. *s. v.* Διόμεια; Hesych. *s. v.* Διομεῖς; Steph., Hesych. *s. v.* Κυνόσαργες; Schol. *ad Aristoph. Ran.* 664; Plut. *de Exsil. l. c.*) The Outer Diomeia could not have extended far beyond the walls, since the demus Alopece was close to Cynosarges, and only eleven or twelve stadia from the walls of the city. (Herod. v. 63; Aesch. *c. Tim.* p. 119, Reiske.)

7. *Coele* (Κοίλη), a demus belonging to the tribe Hippothoontis. It lay partly within and partly without the city, in the valley between the Museium and the hills on the southern side of Ilissus. In this district, just outside the Melitian gate, were the sepulchres of Thucydides and Cimon. [For authorities, see p. 263.]

8. *Ceiriadae* (Κειριάδαι), a demus belonging to the tribe Hippothoontis. (Harpocrat., Suid., Steph. B., Hesych. *s. v.*) The position of this demus is uncertain; but Sauppe brings forward many arguments to prove that it was within the city walls. In this district, and perhaps near the Metroum, was the Βάραθρον, into which criminals were cast. (For authorities, see Sauppe, pp. 17, 18.)

9. *Agrae* (Ἄγραι), was situated south of the Ilissus, and in the SE. of the city. Respecting its site, see p. 300, b. It does not appear to have been a separate demus, and was perhaps included in the demus of Agryle, which was situated south of it.

10. *Limnae* (Λίμναι), was a district to the south of the Acropolis, in which the temple of Dionysus was situated. (Thuc. ii. 15.) It was not a demus, as stated by the Scholiast on Callimachus (*H. in Del.* 172), who has mistaken the Limnae of Messenia for the Limnae of Athens.

Colonus, which we have spoken of as a hill in the city, is maintained by Sauppe to have been a separate demus; but see above, p. 298, b.

The Euboean cities of Eretria and Histiaea were said by some to have been named from Attic demi (Strab. x. p. 445); and from another passage of Strabo (x. p. 447) it has been inferred that the so-called New Agora occupied the site of Eretria. [See p. 298, b.] It is doubtful whether Eretria was situated in the city; and at all events it is not mentioned elsewhere, either by writers or inscriptions, as a demus.

Respecting the city demi the best account is given by Sauppe, *De Demis Urbanis Athenarum*, Weimar, 1846.

X. Suburbs of the City.

1. *The Outer Cerameicus and the Academy.*—The road to the Academy (Ἀκαδημία), which was distant six or eight stadia from the gate named Dipylum, ran through the Outer Cerameicus. (Liv. xxxi. 24; Thuc. vi. 57; Plat. *Parm.* 2; Plut. *Sull.* 14; Cic. *de Fin.* v. 1; Lucian, *Scyth.* 2.) It is called by Thucydides the most beautiful suburb of the city (ἐπὶ τοῦ καλλίστου προαστείου τῆς πόλεως, Thuc. ii. 34). On each side of the road were the monuments of illustrious Athenians, especially of those who had fallen in battle; for the Outer Cerameicus was the place of burial for all persons who were honoured with a public funeral. Hence we read in Aristophanes (*Aves*, 395):—

> ὁ Κεραμεικὸς δέξεται νύ.
> δηχοσίᾳ γὰρ ἵνα ταφῶμεν.

Over each tomb was placed a pillar, inscribed with the names of the dead and of their demi. (Paus. i. 29. § 4; comp. Cic. *de Leg.* ii. 26.) In this locality was found an interesting inscription, now in the British Museum, containing the names of those who had fallen at Potidaea, B. C. 432.

The Academy is said to have belonged originally to the hero Academus, and was afterwards converted into a gymnasium. It was surrounded with a wall by Hipparchus, and was adorned by Cimon with walks, groves, and fountains. (Diog. Laërt. iii. 7; Suid. *s. v.* Ἱππάρχου τειχίων; Plut. *Cim.* 13.) The beauty of the plane trees and olive plantations was particularly celebrated. (Plin. xii. 1. s. 5.) Before the entrance were a statue and an altar of Love, and within the inclosure were a temple of Athena, and altars of the Muses, Prometheus, Hercules, &c. (Paus. i. 30. § 1.) It was from the altar of Prometheus that the race of the Lampadephoria commenced. The Academy was the place where Plato taught, who possessed a small estate in the neighbourhood, which was his usual place of residence. (Diog. Laërt. *l. c.*; Aelian, *V. H.* ix. 10.) His successors continued to teach in the same spot, and were hence called the Academic philosophers. It continued to be one of the sanctuaries of philosophy, and was spared by the enemy down to the time of Sulla, who, during the siege of Athens, caused its celebrated groves to be cut down, in order to obtain timber for the construction of his military machines. (Plut. *Sull.* 12; Appian, *Mithr.* 30.) The Academy, however, was replanted, and continued to enjoy its ancient celebrity in the time of the emperor Julian. Near the temple of Athena in the Academy were the Moriae, or sacred olives, which were derived from the sacred olive in the Erechtheium. The latter, as we have already seen, was the first olive tree planted in Attica, and one of the Moriae was shown to Pausanias as the second. They were under the guardianship of Zeus Morius. (Comp. Suid. *s. v.* Μορίαι; Schol. *ad Soph. Oed. Col.* 730.) A little way beyond the Academy was the hill of Colonus, immortalised by the tragedy of Sophocles; and between the two places were the tomb of Plato and the tower of Timon. (Paus. i. 30. §§ 3, 4.) The name of *Akadhimia* is still attached to this spot. "It is on the lowest level, where some water-courses from the ridges of Lycabettus are consumed in gardens and olive plantations. These waters still cause the spot to be one of the most advantageous situations near Athens for the growth of fruit and pot-herbs, and maintain a certain degree of verdure when all the surrounding plain is parched with the heat of summer." (Leake, p. 195.)

2. *Cynosarges* (Κυνόσαργες), was a sanctuary of Hercules and a gymnasium, situated to the east of the city, not far from the gate Diomeia. It is said to have derived its name from a white dog, which carried off part of the victim, when sacrifices were first offered by Diomus to Hercules. (Paus. i. 19. § 3; Herod. v. 63, vi. 116; Plut. *Them.* 1; Harpocrat. *s. v.* Ἡράκλεια; Hesych. Suid. Steph. B. *s. v.* Κυνόσαργες.) Antisthenes, the founder of the Cynic school, taught in the Cynosarges. (Diog. Laërt. vi. 13.) It was surrounded by a grove, which was destroyed by Philip, together with the trees of the neighbouring Lyceium, when he encamped at this spot in his invasion of Attica in B. C. 200. (Liv. xxxi. 24.) Since Cynosarges was near a rising ground (Isocr. *Vit. X. Orat.* p. 838), Leake places it at the foot of the south-eastern extremity of Mount Lycabettus, near the point where the arch of the aqueduct of Hadrian and Antoninus formerly stood. The name of this gymnasium, like that of the Academy, was also given to the surrounding buildings, which thus formed a suburb of the city. (Forchhammer, p. 368.)

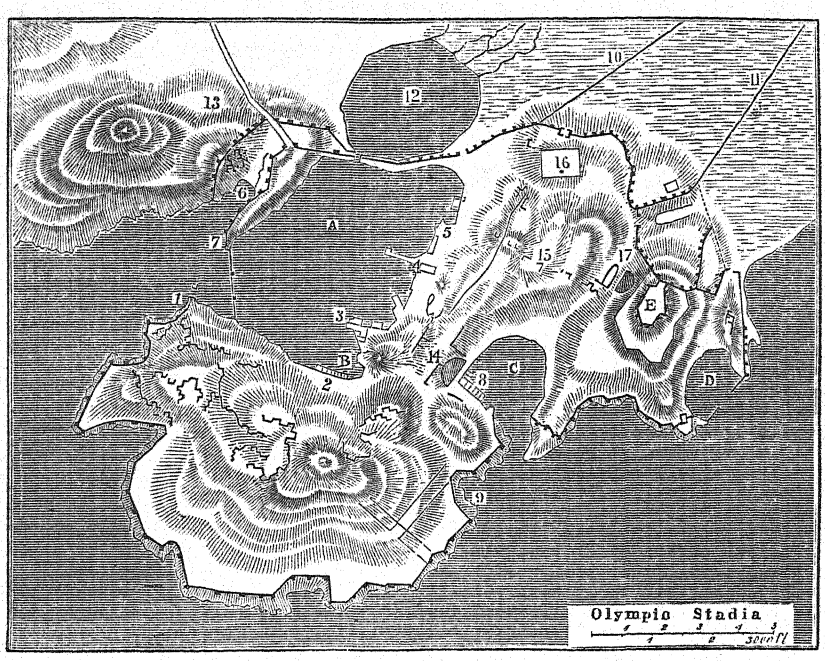
3. *Lyceium* (Λύκειον), a gymnasium dedicated to Apollo Lyceius, and surrounded with lofty plane trees, was also situated to the east of the city, and a little to the south of the Cynosarges. It was the chief of the Athenian gymnasia, and was adorned by Peisistratus, Pericles, and Lycurgus. (Paus. i. 19. § 3; Xen. *Hipp.* 3. § 6; Hesych. Harpocrat. Suid. *s. v.* Λύκειον.) The Lyceium was the place in which Aristotle and his disciples taught, who were called Peripatetics, from their practice of walking in this gymnasium while delivering their lectures. (Diog. Laërt. v. 5; Cic. *Acad. Quaest.* i. 4.) In the neighbourhood of the Lyceium was a fountain of the hero Panops, near which was a small gate of the city, which must have stood between the gates Diocharis and Diomeia. (Plat. *Lys.* 1; Hesych. *s. v* Πάνωψ.)

4. *Lycabettus* (Λυκαβηττός), was the name of the lofty insulated mountain overhanging the city on its north-eastern side, and now called the *Hill of St. George*, from the church of St. George on its summit. [See p. 255, a.] This hill was identified by the ancient geographers with Anchesmus (Ἀγχεσμός), which is described by Pausanias (i. 32

§ 2) as a small mountain with a statue of Zeus Anchesmius. Pausanias is the only writer who mentions Anchesmus; but since all the other hills around Athens have names assigned to them, it was supposed that the hill of St. George must have been Anchesmus. But the same argument applies with still greater force to Lycabettus, which is frequently mentioned by the classical writers; and it is impossible to believe that so remarkable an object as the Hill of St. George could have remained without a name in the classical writers. Wordsworth was, we believe, the first writer who pointed out the identity of Lycabettus and the Hill of St. George; and his opinion has been adopted by Leake in the second edition of his Topography, by Forchhammer, and by all subsequent writers. The celebrity of Lycabettus, which is mentioned as one of the chief mountains of Attica, is in accordance with the position and appearance of the Hill of St. George. Strabo (x. p. 454) classes Athens and its Lycabettus with Ithaca and its Neriton, Rhodes and its Atabyris, and Lacedaemon and its Taygetus. Aristophanes (*Ran.* 1057), in like manner, speaks of Lycabettus and Parnassus as synonymous with any celebrated mountains:

> ἦν οὖν σὺ λέγῃς Λυκαβηττοὺς
> καὶ Παρνασῶν ἡμῖν μεγέθη, τοῦτ' ἐστὶ τὸ
> χρηστὰ διδάσκειν.

Its proximity to the city is indicated by several passages. In the edition of the Clouds of Aristophanes, which is now lost, the Clouds were represented as vanishing near Lycabettus, when they were threatening to return in anger to Parnes, from which they had come. (Phot. *Lex. s. v.* Πάρνης.) Plato (*Critias*, p. 112, a) speaks of the Pnyx and Lycabettus as the boundaries of Athens. According to an Attic legend, Athena, who had gone to Pallene, a demus to the north-eastward of Athens, in order to procure a mountain to serve as a bulwark in front of the Acropolis, was informed on her return by a crow of the birth of Erichthonius, whereupon she dropt Mount Lycabettus on the spot where it still stands. (Antig. Car. 12; for other passages from the ancient writers, see Wordsworth, p. 57, seq.; Leake, p. 204, seq.) Both Wordsworth and Leake suppose Anchesmus to be a later name of Lycabettus, since Pausanias does not mention the latter; but Kiepert gives the name of Anchesmus to one of the hills north of Lycabettus. [See Map, p. 256.]



XI. The Port-towns.

Between four and five miles SW. of the Asty is the peninsula of Peiraeeus, consisting of two rocky heights divided from each other by a narrow isthmus, the eastern, or the one nearer the city, being the higher of the two. This peninsula contains three natural basins or harbours, a large one on the western side, now called *Drákо* (or *Porto Leone*), and two smaller ones on the eastern side, called respectively *Stratiotiki* (or *Paschalimáni*), and *Fanári;* the latter, which was nearer the city, being the smaller of the two. Hence Thucydides describes (i. 93) Peiraeeus as χωρίον λιμένας ἔχον τρεῖς αὐτοφυεῖς.

We know that down to the time of the Persian wars the Athenians had only one harbour, named Phalerum; and that it was upon the advice of Themistocles that they fortified the Peiraeeus, and made use of the more spacious and convenient harbours in this peninsula. Pausanias says (i. 1. § 2): 'The Peiraeeus was a demus from early times, but was not used as a harbour before Themistocles administered the affairs of the Athenians Before that time their harbour was at Phalerum, at the spot where the sea is nearest to the city. . . . . But Themistocles, when he held the government, perceiving that Peiraeeus was more conveniently situated for navigation, and that it possessed three ports instead of the one at Phalerum (λιμένας τρεῖς ἀνθ' ἑνὸς ἔχειν τοῦ Φαληροῖ), made it into a receptacle of ships." From this passage, compared with the words of Thucydides quoted above, it would seem a natural inference that the three ancient ports of Peiraeeus were those now called *Drákо*, *Stratiotiki*, and *Fanári;* and that Phalerum had nothing to do with the peninsula of Peiraeeus, but was situated more to the east, where the sea-shore is nearest to Athens. But till within the last few years a very different situation has been assigned to the ancient harbours of Athens. Misled by a false interpretation of a passage of the Scholiast upon Aristophanes (*Pac.* 145), modern writers supposed that the large harbour of Peiraeeus (*Drákо*) was divided into three ports called respectively Cantharus (Κάνθαρος), the port for ships of war, Zea (Ζέα) for corn-ships, and Aphrodisium ('Αφροδίσιον) for other merchant-ships; and that it was to those three ports that the words of Pausanias and Thucydides refer. It was further maintained that *Stratiotiki* was the ancient harbour of Munychia, and that *Fanári*, the more easterly of the two smaller harbours, was the ancient Phalerum. The true position of the Athenian ports was first pointed out by Ulrichs in a pamphlet published in modern Greek (οἱ λιμένες καὶ τὰ μακρὰ τείχη, τῶν 'Αθήνων, Athens, 1843), of the arguments of which an abstract is given by the author in the *Zeitschrift für die Alterthumswissenschaft* (for 1844, p. 17, seq.). Ulrichs rejects the division of the larger harbour into three parts, and maintains that it consisted only of two parts; the northern and by far the larger half being called Emporium ('Εμπόριον), and appropriated to merchant vessels, while the southern bay upon the right hand, after entering the harbour, was named Cantharus, and was used by ships of war. Of the two smaller harbours he supposes *Stratiotiki* to be Zea, and *Phanári* Munychia. Phalerum he removes altogether from the Peiraic peninsula, and places it at the eastern corner of the great Phaleric bay, where the chapel of St. George now stands, and in the neighbourhood of the Τρεῖς Πύργοι, or the *Three Towers*. Ulrichs was led to these conclusions chiefly by the valuable inscriptions relating to the maritime affairs of Athens, which were discovered in 1834, near the entrance to the larger harbour, and which were published by Böckh, with a valuable commentary under the title of *Urkunden über das Seewesen des attischen Staates*, Berlin, 1834. Of the correctness of Ulrichs's views there can now be little doubt; the arguments in support of them are stated in the sequel.

A. *Phalerum.*

The rocky peninsula of Peiraeeus is said by the ancient writers to have been originally an island, which was gradually connected with the mainland by the accumulation of sand. (Strab. i. p. 59; Plin. iii. 85; Suid. *s. v.* ἔμβαρος.) The space thus filled up was known by the name of Halipedum ('Αλίπεδον), and continued to be a marshy swamp, which rendered the Peiraeeus almost inaccessible in the winter time till the construction of the broad carriage

PLAN OF THE PORT-TOWNS.

A. Harbour of Peiraeeus (Emporium), now *Drâko* or *Porto Leone*.
B. Harbour of Cantharus.
C. Harbour of Zea, now *Stratiotiki*.
D. Harbour of Munychia, now *Fanâri*.
E. Munychia, the Acropolis of Peiraeeus.
1. Alcimus.
2. Ship-houses.
3. Hoplotheca or Armentarium of Philo.
4. Aphrodisium.
5. Stoae.

8. Ship-houses.
9. Phreattys.
10. Northern Long Wall.
11. Southern Long Wall.
12. Halae.
13. Necropolis.
14. Ruins, erroneously supposed to be those of the Peiraic Theatre.
15. Temple of Zeus Soter.
16. Hippodameian Agora.
17. Theatre.

road (ἁμαξιτός), which was carried across it. (Harpocrat., Suid. *s. v.* ἀλίπεδον; Xen. *Hell.* ii. 4. § 30.) Under these circumstances the only spot which the ancient Athenians could use as a harbour was the south-eastern corner of the Phaleric bay, now called, as already remarked, Τρεῖς Πύργοι, which is a round hill projecting into the sea. This was accordingly the site of Phalerum (Φάληρον, also Φαληρός: *Eth.* Φαληρεῖς), a demus belonging to the tribe Aeantis. This situation secured to the original inhabitants of Athens two advantages, which were not possessed by the harbours of the Peiraic peninsula: first, it was much nearer to the most ancient part of the city, which was built for the most part immediately south of the Acropolis (Thuc. ii. 15); and, secondly, it was accessible at every season of the year by a perfectly dry road.

The true position of Phalerum is indicated by many circumstances. It is never included by ancient writers within the walls of Peiraeeus and Munychia. Strabo, after describing Peiraeeus and Munychia, speaks of Phalerum as the next place in order along the shore (μετὰ τὸν Πειραιᾶ Φαληρεῖς δῆμος ἐν τῇ ἐφεξῆς παραλίᾳ, ix. p. 398). There is no spot at which Phalerum could have been situated before reaching Τρεῖς Πύργοι, since the intervening shore of the Phaleric gulf is marshy (τὸ Φαληρικόν, Plut. *Vit. X. Orat.* p. 844, *Them.* 12; Strab. ix. p. 400; Schol. *ad Aristoph. Av.* 1693). The account which Herodotus gives (v. 63) of the defeat of the Spartans, who had landed at Phalerum, by the Thessalian cavalry of the Peisistratidae, is in accordance with the open country which extends inland near the chapel of St. George, but would not be applicable to the Bay of *Phanâri*, which is completely protected against the attacks of cavalry by the rugged mountain rising immediately behind it. Moreover, Ulrichs discovered on the road from Athens to St. George considerable substructions of an ancient wall, apparently the Phaleric Wall, which, as we have already seen, was five stadia shorter than the two Long Walls. [See p. 259, b.]

That there was a town near St. George is evident from the remains of walls, columns, cisterns, and other ruins which Ulrichs found at this place; and we learn from another authority that there may still be seen under water the remains of an ancient mole, upon which a Turkish ship was wrecked during the war of independence in Greece. (Westermann, in *Zeitschrift für die Alterthumswissenschaft*, 1843, p. 1009.)

Cape Colias (Κωλίας), where the Persian ships were cast ashore after the battle of Salamis (Herod. viii. 96), and which Pausanias states to have been 20 stadia from Phalerum (i. 1. § 5), used to be identified with Τρεῖς Πύργοι, but must now be placed SE. at the present Cape of *St. Kosmas*: near the latter are some ancient remains, which are probably

those of the temple of Aphrodite Colias mentioned by Pausanias.

The port of Phalerum was little used after the foundation of Peiraeeus; but the place continued to exist down to the time of Pausanias. This writer mentions among its monuments temples of Demeter Zeus, and Athena Sciras, called by Plutarch (*Thes.* 17) a temple of Sciras; and altars of the Unknown Gods, of the Sons of Theseus, and of Phalerus. The sepulchre of Aristeides (Plut. *Arist.* 1) was at Phalerum. The Phaleric bay was celebrated for its fish. (For authorities, see Leake, p. 397.)

B. *Peiraeeus and Munychia.*

1. *Division of Peiraeeus and Munychia.*—Peiraeeus (Πειραιεύς: *Eth.* Πειραιεῖς) was a demus belonging to the tribe Hippothontis. It contained both the rocky heights of the peninsula, and was separated from the plain of Athens by the low ground called Halipedon, mentioned above. Munychia (*Μουνυχία*) was included in Peiraeeus, and did not form a separate demus. Of the site of Munychia there can no longer be any doubt since the investigations of Curtius (*De Portubus Athenarum*, Halis, 1842); Ulrichs also had independently assigned to it the same position as Curtius. Munychia was the Acropolis of Peiraeeus. It occupied the hill immediately above the most easterly of the two smaller harbours, that is, the one nearest to Athens. This hill is now called Καστέλλα. It is the highest point in the whole peninsula, rising 300 feet above the sea; and at its foot is the smallest of the three harbours. Of its military importance we shall speak presently. Leake had erroneously given the name of Munychia to a smaller height in the westerly half of the peninsula, that is, the part furthest from Athens, and had supposed the greater height above described to be the Acropolis of Phalerum.

2. *Fortifications and Harbours.*— The whole peninsula of Peiraeeus, including of course Munychia, was surrounded by Themistocles with a strong line of fortifications. The wall, which was 60 stadia in circumference (Thuc. ii. 13), was intended to be impregnable, and was far stronger than that of the Asty. It was carried up only half the height which Themistocles had originally contemplated (Thuc. i. 93); and if Appian (*Mithr.* 30) is correct in stating that its actual height was 40 cubits, or about 60 feet, a height which was always found sufficient, we perceive how vast was the project of Themistocles. "In respect to thickness, however, his ideas were exactly followed: two carts meeting one another brought stones, which were laid together right and left on the outer side of each, and thus formed two primary parallel walls, between which the interior space (of course at least as broad as the joint breadth of the two carts) was filled up, not with rubble, in the usual manner of the Greeks, but constructed, through the whole thickness, of squared stones, cramped together with metal. The result was a solid wall probably not less than 14 or 15 feet thick, since it was intended to carry so very unusual a height." (Grote, vol. v. p. 335; comp. Thuc. i. 93.) The existing remains of the wall described by Leake confirm this account. The wall surrounded not only the whole peninsula, but also the small rocky promontory of Etioneia, from which it ran between the great harbour and the salt marsh called Halae. These fortifications were connected with those of the Asty by means of the Long Walls, which have been already described. [See p. 259, seq.] It is usually stated that the architect employed by Themistocles in his erection of these fortifications, and in the building of the town of Peiraeeus, was Hippodamus of Miletus; but C. F. Hermann has brought forward good reasons for believing that, though the fortifications of Peiraeeus were erected by Themistocles, it was formed into a regularly planned town by Pericles, who employed Hippodamus for this purpose. Hippodamus laid out the town with broad straight streets, crossing each other at right angles, which thus formed a striking contrast with the narrow and crooked streets of Athens. (Hermann, *Disputatio de Hippodamo Milesio*, Marburg, 1841.)

The entrances to the three harbours of Peiraeeus were rendered very narrow by means of moles, which left only a passage in the middle for two or three triremes to pass abreast. These moles were a continuation of the walls of Peiraeeus, which ran down to either side of the mouths of the harbours; and the three entrances to the harbours (*τὰ κλεῖθρα τῶν λιμένων*) thus formed, as it were, three large sea-gates in the walls. Either end of each mole was protected by a tower; and across the entrance chains were extended in time of war. Harbours of this kind were called by the ancients *closed ports* (κλειστοὶ λιμένες), and the walls were called χηλαί, or *claws*, from their stretching out into the sea like the claws of a crab. It is stated by ancient authorities that the three harbours of the Peiraeeus were *closed ports* (Hesych. *s. v. Ζέα*; Schol. *ad Aristoph. Pac.* 145; comp. Thuc. ii. 94; Plut. *Demetr.* 7; Xen. *Hell.* ii. 2. § 4); and in each of them we find remains of the *chelae*, or moles. Hence these three harbours cannot mean, as Leake supposed, three divisions of the larger harbour since there are traces of only one set of chelae in the latter, and it is impossible to understand how it could have been divided into three closed ports.

(i.) *Phanári*, the smallest of the three harbours, was anciently called MUNYCHIA, from the fortress rising above it. It was only used by ships of war; and we learn, from the inscriptions already referred to, that it contained 82 *νεώσοικοι*, or ship-houses. This harbour was formerly supposed to be Phalerum; but it was quite unsuitable for trading purposes, being shut in by steep heights, and having no direct communication with the Asty. Moreover, we can hardly conceive the Athenians to have been so blind as to have used this harbour for centuries, and to have neglected the more commodious harbours of *Stratiotiki* and *Dráko*, in its immediate vicinity. The modern name of *Phanári* is probably owing to a lighthouse having stood at its entrance in the Byzantine period.

(ii.) *Stratiotiki* (called *Paschalimáni* by Ulrichs), the middle of the three harbours, is the ancient ZEA (*Ζέα*), erroneously called by the earlier topographers Munychia. (Timaeus, *Lex.*, *Plat.*; Phot. *Lex. s. v. Ζέα.*) It was the largest of the three harbours for ships of war, since it contained 196 ship-houses, whereas Munychia had only 82, and Cantharus only 94. Some of the ship-houses at Zea appear to have been still in existence in the time of Pausanias; for though he does not mention Zea, the *νεώσοικοι* which he speaks of (i. 1. § 3) were apparently at this port. This harbour probably derived its name from Artemis, who was worshipped among the Athenians under the surname of Zea, and not, as Meursius supposed, from the corn-vessels, which were confined to the Emporium in the great harbour.

(iii.) *Drákо* or *Porto Leone*, the largest of the three harbours, was commonly called by the ancients simply Peiraeeus (Πειραιεύς), or The Harbour (ὁ λίμην). It derives its modern name from a colossal lion of white marble, which Spon and Wheler observed upon the beach, when they visited Athens; and which was carried to Venice, after the capture of Athens by the Venetians in 1687. *Drákо* is the name used by the modern Greeks, since δράκων, which originally meant only a serpent, now signifies a monster of any kind, and was hence applied to the marble lion.

It has been already stated that Leake and other writers, misled by a passage of the Scholiast on Aristophanes (*Pac.* 145), divided the harbour of Peiraeeus into three separate ports, named Cantharus, Aphrodisium, and Zea, but the words of the Scholiast warrant no such conclusion:—ὁ Πειραιεὺς λιμένας ἔχει τρεῖς, πάντας κλειστούς· εἷς μὲν ὁ Κανθάρου λίμην — ἐν ᾧ τὰ νεώρια. εἶτα τὸ Ἀφροδίσιον· εἶτα κύκλῳ τοῦ λιμένος στοαὶ πέντε. It is evident that the Scholiast does not intend to give the names of the three harbours of Peiraeeus; but, after mentioning Cantharus, he proceeds to speak of the buildings in its immediate vicinity, of which the Aphrodisium, a temple of Aphrodite, was one; and then followed the five Stoae or Colonnades. Leake supposed Zea to be the name of the bay situated on the right hand after entering the harbour, Aphrodisium to be the name of the middle or great harbour, and Cantharus to be the name of the inner harbour, now filled up by alluvial deposits of the Cephissus. It is, however, certain that the last-mentioned spot never formed part of the harbour of Peiraeeus, since between this marsh and the harbour traces of the ancient wall have been discovered; and it is very probable that this marsh is the one called Halae (Ἁλαί) by Xenophon. (*Hell.* ii. 4. § 34.)

The harbour of Peiraeeus appears to have been divided into only two parts. Of these, the smaller one, occupying the bay to the right hand of the entrance to the harbour, was named Cantharus. It was the third of the Athenian harbours for ships of war, and contained 94 ship-houses. Probably upon the shores of the harbour of Cantharus the armoury (ὁπλοθήκη) of Philo stood, containing arms for 1000 ships. (Strab. ix. p. 395; Plin. vii. 37. s. 38; Cic. *de Orat.* i. 14; Vitruv. vii. Praef.; Appian, *Mithr.* 41.)

The remainder of the harbour, being about two-thirds of the whole, was called Emporium, and was appropriated to merchant vessels. (Timaeus, *Lex. Plat.*; Harpocrat. *s. v.* Δεῖγμα.) The surrounding shore, which was also called Emporium, contained the five Stoae or Colonnades mentioned above, all of which were probably appropriated to mercantile purposes. One of these was called the Macra Stoa (μακρὰ στοὰ), or the Long Colonnade (Paus. i. 1. § 3); a second was the Deigma (Δεῖγμα), or place where merchants exhibited samples of their goods for sale (Harpocrat. *s. v.* Δεῖγμα; Schol. *ad Aristoph. Equit.* 974; Dem. *c. Lacrit.* p. 932); a third was the Alphitopolis (Ἀλφιτοπῶλις), or Corn-Exchange, said to have been built by Pericles (Schol. *ad Aristoph. Equit.* 547): of the other two Stoae the names have not been preserved. Between the Stoae of the Emporium and Cantharus stood the Aphrodisium, or temple of Aphrodite, built by Conon after his victory at Cnidus. (Paus. *l. c.*; Schol. *ad Aristoph. Pac. l. c.*) The limits of the Emporium towards Cantharus were marked by a boundary stone discovered *in situ* in 1843, and bearing the inscription:—

ΕΜΠΟΡΙΟ
ΚΑΙΗΟΔΟ
ΗΟΡΟΣ,

i. e., Ἐμπορίου καὶ ὁδοῦ ὅρος. The forms of the letters, and the use of the H for the spiritus asper, prove that the inscription belongs to the period before the Peloponnesian war. The stone may have been erected upon the first foundation of Peiraeeus by Themistocles, or when the town was laid out regularly by Hippodamus in the time of Pericles. It probably stood in a street leading from the Emporium to the docks of the harbour of Cantharus.

3. *Topography of Munychia and Peiraeeus.*— The site of Munychia, which was the Acropolis of Peiraeeus, has been already explained. Remains of its fortifications may still be seen on the top of the hill, now called *Castella*, above the harbour of *Phanári*. From its position it commanded the whole of the Peiraic peninsula, and its three harbours (ὑποπίπτουσι δ' αὐτῷ λιμένες τρεῖς, Strab. ix. p. 395); and whoever obtained possession of this hill became master of the whole of Peiraeeus. Epimenides is said to have foreseen the importance of this position. (Plut. *Sol.* 12; Diog. Laërt. i. 114.) Soon after the close of the Peloponnesian war, the seizure of Munychia by Thrasybulus and his party enabled them to carry on operations with success against the Thirty at Athens. (Xen. *Hell.* ii. 4.) The successors of Alexander the Great kept a Macedonian garrison in Munychia for a long period, and by this means secured the obedience of Athens. The first Macedonian garrison was placed in this fortress by Antipater after the defeat of the Greeks at Crannon, B. C. 322. (Paus. i. 25. § 4; Plut. *Dem.* 28.) When Athens surrendered to Cassander, in B. C. 318, Munychia was also garrisoned by the latter; and it was by the support of these troops that Demetrius Phalereus governed Athens for the next ten years. In B. C. 307 the Macedonians were expelled from Munychia by Demetrius Poliorcetes; but the latter, on his return from Asia in B. C. 299, again placed a garrison in Munychia, and in the Museium also. These garrisons were expelled from both fortresses by the Athenians, under Olympiodorus, when Demetrius was deprived of the Macedonian kingdom in B. C. 287. (Paus. i. 25. § 4, seq., 26. § 1, seq.; Diod. xviii. 48, 74, xx. 45; Plut. *Demetr.* 8, seq., 46, *Phoc.* 31, seq.) During the greater part of the reign of Antigonus and of his son Demetrius II., the Macedonians had possession of Munychia; but soon after the death of Demetrius, Aratus purchased the departure of the Macedonian garrison by the payment of a large sum of money. (Plut. *Arat.* 34; Paus. ii. 8. § 5.) Strabo (*l. c.*) speaks of the hill of Munychia as full of hollows and excavations, and well adapted for dwelling-houses. In the time of Strabo the whole of the Peiraeeus was in ruins, and the hollows to which he alludes were probably the remains of cisterns. The sides of the hill sloping down to the great harbour appear to have been covered with houses rising one above another in the form of an amphitheatre, as in the city of Rhodes, which was laid out by the same architect, and was also celebrated for its beauty.

Within the fortress of Munychia was a temple of Artemis Munychia, who was the guardian deity of this citadel. The temple was a celebrated place of asylum for state criminals. (Xen. *Hell.* ii. 4. § 11·

Paus. i. 1. § 4; Dem. *de Coron.* p. 222, Reiske; Lys. *c. Agorat.* pp. 460, 462, Reiske.) Near the preceding, and probably also within the fortress, was the *Bendideium* (Βενδίδειον), or temple of the Thracian Artemis Bendis, whose festival, the Bendideia, was celebrated on the day before the lesser Panathenaea. (Xen. *Hell.* ii. 4. § 11; Plat. *de Rep.* i. pp. 327, 354.) On the western slope of the hill was the Dionysiac theatre, facing the great harbour: it must have been of considerable size, as the assemblies of the Athenian people were sometimes held in it. (Thuc. viii. 93; Xen. *Hell.* ii. 4. § 32; Lys. *c. Agorat.* pp. 464, 479; comp. Dem. *de Fals. Leg.* p. 379.) It was in this theatre that Socrates saw a performance of one of the plays of Euripides. (Aelian, *V. H.* ii. 13.) Some modern writers distinguish between the theatre at Munychia and another in Peiraeeus; but the ancient writers mention only one theatre in the peninsula, called indifferently the Peiraic or the Munychian theatre, the latter name being given to it from its situation upon the hill of Munychia. The ruins near the harbour of Zea, which were formerly regarded as those of the Peiraic theatre, belonged probably to another building.

The proper agora of Peiraeeus was called the *Hippodameian Agora* (Ἱπποδάμειος ἀγορά), to distinguish it from the Macra Stoa, which was also used as an agora. The Hippodameian Agora was situated near the spot where the two Long Walls joined the wall of Peiraeeus; and a broad street led from it up to the citadel of Munychia. (Xen. *Hell.* ii. 4. § 11; Andoc. *de Myst.* p. 23, Reiske; Dem. *c. Timoth.* p. 1190.)

At the entrance to the great harbour there was on the right hand the promontory *Alcimus* (Ἄλκιμος), on the left hand the promontory *Eetionia* (Ἠετιωνία, or Ἠετιώνεια). On Alcimus stood the tomb of Themistocles, whose bones are said to have been brought from Magnesia in Asia Minor, and buried at this place. (Plut. *Them.* 32; Paus. i. 1. § 2). Eetionia was a tongue of land commanding the entrance to the harbour; and it was here that the Four Hundred in B. C. 411 erected a fort, in order to prevent more effectually the entrance of the Athenian fleet, which was opposed to them. (Thuc. viii. 90; Dem. *c. Theocr.* p. 1343; Harpocrat., Suid., Steph. B. *s. v.* Ἠετιώνεια.) The small bay on the outer side of the promontory was probably the κωφὸς λίμην mentioned by Xenophon. (*Hell.* ii. 4. § 31.)

The buildings around the shore of the great harbour have been already mentioned. Probably behind the Macra Stoa was the temenus of Zeus and Athena, which Pausanias (i. 1. § 3) mentions as one of the most remarkable objects in Peiraeeus, and which is described by other writers as the temple of Zeus Soter. (Strab. ix. p. 396; Liv. xxxi. 30; Plin. xxxiv. 8. s. 19. § 14.) *Phreattys*, which was one of the courts of justice for the trial of homicides, was situated in Peiraeeus; and as this court is described indifferently ἐν Ζέᾳ or ἐν Φρεαττοῖ, it must be placed either in or near the harbour of Zea. The accused pleaded their cause on board ship, while the judges sat upon the shore. (Paus. i. 28. § 11; Dem. *c. Aristocr.* p. 645; Pollux, viii. 120; Becker, *Anecd. Graec.* i. p. 311.)

Peiraeeus never recovered from the blow inflicted upon it by its capture by Sulla, who destroyed its fortifications and arsenals. So rapid was its decline that in the time of Strabo it had become "a small village, situated around the ports and the temple of Zeus Soter." (Strab. ix. p. 395.)

The most important work on the Topography of Athens is Col. Leake's *Topography of Athens*, London, 1841, 2nd edition. In common with all other writers on the subject, the writer of the present article is under the greatest obligations to Col. Leake, although he has had occasion to differ from him on some points. The other modern works from which most assistance have been derived are Forchhammer, *Topographie von Athen*, in *Kieler Philologische Studien*, Kiel, 1841; Kruse, *Hellas*, vol. ii. pt. i., Leipzig, 1826; K. O. Müller, art. *Attika* in Ersch and Gruber's *Encyclopädie*, vol. vi., translated by Lockhart, London, 1842; Wordsworth, *Athens and Attica*, London, 1836; Stuart and Revett, *Antiquities of Athens*, London, 1762—1816, 4 vols., fo. (2nd ed. 1825—1827); Dodwell, *Tour through Greece*, vol. i. London, 1819; Prokesch, *Denkwürdigkeiten, &c.*, vol. ii., Stuttgart, 1836; Mure, *Journal of a Tour in Greece*, vol. ii. Edinburgh, 1842.

COINS OF ATHENS.

ATHENAEON (Ἀθηναιών: *Sudak* or *Sugdaja?*) also called "a harbour of the Scythotauri," was a port on the south coast of the Tauric Chersonesus. (Anon. *Peripl.* p. 6.)

ATHENAEUM (Ἀθηναῖον). 1. A fortress in the S. of Arcadia, and in the territory of Megalopolis, is described by Plutarch as a position in advance of the Lacedaemonian frontier (ἐμβολὴ τῆς Λακωνικῆς), and near Belemina. It was fortified by Cleomenes in B. C. 224, and was frequently taken and retaken in the wars between the Achaean League and the Spartans. Leake supposes that it occupied the summit of Mount *Tzimbará*, on which there are some remains of an Hellenic fortress. In that case it must have been a different place from the Athenaeum mentioned by Pausanias on the road from Megalopolis to Asea, and 20 stadia from the latter. (Plut. *Cleom.* 4; Pol. ii. 46, 54, iv. 37, 60, 81; Paus. viii. 44. §§ 2, 3; Leake, *Peloponnesiaca*, p. 248.)

2. A fortress in Athamania in Epeirus, described by Livy as "finibus Macedoniae subjectum," and apparently near Gomphi. Leake places it on a height, a little above the deserted village of *Apáno Porta*, or *Porta Panaghia*. (Liv. xxviii. 1, xxxix. 25 Leake, *Northern Greece*, vol. iv. pp. 212, 525.)

ATHENO'POLIS, a city on the coast of Gallia Narbonensis, dependent on Massilia. (Mela, ii. 5; Plin. iii. 4.) Stephanus (*s. v.* Ἀθῆναι) mentions an Athenae of the Ligystii, which may be this place. There are no measures for determining the position of Athenopolis. D'Anville observes, that Pliny and Mela seem to place this Massaliot settlement south of Forum Julii (*Fréjus*); and yet in his map he fixes it north of Fréjus, at a place called *Agay*. Walckenaer, at a guess, places it at *St. Tropez*, which is on a bay nearly due south of Fréjus. The Athenaeopolitae of Varro (*L. L.* viii. 35) are assumed to be the inhabitants of this place. [G. L.]

ATHESIS (Ἄτησις, Strab.; Ἄτισις, Plut.), one of the principal rivers of Northern Italy, now called the *Adige*. It rises in the Rhaetian Alps, in a small lake near the modern village of *Reschen*, and after a course of about 50 miles in a SE. direction, receives the waters of the ATAGIS or *Eisach*, a stream almost as considerable as its own, which descends from the pass of the *Brenner*. Their united waters flow nearly due S. through a broad and deep valley, passing under the walls of Tridentum (*Trento*), until they at length emerge into the plains of Italy, close to Verona, which stands on a kind of peninsula almost encircled by the Athesis. (Verona Athesi circumflua, Sil. Ital. viii. 597.) From hence it pursues its course, first towards the SE., and afterwards due E. through the plains of Venetia to the Adriatic, which it enters only a few miles from the northernmost mouth of the Padus, but without having ever joined that river. From its source to the sea it has a course of not less than 200 miles; and in the volume of its waters it is inferior only to the Padus among the rivers of Italy. (Strab. iv. p. 207, where there is little doubt that the names Ἄτησις and Ἴσαρας have been transposed; Plin. iii. 16. s. 20; Virg. *Aen.* ix. 680; Claudian, *de VI. Cons. Hon.* 196.) Servius (*ad Aen. l. c.*) and Vibius Sequester (p. 3) erroneously describe the Athesis as falling into the Padus; a very natural mistake, as the two rivers run parallel to each other at a very short interval, and even communicate by various side branches and artificial channels, but their main streams continue perfectly distinct.

It was in the plains on the banks of the Athesis, probably not very far from Verona, that Q. Catulus was defeated by the Cimbri in B. C. 101. (Liv. *Epit.* lxviii.; Flor. iii. 3; Plut. *Mar.* 23.) [E. H. B.]

ATHMO'NIA, A'THMONUM. [ATTICA.]

ATHOS (Ἄθως, Ἄθων, Ep. Ἀθόως, gen. Ἀθόω: *Eth.* Ἀθωίτης), the lofty mountain at the extremity of the long peninsula, running out into the sea from Chalcidice in Macedonia, between the Singitic gulf and the Aegaean. This peninsula was properly called Acte (Ἀκτή, Thuc. iv. 109), but the name of Athos was also given to it, as well as to the mountain. (Herod. vii. 22.) The peninsula, as well as the mountain, is now called the *Holy Mountain* (Ἅγιον Ὄρος, *Monte Santo*), from the great number of monasteries and chapels with which it is covered. There are 20 of these monasteries, most of which were founded during the Byzantine empire, and some of them trace their origin to the time of Constantine the Great. Each of the different nations belonging to the Greek Church, has one or more monasteries of its own; and the spot is visited periodically by pilgrims from Russia, Servia, Bulgaria, as well as from Greece and Asia Minor. No female, even of the animal kind, is permitted to enter the peninsula.

According to Pliny (iv. 10. s. 17. § 37, Sillig), the length of the peninsula is 75 (Roman) miles, and the circumference 150 (Roman) miles. Its real length is 40 English miles, and its average breadth about four miles. The general aspect of the peninsula is described in the following terms by a modern traveller:—"The peninsula is rugged, being intersected by innumerable ravines. The ground rises almost immediately and rather abruptly from the isthmus at the northern end to about 300 feet, and for the first twelve miles maintains a table-land elevation of about 600 feet, for the most part beautifully wooded. At this spot the peninsula is narrowed into rather less than two miles in breadth. It immediately afterwards expands to its average breadth of about four miles, which it retains to its southern extremity. From this point, also, the land becomes mountainous rather than hilly, two of the heights reaching respectively 1700 and 1200 feet above the sea. Four miles farther south, on the eastern slope of the mountain ridge, and at a nearly equal distance from the east and west shores, is situated the town of *Karyés*, picturesquely placed amidst vineyards and gardens. . . . . Immediately to the southward of *Karyés* the ground rises to 2200 feet, whence a rugged broken country, covered with a forest of dark-leaved foliage, extends to the foot of the mountain, which rears itself in solitary magnificence, an insulated cone of white limestone, rising abruptly to the height of 6350 feet above the sea. Close to the cliffs at the southern extremity, we learn from Captain Copeland's late survey, no bottom was found with 60 fathoms of line." (Lieut. Webber Smith, in *Journal of Royal Geogr. Soc.* vol. vii. p. 65.) The lower bed of the mountain is composed of gneiss and argillaceous slate, and the upper part of grey limestone, more or less inclined to white. (Sibthorp, in *Walpole's Travels, &c.* p. 40.)

Athos is first mentioned by Homer, who represents Hera as resting on its summit on her flight from Olympus to Lemnos. (*Il.* xiv. 229.) The name, however, is chiefly memorable in history on account of the canal which Xerxes cut through the isthmus, connecting the peninsula with Chalcidice. (Herod. vii. 23, seq.) This canal was cut by Xerxes for the passage of his fleet, in order to escape the gales and high seas, which sweep around the promontory, and which had wrecked the fleet of Mardonius in B. C. 492. The cutting of this canal has been rejected as a falsehood by many writers, both ancient and modern; and Juvenal (x. 174) speaks of it as a specimen of Greek mendacity:

> "creditur olim
> Velificatus Athos, et quidquid Graecia mendax
> Audet in historia."

Its existence, however, is not only attested by Herodotus (*l. c.*), Thucydides (*l. c.*), and other ancient writers, but distinct traces of it have been discovered by modern travellers. The modern name of the isthmus is *Próvlaka*, evidently the Romaic form of Προαύλαξ, the canal *in front of* the peninsula of Athos. The best description of the present condition of the canal is given by Lieut. Wolfe:—"The canal of Xerxes is still most distinctly to be traced all the way across the isthmus from the *Gulf of Monte Santo* (the ancient Singitic Gulf) to the *Bay of Erso* in the *Gulf of Contessa*, with the exception of about 200 yards in the middle, where the ground bears no appearance of having ever been touched. But as there is no doubt of the whole

canal having been excavated by Xerxes, it is probable that the central part was afterwards filled up, in order to allow a more ready passage into and out of the peninsula. In many places the canal is still deep, swampy at the bottom, and filled with rushes and other aquatic plants: the rain and small springs draining down into it from the adjacent heights afford, at the Monte Santo end, a good watering-place for shipping; the water (except in very dry weather) runs out in a good stream. The distance across is 2500 yards, which agrees very well with the breadth of twelve stadia assigned by Herodotus. The width of the canal appears to have been about 18 or 20 feet; the level of the earth nowhere exceeds 15 feet above the sea; the soil is a light clay. It is on the whole a very remarkable isthmus, for the land on each side (but more especially to the westward) rises abruptly to an elevation of 800 to 1000 feet." (*Penny Cyclopaedia*, vol. iii. p. 23.)

About 1½ mile north of the canal was Acanthus [ACANTHUS], and on the isthmus, immediately south of the canal, was Sane, probably the same as the later Uranopolis. [SANE.] In the peninsula itself there were five cities, DIUM, OLOPHYXUS, ACROTHOUM, THYSSUS, CLEONAE, which are described under their respective names. To these five cities, which are mentioned by Herodotus (*l. c.*), Thucydides (*l. c.*) and Strabo (vii. p. 331), Scylax (*s. v. Μακεδονία*) adds Charadriae, and Pliny (*l. c.*) Palaeorium and Apollonia, the inhabitants of the latter being named Macrobii. The extremity of the peninsula, above which Mt. Athos rises abruptly, was called Nymphaeum (*Νύμφαιον*), now *Cape St. George* (Strab. vii. p. 330; Ptol. iii. 13. § 11.) The peninsula was originally inhabited by Tyrrheno-Pelasgians, who continued to form a large part of the population in the Greek cities of the peninsula even in the time of the Peloponnesian war (Thuc. *l. c.*). (Respecting the peninsula in general see Leake, *Northern Greece*, vol. iii. p. 114; Bowen, *Mount Athos, Thessaly, and Epirus*, London, 1852, p. 51, seq.; Lieuts. Smith and Wolfe, Sibthorp, *ll. cc.*)

ATHRIBIS, ATHLIBIS (Herod. ii. 166; Ptol. iv. 5. §§ 41, 51; Plin. v. 9. s. 11; Steph. Byz. *s. v.* *Ἀθλιβις*, *Ἀθάρραβις*: *Eth.* *Ἀθριβίτης* or *Ἀθλιβίτης*), the chief town of the Athribite nome, in Lower Egypt. It stood upon the eastern bank of the Tanitic branch of the Nile, and near the angle where that branch diverges from the main stream. Ammianus Marcellinus reckons Athribis among the most considerable cities of the Delta, in the 4th century of our era (xxii. 16. § 6). It seems to have been of sufficient importance to give the name Athribiticus Fluvius to the upper portion of the Tanitic arm of the Nile. It was one of the military nomes assigned to the Calasirian militia under the Pharaohs. Under the Christian Emperors, Athribis belonged to the province of Augustamnica Secunda.

The Athribite nome and its capital derived their name from the goddess Thriphis, whom inscriptions both at Athribis and Panopolis denominate "the most great goddess." Thriphis is associated in worship with Amun Khem, one of the first quaternion of deities in Egyptian mythology; but no representation of her has been at present identified. Wilkinson (*Manners and Customs*, &c., vol. iv. p. 265) supposes Athribis to have been one of the lion-headed goddesses, whose special names have not been ascertained.

The ruins of *Atrieb* or *Trieb*, at the point where the modern canal of Moueys turns off from the Nile, represent the ancient Athribis. They consist of extensive mounds and basements, besides which are the remains of a temple, 200 feet long, and 175 broad, dedicated to the goddess Thriphis (Coptic *Athrébi*). The monks of the White Monastery, about half a mile to the north of these ruins, are traditionally acquainted with the name of Attrib, although their usual designation of these ruins is *Medeenet Ashaysh*. An inscription on one of the fallen architraves of the temple bears the date of the ninth year of Tiberius, and contains also the name of his wife Julia, the daughter of Augustus. On the opposite face of the same block are found ovals, including the names of Tiberius Claudius and Caesar Germanicus: and in another part of the temple is an oval of Ptolemy XII., the eldest son of Ptolemy Auletes (B.C. 51—48). About half a mile from Athribis are the quarries from which the stone used in building the temple was brought; and below the quarries are some small grotto tombs, the lintels of whose doors are partially preserved. Upon one of these lintels is a Greek inscription, importing that it was the "sepulchre of Hermeius, son of Archibius." He had not, however, been interred after the Egyptian fashion, since his tomb contained the deposit of calcined bones. Vestiges also are found in two broad paved causeways of the two main streets of Athribis, which crossed each other at right angles, and probably divided the town into four main quarters. The causeways and the ruins generally indicate that the town was greatly enlarged and beautified under the Macedonian dynasty. (Champollion, *l'Egypte*, vol. ii. p. 48; Wilkinson, *Egypt and Thebes*, p. 393.) [W. B. D.]

ATHRYS. [TANTRUS.]

ATHYRAS (*Ἄθυρας*), a river of Thrace between Selymbria and Byzantium. (Ptol. iii. 11. § 6; Plin. iv. 11. s. 18. § 47, Sillig; Pliny calls it also Pydaras.)

ATILIA'NA. [AUTRIGONES.]

ATI'NA (*Ἄτινα*: *Eth.* Atinas, ātis). 1. An ancient and important city of the Volscians, which retains its ancient name and position, on a lofty hill near the sources of the little river Melpis (*Melfa*), and about 12 miles SE. of Sora. Virgil speaks of it as a great and powerful city (*Atina potens*, *Aen.* vii. 630) long before the foundation of Rome, and Martial also terms it "prisca Atina" (x. 92. 2.): the former poet seems to consider it a Latin city, but from its position it would appear certain that it was a Volscian one. It had, however, been wrested from that people by the Samnites when it first appears in history. In B. C. 313 it was (according to some annalists) taken by the Roman consul C. Junius Bubulcus (Liv. ix. 28); but in B. C. 293 we again find it in the hands of the Samnites, and its territory was ravaged by the consuls, but no attack made on the town. (Id. x. 39.) We have no account of its final reduction by the Romans, but it appears to have been treated with severity, and reduced to the condition of a praefectura, in which it still continued even after its citizens had been admitted to the Roman franchise. But notwithstanding its inferior position, it was in the days of Cicero a flourishing and populous town, so that he draws a favourable contrast between its population and that of Tusculum, and says that it was not surpassed by any praefectura in Italy. (Cic. *pro Planc.* 8.) It was the birthplace of his friend and client Cn. Plancius, and was included in the Terentine tribe.

(Ibid. 16.) At a subsequent period it became a municipal town, with the ordinary privileges and magistrates; but though it received a military colony under Nero, it did not obtain colonial rank. We learn, from numerous inscriptions, that it continued to be a considerable place under the Roman empire. (*Lib. Colon.* p. 230; Plin. iii. 5. s. 9; Ptol. iii. 1. § 62; Murat. *Inscr.* pp. 352, 1102, 1262; Orell. *Inscr.* 140, 1678, 2285, &c.)

Silius Italicus alludes to its cold and elevated situation (*monte nivoso descendens Atina*, viii. 398), and the modern city of *Atina* is noted as one of the coldest places in the whole kingdom of Naples, which results not only from its own position on a lofty eminence, but from its being surrounded by high and bleak mountains, especially towards the south. Its ancient walls, built in a massive style of polygonal blocks, but well hewn and neatly fitted, comprised the whole summit of the hill, only a portion of which is occupied by the modern city; their extent and magnitude confirm the accounts of its importance in very early times. Of Roman date there are the remains of an aqueduct on a grand scale, substructions of a temple, and fragments of other buildings, besides numerous sepulchral monuments and inscriptions. (Romanelli, vol. iii. p. 361; Craven, *Abruzzi*, vol. i. pp. 61—65.)

2. A town of Lucania, situated in the upper valley of the Tanager, now the *Valle di Diano*. It is mentioned only by Pliny, who enumerates the Atenates among the inland towns of Lucania, and by the *Liber Coloniarum*, where it is called the "praefectura Atenas." But the correct orthography of the name is established by inscriptions, in which we find it written ATINATES; and the site is clearly ascertained by the ruins still visible just below the village of *Atena*, about 5 miles N. of *La Sala*. These consist of extensive remains of the walls and towers, and of an amphitheatre; numerous inscriptions have also been discovered on the spot, which attest the municipal rank of the ancient city. It appears that its territory must have extended as far as *La Polla*, about 5 miles further N., where the Tanager buries itself under ground, a phenomenon which is noticed by Pliny as occurring "in campo Atinati." (Plin. ii. 103. s. 106, iii. 11. s. 15; *Lib. Colon.* p. 209; Romanelli, vol. i. p. 424; *Bullett. dell' Inst.* 1847, p. 157.) [E. H. B.]

ATINTA'NIA (Ἀτιντανία: *Eth.* Ἀτιντάν, -ᾶνος), a mountainous district in Illyria, north of Molossis and east of Parauaea, through which the Aous flows, in the upper part of its course. It is described by Livy (xlv. 30) as poor in soil and rude in climate. The Atintanes are first mentioned in B. C. 429, among the barbarians who assisted the Ambraciots in their invasion of Peloponnesus, upon which occasion the Atintanes and Molossi were commanded by the same leader. (Thuc. ii. 80.) On the conclusion of the first war between Philip and the Romans, Atintania was assigned to Macedonia, B. C. 204; and after the conquest of Perseus in B. C. 168, it was included in one of the four districts into which the Romans divided Macedonia. (Liv. xxvii. 30, xlv. 30.) It is not mentioned by Ptolemy, as it formed part of Chaonia. (Comp. Strab. vii. p. 326; Pol. ii. 5; Scylax, *s. v.* Ἰλλύριοι; Lycophr. 1043; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iv. p. 118.)

ATLANTES (Ἄτλαντες), a people in the interior of Libya, inhabiting one of the chain of oases formed by salt hills, which are described by Herodotus as extending along the N. of the Great Desert (*Sahara*), ten days' journey W. of the ATARANTES, and in the vicinity of M. ATLAS, whence they derived their name. They were reported to abstain from using any living thing for food, and to see no visions in their sleep. (Herod. iv. 184; Mela, i. 8. § 5; Plin. v. 8; respecting the common confusion in the names see ATARANTES.) Herodotus adds, that they were the furthest (*i. e.* to the W.) of the people known to him as inhabiting the ridge of salt hills; but that the ridge itself extended as far as the pillars of Hercules, or even beyond them (iv. 185). The attempts of Rennell, Heeren, and others to assign the exact position of the people, from the data supplied by Herodotus, cannot be considered satisfactory. (Rennell, *Geogr. of Herod.* vol. ii. pp. 301, 311; Heeren, *Ideen*, vol. ii. pt. 1. p. 243.) [P. S.]

ATLANTICUM MARE. The opinions of the ancients respecting the great body of water, which they knew to extend beyond the straits at the entrance of the Mediterranean, must be viewed historically; and such a view will best exhibit the meaning of the several names which they applied to it.

The word *Ocean* (Ὠκεανός) had, with the early Greeks, a sense entirely different from that in which we use it. In the poets, Homer and Hesiod, the personified being, Ocean, is the son of Heaven and Earth (Uranus and Gaia), a Titanic deity of the highest dignity, who presumes even to absent himself from the Olympic councils of Jove; and he is the father of the whole race of water-nymphs and river-gods. (Hes. *Theog.* 133, 337, foll. 368; Hom. *Il.* xx. 7.) Physically, Ocean is a *stream* or *river* (expressly so called) encircling the earth with its ever-flowing current; the primeval water, which is the source of all the other waters of the world, nay, according to some views, of all created things divine and human, for Homer applies it to the phrases Θεῶν γένεσις and ὅσπερ γένεσις πάντεσσι τέτυκται. (*Il.* xiv. 201, 246; comp. Virg. *Georg.* iv. 382, where Ocean is called *patrem rerum*, with reference, says Servius, to the opinions of those who, as Thales, supposed all things to be generated out of water.) The sun and stars rose out of its waters and returned to them in setting. (*Il.* v. 5, 6, xviii. 487.) On its shores were the abodes of the dead, accessible to the heroic voyager under divine direction. (*Od.* x., xi., xii.) Among the epithets with which the word is coupled, there is one, ἄψορρος (*flowing backwards*), which has been thought to indicate an acquaintance with the *tides* of the Atlantic; but the meaning of the word is not certain enough to warrant the inference. (Hom. *Il.* xviii. 399, xx. 65; Hesiod, *Theog.* 776.)

Whether these views were purely imaginary or entirely mythical in their origin, or whether they were partly based on a vague knowledge of the waters outside of the Mediterranean, is a fruitful subject of debate. Nor can we fix, except within wide limits, the period at which they began to be corrected by positive information. Both scripture and secular history point to enterprizes of the Phoenicians beyond the Straits at a very early period; and, moreover, to a suspicion, which was attempted more than once to be put to the proof, that the Mediterranean on the W. and the Arabian Gulf on the S. opened into one and the same great body of water. It was long, however, before this identity was at all generally accepted. The story that Africa had actually been circumnavigated, is related by Herodotus with the greatest distrust [LIBYA]: and the

question was left, in ancient geography, with the great authority of Ptolemy on the negative side In fact, the progress of maritime discovery, proceeding independently in the two directions, led to the knowledge of the two great expanses of water, on the S. of Asia, and on the W. of Africa and Europe, while their connection around Africa was purely a matter of conjecture. Hence arose the distinction marked by the names of the *Southern* and the *Western* Seas, the former being constantly used by Herodotus for the Indian Ocean [ARABICUS SINUS], while, somewhat curiously, the latter, its natural correlative, is only applied to the Atlantic by late writers.

Herodotus had obtained sufficient knowledge to reject with ridicule the idea of the river Ocean flowing round the earth (ii. 21, 23, iv. 8, 36); and it deserves notice, that with the notion he rejects the *name* also, and calls those great bodies of water, which we call *oceans, seas.* In this he is followed by the great majority of the ancient writers; and the secondary use of the word Ocean, which we have retained, as its common sense, was only introduced at a late period, when there was probably a confused notion of its exact primary sense. It is found in the Roman writers and in the Greek geographers of the Roman period, sometimes for the whole body of water surrounding the earth and sometimes with epithets which mark the application of the word to the Atlantic Ocean, which is also called simply Oceanus; while, on the other hand, the epithet Atlanticus is found applied to the Ocean in its wider sense, that is, to the whole body of water surrounding the three continents.

Herodotus speaks of the great sea on the W. of Europe and Asia, as *the sea beyond the Pillars* (of Hercules) *which is called the Sea of Atlas* (ἡ ἔξω στηλέων θάλασσα ἡ Ἀτλαντὶς,—fem. adj. of Ἄτλας,—καλεομένη: Her. i. 202.) The former name was naturally applied to it in contradistinction to the Mediterranean, or *the sea within the Pillars* (ἡ ἐντὸς Ἡρακλείων στηλῶν θάλασσα, Aristot. *Meteor.* ii. 1; Dion. Hal. i. 3; Plut. *Pomp.* 25); and the latter on account of the position assigned to the mythical personage Atlas, and to the mountain of the same name, at the W. extremity of the earth [ATLAS]. (Comp. Eurip. *Hippol.* 3; Aristot. *Prob.* xxvi. 54.) Both names are constantly used by subsequent writers. The former name is common in the simpler form of the *Outer Sea* (ἡ ἔξω θάλασσα, ἡ ἐκτὸς θάλαττα, Mare Externum, Mare Exterius); *outer*, with reference sometimes to the Mediterranean, and sometimes to all the inner waters of the earth. Another name constantly used is that of the *Great Sea* (ἡ μεγάλη θάλασσα, Mare Magnum), in contradistinction to all the lesser seas, and to the Mediterranean in particular. It was also called the *Western Sea* or *Ocean* (Ἑσπέριος Ὠκεανὸς, δυτικὸς and δυσμικὸς ὠκεανὸς, Hesperium Mare). The use of these names, and the ideas associated with them, require a more particular description.

The old Homeric notion of the river Ocean retained its place in the poets long after its physical meaning had been abandoned; and some indications are found of an attempt to reconcile it with later discoveries, by placing the Ocean *outside of all the seas of the world*, even of the outer seas. (Eurip. *Orest.* 1377.) Afterwards, the language of the old poets was adapted to the progress of geographical knowledge, by transferring the poetical name of the all-encircling *river* to the *sea* which was supposed (by most geographers, though not by all) to surround the inhabited world; and this encircling sea was called not only Ocean, but also by the specific names applied to the Atlantic Ocean. Thus, in the work *de Mundo*, falsely ascribed to Aristotle (c. 3), it is said that the whole world is an island surrounded by the Atlantic Sea (ὑπὸ τῆς Ἀτλαντικῆς καλουμένης θαλάσσης περιῤῥεομένη: and, again, πέλαγος δὲ, τὸ μὲν ἔξω τῆς οἰκουμένης, Ἀτλαντικὸν καλεῖται, καὶ ὁ Ὠκεανὸς, περιῤῥέων ἡμᾶς), and the same idea is again and again repeated in other passages of the work, where the name used is simply Ὠκεανὸς.

Similarly Cicero (*Somn. Scip.* 6) describes the inhabited earth as a small island, surrounded by that sea which men call *Atlantic*, and *Great*, and *Ocean* (illo mari, quod Atlanticum, quod Magnum, quem Oceanum, appellatis in terris). When he adds, that though bearing so great a name, it is but small, he refers to the idea that there were many such islands on the surface of the globe, each surrounded by its own small portion of the great body of waters.

Strabo refers to the same notion as held by Eratosthenes (i. pp. 56, 64, *sub fin.*; on the reading and meaning of this difficult passage see Seidel, *Fr. Eratosth.* pp. 71, foll., and Groskurd's German translation of Strabo), who supposed the circuit of the earth to be complete within itself, "so that, but for the hindrance arising from the great size of the Atlantic Sea, we might sail from Iberia (Spain) to India along the same parallel;" to which Strabo makes an objection, remarkable for its unconscious anticipation of the great discovery of Columbus, that there *may be* two inhabited worlds (or islands) in the temperate zone. (Comp. i. p. 5, where he discusses the Homeric notion, i. p. 32, and ii. p. 112.) Elsewhere he says that the earth is surrounded with water, and receives into itself several gulfs "from the outer sea" (ἀπὸ τῆς ἔξω θαλάττης κατὰ τὸν ὠκεανὸν, where the exact sense of κατὰ is not clear: may it refer to the idea, noticed above, of some distinction between the Ocean and even the outer seas of the world?). Of the gulfs here referred to, the principal, he adds, are four: namely, the Caspian on the N., the Persian and Arabian on the S., and the Mediterranean (ἡ ἐντὸς καὶ καθ' ἡμᾶς λεγομένη θάλαττα) on the W. Of his application of the name *Atlantic* to the whole of the surrounding Ocean, or at least to its southern, as well as western, portion, we have examples in i. p. 32 (καὶ μὴν σύρρους ἡ πᾶσα Ἀτλαντικὴ θάλασσα, καὶ μάλιστα ἡ κατὰ μεσημβρίαν), and in xv. p. 689, where he says that the S. and SE. shores of India run out into the Atlantic sea; and, in ii. p. 130, he makes India extend to "the Eastern Sea and the Southern Sea, which is part of the Atlantic" (πρός τε τὴν ἑῴαν θάλατταν καὶ τὴν νοτίαν τῆς Ἀτλαντικῆς). Similarly Eratosthenes had spoken of Arabia Felix as extending S. as far as the Atlantic Sea (μέχρι τοῦ Ἀτλαντικοῦ πελάγους, Strab. xvi. p. 767, where there is no occasion for Letronne's conjectural emendation, Αἰθιοπικοῦ, a name also which only occurs in the later geographers).

Of the use of the simple word *Oceanus*, as the name of the Atlantic Ocean, by writers about Strabo's time, examples are found in Cicero (*Leg. Manil.* 12), Sallust (*Jug.* 18), Livy (xxiii. 5), Horace (*Carm.* iv. 14. 47, 48), and Virgil (*Georg.* iv. 382); and the word is coupled with *mare* by Caesar (*B. G.* iii. 7, *mare Oceanum*), Catullus (*Carm.* 114, 6),

and Ovid (*Met.* vii. 267, *Oceani mare*). It should have been stated earlier that Polybius calls it the *Outer* and *Great Sea* (iii. 37. §§ 10, 11, *τὴν ἔξω καὶ μεγάλην προσαγορευομένην*); and in another passage he says that it was called by some Ὠκεανός, by others, *τὸ Ἀτλαντικὸν πέλαγος* (xvi. 29. § 6).

Of the geographers subsequent to Strabo, Mela states that the inhabited earth is entirely surrounded by the Ocean, from which it receives four seas, one from the N., two from the S., and the fourth from the W. (i. 1), meaning the same four gulfs which are specified by Strabo (see above). After describing the shores of the Mediterranean, he proceeds to speak of the sea without the Straits, under the name of Oceanus, as *ingens infinitumque pelagus*, and he particularly describes the phenomena of the tides; and then adds, that the sea which lies to the right of those sailing out of the Straits and washes the shore of Baetica, is called *aequor Atlanticum* (iii. 1). Elsewhere he speaks of the sea on the W. of Europe and Africa by the general name of Oceanus (ii. 6), and by the special names of Atlanticum Mare (i. 3, 4, iii. 10), and Atlanticus Oceanus (i. 5). Pliny speaks of it as *mare Atlanticum, ab aliis magnum* (iii. 5. s. 10).

Ptolemy distinguishes the Atlantic from the other outer seas or (as he generally calls them) oceans, by the name of the *Western Ocean* (*ὁ δυτικὸς ὠκεανός*, ii. 5. § 3), and makes it the W. boundary of Europe and Libya, except in the S. part of the latter continent, where he supposes the unknown land to stretch out to the W. (vii. 5. § 2, viii. 4. § 2, 13. § 2).

Agathemerus (ii. 14) says that the Great Sea (*ἡ μεγάλη θάλασσα*) surrounding the whole inhabited world is called by the common name of Ocean, and has different names according to the different regions; and, after speaking of the Northern, Southern, and Eastern Seas, he adds, that the sea on the west, from which our sea (*ἡ καθ' ἡμᾶς θάλασσα*, the Mediterranean) is filled, is called the Western Ocean (*Ἑσπέριος Ὠκεανός*), and, *κατ' ἐξοχήν*, the Atlantic Sea (*Ἀτλαντικὸν πέλαγος*). In another passage (ii. 4) he says that Lusitania lies adjacent to the Western Ocean (*πρὸς τῷ δυσμικῷ Ὠκεανῷ*), and that Tarraconensis extends from the *Ocean and the Outer Sea* to the Mediterranean; but whether we should understand this as making a precise distinction between the Outer Sea, as on the W. of Spain, and the Ocean, as further N., is not quite clear.

According to Dionysius Periegetes, the earth is surrounded on every side by the "stream of unwearied Ocean" (of course a mere phrase borrowed from the early poets), which, being one, has many names applied to it; of which, the part on the west is called Ἄτλας ἑσπέριος, which the commentators explain as two adjectives in opposition (vi. 27—42; comp. Eustath. *Comm.* and Bernhardy, *Annot.* ad loc.; also comp. Priscian, *Perieg.* 37, foll., and 72, where he uses the phrase *Atlantis ab unda;* Avien. *Descr. Orb.* 19, 77, foll., *gurgitis Hesperii, aequoris Hesperii tractus*, 398, *Atlantei vis aequoris*, 409, *Hesperii aequoris undum*). At v. 335 he speaks of the Iberian people as *γείτων Ὠκεανοῖο πρὸς ἑσπέρου*. Agathemerus, Dionysius, and the imitators of the latter, Priscian and Avienus, describe the four great gulfs of the Outer Sea in nearly the same manner as Strabo and Mela.

Avienus (*Or. Marit.* pp. 80, foll.) distinguishes from the all-surrounding Ocean the sea between the SW. coast of Spain and the NW. coast of Africa, which he calls *Atlanticus sinus*, and regards it as a sort of outer gulf of the Mediterranean (*gurges hic nostri maris;* comp. 390, foll., where *Oceanus, pontus maximus, gurges oras ambiens, parens nostri maris*, is distinguished from *Hesperius aestus atque Atlanticum salum*); and, respecting the names, he adds (402, 403):

> "Hunc usus olim dixit Oceanum vetus,
> Alterque dixit mos Atlanticum mare."

Suidas defines the term Ἀτλαντικὰ πελάγη as including both the Western and Eastern Oceans (Ἑσπέριος Ὠκεανὸς καὶ Ἑῷος), and all unnavigable seas; and the Atlantic Sea he explains as the Ocean (Ἀτλαντὶς θάλαττα ὁ Ὠκεανός).

It is enough to refer to such variations of the name as *Atlanteus Oceanus* (Claud. *Nupt. Hon. et Mar.* 280, *Prob. et Olyb. Cons.* 35), and *Atlanteus Gurges* (Stat. *Achill.* i. 223); and to passages in which particular reference is made to the connection between the Atlantic and the Mediterranean at the Straits, which are sometimes called the *mouth of the Atlantic Sea*, or *of the Ocean* (*τὸ τῆς θαλάττης τῆς Ἀτλαντικῆς στόμα*, Scymn. Ch. 138; *Oceani Ostium*, Cic. *Leg. Manil.* 12; Strab. iii. p. 139).

Respecting the progress of discovery in the Atlantic, allusion has been made above to the early enterprizes of the Phoenicians; but the first detailed account is that of the voyage of Hanno, who was sent out from Carthage, about B. C. 500, with a considerable fleet, to explore the W. coast of Africa, and to found colonies upon it. Of his narrative of his voyage, we still possess a Greek translation. The identification of his positions is attended with some difficulty; but it can be made out that he advanced as far S. as the mouths of the *Senegal* and *Gambia*. [LIBYA: *Dict. of Biog.* art. *Hanno.*] Pliny's statement, that Hanno reached Arabia, is a fair example of the exaggerations prevalent on these matters, and of the caution with which the stories of the circumnavigation of Africa should be examined. (ii. 67.) About the same time the Carthaginians sent out another expedition, under Himilco, to explore the Atlantic N. of the Straits. (Plin. *l. c.*) Himilco's narrative has not come down to us; but we learn some of its contents from the *Ora Maritima* of Avienus. (108, foll., 375, foll.) He discovered the British islands, which he placed at the distance of four months' voyage from the Straits; and he appears to have given a formidable description of the dangers of the navigation of the ocean, from sudden calms, from the thick sluggish nature of the water, from the sea-weed and even marine shrubs which entangled the ship, the shoals over which it could scarcely float, and the sea-monsters which surrounded the voyager as he slowly made his way through all these difficulties. Such exaggerated statements would meet with ready credence on account of the prevalent belief that the outer ocean was unnavigable, owing, as the early poets and philosophers supposed, to its being covered with perpetual clouds and darkness (Hesiod ap. Schol. Apoll. Rhod. iv. 258, 283; Pind. *Nem.* iii. 79; Eurip. *Herod.* 744); and it is thought, with much probability, that these exaggerations were purposely diffused by the Carthaginians, to deter the mariners of other nations from dividing with themselves the navigation of the ocean. At all events, these stories are often repeated by the Greek writers (Herod. ii. 102; Aristot. *Meteor.* ii. 1, 13, *Mir.*

Ausc. 136; Plat. *Tim.* p. 24, 25, comp. ATLANTIS; Theophrast. *Hist. Plant.* iv. 6. § 4; Scylax, p. 53; Suid. *s. v.* ἅπλωτα πελάγη, Ἀτλαντικὰ πελάγη; comp. Ideler, ad *Aristot. Meteor.* p. 504, and Humboldt, *Krit. Untersuch.* vol. ii. p. 67, foll., who explains the stories of the shallows and sea-weed as referring to the extraordinary phaenomena which the parts of the ocean near the coast would present at low water to voyagers previously unacquainted with its tides).

The most marked epochs in the subsequent history of discovery in the Atlantic are those of the voyage of Pytheas of Massilia (about B. C. 334) round the NW. shores of Europe, described in his lost works, περὶ τοῦ ὠκεανοῦ and περίοδος τῆς γῆς, which are frequently cited by Strabo, Pliny, and others (*Dict. of Biog. s. v.*); the voyage of Polybius, with the fleet of Scipio, along the W. coast of Africa [LIBYA]; and the intercourse of the Romans with the British isles [BRITANNIA]. But, as the Atlantic was not, like the Indian Ocean, a great highway of commerce, and there was no motive for the navigation of its stormy seas beyond the coasts of Spain and Gaul, little additional knowledge was gained respecting it. The latest views of the ancient geographers are represented in the statements of Dionysius and Agathemerus, referred to above.

So little was known of the prevailing currents and winds, and other physical features of the Atlantic, that their discussion does not belong to ancient geography, except with reference to one point, which is treated under LIBYA, namely the influence of the currents along the W. coast of Africa on the attempts to circumnavigate that continent.

The special names most in use for portions of the Atlantic Ocean were the following: OCEANUS GADITANUS, the great gulf (if the expression may be allowed) outside the Straits, between the SW. coast of Spain and the NW. coast of Africa, to which, as has been seen above, some geographers gave the name of the Atlantic Sea or Gulf, in a restricted sense: OCEANUS CANTABER (Καντάβριος ὠκεανός: *Bay of Biscay*), between the N. coast of Spain and the W. coast of Gaul: MARE GALLICUM or OCEANUS GALLICUS, off the NW. coast of Gaul, at the mouth of the *English Channel*: and MARE BRITANNICUM or OCEANUS BRITANNICUS, the E. part of the Channel, and the *Straits of Dover*, between the mouths of the Sequana (*Seine*) and the Rhenus (*Rhine*). All to the N. of this belonged to the Northern Ocean. [OCEANUS SEPTENTRIONALIS.]

Of the islands in the Atlantic, exclusive of those immediately adjacent to the mainlands of Europe and Africa, the only ones known to the ancients were those called by them FORTUNATAE INSULAE, namely, the *Canaries*, with, perhaps, the *Madeira* group. The legend of the great island of ATLANTIS, and its connection with the question of any ancient knowledge of the great Western Continent, demands a separate article. [P. S.]

ATLANTIS (ἡ Ἀτλαντὶς νῆσος: *Eth.* Ἀτλαντῖνοι, Procl. *ad Plat. Tim.*; *Schol. in Plat. Rep.* p. 327), the *Island of Atlas*, is first mentioned by Plato, in the *Timaeus* (p. 24), and the *Critias* (pp. 108, 113). He introduces the story as a part of a conversation respecting the ancient history of the world, held by Solon with an old priest of Saïs in Egypt. As an example of the ignorance of the Greeks concerning the events of remote ages, and in particular of the Athenians respecting the exploits of their own forefathers, the priest informs Solon that the Egyptian records preserved the memory of the fact, that 9000 years earlier the Athenians had repelled an invading force, which had threatened the subjugation of all Europe and Asia too. This invasion came from the Atlantic Sea, which was at that time navigable. In front of the strait called the Pillars of Hercules (and evidently, according to Plato's idea, not far from it), lay an island (which he presently calls Atlantis), greater than Libya and Asia taken together, from which island voyagers could pass to other islands, and from them to the opposite continent, which surrounds that sea, truly so called (*i. e.* the Atlantic). For the waters within the strait (*i. e.* the Mediterranean), may be regarded as but a harbour, having a narrow entrance; but that is really a sea, and the land which surrounds it may with perfect accuracy be called a continent (*Tim.* p. 24, e—25, a.).

The above passage is quoted fully to show the notion which it exhibits, when rightly understood, that beyond and on the opposite side of the Atlantic there was a vast continent, between which and the W. shores of Europe and Libya were a number of islands, the greatest of which, and the nearest to our world, was that called Atlantis.

In this island of Atlantis, he adds, there arose a great and powerful dynasty of kings, who became masters of the whole island, and of many of the other islands and of parts of the continent. And moreover, on this side the Atlantic, within the Straits, they ruled over Libya up to Egypt, and Europe up to Tyrrhenia. They next assembled their whole force for the conquest of the rest of the countries on the Mediterranean; but the Athenians, though deserted by their allies, repelled the invaders, and restored the liberty of all the peoples within the Pillars of Hercules. But afterwards came great earthquakes and floods, by which the victors in the contest were swallowed up beneath the earth, and the island of Atlantis was engulphed in the sea, which has ever since been unnavigable by reason of the shoals of mud created by the sunken island. (*Tim.* p. 25, a—d.)

The story is expanded in the *Critias* (p. 108, e, foll.), where, however, the latter part of it is unfortunately lost. Here Plato goes back to the original partition of the earth among the gods, and (what is of some importance as to the interpretation of the legend), he particularly marks the fact that, of the two parties in this great primeval conflict, the Athenians were the people of Athena and Hephaestus, but the Atlantines the people of Poseidon. The royal race was the offspring of Poseidon and of Cleito, a mortal woman, the daughter of Evenor, one of the original earthborn inhabitants of the island, of whose residence in the centre of the island Plato gives a particular description. (*Crit.* p. 113, c—e.) Cleito bore to Poseidon five pairs of twins, who became the heads of ten royal houses, each ruling a tenth portion of the island, according to a partition made by Poseidon himself, but all subject to the supreme dynasty of Atlas, the eldest of the ten, on whom Poseidon conferred the place in the centre of the island, which had been before the residence of Evenor, and which he fortified and erected into the capital. We have then a minute description of the strength and magnificence of this capital; of the beauty and fertility of the island, with its lofty mountains, its abundant rivers, its exuberant vegetation, its temperate climate, its irrigation by natural

moisture in the winter and by a system of aqueducts in the summer, its mineral wealth, its abundance in all species of useful animals; and the magnificent works of art with which it was adorned, especially at the royal residences. We have also a full account of the people; their military order; their just and simple government, and the oaths by which they bound themselves to obey it; their laws, which enjoined abstinence from all attacks on one another, and submission to the supreme dynasty of the family of Atlas, with many other particulars. For many generations, then, as long as the divine nature of their founder retained its force among them, they continued in a state of unbounded prosperity, based on wisdom, virtue, temperance, and mutual regard; and, during this period, their power grew to the height previously related. But at length, the divine element in their nature was overpowered by continual admixture with the human, so that the human character prevailed in them over the divine; and thus becoming unfit to bear the prosperity they had reached, they sank into depravity: no longer understanding the true kind of life which gives happiness, they believed their glory and happiness to consist in cupidity and violence. Upon this, Jove, resolving to punish them, that they might be restored to order and moderation, summoned a council of the gods, and addressed them in words which are lost with the rest of this dialogue of Plato.

The truth or falsehood, the origin and meaning, of this legend, have exercised the critical and speculative faculties of ancient and modern writers. That it was *entirely* an invention of Plato's, is hardly credible; for, even if his derivation of the legend from Egypt through Solon, and his own assertion that the story is "strange but altogether true" (*Tim.* p. 20, d.) be set down to his dramatic spirit, we have still the following indications of its antiquity. First, if we are to believe a Scholiast on Plato (*Repub.* p. 327), the victory of the Athenians over the Atlantines was represented on one of the *pepli* which were dedicated at the Panathenaea. Diodorus also refers to this war (iii. 53). Then, the legend is found in other forms, which do not seem to be entirely copied from Plato.

Thus Aelian relates at length a very similar story, on the authority of Theopompus, who gave it as derived from a Phrygian source, in the form of a relation by the satyr Silenus to the Phrygian Midas; and Strabo just mentions, on the authority of Theopompus and Apollodorus, the same legend, in which the island was called Meropis and the people Meropes (Μεροπὶς, Μέροπες, the word used by Homer and Hesiod in the sense of *endowed with the faculty of articulate speech*: Aelian, *V. H.* iii. 18, comp. the Notes of Perizonius; Strab. vii. p. 299: comp. Tertull. *de Pallio*, 2.)

Diodorus, also, after relating the legend of the island in a form very similar to Plato's story, adds that it was discovered by some Phoenician navigators who, while sailing along the W. coast of Africa, were driven by violent winds across the Ocean. They brought back such an account of the beauty and resources of the island, that the Tyrrhenians, having obtained the mastery of the sea, planned an expedition to colonize the new land, but were hindered by the opposition of the Carthaginians. (Diod. v. 19, 20.) Diodorus does not mention the name of the island; and he differs from Plato by referring to it as still existing. Pausanias relates that a Carian Euphemus had told him of a voyage during which he had been carried by the force of the winds into the outer sea, "into which men no longer sail; where he came to desert islands, inhabited by wild men with tails, whom the sailors, having previously visited the islands, called Satyrs, and the islands Σατυρίδες" (i. 23. § 5, 6); whom some take for monkeys; unless the whole narrative be an imposture on the grave traveller. Another account is quoted by Proclus (*ad Plat. Tim.* p. 55) from the *Aethiopica* of Marcellus, that there were seven islands in the Outer Sea, which were sacred to Persephone, and three more, sacred to Pluto, Ammon, and Poseidon; and that the inhabitants of this last preserved from their ancestors the memory of the exceedingly large island of Atlantis, which for many ages had ruled over all the islands in the Atlantic Sea, and which had been itself sacred to Poseidon. Other passages might be quoted, but the above are the most important.

The chief variations of opinion, in ancient and modern times, respecting these traditions, are the following. As to their *origin*, some have ascribed them to the hypotheses, or purely fictitious inventions of the early poets and philosophers; while others have accepted them as containing at least an element of fact, and affording, as the ancients thought, evidence of the existence of unknown lands in the Western Ocean, and, as some modern writers suppose, indications that *America* was not altogether unknown to the peoples of antiquity. As to the *significance* of the legend, in the form which it received from the imagination of the poets and philosophers, some have supposed that it is only a form of the old tradition of the "golden age;" others, that it was a symbolical representation of the contest between the primeval powers of nature and the spirit of art and science, which plays so important a part in the old mythology; and others that it was merely intended by Plato as a form of exhibiting his ideal polity: the second of these views is ably supported by Proclus in his commentary on the *Timaeus*; and has a great deal to be said in its favour. As to the former question, how far the legend may contain an element of fact, it seems impossible to arrive at any certain conclusion. Those who regard it as pure fiction, but of an early origin, view it as arising out of the very ancient notion, found in Homer and Hesiod, that the abodes of departed heroes were in the extreme west, beyond the river Oceanus, a locality naturally assigned as beyond the boundaries of the inhabited earth. That the fabulous prosperity and happiness of the Atlantines was in some degree connected with those poetical representations, is very probable; just as, when islands were actually discovered off the coast of Africa, they were called the *Islands of the Blest*. [FORTUNATAE INSULAE.] But still, important parts of the legend are thus left unaccounted for; its mythological character, its derivation from the Egyptian priests, or other Oriental sources; and, what is in Plato its most important part, the supposed conflict of the Atlantines with the people of the old world. A strong argument is derived also from the extreme improbability of any voyagers, at that early period, having found their way in safety across the Atlantic, and the double draft upon credulity involved in the supposition of their safe return; the return, however, being generally less difficult than the outward voyage. But this argument, though strong, is not decisive against the *possibility* of such a voyage. The opinions of the ancients may be gathered up in a few

words. Proclus (*ad Tim.* p. 24) tells us that Crantor, the first commentator on Plato, took the account for a history, but acknowledged that he incurred thereby the ridicule of his contemporaries. Strabo (ii. p. 102) barely mentions the legend, quoting the opinion of Poseidonius, that it was possibly true; and Pliny refers to it with equal brevity (vi. 31. s. 36). But of far more importance than these direct references, is the general opinion, which seems to have prevailed more or less from the time when the globular figure of the earth was established, that the known world occupied but a small portion of its surface, and that there might be on it other islands, besides our triple continent. Some statements to this effect are quoted in the preceding article [ATLANTICUM MARE]. Mela expressly affirms the existence of such another island, but he places it in the southern temperate zone (i. 9. § 2). Whether such opinions were founded on the vague records of some actual discovery, or on old mythical or poetical representations, or on the basis of scientific hypothesis, can no longer be determined; but, from whatever source, the anticipation of the discovery of America is found (not to mention other and less striking instances) in a well-known passage of Seneca's *Medea*, which is said to have made a deep impression on the mind of Columbus (Act ii. v. 375, et seq.):—

> "Venient annis saecula seris,
> Quibus Oceanus vincula rerum
> Laxet, et ingens pateat tellus,
> Tethysque novos detegat orbes;
> Nec sit terris ultima Thule."

In modern times the discussion has been carried on with great ingenuity, but with no certain result. All that has been said, or perhaps that can be said upon it, is summed up in the Appendix of Cellarius to his great work on ancient geography, "*De Novo Orbe, an cognitus fuerit veteribus* (vol. ii. p. 251—254), and in Alexander von Humboldt's *Kritische Untersuchungen über die historische Entwickelung der geographischen Kenntnisse der neuen Welt*, Berlin, 1826.

One point seems to deserve more consideration than it has received from the disputants on either side; namely, whether the stories of ancient voyagers, which seem to refer to lands across the Atlantic, may not, after all, be explained equally well by supposing that the distant regions reached by these adventurers were only parts of the W. shores of Europe or Africa, the connection of which with our continent was not apparent to the mariners who reached them after long beating about in the Atlantic. By the earliest navigators everything beyond the Straits would be regarded as remote and strange. The story of Euphemus, for example, might be almost matched by some modern adventures with negroes or apes on the less known parts of the W. coast of Africa. It is worthy of particular notice, that Plato describes Atlantis as evidently not far from the Straits, and allots the part of it nearest our continent to Gadeirus, the twin brother of Atlas, the hero eponymus of the city of Gades or Gadeira (*Cadiz*) If this explanation be at all admissible (merely as the ultimate core of fact round which the legend grew up), it is quite conceivable that, when improved knowledge had assigned the true position to the coasts thus vaguely indicated, their disappearance from their former supposed position would lead to the belief that they had been swallowed up by the ocean. On this hypothesis, too, the war of the Atlantines and the Greeks might possibly refer to some very ancient conflict with the peoples of western Europe. [P. S.]

ATLAS (Ἄτλας: *adj.* Ἄτλας, fem. Ἀτλαντίς: Ἀτλαντικός, Atlanticus, Atlantēus), a name transferred from mythology to geography, and applied to the great chain of mountains in the NW. of Africa, which we still call by the same name. But the application of the name is very different now from what it was with the ancients. It is now used to denote the whole mountain system of Africa between the Atlantic Ocean on the W. and the Lesser Syrtis on the E., and between the Mediterranean on the N. and the Great Desert (*Sāhăra*) on the S.; while, in the widest extent assigned to the name by the ancients, it did not reach further E. than the frontier of Marocco; and within this limit it evidently has different significations. To understand the several meanings of the word, a brief general view of the whole mountain chain is necessary.

The western half of North Africa is formed by a series of terraces, sloping down from the great desert table land of North Central Africa to the basin of the Mediterranean; including in this last phrase that portion of the Atlantic which forms a sort of gulf between Spain and the NW. coast of Africa. These terraces are intersected and supported by mountain ranges, having a general direction from west to east, and dividing the region into portions strikingly different in their physical characters. It is only of late years that any approach has been made to an accurate knowledge of this mountain system; and great parts of it are still entirely unexplored. In the absence of exact knowledge, both ancient and modern writers have fallen into the temptation of making out a plausible and symmetrical system by aid of the imagination. Thus Herodotus (ii. 32, iv. 181) divides the whole of N. Africa (Libya) W. of the Nile-valley into three parallel regions: the inhabited and cultivated tract along the coast; the Country of Wild Beasts (ἡ θηριώδης) S. of the former; and, S. of this, the Sandy Desert (ψάμμος καὶ ἄνυδρος δεινῶς καὶ ἐρῆμος πάντων, comp. iv. 184, sub fin.), or, as he calls it in iv. 181, a ridge of sand, extending like an eyebrow (ὀφρύη ψάμμης) from Thebes in Egypt to the Pillars of Hercules. A similar threefold division has been often made by modern writers, varying from that of Herodotus only in naming the central portion, from its characteristic vegetation, the Country of Palms (*Beled-el-Jerid*); and the parallel chains of the Great and Lesser Atlas have been assigned as the lines of demarcation on the S. and in the middle. Such views have just enough foundation in fact to make them exceedingly apt to mislead. The true physical geography of the region does not present this symmetry, either of arrangement or of products. It is true that the whole region may be roughly divided into two portions, the cultivated land and the sandy desert (or, as the Arabs say, the *Tell* and the *Sāhăra*), between which the main chain of Atlas may be considered, in a very general sense, as the great barrier; and that there are districts between the two, where the cultivation of the soil ceases, and where the palm chiefly, but also other trees, flourish, not over a continuous tract, but in distinct oases: but even this general statement would require, to make it clear and accurate, a more detailed exposition than lies within our province. In general terms, it may be observed that the *Tell*, or corn-growing country, cannot be defined by the limit of the Lesser or even the Great Atlas

(terms themselves far from definite), but that it even extends, in some places (as in *Tunis*), beyond the latter chain; that the *Sahara*, or sandy desert, spreads itself, in patches of greater or lesser extent, far to the N. of the great desert table-land, which the name is commonly understood to denote; that the palm-growing *oases* (*wadys*) are found in all parts of the *Sahara*, on both sides of the Atlas, but chiefly in series of detached oases, not only on the N., but also on the S. margin of the main chain of mountains; and that, where any continuous tract can be marked out as a belt of demarcation between the *Tell* and the *Sahara*, its physical character is that of *pasture-land*, with numerous fruit-trees of various species. The *Tell* is formed by a series of valleys or river-basins, lying for the most part in the mountains near the coast, which form what is called the Lesser Atlas; and opening out, in the NW. of *Marocco*, into extensive plains, which, however, the larger they become, assume more and more of the desert character, for the obvious reason that they are less completely irrigated by the streams flowing through them. The lower mountain ridges, which divide these basins, seem generally well wooded; but, as they form the strongholds of the Berbers, they are little known to the Europeans, or even to the Arabs. The southern limit of the *Tell* cannot be defined by any one marked chain of mountain; but in proportion as the main chain retires from the sea, so does the *Sahara* gain upon the *Tell;* and, on the other hand, where, as in *Tunis*, the main chain approaches the sea, the *Tell* even reaches its southern side.

To the S. of the *Tell*, the *Sahara*, in the Arab sense of the word, extends over a space which can be tolerably well defined on the S. by a chain of oases, running in the general direction of WSW. to ENE. from the extreme S. of the empire of *Marocco*, in about 28° or 29° N. lat., to the bottom of the Lesser Syrtis, between 33° and 34°. As far as can be judged from the very imperfect data we possess, this series of oases marks a depression between the S. slopes of the Atlas system and the high table-land of the Great Desert. It thus forms a natural boundary between the "Barbary States," or that portion of North Africa which has always fallen more or less within the history of the civilized world, and the vast regions of Central Africa, peopled by the indigenous black tribes included under the general names of Ethiopians or Negroes. To the S. of this boundary lies the great sandy desert which we commonly call the *Sahara;* to the N., the *Sahara* of the Arabs of Barbary: the physical distinction being as clearly marked as that between an ocean, with here and there an island, and an archipelago. The Great Desert is such an ocean of sand, with here and there an oasis. The *Sahara* of Barbary is "a vast archipelago of oases, each of which presents to the eye a lively group of towns and villages. Each village is surrounded by a large circuit of fruit-trees. The palm is the king of these plantations, as much by the height of its stature as the value of its products; but it does not exclude other species; the pomegranate, the fig, the apricot, the peach, the vine, grow by its side." (Carette, *l'Algérie Meridionale*, in the *Exploration Scientifique de l'Algérie*, vol. ii. p. 7.) Such is the region confounded by some writers with the Desert, and vaguely described by others as the *Country of Palms*, a term, by the bye, which the Arabs confine to the Tunisian *Sahara* and its oases. As for Herodotus's "Country of Wild Beasts," whatever may have been the case in his time, the lion and other beasts of prey are now confined to the mountains, and do not venture down into the plains. The inhabitants of the *Sahara* are connected with the peoples N. of them by race and by the interchange of the first necessaries of life, receiving the corn of the *Tell*, and giving their fruits in return; while they are severed from the peoples of the S. by race, habits, and the great barrier of the true sandy desert. A particular description of the oases of the *Sahara*, and of the other points only indicated here, will be found in the work just quoted.

The only delimitation that can be made between the *Tell* and the *Sahara* is assigned by the difference of their products. But, even thus, there are some intervening regions which partake of the character of both. Carette traces three principal basins of this kind in *Algeria:* the eastern, or basin of lake *Melrir*, S. of Tunis and the E. part of *Algeria*, and W. of the Lesser Syrtis, characterized by the culture both of corn and fruits; the central, or basin of *El-Hodna*, far NW. of the former, where both kinds of culture are mixed with pastures; and the W., or basin of the upper *Shelif* (the ancient Chinalaph), where cultivation is almost superseded by pasturage.

Such is a general view of the country formed by what we now call the Atlas system of mountains, the main chain of which defines the S. margin of the basin of the Mediterranean. The precise determination of this main chain is somewhat difficult. Its general direction is not parallel to that of the whole system; but it forms a sort of diagonal, running about WSW. and ENE., and nearly parallel to the line of oases mentioned above as the southern limit of the system. The true W. extremity seems to be *C. Ghir* or *Ras Aferni*, about 30° 35′ N. lat.; and the E. extremity is formed by the NE. point of Tunis, *Ras Addar* or *C. Bon*. At this end it communicates, by branches thrown off to the S., with the mountain chain which skirts the eastern half of the Mediterranean coast from the Lesser Syrtis to the Nile valley; but this latter range is regarded by the best geographers as a distinct system, and not a part of the Atlas. The first part of the main chain, here called the *High Atlas*, proceeds in the direction above indicated as far as *Jebel Miltsin*, S. of the city of *Marocco*, where it attains its greatest height, and whence it sends off an important branch to the S., under the name of *Jebel Hadrar*, or the Southern Atlas, which terminates on the Atlantic between *C. Nun* and *C. Jubi*. The main chain proceeds till it reaches a sort of knot or focus, whence several ranges branch out, in 31° 30′ N. lat. and 4° 50′ W. long. It here divides into two parts; one of which, retaining the name of the *High Atlas*, runs N. and NE. along the W. margin of the river *Mulwia* (the ancient Malva or Molochath), terminating on the W. of the mouth of that river and on the frontier of *Marocco*. From this range several lateral chains are thrown off to the N. and W., enclosing the plains of *N. Marocco*, and most of them reaching a common termination on the S. side of the *Straits of Gibraltar:* the one skirting the N. coast is considered as the W. portion of the *Lesser Atlas* chain, to be spoken of presently. From the usage of the ancient writers, as well as the modern inhabitants of the country, this so-called *High Atlas* has the best claim to be regarded as the prolongation of the main chain. But, on the ground of uniformity of direction, and to preserve a continuity through the whole system, geographers assign that

character to another range, which they call the *Great Atlas*, running from the same mountain knot, with an inclination more to the E., forming the SE. margin of the valley of the *Mulwia*, and, after an apparent depression about the frontier of *Marocco*, where it is little known, reappearing in the lofty group of *Jebel Amour*, in the meridian of *Shershell*, and thence continuing, in the direction already indicated, to *C. Bon*. Parallel to this range, and near the coast of the Mediterranean, from the mouth of the *Mulwia* to that of the *Mejerdah* (the ancient Bagradas) in Tunis, runs another chain, commonly called the *Lesser Atlas*, which may be regarded as an eastern prolongation of the *High Atlas* of N. Marocco; while its ridges may also be viewed as the walls of the terraces by which the whole system slopes down to the Mediterranean. These ridges are varied in number and direction, and the valleys formed by them constitute the greater portion of the *Tell:* the varied positions and directions of these valleys may be at once seen by the courses of the rivers on any good map of Algeria. In few places is there any tract of level land between the north side of the Lesser Atlas and the coast. Besides the less marked chains and terraces, which connect the Lesser Atlas with the principal chain, there is one well defined bridge, running WNW. and ESE. from about the meridian of *Algier* (the city) to that of *Constantineh*, which is sometimes described as the *Middle Atlas;* but this term is sometimes applied also to the whole system of terraces between the Great and Lesser Atlas. In the N. of Tunis (the ancient Zeugitana) the two chains coalesce.

The principal chain divides the waters which run into the Mediterranean (and partly into the Atlantic) from those which flow southwards towards the Great Desert. The latter, excepting the few which find their way into the Mediterranean about the Lesser Syrtis, are lost in the sands, after watering the oases of the *Sahara* of Barbary. Of the former, several perform the same office and are absorbed in the same manner; but a few break through the more northern chains and flow into the Mediterranean, thus forming the only considerable rivers of N. Africa: such are the *Mulwia* (Molochath) and *Mejerdah* (Bagradas). Of the waters of the Lesser Atlas, some flow S. and form oases in the *Sahara;* while others find their way into the Mediterranean, after a circuitous course through the longitudinal valleys described above; not to mention the smaller streams along the coast, which fall directly down the N. face of the mountains into the sea. Reference has already been made to the common error, which assumes to determine the physical character of the country by lines of demarcation drawn along the mountain ranges. On this point, Carette remarks (p. 26) that "in the east and in the centre, the region of arable culture passes the limits of the basin of the Mediterranean; while on the west, it does not reach them."

As to elevation, the whole system declines considerably from W. to E., the highest summits in Marocco reaching near 13,000 feet; in Tunis, not 5000. In its general formation, it differs from the mountains on the N. margin of the Mediterranean basin, by being less abrupt and having a tendency rather to form extensive table-lands than sharp crests and peaks.

The portion of this mountain system E. of the Molochath was known to the ancients by various names. [MAURETANIA: NUMIDIA.] The name of ATLAS seems never to have been extended by them beyond the original Mauretania (Tingitana), that is, not E. of the Molochath. The earliest notices we find are extremely vague, and partake of that fabulous character with which the W. extremity of the known earth was invested. On the connection of the name with the mythical personage, nothing requires to be added to what has been said under ATLAS in the *Dictionary of Mythology and Biography*.

As a purely geographical term, the name occurs first in Herodotus, whose Atlas is not a chain of mountains, but an isolated mountain in the line of his imaginary crest of sand, which has been already mentioned, giving name to a people inhabiting one of the oases in that ridge. [ATLANTES.] He describes it as narrow and circular, and so steep that its summit was said to be invisible: the snow was said never to leave its top either in summer or winter; and the people of the country called it the pillar of heaven (iv. 184). The description is so far accurate, that the highest summits of the Atlas, in Marocco, are covered with perpetual snow; but the account is avowedly drawn from mere report, and no data are assigned to fix the precise locality. With similar vagueness, and avowedly following ancient legends, Diodorus (iii. 53) speaks of the lake TRITONIS as near Ethiopia and the greatest mountain of those parts, which runs forward into the ocean, and which the Greeks call Atlas.

It was not till the Jugurthine War brought the Romans into contact with the people W. of the Molochath, that any exact knowledge could be obtained of the mountains of Mauretania; but from that time to the end of the Civil Wars the means of such knowledge were rapidly increased. Accordingly the geographers of the early empire are found speaking of the Atlas as the great mountain range of Mauretania, and they are acquainted with its native name of Dyrin (Δύριν), which it still bears, under the form of *Idrâr-n-Deren*, in addition to the corrupted form of the ancient name, *Jebel-Tedla*. The name of *Deren* is applied especially to the part W. of the great knot.

Strabo (xvii. p. 825) says that on the left of a person sailing out of the straits, is a mountain, which the Greeks call Atlas, but the barbarians Dyrin; from which runs out an offset (πρόπους) forming the NW. extremity of Mauretania, and called Cotes. [AMPELUSIA]. Immediately afterwards, he mentions the mountain-chain extending from Cotes to the Syrtes in such a manner that he may perhaps seem to include it under the name of Atlas, but he does not expressly call it so. Mela is content to copy, almost exactly, the description of Herodotus, with the addition from the mythologers "caelum et sidera non tangere modo vertice, sed sustinere quoque dictus est" (iii. 10. § 1). Pliny (v. 1) places the Atlas in the W. of Mauretania, S. of the river Sala, (or, as he elsewhere says, S. of the river Fut) and the people called Autololes, through whom, he says, is the road "ad montem Africae vel *fabulosissimum* Atlantem." He describes it as rising up to heaven out of the midst of the sand, rough and rugged, where it looks towards the shores of the ocean to which it gives its name, but on the side looking to Africa delightful for its shady groves, abundant springs, and fruits of all kinds springing up spontaneously. In the day-time its inhabitants were said to conceal themselves, and travellers were filled with a religious horror by the silence of its

solitudes and its vast height, reaching above the clouds and to the sphere of the moon. But at night, fires were seen blazing on its crests, its valleys were enlivened with the wanton sports of Aegipans and Satyrs, and resounded with the notes of pipes and flutes and with the clang of drums and cymbals. He then alludes to its being the scene of the adventures of Hercules and Perseus, and adds that the distance to it was immense. On the authority of the voyage of Polybius, he places it in the extreme S. of Mauretania, near the promontory of Hercules, opposite the island of Cerne. (Comp. vi. 31. s. 36.) After Ptolemy, king of Mauretania, had been deposed by Claudius, a war arose with a native chieftain Aedemon, and the Roman arms advanced as far as Mt. Atlas. In spite, however, of this opportunity, and of the resources of five Roman colonies in the province, Pliny insinuates that the Romans of equestrian rank, who commanded the expedition, were more intent on collecting the rich products of the country, to subserve their luxury, than on making inquiries in the service of science: they collected, however, some information from the natives, which Pliny repeats. His own contemporary, Suetonius Paulinus, was the first Roman general who crossed the Atlas:—a proof, by the bye, that the Marocco mountains only are referred to, for those of Algeria had been crossed by Roman armies in the Jugurthine War. He confirmed the accounts of its great height and of the perpetual snow on its summit, and related that its lower slopes were covered with thick woods of an unknown species of tree, somewhat like a cypress. He also gained some information respecting the country S. of the Atlas, as far as the river GER. Pliny adds that Juba II. had given a similar account of the Atlas, mentioning especially among its products the medicinal herb *euphorbia*. Solinus (c. 24) repeats the account of Pliny almost exactly.

Ptolemy mentions, among the points on the W. coast of Mauretania Tingitana, a mountain called ATLAS MINOR (Ἄτλας ἐλάττων) in 6° long. and 33° 10′ N. lat., between the rivers Duus and Cusa (iv. 1. § 2); and another mountain, called ATLAS MAJOR (Ἄτλας μείζων), the southernmost point of the province, S. of the river Sala, in 8° long. and 36° 30′ N. lat. (*ib.* § 4). These are evidently promontories, which Ptolemy regarded, whether rightly or not, as forming the extremities of portions of the chain; but of the inland parts of the range he gives no information. (Shaw, *Travels*, &c.; Pellissier, *Mémoires historiques et géographiques sur l'Algérie*, in the *Exploration*, &c., vol. vi. pp. 316, foll.; Jackson, *Account of Marocco*, p. 10; Ritter, *Erdkunde*, vol. i. pp. 883, foll.) [P. S.]

ATRAMI'TAE. [ADRAMITAE.]

ATRAE or HATRAE (Ἄτραι, Herodian iii. 28; Steph. Byz. *s. v.*; τὰ Ἄτρα, Dion Cass. lxvii. 31, lxxxv. 10; Hatra, Amm. xxv. 8; *Eth.* Ἀτρήνοι: *Al Hathr*, *Journ. Geog. Soc.*, vol. ix. p. 467), a strong place, some days' journey in the desert, west of the Tigris, on a small stream, now called the *Tharthar* (near Libanae, Steph. B. *s. v.* βαναί). Herodianus (*l. c.*) describes it as a place of considerable strength, on the precipice of a very steep hill; and Ammianus (*l. c.*) calls it *Vetus oppidum in media solitudine positum olimque desertum*. Zonaras calls it πόλιν Ἀράβιον. Mannert (v. 2) suggests that perhaps the βηθάτρα of Ptolemy (v. 18. § 13) represents the same place, it being a corruption for Bet-atra; but this seems hardly necessary: moreover, in some of the later editions of Ptolemy, the word is spelt βιμάτρα. The ruins of *Al Hathr*, which are very extensive, and still attest the former grandeur of the city, have been visited by Mr. Layard in 1846, who considers the remains as belonging to the Sassanian period, or, at all events, as not prior to the Parthian dynasty. (*Nineveh and its Remains*, vol. i. p. 110.) Mr. Ainsworth, who visited *Al Hathr* in company with Mr. Layard in the spring of 1840, has given a very full and interesting account of its present state, which corresponds exceedingly well with the short notice of Ammianus. (Ainsworth, *Res.* vol. ii. c. 35.) It appears from Dion Cassius (preserved in Xiphilinus) that Trajan, having descended the Tigris and Euphrates, and having proclaimed Parthamaspates king of Ctesiphon, entered Arabia against Atra, but was compelled to retire, owing to the great heat and scarcity of water; and that Septimius Severus, who also returned by the Tigris from Ctesiphon, was forced to raise the siege of the city after sitting twenty days before it, the machines of war having been burnt by "Greek fire," which Mr. Ainsworth conjectures to have been the bitumen so common in the neighbourhood. Its name is supposed by Mr. Ainsworth to be derived from the Chaldee Hutra, "a sceptre"—*i. e.* the seat of government. [V.]

ATRAX (Ἄτραξ, also Ἀτρακία, Steph. B.; Ptol. iii. 13. § 42: *Eth.* Ἀτράκιος), a Perrhaebian town in Thessaly, described by Livy as situated above the river Peneius, at the distance of about 10 miles from Larissa. (Liv. xxxii. 15, comp. xxxvi. 13.) Strabo says that the Peneius passed by the cities of Tricca, Pelinnaeum and Parcadon, on its left, on its course to Atrax and Larissa. (Strab. ix. p. 438.) Leake places Atrax on a height upon the left bank of the Peneius, opposite the village of *Gúnitza*. On this height, which is now called *Sidhiro-péliko* (Σίδηροπέλικος), a place where chippings of iron are found, Leake found stones and fragments of ancient pottery, and in one place foundations of an Hellenic wall. (Leake, *Northern Greece*, vol. iii. p. 368, vol. iv. p. 292.)

ATRE'BATES or ATREBATI (Ἀτρέβατοι, Strab. p. 194), one of the Belgic nations (Caesar, *B. G.* ii. 4), or a people of Belgium, in the limited sense in which Caesar sometimes uses that term. They were one of the Belgic peoples who had sent settlers to Britannia, long before Caesar's time (*B. G.* v. 12); and their name was retained by the Atrebates of Britannia. The Atrebates of Belgium were between the rivers *Somme* and the *Schelde*, and the position of their chief town Nemetocenna (*B. G.* viii. 46) or Nemetacum, is that of *Arras*, in the modern French department of *Pas de Calais*, on the *Scarpe*. The Morini were between the Atrebates and the sea. Their country in Caesar's time was marshy and wooded. The name Atrebates is partly preserved in *Arras*, and in the name of *Artois*, one of the ante-revolutionary divisions of France. In the middle-age Latin *Artois* is called Adertisus Pagus. But it is said that the limits of the Atrebates are not indicated by the old province of *Artois*, but by the extent of the old diocese of *Arras*. *Atrecht*, the German name of *Arras*, is still nearer to the form Atrebates.

In Caesar's Belgic War, B. C. 57, the Atrebates supplied 15,000 men to the native army (*B. G.* ii. 4), and they were defeated, together with the Nervii, by Caesar, in the battle on the banks of

the *Sambre*. (*B. G.* ii. 23.) Caesar gave the Atrebates a king, named Comm (*B. G.* iv. 21), whom he sent over to Britannia, before his first expedition, in order to induce the Britanni to acknowledge the Roman supremacy. Comm was also in Britannia during Caesar's second expedition (v. 22). Though Caesar had exempted the Atrebates from imposts and allowed them to enjoy their liberty, as a reward for Comm's services, and had also attached the Morini to the government of Comm, the Belgian joined his countrymen in the general rising against Caesar, under Vercingetorix. (*B. G.* vii. 76.) He finally submitted (viii. 47).

The Atrebates were included in Gallia Belgica under the empire. (Plin. iv. 7.) It seems that a manufacture of woollen cloths existed among the Atrebates in the later imperial period. (Trebellius Poll. *Gallien.* c. 6, and the notes of Salmasius, *Hist. Aug. Scriptores*, pp. 280, 514.) [G. L.]

ATREBATII (Ἀτρεβάτιοι, Ptol. ii. 3. § 26), in Britain, were the people about Calleva Attrebatum or *Silchester*. [BELGAE.] [R. G. L.]

ATROPATE'NE (Ἀτροπατηνή, Strab. xi. pp. 524—526; Ἀτροπάτιος Μηδία, Strab. xi. pp. 523—529; Ἀτροπατία and Ἀτροπάτιες, Steph. B.; Τροπατηνή, Ptol. vi. 2. § 5; Atropatene, Plin. vi. 13.) Strabo, in his description of Media, divides it into two great divisions, one of which he calls Μεγάλη, Media Magna; the other ἡ Ατροπάτιος Μηδία or ἡ Ἀτροπατηνή. He states that it was situated to the east of Armenia and Matiene, and to the west of Media Magna. Pliny (*l. c.*) affirms that Atropatene extended to the Caspian Sea, and that its inhabitants were a part of the Medes. Its extent, N. and E., is nowhere accurately defined; but it seems probable that it extended E. beyond the river Amardus. It seems also likely that it comprehended the E. portion of Matiene, which province is considered by Strabo (xi. p. 509) to have been part of Media. It must therefore have included a considerable part of the modern province of *Azerbaijan*. It derived its name from Atropates, or Atropes, who was governor of this district under the last Dareius, and, by a careful and sagacious policy with regard to the Macedonian invaders, succeeded in preserving the independence of the country he ruled, and in transmitting his crown to a long line of descendants, who allied themselves with the rulers of Armenia, Syria, and Parthia (Arrian, iii. 8, vi. 19, 29; Strab. xvi. p. 523; and Arrian, vii. 4, 13). The province of Atropatene was evidently one of considerable power, Strabo (xi. p. 523), on the authority of Apollonides, stating that its governor was able to bring into the field 10,000 horse and 40,000 foot; nor does it ever appear to have been completely conquered, though during the most flourishing times of the Parthian empire it was sometimes a tributary of that warlike race, sometimes governed by one of its own hereditary sovereigns, descended from Atropates. (Tac. *Ann.* xv. 2, 31.)

The whole of the district of Atropatene is very mountainous, especially those parts which lie to the NW. and W. The mountains bear respectively the names of Choatras, Montes Cadusii, and M. Iasonius, and are connected with M. Zagros. They were respectively outlying portions of the great chains of Taurus and Anti-Taurus (at present the mountain ranges of *Kurdistan*, *Rowandiz*, and *Azerbaijan*). Its chief rivers were the Cambyses, Cyrus, Amardus or Mardus, and the Charindas (which perhaps ought rather to be counted with the streams of Hyrcania). It had also a lake, called Spauta (Strab. xi. p. 523) which is probably the present lake of *Urmiah*.

The capital of Atropatene is called by Strabo (xi. p. 523) Gaza, by Pliny Gazae, by Ptolemy (vi. 18. § 4), Stephanus and Ammianus (xxiii. 6), Gazaca (Γάζακα). It is described thus by the first: "The summer residence of the kings of Media Atropatene is at Gaza, a city situated in a plain and in a strong fort, named Vera, which was besieged by M. Antonius in his Parthian war." It has been inferred from this that Strabo is speaking of two different places; but the probability is, that Gaza was the town in the plain, of which Vera was the keep or rock-citadel, especially as he adds, evidently speaking of *one* place, and on the authority of Adelphius, who accompanied Antony, "it is 2,400 stadia from the Araxes, which divides Armenia from Atropatene." Colonel Rawlinson has shown, in a very able and learned paper in the *Roy. Geogr. Journ.* (vol. x.), which has thrown more light on the geography of this part of Asia than any other work, ancient or modern, that this city bore at different periods of history several different names, and that its real name ought to be the Ecbatana of Atropatene, in contradistinction to the Ecbatana of Media Magna, now *Hamadán*. [ECBATANA.] [V.]

ATTACOTTI or ATTICOTTI, mentioned by Ammianus (xxvii. 28), as having, in conjunction with the Scots and Picts, harassed Britain. Mentioned, too, by St. Jerome (*adv. Jovin.* lib. ii.), as having been seen by him in Gaul, indulging in cannibalism; also that they had their wives in common. If so, these were not the Attacotti of their own proper British locality, but a detachment planted in Gaul. This we infer from the *Notitia*; where we have the *Attacotti Honoriani Seniores*, and the *Attacotti Honoriani Juniores*; the former in Gaul, and the latter in Gaul and Italy.

In the Irish annals, the Attacots (*Aiteachtuath*) take a far greater prominence. They appear as enemies to the native Irish as early as A. D. 56 and it is a suspicious circumstance, that in proportion as we approach the epoch of true history, they disappear; the same applying to the famous *Fir-Bolgs*. [R. G. L.]

ATTACUM (Ἄτταϰον: *Ateca* near *Calatayud*), a town of the Celtiberi in Hispania Tarraconensis, described on an inscription as a municipium, MUNICIP. ATTACENS. (Ptol. ii. 6; Morales, p. 69, b.). [P. S.]

ATTALEIA or ATTALIA (Ἀττάλεια, Ἀττα-λία: *Eth.* Ἀτταλεύς). 1. A city of Pamphylia. After mentioning Phaselis in Lycia, Strabo mentions Olbia as the first town in Pamphylia, then the river Catarrhactes, and then Attalia, a city founded by Attalus II. Philadelphus, king of Pergamum. Accordingly he places the Catarrhactes west of Attalia. Ptolemy mentions Phaselis, Olbia, and Attaleia, and then the Catarrhactes. Pliny mentions Olbia, but not Attalia (v. 27), though he mentions the Catarrhactes. The modern town of *Adalia*, now the largest place on the south coast of Asia Minor, corresponds in name to Attalia; but it is west of the Catarrhactes, now the *Duden Su*. Strabo describes the Catarrhactes as falling from a high rock, and the noise of the cataract was heard to a distance. It is generally assumed that Strabo means that it falls over a rock into the sea; but he does not say so, though this may be his meaning. Beaufort (*Karamania*, p. 135) observes, that on the west side of the town "there are only two small rivers, both of

which glide quietly into the sea through the sandy beach, and can by no means answer the description of the Catarrhactes." But there are many small rivulets which turn the mills near Adalia, and rush directly over the cliff into the sea; and if these rivulets were united, they would form a large body of water. (Beaufort.) The water of these streams is full of calcareous particles, and near some of the mouths stalactites were observed. It is very probable, then, that the lower course of this river may have undergone great changes since Strabo's time, and these changes are still going on. D'Anville considered *Adalia* to represent Olbia, and Attalia to be further east at a place called *Laara*, and he has been followed by others in identifying *Adalia* and Olbia; but this erroneous opinion is founded entirely on the order of the names in Strabo, who is contradicted in this matter by Ptolemy and the Stadiasmus. Spratt and his associates visited *Adalia*. The houses and walls contain many fragments of sculpture and columns: the cemeteries which are outside of the city also contain marble fragments and columns. The style of all the remains, it is said, is invariably Roman. Fourteen inscriptions were found, but not one of them contains the name of the place. As *Adalia* is now the chief port of the south coast of Asia Minor, it is probable that it was so in former times; and it is an excellent site for a city. Paul and Barnabas after leaving Perga went to Attalia, "and thence sailed to Antioch." (*Acts*, xiv. 25.) The church of Attalia was afterwards an episcopal see. There are imperial coins of Attalia, with the epigraph Ἀτταλεων.

Leake, who fixes Attalia at *Adalia*, supposed that Olbia might be found in the plain which extends from Adalia to the foot of Solyma; and it ought to be found here, according to Strabo's authority. About 3½ miles west of Adalia, near the coast, there are the remains of an ancient city, on an elevated flat with three precipitous sides, one side of which is bounded by the *Arab Su*. This agrees with Strabo's description of Olbia as a "great fort." The country between these ruins and Adalia is a rocky tract, incapable of cultivation, but the country west of them to the mountains of Solyma, is very fertile. This, as it is well observed in Spratt's *Lycia* (vol. i. p. 217), will explain Stephanus (*s. v.* Ὀλβία), who finds fault with Philo for saying that Olbia belongs to Pamphylia: he adds, "it is not in Pamphylia, but in the land of the Solymi;" and his remark is conformable to the physical character of the country. He says, also, that the true name is Olba. Mannert's conjecture of Olbia and Attalia being the same place, cannot be admitted. Strabo, in an obscure passage (p. 667), speaks of Corycus and Attalia together. Leake (*Asia Minor*, p. 192) interprets Strabo, by comparing with his text Stephanus (*s. v.* Ἀττάλεια) and Suidas (*s. v.* Κωρυκαῖος), to mean that Attalus fixed Attalia near a small town called Corycus, and that he inclosed Corycus and the new settlement within the same walls. This does not appear to be exactly Strabo's meaning; but Corycus was at least near Attalia, and received a colony and was fortified when Attalia was built.

2. A city of Lydia, originally named Agroeira or Alloeira. (Steph. *s. v.* Ἀττάλεια.) There is a place called *Adala* on the river Hermus, but Hamilton (*Researches, &c.* vol. i. p. 143) found no ancient remains there. [ATTEA.] [G. L.]

ATTA VICUS (Ἄττα κώμη), a town in the country of the Aetaeei, on the west of the Persian Gulf, and south of GERRHA (Ptol. vi. 7. § 15), which probably gave its name to the *Attene regio* of Pliny (vi. 28. s. 32), which he places on the Gerraicus Sinus, now the *Gulf of Bahrein*. The Attene regio has been identified with the peninsula of *Bahran*, which forms the eastern side of this gulf, and the Atta vicus with the modern *Khalt*, a town north of *Katura* (the Katara of Ptolemy), on the eastern coast of this peninsula. (Forster, *Geog. of Arabia*, vol. ii. pp. 221, 223.) [G. W.]

ATTEA (Ἄτταια), a place on the sea coast of Mysia, which, if we follow the order of Strabo's enumeration (p. 607), lies between Heracleia and Atarneus. It has been conjectured that it is the same place which is named Attalia in the Table. Pliny (v. 30) mentions an Attalia in Mysia, but he places it in the interior; and he also mentions the Attalenses as belonging to the conventus of Pergamum. It seems, then, there is some confusion in the authorities about this Attalia; and the Lydian Attalia of Stephanus and this Attalia of Pliny may be the same place. [G. L.]

ATTE'GUA (Ἀτέγουα: prob. *Teba*, between *Osuña* and *Antequera*), an inland town in the mountains of Hispania Baetica, in the district of Bastetania and the conventus of Corduba, mentioned in the war between Caesar and the sons of Pompey. (*Bell. Hisp.* 7, 8, 22; Dion Cass. xliii. 33; Val. Max. ix. 3; Frontin. *Strat.* iii. 14; Strab. iii. p. 141; Plin. iii. 1; Ukert, *Geographie*, vol. ii. pt. 1. p. 362.) [P. S.]

ATTELEBUSA, a small island in the Lycian sea, mentioned by Pliny (v. 31) and by Ptolemy. Beaufort (*Karamania*, p. 117) identifies it with the islet *Rashat*, which is separated from the Lycian shore by a narrow channel. *Adalia* is on the opposite side of the bay which the coast forms here. [G. L.]

ATTICA (ἡ Ἀττική, sc. γῆ), one of the political divisions of Greece. I. *Name.*—The name of Attica is probably derived from *Acte* (ἀκτή), as being a projecting peninsula, in the same manner as the peninsula of Mt. Athos was also called Acte. [ACTE.] *Attica* would thus be a corruption of *Actica* (Ἀκτική), which would be regularly formed from *Acte*. It is stated by several ancient writers that the country was originally called Acte. (Strab. ix. p. 391; Steph. B. *s. v.* Ἀκτή; Plin. iv. 7. s. 11.) Its name, however, was usually derived by the ancient writers from the autochthon Actaeus or Actaeon, or from Atthis, daughter of Cranaus, who is represented as the second king of Athens. (Paus. i. 2. § 6; Strab. ix. p. 397; Apollod. iii. 14. § 5.) Some modern scholars think that Attica has nothing to do with the word Acte, but contains the root *Att* or *Ath*, which we see in Ath-enae.

II. *Natural Divisions.*—Attica is in the form of a triangle, having two of its sides washed by the sea, and its base united to the land. It was bounded on the east by the Aegaean sea, on the west by Megaris and the Saronic gulf, and on the north by Boeotia. It is separated from Boeotia by a range of lofty, and in most places inaccessible, mountains, which extend from the Corinthian gulf to the channel of Euboea. The most important part of this range, immediately south of Thebes and Plataeae, and near the Corinthian gulf, was called Cithaeron. From the latter there were two chief branches, one extending SW. through Megaris under the name of the Oenean mountains, and terminating at the Scironian rocks on the Saronic gulf; and the other, called Parnes, running in a general easterly

direction, and terminating on the sea coast above the promontory Rhamnus. The modern name of Parnes is *Noziá;* that of Cithaeron, or at least of its highest point, is *Elaté*, derived from its fir-trees. These two chains of mountains, together with the central one of Cithaeron, completely protect the peninsula of Attica from the rest of Greece. It thus appears that Megaris naturally forms a part of the peninsula: it was one of the four ancient divisions of Attica, but was afterwards separated from it. [MEGARIS.]

There are two passes across the mountains from Corinth into the Megaris, which are spoken of under MEGARIS. Through the range of Cithaeron and Parnes there are three principal passes, all of which were of great importance in ancient times for the protection of Attica on the side of Boeotia. The most westerly of these passes was the one through which the road ran from Thebes and Plataeae to Eleusis; the central one was the pass of Phyle, through which was the direct road from Thebes to Athens; and the eastern one was the pass of Deceleia, leading from Athens to Oropus and Delium. A more particular account of these important passes is given below. [See Nos. 43, 48, 51.] The highest points of Mt. Parnes lie between the passes of Phyle and Deceleia: one of the summits rises to the height of 4193 feet.

From this range of mountains there descend several other ranges into the interior, between which there lie four plains of greater or less extent.

On the NW. boundary of Attica a range of mountains runs down to the south, terminating on the west side of the bay of Eleusis in two summits, formerly called *Cerata* (τὰ Κέρατα, Strab. ix. p. 395) or the *Horns*, now *Kandili:* this range forms the boundary between Attica and Megaris. Another mountain range, extending from Parnes to the south, terminates on the eastern side of the bay of Eleusis, and at the narrow strait which separates the island of Salamis from the mainland: it bore the general name of Aegaleos, and parts of it were also called Poecilum and Corydallus. [AEGALEOS.] Between the range of Cerata and that of Aegaleos lies the *Eleusinian* and *Thriasian Plain.*

Eastward of this plain lies the *Athenian Plain*, frequently called simply *The Plain* (τὸ Πέδιον). It is bounded on the west by Aegaleos, as has been already mentioned. Through this range of mountains there is an important pass leading from the Eleusinian into the Athenian plain. It is a narrow rocky opening between Mt. Corydallus, and is now called the pass of *Dhafni:* through it the Sacred Way from Eleusis to Athens formerly ran. Further north, towards Acharnae, are some openings in the heights, where are found ruins of a rampart, seven feet high, and five feet and a half thick, built along the crest of the hills: the summit of the wall forms a commanding platform towards the Eleusinian plain. (Leake, p. 143.) On the west the Athenian plain is bounded by a range of mountains, which also descends from Parnes. The northern part of this range appears to have been anciently called Brilessus (Thuc. ii. 23), and subsequently Pentelicus (τὸ Πεντελικὸν ὄρος, Paus. i. 32. § 1; Mons Pentelensis, Vitruv. ii. 8), now *Mendeli* or *Penteli.* The first Greek writer who applies the name of Pentelicus to this mountain is Pausanias; but as Strabo (ix. p. 399) speaks of Pentelic marble, we may infer with Leake that the celebrity of the marble quarried in the demus of Pentele, upon the side of Mt. Brilessus, had caused the name of Pentelicus to supplant that of the ancient Brilessus. The plain of Athens is bounded on the south-east by the lofty range of Mt. Hymettus, which is separated from that of Pentelicus by a depression about two miles in length. Hymettus, the highest point of which is 3506 feet, is separated by a remarkable break into two parts, the northern or greater Hymettus, now called *Telo-Vuni*, and the southern or lesser Hymettus, which formerly bore also the name of Anhydrus (Ἄνυδρος, Theophr. *de Sign. Pluv.* p. 419, Heins.) or the Waterless, now called *Mavro-Vuni.* The latter terminates in the promontory Zoster.

The hill of Lycabettus, in the neighbourhood of Athens, is spoken of elsewhere. [See p. 303, b.]

Sometimes both the Eleusinian and Athenian plains are included under the general name of *The Plain;* and the coast of these two plains was more specifically called *Acte.* (Strab. ix. p. 391.)

North-east of the Athenian plain, between Parnes, Pentelicus, and the sea, is a mountain district, known by the name of *Diacria* (Διακρία) in antiquity. Its inhabitants, usually called *Diacreis* or *Diacrii* (Διακρεῖς, Διακρίοι), were sometimes also termed *Hyperacrii* (Ὑπεράκριοι, Herod. i. 59), apparently from their dwelling on the other side of the mountain from the city. The only level part of this district is the small plain of Marathon, open to the sea. At the north-eastern extremity of this district, west of *Cape Kálamo*, there rises an eminence 2038 feet in height, which is probably the ancient Phelleus (Φελλεύς), a name which came to be used by the Athenians for any rocky heights adapted for the pasture of goats. (Aristoph. *Nub.* 71, *Acharn.* 272; Isaeus, *de Ciron. Hered.* p. 227, Reiske; Harpocrat., Suid., *s. v.* Φελλέα; Hesych. *s. v.* Φέλλος.)

South-east of the Athenian plain is an undulating district, anciently called *Mesogaea* (Μεσόγαια) or the Midland district, and now *Mesóghia.* It is bounded by Pentelicus on the north, Hymettus on the west, the sea on the east, and the hills of Paralia on the south

Paralia or *Paralus* (Παραλία, Πάραλος), i. e. the Sea-coast district, included the whole of the south of Attica, extending from the promontory Zoster on the west, and from Brauron on the east, to Sunium. It was a hilly and barren district, but contained the rich silver-mines of Laurium. (Thuc. ii. 55; Steph. B., Suid. *s. v.*)

It appears, then, that Attica is distributed into five natural divisions. 1. The Eleusinian or Thriasian Plain. 2. The Athenian Plain. 3. The Diacria or Highlands, including the Plain of Marathon. 4. The Mesogaea or Midland District. 5. The Paralia or Sea-coast District. This geographical distribution gave rise also to political divisions, as we shall see presently.

The small plain of Oropus, lying north of Parnes upon the Euboean channel, generally belonged to Attica, though physically separated from it, and properly a part of Boeotia. [OROPUS.]

The area of Attica is about 700 square miles, not including the island of Salamis, which is about 40 more. The length of the west coast from Cerata or the Horns to Sunium is about 60 miles, and the length of the east coast is about the same. (There is a good account of the physical features of Attica in the *Penny Cyclopaedia*, vol. iii. p. 59.)

III. *Rivers.* — The rivers of Attica are little better than mountain torrents, almost dry in summer, and only full in winter, or after heavy rains. The

Athenian plain is watered by two rivers, the Cephissus and the Ilissus. The Cephissus (Κηφισσός), which is the more important of the two, flows southwards from Mt. Parnes on the west side of Athens, and after crossing the Long Walls falls into the Phaleric bay. Strabo (x. p. 400) places its sources at Trinemii. Leake observes: "The most distant sources of the river are on the western side of Mt. Pentelicus, and the southern side of Mt. Parnes, and in the intermediate ridge which unites them; but particularly at *Kivisía*, at the foot of Pentelicus,—near *Fasídhero*, in the part of Diacria adjoining to the same mountain,—at *Tutóy*, near the ancient Deceleia, and in the steepest part of Mt. Parnes, from whence descends a broad torrent, which, passing near the village *Menídhi*, pours a large occasional supply into the main channel of the Cephissus." Strabo says (*l. c.*) that "the Cephissus is only a torrent stream, and that in summer it fails altogether;" but this is not in accordance with the account of most modern travellers, who represent it as the only river in Attica which is supplied with water during the whole year. In ancient times "it flowed in a single channel, and was probably carefully embanked: it is now allowed to find its way through the olive-groves in several streams, from which there are many smaller derivations, for the purpose of watering olive-trees and gardens." (Leake.)

The Ilissus (Ἰλισσός) is a more insignificant river. It was composed of two branches, one of which was named Eridanus (Ἠριδανός, Paus. i. 19. § 5). The main branch rises at the northern extremity of Hymettus, and receives near the Lyceium, on the east side of Athens, the Eridanus, which rises on the western slope of Hymettus at a spot called *Syriáni*. The united stream then flows through the southern portion of the city, towards the Phaleric bay; but it scarcely ever reaches the sea, and in the neighbourhood of Athens it is always dry in the summer. The spreading plane trees, and the shady banks of this stream, which have been immortalized by the beautiful description in the *Phaedrus* of Plato, have been succeeded by sun-burnt rocks and stunted bushes. (Dodwell, vol. i. p. 475.) The source of the river at *Syriáni* is a beautiful spot, and is apparently described in the passage of Ovid (*Ar. Am.* iii. 687), beginning:

"Est prope purpureos colles florentis Hymetti
Fons sacer, et viridi cespite mollis humus."

There was a torrent in the Athenian plain called Cycloborus (Κυκλόβορος), described as rushing down with a great noise (Aristoph. *Equit.* 137, with Schol., *Acharn.* 381; Hesych., Suid.): it is probably the large and deep channel, called *Megalo Potamo*, which descends from Parnes, and flows some miles, until lost in the olive-groves. (Dodwell, vol. i. p. 477.)

Two small streams water the Eleusinian plain; one called the Cephissus (*Sarandáforo*), rises in Mt. Cithaeron, and traverses the narrow plain of Eleutherae, before it descends into that of Eleusis (Paus. i. 28. § 5); the other, now named *Ianúla*, has its origin in the range of Parnes, near Phyle. A small stream called Iapis (Ἰαπίς) formed the boundary between the territory of Eleusis and Megaris. (Scylax, *s. v.* Μέγαρα; Callim. ap. Steph. B. *s. v.* Ἰαπίς.)

The only other rivulets of Attica deserving notice are three on the eastern coast: one flowing through the plain of Marathon; a second rising on the south-eastern side of Pentelicus, and flowing into the sea a little below *Ratina;* and a third, now called the river of *Vraóna*, which descends from Hymettus, and flows into the bay of *Livádhi*: the last is probably the ancient Erasinus (Ἐρασῖνος, Strab. viii. p. 371).

IV. *Products.*—The mountains of Attica are chiefly calcareous. The best marble was obtained from Mt. Pentelicus, which supplied inexhaustible materials for the public buildings and statues of Athens. The Pentelic marble is of a dazzling white colour, hard, and fine-grained; but, owing to the little pieces of quartz or flint imbedded in it, not easy to work. Hymettus also produced fine marble: it is not so brilliantly white as the Pentelic, and in some places is almost grey. It was much used by the Romans in architecture. ("Trabes Hymettiae," Hor. *Carm.* ii. 18. 3.) Blue or black marble, which was frequently used in the Athenian architecture, is found at Eleusis, and was also obtained from a quarry near the promontory of Amphiale. (Strab. ix. p. 395.) Marble was an article of export from Attica. (Xen. *de Vect.* 1. § 4.) Between Pentelicus and Parnes, the mass of rocks appears to have been mica slate, which is also the basis of Pentelicus. Near the Horns, on the boundaries of Megaris, there is a large deposit of conchiferous limestone, which Pausanias mentions (i. 44. § 6).

The hilly district of Laurium, above the promontory of Sunium, contained valuable silver mines, which contributed to raise Athens at an early period to a foremost rank among the Grecian states. These mines require a separate notice. [LAURIUM.]

The soil of Attica is light and dry, and produces at present little wheat. In antiquity, however, agriculture was held in great honour by the Athenians, who cultivated their land with extraordinary care. Some remarks are made elsewhere respecting the quantity of corn probably grown in Attica in ancient times. [ATHENAE, p. 262.]

The soil is better adapted for the growth of fruits. The olives and figs were particularly delicious; they both ripened earlier and continued longer in season than those in other countries. (Xen. *de Vect.* 1.) The olive-tree was regarded as the gift of Athena, and its cultivation was always under the especial care and protection of the goddess. From the olive-tree which grew in the temple of the goddess on the Acropolis, there came the *Moriae* (μορίαι), or sacred olive-trees in the Academy [see p. 303]; and from these again all the other olive-trees, which grew in the precincts of the temples and the grounds of private persons. Even in the present day there are extensive groves of olive-trees along the banks of the Cephissus. The fig-tree was under the protection of Demeter, as the olive was under the care of Athena. Like the sacred olive-tree on the Acropolis, there was a sacred fig-tree at Eleusis, which the goddess Demeter is said to have produced. Olives were exported from Attica, and so probably were figs also; for the law which is said to have prohibited the exportation of the latter became obsolete in historical times, if indeed it ever existed. (Böckh, *Publ. Economy of Athens*, p. 41, 2nd ed.)

The wine of Attica was pleasant to the taste, though not of a superior kind. The most celebrated was grown at Icaria, where Dionysus is said to have been welcomed. [See below, No. 42.] One of the varieties of the Attic grape was called the Nicostratian (Νικοστράτιος βότρυς, Athen. xiv. p. 654.) The honey, however, was particularly fine, especially

from the bees which sucked the wild flowers of Mt. Hymettus.

Attica is not adapted for the breeding of horses to any extent; the country is too hilly, and the soil too poor to afford much nourishment for them. Hence they were very scarce in early times, and even at later times could be kept only by the wealthy. For the same reason horned cattle were also scarce, and Philochorus mentions an ancient law which prohibited the killing of these animals. (Athen. ix. p. 375.) The slopes of the mountains, however, afforded excellent pasture for sheep and goats, which were very numerous in ancient times. Goats in particular formed a large portion of the wealth of the ancient inhabitants; and, from this animal, one of the four ancient tribes was called Aegicoreis. Of sheep there were several different breeds, particularly of the finest kinds. (Dem. *c. Euerg. et Mnesib.* p. 1153; Athen. xii. p. 540.) To encourage the breeding of sheep, there was an ancient law, which forbade the sacrifice of a sheep until it had lambed or had been shorn. (Athen. ix. p. 375.) The seas around the coast abounded in fish, which were a favourite article of diet among the Athenians. Leake enumerates several varieties caught in the Phaleric bay, of which the *ἀφύη*, probably a sort of anchovy or sardine, is often mentioned. Off Cape Zoster was caught the red mullet (*τρίγλη*).

On the mountains wild animals were found. Even in the time of Pausanias the bear and the wild boar were hunted on Mt. Parnes. (Paus. i. 32. § 1.)

V. *Political Divisions.*—The oldest political division of Attica is said to have been made by Cecrops, who divided the country into twelve independent communities, which were afterwards united into one state by Theseus. The names of these communities were: Cecropia, Tetrapolis, Epacria, Deceleia, Eleusis, Aphidna, Thoricus, Brauron, Cytherus, Sphettus, Cephisia, and Phalerus. (Philochor. *ap. Strab.* ix. p. 397; Etymol. M. *s. v.* 'Επακρία; Plut. *Thes.* 24.) Their position has been ably discussed by Finlay, in the *Transactions of the Royal Society of Literature* (vol. iii. p. 396), but as we shall have occasion to speak of each presently, it is only necessary to state now that these names continued to exist down to the latest times of Athenian history; that Cecropia became the Acropolis of Athens; that Tetrapolis contained the four demi of Oenoë, Marathon, Tricorythus, and Probalinthus (Strab. viii. p. 383); and that the remaining cities sunk into demi.

Another ancient division of Attica into four parts, among the sons of Pandion, has a distinct reference to the physical divisions of the country. Nisus received Megaris; Aegeus the Coastland (*ἀκτή*), with the capital and the adjoining plain (*πεδιάς*); and the two other brothers Diacria (*διακρία*), or the Highlands in the NE. of the country, and Paralia (*παραλία*), or the southern coast. (Strab. ix. p. 392; Schol. *ad Aristoph. Vesp.* 1223, and *ad Vesp.* 58.) That this division has a reference to some historical fact, is clear from the circumstance that, after Megaris had been torn away from Athens by the Dorians, the inhabitants of the remaining parts formed three political parties in the time of Solon and Peisistratus, known by the name of the Men of the Plain, the Parali, and the Diacrii or Hyperacrii. (Herod. i. 59; Plut. *Sol.* 13.)

Another division of the people of Attica into four *φυλαί* or tribes, existed from the earliest times. These tribes were called by different names at different periods. In the time of Cecrops they were called Cecropis, Autochthon, Actaea, and Paralia, the two former names being derived from mythical persons, and the two latter from the physical divisions of the country. In the reign of Cranaus, these names were changed into Cranais, Atthis, Mesogaea, and Diacris, where again the two former are mythical, and the two latter local denominations. Afterwards we find a new set of names, Dias, Athenais, Poseidonias, and Hephaestias, evidently derived from the deities who were worshipped in the country. But these names all disappeared before the four Ionic tribes of Geleontes, Hopletes, Argades, and Aegicores, which continued to exist down to the time of Cleisthenes (B. C. 510). One of the most important measures in the democratical revolution, brought about by Cleisthenes after the expulsion of the Peisistratidae, was the abolition of the four ancient Ionic tribes, and the formation of ten new tribes. The names of these ten tribes, derived from Attic heroes, were, in order of precedence, Erechtheis, Aegeis, Pandionis, Leontis, Acamantis, Oeneis, Cecropis, Hippothoöntis, Aeantis, Antiochis. This number remained unaltered down to B. C. 307, when it was increased to twelve by the addition of two new tribes, Antigonias and Demetrias, in honour of Antigonus and his son Demetrius, because the latter had delivered Athens from the rule of Cassander. The name of Antigonias was subsequently changed into that of Ptolemais, in honour of Ptolemy Philadelphus; and the Demetrias into Attalis, when Attalus was the ally of Athens against Philip and the Rhodians. Finally, the number of tribes was increased to thirteen, in the reign of Hadrian, by the addition of Hadrianis, in honour of this emperor.

Each tribe was subdivided into a certain number of *δῆμοι*, townships, cantons, or parishes. The whole territory of Attica was parcelled out into these demi, in one or other of which every Athenian citizen was enrolled. The number of these demi is not ascertained: we only know that they were 174 in the time of Polemo, who lived in the third century B. C. (Strab. ix. p. 396; Eustath. *in Il.* ii. 546.) It has been supposed, from the words of Herodotus (*δέκα δὲ καὶ τοὺς δήμους κατένεμε ἐς τὰς φυλάς*, v. 69), that there were originally one hundred demi, ten to each tribe; but it is improbable that the number of demi was increased so largely as from 100 to 174, and hence some modern critics construe *δέκα* with *φυλάς*, and not with *δήμους*, as the least difficulty in the case.

It is important to bear in mind that the demi assigned by Cleisthenes to each tribe were in no case all adjacent to each other. The reason for this arrangement cannot be better stated than in the words of Mr. Grote (vol. iv. p. 177): "The tribe, as a whole, did not correspond with any continuous portion of the territory, nor could it have any peculiar local interest, separate from the entire community. Such systematic avoidance of the factions arising out of neighbourhood will appear to have been more especially necessary, when we recollect that the quarrels of the Parali, the Diacrii, the Pediaci, during the preceding century, had all been generated from local feud, though doubtless artfully fomented by individual ambition. Moreover, it was only by this same precaution that the local predominance of the city, and the formation of a city-interest distinct from that of the country, was obviated; which could hardly have failed to arise, had the city itself constituted either one deme or one tribe." We know that five of the city demi belonged to five different tribes:

namely, the demus *Cerameicus* belonged to the tribe Amantis; *Melite* to the Cecropis; *Collytus* to the Aegeis; *Cydathenaeum* to the Pandionis; *Scambonidae* to the Leontis. Moreover, *Peiraeeus* belonged to the Hippothoöntis, and *Phalerum* to the Aeantis.

For further information respecting the Athenian tribes in general, and the organization of the demus, the reader is referred to the *Dict. of Antiq.* arts. *Tribus* and *Demus*.

It is certain that the descendants of a man always remained in the demus in which their ancestor was originally enrolled in the time of Cleisthenes. Consequently, if a person transferred his abode to another demus, he was not enrolled in the new demus in which he settled, even if he was highly esteemed by the inhabitants of the latter, and had conferred great obligations upon them. This is clear from an inscription in Böckh's collection (n. 101). (Sauppe, *De Demis Urbanis Athenarum*, p. 13.) It is important to bear this fact in mind, because modern writers have sometimes fixed the site of a demus, simply in consequence of finding upon the spot the name of this demus attached to the name of a man; but this is not conclusive, since the demus in which a man was enrolled, and the demus in which he resided, might be, and frequently were, different.

Each of the larger demi contained a town or village; but several of the smaller demi possessed apparently only a common temple or place of assembly, the houses of the community being scattered over the district, as in many of our country parishes. The names of most of the demi are preserved. It was the practice in all public documents to add to the name of a person the name of the district to which he belonged; and hence we find in inscriptions the names of a great number of demi. Many others are met with in Harpocration, Hesychius, Stephanus, and Suidas, as well as in the earlier writers. But though the names of most of the demi are thus preserved, it is impossible to fix the site of a large number of them, as they were not of sufficient importance to be mentioned in history. We shall endeavour, however, to ascertain their position as far as is practicable, arranging the demi under: 1. The Demi of the Athenian Plain. 2. The Demi of the Eleusinian Plain. 3. The Demi of Diacria and Mount Parnes. 4. The Demi of Paralia and Mesogaea.

A. The Demi of the Athenian Plain.

1—10. The demi in the city of Athens and its suburbs are spoken of elsewhere. [Athenae, p. 301, seq.] They were Cerameicus, Melite, Scambonidae, Collytus, Cydathenaeum, Diomeia, Coele, and perhaps Ceriadae. To these must be added Peiraeeus and Phalerum. [See p. 304, seq.]

(*a.*) West of the Cephissus in the direction from N. to S. were:

11. Xypete (Ξυπέτη, also Ξυπετεών, Strab. xiii. p. 604), said to have been likewise called Troja (Τροία), because Teucrus led from hence an Attic colony into Phrygia. (Dionys. i. 61; Strab. *l. c.*; Steph. B.) It was apparently near Peiraeeus or Phalerum, since Xypete, Peiraeeus, Phalerum, and Thymoetadae formed the τετράκωμοι (Pollux, iv. 105), who had a temple of Hercules in common (τετράκωμον Ἡρακλεῖον, Steph. B. *s. v.* Ἐχελίδαι; Böckh, *Inscrip.* vol. i. p. 123). Leake places Xypete at a remarkable insulated height, a mile from the head of the harbour of Peiraeeus, where are still seen some Hellenic foundations; but Ross remarks that this cannot be correct, since Xenophon (*Hell.* ii. 4. § 34) mentions this hill without giving its name, which he certainly would not have done if it had been Xypete.

12. Thymoetadae (Θυμοιτάδαι), deriving its name from Thymoetas, a king of Attica, possessed a port, from which Theseus secretly set sail on his expedition to Crete. (Plut. *Thes.* 19.) This retired port seems to have been the same as the Phoron Limen (Φώρων λιμήν), or "Thieves' port," so called from its being frequented by smugglers. (Dem. *c. Lacrit.* p. 932; Strab. ix. p. 395.) It is a small circular harbour at the entrance to the bay of Salamis, and according to Dodwell is still called *Klephtho-limani*. Leake noticed the foundations of a temple upon a height near the beach, and other remains at a quarter of a mile on the road to Athens. This temple was probably the Heracleium mentioned above. It was situated on the Attic side of the Strait of Salamis (Ctesias, *Pers.* c. 26, ed. Lion; Diod. xi. 18); and it was from the heights of Aegaleos, above this temple, that Xerxes witnessed the battle of Salamis. (Phanodemus, ap. Plut. *Them.* 13; comp. Herod. viii. 90.) It is true that this temple was not situated at the narrowest part of the strait, as some writers represent; but Leake justly remarks, that the harbour was probably the point from whence the passage-boats to Salamis departed, as it is at the present day, and consequently the Heracleium became the most noted place on this part of the Attic shore. At the foot of Mt. Aegaleos are still seen vestiges of an ancient causeway, probably the road leading from Athens to the ferry. The σισύραι, or garments of goatskins of Thymoetadae, appear to have been celebrated. (Aristoph. *Vesp.* 1138.)

13. Echelidae (Ἐχελίδαι), so called from the hero Echelus, lay between Peiraeeus and the Heracleium, in or near a marshy district, and possessed a Hippodrome, in which horse-races took place. (Steph. B. *s.v.*; Etym. M. *s.v.* Ἔχελος; Hesych. and Etym. M. *s. v.* ἐν Ἐχελιδῶν.) It is probable that this Hippodrome is the place to which the narrative in Demosthenes refers (*c. Everg.* p. 1155, *seq.*), in which case it was near the city. (Ibid. p. 1162; comp. Xen. *de Mag. Eq.* 3. §§ 1, 10.)

14. Corydallus (Κορυδαλλός), at the foot of the mountain of the same name, is placed by Strabo (ix. p. 395) between Thria and Peiraeeus, near the straits of Salamis, opposite the islands of Pharmacussae. This position is in accordance with the account of Diodorus (iv. 59), who, after relating the contest of Theseus with Cercyon, which, according to Pausanias (i. 39. § 3), took place to the west of Eleusis, says that Theseus next killed Procrustes, whose abode was in Corydallus. Against the express testimony of Strabo, we cannot accept the authority of other writers, who make Corydallus a mountain on the frontiers of Boeotia and Attica. (Athen. ix. p. 390; Plin. x. 41; Antig. Caryst. 6; Aelian, *H. An.* iii. 35.)

15. Hermus (Ἕρμος), lay on the sacred road to Eleusis, between the Cephissus and the Pythium, a temple of Apollo on Mt. Poecilum, upon a rivulet of the same name. Here was the splendid monument of Pythonice, the wife of Harpalus. (Plut. *Phoc.* 22; Harpocrat. *s. v.* Ἕρμος; Paus. i. 37. § 4; Athen. xiii. p. 594; Diod. xvii. 108.)

16. Oea or Oe (Οἶα or Ὄη), was situated above the Pythium, to the west of Mt. Aegaleos, to the north

of the pass of Poecilum. (Soph. *Oed. Col.* 1061, Οἰάτιδος ἐκ νόμου, with the Schol.; Leake, p. 151.)

(*b.*) West of the Cephissus, and E. of the city, in the direction from N. to S.:

17. OEUM CERAMEICUM (Οἶον Κεραμεικόν), to distinguish it from Oeum Deceleicum near Deceleia. Its name shows that it was near the outer Cerameicus, and it may, therefore, be placed, with Leake, between the Sacred Way and the northern Long Wall. (Harpocrat., Suid. *s. v.*)

18. SCIRUM (Σκίρον, Σκίρα, Strab. ix. p. 393), a small place near a torrent of the same name, just outside the Athenian walls on the Sacred Way. It was not a demus, and derived its name from Scirus, a prophet of Dodona, who fell in the battle between the Eleusinii and Erechtheus, and was buried in this spot. (Paus. i. 36. § 4; Strab. *l. c.*; Steph. B., Harpocrat. *s. v*; comp. Schol. *ad Aristoph. Eccl.* 18.)

19. LACIADAE (Λακιάδαι), on the Sacred Way between Sciron and the Cephissus, and near the sacred fig-tree. It is celebrated as the demus to which the family of Miltiades and Cimon belonged. (Paus. i. 37. § 2; Plut. *Cim.* 4, *Alc.* 22; Cic. *de Off.* ii. 18; Hesych.; Suid.)

20. COLONUS (Κολωνός), celebrated as the demus of Sophocles, and the scene of one of the poet's tragedies, was situated ten stadia from the gate of the city, called Dipylum, near the Academy and the river Cephissus. (Thuc. viii. 67; Cic. *de Fin.* v. 1.) It derived its name from two small but conspicuous heights, which rise from the plain a little to the north of the Academy. Hence it is called by Sophocles "the white Colonus" (τὸν ἀργῆτα Κολωνόν, *Oed. Col.* 670). It was under the especial care of Poseidon, and is called by Thucydides (*l. c.*) the ἱερόν of this god. It is frequently called "Colonus Hippius," to distinguish it from the "Colonus Agoraeus" in Athens. [ATHENAE, p. 298, b.] Besides the temple of Poseidon, it possessed a sacred inclosure of the Eumenides, altars of Athena, Hippia, Demeter, Zeus, and Prometheus, together with sanctuaries of Peirithous, Theseus, Oedipus, and Adrastus. (Paus. i. 30. § 4.) The natural beauties of the spot are described by Sophocles in the magnificent chorus, beginning with the words:—

> εὐίππου, ξένε, τᾶσδε χώρας
> ἵκου τὰ κράτιστα γᾶς ἔπαυλα
> τὸν ἀργῆτα Κολωνόν.

(*c.*) Farther north:

21. ACHARNAE (Ἀχαρναί), the most important of all the Attic demi, described in a separate article. [ACHARNAE.]

22. EUPYRIDAE (Εὐπυρίδαι, Steph. B.),

23. CROPIA (Κρωπία, Steph. B.; Κρωπειά, Thuc. ii. 19),

24. PELECES (Πήληκες), three demi forming a community, as τρικωμοι (Steph. B. *s. v.* Εὐρυπίδαι), and probably, therefore, adjacent. If the reading in Thucydides (ii. 19) is correct, διὰ Κρωπειᾶς, these demi should be placed in the north of the Athenian plain, but many editors read διὰ Κεκροπίας. Stuart, who has been followed by most modern writers, was led, by similarity of name, to place Peleces at the modern *Bélikas*, near *Marúsi*; but Ross maintains that the name of this Albanian village has no connexion with Peleces.

25. PAEONIDAE (Παιονίδαι, Paus. ii. 18. § 9), apparently the same as the Paeonia (Παιονίη) of Herodotus (v. 62), who describes Leipsydrium as situated above Paeonia. It was perhaps on the site of the modern *Menídhi*, since we know that the modern Greeks frequently change π into μ; thus Πεντέλη is also pronounced Μεντέλη.

26. LEIPSYDRIUM (Λειψύδριον), was not a demus, but a fortress, in which the Alcmaeonidae fortified themselves after the death of Hipparchus, but was taken by the Peisistratidae after defeating the opposite party. (Herod. v. 62; comp. Athen. xv. p. 695.) We have already seen that Herodotus describes it as situated above Paeonia, and other authorities place it above Parnes. (Schol. *ad Aristoph. Lysistr.* 665; Hesych. *s. v.* Λειψύδριον; Hesych., Suid. ἐπὶ Λειψυδρίῳ μάχῃ.) It is, however, more probable that it stood on the southern slopes of Mt. Parnes, so as to command the descent into the Athenian plain. Leake conjectures that it may have occupied the site of the Metókhi of St. Nicolas, a small monastery, situated amidst the woods of the upper region of Mount Parnes, at the distance of three or four miles to the north of *Menídhi*.

27. CEPHISIA (Κηφισία), was one of the ancient twelve cities of Cecrops, and continued to be an important demus down to the latest times. It retains its ancient name (*Kivisía*), and is situated about nine miles NE. of Athens, at the foot of Mt. Pentelicus, nearly opposite Acharnae. It was the favourite summer residence of Herodes Atticus, who adorned it with buildings, gardens, and statues. We learn from modern travellers that a fountain of transparent water, and groups of shady trees, still remain here; and that it continues to be a favourite residence of the Athenians during the heat of summer. (Strab. ix. 397; Diog. Laërt. iii. 41; Philostr. *Vit. Soph.* ii. 1. § 12; Gell. i. 2, xviii. 10; Harpocrat.; Phot.; Wordsworth, p. 227; Stephani, *Reise durch Griechenland*, p. 1.)

28. ATHMONUM (Ἀθμονον, also Ἀθμονία, Harpocrat.; Steph. B.; Zonar.; Suid.; Bekker, Anecd. i. p. 349), situated on the site of the village *Marúsi*, which is a mile and a half from *Kivisía* on the road to Athens. The name of the modern village has been derived from Amarysia, a surname of Artemis, who was worshipped under this designation at Athmonum. (Paus. i. 35. § 5.) An inscription found near *Marúsi*, in which the temenos of this goddess is mentioned, puts the matter beyond dispute. (Ὅρος Ἀρτέμιδος τεμένους Ἀμαρυσίας, Böckh, *Inscr.* n. 528.) Athmonum also possessed a very ancient temple of Aphrodite Urania. (Paus. i. 14. § 7.) The inhabitants of this demus appear to have been considered clever wine-dressers. (Aristoph. *Pac.* 190.)

29. IPHISTIADAE or HEPHAESTIADAE (Ἰφιστιάδαι, Ἡφαιστιάδαι, Steph. B.; Hesych.), are the names of one demus, and not two separate demi, as Leake maintained. Iphistiadae appears to have been the correct form of the name, not only because it occurs much more frequently in inscriptions, but also because it is much more probable that a name formed from the obscure hero Iphistius should have been converted into one derived from the god Hephaestus, than that the reverse should have been the case. (Ross, p. 74.) We learn from Plato's will (Diog. Laërt. iii. 41), that this demus contained an Heracleium or temple of Hercules, which has probably given its name to the modern village of *Arakli*, about two or three miles westward of *Kivisía* and *Marusi*. Hence *Arakli* indicates the site of Iphistiadae, as *Marúsi* does that of Athmonum.

30. EIRESIDAE (Εἰρεσίδαι, Steph. B.; Bekker, *Anecd.* i. p. 246), west or south-west of Cephisia, and adjacent to Iphistiadae. (Diog. Laërt. iii. 41.)

31. PENTELE (Πεντέλη, Steph.), was situated at the north-eastern extremity of the Athenian plain, at the marble quarries of Mt. Brilessus, which was called Mt. Pentelicus from this place. [See p. 322, a.] The fact of Pentele being a demus rests upon the authority of Stephanus alone, and has not yet been confirmed by inscriptions.

32. PALLENE (Παλλήνη), a celebrated demus, frequently mentioned by ancient writers and in inscriptions. From the mythical story of the war of the Pallantidae against Theseus, we learn that the demi of Pallene, Gargettus, and Agnus were adjacent. When Pallas was marching from Sphettus in the Mesogaea against Athens, he placed a body of his troops in ambush at Gargettus, under the command of his two sons, who were ordered, as soon as he was engaged with the army of Theseus, to march rapidly upon Athens and take the city by surprise. But the stratagem was revealed to Theseus by Leos of Agnus, the herald of Pallas; whereupon Theseus cut to pieces the troops at Gargettus. In consequence of this a lasting enmity followed between the inhabitants of Pallene and Agnus. (Plut. *Thes.* 13; Philochor. *ap. Schol. ad Eurip. Hippol.* 35.) The road from Sphettus to Athens passed through the opening between Mt. Pentelicus and Mt. Hymettus. In this situation, on the SW. side of Pentelicus, we find a small village, named *Garitó*, which is undoubtedly the site of the ancient Gargettus. The proximity of Pallene and Gargettus is indicated by another legend. Pallene was celebrated for its temple of Athena; and we are told that Eurystheus was buried at Gargettus in front of the temple of Athena Pallenis. (Strab. viii. p. 377; Steph., Hesych. *s. v.* Γαργηττός; *πάροιθε παρθένου Παλληνίδος*, Eurip. *Heracl.* 1031.) We know further that Pallene lay on one of the roads from the city to Marathon (Herod. i. 62); and as the most convenient road for warlike operations leads to Marathon around the southern side of Pentelicus, Ross places Pallene half an hour south of *Garitó*, between the monastery *Hieraka* and the small village *Charvati*, at the spot where was discovered a celebrated inscription respecting money due to temples, and which was probably placed in the temple of Athena Pallenis. (Böckh, *Inscr.* n. 76.) In *Hieraka* there was also found the Boustrophedon inscription of Aristocles, which probably also came from the same temple. (Böckh, n. 23.) Leake supposes Pallene to have stood at the foot of Hymettus, immediately opposite to *Garitó* at the foot of Pentelicus, and supposes its site to be indicated by some Hellenic ruins of considerable extent on a height which is separated only from the northern extremity of Hymettus by the main road into the Mesogaea. "This place is about a mile and a half to the south-westward of *Garitó*, near two small churches, in one of which Mr. Finlay found the following fragment: ΘΕΟΦΑΝΗΣ ΠΑΛΛ(ΗΝΕΥΣ). This situation, where the roads of the Mesogaea necessarily unite in approaching Athens, is such a point as would be important, and often occupied in military operations; and accordingly, we find that on three occasions in the early history of Athens, Pallene was the scene of action; first, when Eurystheus fought against the Athenians and Heracleidae; again, when Theseus was opposed to the Pallantidae; and a third time when Peisistratus defeated the Alcmaeonidae." (Leake, p. 46.) The inscription, however, in such a case, is not decisive evidence, as we have already seen. [See p. 325, a.]

Agnus is placed by Ross in the hollow which lies between the extreme northern point of Hymettus and *Hieraka*. Leake, on the other hand, fixes it at *Markópulo*, in the southern part of the Mesogaea, because Mr. Finlay found at this place an inscription, ... υλίδης Ἀγνούσιος.

33. GARGETTUS (Γαργηττός, Steph.; Hesych.; Phavor.; Schol. *ad Aristoph. Thesm.* 905), spoken of above, and celebrated as the demus of Epicurus.

34. AGNUS or HAGNUS (Ἀγνοῦς or Ἁγνοῦς, Steph.; Phryn.; Hesych.; Suid.), also spoken of above.

(*d.*) East of Athens:—

35. ALOPECE (Ἀλωπέκη), was situated only eleven or twelve stadia from the city (Aesch. *c. Timarch.* p. 119, Reiske), and not far from Cynosarges. (Herod. v. 63.) It lay consequently east of Athens, near the modern village of *Ambelókipo*, between Lycabettus and Ilissus. It possessed a temple of Aphrodite (Böckh, *Inscr.* n. 395), and also, apparently, one of Hermaphroditus. (Alciphr. *Ep.* iii. 37.) There are some remains of an ancient building in the church at *Ambelókipo*, which Leake supposes may be those of the temple of Aphrodite.

(*e.*) South of Athens:—

36, 37. AGRYLE (Ἀγρυλή, Ἀραυλή, Ἀγροιλή, Steph.; Harpocrat.; Suid.; Hesych.; Zonar.; Bekker, *Anecd.* i. p. 332), was the name of two demi, an upper and a lower Agryle. They lay immediately south of the stadium in the city. (Harpocrat. *s. v.* Ἀρδηττός.) It is not improbable that the district of Agrae in the city belonged to one of these demi. [See p. 302, b.]

38. HALIMUS (Ἅλιμοῦς, Harpocrat.; Suid.; Steph.; Bekker, *Anecd.* i. p. 376; Schol. *ad Aristoph. Av.* 498), said to have been so called from *τὰ ἅλιμα*, sea-weeds (Etym. M. *s. v.*), was situated on the coast between Phalerum and Aexone (Strab. ix. p. 398), at the distance of 35 stadia from the city (Dem. *c. Eubulid.* p. 1302), with temples of Demeter and Core (Paus. i. 31. § 1), and of Hercules. (Dem. pp. 1314, 1319.) Hence Leake places it at *C. Kallimákhi*, at the back of which rises a small but conspicuous hill, crowned with a church of St. Cosmas. Halimus was the demus of Thucydides the historian.

38*. AEXONE (Αἰξωνή, Harpocrat.; Suid.; Zonar.; Steph.; Bekker, *Anecd.* i. p. 358; Xen. *Hell.* ii. 4. § 26), situated on the coast south of Halimus (Strab. *l. c.*), probably near the promontory of Colias. [Respecting the position of Colias, see p. 305, b.] Aexone was celebrated for its fisheries. (Athen. vii. p. 325; Hesych., Zonar., Suid., *s. v.* Αἰξωνίδα τρίγλην.)

39. HALAE AEXONIDES (Ἅλαὶ Αἰξωνίδες), a little south of the preceding, derived its name from its salt-works. (Strab. *l. c.*; Steph.) "They occupy a level behind a cape called *Aghiá*, where are found numerous remains of an ancient town, and among them a lion in white marble." (Leake.)

B. THE ELEUSINIAN OR THRIASIAN PLAIN.

The celebrated Sacred Way (Ἱερὰ Ὁδός), leading from Athens to Eleusis, demands a few words. It was the road along which the solemn procession in the Eleusinian festival travelled every year from Athens to Eleusis. It was lined on either side with numerous monuments. (*Dict. of Ant. s. v. Eleusinia.*) This road, with its monuments, is described

at some length by Pausanias (i. 36—38), and was the subject of a special work by Polemon, which is unfortunately lost. (Harpocrat. *s. v.* Ἱερὰ Ὁδός.)

It has been mentioned elsewhere, that there were probably two roads leading from Athens, to each of which the name of the Sacred Way was given, one issuing from the gate called Dipylum, and the other from the Sacred Gate, and that these two roads united shortly after quitting Athens, and formed the one Sacred Way. [ATHENAE, p. 263, a.]

Pausanias, in his journey along the Sacred Way, left Athens by Dipylum. The first monument, which was immediately outside this gate, was that of the herald Anthemocritus. Next came the tomb of Molossus, and then the place Scirum, already described. [See above, No. 18.] After some monuments mentioned by Pausanias there was the demus Laciadae [see No. 19], and shortly afterwards the Cephissus was crossed by a bridge, which Pausanias has omitted to mention, but which is celebrated as the place at which the initiated assailed passengers with vulgar abuse and raillery, hence called γεφυρισμοί. (Strab. ix. p. 400; Suid. *s. v.* Γεφυρίζων; Hesych. *s. v.* Γεφυρισταί.) After crossing the Cephissus, Pausanias describes several other monuments, of which he specifies two as the most remarkable for magnitude and ornament, one of a Rhodian who dwelt at Athens, and the other built by Harpalus in honour of his wife Pythionice. The latter, as we have already seen, was situated at the demus Hermus. [See above, No. 15.]

The next most important object on the road was the temple of Apollo on Mount Poecilum, the site of which is now marked by a church of St. Elias. In one of the walls of this church there were formerly three fluted Ionic columns, which were removed by the Earl of Elgin in 1801: the capitals of these columns, a base, and a part of one of the shafts, are now in the British Museum. It was situated in the principal pass between the Eleusinian and Thriasian plains. This pass is now called *Dhafni*; at its summit is a convent of the same name. [See p. 322, a.] Beyond the temple of Apollo was a temple of Aphrodite, of which the foundations are found at a distance of less than a mile from *Dhafni*. That these foundations are those of the ancient temple of Aphrodite appears from the fact that doves of white marble have been discovered at the foot of the rocks, and that in the inscriptions still visible under the niches the words Φίλῃ Ἀφροδίτῃ may be read. This was the Philaeum or the temple of Phila Aphrodite, built by one of the flatterers of Demetrius Poliorcetes in honour of his wife Phila (Athen. vii. pp. 254, a. 255, c.); but Pausanias, whose pious feelings were shocked by such a profanation, calls it simply a temple of Aphrodite. Pausanias says that before the temple was "a wall of rude stones worthy of observation," of which, according to Leake, the remains may still be seen; the stones have an appearance of remote antiquity, resembling the irregular masses of the walls of Tiryns.

At the bottom of the pass close to the sea were the RHEITI (Ῥειτοί), or salt-springs, which formed the boundaries of the Athenians and Eleusinians at the time of the twelve cities. "The same copious springs are still to be observed at the foot of Mt. Aegaleos; but the water, instead of being permitted to take its natural course to the sea, is now collected into an artificial reservoir, formed by a stone wall towards the road. This work has been constructed for the purpose of turning two mills, below which the two streams cross the Sacred Way into the sea." (Leake.)

Half a mile beyond the Rheiti, where the road to Eleutherae branches off to the right, was the Tomb of Strato, situated on the right-hand side of the road. There are still ruins of this monument with an inscription, from which we learn its object; but it is not mentioned by Pausanias. The Way then ran along the low ground on the shore of the bay, crossed the Eleusinian Cephissus, and shortly afterwards reached Eleusis. Leake found traces of the ancient causeway in several places in the Eleusinian plain, but more recent travellers relate that they have now disappeared. (Mure, vol. ii. p. 31.) Respecting the Sacred Way in general, see Leake, p. 134, and Preller, *De Via Sacra Eleusinia*, Dorpat. 1841.

40. ELEUSIS (Ἐλευσίς), is noticed separately. [ELEUSIS.]

41. THRIA (Θρία), an important demus, from which the Eleusinian plain, or, at all events, the central or eastern part of it, was called the Thriasian Plain. When Attica was invaded from the west, the Thriasian Plain was the first to suffer from the ravages of the enemy. (Θριάσιον πεδίον, Strab. ix. p. 395; Herod. ix. 7; Thuc. i. 114, ii. 19.) A portion of the Eleusinian plain was also called the Rharian Plain (Ῥάριον, Hom. *Hymn. Cer.* 450) in ancient times, but its site is unknown.

The territory of Thria appears to have been extended as far as the salt-springs Rheiti, since the temple of Aphrodite Phila is said to have been in Thria. (Athen. vi. p. 255, c.) Thria is placed by Leake at a height called *Magúla*, on the Eleusinian Cephissus, about three miles above Eleusis, but it is much more probable that it stood upon the coast somewhere between Eleusis and the promontory Amphiale (εἶτα [after Eleusis] τὸ Θριάσιον πεδίον καὶ δμώνυμος αἰγιαλὸς καὶ δῆμος· εἶθ' ἡ ἄκρα ἡ Ἀμφίαλη, Strab. *l. c.*). Fiedler mentions the ruins of a demus, probably Thria, situated on the coast, at the distance of scarcely ten minutes after leaving the pass of Dhafni. (Fiedler, *Reise*, &c. vol. i. p. 81.)

42. ICARIA (Ἰκαρία), the demus, in which Icarius received Dionysus, who taught him the art of making wine. (For the legend, see *Dict. of Biogr. and Myth.*, art. *Icarius.*) The position of this demus and of Mount Icarius (Plin. iv. 7. s. 11) has been variously fixed by modern scholars. Leake has identified Icarius with Mount *Argaliki*, on the south side of the Marathonian plain, since Icarius is said by Statius (*Theb.* xi. 644) to have been slain in the Marathonian forest. But, as Ross has observed, Marathonian is here used only in the sense of Attican; and the argument derived from this passage of Statius is entirely overthrown by another passage of the same poet, in which the abodes of Icarius and of Celeus (i. e. Icaria and Eleusis) and Melaenae are mentioned together as three adjacent places. ("Icarii Celeique domus viridesque Melaenae," Stat. *Theb.* xii. 619.) Ross, with greater probability, places Icaria in the west of Attica, because all the legends respecting the introduction of the worship of Dionysus into Attica represent it as coming from Thebes by way of Eleutherae, and because the Parian chronicle represents men from Icaria as instituting the first chorus at Athens, while the invention of comedy is assigned to the Megarian Susarion. From the latter circumstance, Ross conjectures that Icaria was near the frontiers of Megara; and he supposes that the range of moun-

tains, separating the Megarian and Eleusinian plains, and terminating in the promontory of the Kerata or the Horns, to which no ancient name has been hitherto assigned, was Mount Icarius. (Ross, p. 73.)

43. OENOE (Οἰνόη), which must be distinguished from a demus of the same name in the Marathonian Plain, was situated upon the confines of Boeotia and Attica, near Eleutherae, and upon the regular road to Plataea and Thebes. (Strab. viii. p. 375; Herod. v. 74; Thuc. ii. 18; Diod. iv. 60.) Hysiae and Oenoe are mentioned as the frontier demi of Attica in B.C. 507, when they were both taken by the Boeotians. (Herod. *l. c.*) From this time Hysiae continued to be a Boeotian town; but Oenoe was recovered by the Athenians, and was fortified by them before the commencement of the Peloponnesian war (Thuc. *l. c.*) In B. C. 411 the Boeotians again obtained possession of Oenoe (Thuc. viii. 98); but it must have been recovered a second time by the Athenians, as it continues to be mentioned as an Attic demus down to the latest times. Oenoe was situated on the Pythian Way, so called because it led from Athens to Delphi (Strab. ix. p. 422): this road apparently branched off from the Sacred Way to Eleusis, near the tomb of Strato. Near Oenoe was a Pythium, or temple of Apollo Pythius, in consequence of the sanctity of which Oenoe obtained the epithet of the Sacred. (Liban. *Declam.* 16, *in Dem. Apol.* i. p. 451.) This Pythium is said to have formed the northern boundary of the kingdom of Nisus, when Attica and the Megaris were divided between the four sons of Pandion. (Strab. ix. p. 392.)

At the NW. extremity of Attica there is a narrow pass through Mount Cithaeron, through which ran the road from Thebes and Plataeae to Eleusis. This pass was known in antiquity by the name of the Three Heads, as the Boeotians called it, or the Oak's Heads, according to the Athenians. (Herod. ix. 38.) On the Attic side this pass was guarded by a strong fortress, of which the ruins form a conspicuous object on the summit of a height, to the left of the road. They now bear the name of *Ghyftó-kastro*, or gipsy castle, a name frequently given to such buildings among the modern Greeks. Leake supposes these ruins to be those of Oenoe, and that ELEUTHERAE was situated at *Myúpoli*, about four miles to the south-eastward of *Ghyftó-kastro*. The objection to this hypothesis is, that Eleutherae was originally a member of the Boeotian confederacy, which voluntarily joined the Athenians, and never became an Athenian demus, and that hence it is improbable that Oenoe, which was always an Attic demus, lay between Plataeae and Eleutherae. To this Leake replies, that, on examining the ruins of *Ghyftó-kastro*, its position and dimensions evidently show that it was a fortress, not a town, being only 700 or 800 yards in circumference, and standing upon a strong height, at the entrance of the pass, whereas *Myúpoli* has every appearance of having been a town, with an acropolis placed as usual on the edge of a valley. (Respecting Eleutherae, see Paus. i. 38. § 8; Xen. *Hell.* v. 4. § 14; Strab. viii. p. 375, ix. p. 412; Plut. *Thes.* 29; Steph. B.; Plin. iv. 7. s. 12.) The position of these places cannot be fixed with certainty; but we think Leake's opinion is, upon the whole, the most probable. Müller, Kiepert, and others suppose the ruins of *Ghyftó-kastro* to be those of PANACTUM, described by Thucydides as a fortress of the Athenians, on the confines of Boeotia, which was betrayed to the Boeotians in B.C. 420, and subsequently destroyed by them. (Thuc. v. 3, 42; comp. Paus. i. 25. § 6; Dem. *de Fals. Leg.* p. 446; Steph. B.) Leake places Panactum on the Boeotian side of the pass of Phyle; but Ross thinks that he has discovered its ruins in the plain of Eleutherae, west of *Skurta*. Ross, moreover, thinks that Eleutherae stood to the east of *Ghyftó-kastro*, near the convent of St. Meletius, where are ruins of an ancient place; while other modern writers suppose Eleutherae to have stood more to the west, near the modern village of *Kúndara*.

44. ELEUTHERAE (Ἐλευθεραί), not a demus. Respecting its site, see No. 43.

45. PANACTUM (Πάνακτον), a fortress, also not a demus. Respecting its site, see No. 43.

46. MELAENAE (Μέλαιναι), a fortified demus, on the frontier of Attica and Boeotia, celebrated in Attic mythology as the place for which Melanthus and Xanthus fought. It was sometimes called Melaenae. (Polyaen. i. 19; Callim. *ap. Steph. B. s. v.* Μελαινεῖς; Schol. *ad Aristoph. Acharn.* 146, *Pac.* 890; Suid. *s. v.* Ἀπατούρια, Κελαιναί.) Leake supposes the ruins near the convent of St. Meletius, of which we have just spoken, to be those of Melaenae, and remarks that the groves and fountains, which maintain the verdure of this spot, accord with the epithet bestowed by the Latin poet upon the place (viridesque Melaenae, Stat. *Theb.* xii. 619.).

47. DRYMUS (Δρυμός), a fortress, not a demus, in the same neighbourhood, but of uncertain site. (Dem. *de Fals. Leg.* p. 446; Hesych.; Harpocrat.)

C. THE DEMI OF DIACRIA AND MOUNT PARNES.

48. PHYLE (Φυλή), still called *Fili*, a strong fortress, stands on a steep rock, commanding the narrow pass across Mt. Parnes, through which runs the direct road from Thebes to Athens, past Acharnae. On the northern side of the pass was the territory of Tanagra. Phyle is situated at the distance of more than 120 stadia from Athens (Psephisma, ap. Dem. *de Cor.* p. 238), not 100 stadia, as Diodorus states (xiv. 32), and was one of the strongest Athenian fortresses on the Boeotian frontier. The precipitous rock upon which it stands can only be approached by a ridge on the eastern side. It is memorable in history as the place seized by Thrasybulus and the Athenian exiles in B.C. 404, and from which they commenced their operations against the Thirty Tyrants. The height of Phyle commands a magnificent view of the whole Athenian plain, of the city itself, of Mt. Hymettus, and the Saronic Gulf. (Xen. *Hell.* ii. 4. § 2, seq.; Diod. *l. c.*; Nep. *Thrasyb.* 2; Strab. ix. pp. 396, 404.) In Phyle there was a building called the Daphnephoreion, containing a picture, which represented the Thargelia. (Athen. x. p. 424, f.)

49. HARMA (Ἅρμα), a fortress, but not a demus, near Phyle, situated on a height visible from Athens. (Strab. ix. p. 404; Eustath. *ad Il.* ii. 499.) Leake places it above Phyle, towards the summit of the ridge, and to the left of the modern road, where the ruins of a fortress are visible; but other writers place it south-east of Phyle.

50. CHASTIEIS (Χαστιεῖς), a demus, mentioned only by Hesychius (*s. v.*); but in consequence of the similarity of name, it is supposed to have occupied the site of *Khassiá*, the largest village in Attica, which is the first place met with on descending the pass of Phyle towards Athens.

51. DECELEIA (Δεκέλεια) was situated near the entrance of the eastern pass across Mount Parnes, which leads from the north-eastern part of the Athenian plain to Oropus, and from thence both to Tanagra on the one hand, and to Delium and Chalcis on the other. It was originally one of the twelve cities of Attica. (Strab. ix. p. 397.) It was situated about 120 stadia from Athens, and the same distance from the frontiers of Boeotia: it was visible from Athens, and from its heights also might be seen the ships entering the harbour of Peiraeeus. (Thuc. vii. 19; Xen. *Hell.* i. 1. § 25.) It was by the pass of Deceleia that Mardonius retreated from Athens into Boeotia before the battle of Plataeae (Herod. ix. 15); and it was by the same road that the grain was carried from Euboea through Oropus into Attica. (Thuc. vii. 28.) In B.C. 413 Deceleia was occupied and fortified by the Lacedaemonians under Agis, who kept possession of the place till the end of the war; and from the command which they thus obtained of the Athenian plain, they prevented them from cultivating the neighbouring land, and compelled them to bring the corn from Euboea round Cape Sunium. (Thuc. ii. 27, 28.) The pass of Deceleia is now called the pass of *Tatóy*. Near the village of this name there is a peaked height, which is a conspicuous object from the Acropolis: the exact site of the demus is probably marked by a fountain, near which are many remains of antiquity. (Leake.)

52. OEUM DECELEICUM (Οἶον Δεκελεικόν), of unknown site, but near Deceleia, so called to distinguish it from the Oeum Cerameicum. (Harpocrat.; Suid.) [No. 17.]

53. SPHENDALE (Σφενδάλη), a demus, at which Mardonius halted on his route from Deceleia to Tanagra. (Herod. ix. 15; Steph.; Hesych.) "Hence it appears to have stood not far from the church of *Aio Merkúrio*, which now gives name to the pass leading from Deceleia through the ridges of Parnes into the extremity of the Tanagraean plain. But as there is no station in the pass where space can be found for a demus, it stood probably at *Malukása*, in a plain where some copious sources unite to form the torrent, which joins the sea one mile and a half east of the Skala of Apostólus." (Leake.) In the territory of Sphendale there was a hill, named Hyacinthus. (Suid. *s. v.* Παρθένοι, where Σφενδαλέων should be read instead of Σφενδονίων.)

54. OROPUS (Ὠρωπός), was originally a Boeotian town, and though afterwards included in Attica, was not an Attic demus. This place, together with its harbour Delphinium, and Amphiaraeium, in its neighbourhood, is spoken of separately. [OROPUS.]

55. PSAPHIS (Ψαφίς), originally a town of the Oropia, but subsequently an Attic demus, lay between Oropus and Brauron, and was the last demus in the north-eastern district of Attica. (Strab. ix. p. 399.)

56. RHAMNUS (Ῥαμνοῦς), south of Psaphis, on the coast of the Euripus, requires a separate notice on account of its celebrated temples. [RHAMNUS.]

57. APHIDNA (Ἀφιδνα), one of the twelve ancient cities of Attica, lay between Deceleia and Rhamnus. It is also spoken of separately.

58, 59, 60. TITACIDAE (Τιτακίδαι), PERRHIDAE (Περρίδαι), and THYRGONIDAE (Θυργωνίδαι), were probably all in the neighbourhood of Aphidna. These three demi, together with Aphidna, are said to have been removed from the Aeantis to another tribe. (Harpocr. *s. v.* Θυργωνίδαι.) Perrhidae is described as a demus in Aphidna (Hesych. Phavor. δῆμος ἐν Ἀφίδναις); and that Titacidae was in the same locality may be inferred from the story of the capture of Aphidna by the Dioscuri in consequence of the treachery of Titacus. (Herod. ix. 73; Steph. *s. v.* Τιτακίδαι.)

61. TRINEMEIA (Τρινέμεια), at which one of the minor branches of the Cephissus takes its rise, and therefore probably situated at the modern village of *Bugáti*. (Strab. ix. p. 400; Steph. B. *s. v.*)

62, 63, 64, 65. MARATHON (Μαραθών), PROBALINTHUS (Προβάλινθος), TRICORYTHUS (Τρικόρυθος), and OENOE (Οἰνόη), four demi situated in the small plain open to the sea between Mt. Parnes and Mt. Pentelicus, originally formed the Tetrapolis, one of the twelve ancient divisions of Attica. The whole district was generally known under the name of Marathon, under which it is described in this work. [MARATHON.]

66. EPACRIA (Ἐπακρία), one of the twelve ancient districts of Attica (Strab. ix. p. 397), and subsequently, as appears from an inscription, a demus near Plotheia and Halae Araphenides. (Böckh, *Inscr.* No. 82.) As the name of a district, it was probably synonymous with Diacria. (Etym. M. Ἐπακρία; Steph. Σημαχίδαι.) An ancient grammarian describes the district of Epacria as bordering upon that of the Tetrapolis of Marathon. (Bekker, *Anecd.* i. p. 259.) Finlay and Leake place the town of this name at *Pikérmi*, upon the south-eastern heights of Pentelicus, "where a strong position on a perennial stream, added to some vestiges of buildings, and several inscriptions, are proofs of an Hellenic site."

67. SEMACHIDAE (Σημαχίδαι), described by Philochorus (ap. Steph. *s. v.*) as a demus in the district of Epacria, but its exact site is uncertain. (Hesych.; Phot.)

68. PLOTHEIA (Πλώθεια) appears to have belonged to the district of Epacria, and to have been not far from Halae Araphenides. (Harpocr.; Suid.; Steph.; Phot.; Böckh, *Inscr.* No. 82.)

69, 70. PHEGAEA (Φηγαία), the name of two demi of uncertain site. (Steph.; Harpocr.; Suid.; Etym. M.; Phot.; Hesych.) It is probable, however, that Stephanus speaks of one of these demi, under the name of PHEGEUS, when he describes Halae Araphenides as lying between Phegeus near Marathon and Brauron. (Steph. *s. v.* Ἁλαί.)

71. HECALE (Ἑκάλη), probably near Marathon, since this demus is said to have obtained its name from a woman who hospitably received Theseus into her house, when he had set out to attack the Marathonian bull, which was ravaging the Tetrapolis. It contained a sanctuary of Zeus Hecaleius. (Philochor. ap. Plut. *Thes.* 14; Suid. *s. vv.* Ἑκάλη, Κωλιάς, Ἐπαύλια; Steph. *s. vv.* Ἑκάλη, Ἰαπίς, Τρινεμεῖς; Schol. *ad Aristoph. Acharn.* 127.)

72. ELAEUS (Ἐλαιοῦς, Steph.; Bekker, *Anecd.* i. p. 249), of uncertain site, but placed by Leake at *Liósia*, a village two miles to the west of Aphidna, because he considers this name a corruption of Elaeus; but this is not probable.

D. THE DEMI OF PARALIA AND MESOGAEA.

Mount Hymettus, which bounded the Athenian plain on the south, terminated in the promontory of ZOSTER (Ζωστήρ), opposite to which was a small island called PHAURA (Φαῦρα). At Zoster, upon the sea, stood four altars, sacred respectively to Athena, Apollo, Artemis, and Leto. (Strab. ix

p. 398; Paus. i. 31. § 1; Steph. *s. v.* Ζωστήρ.) "The hill of Zoster terminates in three capes; that in the middle is a low peninsula, which shelters in the west a deep inlet called *Vuliasméni*." (Leake.) The island Phaura is now called *Fleva* or *Flega*.

73. ANAGYRUS (Ἀναγυροῦς), situated on the western coast, a little north of the promontory Zoster, on the site of the modern *Vári*. [ANAGYRUS.]

74. CHOLLEIDAE (Χολλεῖδαι, Χολλίδαι, Harpocr.; Suid.; Steph.; Schol. *ad Aristoph. Acharn.* 404), is supposed to have been near the Nymphaeum, or Grotto of the Nymphs, situated at the southern end of Mt. Hymettus, and about three miles from *Vári* by the road. From the inscriptions in this cave, we learn that it was dedicated to the nymphs and the other rustic deities by Archedemus of Pherae (not Therae, as is stated by some modern writers), who had been enrolled in the demus of Cholleidae. Hence it is inferred that the grotto was, in all probability, situated in this demus. A full and interesting description of the grotto is given by Wordsworth (p. 192, seq.; comp. Leake, p. 57.).

75. THORAE (Θοραί), a little south of Anagyrus. (Strab. ix. p. 398; Harpocr.; Steph.; Etym. M.)

76, 77. LAMPTRA (Λάμπτρα, in inscr.; Λάμπρα, in Strab. &c.), the name of two demi, Upper Lamptra (Λάμπτρα καθύπερθεν), and Lower or Maritime Lamptra (Λάμπτρα ὑπένερθεν or παράλιος). These places were between Anagyrus, Thorae, and Aegilia. (Strab. *l. c.*) Upper Lamptra was probably situated at *Lamoriká*, a village between three and four miles from the sea, at the south-eastern extremity of Mt. Hymettus; and Lower Lamptra on the coast. At Lamptra the grave of Cranaus was shown. (Paus. i. 31. § 2; Steph.; Hesych.; Harpocr.; Suid.; Phot.)

78. AEGILIA (Αἰγιλία), south of Lamptra, spoken of separately. [AEGILIA.]

79. ANAPHLYSTUS (Ἀνάφλυστος), now called *Anávyso*, situated between the promontories of Astypalaea and Sunium, a little south of the former. It is also spoken of separately. [ANAPHLYSTUS.] Opposite the promontory of Astypalaea is a small island, now called *Lagonísi* or *Lágussa*, in ancient times ELEUSSA (Ἐλεοῦσσα, Strab. *l. c.*). Astypalaea and Zoster were the two chief promontories on the western coast of Attica.

Strabo (*l. c.*) speaks of a PANEIUM (Πανεῖον), or Grotto of Pan, in the neighbourhood of Anaphlystus. It is no doubt the same as the very beautiful and extensive cavern above *Mt. Elymbo* in the Paralian range, of which the western portion bears the name of *Pani*.

80. AZENIA (Ἀζηνία), the only demus mentioned by Strabo (*l. c.*) between Anaphlystus and Sunium. (Harpocr.; Hesych.; Steph.; Bekker, *Anecd.* i. p. 348.) It was probably situated in the bay of which Sunium forms the eastern cape. Opposite this bay is a small island, now called *Gaidharonisi*, formerly the Island or Rampart of Patroclus (Πατρόκλου χάραξ or νῆσος), because a fortress was built upon it by Patroclus, who commanded on one occasion the ships of Ptolemy Philadelphus. (Strab. *l. c.*; Paus. i. 1. § 1; Steph. *s. v.* Πατρόκλου νῆσος.) Ten miles to the south of this island, at the entrance of the Saronic gulf, is Belbina, now *St. George*, which was reckoned to belong to Peloponnesus, though it was nearer the coast of Attica. [BELBINA.]

81. SUNIUM (Σούνιον), situated on the southern promontory of Attica, which was also called Sunium, now *Cape Kolónnes*, from the columns of the ruined temple on its summit, is noticed separately. [SUNIUM.] Northward of the promontory of Sunium, and stretching from Anaphlystus on the west coast to Thoricus on the east coast, was Mt. Laurium, which contained the celebrated silver mines. [LAURIUM.]

82. THORICUS (Θορικός), north of Sunium on the east coast, was a place of importance, and also requires a separate notice. [THORICUS.] Midway between Sunium and Thoricus was the harbour PANORMUS (Πάνορμος, Ptol. iii. 15. § 8), now named *Panórimo*. Parallel to the east coast, and extending from Sunium to Thoricus, stretches the long narrow island, called Macris or Helena. [HELENA.]

83, 84. AULON (Αὐλών) and MARONEIA (Μαρώνεια), two small places of uncertain site, not demi, in the mining district of Mt. Laurium. [LAURIUM.]

85. BESA (Βῆσα), situated in the mining district, midway between Anaphlystus and Thoricus (Xen. *Vect.* 4. §§ 43, 44), and 300 stadia from Athens. (Isaeus, *de Pyrrh. Her.* p. 40, Steph.). Xenophon (*l. c.*) recommended the erection of a fortress at Besa, which would thus connect the two fortresses situated respectively at Anaphlystus and Thoricus. Strabo (ix. p. 426) says that the name of this demus was written with one *s*, which is confirmed by inscriptions.

86. AMPHITROPE (Ἀμφιτρόπη), north of Besa and in the district of the mines, placed by Stuart at *Metropisti*. (Böckh, *Inscr.* No. 162; Steph.; Hesych.)

87, 88. POTAMUS (Ποταμός or Ποταμοί), the name of two demi, as appears from an inscription quoted by Ross (p. 92), though apparently only one place. It lay on the east coast north of Thoricus, and was once a populous place: it was celebrated as containing the sepulchre of Ion. (Strab. ix. pp. 398, 399; Paus. i. 31. § 2, vii. i. § 2; Plin. iv. 7. s. 11; Suid.; Harpocr.) Its harbour was probably the modern *Dhaskalió*; and the demus itself is placed by Leake at the ruins named *Paleókastro* or *Evreókastro*, situated on a height surrounded by torrents two miles to the south-west of *Dhaskalió*, a little to the south of the village *Dárdheza*. The port *Dhaskalió* was probably, as Leake observes, the one which received the Peloponnesian fleet in B. C. 411. (Thuc. viii. 95.)

89. PRASIAE (Πρασίαι), on the east coast, between Potamus and Steiria, with an excellent harbour, from which the Theoria or sacred procession used to sail. Here was a temple of Apollo, and also the tomb of Erysichthon, who died at this place on his return from Delos. (Strab. ix. p. 399; Paus. i. 31. § 2; Thuc. viii. 95; Liv. xxxi. 45.) The ruins of the demus are seen on the north-east side of the bay. The harbour, now called *Porto Rafti*, is the best on the eastern coast of Attica, and is both deep and capacious. The entrance of the harbour is more than a mile in breadth; and in the centre of the entrance there is a rocky islet, upon which is a colossal statue of white marble, from which the harbour has derived its modern name, since it is commonly supposed to bear some resemblance to a tailor (ῥάπτης) at work. The best description of this statue is given by Ross, who remarks that it evidently belongs to the Roman period, and probably to the first or second century after the Christian era. (Ross, *Reisen auf den Griech. Inseln*, vol. ii. p. 9; comp. Leake, p. 72; Wordsworth, p. 217.) We also learn from Ross that in the middle of the bay there is a

rocky promontory with ruins of the middle ages upon it, which promontory Ross supposes to be the CORONEIA of Stephanus (*s. v.* Κορώνεια).

90. STEIRIA (Στείρια, Steph.; Hesych.; Suid.; Plin. iv. 7. s. 11), on the east coast, between Prasiae and Brauron. (Strab. ix. p. 399.) Wordsworth says that it is an hour's walk from Prasiae to Brauron, and that on the way he passed some ruins, which must be those of Steiria. Stiris in Phocis is said to have been founded by the inhabitants of this demus. (Paus. x. 35. § 8.) The road from Athens to Steiria and the harbour of Prasiae was called the Στειριακὴ ὁδός. (Plat. *Hipparch.* p. 229.) Steiria was the demus of Theramenes and Thrasybulus.

91. BRAURON (Βραυρών), one of the twelve ancient cities, but never mentioned as a demus, though it continued to exist down to the latest times. It was situated on or near the eastern coast of Attica, between Steiria and Halae Araphenides, near the river Erasinus. (Strab. viii. p. 371, ix. p. 399.) Its name is apparently preserved in that of the two villages, called *Vraóna* and *Paleó Vraóna*, situated south of the Erasinus. Brauron is celebrated on account of the worship of Artemis Brauronia, in whose honour a festival was celebrated in this place. (Herod. vi. 138.) Here Orestes and Iphigeneia were supposed to have landed, on their return from Tauris, bringing with them the statue of the Taurian goddess. (Paus. i. 33. § 1, iii. 16. § 7; Eurip. *Iphig. in Taur.* 1450, 1462; Nonnus, *Dionys.* xiii. 186.) This ancient statue, however, was preserved at Halae Araphenides, which seems to have been the proper harbour of Brauron, and therefore the place at which the statue first landed. Pausanias (i. 33. § 1), it is true, speaks of an ancient statue of Artemis at Brauron; but the statue brought from Tauris is expressly placed by Callimachus (*Hymn. in Dian.* 173), and Euripides (*Iphig. in Taur.* 1452) at Halae; and Strabo (ix. p. 399) distinguishes the temple of Artemis Tauropolus at Halae Araphenides from the temple of Artemis Brauronia at Brauron. There was a temple of Artemis Brauronia on the Acropolis, containing a statue of the goddess by Praxiteles. (Paus. i. 23. § 7.)

92. HALAE ARAPHENIDES (Ἅλαὶ Ἀραφηνίδες), so called to distinguish it from Halae Aexonides [No. 39], lay on the east coast between Brauron and Araphen, and was the proper harbour of Brauron, from whence persons crossed over to Marmarium in Euboea, where were the marble quarries of Carystus. (Strab. ix. p. 399, x. p. 446.) Hence Halae is described by Euripides (*Iphig. in Taur.* 1451) as γείτων δειράδος Καρυστίας. The statue of the Taurian Artemis was preserved at this place, as has been already shown. [No. 91.]

93. ARAPHEN (Ἀραφήν), on the east coast, north of Halae and Brauron, the name of which is probably preserved in the village of *Rafína*, situated near the mouth of the river of that name. (Harpocr.; Suid.; Steph.; Bekker, *Anecd.* i. p. 338.)

We learn from Strabo (ix. p. 399) that the demi in the Mesogaea were very numerous; and his statement is confirmed by the great number of remains of ancient buildings which occur in this district. (Wordsworth, p. 226). But the names of only a few have been preserved, which we can assign with certainty to the Mesogaea; and the position of many of these is doubtful.

94. PROSPALTA (Πρόσπαλτα) lay in the interior, between Zoster and Potamos, at the modern village of *Keratiá*, as we may infer from an inscription discovered at this place. (Paus. i. 31. § 1; Dem. *c. Macart.* p. 1071; Harpocr.; Phot.; Suid.; Steph.)

95. MYRRHINUS (Μυῤῥινοῦς) lay to the east of Prasiae or *Porto Raphti*, at *Méronda*, as appears from inscriptions found at this place. Artemis Colaenis was worshipped at Myrrhinus (Paus. i. 31. § 4; Schol. *ad Aristoph. Av.* 874); and in one of the inscriptions at *Méronda* mention is made of a temple of Artemis Colaenis. (Böckh, *Inscr.* No. 100.) (See also Strab. ix. p. 399; Steph.; Phot.)

96. PHLYA (Φλύα, Φλυά), the site of which cannot be determined, though there can be little doubt that it lay in the Mesogaea from the position which it occupies in the list of Pausanias. It must have been a place of importance from the number of temples which it contained, and from its frequent mention in inscriptions. (Paus. i. 31. § 4, iv. 1. § 5; Plut. *Them.* 1; Athen. x. p. 424; Harpocr.; Suid.; Steph.; Phot.)

97, 98. PAEANIA (Παιανία), divided into Upper and Lower Paeania, was situated on the eastern side of Hymettus, near the modern village of *Liogesi*. It was the demus of Demosthenes. (Paus. i. 23. § 12; Harpocr.; Suid.; Phot.; Ross, in *Annal. dell' Inst. Arch.* vol. ix. p. 5, foll.)

99. PHILAIDAE (Φιλαΐδαι) appears to have been near Brauron, since it is said to have derived its name from Philaeus, the son of the Telamonian Ajax, who dwelt in Brauron. Philaïdae was the demus of Peisistratus. (Plut. *Sol.* 10; Plat. *Hipparch.* p. 228; Paus. i. 35. § 2; Herod. vi. 35.)

100. CEPHALE (Κεφαλή) appears, from the order in which it occurs in the list of Pausanias (i. 31. § 1), to have been situated south or east of Hymettus, perhaps in the neighbourhood of Brauron and *Vraóna*, where Ross found an inscription containing the name of this demus. Cephale possessed a temple of the Dioscuri, who were here called the Great Gods. (Paus. *l. c.*; Harpocr.; Suid.; Phot.; Schol. *ad Aristoph. Av.* 417.)

101. SPHETTUS (Σφηττός), one of the twelve ancient cities, and subsequently a demus. Its position has given rise to much dispute. Leake places it in the northern part of the Mesogaea, and thinks that *Spata* may be a corruption of Sphettus. That it was situated either in the Mesogaea or the Paralia is certain from the legend, that Pallas, who had obtained these districts, marched upon Athens from Sphettus by the Sphettian Way. (Plut. *Thes.* 13; Philochor. *ap. Schol. ad Eurip. Hipp.* 35.) Now we have seen good reasons for believing that Pallas must have marched round the northern extremity of Hymettus [see above, No. 32]; and consequently the Sphettian road must have taken that course. Although the Sphettian road cannot therefore have run along the western coast and entered Athens from the south, as many modern writers maintain, Sphettus was probably situated further south than Leake supposes, inasmuch as Sphettus and Anaphlystus are represented as sons of Troezen, who migrated into Attica; and, seeing that Anaphlystus was opposite Troezen, it is inferred that Sphettus was probably in the same direction. (Paus. ii. 30. § 9; Steph. *s. vv.* Ἀνάφλυστος, Σφηττός.)

102. CYTHERRUS (Κύθηρρος, Inscr.; Κύθηρος, Κύθηρον, Strab. ix. p. 397; Harpoc.; Suid.; Steph.; Phot.), one of the twelve ancient cities, and afterwards a demus. Its position is quite uncertain.

Leake conjectures that its territory as one of the twelve cities may have occupied the southern end of the inland country, on the supposition that the territory of Sphettus occupied the northern half of this district. Ross however conjectures, from a passage of Pausanias (vi. 22. § 7), that Cytherus may have been near Gargettus. Pausanias states that the nymphs of the river Cytherus in Elis were called Ionides from Ion, the son of Gargettus, when he migrated from Athens to Elis.

(The best works on the demi are by Leake, *The Demi of Attica*, London, 1841, 2nd ed., and Ross, *Die Demen von Attika*, Halle, 1846; from both of which great assistance has been derived in drawing up the preceding account. The other most important works upon the topography of Attica are Grotefend, *De Demis sive Pagis Atticae*, Gött. 1829; Finlay, in *Transactions of the Royal Society of Literature*, vol. iii. p. 396, seq., and *Remarks on the Topography of Oropia and Diacria*, 12mo. Athens, 1838; K. O. Müller, art. *Attika*, in Ersch and Grüber's *Encyclopädie*, vol. vi., translated by Lockhart, London, 1842; Wordsworth, *Athens and Attica*, London, 1836; Kruse, *Hellas*, vol. ii.; Leake, *Northern Greece*, vol. ii.; Stuart's *Antiquities;* and the *Travels* of Dodwell, Gell, Brönsted, Fiedler, and Mure.)

In the following alphabetical list of the demi, the first column contains the name of each demus; the second that of the demotes; the third that of the tribe to which each demus belonged during the time of the ten tribes; and the fourth that of the tribe when there were twelve or thirteen tribes. Of the demi in this list, which have not been spoken of above, the site is unknown.

E. Alphabetical List of the Demi.

1.	Ἀγγελή	Ἀγγελῆθεν, Ἀγγελεύς	Pandionis	Pandionis.
2, 3.	Ἀγκυλή καθύπερθεν and ὑπένερθεν.	Ἀγκυλῆθεν, Ἀγκυλεύς	Aegeis	Aegeis.
4.	Ἀγνοῦς, Ἄγνους	Ἀγνούσιος	Acamantis	Demetrias, Attalis.
	[Ἀγριάδαι	Ἀγριάδης	Hippothoontis.]	
5, 6.	Ἀγρυλή (Ἀγραυλή, Ἀγροιλή) καθύπερθεν and ὑπένερθεν.	Ἀγρυλῆθεν, Ἀγρυλεύς	Erechtheis	Attalis.
7.	Ἀζηνία	Ἀζηνιεύς, Ἀζηνιᾶθεν	Hippothoontis	Hippothoontis.
8.	Ἄθμονον (Ἀθμονία)	Ἀθμονεύς	Cecropis	Attalis.
9.	Αἰγιλία (Αἴγιλος)	Αἰγιλιεύς	Antiochis	Antiochis.
10.	Αἰθαλίδαι	Αἰθαλίδης	Leontis	Antigonis (?)
11.	Αἰξωνή	Αἰξωνεύς	Cecropis	Cecropis.
12.	Ἀλαὶ Αἰξωνίδες	Ἀλαιεύς	Cecropis	Cecropis.
13.	Ἀλαὶ Ἀραφηνίδες	Ἀλαιεύς	Aegeis	Aegeis.
14.	Ἀλεξάνδρεια	Ἀλεξανδρεύς	Acamantis	Acamantis.
15.	Ἁλιμοῦς	Ἁλιμούσιος	Leontis	Leontis.
16.	Ἀλωπεκή	Ἀλωπεκῆθεν, Ἀλωπεκειεύς	Antiochis	Antiochis.
17.	Ἀμαξάντεια	Ἀμαξαντειεύς, Ἀμαξαντεύς	Hippothoontis	Hippothoontis.
18.	Ἀμφιτροπή	Ἀμφιτροπῆθεν		Antiochis.
19.	Ἀναγυροῦς	Ἀναγυράσιος	Erechtheis	Erechtheis.
20.	Ἀνακαία	Ἀνακαιεύς	Hippothoontis	Hippothoontis.
21.	Ἀνάφλυστος	Ἀναφλύστιος	Antiochis	Antiochis.
22.	Ἀπολλωνία	Ἀπολλωνιεύς		Attalis.
23.	Ἀραφήν	Ἀραφήνιος	Aegeis	Aegeis.
24.	Ἀτήνη	Ἀτηνεύς	Antiochis	Attalis.
26.	Ἄφιδνα	Ἀφιδναῖος	Acantis, Leontis	Ptolemais, Hadrianis.
27.	Ἀχαρναί	Ἀχαρνεύς	Oeneis	Oeneis.
28.	Ἀχερδοῦς (Ἀχραδοῦς)	Ἀχερδούσιος	Hippothoontis	
29.	Βατή	Βατῆθεν		Aegeis.
30.	Βερενικίδαι	Βερενικίδης		Ptolemais.
31.	Βῆσα	Βησαιεύς	Antiochis	Hadrianis.
32.	Βοιώτιοι	Βοιώτιος		
33.	Βουτάδαι	Βουτάδης	Oeneis	Aegeis (?)
34.	Γαργηττός	Γαργήττιος	Oeneis (?)	Aegeis.
35.	Γραῖα	Γραεύς		Paiidionis.
36.	Δαιδαλίδαι	Δαιδαλίδης	Cecropis	Cecropis.
37.	Δειράδες	Δειραδιώτης	Leontis	Leontis.
38.	Δεκέλεια	Δεκελεύς, Δεκελεεύς	Hippothoontis	Hadrianis.
39.	Διόμεια	Διομεύς, Διομεεύς, Διομειεύς	Aegeis	Aegeis.
	[Ἐδαπτεῖς, very doubtful.]			

40	Εἰρεσίδαι, Ἠρεσίδαι	Ειρεσίδης	Acamantis	Acamantis.
41.	Εἰτέα (Ἰτέα)	Εἰτεαῖος	Acamantis	Acamantis.
42.	Ἐκάλη	Ἐκάλειος (?) Ἐκαλῆθεν	Leontis	Ptolemais.
43.	Ἐλαιοῦς	Ἐλαιούσιος	Hippothoontis	Hadrianis.
44.	Ἐλευσίς	Ἐλευσίνιος	Hippothoontis	Hippothoontis.
45.	Ἐπεικίδαι	Ἐπεικίδης		Cecropis.
46.	Ἐπικηφισία	Ἐπικηφίσιος		Oeneis.
47.	Ἐρίκεια Ἐρίκαια,	Ἐρικειεύς, Ἐρικεεύς		Aegeis.
48.	Ἑρμος	Ἑρμειος	Acamantis	Acamantis.
49.	Ἑροιάδαι	Ἑροιάδης	Hippothoontis	Hippothoontis.
50.	Ἐρχία (Ἔρχεια)	Ἐρχιεύς	Aegeis	Aegeis.
51.	Ἑστιαία, Ἱστιαία	Ἑστιαιόθεν	Aegeis	Aegeis.
52.	Εὐνοστίδαι	Εὐνοστίδης		Antigonis.
53.	Εὐπυρίδαι	Εὐπυρίδης		Leontis.
54.	Εὐώνυμον (Εὐωνυμία)	Εὐωνυμεύς	Erechtheis	Erechtheis.
55.	Ἐχελίδαι	Ἐχελίδης		
	[Ἡφαιστιάδαι, see Ἰφιστιάδαι.]			
56.	Θημακός (Θημακοί)	Θημακεύς	Erechtheis	Ptolemais, Antigonis.
57.	Θοραί	Θορᾶθεν, Θοραιεύς	Antiochis	Antiochis.
58.	Θορικός	Θορίκιος	Acamantis	Acamantis.
59.	Θρία	Θριάσιος	Oeneis	Oeneis.
60.	Θυμαιτάδαι (Θυμοιτάδαι)	Θυμαιτάδης	Hippothoontis	Hippothoontis.
61.	Θυργωνίδαι	Θυργωνίδης	Aeantis	Ptolemais
62.	Ἰκαρία	Ἰκαριεύς	Aegeis	Aegeis.
63.	Ἱπποταμάδαι	Ἱπποταμάδης		
	[Ἰτέα, see Εἰτέα.]			
64.	Ἰφιστιάδαι (Ἡφαιστιάδαι)	Ἰφιστιάδης		Acamantis.
65.	Ἰωνίδαι	Ἰωνίδης	Aegeis	Aegeis.
66.	Κειριάδαι	Κειριάδης	Hippothoontis	Hippothoontis.
67.	Κεραμεικός (Κεραμεῖς)	ἐκ Κεραμέων, Κεραμεύς	Acamantis	Acamantis.
68.	Κεφαλή	Κεφαλῆθεν	Acamantis	Acamantis.
69.	Κηδαί (Κηδοί)	ἐκ Κηδῶν	Erechtheis	Erechtheis.
70.	Κηττοί (Κηττός)	Κήττιος	Leontis	Leontis.
71.	Κηφισία	Κηφισιεύς	Erechtheis	Erechtheis.
72.	Κίκυννα	Κικυννεύς	Acamantis, Cecropis	Acamantis.
73.	Κοθωκίδαι	Κοθωκίδης	Oeneis	
74.	Κοίλη	ἐκ Κοίλης		Hippothoontis.
75.	Κολλυτός (Κολυττός)	Κολλυτεύς	Aegeis	Aegeis.
76.	Κολωνός	ἐκ Κολωνοῦ, Κολωνῆθεν, Κολωνεύς	Antiochis	Aegeis, Ptolemais.
77.	Κονθύλη	Κονθυλεύς, Κονθυλίδης	Pandionis	Ptolemais.
78.	Κόπρος	Κόπρειος	Hippothoontis	Hippothoontis.
79.	Κορυδαλλός	Κορυδαλλεύς	Hippothoontis	Attalis.
80.	Κριῶα	Κριωεύς	Antiochis	Antiochis.
81.	Κρωπεία (Κρωπίδαι)	Κρωπίδης	Leontis	Leontis.
82.	Κυδαθήναιον	Κυδαθηναιεύς	Pandionis	Pandionis.
83.	Κυδαντίδαι	Κυδαντίδης	Aegeis	Aegeis, Ptolemais.
84.	Κύθηρος (Κύθηρον)	Κυθήριος	Pandionis	Pandionis.
85.	Κύκαλα			Acantis.
86.	Κυρτιάδαι (Κυρτεῖδαι)	Κυρτιάδης		Acamantis.
87.	Λακιάδαι	Λακιάδης	Oeneis	Oeneis.
88, 89.	Λαμπτραὶ καθύπερθεν and ὑπένερθεν.	Λαμπτρεύς	Erechtheis	Erechtheis.
90.	Λέκκον			Antiochis.
91.	Λευκονόη (Λευκόνιον)	Λευκονοεύς, Λευκονοιεύς	Leontis	Leontis.
92.	Λευκοπύρα			Antiochis.

93.	Λουσία	Λουσιεύς	Oeneis	Oeneis.
94.	Μαραθών	Μαραθώνιος	Aeantis	Aeantis.
95.	Μελαιναί	Μελαινεύς		Antiochis.
96.	Μελίτη	Μελιτεύς	Cecropis	Cecropis.
97.	Μυρρινοῦς	Μυρρινούσιος	Pandionis	Pandionis.
98.	Μυρρινούττη	ἐκ Μυρρινούττης		Aegeis.
99.	Ξυπέτη	Ξυπεταιών	Cecropis	Cecropis.
100.	Ὄα (Ὦα)	Ὀαεύς, Ὀαιεύς, Ὄαθεν, Ὦαθεν	Pandionis	Pandionis, Hadrianis.
101.	Ὄη (Οἴη)	Ὀῆθεν, Οἰῆθεν	Oeneis	Oeneis.
102.	Οἰνόη (near Marathon)	Οἰναῖος	Aeantis	Attalis (?)
103.	Οἰνόη (near Eleusis)	Οἰναῖος	Hippothoontis	Ptolemais (?)
104.	Οἶον Δεκελειικόν	ἐξ Οἴου	Hippothoontis	
105.	Οἶον Κεραμεικόν	ἐξ Οἴου	Leontis	
106.	Ὀτρυνεῖς	Ὀτρυνεύς		Aegeis.
107, 108.	Παιανία καθύπερθεν and ὑπένερθεν.	Παιανιεύς	Pandionis	Pandionis.
109.	Παιονίδαι	Παιονίδης	Leontis	Leontis.
110.	Πάκαλη, Πάκαλα?	Πακαλεύς		
111.	Παλλήνη	Παλληνεύς	Antiochis	Antiochis.
112.	Παμβωτάδαι	Παμβωτάδης	Erechtheis	Erechtheis.
113.	Πειραιεύς	Πειραιεύς	Hippothoontis	Hippothoontis.
114.	Πεντέλη	Πεντελῆθεν		Antiochis.
115, 116.	Περγασή καθύπερθεν and ὑπένερθεν.	Περγασῆθεν	Erechtheis	Erechtheis.
117.	Περιθοίδαι	Περιθοίδης	Oeneis	Attalis (?)
118.	Περρίδαι	Περρίδης	Aeantis	Antiochis.
119.	Πήληκες	Πήληξ	Leontis	Leontis.
120.	Πίθος (Πίτθος)	Πιθεύς	Cecropis	Cecropis.
121.	Πλώθεια	Πλωθειεύς, Πλωθεύς	Aegeis	Aegeis.
122.	Πόρος	Πόριος	Acamantis	Acamantis.
123, 124.	Ποταμός καθύπερθεν and ὑπένερθεν.	Ποτάμιος	Leontis	
125.	Πρασιαί	Πρασιεύς	Pandionis	Pandionis.
126.	Προβάλινθος	Προβαλίσιος		Pandionis.
127.	Πρόσπαλτα	Προσπάλτιος	Acamantis	Acamantis.
128.	Πτελέα	Πτελεάσιος		Oeneis.
129.	Ῥακίδαι	Ῥακίδης	Acamantis	
130.	Ῥαμνοῦς [Σαλαμίς.]	Ῥαμνούσιος	Aeantis	Aeantis.
131.	Σημαχίδαι	Σημαχίδης	Antiochis	Antiochis.
132.	Σκαμβωνίδαι	Σκαμβωνίδης	Leontis	Leontis.
133.	Σούνιον	Σουνιεύς	Leontis	Attalis.
134.	Στειρία	Στειριεύς	Pandionis	Pandionis.
135.	Συβρίδαι	Συβρίδης	Erechtheis	Erechtheis.
136.	Συπαληττός	Συπαλήττιος	Cecropis	Cecropis.
137.	Σφενδάλη	Σφενδαλεύς		Hippothoontis.
138.	Σφηττός	Σφήττιος	Acamantis	Acamantis.
139.	Ταρσός	Ταρσεύς		Ptolemais.
140.	Τίθρας (Τείθρας)	Τιθράσιος	Aegeis	Aegeis.
141.	Τιτακίδαι	Τιτακίδης	Aeantis	Antiochis.
142.	Τρικόρυθος	Τρικορύσιος	Aeantis	Aeantis.
143.	Τρινεμεία (Τρινεμεῖς)	Τρινεμεύς		Cecropis.
144.	Τυρμίδαι (Τυρμεῖδαι)	Τυρμίδης	Oeneis	Oeneis (?)
145.	Ὑδάδαι	Ὑδάδης	Leontis	Leontis (?)
146.	Ὑπώρεια	Ὑπωρεύς		Leontis.
147.	Φάληρον (Φάληρος)	Φαληρεύς	Antiochis, Aeantis	Aeantis.
148.	Φηγαια	Φηγαιεύς	Aeantis	Aegeis, Pandionis, Hadrianis.
149.	Φηγαία	Φηγαιεύς		
150.	Φηγοῦς	Φηγούσιος	Erechtheis	Erechtheis.
151.	Φιλαίδαι	Φιλαίδης	Aegeis	Aegeis.
152.	Φλύα (Φλυά)	Φλυεύς, Φλυῆθεν	Cecropis	Ptolemais.
153.	Φρεάρριοι	Φρεάρριος	Leontis	Leontis.
154	Φυλή	Φυλάσιος	Oeneis	Oeneis.
155.	ΦΥΡΝ			Antiochis.
156.	Χαστιεῖς	Χαστιεύς		

157.	X.....			Erechtheis.
158.	Χολαργός (Κολαργία)	Χολαργεύς	Acamantis	Acamantis.
159.	Χολλεῖδαι (Κολλίδαι)	Χολείδης	Leontis	Aegeis.
160.	Ψαφίς (Ψαφίδαι)	Ψαφίδης		Aeantis.
	[Ὦα, see Ὄα.]			

ATTI'CITUS (Ἀττίκιτος, Ptol. v. 9), or ANTICEI'TES (Ἀντικείτης, Strab. xi. pp. 494, 495), a great river in the country of the Maeotae, in Sarmatia Asiatica, with two mouths, the one falling into the Palus Maeotis, and the other into the Euxine; but the latter formed first the lake of Corocondametis (Κοροκονδαμῆτις), so named from the town of Corocondame. It is evidently the *Kuban*. According to Strabo, it was also called Hypanis, and Ptolemy calls its southern arm Vardanes. [P. S.]

ATTI'DIUM, a town of Umbria, mentioned only by Pliny, who enumerates the Attidiates among the inland towns of that province (iii. 14. s. 19). But its existence as a municipal town is confirmed by inscriptions (Holsten. *Not. ad Cluver.* p. 83; Orell. *Inscr.* 88), and there is little doubt that the "Attidiatis ager" mentioned in the *Liber de Coloniis* (p. 252) among those of Picenum is only a corruption of "Attidiatis." The site is clearly marked by the village of *Attigio*, situated in the upper valley of the Aesis, about 2 miles S. of the modern city of *Fabriano*, to which the inhabitants of Attidium appear to have migrated in the middle ages. Some ruins and numerous inscriptions still remain at *Attigio*. (Cluver. *Ital.* p. 614; Calindri, *Statistica del Pontificio Stato*, p. 115; Ramelli, *Iscrizioni di Fabriano*, in *Bull. d. Inst.* 1845, p. 127.) [E. H. B.]

A'TTUBI or A'TUBI (prob. *Espejo*, on the *Guadajoz*), a colony in Hispania Baetica, with the surname Claritas Julia, belonging to the conventus of Astigi. (Plin. iii. 1. s. 3; Mariana, iii. 21; Florez, *Esp. Sagr.* ix. 54, x. 149, xii. 303; Volkmann, *Reisen*, vol. ii. p. 18; Ukert, vol. ii. pt. 1. p. 366.) [P. S.]

ATTU'DA (Ἄττουδα: *Eth.* Ἀττουδεύς), a town of Caria, or of Phrygia, as some suppose, noticed only by Hierocles and the later authorities. But there are coins of the place with the epigraph Ἱερὰ Βουλὴ Ἀττουδέων, of the time of Augustus and later. The coins show that the Men Carus was worshipped there. An inscription is said to show that the site is that of *Ypsili Hissar*, south-east of Aphrodisias in Caria. (Cramer, *Asia Minor*, vol. ii. p. 55; Forbiger, vol. ii. p. 235.) [G. L.]

ATUATICI. [ADUATICI.]

ATU'RIA. [ASSYRIA.]

ATU'RIA (prob. *Oria*), a river of Hispania Tarraconensis, in the territory of the Vascones. (Mela, iii. 1; Ukert, vol. ii. pt. 1, p. 300.) [P. S.]

A'TURUS (*Adour*), as Lucan (i. 420) names it, or ATURRUS (Auson. *Mosell.* v. 467), a river of Aquitania. Vibius Sequester has the name Atyr (ed. Oberl. p. 68), which is the genuine name, unless we should write Atur. The Adur of Sussex is the same name. Ptolemy's form Aturis is the Aquitanian word with a Greek termination. The Aturus is the chief river of Aquitania. It drains some of the valleys on the north face of the western part of the Pyrenees, and has a course of about 170 miles to the Bay of Biscay, which it enters below Bayonne. The town of Aquae Augustae was on the Aturus. The poets call the river Tarbellicus, from the name of the Tarbelli, an Aquitanian people who occupied the flat coast north of the mouth of the Adour.

It seems that there was a tribe named Atures (Tibull. i. 7, according to the emended text) or Aturenses: probably this was a name given to the inhabitants of the banks of the Atur. [G. L.]

ATU'SA, a town in Assyria, the exact site of which has been much questioned. It has, however, been determined lately, by the publication of a very rare and almost unique coin, bearing the inscription Ἀτουσιέων τῶν πρὸς τὸν καπρον (Millingen, *Sylloge of Unedited Coins*, 4to. 1837). It had, indeed, been noticed previously, and correctly, by Weston (*Archaeol.* xvi. pp. 9 and 89), though Sestini (*Letter. Numism. Ser.* ii. vol. vi. p. 80) questioned the attribution, on insufficient grounds. The fabric, form of the inscription, the arrow symbolical of the Tigris (Strab. xi. p. 529), all combine to refer the coin to a country in that part of Asia, and, if the coin be evidence enough, to a city on the Caprus, now Lesser *Zab*. The name, too, is probably Assyrian, and may be derived either from Atossa, which was a national Assyrian name (Euseb. *Chron. an.* 583; Conon, vi.), or else a modification of the ancient name Aturia. [ASSYRIA.] A passage of Pliny (v. 40), where the name Attusa occurs, is manifestly corrupt.

Cramer, on the authority of a single autonomous coin, speaks of Atusia, a city of Phrygia, on the river Caprus, which flows into the Maeander; but he probably refers to the coin mentioned above. (Cramer, *Asia Minor*, vol. ii. p. 55.) [V.]

AUALI'TES SINUS (Αὐαλίτης κόλπος, Steph. B. *s. v.*, Ἀβαλίτης in some manuscripts of Ptolemy, iv. 7. §§ 27, 39; Plin. vi. 29. s. 34; Arrian. *Perip. Mar. Eryth.* p. 6: *Eth.* Αὐαλίτης), the modern *Zeyla*, in Abyssinia, was a deep bay on the eastern coast of Africa, in lat. 11° N., SW. of the Straits of *Bab-el-Man-deb*. At the head of the bay was a town Avalites; and the inhabitants of the immediate district were called Avalitae. They were dependent upon the kingdom of Axum. [W. B. D.]

AUA'SIS. [OASIS.]

AUDUS (Αὔδος), a river of Mauretania Caesariensis (aft. Sitifensis), falling into the Sinus Numidicus (*G. of Boujayah*). It is placed by Ptolemy 10′ W. of Igilgilis (*Jijeli*), a position which identifies it, according to Pellissier, with a river called *Wad-el-Jenan*, not marked on the maps. If so, the promontory Audum (Αὔδον), which Ptolemy places 10′ W. of the Audus, would be *C. Cavallo*. (Ptol. iv. 2. §§ 10, 11). But, on the other hand, Ptolemy seems to make Audum the W. headland of the Sinus Numidicus (*C. Carbon* or *Ras Metzenkoub*); and, if this be its true position, the Audus might be identified with the considerable river *Sumeim*, falling into the gulf E. of *Boujayah*, and answering (on the other supposition) to the Sisar of Ptolemy. Mannert solves the difficulty by supposing that here (as certainly sometimes happens) Ptolemy got double results from two inconsistent accounts, and that his

Sisar and Audus are the same river, and identical also with the USAR of Pliny. Perhaps the two names, Audus and Sisar (or Usar), may belong to the two great branches of the *Sumeim*, of which the western is still called *Adous*, and the other *Ajeby*. (Mannert, vol. x. pt. 2. p. 411; Pellissier, *Exploration de l'Algérie*, vol. vi. p. 356.) [P. S.]

AUFIDE'NA (Αὐφιδῆνα, Ptol.: *Eth.* Aufidenas, ātis: *Alfidena*), a city of northern Samnium, situated in the upper valley of the Sagrus, or *Sangro*. Ptolemy mentions it as the chief city of the Caraceni, the most northern tribe of the Samnites; and the Itineraries place it 24 miles from Sulmo, and 28 from Aesernia, but the latter number is certainly erroneous. (Ptol. iii. 1. § 66; Itin. Ant. p. 102.) The remains of its massive ancient walls prove that it must have been a fortress of great strength; but the only notice of it in history is that of its conquest by the Roman consul Cn. Fulvius, who took it by storm in B. C. 298. (Liv. x. 12.) It seems to have suffered severely in common with the other Samnite cities from the ravages of Sulla, but received a military colony under Caesar (*Lib. Colon.* p. 259; Zumpt, *de Coloniis*, p. 307), and continued to exist under the empire as a municipal town of some consequence. (Plin. iii. 12. s. 17; Orell. *Inscr.* 3776; Zumpt, *l. c.*) The modern village of *Alfidena*, as is often the case in Italy, though it has retained the name of Aufidena, does not occupy its original site; the ruins of the ancient city (consisting principally of portions of its walls of a very rude and massive character) are still visible on a hill on the left bank of the river *Sangro*, about 5 miles above *Castel di Sangro*. Numerous architectural fragments and other ancient relics of Roman date are also still found on the site. (Romanelli, vol. ii. pp. 486, 487; Craven's *Abruzzi*, vol. ii. p. 59.) [E. H. B.]

AU'FIDUS (Αὔφιδος: *Ofanto*), the principal river of Apulia, and one of the most considerable of Southern Italy, flowing into the Adriatic Sea. Polybius says (iii. 110) that it is the only river of Italy that traverses the central chain of the Apennines, which is a mistake; but its sources are at so short a distance from the Tyrrhenian Sea, as to have readily given rise to the error. It actually rises in the Apennines, in the country of the Hirpini, about 15 miles W. of Compsa (*Conza*), and only 25 from Salernum, on the Tyrrhenian Sea. From thence it flows through the rugged mountain country of the Hirpini for a distance of above 40 miles to the frontiers of Apulia, which it crosses between Asculum and Venusia, and traverses the broad plains of that province, till it discharges itself into the Adriatic, about half way between Sipontum and Barium. Like most of the rivers of Italy, it has much of the character of a great mountain torrent. Horace, whose native place of Venusia was scarcely 10 miles distant from the Aufidus (whence he calls himself "longe sonantem natus ad Aufidum," *Carm.* iv. 9. 2), alludes repeatedly to the violent and impetuous character of its stream, when swollen by winter floods or by heavy rains in the mountains of the Hirpini; nor has it in this respect degenerated from its ancient character. (Hor. *Carm.* iii. 30. 10, iv. 14. 25, *Sat.* i. 1 58.) But in the summer, on the contrary, it dwindles to a very inconsiderable river, so that it is at this season readily fordable at almost any point; and below Canusium it is described by a recent traveller as "a scanty stream, holding its slow and winding course through the flat country from thence to the sea." (Craven, *Travels*, p. 86.) Hence Silius Italicus, in describing the battle of Cannae, speaks of the "stagnant Aufidus" (*stagna Aufida*, x. 180; see also xi. 510), an epithet well deserved where it traverses that celebrated plain. So winding is this part of its course, that the distance from the bridge of Canusium to the sea, which is only 15 miles in a direct line, is nearly double that distance along the river. (Lupuli, *Iter Venusin.* p. 176; Swinburne, *Travels*, vol. i. p. 165; Giustiniani, *Diz. Geogr.* pt. ii. vol. iii. p. 44.) Strabo speaks of it as navigable for a distance of 90 stadia from its mouth, at which point the Canusians had an emporium. But this could never have been accessible to any but very small vessels. (Strab. vi. p. 283; Plin. iii. 11. s. 16; Mela, ii. 4; Ptol. iii. 1. § 15.)

There are at the present day only three bridges over the Aufidus, all of which are believed to have been originally of ancient construction; the one called the *Ponte di Canosa*, 3 miles W. of that city, was traversed by the Via Trajana from Herdonia to Canusium; that called the *Ponte di Sta. Venere*, about 7 miles from *Lacedogna*, is clearly the PONS AUFIDI of the Itin. Ant. (p. 121), which places it on the direct road from Beneventum to Venusia, 18 M. P. from the latter city. The ancient Roman bridge is still preserved, and an inscription records its restoration by M. Aurelius. (Pratilli, *Via Appia*, iv. c. 5, p. 469; Lupuli, *Iter Venusin.* p. 178; Romanelli, vol. ii. pp. 230, 231.)

The Itineraries also notice a station at the mouth of the river where it was crossed by the coast road from Sipontum to Barium; but its name is corrupted into Aufidena (Itin. Ant. p. 314) and Aufinum (Tab. Peut.) [E. H. B.]

AUFINA, a city of the Vestini, mentioned only by Pliny (iii. 12. s. 17), who enumerates the "Aufinates Cismontani" among the communities of the Vestini; and tells us that they were united with the Peltuinates, but whether municipally or locally, is not clear. The modern village of *Ofena*, about 12 miles N. of *Popoli*, in the lofty and rugged group of mountains N. of the Aternus, retains the ancient site as well as name. It was a bishop's see as late as the 6th century, and numerous antiquities have been found there. (Holsten. *Not. in Cluver.* p. 140; Romanelli, vol. iii. p. 271.) [E. H. B.]

AUFONA, a river in Britain. In Tacitus (*Annal* xii. 31) we find that Ostorius covered the rivers Sabrina and Antona with encampments. The Geographer of Ravenna has *Aufona*, and the Gloucestershire *Avon* suits the locality. This has justified the current notion that such was either the true reading of Tacitus, or else that it would have been more correctly so written by the author. [R. G. L.]

AUGEIAE (Αὐγειαί: *Eth.* Αὐγεάτης). 1. A town of Locris Epicnemidia, near Scarpheia, mentioned by Homer, but which had disappeared in the time of Strabo. (Hom. *Il.* ii. 532; Strab. ix. p. 426; Steph. B. *s. v.*)

2. A town of Laconia, mentioned by Homer (*Il.* ii. 583), probably the same as the later Aegiae. [AEGIAE.]

AU'GILA (τὰ Αὔγιλα: *Eth.* Αὐγιλῖται, Steph. B.; Αὔγιλαι, Ptol.; Augilae or Augylae, Mela and Plin.: *Aujelah*), an oasis in the desert of Barca, in the region of Cyrenaica, in N. Africa, about 3½° S. of Cyrene. Herodotus mentions it as one of the oases formed by salt hills (κολωνοὶ ἅλος), which he places at intervals of 10 days' journey along the ridge of sand which he supposes to form the N.

margin of the Great Desert. His distance of 10 days' W. of the oasis of Ammon is confirmed by Hornemann, who made the journey with great speed in 9 days; but the time usually taken by the caravans is 13 days. In the time of Herodotus the oasis belonged to the NASAMONES, who then dwelt along the shore from Egypt to the Great Syrtis; and who, in the summer time, left their flocks on the coast, and migrated to Augila to gather the dates with which it abounded. (Herod. iv. 172. 182; in the latter passage some MSS. have Ἄγιλα.) It was not, however, uninhabited at other seasons, for Herodotus expressly says, καὶ ἄνθρωποι περὶ αὐτὸν οἰκέουσι. Mela and Pliny, in abridging the statement of Herodotus, have transferred to the Augilae (by a carelessness which is evident on comparison) what he says of the Nasamones. (Mela, i. 4, 8; Plin. v. 4, 8.) They place them next to the Garamantes, at a distance of 12 days' journey. (Plin.) Ptolemy (iv. 5. § 30) mentions the Augilae and the Nasamones together, in such a manner as to lead to the inference that the Nasamones, when driven back from the coast by the Greek colonists, had made the oasis of Augila their chief abode. Stephanus Byzantinus calls Augila a city.

The oasis, which still retains its ancient name, forms one of the chief stations on the caravan route from Cairo to Fezzan. It is placed by Rennell in 30° 3′ N. lat. and 22° 46′ E. long., 180 miles SE. of Barca, 180 W. by N. of Siwah (the Ammonium), and 426 E. by N. of Mourzouk. Later authorities place *Aujilah* (the village) in 29° 15′ N. lat. and 21° 55′ E. long. It consists of three oases, that of *Aujilah* properly so called, and those of *Jalloo* (Pacho: *Mojabra*, Hornemann) and *Leshkerreh*, a little E. and NE. of the former, containing several villages, the chief of which is called *Aujilah*, and supporting a population of 9000 or 10,000. Each of these oases is a small hill (the κολωνός of Herodotus), covered with a forest of palm-trees, and rising out of an unbroken plain of red sand, at the S. foot of the mountain range on the S. of Cyrenaica. The sands around the oasis are impregnated with salts of soda. They are connected with the N. coast by a series of smaller oases. Augila is still famous for the palm-trees mentioned by Herodotus and by the Arabian geographer Abulfeda. An interesting parallel to Herodotus's story of the gathering of the date harvest by the Nasamones occurs in the case of a similar oasis further to the E., the dates of which are gathered by the people of Derna on the coast.

According to Procopius (*Aedif.* vi. 1), there were temples in the oasis, which Justinian converted into Christian churches. There are still some traces of ruins to be seen.

(Rennell, *Geography of Herodotus*, vol. ii. pp. 209, 212, 213, 271; Hornemann, *Journal of Travels from Cairo to Mourzouk;* Heeren, *Researches*, &c., *African Nations*, vol. i. p. 213; Pacho, *Voyage dans la Marmarique*, p. 272.) [P. S.]

AUGUSTA (*Eth.* Augustanus, Steph. B. *s. v.* Αὔγουστα), a Cilician town, in the interior. (Plin. v. 27.) The name shows that it was either founded under the patronage of some Roman emperor, or a new Roman name was given to an old place. Ptolemy places this town in a district named Bryelice. [G. L.]

AUGUSTA AUSCORUM (*Auch*), the chief town of the Ausci, a people of Aquitania. Augusta was originally Climberrum (Mela, iii. 2), which seems to be a Basque name. Like many other Gallic towns named Augusta, it obtained this appellation under Augustus or some of his successors. It was on the road from *Bordeaux* to *Toulouse*. It appears in the Table under the name Eliberre; and in the Antonine Itin., on the route from Aginnum (*Agen*) to Lugdunum in Aquitania, under the name of Climberrum. *Auch* is the chief town of the department of *Gers*, and on the river *Gers*, a tributary of the *Garonne*. [AUSCI.] [G. L.]

AUGUSTA ASTURICA. [ASTURICA AUGUSTA.]

AUGUSTA EME'RITA (Αὐγούστα Ἡμερίτα: *Merida*, Ru.), the chief city of Lusitania in Spain, was built in B. C. 23, by Publius Carisius, the legate of Augustus, who colonized it with the veterans of the 5th and 10th legions whose term of service had expired (*emeriti*), at the close of the Cantabrian War. (Dion Cass. liii. 26; Strab. iii. pp. 151, 166.) It was, of course, a colonia from the first, and at a later period it is mentioned as having the jus Italicum. (Paullus, *Dig.* viii. de Cens.) It was the seat of one of the three juridical divisions of Lusitania, the *conventus Emeritensis*. (Plin. iv. 22. s. 35.) It speedily became the capital of Lusitania, and one of the greatest cities of Spain. (Mela, ii. 6.) Ausonius celebrates it in the following verses (*Ordo Nobil. Urb.* viii., Wernsdorf, *Poet. Lat. Min.* vol. v. p. 1329):—

"Clara mihi post has memorabere, nomen Iberum,
Emerita aequoreus quam praeterlabitur amnis,
Submittit cui tota suos Hispania fasces.
Corduba non, non arce potens tibi Tarraco certat,
Quaeque sinu pelagi jactat se Bracara dives."

Emerita stood on the N. bank of the Anas (*Guadiana*), but a part of its territory lay on the S. side of the river, on which account Hyginus places it in Baeturia. (Hygin. *Lim. Const.* p. 154.) From its position on the borders of Lusitania and Baetica, we have various statements of the people and district to which it belonged. Strabo assigns it to the Turduli, a part of whom certainly dwelt at one time on the right bank of the Anas (comp. Plin. *l. c.*); Prudentius to the Vettones (*Hymn. in Eulal.* ix. 186). Ptolemy simply mentions it as an inland city of the Lusitani (ii. 5. § 8). It is one of his points of astronomical observation, having 14 hrs. 15 min. in its longest day, and being 3½ hours W. of Alexandria (viii. 4. § 3).

Emerita was the centre of a great number of roads branching out into the three provinces of Spain; the chief distances along which were, 162 M. P. to Hispalis; 144 to Corduba; 145, 161, and 220, by different routes, to Olisipo; 313 to the mouth of the Anas; 632 to Caesaraugusta, or 348 by a shorter route, or 458 by the route through Lusitania. (*Itin. Ant.* pp. 414, 415, 416, 418, 419, 420, 431, 432, 433, 438, 444.) Its territory was of great fertility, and produced the finest olives. (Plin. xv. 3. s. 4.) Pliny also mentions a kind of cochineal (coccus) as found in its neighbourhood and most highly esteemed (iv. 41. s. 65).

The coins of Emerita are very numerous, most of them bearing the heads of the Augustan family, with epigraphs referring to the origin of the city, and celebrating its founder, in some cases with divine honours. A frequent type is a city gate, generally bearing the inscription EMERITA AUGUSTA, a device which has been adopted as the cognizance of the modern city. (Florez, *Med.* vol. i. p. 384; Eckhel, *Doctr. Num. Vet.* vol. i. pp. 12, 13.)

And well may Merida, though now but a poor

neglected town of 4500 inhabitants, cling to the memory of her past glory; for few cities in the Roman empire have such magnificent ruins to attest their ancient splendour. It has been fitly called "the Rome of Spain in respect of stupendous and well-preserved monuments of antiquity." (Ford, p. 258.) Remains of all the great buildings which adorned a Roman city of the first class are found within a circuit of about half a mile, on a hill which formed the nucleus of the city. The Goths preserved and even repaired the Roman edifices; and, at the Arab conquest, Merida called forth from the Moorish leader Musa the exclamation, that "all the world must have been called together to build such a city." The conquerors, as usual, put its stability to the severest test, and the ruins of Merida consist of what was solid enough to withstand their violence and the more insidious encroachments of the citizens, who for ages have used the ancient city as a quarry. Within the circuit of the city, the ground is covered with traces of the ancient roads and pavements, remains of temples and other buildings, fragments of columns, statues, and bas-reliefs, with numerous inscriptions. A particular account of the antiquities, which are too numerous to describe here, is given by Laborde and Ford. The circus is still so perfect that it might be used for races as of old, and the theatre, the vomitaries of which are perfect, has been the scene of many a modern bull-fight. The great aqueduct is one of the grandest remains of antiquity in the world; and there are several other aqueducts of less consequence, and the remains of vast reservoirs for water. The Roman bridge over the *Guadiana*, of 81 arches, 2575 feet long, 26 broad, and 33 above the river, upheld by Goth and Moor, and repaired by Philip III. in 1610, remained uninjured till the Peninsular War of our own time, when some of the arches were blown up, in April 1812. (Florez, *Esp. Sagr.* vol. xiii. pp. 87, foll.; Laborde, *Itinéraire de l'Espagne*, vol. iii. pp. 399, foll., 3rd ed.; Ford, *Handbook of Spain*, pp. 258, foll.) [P. S.]

AUGUSTA FIRMA. [ASTIGI.]

AUGUSTA GEMELLA. [TUCCI.]

AUGUSTA JULIA. [GADES.]

AUGUSTA PRAETORIA (Αὐγούστα, Strab.; Αὐγούστα Πραιτωρία, Ptol.), a city of Cisalpine Gaul, in the territory of the Salassi, situated at the foot of the Alps, in the valley of the Duria Major: t is now called *Aosta*, and gives to the whole valley of the Duria the name of *Val d' Aosta*. It was a Roman colony, founded by Augustus, who, after the complete subjugation of the Salassians by Terentius Varro, established here a body of 3,000 veterans. From the statement of Strabo, that the colony was settled on the site of the camp of Varro, it would appear that there was previously no town on this spot; but the importance of its position at the point of junction of the two passes over the Pennine and Graian Alps (the Great and Little St. Bernard) caused it quickly to rise to great prosperity, and it soon became, what it has ever since continued, the capital of the whole valley and surrounding region. (Strab. iv. p. 206; Dion Cass. liii. 25; Plin. iii. 17. s. 21; Ptol. iii. 1. § 34.) According to Pliny it was the extreme point of Italy towards the north, so that he reckons the length of that country "ab Alpino fine Praetoriae Augustae" to Rhegium. (*H. N.* iii. 5. § 6.) The importance of Augusta Praetoria under the Roman empire is sufficiently attested by its existing remains, among which are those of a triumphal arch at the entrance of the town on the E. side, of a very good style of architecture, and probably of the time of Augustus, but which has lost its inscription. Besides this, there is another ancient gate, now half buried by the accumulation of the soil; a fine Roman bridge, and some remains of an amphitheatre; while numerous architectural fragments attest the magnificence of the public buildings with which the city was once adorned. (Millin. *Voy. en Piémont*, vol. ii. pp. 14—17.) [E. H. B.]

AUGUSTA RAURACORUM (*Augst*), the chief town of the Rauraci, who bordered on the Helvetii. (Caes. *B. G.* i. 5.) A Roman colony was settled here by L. Munatius Plancus, in the time of Augustus, as is proved by an inscription. (Plin. iv. 17, ed. Hard. note.) Ammianus (xiv. 10) gives it the name Rauracum, and fixes its position on the border of the Rhine. The town suffered from the Alemanni, and was reduced to a mere fort, Castrum Rauracense. *Augst* is in the canton of Bâle, six miles east of Bâle, and on the left bank of the Rhine. It is now a village. In the sixteenth century there were still many remains of Augusta, and among them a large amphitheatre. [RAURACI.]

AUGUSTA SUESSONUM or SUESSIONUM (*Soissons*). The position of this place is determined by the Itineraries. It is twice called simply Suessonae in the Antonine Itin. It was on the road from Durocortorum (*Rheims*) to Samarobriva (*Amiens*). *Soissons* is on the south bank of the *Aisne*, in the department of *Aisne*. Under the later empire there was a Roman manufactory of shields, balistae, and armour for the cavalry called Clibanarii. D'Anville and others suppose that the Noviodunum of Caesar (*B. G.* ii. 12) was the place that afterwards became Augusta Suessonum; and it may be, but it is only a conjecture. [SUESSIONES.] [G. L.]

AUGUSTA TAURINORUM (Αὐγούστα Ταυρινῶν, Ptol.: *Torino* or *Turin*), the capital of the Ligurian tribe of the Taurini, was situated on the river Padus, at its junction with the Duria Minor or *Dora Riparia*. It was at this point that the Padus began to be navigable, and to this circumstance, combined with its position on the line of high road leading from Mediolanum and Ticinum to the passage of the Cottian Alps (*Mont Genèvre*), the city doubtless owed its early importance. It is probable that the chief city of the Taurini, which was taken by Hannibal immediately after his descent into Italy (Polyb. iii. 60), and the name of which, according to Appian (*Annib.* 5), was Taurasia, was the same that became a Roman colony under Augustus, and received from him the name of Augusta. The only subsequent mention of it in history is during the civil war between Otho and Vitellius, A. D. 69, when a considerable part of it was burnt by the soldiers of the latter (Tac. *Hist.* ii. 66); but we learn both from Pliny and Tacitus, as well as from numerous inscriptions, that it retained its colonial rank, and was a place of importance under the Roman empire. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 35; Gruter. *Inscr* pp. 458. 8, 495. 5; Maffei, *Mus. Veron.* pp. 209—233; Millin. *Voy. en Piémont*, vol. i. p. 254.)

The name of Augusta seems to have been gradually dropped, and the city itself came to be called by the name of the tribe to which it belonged: thus we find it termed in the Itineraries simply "Taurini," from whence comes its modern name of *Torino* or *Turin*. It continued after the fall of the Roman empire to be a place of importance, and became the capital of Piedmont, as it now is of the kingdom of Sardinia. With the exception of the inscriptions

which have been mentioned above, it retains no vestiges of antiquity. [E. H. B.]

AUGUSTA TREVIRORUM (*Trier*, or *Trèves*, as the French call it), a town on the right bank of the Mosel, now in the Prussian territory. It was sometimes simply called Augusta, and sometimes under the later empire Treviri, whence the modern name *Trier*. Caesar names no town among the Treviri. *Trier* is the Colonia Trevirorum of Tacitus (*Hist.* iv. 62). It is mentioned by Mela under the name of Augusta (iii. 2), and we may conclude from the probable period of Mela that it was settled by Augustus. It appears from Tacitus (*Hist.* iv. 77), that the Roman colonia was connected with the opposite bank by a bridge, as the modern town is; and this suburb was called Vicus Voclanni, as we learn from sepulchral inscriptions found on the left bank. Some commentators have incorrectly supposed that Strabo (p. 194) speaks of this bridge; but he is speaking of bridging the Rhine. The walls of the town are also mentioned by Tacitus. Ausonius, who wrote in the second half of the fourth century of the Christian aera, places Treviri fourth in his list of "nobiles urbes," a rank to which it was entitled from being the head quarters of the Roman commanders on the Rhine, and the frequent residence of the Roman emperors or Caesars. From the middle of the third century of the Christian aera Trier was visited by the emperors, and in the fourth century it was the regular imperial residence in this division of Gallia. Trier was one of the sixty great towns of Gallia which were taken by the Franks and the Alemanni, after the death of the emperor Aurelian, and recovered by Probus. (Fl. Vopiscus, *Probus*, c. 13.) The restoration of Trier seems to be due to the emperor Constantine the Great, who from A. D. 306 to A. D. 331 frequently resided at Trier. The panegyric attributed to the rhetorician Eumenius, pronounced before Constantine at Trier in A. D. 310, speaks of the walls of the city as rising again; and the conclusion, from the words of the panegyrist, seems to be that Constantine rebuilt or repaired the walls of Trier. He may have considerably beautified the place, but it is uncertain how much, after it had been damaged by the Germans. Eumenius mentions the great circus of Trier, the basilicae, and the forum, as royal works. The city probably received other embellishments after the period of Constantine, and it was a flourishing place when Ausonius wrote. It had establishments for education, and a mint. Trier stands on level ground, surrounded by gentle hills, the slopes of which are covered with vines, as they were when Ausonius visited the place.

The Roman bridge over the Mosel, probably the work of Agrippa, existed till the French wars of Louis XIV. in 1689, when it is said to have been blown up. All that now remains of the original structure are the massive foundations and the piers. The arches were restored in 1717—1720. The blocks of the ancient structure are from six to nine feet long, three feet wide, and three feet high, without any cement. The piers are on an average 66 feet high and 21 wide. There are eight arches. The bridge is 690 feet long and 24 wide. One of the city gates remains, which recent excavations have shown to be in the line of the walls of the city. This Porta Martis or Porta Nigra, as it was called in the middle ages, is a colossal work. It is a kind of quadrangle 115 feet long; and in the central or principal part it is 47, and in the two projecting sides 67 feet deep: it is 91 feet high. It is four stories high in the flanks, but in one of the flanks only three stories remain. There are two gateways in the central part, each 14 feet wide; and over the gateways there is a chamber 52 feet long and 22 feet wide. This building is constructed of great blocks of stone, without cement; some of them four to five feet in length, and others from seven to nine feet long. It is a structure of enormous strength, a gigantic and imposing monument. In the chambers there is a collection of Roman antiquities found in and about Trier: many of the sculptures are of excellent workmanship. A view and plan of the Porta Nigra are given in the *Dictionary of Antiquities*, p. 943. On the outside of the present town are the remains of the amphitheatre, which was included within the ancient walls. The longer axis is 219 feet, and the shorter 155. There are also remains of the ancient Thermae, which are constructed of limestone and rows of bricks alternately, except the beautiful arches, which are entirely of brick. These and other remains of Trier are described by Wyttenbach, *Recherches sur les Antiquités Romaines, &c., de Trèves*, and *Forschungen*, &c.; and also by other writers. [G. L.]

AUGUSTA TRICASTINORUM, as Pliny (iii. 4) calls it, or Augusta, as it is simply called in the Itineraries. It was on the road between Valentia (*Valence*), on the Rhone, and Dea Vocontiorum (*Die*). It is said to be *Aoust-en-Diois*, on the Drôme a branch of the Rhone, and in the department of *Drôme*. D'Anville places Augusta Tricastinorum at *St. Paul-trois-Châteaux*, north of *Orange;* and the Augusta of the Itineraries at *Aouste*. There are said to be considerable remains at *Aouste*. [G. L.]

AUGUSTA TRINOBANTUM. [LONDINIUM.]

AUGUSTA VAGIENNORUM (Αὐγούστα Βαγιεννῶν, Ptol.; an inscription, Orell. 76, has AUG. BAG. for Augusta Bagiennorum), the chief city of the Ligurian tribe of the Vagienni, is mentioned both by Pliny and Ptolemy, and the former speaks of it as a place of importance. (Plin. iii. 5. s. 7; Ptol. iii. 1. § 35.) But though the name would lead us to suppose that it was a colony of Augustus, we have no account of its foundation, nor do ancient authors afford any clue to its position. It was placed by D'Anville at *Vico*, near *Mondovi;* but a local antiquarian, Durandi, has satisfactorily proved that some Roman ruins still visible near *Bene* (a considerable town of Piedmont, situated between the valleys of the *Tanaro* and the *Stura*, about 12 miles from the site of Pollentia) are those of Augusta Vagiennorum. They comprise the remains of an aqueduct, amphitheatre, baths, and other buildings, and cover a considerable extent of ground. The name of *Bene* is itself probably only a corruption of *Bagienna*, the form of the ancient name which is found in documents of the middle ages. (Durandi, *Dell' Augusta de' Vagienni*, Torino, 1769; Millin, *Voy. en Piémont*, vol. ii. p. 50.) [E. H. B.]

AUGUSTA VEROMANDUORUM, the chief town of the Veromandui, who are mentioned by Caesar (*B. G.* ii. 4, 16). The name of this place first occurs in Ptolemy; and its identity with *St. Quentin*, in the department of *Aisne*, is proved by the Roman roads from *Soissons*, *Amiens*, and *Bavay*, which intersected here. [G. L.]

AUGUSTA VINDELICORUM (Αὐγούστα Οὐινδελικῶν: *Augsburg*), the capital of Vindelicia or Raetia Secunda, situated on the rivers *Lech* (Licus) and *Wertach* (Vindo?). It was founded by Au-

gustus about A. D. 14, after the conquest of Raetia by Drusus. This is no doubt the place to which Tacitus (*Germ.* 41) applies the expression "splendidissima Raetiae provinciae colonia." During the second half of the fourth century the Romans withdrew their garrison, and the place was given up to the Alemanni, under whom it soon became again a town of great eminence. (Sext. Ruf. 10; Ptol. ii. 12. § 3; comp. Von Raiser, *Die Röm. Denkmäler zu Augsburg*, 1820. 4to.) [L. S.]

AUGUSTOBONA. [TRICASSES.]

AUGUSTOBRI'GA (Αὐγουστόβριγα: *Eth.* Augustobrigenses). 1. A city of Lusitania, on the road from Emerita to Toletum, 56 M. P. from the former and 55 from the latter. (*Itin. Ant.* p. 438.) It seems to correspond to *Puente de Arçobispo*, on the N. bank of the Tagus: others seek it at *Villar Pedroso*. (Ukert, vol. ii. pt. 1. p. 396.)

2. A city of the Vettones in Lusitania, probably near *Ciudad Rodrigo*. (Ptol. ii. 5. § 9.)

It is uncertain which of the above is the stipendiary town of Pliny (iv. 22. s. 35.)

3. (*Aldea el Muro*, near *Soria*), a city of the Pelendones, in Hispania Tarraconensis, 23 M. P. E. of Numantia, on the road to Caesaraugusta. (*Itin. Ant.* p. 442; Ptol. ii. 6. § 54; Florez, *Esp. Sagr.* vol. xiv. p. 41; D'Anville, *Mém. de l'Acad. des Inscr.* vol. xl. p. 767; Ukert, id. p. 454.) [P. S.]

AUGUSTODUNUM. [BIBRACTE.]

AUGUSTODURUS, mentioned in the Table, is said to be *Bayeux*, in the department of *Calvados*, as the Roman milestones prove (Walckenaer, *Géog.* &c. vol. i. pp. 385, 396), which have been found in the neighbourhood of *Bayeux*, with the name Augustodurus on them. D'Anville identified the Araegenus of the Table with *Bayeux*. [G. L.]

AUGUSTOMAGUS (*Senlis*), is placed in the Antonine Itin. on the road between Caesaromagus (*Beauvais*) and Suessonae (*Soissons*). In the Notitia Imperii the Silvanectes are mentioned as belonging to Belgica Secunda, and the Civitas Silvanectum is mentioned in the Notitia of the provinces of Gallia. The name Silvanectes points to the modern *Senlis*, in the department of *Oise*. [G. L.]

AUGUSTOMANA. [TRICASSES.]

AUGUSTONE'METUM (Αὐγουστονέμετον), the chief town of the Arverni, which Strabo calls Nemossus (p. 191), and places on the Loire; but he either placed it on the Loire through mistake, or by the Loire he means that branch of the Loire called the Elaver (*Allier*). The name Augustonemetum occurs in Ptolemy and in the Table. The place was afterwards simply called Arverni (Ammian. xv. 11), though in the passage of Ammianus the people may be meant. It seems that Pliny (34, c. 7), when he speaks of the colossal statue of Mercury made "in civitate Galliae Arvernis," must mean the city and not the territory; and this, as D'Anville observes (*Notice*, &c.), is singular, because the practice of giving the name of a people to the chief town of the people did not come in use until after Pliny's time. *Clermont*, in the *Auvergne*, which represents Augustonemetum, does not bear either the ancient name or the name of the people, but the identity is certain. An old Latin historian of Pippin, quoted by D'Anville, makes the "urbs Arverna" and "Clarus Mons," that is *Clermont*, identical; and Aimoin also speaks of "Arvernis quae Clarus mons dicitur." *Clermont Ferrand*, the capital of the department of *Puy de Dôme*, is on a small stream which flows into the *Allier*. [G. L.]

AUGUSTORITUM (Αὐγουστόριτον), the capital of the Lemovices, a Gallic tribe, the neighbours of the Arverni on the west. In the Table, Augustoritum is abbreviated or corrupted into Ausrito. The Anton. Itin. between Burdigala, *Bordeaux*, and Argentomagus, *Argenton*, agrees with the modern measurements, and determines the position of Augustoritum to be *Limoges*, the former capital of the *Limosin*. [G. L.]

AULAEI TICHOS or CASTRUM (Αὐλαίου τεῖχος: *Kurudere?*), a Thracian town on the coast of the Euxine, south of Apollonia. (Arrian, *Peripl.* p. 24.) It is probably the same place as Thera, mentioned in the Tabul. Peuting., and as the Theras Chorion in the Periplus Anonymus (p. 14). [L. S.]

AULERCI, appears to be a generic name, which included several Celtic tribes. Caesar (*B. G.* ii. 34) names the Aulerci with the Veneti and the other maritime states In *B. G.* vii. 75, he enumerates, among the clients of the Aedui, the Aulerci Brannovices and Brannovii, as the common text stands; but the names in this chapter of Caesar are corrupt, and "Brannovii" does not appear to be genuine. If the name Aulerci Brannovices is genuine in vii. 75, this branch of the Aulerci, which was dependent on the Aedui, must be distinguished from those Aulerci who were situated between the Lower Seine and the Loire, and separated from the Aedui by the Senones, Carnutes, and Bituriges Cubi.

Again, in vii. 75, Caesar mentions the Aulerci Cenomani and the Aulerci Eburones, as the text stands; but it is generally agreed that for Eburones we must read Eburovices, as in *B. G.* iii. 17. In this chapter (vii. 75) Caesar also mentions the maritime states (ii. 34) under the name of the Armoric states; but his list does not agree with the list in ii. 34, and it does not contain the Aulerci. Caesar (iii. 17) mentions a tribe of Diablintes or Diablintres, to whom Ptolemy gives the generic name of Aulerci. It seems, then, that Aulerci was a general name under which several tribes were included [CENOMANI, DIABLINTES, EBUROVICES]. [G. L.]

AULIS (Αὐλίς: *Eth.* Αὐλιδεύς, *fem.* Αὐλιδίς), a town of Boeotia, situated on the Euripus, and celebrated as the place at which the Grecian fleet assembled, when they were about to sail against Troy. Strabo says that the harbour of Aulis could only hold fifty ships, and that therefore the Grecian fleet must have assembled in the large port in the neighbourhood, called βαθὺς λιμήν. (Strab. ix. p. 403.) Livy states (xlv. 27) that Aulis was distant three miles from Chalcis. Aulis appears to have stood upon a rocky height, since it is called by Homer (*Il.* ii. 303) Αὐλὶς πετρήεσσα, and by Strabo (*l. c.*) πετρῶδες χωρίον. These statements agree with the position assigned to Aulis by modern travellers. About three miles south of Chalcis on the Boeotian coast are "two bays separated from each other by a rocky peninsula; the northern is small and winding, the southern spreads out at the end of a channel into a large circular basin. The latter harbour, as well as a village situated a mile to the southward of it, is called *Vathý*, a name evidently derived from βαθὺς λιμήν" (Leake.) We may therefore conclude that Aulis was situated on the rocky peninsula between these two bays.

Aulis was in the territory of Tanagra. It is called a κώμη by Strabo. In the time of Pausanias it had only a few inhabitants, who were potters. Its temple of Artemis, which Agamemnon is said to have founded, was still standing when Pausanias

visited the place. (Dicaearch. 88; Paus. ix. 19. § 6, seq.; Plin. iv. 7. s. 12; Leake, *Northern Greece*, vol. ii. p. 262, seq.; Wordsworth, *Athens and Attica*, p. 4, seq.)

AULOCRENAE, "a valley ten Roman miles from Apamia (Cibotus) for those who are going to Phrygia." (Plin. v. 29.) "The Marsyas," says Pliny, "rises and is soon hidden in the place where Marsyas contended with Apollo on the pipe in Aulocrenae;" whence, perhaps, the place derives its name from the legend of Apollo and Marsyas, as it means the fountains of the pipe. Strabo describes the Marsyas and Maeander as rising, according to report, in one lake above Celaenae, which produces reeds adapted for making mouth-pieces for pipes; he gives no name to the lake. Pliny (xvi. 44) says, "We have mentioned the tract (regio) Aulocrene, through which a man passes from Apamia into Phrygia; there a plane tree is shown from which Marsyas was suspended, after being vanquished by Apollo." But Pliny has not mentioned the "regio Aulocrene" before; and the passage to which he refers (v. 29), and which is here literally rendered, is not quite clear. But he has mentioned, in another passage (v. 29), a lake on a mountain Aulocrene, in which the Maeander rises. Hamilton (*Researches*, &c. vol. i. p. 498) found near *Denair* (Apameia Cibotus), a lake nearly two miles in circumference, full of reeds and rushes, which he considers to be the source of the Maeander, and also to be the lake described by Pliny on the Mons Aulocrene. But the Aulocrenae he considers to be in the plain of *Dombai*. Thus Pliny mentions a "regio Aulocrene," a "mons Aulocrene," and a valley (convallis) Aulocrenae. [MAEANDER.] [G. L.]

AULOCRE'NE. [AULOCRENAE.]

AULON (Αὐλών), a hollow between hills or banks, was the name given to many such districts, and to places situated in them.

1. A valley in the north-west of Messenia, upon the confines of Elis and Messenia, and through which there was a route into the Lepreatis. Pausanias speaks of "a temple of Asclepius Aulonius in what is called Aulon," which he places near the river Neda; but whether there was a town of the name of Aulon is uncertain. The French Commission suppose that there was a town of this name, near the entrance of the defile which conducts from Cyparissia to the mouth of the Neda, and believe that its position is marked by some ruins near the sea on the right bank of the river Cyparissus. (Strab. viii. p. 350; Xen. *Hell.* iii. 2. § 25, iii. 3. § 8; Polyaen. ii. 14; Paus. iv. 36. § 7; Leake, *Morea*, vol. i. p. 484; Boblaye, *Recherches*, &c. p. 116.)

2. In Mygdonia in Macedonia, situated a day's march from the Chalcidian Arnae. (Thuc. iv. 103.) Leake (*Northern Greece*, vol. iii. p. 170) regards it as simply the name of the pass, through which the waters of the lake Bolbe flow by means of a river into the Strymonic gulf; but it appears to have been also the name of a place in this pass. In later times at all events there was a town called Aulon, since it is mentioned as one of the Macedonian cities restored by Justinian. (*De Aedif.* iv. 4.)

3. A small place in Attica in the mining district of Laurium. [LAURIUM.]

4. (*Valona*), a town on the coast of Illyricum between Apollonia and Oricum, a little south of the Aous, and on a deep bay. (Ptol. iii. 13. § 3; Tab. Peut.; Hierocl.)

AULON, a hill in the neighbourhood of Tarentum, noticed by Horace for the excellence and abundance of its wine. Martial also speaks of it as producing excellent wine as well as wool, for which the whole neighbourhood of Tarentum was famous. (Hor. *Carm.* ii. 6. 18; Mart. xiii. 125.) Its site still retains its ancient celebrity in the former respect: it is now called *Monte Melone* (probably a corruption of *Aulone*), a sloping ridge on the sea shore about eight miles SE. of Tarentum. (Romanelli, vol. i. p. 295; Carducci, *Delizie Tarantine*, p. 269.) [E. H. B.]

AULON (Αὐλών: *El-Ghôr*), the name given by the ancients to the great valley through which the Jordan flows below the Lake of Tiberias, and to its continuation quite across the whole length of the Dead Sea, and for some distance beyond. It signifies a depressed tract of plain, usually between two mountains, and corresponds with the *Ghôr* of the Arabian writers. (Edrisi *par Jaubert*, pp. 337, 338; Abulf. *Tab. Syr.* pp. 8, 9; Schulten's *Index Vit. Salad. s. v. Algaurum.*) According to Eusebius its extreme limits are Mt. Libanus, and the Desert of Paran, in Arabia Petraea. Burkhardt (*Trav.* p. 344) describes the course of the valley in the upper end, near Lake Tiberias, as running from N. by E. to S. by W., and as about two hours broad. The plain through which the river flows is for the most part barren, without trees or verdure; the cliffs and slopes of the river-uplands present a wild and cheerless aspect. Opposite to Jericho its general course is the same, but the cleft which forms the valley widens, and the river flows through the broad plain which is called on the W. "the Plain of Jericho," on the E. "the Plain of Moab." Josephus speaks of the Jordan as flowing through a desert (*B. J.* iii. 10. § 7, iv. 8. § 2), and it preserves this character to the present day. The low bed of the river, the absence of inundation and of tributary streams, have combined to produce this result. The part of the valley which is S. of the Dead Sea has not yet been sufficiently explored. The whole of the valley of the Jordan may be considered as one of those long fissures which occur frequently among limestone mountains, and has given to Palestine its remarkable configuration. And it has been inferred that the phenomenon is referable to volcanic action, of which the country around exhibits frequent traces. (Robinson, *Palestine*, vol. ii. pp. 215, 258, 305; Von Raumer's *Palestina*, p. 56; Reland, *Palaest.* p. 364; Rosenmüller, *Bibl. Alt.* vol. ii. pt. 1. p. 146; Ritter, *Erdkunde West Asien*, vol. xv. p. 481.)

2. In Syria. [COELE SYRIA.]

3. A town in Crete (Steph. B. *s. v.*), probably the same as the Episcopal See of Aulopotamos. (Cornelius, *Creta Sacra*, vol. i. p. 233.) According to Hoeck (*Kreta*, vol. i. p. 431) it is represented by a place called *Aulon*, S. of *Retimo*. [E. B. J.]

AURANITIS. [HAURAN.]

AURA'SIUS MONS (τὸ Αὐράσιον ὄρος: *Jebel Auress*), a mountain of N. Africa, in the S. of Numidia, below the city of Lambesa. It forms the SE. extremity of the so-called Middle Atlas, which it connects with the main chain of the Great Atlas. [ATLAS.] It divides the waters which flow into the basin of the lake Tritonis (*Melrir*) from those which flow NE. into the basin of the Bagradas. (Procop. *B. V.* ii. 13, 19, *Aedif.* vi. 7.) It appears to be the Audus Mons of Ptolemy (τὸ Αὔδον ὄρος, iv. 3. § 16). [P. S.]

AUREA CHERSONESUS (ἡ χρυσῆ χερρόνησος), in India extra Gangem, is supposed to correspond to the peninsula of Malacca. There is also

an Aurea Regio (ἡ χρυσῆ χώρα) in that part of the world. For particulars, see INDIA. [P. S.]

AURELIANORUM URBS or CIVITAS. [GENABUM.]

AURGI, a city of Hispania Baetica, mentioned in an inscription, MUNICIPIUM FLAVIUM AURGITANUM. (Muratori, p. 1103, No. 6.) Ukert supposes it to be *Jaen* (vol. ii. pt. 1. p. 370). [P. S.]

AURINX, a city in the S. of Hispania, not far from Munda (Liv. xxiv. 42); doubtless the same place as Oringis, on the confines of the Melesses, which Hasdrubal made his head quarters against Scipio, B. C. 207. It was at that time the most wealthy city of the district, and had a fertile territory, and silver mines worked by the natives. (Liv. xxviii. 3.) Pliny mentions it, with a slight difference of form, Oningis, among the *oppida stipendiaria* of the conventus Astigitanus. (Liv. iii. 1. s. 3.) Ukert places it between *Monclova* and *Ximena de la Frontera* (vol. ii. pt. 1. p. 359). [P. S.]

AURUNCA, the capital or metropolis of the little mountain tribe of the Aurunci, in the more limited sense of that name [AURUNCI], was situated on one of the summits of the volcanic group of mountains, which rise above the plains of Campania, near Suessa and Teanum. Its name is found only in Festus (v. *Ausonia*), who tells us it was founded by Auson, the son of Ulysses and Circe; but Livy clearly alludes to its existence, though without mentioning the name. He tells us, that in B. C. 337, the Aurunci, being hard pressed by their neighbours the Sidicini, abandoned *their city*, and took refuge at Suessa, which they fortified; and that *their ancient city* was destroyed by the Sidicini. (Liv. viii. 15.) It was never rebuilt, and hence no subsequent notice of it is found; but some vestiges of it have been discovered on the summit of a narrow mountain ridge, now called *La Serra*, or *La Cortinella*, about 5 miles N. of Suessa, where there are some fragments of the ancient walls, and massive substructions, probably those of a temple. The hill on which it stood forms part of the outer edge, or encircling ridge of an ancient volcanic crater, the highest point of which, called the *Monte di Sta Croce*, attains an elevation of 3,200 feet above the sea; and the site of the ancient town must have been, like that of Alba Longa, a long and narrow plateau on the summit of this ridge. It is to this elevated position that Virgil alludes. ("*De collibus altis* Aurunci misere patres," *Aen.* vii. 727.) For the description of the remains and site of the ancient city, see Abeken, *Ann. d. Inst.* 1839, p. 199—206, and Daubeny on Volcanoes, p. 175—178. Suessa was frequently distinguished by the epithet Aurunca, and hence Juvenal (i. 20) terms Lucilius, who was a native of that city, "Auruncae alumnus." [E. H. B.]

AURUNCI (Αὔρουγκοι), is the name given by Roman writers to an ancient race or nation of Italy. It appears certain that it was originally the appellation given by them to the people called AUSONES by the Greeks: indeed, the two names are merely different forms of the same, with the change so common in Latin of the s into the r. (Aurunci = Aurunici = Auruni = Ausuni.) The identity of the two is distinctly asserted by Servius (*ad Aen.* vii. 727), and clearly implied by Dion Cassius (*Fr.* 2), where he says, that the name of Ausonia was properly applied only to the land of the Auruncans, between the Volscians and the Campanians. In like manner Festus (*s. v. Ausonia*) makes the mythical hero Auson the founder of the city of Aurunca. Servius terms the Aurunci one of the most ancient nations of Italy (*ad Aen.* vii. 206); and they certainly appear to have been at an early period much more powerful and widely spread than we subsequently find them. But it does not appear that the name was ever employed by the Romans in the vague and extensive sense in which that of Ausones was used by the Greeks. [AUSONES.]

At a later period, in the fourth century B. C., the two names of Aurunci and Ausones had assumed a distinct signification, and came to be applied to two petty nations, evidently mere subdivisions of the same great race, both dwelling on the frontiers of Latium and Campania; the Ausones on the W. of the Liris, extending from thence to the mountains of the Volscians; the Auruncans, on the other hand, being confined to the detached group of volcanic mountains now called *Monte di Sta Croce*, or *Rocca Monfina*, on the left bank of the Liris, together with the hills that slope from thence towards the sea. Their ancient stronghold or metropolis, AURUNCA, was situated near the summit of the mountain, while SUESSA, which they subsequently made their capital, was on its south-western slope, commanding the fertile plains from thence to the sea. On the E. and S. they bordered closely on the Sidicini of Teanum and the people of Cales, who, according to Livy (viii. 16), were also of Ausonian race, but were politically distinct from the Auruncans. Virgil evidently regards these hills as the original abode of the Auruncan race (*Aen.* vii. 727), and speaks of them as merely a petty people. But the first occasion on which they appear in Roman history exhibits them in a very different light, as a warlike and powerful nation, who had extended their conquests to the very borders of Latium.

Thus, in B. C 503, we find the Latin cities of Cora and Pometia "revolting to the Aurunci," and these powerful neighbours supporting them with a large army against the infant republic. (Liv. ii. 16, 17.) And a few years later the Auruncans took up arms as allies of the Volscians, and advanced with their army as far as Aricia, where they fought a great battle with the Roman consul Servilius. (Id. ii. 26; Dionys. vi. 32.) On this occasion they are termed by Dionysius a warlike people of great strength and fierceness, who occupied the fairest plains of Campania; so that it seems certain the name is here used as including the people to whom the name of Ausones (in its more limited sense) is afterwards applied. From this time the name of the Auruncans does not again occur till B. C. 344, when it is evident that Livy is speaking only of the petty people who inhabited the mountain of *Rocca Monfina*, who were defeated and reduced to submission without difficulty. (Liv. vii. 28.) A few years later (B. C. 337) they were compelled by the attacks of their neighbours the Sidicini, to apply for aid to Rome, and meanwhile abandoned their stronghold on the mountain and established themselves in their new city of Suessa. (Id. viii. 15.) No mention of their name is found in the subsequent wars of the Romans in this part of Italy; and as in B. C. 313 a Roman colony was established at Suessa (Liv. ix. 28), their national existence must have been thenceforth at an end. Their territory was subsequently included in Campania. [E. H. B.]

AUSA (Αὔσα), the chief city of the AUSETANI, was called in the middle ages Ausona and Vicus Ausonensis, *Vic de Osane*, whence its modern name

of *Vique*, or *Vich*. It lies W. of *Gerona*, on a S. tributary of the *Ter*, the ancient Alba. (Plin. iii. 3. s. 4; Ptol. ii. 6. § 70; Marca, *Hisp.* ii. 22, p. 191.) There is a coin with the inscription AUSA; but it is probably spurious. (Eckhel, vol. i. p. 35; Mionnet, vol. i. p. 29; Sestini, *Lettere*, vol. ix. praef., *Med. Isp.* p. 104; Ukert, vol. ii. pt. 1. p. 426.) [P. S.]

AUSARA (Αὔσαρα). 1. A city of the Sachalitae on the south coast of Arabia (Ptol. vi. 7. § 11), in the modern district of *Mahrah:* probably the capital of Pliny's Ausaritae (vi. 28. s. 32), from which apparently a peculiar kind of incense enumerated by him (xii. 25. s. 16) derived its name. Forster identifies it with *Ras-al-Sair*. (*Geog. of Arabia*, vol. ii. pp. 177, 178.)

2. Another town of the same name as the preceding is enumerated among the inland cities of Arabia Felix by Ptolemy (vi. 7. 30), and placed by him in long. 71°, lat. 25° 30′, which Forster finds in the modern town of *Zarfa*, in the Hedjaz. (Ibid. vol. ii. pp. 127, 130.) [G. W.]

AUSCHI'SAE (Αὐσχίσαι, Herod. iv. 171; Αὐσχίται, Apollod. ap. Steph. B.; Αὐχῖσαι, Diod. Sic. iii. 42; Αὐχῖται, Ptol. iv. 5. § 21; Αὐχῆται, Nonn. *Dionys.* xiii. 375), a Libyan people in Cyrenaica, W. of the ASBYSTAE, extending S. of Barca as far W. as the Hesperides (aft. BERENICE), on the coast of the Greater Syrtis. Ptolemy alone places them in Marmarica.

There are some exceedingly interesting remains of forts, of an extremely ancient style of building, which are fully described by Barth, who regards them as works of the Auschisae, and fortifies his opinion by the statement of Pliny (iv. 1), that it was the common custom of the Libyan tribes to build forts. (Beechey, *Proceedings of the Expedition to explore the N. coast of Africa*, pp. 251, 252; Barth, *Wanderungen*, &c. p. 354.) [P. S.]

AUSCI ((Αὔσκιοι), also Auscenses, one of the nations of Aquitania who submitted to Caesar's legatus, P. Crassus, in B. C. 56. Strabo (p. 191) says that they had the Latinitas at the time when he wrote. Mela (iii. 2) calls the Ausci the most illustrious of the Aquitanian nations. Their territory was fertile. The position of the Ausci is determined by that of *Auch*, or Augusta Auscorum, their chief town; and their territory may be represented pretty nearly by the French department of *Gers*. [AUGUSTA AUSCORUM.] [G. L.]

AUSENSES (Αὐσενεῖς), a Libyan people, in North Africa, dwelling about the lake Tritonis at the bottom of the Lesser Syrtis, next to the MACHLYES. The Machlyes were on the S. side of the lake, and the Ausenses on the N. (E. and W. respectively, according to the view of Herodotus), the river Triton being the boundary between them: the latter people, therefore, were in the S. of the district afterwards called Byzacena. (Herod. iv. 180.) Herodotus makes them the last of the nomade peoples towards the W., their neighbours on that side, the MAXYES, being an agricultural people. (Herod. iv. 191: it is hardly necessary to notice Rennell's allusion to, and obviously correct solution of, an inconsistency which the hypercritic may fancy between this passage and c. 186: Rennell, *Geog. to Herod.* vol. ii. p. 302.) "The Machlyes," says Herodotus, "wear the hair on the back of the head, but the Ausenses on the front. The Ausenses celebrated a yearly festival of Athena, whom they claimed as their native goddess, in which their virgins were divided into two parties, which fought each other with stones and clubs, and those who died of their wounds were esteemed not true virgins. The combat was preceded by a procession, in which the most beautiful of the virgins was decorated with a Corinthian helmet and a full suit of Grecian armour, and was drawn in a chariot round the lake." (Comp. Mela, i. 7.) Respecting the supposed connection of the locality with the worship of Athena, see TRITON.

The Ausenses are supposed by Pacho (*Voyage dans la Marmarique*, &c.) to be the same people as the Ausurii, who are mentioned by Synesius as devastating Cyrenaica in the 6th century. (Bähr, *ad Herod. l. c.*) [P. S.]

AUSER or AUSAR (Αὔσαρ, Strab.: *Serchio*), a considerable river of Etruria, rising in the Apennines on the borders of Liguria, and flowing near the city of Luca, is evidently the same with the modern *Serchio*, though that river now flows into the Tyrrhenian Sea by a separate mouth, seven miles N. of that of the *Arno*, while all ancient writers represent the Auser as falling into the Arnus. The city of Pisae was situated at the point of their junction: and the confluence of the two streams was said to give rise to a violent agitation of their waters. (Strab. v. p. 222; Plin. iii. 5. s. 8; Rutil. *Itin.* i. 566.) The Auser appears to have retained its ancient course till about the 12th century; but the exact period of the change is unknown; the whole space between it and the Arnus, in the lower part of their course, is so flat and low that it is said that their waters still communicate during great floods. A canal or ditch between the two streams still retained the name of *Osari* in the days of Cluverius. The modern name of *Serchio* is supposed to be a corruption of Auserculus, a form which is found in documents of the middle ages. (Cluver. *Ital.* p. 462; Müller, *Etrusker*, p. 213; Targioni-Tozzetti, *Viaggi in Toscana*, vol. ii. p. 146—178.) [E. H. B.]

AU'SERE (*Fessah?*), a river of Tripolitana, in Africa Propria. (Tab. Peut.) [P. S.]

AUSETA'NI (Αὐθητανοί, Ptol. ii. 6. § 70), one of the small peoples in the extreme NE. of Hispania Tarraconensis, at the foot of the Pyrenees, in *Catalonia*. Pliny (iii. 3. s. 4) places them (*intus recedentes radice Pyrenaei*) W. of the LALETANI and INDIGETES, and E. of the LACETANI and CERRETANI. Ptolemy (*l. c.*) places the Cerretani furthest to the E., and next to them the Ausetani. Their position is fixed by that of their chief cities AUSA and GERUNDA (*Gerona*), along the valley of the river *Ter*, the ancient Alba. The great Roman road from Narbo in Gaul to Tarraco passed through their territory. Under the Roman empire they belonged to the conventus of Tarraco. Of their cities, AUSA and GERUNDA had the *jus Latinum* (Plin. *l. c.*); and Baecula (Βαικούλα, Ptol. *l. c.*: *Eth.* Baeculonenses, Plin.) was a *civitas stipendiaria*. Ptolemy also mentions Aquae Calidae (Ὕδατα θερμά: prob. *Bañolas*), between Ausa and Gerunda: it seems not quite certain whether this town is the same as that of the *stipendarii Aquicaldenses* of Pliny (*l. c.*)

The Ausetani are several times mentioned by Livy: as conquered by Hannibal, at the beginning of the second Punic War (xxi. 23); reconquered by Scipio (c. 61); taking part in the revolt of Indibilis, B. C. 205 (xxix. 2, et seq.), and the war of the Emporiae, B. C. 195 (xxxiv. 20: see also xxxix. 56, and Caesar, *B. C.* i. 60.) [P. S.]

AUSOBA, in Ireland, placed by Ptolemy (ii. 2. § 4) as the third river from the Boreum promon-

torium [BOREUM], and as due north of the Sena. As it is more certain that the Sena is the *Shannon* than that the northern promontory is *Malin Head*, the outlet of *Loch Corrib* in *Galway Bay* best suits the somewhat equivocal condition of the river Ausoba. [R. G. L.]

AU'SONA, a city of Latium, in the more extended sense of that term, but which, at an earlier period, was one of the three cities possessed by the tribe of the Ausones. Its name would seem to imply that it was once their chief city or metropolis; but it is only once mentioned in history—during the second Samnite war, when the Ausonians having revolted from the Romans, all their three cities were betrayed into the hands of the Roman consuls, and their inhabitants put to the sword without mercy. (Liv. ix. 25.) No subsequent notice is found of Ausona; but it is supposed to have been situated on the banks of the little river still called *Ausente*, which flows into the Liris, near its mouth. The plain below the modern village of *Le Fratte*, near the sources of this little stream, is still known as the *Piano dell' Ausente;* and some remains of a Roman town have been discovered here. (Romanelli, vol. iii. p. 438.) [E. H. B.]

AU'SONES (Αὔσονες) is the name given by Greek writers to one of the ancient nations or races that inhabited Central Italy. The usage of ancient writers in regard to all these national appellations is very vague and fluctuating, and perhaps in no instance more so than in the case of the Ausones or Ausonians. But notwithstanding this uncertainty, some points appear to be pretty clearly made out concerning them.

1. The Ausonians were either identical with the Opicans or Oscans, or were at least a part of the same race and family. Aristotle expressly tells us (*Pol.* vii. 10), that the part of Italy towards Tyrrhenia was inhabited by the Opicans, "who were called, both formerly and in his time, by the additional name of Ausones." Antiochus of Syracuse also said, that Campania was at first occupied by the Opicans, "who were also called Ausonians." (*Ant.* ap. Strab. v. p. 242.) Polybius, on the contrary, appears to have regarded the two nations as different, and spoke of Campania as inhabited by the Ausonians *and* Opicans; but this does not necessarily prove that they were really distinct, for we find in the same manner the Opicans and Oscans mentioned by some writers as if they were two different nations (Strab. *l. c.*), though there can be no doubt that these are merely forms of the same name. Hecataeus also appears to have held the same view with Antiochus, as he called Nola in Campania "a city of the Ausones" (*ap. Steph. B. s. v.* Νῶλα).

2. The Ausones of the Greeks were the same people who were termed Aurunci by the Romans: the proofs of the original identity of the two have been already given under AURUNCI. But at a later period the two appellations were distinguished and applied to two separate tribes or nations.

3. The name of Ausones, in this restricted and later sense of the term, is confined to a petty nation on the borders of Latium and Campania. In one passage Livy speaks of Cales as their chief city; but a little later he tells us that they had three cities, Ausona, Minturnae, and Vescia, all of which appear to have been situated in the plains bordering on the Liris, not far from its mouth. (Liv. viii. 16, ix. 25.) At this period they were certainly an inconsiderable tribe, and were able to offer but little resistance to the Roman arms. Their city of Cales was captured, and soon after occupied by a Roman colony, B. C. 333; and though a few years afterwards the success of the Samnites at Lautulae induced them to take up arms again, their three remaining towns were easily reduced by the Roman consuls, and their inhabitants put to the sword. On this occasion Livy tells us (ix. 25) that "the Ausonian nation was destroyed;" it is certain that its name does not again appear in history, and is only noticed by Pliny (iii. 5. s. 9) among the extinct races which had formerly inhabited Latium.

But however inconsiderable the Ausonians appear at this time, it is clear that at a much earlier period they were a powerful and widely extended nation. For although it is probable that the Greeks frequently applied the name with little regard to accuracy, and may have included races widely different under the common appellation of Ausonians, it is impossible to account for this vague and general use of the name, unless the people to whom it really belonged had formed an important part of the population of Central Italy. The precise relation in which they were considered as standing to the Opicans or Oscans it is impossible to determine, nor perhaps were the ideas of the Greeks themselves upon this point very clear and definite. The passages already cited prove that they were considered as occupying Campania and the western coast of Italy, on which account the Lower Sea (Mare Inferum, as it was termed by the Romans), subsequently known as the Tyrrhenian, was in early ages commonly called by the Greeks the Ausonian Sea.* (Strab. v. 233; Dionys. i. 11; Lycophr. *Alex.* 44; Apoll. Rhod. iv. 590.) Other accounts, however, represent them as originally an inland people, dwelling in the mountains about Beneventum. (Festus, s. v. *Ausonia.*) Scymnus Chius also speaks of them as occupying an inland region (*Perieg.* 228); and Strabo (p. 233) tells us that they had occupied the mountain tract above the Pontine marshes, where in Roman history we meet only with Volscians. On the whole, it is probable that the name was applied with little discrimination to all the native races who, prior to the invasion of the Samnites, occupied Campania and the inland mountainous region afterwards known as Samnium, and from thence came to be gradually applied to all the inhabitants of Central Italy. But they seem to have been regarded by the best authorities as distinct from the Oenotrians, or Pelasgic races, which inhabited the southern parts of the peninsula (see Aristot. *l. c.*); though other authors certainly confounded them. Hellanicus according to Dionysius (i. 22) spoke of the *Ausonians* as crossing over into Sicily under their king Siculus, where the people meant are clearly the Siculi. Again, Strabo speaks (vi. p. 255) of Temesa as founded by the Ausones, where he must probably mean the Oenotrians, the only people whom we know of as inhabiting these regions before the arrival of the Greeks. The use of the name of AUSONIA for the whole Italian peninsula was merely poetical, at least it is not found in any extant prose writer; and Dionysius, who assures us it was used by the Greeks in very early times, associates it with

* Pliny, on the contrary (iii. 5 s. 10, 10. s. 15), and, if we may trust his authority, Polybius also, applied the name of "Ausonium Mare," to the sea on the SE. of Italy, from Sicily to the Iapygian Promontory, but this is certainly at variance with the customary usage of the term.

Hesperia and Saturnia, both of them obviously poetical appellations (i. 35). Lycophron, though he does not use the name of Ausonia, repeatedly applies the adjective *Ausonian* both to the country and people, apparently as equivalent to *Italian;* for he includes under the appellation, Arpi in Apulia, Agylla in Etruria, the neighbourhood of Cumae in Campania, and the banks of the Crathis in Lucania. (*Alex.* 593, 615, 702, 922, 1355.) Apollonius Rhodius, a little later, seems to use the name of Ausonia (Αὐσονίη) precisely in the sense in which it is employed by Dionysius Periegetes and other Greek poets of later times — for the whole Italian peninsula. It was probably only adopted by the Alexandrian writers as a poetical equivalent for Italia, a name which is not found in any poets of that period. (Apoll. Rhod. iv. 553, 660, &c.; Dion. Per. 366, 383, &c.) From them the name of Ausonia was adopted by the Roman poets in the same sense (Virg. *Aen.* vii. 55, x. 54, &c.), and at a later period became not uncommon even in prose writers.

The etymology of the name of Ausones is uncertain; but it seems not improbable that it is originally connected with the same root as Oscus or Opicus. (Buttmann. *Lexil.* vol. i. p. 68; Donaldson, *Varronianus*, pp. 3, 4.) [E. H. B.]

AUSO'NIA. [AUSONES.]

AUSTERA'VIA or AUSTRA'NIA, the German name of an island in the German Ocean (probably *Ameland*), signifying "the sister island." The Romans called it Glessaria, because their soldiers are said to have found amber (*glessum* or *glass*) there. (Plin. *H. N.* iv. 27, xxxvii. 11. § 2.) [L. S.]

AUTARIA'TAE (Αὐταριάται), described by Strabo (vii. p. 317) as, at one time, the most numerous and bravest of the Illyrians, appear to have bordered to the eastward upon the Agrianes and Bessi, to the south upon the Maedi and Dardani, and in the other directions upon the Ardiaei and Scordisci. (Leake.) We have only a few particulars respecting their history. Strabo relates (*l. c.*) that they were frequently engaged in hostilities with the Ardiaei respecting some salt-works situated on the confines of both nations; that they once subdued the Triballi; but were in their turn subjugated, first by the Scordisci, and subsequently by the Romans. We also learn from Diodorus (xx. 19) that the Autariatae were likewise conquered by Audoleon, king of Paeonia, who transported 20,000 of them to Mount Orbelus. (Comp. Strab. vii. p. 315; Arrian, *Anab.* i. 5; Aelian, *H. A.* xvii. 41; Justin, xv. 2; Appian, *Illyr.* 3; Leake, *Northern Greece*, vol. iii. pp. 463, 464.)

AUTEI, an Arab tribe mentioned by Pliny on the road between Pelusium and Arsinoe. They occur also in the neighbourhood of Berenice, in *Foul Bay*, on the western coast of the Red Sea, at the NE. of Nubia. (Plin. vi. 29. s. 33.) [G. W.]

AUTERI, in Ireland, placed by Ptolemy (ii. 2. § 5) as next to the Nagnatae. Name for name the Nagnatae are the people of *Connaught;* but the Nagnatae of Ptolemy was a *city.* This was to the south of the *Erd*-ini. If this name be preserved in Loch *Erne* (as it probably is), the locality of the Auteri was in *Mayo* or *Galway.* [R. G. L.]

AUTHETA'NI. [AUSETANI.]

AUTISSIODU'RUM. Julian marched from Augustodunum (*Autun*) to Tricassini or Tricasses (*Troyes*), and on his way he went through Autissiodurum, or Autosidorum, as it stands in the common texts of Ammianus (xvi. 2). This route agrees with the Anton. Itin. and the Table, which place Autissiodorum on the road between Augustodunum and Tricasses. The place is therefore on the site of *Auxerre*, on the *Yonne*, in the department of *Yonne.* Autissiodurum belonged to the Senones. A sepulchral inscription dug up at Auxerre contains "civitatis Senonum, Tricassinorum, Meldorum, Pariorum, et civitatis Aeduorum," but it is difficult to see what conclusion can be derived from this. The name "civitas Autesiodurum" is not found earlier than in the Notitia of the Gallic provinces. A patera found near Auxerre bears the inscription *Deo* APPOLLINI R. P. II. M. AUTESSIODURUM. (Walckenaer, *Géog.*, &c., vol. i. p. 408.) [G. L.]

AUTO'LOLES, or AUTOLOLAE (Αὐτολάλαι, Ptol. iv. 6. § 17; common reading Αὐτολάται), a Gaetulian people on the W. coast of Africa, in the "Libya Interior" of Ptolemy, both N. and S. of the Atlas, with a city Autolala, or Autolalae (Αὐτολάλα, Αὐτολάλαι). This city is one of Ptolemy's points of astronomical observation, having the longest day 13½ hrs., being distant 3½ hrs. W. of Alexandreia, and having the sun vertical once a year, at the time of the winter solstice. (Ptol. iv. 6. § 24; viii. 16. § 4.) Reichard takes it for the modern *Agulon*, or *Aquilon.* (*Kleine Geogr. Schriften*, p. 506.) All writers, except Ptolemy, call the people Autololes. (Plin. v. 1; Solin. 24; Lucan. *Phars.* iv. 677; Sil. Ital. iii. 306; Claudian. *Laud. Stilich.* i. 356.)

Ptolemy (iv. 6. § 33) mentions, in the Western Ocean, an island called Autolala, or Junonis Insula (Ἥρας ἡ καὶ Αὐτολάλα νῆσος), as distinct from the Fortunatae group. Some take it for Madeira, but this is very uncertain. [P. S.]

AUTO'MALA (Αὐτόμαλα, Strab. ii. p. 123; Αὐτομάλαξ, Ptol. iv. 4. § 3; Αὐτομάλακα, Steph. B., *Eth.* Αὐτομαλακίτης and Αὐτομαλακεύς; Αὐτομάλαι, Diod. Sic. xx. 41), a border fortress of Cyrenaica, on the extreme W. frontier, at the very bottom of the Great Syrtis, E. of the Altars of the Philaeni; very probably the Anabucis of the Antonine Itinerary, 25 M. P. E. of Banadedari (the Arae Philaenorum, p. 65). Modern travellers have discovered no vestige of the place. It is mentioned by Diodorus, in connection with the difficult march of Ophellas, to support Agathocles in the Carthaginian territory; and in its neighbourhood was a cave, said to have been the abode of the child-murdering queen Lamia. (Diod. *l. c.*) [P. S.]

AUTRICUM (*Chartres*), a town of the Carnutes, a Celtic people. Their chief towns were Autricum and Genabum. Autricum seems to derive its name from the Autura, or *Eure*, though the name Autura does not occur in any ancient writing; but the river is named Audura in the middle-age writings. Avaricum, *Bourges*, is a name formed in like manner from the river Avara. The position of Autricum is determined by two routes in the Table, though the name is miswritten Mitricum. The place afterwards took the name of Carnutes or Carnutum, whence the name *Chartres.* [G. L.]

AUTRI'GONES (Αὐτρίγονες, Ptol. ii. 6. §§ 7, 53; Mela, iii. 1. § 10; Plin. iii. 3. s. 4; Aurigonae, Flor. iv. 12. § 47; Autrigonae, Oros. iv. 21; probably the 'Αλλότριγαι of Strabo, iii. p. 155), a people in the N. of Hispania Tarraconensis, E. of the Cantabri, between the sea and the sources of the Iberus (*Ebro*), in *Biscaya*, *Guipuzcoa*, and *Alava.* The little river Nerva (*Nervion*) was in their territory,

and W. of its mouth was the town of Flaviobriga, which Ptolemy assigns to them, but Pliny to the Varduli. [FLAVIOBRIGA.] Pliny states that among their ten cities none were of any consequence, except TRITIUM and VIROVESCA. Ptolemy assigns to them the towns of Uxama Barca (Οὔξαμα Βάρκα, prob. *Osma:* comp. Muratori, p. 1095. 8), Segisamunculum (Σεγισαμόγκουλον, prob. *S. Maria de Ribaredonda*), VIROVESCA (Οὐιροούεσκα), Antequia (Αντεκούϊα). Deobrigă (Δεόβριγα: *Brinnos* or *Miranda de Ebro*), Vendeleia (Οὐενδέλεια), and Saliunca (Σαλιόγκα). The great road from Asturica to Caesaraugusta and the Pyrenees entered the land of the Autrigones, near Virovesca, and from this place it branched out into three. The N. branch led to the W. pass of the Pyrenees, and on it the towns and distances were: Virovesca, Vindeleia, 11 M. P., Deobriga, 14 M. P. (*It. Ant.* p. 455.) The second road led to Caesaraugusta, and on it were: Verovesca (sic in *It.*), Segasamunclum (sic in *It.*), 11 M. P., Libia, 7 M. P. (prob. *Leyva*), Tritium, 18 M. P. (*It. Ant.* p. 394.) The third, further S., also led to Caesaraugusta, and on it were: Virovesca, Atiliana, 30 M. P., Barbariana (*Araviana*), 32 M. P. (*It. Ant.* p. 450.) Whether the Bursaones of Livy (Fr. xci.), the Bursaonenses of Pliny, the Bursavolenses of Hirtius (*B. H.* 22) belong to the Autrigones or the Berones is uncertain. (Ukert, vol. ii. pt. 1, pp. 445, 446.) [P. S.]

AUXACII, or AUZACII MONTES (τὰ Αὐξάκια, or Αὐζάκια ὄρη), a part of the *Altai* range, SW. of the *Annibi M.* and NW. of the *Asmiraei M.*, having its W. part in Scythia extra Imaum, and its E. part in Serica. Ptolemy places the W. division between 149° long. and 49° lat. and 165° long. and 55° lat. These mountains contained the sources of the river Oechardes (prob. *Selenga*). The district N. of them was called Auxacitis (or Auzacitis), with a city Auxacia (or Auzacia), which was one of Ptolemy's positions of astronomical observation, having its longest day about 16¼ hours, and being distant from Alexandreia 5 hours 36 min. to the east. (Ptol. vi. 15. §§ 2, 3, 4; 16. §§ 2, 3, 4; viii. 24. § 4: comp. OXII M.) [P. S.]

AU'XIMUM (Αὔξυμον, Strab. Αὔξιμον, Procop.; *Eth.* Auximas, -ātis; *Osimo*), a city of Picenum, situated on a lofty hill about 12 miles SW. of Ancona. It is first mentioned in B. C. 174, when the Roman censors caused walls to be erected around it, and its forum to be surrounded with a range of shops. (Liv. xli. 27.) From hence it would appear that it had then already received the Roman franchise; but it did not become a Roman colony till B. C. 157. (Vell. Pat. i. 15.) The great strength of its position seems to have soon rendered it a place of importance. During the wars between Sulla and Carbo, it was here that Pompey first made head against the officers of the latter (Plut. *Pomp.* 6); and on the outbreak of the Civil War in B. C. 49, it was occupied by the partisans of Pompey as one of the chief strongholds of Picenum, but the inhabitants declared in favour of Caesar, and opened the gates to him. (Caes. *B. C.* i. 12; Lucan. ii. 466.) Under the Roman Empire it continued to be a city of importance, and retained its colonial rank, as we learn from numerous inscriptions, though Pliny does not notice it as a colony. (Gruter, *Inscr.* p. 372. 4, 445. 9, 446. 1, 465. 4, &c.; Orell. *Inscr.* 3168, 3899; Plin. iii. 13. s. 18; Strab. v. p. 241; Itin. Ant. p. 312.) At a later period it rose to a still more distinguished position, and is distinctly called by Procopius the chief city of Picenum, and the capital of the province. Hence it played an important part in the wars of Belisarius against the Goths, and was not reduced by him till after a long siege, in which he himself very nearly lost his life. (Procop. *B. G.* ii. 10, 11, 16, 23—27, iii. 11, &c.) It remained afterwards for a long period subject to the Byzantine Empire, and was one of the five cities which constituted what was termed the Pentapolis under the Exarchate of Ravenna. The modern city of *Osimo* retains the same elevated site as the ancient one; it continued to be a considerable place throughout the middle ages, and still has a population of above 5000 inhabitants. Numerous inscriptions, statues, and other ancient relics, have been found there. [E. H. B.]

AUXU'ME (Αὔξουμις, Αὐξούμη, Ptol. iv. 7. § 25; Ἄξουμις, Steph. Byz. *s. v.*; *Eth.* Ἀξουμίτης, *Peripl. Mar. Eryth.* p. 3: Ἀξωμίτης, Procop. *B. Pers.* i. 19), the modern *Axum*, the capital of *Tigré*, in Abyssinia, was the metropolis of a province, or kingdom of the same name (Regio Axiomitarum), and is described by Stephanus B. (*s. v.*) as the chief town of the Aethiopes Auxumitae (Ptol. iv. 7. § 29). Auxume stood in about lat. 14° 7′ N. to the SE. of Meroe and E. of the river Astaboras or *Tacazzé*. The modern city, which corresponds in site to the ancient one, is described by Salt "as standing partly in and partly at the mouth of a nook, formed by two hills on the NW. end of an extensive and fertile valley, which is watered by a small stream." The kingdom of Auxume was at one time nearly co-extensive with the modern Abyssinia, and comprised also a portion of the SW. coast of the Red Sea, and the tribes of the Sabaean and Homerite Arabs on the opposite shore. Its principal haven was Adule (*Arkeeko*), from which it was about 120 miles distant. Auxume and Adule were the chief centres of the trade with the interior of Africa in gold-dust, ivory, leather, hides, and aromatics. (Nonnosus, *ap. Photium.* n. 3, p. 2, ed. Bekker.) The Auxumitae were originally a pure Aethiopian race, with little admixture from the neighbouring Arabians. In the decline of the kingdom the latter seem to have become the principal element in the Auxumite population. The kingdom and its capital attained a high degree of prosperity after the decline of Meroë, in the first or second century of our era. As a city of inferior note, however, Auxume was known much earlier; and is even supposed by some writers to have been founded by the exiled Egyptian war-caste, in the reign of Psammitichus B. C. 671—617; by others, as Heeren (*Ideen* ii. 1. p. 431) to have been one of the numerous priest-colonies from Meroë. The Greek language was spoken at Auxume—a circumstance which adds to the probability that the city did not begin to flourish until the Macedonian dynasty was established in Egypt, and Greek factors and colonists had generally penetrated the Nile-Valley. Indeed, a Greek inscription, which will be noticed presently, makes it not unlikely that, as regards the Hellenic element of its population, Auxume was a colony of its haven Adule.

That Auxume was a city of great extent its ruins still attest. Travellers, however, vary considerably in their accounts of its vestiges; and the more recent visitors of *Axum* seem to have found the fewest authentic remains. Combes and Tamisier, who visited it in 1836 (*Voyage en Abyssinie*, vol. i. p. 268.), for example, saw much less to describe

than Mr. Salt in 1813, or Lord Valentia in 1808. Its most interesting monument is its obelisk.

Originally there appear to have been 55 obelisks: of which 4 were of superior magnitude to the rest. One of the 4 is still erect. It is 60 feet in height, and is formed of a single block of granite. But it is not inscribed with hieroglyphics, and differs considerably from Egyptian and Aethiopian structures of that kind. For the Auxumite obelisk, although quadrilateral, has not a pyramidal summit, but a finial shaped like a slipper or a patera; and on one of its faces is a deep hollow groove, surmounting a doorway, and running up the centre of the face from the lintel of the door to the vertex of the obelisk. It stands near a Daroo tree (*ficus sycaminus*) of remarkable size, and of great age—the sole survivor possibly of a sacred grove, in which the other now prostrate obelisks were erected. Nothing is known of the date of these obelisks; but they are probably not anterior to the Christian era.

The most interesting monument of Auxume is to be found near its principal church. This is a square enclosure, with a pillar at each of its angles, and a seat and footstool nearly in its centre. The walls, pillars, and seat are all of granite. The enclosure was, according to a local tradition, the coronation chamber, and the seat the throne of the ancient Auxumite kings. Bruce affirms, but more recent travellers deny, that there is upon this footstool and seat an inscription in Greek characters. The real Auxumite inscription, however, appears, from Mr. Salt's narrative, to be found upon another footstool without the enclosure, and about 30 yards apart from it. A Greek inscription was seen at Auxume by the Portuguese missionaries in the 17th century. (Tellez, *Hist. of Aethiopia*, vol. i. ch. 22.)

The inscription on the latter footstool is bilingual—Greek and Cushite, or Aethiopian—one set of characters was probably intended for the native Auxumites, the other for their Greek rulers or colonists. Mr. Salt considers them as contemporary and identical in meaning. He was unable to transcribe much of the Aethiopic, which is in small letters; but he copied the Greek inscription, which is in rude characters.

By comparing the Auxumite inscription with the Marmor Adulitanum [ADULE], we find that they both relate to the same dynasty of kings, and that the latter is the more ancient of the two. From each it appears that the Auxumite and Adulitan monarchs claimed a descent from Ares, and that while the Adulitan king conquered various neighbouring tribes—Troglodytes, Homerites, Sabaeans, &c.—the Auxumite king is simply stated to have ruled over them. We may accordingly infer that Adule was at first the more powerful state of the two, and that Auxume derived its prosperity from its commercial emporium on the Red Sea.

About A. D. 356 Athanasius of Alexandreia was expelled from his see by the Arians, and his successor Gregory insisted upon his right to re-consecrate all the bishops in his diocese. The Byzantine emperor Constantius Nicephorus accordingly addressed a rescript to the kings of Auxume, ordering them to send forthwith the Auxumitan bishop Frumentius for re-consecration to Alexandreia. This rescript has been transmitted to us by Athanasius in the "*Apology*" which he addressed to Constantius shortly after his expulsion. (Athanas. *Opera*, vol. i. pt. i. p. 315, ed. Bened.)

From the address of the rescript we learn that two equal and contemporary monarchs, Aeizanas and Sazanas, reigned at that time in Auxume. These names are, probably, like that of the Parthian Surenas, not so much personal as official appellations. Now, the above-mentioned Greek inscription records the name and acts of Aizanas, king of the Auxumites, Homerites, &c., and moreover mentions his royal brothers Saizanas and Adephas. The rescript and the inscription, therefore, relate to the same persons and the same period. There is, indeed, some little difficulty respecting the religion of the Auxumite monarchs at this epoch. The city was a Christian see, since Frumentius was its bishop, and Christianity had been preached in Abyssinia at least as early as A. D. 330. Two suppositions, therefore, are before us: (1) that Aeizanas and Sazanas were Christians, but retained on public monuments the old pagan formularies, as most familiar to their subjects; or (2) they were tolerant princes, and protected, without themselves embracing, the new faith. Cosmas, the Indian voyager, who composed his work on Christian Topography in the sixth century A. D., mentions another Auxumite king, whom he names Elesbaan, and who was contemporary with the emperor Justinian, i. e. A. D. 527—565. (Nonnosus, *ap. Phot.* p. 2, ed. Bekker) Here we seem to find the Arabic prefix Al or El; and in the "Book of Axum or Abyssinian Chronicles," a copy of which was brought to this country by Mr. Bruce, several of the Auxumite kings have a similar prefix to their names. If the names be wholly or partially Arabic, the circumstance affords an additional proof of the gradual influx of the Arabs into Aethiopia, which we have already noticed. The subject of the Auxumite inscription is discussed by Buttmann (*Mus. der Alterthumswissenschaft*, vol. ii. p. 575, where all the authorities are given). Vopiscus, in his account of the emperor Aurelian's triumph in A. D. 274 (*Aurelian.* 33), enumerates Axomitae among the captives who preceded his chariot. These were probably merchants who were resident in Palmyra at the time of its capture; and if so, they afford an additional proof of the commercial enterprise of their countrymen. The Byzantine historians speak of the Auxumites as Indians, but by that term they imply not an ethnical but a physiological distinction—the dark colour of the Aethiopian race. (Bruce, *Travels*, vol. i. p. 476, seq., vol. ii. p. 527, vol. iii. p. 128, seq.; Valentia, *Travels*, p. 87, seq. 180; Salt, *Travels in Abyssinia*, p. 510; Combe and Tamisier, *Voyage en Abyssinie*, vol. i. p. 268; Ritter, *Erdkunde*, vol. i. p. 222; Mannert, *Geograph. d. Alten.* x. 1, p. 122, seq.) [W. B. D.]

AUZA (*It. Ant.* p. 30), AUZEA (Tac. *Ann.* iv. 25), AUZIA (Αὔζια, Ptol. iv. 2. § 31, vulg. Αὔζινα: COLONIA AUZIENSIS, Inscr.), an important inland city of Mauretania Caesariensis, on the high road from Caesarea to Sitifi, stood in a small desert plain, at the N. foot of the *Jebel Deira* (Garaphi M.), and near the sources of the river *Adous* (probably the ancient AUDUS). A tradition, quoted by Josephus from Menander, ascribes its foundation to Ithobalus, king of Tyre, the contemporary of Ahab, king of Israel. (*Antiq. Jud.* viii. 7. s. 13. § 2: οὗτος ἔκτισε . . . . . Αὔζαν τὴν ἐν Λιβύῃ.) Its position exposed it greatly to the attacks of the barbarians. In the reign of Tiberius, when it was the scene of Dolabella's victory over Tactarinas, and the latter chieftain's death (A.D. 24), it is described by Tacitus (*l. c.*) as a half-destroyed fort, which had been burnt by the Numidians, shut in by vast forests

on all sides; but its subsequent state, as a flourishing colony, is attested by extant inscriptions, one of which records the defeat and death of a rebel Moorish chieftain, Faraxes, who had led his cavalry into the city's territory, by the praefect Q. Gargilius. This inscription concludes with the date VIII. KAL. FEB. PR. CCXXI., which Orelli explains as the 221st year from the establishment of the province of Numidia by Julius Caesar, in B.C. 46; this would bring the date of the inscription to A.D. 176, in the reign of M. Antoninus. The place is mentioned again in the war of Theodosius against Firmus, A.D. 373, under the various names, in the corrupted text of Ammianus Marcellinus (xxix. 5), of *municipium* or *castellum Addense*, *Audiense*, and *Duodiense;* and D'Avézac refers the inscription just mentioned to the period of this war, identifying the Faraxes of the inscription with the Fericius of Ammianus. (*Afrique Ancienne*, pp. 233, 234.)

The site of Auzia is marked by the ruins called by the Arabs *Sour-el-Rezlan* (*Sour Guzlan*, Shaw), S. of the modern *Hamza*, which has been constructed almost entirely of the ruins of the ancient city. Among these ruins are the inscriptions copied by Shaw, and referred to above. Remarking on the accuracy of the brief description given by Tacitus, Shaw says, "Auzia hath been built upon a small plat of level ground, every way surrounded with such an unpleasant mixture of naked rocks, and barren forests, that I don't remember to have met with a more melancholy situation." (Shaw, *Travels*, vol. i. pp. 80, foll., pp. 37—40, 2d ed.; Orelli, *Inscr.* No. 529; Pellissier, *Exploration Scientifique de l'Algérie*, vol. vi. p. 352.) [P. S.]

AUZACIA, &c. [AUXACII MONTES.]

AVANTICI, an Inalpine people, whom the emperor Galba included within the limits of Gallia Narbonensis (Plin. iii. 4). Pliny mentions Dinia (*Digne*) as the capital of the Avantici and Bodiontici, and thus enables us to determine the position of the Avantici in a general way. *Digne* is in the department of Basses Alpes, on the *Bleonne*, a branch of the *Durance*. A place named *Avançon* seems to represent the name Aventici; but D'Anville thinks that its position does not correspond to the probable position of the Avantici. [G. L.]

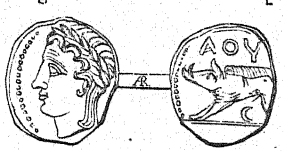
AVARES (Avari, Ἀβάρεις, Ἄβαροι). It is far easier to give the ethnological relations and the conquests of this important population than to fix its exact original locality; though this by a certain amount of not illegitimate speculation, may be approximated. It is the Byzantine writers who chiefly mention the Avars, and that in a manner to show not only that they were members of the great Turanian stock, but also to suggest the doctrine that the still more famous Huns were in the same category. Different chiefs of the Avars are frequently mentioned, and the usual title is χαγάνος, *Cacanus*, *Gaganus*, *Chaganus* or *Caganus*. This is the title *Khân*, as in Zengis-*Khân*, in its uncontracted form, and its application is a sure sign that the population which used it was either Turk or Mongol. Their connection with the Huns is as clear. Theophylact writes (vii. 8) that "when Justinian held the Empire, there settled in Europe a portion of the ancient tribes of the *Var* (Οὐὰρ), and *Chun* (Χουννί), who named themselves Avars, and gloried in calling their chief *Khagan* (Χαγάνος)." Again, Paulus Diaconus states, that "Avares primum *Huni*, postea de regis proprii nomine *Avares* appellati sunt" (i. 27). The importance of this passage will be considered in the sequel. It is the Avars who, flying before the Turks, seek the alliance of Justinian, and whom the Turks, in demanding their surrender, call *Var-chonites* (Οὐαρχωνῖται), a form which has reasonably passed for a compound of *Var* and *Hun*. Even if we object to this criticism, by supposing the original designation to have been *Var-chun* (or some similar form) and the connection with the *Huns* to have been a mere inference from the similarity of name, on the part of the writers, who spoke of the *Var* and *Chun*, the affinity between the two populations must have been considerable; otherwise, the identification would have been absurd. The name *Pseudavari* (Ψευδάβαροι) in Theophylact (vii. 8) creates a difficulty; since we are not told in what manner they differed from the *true*. Yet even these *false Avars* are especially stated to have been *Var* and *Chun*. Jornandes, too (*De Rebus Getic.* 52) speaks of a tract on the Danube called *Hum-i-var;* the same combination, with its elements transposed. Still there are some difficulties of detail arising from the fact of Theophylact himself separating the *Huns* from *Chun;* and also a nation called *Savirs* (Σαβείροι) from the Avars (Ἄβαροι); and these are difficulties which no one but a good Turkish philologist is likely to entirely set aside.

The notice of the Avars by Priscus, is to the effect that between the years 461 and 465 they were distressed by heavy fogs arising from the *Ocean*, and by vast flocks of vultures which ravenously fed upon them (i. e. the Avars), that they forced them upon the *Saviri*, who were thus forced upon the Saraguri, Urogi, and Onoguri (all populations known to be Turk), who, in their turn, were compelled to seek the alliance of the Byzantine Romans. This is but an instance of the tendency, so common with historians, to account for all national movements, by the assumption of some pressure from without, which they then strive to trace to its remotest origin. The name *Avar* is the only undoubted historical part about it. It is in A.D. 558, that they came in contact with the Alans, requested them to make them known to the Romans, and flying before the Turks. As the Alan country was in the present Government of Caucasus, this is the first, unexceptionable Avar locality; and even here they are strangers. More or less supported by the Romans, and retained against the Slavonians of the Danube, the Avars spread over Thrace and Bulgaria, and effected a permanent settlement in Hungary, and an empire as well. From Hungary, Dalmatia and Croatia are overrun; as are Thuringia, Franconia, and even parts of Gaul.

After a series of political relations with the Gepidae and Lombards, the power grows and declines, is materially broken by the Carlovingian kings, and finally destroyed by the Slavonians of Moravia. The valley of the Erlav, however, and feeder of the Danube, was called *terra Avarorum*, as late, at least, as the 10th century.

The Avars throw light upon populations other than the Huns. They add to the list of facts which favour the notion of the Herodotean Scythae (Scoloti) having belonged to the Turk stock. The Scoloti deduced their origin from *Targitaus* (Herod. iv. 5); and *Targitius* was τῷ τῶν Ἀβάρων φύλῳ ἀνὴρ περιβλεπτος (Theophan. i. 6). In truth, he was *Turk*, or the *Eponymus* to the Turk stock in general, and the whole Herodotean legend about

him and his sons is current amongst the Kherghiz at the present day.



But, a not illegitimate speculation may carry us further still. *Avar* was a *native* name, and it was deduced from a king so called (Paul. Diacon. *ut supr.*). This means that there was such an *epônymus* as *Avar;* just as the statement that the *Greeks called themselves Hellenes from their king Hellen*, would imply an *epônymus* of that name. Like Hellen, the *Avar* was a mythological rather than a real personage. Hence, it is suggested that the fabulous *Abaris* of the Hyperborei (Herod. iv. 36) who was carried round the world on an arrow, without eating food, may have been the *epônymus* of the Avars. Name for name, the words coincide; and no locality, as the original area of the Avars, would suit better than that of the Herodotean Hyperborei. A district on or to the east of the Tobol would satisfy the conditions required for the locality of the Hyperboreans and the belief in Abaris. This hypothesis infers the existence of a population from the existence of a personal name,—that personal name being assumed to be an *epônymus*. If this be legitimate the Avars, without being exactly the ancient Hyperboreans, were that portion of them more especially connected with the name of *Abaris*. [R. G. L.]

AVARICUM (*Bourges*), the chief town of the Bituriges, a Celtic people (Caes. *B. G.* vii. 13, 15), on the Avara, *Evre*, a branch of the *Cher*, which falls into the *Loire*. Caesar describes it as the finest city in almost all Gallia, and as nearly surrounded by a river and a marsh, with only one approach to it, and that very narrow. The modern town is situated at the junction of the *Auron* and the *Evre*, and each of these rivers receives other streams in or near the town. The wall of Avaricum is particularly described by Caesar (vii. 23). It was built, like all the Gallic town walls, of long beams of timber, placed at intervals of two feet; the beams, which were 40 feet long, being so placed that their ends were on the outside. The spaces between were filled up with earth, but in front on the outside with large stones. The beams were fastened together on the inner side. On these beams others were placed, and the intervals were filled up in like manner; and so on, till the wall had the requisite height. Caesar besieged Avaricum (B. C. 52) during the rising of the Galli under Vercingetorix. The place was taken by assault, and the Roman soldiers spared neither old men, women, nor children. Out of 40,000 persons, only 800 escaped the sword, and made their way to the camp of Vercingetorix, who was in the neighbourhood. Under the division of Augustus, the town was included in Aquitania, and it finally took the name of Bituriges or Biturigae, which seems to have become Biorgas in the middle ages, and finally *Bourges*, now the capital of the department of *Cher*. The position of Avaricum is determined by the Itineraries, from Augustonemetum, *Clermont*, to Avaricum; from Caesarodunum, *Tours*, to Avaricum, and other routes. [G. L.]

AVARUM PR. (Ἄβαρον ἄκρον, Ptol. ii. 6. § 1), a promontory on the W. coast of Hispania Tarraconensis, between the rivers Avus and Naebis, probably near *Giros*. [P. S.]

AVEIA (Ἄουτα: *Eth.* Aveias, -atis), a city of the Vestini, placed by the Tabula Peutingeriana on the road from Prifernum to Alba Fucensis. Its name is also found in Ptolemy (iii. 1. § 59) among the cities of the Vestini, but is not mentioned by Pliny, though we learn from inscriptions that it must have been a municipal town of some importance. There is little doubt that we should read "Aveiae" for "Avellae" in Silius Italicus (viii. 519) where he enumerates it among the towns of the Vestini, and celebrates the excellence of its pastures. We learn from the Liber Coloniarum (p. 228, where the correction of "Aveias ager" for "Veios" admits of no doubt) that its territory was portioned out in the same manner as that of Amiternum, but was not made a colony, and retained, as we learn from an inscription, the subordinate rank of a Praefectura. The site of Aveia has been a subject of much dispute, but Giovenazzi, a local antiquarian, who has investigated the matter with great care, places it near *Fossa*, a village about six miles S. of *Aquila*, where there are said to be considerable remains of an ancient city, as well as a church of *Sta Balbina*, connected by ecclesiastical records with the ancient Aveia. The ruins at *Civita di Bagno*, supposed by Holstenius to be those of Aveia, are ascribed by this author to Furconium. (Giovenazzi, *Della Città d' Aveia nei Vestini*, Roma 1773, 4to.; Holsten. *Not. in Cluver.* p. 139; Romanelli, vol. iii. p. 257—263; Orell. *Inscr.* 106.) [E. H. B.]

AVE'NIO (Ἀουένιον, Strab. p. 185: *Eth.* Avennicus, Ἀουενιωνήσιος, Ἀουενιωνίτης: *Avignon*), a town of Gallia Narbonensis, at the junction of the Druentia, *Durance*, and the Rhone. It was in the territory of the Cavares; and Pliny and Mela (ii. 5) call it Avenio Cavarum. Pliny (iii. 4) enumerates it among the "oppida Latina," that is, the towns which had the Latinitas, of Gallia Narbonensis. Ptolmey calls it a colonia. Stephanus (*s. v.* Ἀουένιον) calls it "a city of Massalia," from which it seems that there is some authority for supposing it to be a Greek foundation, or to have come under the dominion of the Greeks of *Marseille*. Besides the resemblance of the ancient and modern names, the site of Avignon is determined by the Itin. route from Arelate to Vienna and Lugdunum, which passed through Avenio. [G. L.]

COIN OF AVENIO.

AVENTICUM (*Avenches*), the chief city of the Helvetii. (Tac. *Hist.* i. 68.) It is not mentioned by Caesar. About Trajan's time, or shortly after, it became a Roman colony with the name Pia Flavia Constans Emerita. It seems to have been originally the capital of the Tigurini [TIGURINI], one of the four Helvetic pagi. Its position is determined by inscriptions and the Roman roads which meet there. Ptolemy places it in the territory of the Sequani, from which we may conclude that part of the Helvetii were then attached to the Sequani. In the time of Ammianus (xv. 11) Aventicum was a deserted place, but its former importance was shown by its ruins. There are still remains of an amphitheatre, aqueduct, and part of the wall at *Avenches*, or Wifflisburg, as the Germans call it, in the present canton of Waadt or Pays de Vaud. Many objects of antiquity have been found at *Avenches*. [G. L.]

AVERNUS LACUS or AVERNI LACUS (Ἄορνος λίμνη: *Lago d'Averno*), a small lake in

Campania, between Cumae and the Gulf of Baiae. It occupies the crater of an extinct volcano, the steep sides of which rising precipitously around it, and covered in ancient times with dark and shaggy woods, gave it a strikingly gloomy character; and it was probably this circumstance, associated with the sulphureous and mephitic exhalations so common in the neighbourhood, that led the Greeks to fix upon it as the entrance to the infernal regions, and the scene of Ulysses' visit to the shades. How early this mythical legend became attached to the lake we know not, but probably soon after the settlement of the Greeks at Cumae. Ephorus, however, is the earliest writer whom we find cited as adopting it. (*ap. Strab.* v. p. 244.) It was commonly reported that the pestiferous vapours arising from the lake were so strong that no living thing could approach its banks, and even birds were suffocated by them as they flew across it. Hence its Greek name Ἄορνος was commonly supposed to be derived from ἀ and ὄρνις. This is probably a mere etymological fancy: but it is not improbable that there was some foundation for the fact, though it is treated as merely fabulous by Strabo and other writers. Similar effects from mephitic exhalations are still observed in the valley of Amsanctus and other localities, and it must be observed that Virgil, who describes the phenomenon in some detail, represents the noxious vapours as issuing from a cavern or fissure in the rocks adjoining the lake, not from the lake itself; and constantly uses the expression "Averna loca" or "Averna," as does Lucretius also, in speaking of the same locality. But while the lake itself was closely surrounded with dense woods, these would so much prevent the circulation of the air, that the whole of the atmosphere might be rendered pestilential, though in a less degree. In the time of Strabo the woods had been cut down; but the volcanic exhalations seem to have already ceased altogether. (Strab. v. pp. 244, 245; Pseud. Aristot. *de Mirab.* 102; Antig. Caryst. 167; Diod. iv. 22; Virg. *Aen.* iii. 442, vi. 201, 237—242; Lucr. vi. 739—749; Sil. Ital. xii. 121; Nonius, i. p. 14; Daubeny *on Volcanoes*, p. 199.)

The lake itself was of nearly circular form, about a mile and a half in circumference, though Diodorus reckons it only 5 stadia; and like most volcanic lakes, of great depth, so that it was believed to be unfathomable. (Lycophron. *Alex.* 704; Diod. *l. c.*; Pseud. Arist. *l. c.*; Lucan. ii. 665.) It seems to have had no natural outlet; but Agrippa opened a communication between its waters and those of the Lucrine Lake, so as to render the Lake Avernus itself accessible to ships; and though this work did not continue long in a complete state, there appears to have always remained some outlet from the inner lake to the Gulf of Baiae. (Strab. *l. c.*; Cassiod. *Var.* ix. 6. For further particulars concerning the work of Agrippa see LUCRINUS LACUS.) At a subsequent period Nero conceived the extravagant project of constructing a canal, navigable for ships from the Tiber to the Lake Avernus, and from thence into the Gulf of Baiae; and it appears that the works were actually commenced in the neighbourhood of the Avernus. (Suet. *Ner.* 31; Plin. xiv. 6. s. 8; Tac. *Ann.* xv. 42.) There existed from very early times an oracle or sanctuary on the banks of the lake, connected with the sources of mephitic vapours; and this was asserted by many writers to be the spot where Ulysses held conference with the shades of the departed. It was pretended that the Cimmerians of Homer were no others than the ancient inhabitants of the banks of the lake, and his assertion that they never saw the light of the sun, was explained as referring to their dwelling in subterranean abodes and caverns hollowed in the rocks. (Ephorus *ap. Strab. l. c.*; Lycophr. 695; Max. Tyr. *Diss.* xiv. 2; Sil. Ital. xii. 130.) The softness of the volcanic tufo of which the surrounding hills are composed, rendered them well adapted for this purpose; and after the whole neighbourhood had been occupied by the Romans, Cocceius carried the road from the lake to Cumae, through a long grotto or tunnel. (Strab. v. p. 245.) A similar excavation, still extant on the S. side of the lake, is now commonly known as the *Grotta della Sibilla;* it has no outlet, and was probably never finished. Those writers who placed here the Cimmerians of Homer, represented them as having been subsequently destroyed (Ephorus, *l. c.*; Plin. iii. 5. s. 9); but the oracle continued down to a much later period; and the lake itself was regarded as sacred to Proserpine or Hecate, to whom sacrifices were frequently offered on the spot. It was under pretence of celebrating these sacred rites that Hannibal in B.C. 214 visited the Lake Avernus at the head of his army; but his real object, according to Livy, was to make an attempt upon the neighbouring town of Puteoli. (Liv. xxiv. 12, 13; Sil. Ital. xii. 106—160.)

There exist on the SE. side of the lake the picturesque ruins of a large octagonal vaulted edifice, built of brick, in the style of the best Roman works; this has been called by some writers the temple of Proserpine; but it is more probable that it was employed for thermal purposes. [E. H. B.]

AVIO'NES, a tribe in the north of Germany, dwelling probably in Schleswig, on the river *Auwe*, a tributary of the *Eyder*, or in the duchy of *Lauenburg*. (Tacit. *Germ.* 40.) They are believed to be the same people as the Chabiones or Caviones. (Mamert. *Genethl. Max. Aug.* 7, *Panegyr. Const.* 6.) [L. S.]

AVIUM PR. [TAPROBANE.]

AVRAVANNUS. [ABRAUANNUS.]

AVUS (Ptol. ii. 6. § 1: Ἄβου ποταμοῦ ἐκβολαί), or AVO (Mela, iii. 1. § 8), a small river on the W. coast of Hispania Tarraconensis, N. of the Durius and S. of the Naebis, in the territory of the Gallaeci Bracarii; now called the *Rio d'Aye* [P. S.]

AXATI, aft. prob. OLAURA (*Lora*), a municipium of Hispania Baetica. (Inscr. *ap.* Gruter, p. 1065, No. 2; Morales, pp. 22, 99; Florez, *Esp. S.* vol. ix. p. 62.) [P. S.]

AXELODU'NUM, the 16th station, *per lineam valli* of the *Notitia*, under the charge of the *Cohors prima Hispanorum*. This cohort is mentioned in an inscription found at *Ellenborough* in Cumberland. Place for place, *Burgh on the Sands* is Axellodunum. Name for name, *Hexham* suits better; as the *-el* may have been a diminutive form (as in *Mosella*) and the *-dunum* is an element of composition. Horsley prefers *Burgh* (Book i. c. 7). The evidence, also, of there having been a station of *Burgh* is complete (c. 9). [R. G. L.]

A'XIA (Ἀξία), a small town of Etruria, mentioned by Cicero (*pro Caec.* 7), who calls it a "castellum," and describes it as situated "in agro Tarquiniensi." It is probably the same of which the name is found in Stephanus of Byzantium (*s. v.* Ἀξία), who tells us only that it was "a city of Italy." Its site may be fixed with much probability at a place still called *Castel d' Asso* or *Castellaccio*, about six miles W. of *Vi-*

terbo. The ancient town appears to have occupied the angle formed by two small streams named the *Rio Secco* and *Arcione*, flowing through deep vallies or ravines with precipitous escarpments on each side. Some slight fragments of the ancient walls are all that remain on the site of the town; but the opposite or N. bank of the valley of the *Arcione* was evidently in ancient times the Necropolis of the town, and presents a remarkable assemblage of sepulchres. These are not merely subterranean chambers cut out of the rock, but present regular architectural façades, with bold cornices and mouldings in relief, all hewn out of the soft tufo rock of which the escarpments of the cliffs are composed. They vary in height from 12 to 30 feet, but have all a remarkable resemblance in their architectural character, and occupy a considerable extent of cliff in a regular range like a street, extending also some distance up a lateral ravine which opens into the principal valley. Many of these tombs have inscriptions over them in Etruscan characters, most of which consist of, or at least contain, the customary formula ECAΣTΘINEΣA. Since the first discovery of these monuments in 1808 by Professor Orioli of Bologna, they have attracted much attention, more perhaps than they really deserve. Their architecture is thought to have a strong resemblance to the Egyptian, but it is still more closely connected with the Doric Greek, of which indeed the whole Tuscan architecture was merely a modification. Nor is there any reason to assign them a very remote antiquity; Orioli is probably correct in referring them to the fourth or fifth century of Rome. They certainly however seem to prove that Axia must have been a place of more consideration in the flourishing times of Etruria, than it was in the days of Cicero; though it could never have been more than a small town, and was probably always a dependency of Tarquinii, as its name never occurs in history. The remains at *Castel d'Asso* have been described in detail by Orioli (*Dei Sepolcrali Edifizi dell' Etruria Media*, 1826, inserted in Inghirami, *Mon. Etruschi*, vol. iv.; and a second time in the *Annali dell' Instituto di Corr. Archeol.* 1833, p. 18—56), and again by Dennis (*Cities, &c. of Etruria*, vol. i. p. 229—242.) [E. H. B.]

AXI'ACES (Ἀξιάκης: *Teligul*), a river of Sarmatia Europaea, E. of the Tyras (*Dniester*), flowing, according to Ptolemy, right through Sarmatia, a little above Dacia, as far as the Carpathi M. On its banks were the people called Axiacae. (Mela, ii. 1. § 7; Plin. iv. 12. s. 26; Ptol. iii. 5. § 18, 10. § 14; comp. PASIACES.) [P. S.]

AXIMA (*Aisme*), a town of the Centrones, according to Ptolemy, who are an Alpine people. In the Table it is placed, but under the name Axuna, between Bergintrum (*St. Maurice*) and Darantasia (*Moutiers en Tarentaise*), on the road over the pass of the Alpis Graia or *Petit St Bernard*. The position is thus determined to be that of *Aisme*. The Antonine Itin. omits Axima, but makes the distance xviii. between Bergintrum and Darantasia, the same distance that is given in the Table. It is said that inscriptions have been found at *Aisme* with the name Forum Claudii; yet Forum Claudii is a different place, though in the country of the Centrones. [G. L.]

AXI'NIUM. [UXAMA.]

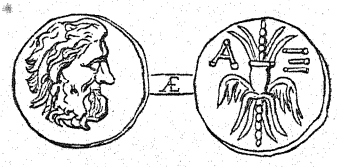
AXIO'POLIS or AXIU'POLIS (Ἀξιούπολις: *Rassova*), a town of Lower Moesia, situated on the river Axius, which flowed into the Danube near its southernmost mouth, which is now stopped up, and the Limes Trajani. (Ptol. iii. 10. § 11.) [L. S.]

A'XIUS (Ἄξιος, Ἀξιός), the principal river of Macedonia, and the eastern boundary of the kingdom before the reign of Philip, rises in Mt. Scardus between Dardania and Dalmatia, a little NW. of Scupi. It flows in a south-easterly direction through Macedonia, and, after receiving the Erigon and Astycus and passing by Pella, falls into the Thermaic gulf. The Lydias also now flows into the Axius, but in the time of Herodotus (vii. 127) the former river joined the Haliacmon. The Axius has frequently changed its course. In earlier times it flowed into the sea between Chalastra and Thessalonica. (Strab. vii. p. 330.) In the middle ages it was called Bardarium (Βαρδάριον, Anna Comn. i. p. 18, Paus.), whence its modern name of *Vardhári*. The principal bridge across the Axius was near Pella (Liv. xliv. 43); this bridge is probably identical with the MUTATIO GEPHYRA in the *Itin. Hierosol.* (p. 605, Wess.). The Axius is a deep and rapid river in winter, and is nearly two miles in breadth before reaching the sea; but it can be crossed by several fords both in the lower and upper parts of its course. (Clark, *Travels*, vol. iii. p. 334; Leake, *Northern Greece*, vol. iii. pp. 258, 289, 437, 469; Tafel, *Thessalonica*, pp. 69, seq. 287, seq.)

AXON, a river of Caria, mentioned by Pliny (v. 28), with Calynda: "flumen Axon, oppidum Calynda." We may, perhaps, infer that Calynda was on or near the Axon. Leake places the Axon immediately west of the gulf of Glaucus. [G. L.]

A'XONA (*Aisne*), a branch of the Isara (*Oise*). The *Oise* joins the Seine below Paris. Caesar encamped on the Axona in the second year (B. C. 57) of his Gallic campaign (*B. G.* ii. 5). Dion Cassius (xxxix. 2) writes the name Αὔξουννος. Ausonius (*Mosel.* v. 461) names it "Axona praeceps," an epithet which is not appropriate.

The Axona, according to Caesar, was in "extremis Remorum finibus," and the direction of his movements shows that this river was at or near their northern boundary. [G. L.]



AXUENNA. A place of this name appears in the Antonine Itin. on the road from Durocorturum (*Reims*) through *Verdun*, to Divodurum (*Metz*). It may have been a place on the Axona (*Aisne*), but the site cannot be fixed.

Another Axuenna is mentioned in the Table, and it seems to be the same place that occurs in the Antonine Itin. under the corrupt name Muenna. It is on the road from Reims to Bagacum (*Bavay*); and the distance from Reims is marked x. in both these routes. This determination is supposed to fix the site of this Axuenna at the passage of the *Aisne*, between *Neufchâtel* and *Avaux*. (D'Anville, *Notice*, &c.) [G. L.]

AXUME. [AUXUME.]

AXUS (Ἄξος: *Axus*), a city of Crete (Herod. iv. 154), which is identified with Ὄαξος (Steph. B. *s. v.*), situated on a river ("rapidum Cretae veniemus Oaxen," Virg. *Ecl.* 166), which, according to Vibius Sequester (*Flum.* p. 15), gave its name to Axus. According to the Cyrenaean traditions, the Theraean Battus, their founder, was the son of a damsel named Phronime, the daughter of Etearchus, king of this city (Herod. *l. c.*). Mr. Pashley (*Travels*, vol. i. p. 143, foll.) discovered the ancient city in the modern village of *Axus*, near Mt. Ida. The river of *Axus* flows past the village. Remains belonging to the so-called Cyclopean or Pelasgic walls were found, and in the church a piece of white marble with a sepulchral inscription in the ancient

Doric Greek of the island. On another inscription was a decree of a "common assembly of the Cretans," an instance of the well known *Syncretism*, as it was called. The coins of Axus present types of Zeus and Apollo, as might be expected in a city situated on the slopes of Mt. Ida, and the foundation of which was, by one of the legends, ascribed to a son of Apollo. The situation answers to one of the etymologies of the name: it was called Axus because the place is precipitous, that word being used by the Cretans in the same sense that the other Greeks assigned to ἀγμός, a crag. (Hoeck, *Kreta*, vol. i. p. 397.) [E. B. J.]

COIN OF AXUS.

A'XYLUS, a woodless tract in Asia Minor, "northward of the region of lakes and plains, through which leads the road from Afioum Karahissár to Kónia and Erkle, a dry and naked region, which extends as far as the Sangarius and Halys." (Leake, *Asia Minor*, p. 65.) Livy (xxxviii. 18) describes the Axylus as entirely destitute of wood; the inhabitants used dried cow-dung for fuel. Pococke, who traversed part of the country, speaks of the people as being much distressed for fuel, and commonly using cow-dung. He might have found the same thing done in some parts of England. (Compare Hamilton, vol. i. pp. 448, 468, as to the Axylus.) The Roman consul Manlius marched through the Axylus to invade Galatia. Part of this woodless region was included in Phrygia, and part in Galatia and Lycaonia. The high plateaus north of *Kónia* and *Erkle* are the mountain-plains (ὀροπέδια), as Strabo (p. 568) terms them, of the Lycaonians, cold, treeless and waterless, but well adapted for sheep-feeding. [G. L.]

AZA, a town of Armenia, mentioned by Pliny (vi. 10). According to the Anton. Itinerary it was 26 M. P. from Satala; it is conjectured to be the same place as the Hassis of the Peutinger Tables, which is distant from Satala 25 M. P. [E. B. J.]

A'ZALI ('Αζαλοι), a tribe in Upper Pannonia, from which, perhaps, the modern town of *Ozal*, derives its name. (Ptol. ii. 14. § 2; Plin. *H. N.* iii. 28.) [L. S.]

AZA'NES ('Αζάνης). It is stated by Arundell (*Asia Minor*, vol. ii. p. 140) that, on a coin of Themisonium in Phrygia, is a river-god, with the name of Azanes, "evidence of some river being at or near Themisonium." The site of Themisonium does not appear to be quite certain; and nothing more seems to be known of the river Azanes, though the conclusion from the coin, that there was a river of that name, can hardly be doubted. [G. L.]

AZA'NES. [Arcadia.]

AZA'NI ('Αζανοί: *Eth.* 'Αζανίτης), as the name appears in Strabo (p. 576), and Stephanus (*s. v.* 'Αζανοί) The name on coins and inscriptions is Αἰζανοί, and also in Herodian, the grammarian, as quoted by Stephanus. Azani is a city of Phrygia Epictetus. The district, which was called Azanitis, contained the sources of the river Rhyndacus.

This place, which is historically unknown, contains very extensive ruins, which were first visited in 1824 by the Earl of Ashburnham (Arundell's *Asia Minor*, vol. ii. p. 347); it had been incorrectly stated (Cramer's *Asia Minor*, vol. ii. p. 14) that the ruins were discovered by Dr. Hall. They have since been visited by several other travellers. The remains are at a place called *Tchavdour-Hissar*, on the left bank of the Rhyndacus. There are two Roman bridges with elliptical arches over the Rhyndacus; or three according to Fellows. (*Plan*, p. 141.) On the left bank of the Rhyndacus, on a slight eminence, is a beautiful Ionic temple, "one of the most perfect now existing in Asia Minor." (Hamilton, *Researches*, *&c.*, vol. i. p. 101.) Eighteen columns and one side and end of the cella are standing. There are also

RUINS AT AZANI.

the colossal foundations of another temple; and some remains of a third. The theatre is situated near half a mile from the temple; and there is a stadium which "extends north and south in a direct line of prolongation from the theatre, with which it is immediately connected, although at a lower level. Some of the marble seats, both in the stadium and in the theatre, are well preserved, and of highly finished workmanship." (Hamilton.) There is a view of the temple of Azani in Fellows' Asia Minor (pp. 137, 141). "There are many fronts of tombs sculptured as doors with panels and devices, having inscriptions." (Fellows, who has given a drawing of one of these doors.) Among the coins which Hamilton procured at this place, and in the surrounding country, there were coins of Augustus, Claudius, Faustina, and other imperial personages. Some also were autonomous, the legends being Δημος, Ἱερα Βουλη, or Ἱερασυνκλητος Αἰζανειτων, or Αἰζανιτων. Several inscriptions from Azani have been copied by Fellows (p. 142, &c.), and by Hamilton (Appendix, 8—20). None of the inscriptions are of early date, and probably all of them belong to the Roman period. One of these records "the great, both benefactor and saviour and founder of the city, Cl. Stratonicus," who is entitled consul (ὕπατον); and the monument was erected by his native city. This Stratonicus, we may infer from the name Claudius, was a native, who had obtained the Roman citizenship. The memorial was erected in the second praetorship (το β στρατηγουντος) of Cl. Apollinarius. Another inscription contains the usual formula, ἡ Βουλη και δ Δημος. In the interior of the cella of the temple there are four long inscriptions, one in well formed Greek characters, another in inferior Greek characters, and two in badly cut Roman characters. There are also inscriptions on the outside of the cella. It appears from one inscription that the temple, which is now standing, was dedicated to Zeus.

The plan given by Fellows shows the positions of the several buildings, which altogether must have produced a very fine effect. There are no traces of any city walls. [G. L.]

COIN OF AZANI.

AZA'NIA, a city belonging to Massilia, according to Stephanus (*s. v.* Ἀζανία), quoting Philo. The place is only mentioned in this passage, which is worth notice, as adding to the list of Massaliot towns in the south of France. Walckenaer (*Géog.*, &c., vol. i. p. 280) conjectures that it may be at *Azillaret*, near *Azille*, in the department of *Aude;* but this is merely a guess, founded on a resemblance of names. [G. L.]

AZA'NIA (ἡ Ἀζανία, Ptol. iv. 7. § 28; Peripl. Mar. Eryth. pp. 10, 11, seq.), the modern coast of *Ajan*, was another name for the maritime region of eastern Africa called Barbaria, which extended from the promontory of Aromata, lat. 11° N., to that of Rhaptum, lat. 2° S. Ptolemy distinguishes between Azania and Barbaria, defining the former as the interior, and the latter as the coast of the region which bore these names. Azania was inhabited by a race of Aethiopians, who were engaged principally in catching and taming wild elephants, or in supplying the markets of the Red Sea coast with hides and ivory. At the southern limit of this undefined and scarcely known region was the river Rhaptus, and the haven Rhaptum (Ptol. iv. 9), which derived their name from the Aethiopes Rhapsii. The Mare Azanium, another name for the Sinus Barbaricus (βαρβαρικὸς κόλπος, Ptol. iv. 7. § 28), skirted this whole region. [W. B. D.]

AZANUS. [INDIA.]

AZARA (Ἄζαρα), mentioned by Strabo (xi. p. 527) in his Account of Armenia as situated on the Araxes; some read τὰ Ζάρα: probably like other words occurring in that country, the name was spelt indifferently. Groskurd (note *ad l. c.*) is inclined to think it was a temple dedicated to the goddess Zaretis, or the Perso-Armenian Artemis. (Comp. Hesych. *s. v.*; Selden, *de Diis Syriis Synt.* ii. c. 15.) [E. B. J.]

AZEKAH, a city of the tribe of Judah. (*Josh.* xv. 35.) It was situated in that part which was called Sephela (rendered by the LXX. τὴν πεδινὴν, τὸ πέδιον, and τὰ ταπεινὰ), which, according to Eusebius and St. Jerome, embraced all the country about Eleutheropolis, to the north and west. (Reland, *Palaest.* p. 187.) A village of this name existed in their day between Eleutheropolis and Aelia (Ib. p. 603); and the site of Shocoh, with which it is joined in 1 *Sam.* xvii. 1, is still preserved in the small ruined village of *Shweikeh*, in the south-east of Judaea, where the hill country declines towards the Plain of the Philistines. (Robinson, *Bib. Res.* vol. ii. pp. 343, 349.) [G. W.]

AZE'NIA. [ATTICA, p. 331, a.]

AZE'TIUM (Ἀζητῖνοι: Azetini), a town of Apulia, the name of which does not occur in any ancient author, under this form, but its correctness is proved by its coins, which have types copied from those of Tarentum and the legend at full ΑΖΗΤΙΝΩΝ. These coins, once erroneously assigned to Azenia in Attica, are found only in the southern part of Apulia, and hence it is probable that the "Ehetium" of the Tab. Peut., a name certainly corrupt, ought to be read Azetium. If this conjecture be admitted Azetium may be placed at *Rutigliano*, a small town about 12 miles SE. of *Bari*, where the coins in question have been frequently discovered. The AEGETINI of Pliny (iii. 11. s. 16) though placed by him among the "*Calabrorum Mediterranei*," in all probability belong to the same place, and this may be the Roman form of the name. (Millingen. *Num. de l'Italie*, p. 147.) [E. H. B.]

COIN OF AZETIUM.

AZIRIS, or AZILIS (Ἄζιρις, Ἄζιλις, Herod., Steph. B., Callim.; Ἄξιρον, Charax, *ap.* Steph. B.; Ἄξυλις or Ἄζυλις κώμη, Ptol. ii. 5. § 2; *Eth.* Ἀζιλίτης, Steph. B.), a district, and, according to the later writers, a town, or village, on the coast of Marmarica, on the E. frontier of Cyrenaica, in N. Africa, opposite the island of Platea. Herodotus tells us that it was colonized by Battus and his followers two years after their first settlement in Platea, B. C. 638. He describes it as surrounded on both sides by the most beautiful slopes, with a river flowing through it, a description agreeing, according to Pacho, with the valley of the river *Temmineh*, which flows into the *Gulf of Bomba*, opposite to the island of *Bomba* (the ancient Platea). In a second passage, Herodotus mentions it as adjacent to the port of Menelaus, and at the commencement of the district where silphium grows. (Herod. iv. 157, 159; Callim. *in Apoll.* 89; Pacho, *Voyage de la Marmarique*, &c. pp. 53, 86.) It appears to be the same place as the Portus Azarius (ὁ Ἀζάριος λιμὴν) of Synesius (c. 4: Thrige, *Res Cyrenens.* p. 72). [P. S.]

AZIRIS (Ἀζιρίς, Ptol. v. 7. § 2), a town of Armenia Minor, which, if we identify with *Arsingan*, or *Arzindjan*, as Mannert (*Geogr.* vol. vi. pt. 2. p. 308) does, must be placed to the W. of the Euphrates. Abúlfedá (*Tab. Syr.* p. 18) fixes this place on the road between *Sivas* and *Arzrum*. According to the Armenian chroniclers it was famous for the worship of the goddess Anahid, and was decorated with many temples by Tigranes II. After the establishment of Christianity it remained an important place, but attained its highest distinction under the Mussulman princes of the Seljuk dynasty. (St. Martin, *Mém. sur l'Arménie*, vol. i. p. 71; Forbiger, vol. ii. p. 312; Ritter, *Erdkunde*, vol. x. p. 270.) [E. B. J.]

AZI'ZIS, or AHI'HIS (Tab. Peut.), AIXI (Priscian. vi. p. 682, ed. Putsch), a town of Dacia, on the high road from Viminacium to Tiviscum, probably the Διζισὶς of Ptolemy (iii. 8. § 9). It seems to be *Taskora* on the *Ternes*. [P. S.]

AZO'RUS (Ἄζωρος, Ἀζόριον, Ptol. iii. 13. § 42: *Eth.* Ἀζωρίτης), a town in Perrhaebia in Thessaly.

situated at the foot of Mount Olympus. Azorus, with the two neighbouring towns of Pythium and Doliche, formed a Tripolis. (Liv. xlii. 53, xliv. 2.) There was also a town of the name of Azorus in Pelagonia in Macedonia. (Strab. vii. p. 327; Leake, *Northern Greece*, vol. iii. pp. 319, 342.)

AZO'TUS (Ἄζωτος: *Eth.* Ἀζώτιος), the ASHDOD of Scripture, a city assigned to the tribe of Judah in the division of the Promised Land (*Josh.* xv. 47), but occupied by the Philistines, and reckoned as one of their five principal cities, where was the chief seat of the worship of Dagon. (1 *Sam.* i. 1—7.) It is celebrated by Herodotus as having stood a siege of 29 years from Psammetichus, king of Egypt (about B. C. 630), the longest of any city he was acquainted with (ii. 157). It was taken by the Assyrians under Tartan, the general of King Sennacherib (B. C. 713; *Is.* xx. 1). It was taken by Judas Maccabaeus (1 *Macc.* ix. 50), and by his brother Jonathan (x. 77); restored by Gabinius (Joseph. *Ant.* xiv. 5. § 3), and given by Augustus to Salome (xvii. 13. § 5). The ancient geographical and historical notices place it between *Askelon* and *Jamnia*, south of the latter, near the coast, but not actually on the sea shore. Its site is clearly identified by the modern village of *Esdûd*, situated on a grassy hill, surrounded by wood. No ruins have been discovered there. (Irby and Mangles, pp. 179—182; and Richardson, as cited in Robinson's *Bib. Res.* vol. ii. p. 368; Reland, pp. 606—609.) [G. W.]

B.

BAALBEK. [HELIOPOLIS.]

BAAL-GAD, in the northern extremity of the Holy Land, "in the valley of Lebanon, under Mount Hermon." (*Josh.* xi. 17, xii. 7, xiii. 5.) [G. W.]

BAAL-MEON, a city of the tribe of Reuben (*Numb.* xxxii. 38; 1 *Chron.* v. 8), afterwards occupied by the Moabites. (*Ezek.* xxv. 9.) It is mentioned by St. Jerome as a large village in his time, and is placed by him and Eusebius nine miles distant from Heshbon, and near Bare (*Baara*). (Reland, *Palaest.* pp. 487, 611.) Burckhardt identifies it with Myoun, ¾ of an hour SE. of the ruins of Heshbon (*Travels*, p. 385); but this would not be more than 2 or 3 miles, which is too short an interval. Yet the name (written by Irby and Mangles "*Mayn*," p. 464), and the neighbouring hot springs (see St. Jerome, *l. c.*), seem to identify it with the Scripture site. It stands on a considerable eminence, in a fertile plain. [G. W.]

BAAL-SHALISHA (2 *Kings*, iv. 42), a town, it would seem, of the district of Shalisha (1 *Sam.* ix. 4), called by Eusebius and St. Jerome Beth-salisa, is placed by them 15 miles north of Diospolis (Lydda), in the Thammitic district. (Reland, p. 611.) [G. W.]

BAAL-TAMAR, a town of the tribe of Benjamin, in the vicinity of Gibeah. (*Judges*, xx. 33.) It existed in the time of Eusebius under the name of Beth-amar. (Reland, p. 611.) [G. W.]

BABBA (Βάββα, Ptol. iv. 1. § 14; Βαββαί: *Eth.* Βαββαῖος, Steph. B.), a colony in Mauretania Tingitana, founded by Augustus, 40 M. P. from Lixus. Its full name is given by Pliny in the form *Babba Julia Campestris* (v. 1). Its coins, which are numerous, from Augustus downwards, have the inscriptions Col. I. B., i. e. *Colonia Julia Babbensis*, or COL. C. I. B. or C. C. I. B., i. e. *Colonia Campestris Julia Babbensis*. (Eckhel, vol. iv. p. 153.) Its site seems quite uncertain. Some place it at *Naranja*, which appears too far east; others at *Bani Teude*, in a beautiful plain on the river *Guarga* (a tributary of the *Subur*), where ancient ruins are still visible. (Leo Africanus, *ap.* Mannert, vol. x. pt. 2, p. 489.) Possibly the true position may be at *Baba Kelam*, E. of *Ksar-el-Kebir*. [P. S.]

BABRA'NTIUM (Βαβράντιον: *Eth.* Βαβράντιος), a place in the neighbourhood of Chios, mentioned by Polybius in his sixteenth book, as quoted by Stephanus, *s. v.* Βαβράντιον. It may be the same place as Babras. [G. L.]

BABRAS (Βάβρας: *Eth.* Βαβράντιος), a small place in Aeolis near Chios. (Steph. B. *s. v.* Βάβρας.) [G. L.]

BABYLLE'NII (Βαβυλλήνιοι, Ptol. iv. 7. § 29), the name of a tribe which belonged to the hybrid population of the Regio Troglodytica, between the Nile and the Red Sea. They were seated between the easternmost boundary of the island Meroe and the Sinus Adulitanus. [W. B. D.]

BA'BYLON (Βαβυλών), in later times called also Babylonia (Justin, i. 2; Solin. c. 37: *Eth.* Βαβυλώνιος, rarely Βαβυλωνεύς, fem. Βαβυλωνίς), the chief town of Babylonia, and the seat of empire of the Babylonio-Chaldaean kingdom. It extended along both sides of the Euphrates, which ran through the middle of it, and, according to the uniform consent of antiquity, was, at the height of its glory, of immense size. There seems good reason for supposing that it occupied the site, or was at least in the immediate vicinity, of Babel, which is mentioned in Genesis (x. 10) as the beginning of Nimrod's kingdom, and in Genesis (xi. 1—9) as the scene of the confusion of tongues: its name is a Graecized form of the Hebrew Babel. There is, however, no evidence that it was at an early period a place of importance, or, like Ninus (Nineveh), the imperial seat of a long line of kings. The name of Babel is said to be derived from the circumstance of its having been the place of this confusion of tongues (*Gen.* xi. 9); another and perhaps more natural derivation would give it the meaning of the gate or court of Bel, or Belus, the Zeus of that country. A tradition of this event has been preserved in Berossus, who says that a tower was erected in the place where Babylon now stands, but that the winds assisted the gods in overthrowing it. He adds that the ruins still exist at Babylon, that the gods introduced a diversity of tongues among men, and that the place where the tower was built is called Babylon on account of the confusion of tongues; for confusion is by the Hebrews called Babel. (Beross. *ap. Euseb. Praep. Evang.* ix.; Syncell. *Chron.* 44; Euseb. *Chron.* 13.) A tradition of the diversity of tongues and its cause is preserved also in a fragment of Histiaeus (*ap. Joseph. Ant.* i. 4), and in Alex. Polyhist. (*ap. Syncell.* 44, and *Joseph. Ant.* i. 4). Eupolemus also (*ap. Euseb. Praep. Evang.* ix.) attributes the foundation of Babylon to those who escaped from the Deluge, and mentions the tower and its overthrow. He adds that Abraham lived in a city of Babylonia called Camarina, or by some Urie [i.e. Ur], which is interpreted to mean a city of the Chaldaeans.

Of Babel or Babylon, believing them, as we do, to represent one and the same place, we have no subsequent notice in the Bible till the reign of Hoshea, about B. C. 730 (2 *Kings*, xvii. 24), when the people of Samaria were carried away captive. It seems probable that during this long period Babylon was

a place of little consequence, and that the great ruling city was the Assyrian capital Ninus. As late as the time of Hezekiah (B.C. 728—700) it is clear that Babylon was dependent on the Assyrian Empire, though Merodach-Baladan is mentioned in Isaiah (xxxix. 1) as, at that time, king or ruler in that city; for Polyhistor (*ap. Euseb. Arm. Chron.* 42) states that after the reign of the brother of Sennacherib, Acises ruled; and that, after Acises had reigned thirty days, he was slain by Merodach-Baladanus, who held the government, but was in his turn slain and succeeded by Elibus. Polyhistor adds that, in the third year of the reign of Elibus, Sennacherib came up and conquered the Babylonians, took their king prisoner away into Assyria, and made his own son Asardanus king in his place. Abydenus (*ap. Euseb. ibid.* p. 53) states the same thing, adding that he built Tarsus after the plan of Babylon. The fragments preserved of Berossus, who lived in the age of Alexander the Great, and who testifies to the existence of written documents at Babylon which were preserved with great care, supply some names, though we have no means of ascertaining how far they may be depended on. The commencement of the narrative of Berossus is a marvellous and fabulous account of the first origin of Babylonia. In it he speaks of Belus, whom he interprets to mean Zeus, and states that some of the most remarkable objects which he has noticed were delineated in the temple of that god at Babylon. (See Castor, *ap. Euseb. Arm. Chron.* 81; Eupol. *ap. Euseb. Praep. Evang.* ix.; Thallus, *ap. Theophan. ad Ant.* 281; Aesch. *Suppl.* 318 and 322; Hesiod, *Fragm. ap. Strab.* i. p.42; and Eustath. *ad Dionys.* 927, for the name of Belus, and various legends connected with it.) Berossus mentions the name Xisuthrus, and with him a legend of a great flood, which has so remarkable a resemblance to the narrative of the Bible, that it has been usual to suppose that Xisuthrus represents the Noah of Holy Scripture; adding that, after the flood, the people returned to Babylon, built cities and erected temples, and that thus Babylon was inhabited again. (Beross. *ap. Sync. Chron.* 28; Euseb. *Chron.* 5. 8.) Apollodorus, professing to copy from Berossus, gives a different and fuller list of rulers, but they are a mere barren collection of names. (Apoll. *ap. Sync. Chron.* 39; Euseb. *Chron.* 5.) The Astronomical canon of Ptolemy commences with the era of Nabonassar, whose reign began B.C. 747 twenty-three years after the appearance of the Assyrian King Pul, on the W. of the Euphrates. It has been argued from this fact, in connection with a passage in Isaiah (xxiii. 13) "Behold the land of the Chaldees; this people was not, till the Assyrian founded it for them that dwell in the wilderness," that the first rulers of Babylon were of Assyrian origin; but this seems hardly a necessary inference. It is, however, curious that Syncellus, after stating that the Chaldaeans were the first who assumed the title of kings, adds that of these the first was Evechius, who is known to us by the name of Nebrod (or Nembrod) who reigned at Babylon for six years and one third. Nabonassar is said to have destroyed the memorials of the kings who preceded him. (Sync. *Chron.* 207) Of the monarchs who succeeded him according to the Canon we know nothing, but it is probable that they were for the most part tributary to the kings of Ninus (Nineveh). Mardoch-Empadus, the fifth, is probably the Merodach-Baladan of the Bible, who sent to congratulate Hezekiah on his recovery from sickness. (*2 Kings*, xx. 12; *Isaiah*, xxxi. 1.) Somewhat later Manasses, king of Judah, is carried by the king of Assyria into captivity to Babylon. Then follow Saosduchinus and Chyniladan, who appear to have ruled partly at one city and partly at the other; and then Nabopollasar, who finally overthrew Ninus, and removed the seat of the empire of western Asia from the banks of the Tigris to Babylon.

With his son Nebuchadnezzar commenced, in all probability, the era of Babylonian greatness, and the accounts in the Bible and in other writings are, for his reign, remarkably consistent with one another. The Bible relates many events of the reign of this king, his carrying the Jews into captivity, his siege and conquest of Tyre (*Ezek.* xxix 18), his descent into Egypt, and his subsequent return to Babylon and death there. Berossus (*ap. Joseph. c. Ap.*) states that Nebuchadnezzar was sent with a great army against Egypt and Judaea, and burnt the temple at Jerusalem and removed the Jews to Babylon, that he conquered Egypt, Syria, Phoenicia, and Arabia, and exceeded in his exploits all that had reigned before him in Babylon and Chaldaea. He adds that, on the return of the king from his Jewish war, he devoted much time to adorning the temple of Belus, rebuilding the city, constructing a new palace adjoining those in which his forefathers dwelt, but exceeding them in height and splendour, and erecting on stone pillars high walks with trees to gratify his queen, who had been brought up in Media, and was therefore fond of a mountainous situation. (Beros. *ap. Joseph. c. Ap.* i. 19; Syncell. *Chron.* 220; Euseb. *Praep. Evang.* ix.)

Berossus goes on to state that after a reign of 43 years, Nebuchadnezzar was succeeded by Evilmerodachus, Neriglissoorus, and Labrosoarchodus, whose united reigns were little more than six years, till at length, on a conspiracy being formed against the last, Nabonnedus obtained the crown, and reigned sixteen years, till, in his seventeenth year, Cyrus took Babylon, the king having retired to the neighbouring city of Borsippus; that, on Cyrus proceeding to besiege Borsippus, Nabonnedus surrendered himself to the king of Persia, who sent him out of Babylonia and placed him in Carmania, where he died. (Beros. *ap. Joseph. c. Ap.* i. 20; Euseb. *Praep. Evang.* ix.)

Megasthenes (*ap. Abyden.*; Euseb. *Praep. Evan.* x., *Chron.* 49) tells nearly the same story, slightly changing the names of the successors of Nebuchadnezzar, and adding, that, Nebuchadnezzar rebuilt Babylon, turned the course of the Armakale (Nahr-Malcha), which was a branch of the Euphrates, constructed a vast receptacle for its waters above the city of Sippara, and built the city of Teredon near the Erythraean Sea, i. e. the Persian Gulf, to check the incursions of the Arabs.

The first Greek who visited Babylon, so far as we know, was Antimenidas, the brother of the Poet Alcaeus, who was there B.C. 600—580 (Strab. xiii. p. 617; *Fragm. Alc.*, Müller, *Rhein. Mus.* p. 287); and the earliest Greek historian who gives any description of Babylon is Herodotus, who travelled thither about a century after the first conquest by Cyrus. His testimony is more valuable than that of any other writer, for he is the only one whom we know to have been an eye-witness, and whose account of what he describes has reached us uncurtailed. There is more or less uncertainty about all the others Thus, of Ctesias, we have only what Diodorus and others have extracted. Of Berossus, who was a

century and a half later than Herodotus, we have only a few fragments. We have no proof that Arrian or Strabo themselves visited Babylon, though the treatise of the former has this value, that he drew his information from the Notes of Aristobulus and Ptolemy the son of Lagus, who were there with Alexander. Of Cleitarchus, who also accompanied Alexander, and wrote τὰ περὶ Ἀλέξανδρου, we have no remains, unless, as has been supposed by some, his work was the basis of that by Curtius. The incidental remarks of Herodotus have a manifest appearance of truth, and convey the idea of personal experience. Thus, in i. 177, he distinguishes between the length of the Royal and the Ordinary Cubit; in i. 182, 183, he expresses his doubts on some of the legends which he heard about the Temple of Belus, though the structure itself (or its remains) he evidently must have seen, as he describes it as still existing (ἐς ἐμὲ τοῦτο ἔτι ἐον, i. 181.) His account also of the country round Babylon (i. 179, and i. 192—200) is, as is shown elsewhere [BABYLONIA], confirmed by all other writers, as well ancient as modern.

According to Herodotus, Babylon, which, after the fall of Ninus, became the seat of the Assyrian empire (i. 178), had already been ruled over by several kings, and by two remarkable queens, Semiramis and Nitocris, at an interval of five generations from one to the other. (i. 184, 185.) Of these, the elder erected immense embankments to keep the water of the Euphrates within its proper channel, the second made the course of the Euphrates, which had previously been straight, so tortuous that it thrice passed the village of Ardericca, dug an immense lake, and having turned the waters of the river into this lake, faced its banks with a wall of baked bricks, and threw a bridge across within Babylon, so as to connect the two sides of the river. (i. 186.) Herodotus adds a story of her tomb, which we may reasonably question, as he himself could only have heard of it by tradition when he was at Babylon (i. 187), and states that it was against the son of this queen, Labynetus, that Cyrus marched. Labynetus is, therefore, the Nabonnedus of Berossus, the Belshazzar of Holy Scripture. Herodotus says nothing about the founders of Babylon, and what is scarcely less remarkable, does not mention Nebuchadnezzar,—he simply describes the town as we may presume he saw it. He states that it was placed in a great plain, and was built as no other city was with which he was acquainted; that it was in form an exact square, each side being 120 stadia long, with a broad and deep trench round it, the materials dug from which helped to make the bricks, of which a wall 200 royal cubits high, and 50 broad, was composed. Warm bitumen procured from the village of Is (now *Hit*) served for mortar, a layer of reeds being inserted at every thirtieth course. (i. 178, 179.) A hundred brazen gates opened into the city, which was divided into two distinct quarters by the Euphrates, had all its streets at right angles one to the other, and many houses of three and four stories. (i. 180.) Another wall, hardly inferior in strength, but less gigantic, went round the city within the one just described. In each of the two quarters of the city, there was an immense structure: one, the Royal Palace, the other, the brazen-gated Temple of Belus, within a square space two stadia each way, itself one stadium in length and breadth; on the ground-plan of which a series of eight towers were built, one above the other. He adds some further remarks about the temple, and speaks of several things, which, as we have remarked, he did not see, and, apparently, did not believe (i. 181—183). The vast size Herodotus gives to Babylon has, in modern days, led scholars to doubt his history altogether, or at least to imagine he must have been misinformed, and to adopt the shorter measures which have been given by other authors. (Grosskurd, *ad Strab.* xvi. p. 738; Heeren, *As. Nat.*; Olearius, *ad Philostr. Vit. Apoll.* i. 25.) Yet the reasoning on which they have rested seems inconclusive; it is as difficult or as easy to believe in the 360 stadia of Ctesias (himself also an eye-witness) as in the 480 stadia of Herodotus. All that was required to effect such works was what the rulers of Babylon had, an ample supply of human labour and time; and, with more than thirty pyramids in Egypt and the wall of China still existing, who can set bounds to what they might accomplish?

The simple narrative of Herodotus we find much amplified, when we turn to later writers. According to Diodorus (ii. 6), who, apparently, is quoting from Ctesias, Semiramis, the wife of Ninus, king of Assyria, founded Babylon (according to one statement, after the death of Ninus), and built its walls of burnt brick and asphalt, and accomplished many other great works, of which the following are the principal:—

1. A bridge across the Euphrates, where it was narrowest, five stadia long. (Strab. xvi. p. 738, says its breadth was only one stadium, in which opinion Mr. Rich [*Babylon*, p. 53] very nearly concurs.)

2. Two palaces or castles at each end of the bridge, on the E. and W. sides of the river, commanding an extensive view over the city, and the keys of their respective positions. On the inner walls of the western castle were numerous paintings of animals, excellently expressing their natural appearance; and on the towers representations of hunting scenes, and among them one of Semiramis herself slaying a leopard, and of Ninus, her husband, attacking a lion with a lance. (Is it possible that Ctesias preserves here a popular tradition of the bas-reliefs lately discovered at *Nimrúd* and *Khorsabád*,—the situation of the scenes having been changed from Assyria to Babylonia?) This palace he states far exceeded in magnificence that on the other side of the river.

3. The temple of Belus or Zeus, in the centre of the city, a work which, in his day, he adds, had totally disappeared (Diod. vi. 9), and in which were golden statues and sacrificial vessels and implements.

On the other hand, many of the ancients, besides Herodotus, seem to have doubted the attribution to Semiramis of the foundation of Babylon. Thus Berossus (ap. Joseph. *c. Ap.* 1) states that it was a fiction of the Greeks that Semiramis built Babylon; Abydenus (*ap. Euseb. Praep.* ix.) that Belus surrounded the town with a wall, the view also taken by Dorotheus Sidonius, preserved in Julius Firmicus. Curtius (v. 1) affirms the double tradition, and Ammianus (xxiii. 6) gives the building of the walls to Semiramis and that of the citadel to Belus: lastly, Orosius (ii. 6) asserts that it was founded by Nimrod the Giant, and restored by Ninus or Semiramis. It has been suggested that the story of Belus is, after all, a Chaldaean legend; but this cannot, we think, be satisfactorily shown (see, however, Volney, *Chron. Bab.*; Perizon. *Orig. Bab.*; and Freinsheim. *ad Curt.* v. 1).

Of the successors of Semiramis (supposing that she did reign in or found an empire at Babylon) we are in almost entire ignorance; though some names, as we have seen, have been preserved in Ptolemy (*Astron. Canon.*), and elsewhere.

With regard to Nebuchadnezzar, another and an ingenious theory has been put forth, which seems generally to have found favour with the German writers. According to Heeren (*As. Nat.* i. p. 382), it has been held that, some time previous to Nebuchadnezzar's ascent of the throne in Babylon, a revolution had taken place in Western Asia, whereby a new race, who, descending from the north, had been for some time partially established in the plain country of Babylonia, became the ruling people; and that Nebuchadnezzar was their first great sovereign. The difficulty of accounting for the Chaldaeans has given a plausibility to this theory, which however we do not think it really merits. The Bible does not help us, as there is a manifest blank between Esarhaddon and Nebuchadnezzar which cannot be satisfactorily filled up, if at all, from fragments on which we cannot rely. So far as the Bible is concerned, Nebuchadnezzar appears before us from first to last, simply as a great ruler, called, indeed, the Chaldaean, but not, as we think, for that reason, necessarily of a race different from the other people of the country. Diodorus, indeed (ii. 10), attributes the Hanging Gardens to a Syrian king, telling the same story which we find in Berossus. It is probable, however, that he and Curtius (v. 1) use the word Syrian in the more extended sense of the word Assyrian, for all western and southern Asia, between Taurus and the Persian Gulf.

Differing accounts have been given of the manner in which Babylon was taken, in the Bible, in Herodotus, and in Xenophon's Cyropaedeia. That in the Bible is the shortest. We are simply told (*Dan.* v. 2—11) that Belshazzar, while engaged at a great feast, was alarmed by a strange writing on the wall of his banqueting room, which Daniel interpreted to imply the immediate destruction of the empire by the combined army of the Medes and Persians. "In that night," the Sacred Record adds, "was Belshazzar the king of the Chaldaeans slain." (*Dan.* v. 28.) Herodotus (i. 177, seq.) describes the gradual advance of the army under Cyrus, and his attempt to take the city by a regular siege, which, however, its vast extent compelled him to convert into a blockade. He mentions the draining the waters of the Euphrates by means of a canal cut above the city, and that by this means the Persians were enabled to enter the city, the water being only thigh-deep, the inhabitants being more careless of their defences, as the day on which they entered happened to be one of their great festivals. (Her. i. 191.) The narrative of Xenophon (*Cyrop.* vii. 5) is substantially the same, though he gives many details which are not found elsewhere. He mentions especially, that the time of attack was one of general festivity, the drunkenness of the royal guards, and the death of the king on the palace being forced.

The subsequent history of Babylon may be told in a few words. From the time of its overthrow by Cyrus it never recovered its previous splendour, though it continued for some centuries a place of considerable importance, and the winter residence of its conqueror Cyrus during seven months of each year. (Xen. *Cyrop.* viii. 7. § 22.) Between the reign of Cyrus and that of Dareius, the son of Hystaspes, we hear nothing of it. In the reign, however, of the latter king, Herodotus (iii. 150) mentions a revolt of the Babylonians, and the cruel plan they adopted to prevent a scarcity of provision in the siege they expected: he appears, however, to have confounded this revolt with a subsequent one which took place in the reign of Xerxes. (Ctes. *Persic.* ap. Phot. p. 50, ed. Didot.) Herodotus, however, states that, at this time, the walls of the city were beaten down, which Cyrus had left standing, and 3000 of the inhabitants were put to death; though Berossus (ap. Joseph. c. *Apion.* i. 20) and Eusebius (*Chron. Armen.* i. p. 75) say that Cyrus only destroyed the outer walls. In neither case is it indeed necessary to suppose that much more ruin was caused than was necessary to render the place useless as one of strength. It is certain that Babylon was still the chief city of the empire when Alexander went there; so that the actual injury done by Dareius and Xerxes could not have been very great. The Behistan inscription mentions two revolts at Babylon, the first of which was put down by Dareius himself, who subsequently spent a considerable time there, while the second was quelled by his lieutenant. (Rawlinson, *As. Journ.* vol. x. pp. 188—190.) In the reign of Xerxes, Herodotus (i. 183) states that that king plundered the Temple of Belus of the golden statue which Dareius had not dared to remove; and Arrian (vii. 17) adds, that he threw down the temple itself, on his return from Greece, and that it was in ruins when Alexander was at Babylon, and was desirous of rebuilding it, and of restoring it to its former grandeur. Strabo (xvi. p. 738) adds, that he was unable to do so, as it took 10,000 men to clear away the ruins. Pliny (vi. 26), on the other hand, appears to have thought that the temple of Belus was still existing in his time.

From the time of Alexander's death its decay became more rapid. Strabo (xvi. p. 738) states, that of those who came after him (Alexander) none cared for it; and the Persians, time, and the carelessness of the Macedonians aided its destruction. Shortly after, Seleucus Nicator built Seleuceia, and transferred to it the seat of government, till, at length, adds the geographer, speaking probably of his own time, it may be said of Babylon, as was said of Megalopolis by the Comic poet, "The vast city is a vast desert" (Cf. also Plin. vi. 26; Paus. iv. 31, viii. 33; Dion Cass. lxxv. 9.)

But though Babylon had ceased, after the foundation of Seleuceia, to be a great city, it still continued for many centuries to exist.

At the time that Demetrius Poliorcetes took Babylon, two fortresses still remained in it (Diod. xix. 100), one only of which he was able to take.

Evemerus, a king of Parthia, B. C. 127, reduced many of the Babylonians to slavery, and sent their families into Media, burning with fire many of their temples, and the best parts of their city. About B. C. 36 a considerable number of Jews were resident in Babylon, so that when Hyrcanus the High Priest was released from confinement by Phraates, king of Parthia, he was permitted to reside there (Joseph. *Ant.* xv. 2), and that this Babylon was not, as has been supposed by some, another name for Seleuceia, is, we think, clear, because when Josephus (*Ant.* xviii. 2. § 4, viii. 9. §§ 8, 9) speaks of Seleuceia, he adds, "on the Tigris," showing, therefore, that he was acquainted with its position.

In the reign of Augustus, we learn from Diodorus that but a small part was still inhabited, the re-

mainder of the space within the walls being under cultivation. Strabo, as we have seen, looked upon it as a desert, when he wrote in the reign of Augustus, though, at the same time, manifestly as a place still existing, as he draws a parallel between it and Seleuceia, which, he says, was at that time the greater city; so great, indeed, that Pliny (v. 26) asserts it contained 600,000 inhabitants; and according to Eutrop. (v. 8) at the time of its destruction, 500,000. Indeed, it is the magnitude of Seleuceia that has misled other writers. Thus Stephanus B. speaks of Babylon as a Persian metropolis called Seleuceia, and Sidonius Apollinaris (ix. 19, 20) describes it as a town intersected by the *Tigris*. When Lucan speaks of the trophies of Crassus which adorned Babylon, he clearly means Seleuceia. A few years later it was, probably, still occupied by a considerable number of inhabitants, as it appears from 1 *Peter*, v. 13, that the First Epistle of St. Peter was written from Babylon, which must have been between A. D. 49—63. It has indeed been held by many (though we think without any sufficient proof) that the word Babylon is here used figuratively for Rome; but it is almost certain that St. Peter was not at Rome before A. D. 62, at the earliest, while the story of his having been at Babylon is confirmed by Cosmas Indico-Pleustes, who wrote in the time of Justinian. Again, not more than twenty years earlier there was evidently a considerable multitude (probably of Jews) in Babylon, as they were strong enough to attack and defeat two formidable robbers, Anilaeus and Asinaeus, who had for some time occupied a fortress in the neighbourhood. (Joseph. *Ant.* xviii. 9.)

The writers of the succeeding century differ but little in their accounts. Thus Lucian of Samosata (in the reign of M. Aurelius) speaks of Babylon as a city which once had been remarkable for its numerous towers and vast circumference, but which would soon be, like Ninus (Nineveh), a subject for investigation. (Lucian, *Charon.* 23, *Philopatr.* 29.)

In the third century, Eusebius of Caesareia states that the people of the surrounding country, as well as strangers, avoided it, as it had become completely a desert.

St. Jerome believed that the ancient walls had been repaired, and that they surrounded a park in which the kings of Persia kept animals for hunting. He states that he learnt this from an Elamite father residing at Jerusalem, and it is certain that he was satisfied that in his time there were few remains of Babylon.

St. Cyril of Alexandreia, about A. D. 412, tells us that the canals drawn from the Euphrates having filled up, the soil of Babylon had become nothing better than a marsh. Theodoret, who died A. D. 460, states it was no longer inhabited either by Assyrians or Chaldaeans, but only by some Jews, whose houses were few and scattered. He adds that the Euphrates had changed its course, and passed through the town by a canal. Procopius of Gaza, in the middle of the sixth century, speaks of Babylon as a place long destroyed.

Ibn Haukal, in A. D. 917, calls Babel a small village, and states that hardly any remains of Babylon were to be seen.

Lastly, Benjamin of Tudela (ed. Asher, 1841), in the twelfth century, asserts that nothing was to be seen but the ruins of Nebuchadnezzar's palace, into which no one dared enter, owing to the quantity of serpents and scorpions with which the place was infested. (Rich, *Babylon*, Introd. pp. xxvii—xxix.)

The ruins of Babylon, which commence a little S. of the village of Mohawill, 8 miles N. of Hillah, have been examined in modern times by several travellers, and by two in particular, at the interval of seven years, the late Resident at Baghdád, Mr. Rich, in 1811, and Sir Robert K. Porter, in 1818. The results at which they have arrived are nearly identical, and the difference between their measurements of some of the mounds is not such as to be of any great importance. According to Mr. Rich, almost all the remains indicative of the former existence of a great city are to be found on the east side of the river, and consist at present of three principal mounds, in direction from N. to S., called, respectively, by the natives, the *Mujelebè*, the *Kasr*, and *Amran Ibn Alì*, from a small mosque still existing on the top of it. On the west side of the river, Mr. Rich thought there were no remains of a city, the banks for many miles being a perfect level. To the NW., however, there is a considerable mound, called *Towareij*; and to the SW., at a distance of 7 or 8 miles, the vast pile called the *Birs-i-Nimrúd*. Of the mounds on the E. side, the *Mujelebè* is much the largest, but the *Kasr* has the most perfect masonry. The whole, however, of the ruins present an extraordinary mass of confusion, owing to their having been for centuries a quarry from which vast quantities of bricks have been removed for the construction of the towns and villages in the neighbourhood. Mr. Rich subsequently visited the *Birs-i-Nimrúd*, the size of which is nearly the same as that of the *Mujelebè*; but the height to the top of the wall is at least 100 feet higher; and he then discusses at some length the question which of these two mounds has the best claim to represent the Tower of Babel of the Bible, and the Temple of Belus of profane authors. His general conclusions incline in favour of the *Birs-i-Nimrúd*, but he thinks it is impossible satisfactorily to accommodate the descriptions of ancient authors with what now remains; while it is nowhere stated positively in which quarter of the city the Temple of Belus stood. Along the E. side of the river, the line of mounds parallel to the Kasr, at the time Mr. Rich was there, were, in many places, about 40 feet above the river, which had incroached in some places so much as to lay bare part of a wall built of burnt bricks cemented with bitumen, in which urns containing human bones had been found. East of *Hillah*, about 6 miles, is another great mound, called *Al Heimar*, constructed of bricks, similar to those at Babylon.

On the publication of Mr. Rich's memoir in the *Fundgruben des Orients*, Major Rennell wrote an Essay in 1815, which was printed in the *Archaeologia*, vol. xviii., in which he combated some of the views which Mr. Rich had stated in his memoir, which produced a rejoinder from Mr. Rich, written in 1817, in which he goes over again more completely the ground mentioned in his first notice, and points out some things in which Major Rennell had been misled by imperfect information. The chief points of discussion are, as to how far any of the existing ruins could be identified with things mentioned in the classical narratives, whether or not the Euphrates had ever flowed between the present mounds, and whether the *Birs-i-Nimrúd* could be identified with the Temple of Belus. It is sufficient here to mention that Rennell considered that honour to belong to the *Mujelebè*, and Mr. Rich to the *Birs-i-*

Nimrúd, an idea which appears to have occurred to Niebuhr (*Voy.* vol. ii. p. 236), though the state of the country did not allow him to pay it a visit. Ker Porter, who surveyed the neighbourhood of Babylon with great attention in 1818, differs from Mr. Rich in thinking that there are remains of ruins on the western side of the river, almost all the way to the *Birs-i-Nimrúd*, although the ground is now, for the most part, very flat and marshy. He considers also that this ruin must have stood within the limits of the original city, at the extreme SW. angle. With regard to this last and most celebrated ruin, it has been conjectured that, after all, it was no part of the actual town of Babylon, the greater part of which, as we have seen, in all probability dates from Nebuchadnezzar, in accordance with his famous boast, "Is not this great Babylon that I have built?" (*Dan.* iv. 30), but that it represents the site of the ancient Borsippus (to which Nabonnedus is said to have fled when Cyrus took Babylon), its present name of Birs recalling the initial letters of the ancient title. According to Col. Rawlinson, the name Borsippa is found upon the records of the obelisk from Nimrúd, which is at least two centuries and a half anterior to Nebuchadnezzar (*As. Journ.* xii. pt. 2. p. 477), and Mr. Rich had already remarked (p. 73) that the word Birs has no meaning in the present language (Arabic) of the country. It is certain that this and many other curious matters of investigation will not be satisfactorily set at rest, till the cuneiform inscriptions shall be more completely decyphered and interpreted. It is impossible to do more here than to indicate the chief subjects for inquiry. (Rich, *Babylon and Persepolis;* Ker Porter, *Travels*, vol. ii.; Rawlinson, *Journ. As. Soc.* vol. xii. pt. 2.) [V.]

BA'BYLON (Βαβυλών, Strab. xvii. p. 807; Diod. i. 56; Joseph. *Antiq.* ii. 5; Ctesias *Fr.*; Ptol. iv. 5. § 54), the modern *Baboul*, was a fortress or castle in the Delta of Egypt. It was seated in the Heliopolite Nome, upon the right bank of the Nile, in lat. 31° N., and near the commencement of the Pharaonic Canal, from that river to the Red Sea. It was the boundary town between Lower and Middle Egypt, where the river craft paid toll ascending or descending the Nile. Diodorus ascribes its erection to revolted Assyrian captives in the reign of Sesostris, and Ctesias (*Persica*) carries its date back to the times of Semiramis; but Josephus (*l. c.*), with greater probability, attributes its structure to some Babylonian followers of Cambyses, in B. C. 525. In the age of Augustus the Deltaic Babylon became a town of some importance, and was the head-quarters of the three legions which ensured the obedience of Egypt. In the Notitia Imperii Babylon is mentioned as the quarters of Legio XIII. Gemina. (It. Anton.; Georg. Ravenn. &c.) Ruins of the town and fortress are still visible a little to the north of *Fostat* or *Old Cairo*, among which are vestiges of the Great Aqueduct mentioned by Strabo and the early Arabian topographers. (Champollion, *l'Egypte*, ii. p. 33.) [W. B. D.]

BABYLO'NIA (ἡ Βαβυλωνία), a province of considerable extent on the banks of the Euphrates and Tigris, and the 9th satrapy of Dareius. (Her. iii. 183.) Its capital was Babylon, from which it is probable that the district adjoining derived its name. It is not easy to determine from ancient authors with any strictness what its boundaries were, as it is often confounded with Mesopotamia and Assyria, while in the Bible it receives the yet more indefinite appellation of the land of the Chaldees. In early times, however, it was most likely only a small strip of land round the great city, perhaps little more than the southern end of the great province of Mesopotamia. Afterwards it is clear that it comprehended a much more extensive territory. A comparison of Strabo and Ptolemy shows that, according to the conception of the Roman geographers, it was separated from Mesopotamia on the N. by an artificial work called the Median Wall [MEDIAE MURUS], which extended from the Tigris, a little N. of Sittace, to the neighbourhood of the Euphrates, and that it was bounded on the E. by the Tigris, on the S. by the Persian Gulf, and on the W. and SW. by the desert sands of Arabia. Eratosthenes (*ap.* Strab. ii. 80) compares its shape to that of the rudder of a ship. The most ancient name for Babylonia was Shinar which is first mentioned in Genesis (x. 10), where it is stated that the beginning of the kingdom of Nimrod was Babel in the land of Shinar: a little later we meet with the name of Amraphel, who was king of that country in the time of Abraham (*Gen.* xiv. 1, &c.) It long continued a native appellation of that land. Thus we find Nebuchadnezzar removing the vessels of the temple of Jehovah to the house of his god in "the land of Shinar" (*Dan.* i. 2); and, as late as B.C. 519, Zephaniah declaring that a house shall be built "in the land of Shinar" (*Zeph.* v. 11). A fragment of Histiaeus (*ap. Joseph. Antiq.* i. 43) shows that the name was not unknown to Greek writers, for he speaks of "Σενναὰρ τῆς Βαβυλωνίας."

It has been thought by some that the ancient name has been preserved in the classical Singara (ὁ Σιγγάρας, Ptol. v. 18. § 2; Amm. Marc. xxiii. 5, xxv. 7), now *Sinjar*. But this seems very doubtful; as the character of the Sinjar country is wholly different from the plain land of Babylonia. If, however, we adopt this view, and Bochart inclines to it, we must suppose the name of the high northern land of Mesopotamia to have been gradually extended to the lowlands of the south (Wahl, *Asien*, p. 609; Rosenm. *Bibl. Alt.* ii. 8). Niebuhr has noticed this attribution. D'Anville (*Comp. Anc. Geogr.* p. 433) has rejected it; while Beke (*Orig. Bibl.* p. 66) has identified Shinar and the present *Kharput Dawassi*, for which there seem to be no grounds whatever.

The inhabitants of Babylonia bore the general name of Babylonians; but there also appears everywhere in their history a people of another name, the Chaldaeans, about whom and their origin there has been much dispute in modern times. Their history is examined elsewhere. [CHALDAEA.] It is sufficient to state here that we think there is no good evidence that the Chaldaeans were either a distinct race from the Babylonians, or a new people who conquered their country. We believe that they were really only a distinguished caste of the native population, the priests, magicians, soothsayers, and astrologers of the country; till, in the end, their name came to be applied as the genuine title of the main body of the people, among whom they were, originally, only the class who devoted themselves to scientific pursuits. Strabo (xvi. p. 739), indeed, speaks as though he considered them as a separate but indigenous nation, and places them in the southern part of Babylonia, adjoining the Persian Gulf and the Deserts of Arabia (see also Ptol. v. 20. § 3), but the authority of these writers will be diminished, when it is remembered that seven centuries had elapsed between the extinction of the

Chaldaeo-Babylonian Empire and the era of those authors. Ptolemy (v. 20. § 3) divides Babylonia into three districts which he calls Auchanitis (Αὐχανῖτις), Chaldaea (Χαλδαία), and Amardocaea (Ἀμαρδοκαία), of none of which, with the exception of Chaldaea, we know any thing; and mentions the following chief towns which are described under their respective names: BABYLON on the Euphrates, VOLOGESIA and BARSITA or BORSIPPA on the Maarsares canal; TEREDON OR DIRIDOTIS near the mouth of the Tigris; and ORCHOE in the Marshes. He speaks also of several smaller towns and villages to which we have now no clue, omitting Seleuceia and some others, because, probably, at his time, they had either altogether ceased to exist, or had lost all importance. A few other places are mentioned by other writers, as Pylae, Charmande, Spasinae-Charax, and Ampe, about which however little is known; and another district called Mesene, apparently different from that in which Apameia was situated [APAMEIA]. These are noticed under their respective names.

Babylonia was an almost unbroken plain, without a single natural hill, and admirably adapted for the great fertility for which it was celebrated in antiquity, but liable at the same time to very extensive floods on the periodical rising of its two great rivers. Herodotus (i. 193) says that its soil was so well fitted for the growth of the cerealia, that it seldom produced less than two hundred fold, and in the best seasons as much as three hundred fold. He mentions also the Cenchrus (Panicum miliaceum) and Sesamum (perhaps the Sesamum Indicum, from which an useful oil was extracted: Plin. xviii. 10; Diosc. ii. 124; Forskal, *Flora Arab.* p. 113) as growing to a prodigious size. He adds that there was a great want of timber, though the date-palm trees grew there abundantly, from which wine and honey were manufactured by the people. (See also Amm. Marc. xxiv. 3; Plut. *Sympos.* viii. 4; S. Basil. *Homil.* 5.) Xenophon (*Anab.* i. 5. § 10.) alludes to the great fertility of the soil, and notices the honey made from the palm, the excellence of the dates themselves, which were so good that what the Babylonians gave to their slaves were superior to those which found their way to Greece (*Anab.* ii. 3. §§ 15, 16), and the intoxicating character of the wine made from their fruit. In the Cyropaedeia (vii. 5. § 11) he speaks also of the gigantic size of the Babylonian palm-trees. Strabo (xvi. p. 741) states that Babylonia produced barley such as no other country did; and that the palm-tree afforded the people bread and honey, and wine and vinegar, and materials for weaving. Its nuts served for the blacksmith's forge, and when crushed and macerated in water were wholesome food for the oxen and sheep. In short, so valuable was this tree to the natives, that a Poem is said to have been written in Persian, enumerating 360 uses to which it could be applied. At present Mr. Ainsworth says (*Res.* p. 125) that the usual vegetation is, on the river bank, shrubberies of tamarisk and acacia, and occasionally poplars, whose lanceolate leaves resemble the willow, and have hence been taken for it. It is curious that there is no such thing as a weeping willow (Salix Babylonica) in Babylonia. The common tamarisk is the Athleh or Atle of Sonnini (Athele, Ker Porter, ii. p. 369, resembling the *Lignum Vitae*, Rich, *Mem.* p. 66, the Tamarix Orientalis of Forskal, *Flora Arab.* p. 206) In the upper part of Babylonia, Herodotus (i. 179) mentions a village called Is, famous for the production of bitumen, which is procured there in large quantities, and which was used extensively in the construction of their great works. Strabo (*l. c.*) confirms this statement, distinguishing at the same time between the bitumen or asphalt of Babylonia, which was hard, and the liquid bitumen or naphtha, which was the product of the neighbouring province of Susiana. He adds that it was used in the construction of buildings and for the caulking of ships. (Comp. Diod. ii. 12.)

The great fertility of Babylonia is clear from the statement of Herodotus, who visited Babylon about seventy years after the destructive siege by Dareius, and who did not, therefore, see it in its magnificence. Even in his time, it supported the king of Persia, his army, and his whole establishment for four months of the year, affording, therefore, one-third of the produce of the whole of that king's dominions: it fed also 800 stallions and 16,000 mares for the then Satrap Tritantaechmes, four of its villages (for that reason free of any other taxes) being assigned for the maintenance of his Indian dogs alone (Her. i. 192; Ctesias, p. 272, Ed. Bähr.)

We may presume also that its climate was good and less torrid than at present, as Xenophon (*Cyrop.* viii. 7. § 22) expressly states that Cyrus was in the habit of spending the seven colder months at Babylon, because of the mildness of its climate, the three spring months at Susa, and two hottest summer ones at Ecbatana.

The fertility of Babylonia was due to the influence of its two great rivers, assisted by numerous canals which intersected the land between them. The remains of many great works, the chief objects of which were the complete irrigation or draining of the country, may yet be traced; though it is not easy, even since the careful survey of the Euphrates by Col. Chesney and the officers who, with him, conducted the "Euphrates Expedition," satisfactorily to identify many of them with the descriptions we have of their ancient courses. Rich. (p. 53.) and Ker Porter (p. 289) state that, at present, the canals themselves show that they are of all ages, and that new ones are continually being made. Arrian (*Anab.* vii. 7.) considers that a difference between the relative heights of the beds of the Euphrates and Tigris was favourable to their original construction, an opinion which has been borne out by modern examination; though it seems likely that Arrian had exaggerated notions of the beds of the two rivers, as he had, also, of the difference in the rapidity of their streams. Not far above Babylon, the bed of the Euphrates was found to be about five feet above that of the Tigris, according to Mr. Ainsworth, (*Researches*, p. 44.) who confirms, generally, Arrian's views, and shows that, owing to the larger quantity of alluvium brought down by the Euphrates than by the Tigris, it happens that, above Babylon, the waters of the Euphrates find a higher level by which they flow into the Tigris, while, at a considerable distance below Babylon, the level of the Euphrates is so low that the Tigris is able to send back its waters. He doubts, however (p. 110.), the statement of the difference in the speed of the current of the two rivers, which he considers to be much the same, and not very rapid even in flood time. Rich (p. 53), on the other hand, says, that the banks of the Euphrates are lower, and the stream more equal than that of the Tigris. These points are more fully discussed elsewhere [EUPHRATES; TIGRIS]. The canals were not sunk into the land, but were rather aqueducts constructed on its surface. The water was forced

into them by dykes or dams made across the river. Instances of the former practice are still found at Adhem on the Diala (one of the eastern tributaries of the Tigris), and at Hit on the Euphrates (Frazer, *Mesop. and Assyr.* p. 31).

Herodotus, who states, generally, that Babylonia, like Egypt, was intersected by many canals (κατατέτμηται εἰς διώρυχας, i. 193), describes particularly one only, which was constructed by a Queen Nitocris as a protection against an invasion from Media. (i. 185.) It was an immense work, whereby, he adds, the course of the Euphrates, which had previously been straight, was rendered so tortuous, as thrice to pass the same village, Ardericca. The position of this place has not been ascertained: we only knew that it was to the north of Babylon itself; probably not far below the ancient Pylae or Charmande, which both Colonel Chesney and Mr. Ainsworth suppose to be near Hit. The position indeed of Pylae cannot be accurately determined, but it has been supposed (Grote, *Hist. Greece*, vol. ix. 48) that there were some artificial barriers dividing Babylonia from Mesopotamia and which bore the name of Pylae, or Gates. It was, probably, at that part of the country where the hills which have previously followed the course of the Euphrates melt into the alluvial plain. (See remarks of Col. Chesney, i. p. 54).

Xenophon (*Anab.* i. 7. § 15) speaks of four principal canals, which were separated the one from the other by a parasang. According to him, they flowed from the Tigris in the direction of the Euphrates, and were large enough to convey corn vessels. It is most likely that the Nahr-Malcha (which appears under various names more or less corrupted as in Isid. Charax, Narmacha; in Zosimus, iii. 27, Narmalaches; in Abyd. *ap. Euseb. Praep. Evang.* ix. 41, Armacales; in Plin. vi. 26, Armalchar) is the μεγίστη τῶν διωρύχων of Herodotus, as this appears to have borne the name of the Royal River. Ammianus (xxiv. 6) speaks of a work which was called "Naarmalcha, quod interpretatur flumen regium," and Abydenus (*l. c.*) attributes its creation to Nebuchadnezzar. Herodotus (i. 193) says that it connected the two rivers and was navigable. Like all the other canals in the soft alluvial soil of Babylonia, it soon fell into decay on the decline of the capital. It was, however, opened again by Trajanus and Severus, so that, with some subsequent reparation, Julian's fleet passed down by it from the Euphrates to the Tigris (Amm. Marc. xxiv. 6). It appears to have left the Euphrates not far above the modern castle of Felujah, and to have entered the Tigris originally below the city of Seleuceia. In later times, its course was slightly altered, and an opening was made for it above that city.

Besides the canals to the N. of Babylon, and more or less connecting the Euphrates with the Tigris, there were two other great works, of which mention is made in antiquity, designed, as it would seem, to carry off seawards the superabundant waters of the Euphrates, and to facilitate the navigation of the river. The first of these, called by Ptolemy (v. 20. § 2) Maarsares (Μααρσάρης), and by Ammianus (xxiii. 6.) Marses, (most correctly Nahr-sares), commenced a little above Babylon, and flowed on the west side of it, parallel with the Euphrates, till it terminated near the place where that river and the Tigris form one stream. It has been conjectured that it may be the same as the Narraga of Pliny (vi. 26), but for this there is no sufficient evidence.

The second was called Pallacopas (Παλλακόπας, Arrian, vii. 21; Pallacottas, Appian, *B. C.* ii. 153.) It commenced about 800 stadia, or 76 miles, below Babylon, and served as an outlet for its waters into the marshes below, at the time when they were at their highest. At the drier season it was, however, found necesary to prevent the escape of the water from the river, and Arrian mentions a Satrap who ruled the country and who had employed 10,000 men (as it would seem ineffectually) in constructing dams &c. to keep the river within its ordinary channel. It is recorded, by the same writer, that Alexander having sailed down the Euphrates to the Pallacopas, at once perceiving the necessity of making the works more efficient, blocked up its former mouth, and cut a new channel 30 stadia lower down the Euphrates, where the nature of the soil was more strong and less yielding. Arrian adds, that Alexander having reached the land of Arabians by the Pallacopas, built a city there, and founded a colony for his mercenary and invalided Greek soldiers. Frazer (p. 34) supposes that the Pallacopas must have commenced about the latitude of *Kufah*, and that Meshed Ali now represents the site of the town he founded. Its termination was at the sea near Teredon (now *Jebel Sanam*), for Col. Chesney travelling W. from Basrah found its bed sixty paces broad, between Zobeir and that town. (Frazer, *l. c.*)

Besides the main stream of the Euphrates, and the numerous canals more or less connected with it, a large portion of Babylonia, especially to the S. of the capital, was covered by shallow lakes or marshes. Of these some were probably artificial, like the vast work ascribed to Nitocris by Herodotus (i. 185), which was to the N. of Babylon. The majority of them, however, were certainly natural; on the west, extending up to the very walls of the city, and forming an impassable natural defence to it (Arrian, vii. 17); on the south, covering a vast extent of territory, and reaching, with little interruption, to the junction of the Euphrates and Tigris. They bore the general name of τὰ ἕλη τὰ κατὰ Χαλδαίους (Strab. xvi. 767), Chaldaicus Lacus (Plin. vi. 27. s. 31), and it was through them, according to Onesicritus, that the Euphrates reached the sea (Strab. xv. p. 729). Late surveys confirm the general accuracy of the ancient accounts. Thus the marshes of *Lamlúm* no doubt represent the first great tract of marshy land below Babylon. Ainsworth (*Res.* p. 123) describes them as shallow sheets of water with reeds and rushes like the tarns of Scotland and meres of England: they teem with buffaloes, and when partially dried in summer, are covered with luxuriant rice crops. They extend from *Lamlúm* to *Kelát-al-Gherrah*, 40 miles in lat. and nearly the same in long. The people live in reed huts temporarily erected on the dry spots like islets. To the south, the plains rise almost imperceptibly from the marshes. A little N. of Korna, the place where the Euphrates and Tigris now join, Ainsworth states (*Res.* p. 123) that there is a vast extent of country subject to almost perpetual inundation, and (p. 129) extensive reed marshes which are chiefly fed by the Tigris.

Col. Chesney thinks that the Chaldaicus Lacus is now represented by the *Samargah* and *Samidah* marshes; but these would seem to be too much to the E. Pliny, however, speaks of the Tigris flowing into them.

The general effect of these canals and marshes was to make the main stream of the Euphrates of very irregular breadth, and to produce the re-

sult noticed very early in History that the Euphrates was distinguished from all other known rivers, in that it got smaller instead of bigger as it flowed on. Col. Chesney shows that this difference of breadth is still very manifest. Thus at *Hillah*, it is 200 yards broad; at *Diwaniyah*, 160; at *Lamlúm*, 120; through the marshes, often not more than 60: below them and on to Korna, its original breadth of 200 yards returns. Below *Korna*, there is reason to believe that the alluvium brought down by the two rivers has produced a very considerable delta, and that the land now projects into the Persian Gulf full fifty miles further than it did when Nebuchadnezzar founded Teredon. [EUPHRATES.]

On the whole, the accounts of modern travellers confirm in all essential points the narratives of ancient authors. Rich and Ker Porter, Colonel Chesney, Mr. Ainsworth and Mr. Frazer, demonstrate that, allowing for the effect of centuries during which no settled population have inhabited the country, the main features of Babylonia remain as Herodotus, Xenophon, and Arrian have recorded. Ker Porter speaks of the amazing fertility of the land on the subsiding of the annual inundations (*Travels*, vol. ii. p. 259), and states that the name Nahr Malka for one of the canals is still preserved among the people (*ibid.* p. 289), (according to Chesney, now called the Abu-Hitti canal), adding that one great difficulty in identifying ancient descriptions and modern works arises from this, that new canals are constantly being cut (one was in operation when he was there in 1818), "dividing and subdividing the ruined embankments again and again, like a sort of tangled net-work over the interminable ground" (*ibid.* p. 297).

One great peculiarity of Babylonia are the vast mounds which still remain, attesting the extent of the former civilization of the district and the vast works undertaken by its rulers. Besides the great mounds of the *Birs-i-Nimrúd* near Babylon, and those of *Al Heimar* and *Akkerkuf* between it and *Baghdád*, Col. Chesney's survey of Euphrates and the investigations of other modern travellers have brought to light the existence of a vast number of these works between the latitude of *Baghdád* and the Persian Gulf. Of these the most important seem to be those of *Umgheier*, *Warka*, *Senkera*, *Tel Eide*, *Jebel Sanám* (*Teredon*) *Iskuriyah*, *Tel Siphr*, *Niffer*, and *Beth Takkara*. Mr. Loftus has examined lately the mound at *Warka*, and has found extraordinary remains, leading him to suppose that it must have been the necropolis of the surrounding country. Some coffins beautifully glazed, the results of his excavations, are now in the British Museum. Of *Umgheier* or *Mugeyer*, "the place of Bitumen," Mr. Frazer, the only traveller who has, so far as we know, examined the place thoroughly, has given a particular description (p. 149). It was noticed by Della Valle as early as 1625, and was supposed by Rennell to be the same as Orchoe.

(Rich, *Babylon and Persepolis*; Rennell, *Geogr. of Herodotus*; Ker Porter, *Travels*, vol. ii.; Ainsworth, *Researches in Assyria, &c.*; Frazer, *Mesop. and Assyria*; Chesney, *Exped. for Survey of Euphrates*; Rawlinson, *Jour. Asiat. Soc.* vol. xii.) [V.]

BABYRSA (Βάβυρσα, Strab. xi. p. 529), a mountain fortress of Armenia, at no great distance from Artaxata, where the treasures of Tigranes and his son Artarvasdes were kept. [E. B. J.]

BABYTACE (Βαβυτάκη: *Eth.* Βαβυτακηνός, Steph. B. *s. v.*; Plin. vi. 27), according to Stephanus a city of Persis, according to Pliny on the Tigris, 135 M. P. from Susa. The place appears to have been variously written in the MSS. of Pliny, but the most recent editor (Sillig, 1851) retains the above reading. It appears, from Pliny's description, that he considered it to be a town of Susiana. He states that it was "in septentrionali Tigridis alveo." It has been conjectured by Forbiger (vol. ii. p. 586) that it is the same place as Badaca (Diod. xix. 19), but this place was probably much nearer to Susa. (Rawlinson, *Journ. Roy. Geogr. Soc.* vol. ix. p. 91; see also Layard, *ibid.* vol. xvi. p. 92.) [V.]

BACAS-CHAMIRI or BACASCAMI, one of the three towns of the Zamareni, a tribe of the interior of Arabia, mentioned by Pliny without any clue to their geographical position (vi. 28. s. 32). It is a probable conjecture of Forster that Chamari points to *Gebel Shammar*, a mountain to the north of the peninsula, and that the Zamareni are identical with the *Beni Shammar* of Burckhardt, whom he further identifies with the Saraceni of Ptolemy. (*Geog. of Arabia*, vol. ii. p. 241.) [G. W.]

BA'CASIS. [JACCETANI.]

BACCANAE or AD BACCANAS, a station on the Via Cassia, still called *Baccano*. It is placed by the Itineraries 21 M. P. from Rome, and 12 from Sutrium (Itin. Ant. p. 286; Tab. Peut.), and must, therefore, have been about a mile farther on the road than the modern *Baccano;* the latter consists only of an inn and a few houses, and the ancient "mutatio" was probably little more. It stands in a basin-shaped hollow, evidently the crater of an extinct volcano, and which must have formed a small lake until artificially drained. (Nibby, *Dintorni di Roma*, vol. i. p. 281; Dennis's *Etruria*, vol. i. p. 78.) [E. H. B.]

BA'CCHIA, a town of Hispania Ulterior, mentioned only by Orosius (v. 4, where the MSS. have *Buccia* and *Buccina*). Its position is unknown. (Freinsh. *Supp. ad Liv.* liv. 10; Ukert, vol. ii. pt. 1. p. 464.) [P. S.]

BACCHIS (Βακχίς, Ptol. iv. 5. § 35), one of the numerous towns or villages which lined the shores of the lake Moeris, and of which indiscriminate mounds of ruin alone attest the existence. Bacchis is supposed by modern travellers (Belzoni, vol. ii. p. 153) to have stood on the eastern bank of the lake, and to be now partially covered by the modern hamlet of *Medinet-Nimroud*. [W. B. D.]

BACHILITAE, an inland tribe of the Arabian peninsula (Plin. vi. 28. s. 32), perhaps identical with the *Anchitae* (Ἀγχῖται) of Ptolemy (vi. 7. § 23), whom he places on the Mons Climax next the Sabaei. They are supposed to be a branch of the Joctanite Arabs (*Beni-Kahtan*), described by Burckhardt as a large tribe, the strongest and most considerable between the *Ateybe* and *Hadramáut*. (Forster, *Geog. of Arab.* vol. ii. p. 283.) [G. W.]

BACTAIALLA (Βακταϊαλλά, Ptol. v. 15, Bactaiali, *Peut. Tab.*), a town of Syria. According to the Peutinger Tables, 27 M. P. from Antioch. The plain of Bectileth (Βακτιλαέθ, *Judith* ii. 21), which the Assyrian army reached in three days' journey from Nineveh, has been connected with this place. (Mannert, *Geog.* vi. pt. 1. p. 456; Winer, *Bib. Real. Wort. s. v.*) [E. B. J.]

BACTRA (τὰ Βάκτρα, Strab. xi. pp. 513, 516, &c.; Βάκτρα Βασίλειον, Ptol. vi. 11. § 9; Arrian, iv. 7. 15; Dion. Perieg. x. 734; Βακτρίον and Βάκ-

τρα, Steph. B.; Bactra, Curt. vii. 4; Plin. vi. 15; Virg. *Georg.* ii. 138; Bactrum, Plin. vi. 16), was one of the chief towns, if not the capital, of the province of Bactriana. It was one of the oldest cities in the world; and the modern *Balkh*, which is believed to occupy its site (Burnes, *Bokhára*, vol. i. p. 237), is still called by the Orientals *Omm' ul-belád*, or "the mother of cities." There has been some doubt, both in ancient and modern times, with regard to the name. Strabo (xi. p. 513) and Pliny (vi. 18) evidently considered that Bactra and Zariaspa were one and the same. Arrian (iv. 7, 22) distinguishes between the two, though he does not definitely state their relative positions. Pliny (*l. c.*) adds that the appellation of Bactrum was derived from the river on which the town was situated; though this view, too, has been questioned. [BACTRUS.] Curtius (vii. 4) places it on the Bactrus, in a plain below the Paropamisan range. Ptolemy (vi. 11. § 9) merely states that it was on the banks of a river, without giving any name to the stream. Alexander the Great appears to have passed the winter of B. C. 328—327 there, on his return from Sogdiana, as, early in the following spring, he commenced his invasion of the Panjáb. (Arrian, iv. 22; Diod. xvii. 83; Curt. vii. 5, 10.) Burnes speaks in the highest terms of the accuracy of the Roman historian. "The language of the most graphic writer," says he, "could not delineate this country with greater exactness than Quintus Curtius has done." (*Bokhára*, vol. i. p. 245.) At present, *Balkh* is about 6 miles from the mountains, and the river does not actually pass its walls. Heeren (*Asiat. Nat.* vol. ii. p. 29) has dwelt at considerable length on the natural and commercial advantages of the position of Bactra and of its neighbourhood; and has shown that, from very early times, it was one of the great commercial entrepôts of Eastern Asia. (Burnes, *Bokhára*, vols. i. and ii.; Wilson, *Ariana;* Heeren, *Asiat. Nat.* vol. ii.) [V.]

BACTRIA'NA (ἡ Βακτριανὴ, Strab. xi. p. 511, &c.; Steph. B.; Curt. vi. 6, vii. 4, &c.; Ptol. vi. 11. § 1; Plin. vi. 16, &c.), an extensive province, according to Strabo (xi. p. 516) the principal part of Ariana, which was separated from Sogdiana on the N. and NE. by the Oxus, from Aria on the S. by the chain of the Paropamisus, and on the W. from Margiana by a desert region. It was a country very various in character, as has been well shown by Curtius (vi. 7), whose description is fully corroborated by Burnes (*Bokhára*, vol. i. p. 245), who found it much as the Roman historian had remarked. It was for the most part a mountainous district, containing, however, occasional steppes and tracts of sand; it was thickly peopled, and along the many small streams by which it was intersected the land appears to have been well watered, and consequently highly cultivated and very fertile. Its exact limits cannot be settled, but it is, however, generally agreed that, after leaving the Paropamisan mountains, we come to Bactria; though it is not clear how far the mountain land extends. Prof. Wilson (p. 160) thinks its original limits W. may have been at *Khulm*, where the higher mountains end; though, politically, the power of Bactria extended, as Strabo has remarked, over the N. portion of the Paropamisan range. Eastward its limits are quite uncertain; but, probably, the modern *Kunduz* and *Badakhshan*, adjoining the ancient Scythian tribes, and the part conterminous with the Indians, were under Bactrian rule.

Both the land and its people were known indifferently by the name of Bactria and Bactriana, Bactri and Bactriani. Strabo (xi. p. 715) has τῆς Βάκτριας μέρη, and τὴν Βακτριανὴν; Arrian (iii. 11. 3), Βάκτριοι ἱππεῖς; Herodotus (ix. 113), νομὸν τὸν Βάκτριον, and (iii. 13) Βακτριάνοι, who, he states, formed the ninth satrapy of Dareius. In iv. 204 he alludes to a village τῆς Βάκτριης χώρης, and Arrian (iii. 29) uses the same periphrasis. Pliny (vi. 16) has Bactri, and, in vi. 6, Bactrianam regionem.

The principal mountain range of Bactria was the Paropamisus or *Hindu Kush*. Its plains appear, from the accounts of Curtius and of modern travellers, to be intersected by lofty ridges and spurs, which proceed N. and NE. from the main chain. Its chief river was the Oxus (now *Gihon* or *Amu-Darja*), which was also the northern limit of Bactriana Proper. Into this great river several small streams flowed, the exact determinations of which cannot be made out from the classical narratives. Ptolemy (vi. 11. § 2) speaks of five rivers which fall into the Oxus,—the Ochus, Dargamanis, Zariaspes, Artamis, Dargoidus: of these the Artamis and Dargamanis unite before they reach the Oxus. The river on which the capital Bactra was situated is called Bactrus by ancient writers. (Strab. xi. p. 516; Aristot. *Meteor.* i. 13; Curt. vii. 4, 31; Polyaen. vii. 11.) Prof. Wilson (*Ariana*, p. 162) considers that the Artamis, which is said to unite itself with the Zariaspa, may be that now called the *Dakash*. Ammianus (xxiii. 6) mentions the Artamis, Zariaspes, and Dargamanis, which he calls Orgamenes. There appears to be some confusion in the account which Ptolemy has left us of these rivers, as what he states cannot be reconciled with the present streams in the country. No stream falls into the Oxus or *Gihon* W. of the river of *Balkh*.

Prof. Wilson (*l. c.*) thinks the Dargamanis may be the present river of *Ghori* or *Kunduz*, which Ptolemy makes fall into the Ochus instead of into the Oxus. Pliny (vi. 16. 18) speaks of three other rivers, which he calls Mandrum, Gridinum, and Icarus. Ritter (*Erd-kunde*, vol. ii. p. 500) conjectures that Icarus is a misreading for Bactrus.

The Greek rulers of Bactriana, according to Strabo (xi. p. 517), divided it into satrapies, of which two, Aspionia and Turiva, were subsequently taken from Eucratides, king of Bactria, by the Parthians. Ptolemy (vi. 11. § 6) gives a list of the different tribes which inhabited the country. The names, however, like those in Pliny (vi. 16), are very obscure, and are scarcely mentioned elsewhere: there are, however, some which are clearly of Indian descent, or at least connected with that country. Thus the Khomari represents the *Kumáras*, a tribe of Rajputs called Raj-ku-mars, still existing in India. The Tokhari are the *Thakurs*, another warlike tribe; the Varni are for *Varna*, "a tribe or caste." The satrapy in Strabo called Turiva, is probably the same as that in Polybius (x. 46) called Ταγουρία. (See Strab. xi. p. 514, and Polyb. v. 44, for a tribe named Tapyri, near Hyrcania; Ptol. vi. 2. § 6, for one in Media, and vi. 10. § 2, for another in Margiana.) It is possible that in *Ghaur* or *Ghorian*, one of the dependencies of *Herát* (*Ariana*, p. 162), are preserved some indications of the Taguria of Polybius. Ptolemy also (vi. 11. § 7) gives a list of towns, most of which are unknown to us. Some, however, are met with in other writers, with the forms of their names slightly modified. The chief town was Bactra or Zariaspa. [BACTRA.] Besides this were, Eucra-

tidia (Strab. xi. p. 516; Ptol. vi. 11. § 8; Steph. B.), named after the Bactrian king Eucratides; Menapia (Amm. Marc. xxiii. 6, Menapila); Drepsa (Amm. Marc. xxiii. 6; Adrapsa and Darapsa, Strab. xi. p. 516; Drapsaca, Arrian, iii. 39), probably the present *Anderáb*, in the NE. part of the province, towards Sogdiana: it was one of the first cities taken by Alexander after passing the mountain, and its position depends upon where this passage was effected. Alexandreia (according to Steph. B. the eleventh town of that name), probably in the neighbourhood of *Khulm*, where Ibn Haukal (p. 226) places an *Iskanderiah*. The Maracanda of Ptolemy is the modern *Samarcand*, and is situated beyond the boundaries of Bactriana in Sogdiana. Arrian (iii. 29) speaks of a town called Aornus, which he designates as one of the principal cities of Bactria.

Strabo (xi. p. 516), following Onesicritus, remarks that the manners of the people of Bactriana differed little from those of the Sogdians in their neighbourhood; the old men, while yet alive, being abandoned to the dogs, who were thence called "Buriers of the Dead;" and the city itself being filled with human bones, though the suburbs were free. He adds that Alexander abolished this custom of exposure. Prof. Wilson (p. 163) suggests that, in this story, we have a relic of the practice prevalent among the followers of Zoroaster, of exposing bodies after death to spontaneous decomposition in the air. (See Anquetil Du Perron, *Zend-Avesta*, vol. i. pt. 2, p. 332.)

The province of Bactriana, with its principal town Bactra, was very early known in ancient history, and connected more or less with fables that had an Indian origin or connection. Thus Euripides (*Bacch.* 15) makes it one of the places to which Bacchus wandered. Diodorus (ii. 6), following Ctesias, makes Ninus march with a vast army into Bactriana, and attack its capital Bactra, which, however, being defended by its king Oxyartes, he was unable to take till Semiramis came to his aid. (Justin., i. 2, calls the king Zoroaster.) Again, Diodorus (ii. 26) speaks of the revolt of the Bactriani from Sardanapalus, and of the march of a large force to assist Arbaces in his destruction of the city of Ninus (Nineveh). Ctesias (*ap. Phot. Cod.* lxxii. 2) states that Cyrus made war on the Bactrians, and that the first engagement was a drawn battle; but that, when they heard that Astyages had become the father of Cyrus (on Cyrus's marrying Amytis, the daughter of Astyages), they gave themselves up willingly to Cyrus, who subsequently, on his death-bed, made his younger son, Tanyoxarces, satrap of the Bactrians, Choramnians (Chorasmians), Parthians, and Carmanians (lxxii. 8). Dareius, too, gave a village of Bactriana to the prisoners taken at Barca in Africa, to which the captives gave the same name. Herodotus adds, that it existed in his own time. (Herod. iv. 204.) During the Persian war we have frequent notices of the power of this province. (Herod. iii. 92, vii. 64, 86, &c.; see also Aeschyl. *Pers.* 306, 718, 732.) It formed, as we have stated, the twelfth satrapy of Dareius, and paid an annual tribute of 360 talents. In the army of Xerxes the warriors from this country are placed beside the Sacae and the Caspii, they wear the same head-dress as the Medes, and carry bows and short spears (vii. 64). Hystaspes, the son of Dareius and Atossa, the daughter of Cyrus, was the general of the Bactriani and Sacae. (Cf. also Aeschyl. *Pers.* 732, for the belief of the Greeks that Bactriana was a province subject to the Persian empire.) Herodotus (ix. 113) mentions the attempt of Masistes to raise a revolt against Xerxes, but that it did not prove successful, as Xerxes intercepted him before he reached Bactriana. On the murder of Xerxes, and the succession of Artaxerxes I. Longimanus to the throne, the Bactrians and their satrap, Artapanus, revolted again (Ctesias, *ap. Phot. Cod.* lxxii. 31), and Artaxerxes was unable in the first battle to reduce them to their allegiance; somewhat later, however, the Bactrians were defeated, and compelled to submit, the historian stating that, during the action, the wind blew in their faces, which was the cause of their overthrow.

During the wars of Alexander the Great in Asia we have constant mention of Bactriana, and of its cavalry, for which it was, and is still, celebrated. At the battle of Gaugamela, the Bactrian horse fought on the side of Dareius (Arrian, iii. 2. § 3, and iii. 13. § 3), forming his escort to the number of 1000, under their chief Nabarzanes, on his subsequent flight from that field towards Transoxiana. (Arrian, iii. 21. §§ 1, 4.) When, a little later, Alexander gave chase to Bessus, who had proclaimed himself king after the murder of Dareius, he went to Aornus and Bactra (Arr. iii. 29. § 1), which he took (see also *Alex. Itin.* ap. ed. Didot), and, crossing the Oxus, the NE. boundary of Bactria (Curt. vii. 4), proceeded as far as Maracanda. It appears that, after the invasion and subjugation of Sogdiana, he returned to Bactra, where he subsequently passed a winter, as he advanced thence, in the spring, to attack India. (Arrian, iv. 22.) Several different satraps are mentioned at this period: Bessus, who murdered Dareius, Artabazus (Arr. iii. 29. § 1), and Amyntas (Arr. iv. 17. § 3), who were both appointed by Alexander himself, and Stasanor of Soli, in Cyprus, who held that rank probably a little later (ap. Arr. *Succ. Alex.* No. 36, ed. Didot). Diodorus calls Stasanor, Philippus, who, according to Arrian, was governor of Parthia (*ap. Phot.* xxvii.), and assigns to him the provinces of Aria and Drangiana. Justin (iii. 1) terms the satrap of the Bactrians, Amyntas. On the return of Seleucus from India, between B. C. 312 and B. C. 302, he appears to have reduced Bactria to a state of dependence on his Persian empire; a conclusion which is confirmed by the multitude of coins of Seleucus and Antiochus which have been found at *Balkh* and *Bokhára*. In the reign of the third of the Seleucid princes, Antiochus Theus, Theodotus (or, as his name appears on his coins, Diodotus) threw off the Greek yoke, and proclaimed himself king (Justin, xli. 4; Prol. Trog. Pompeii, xli.), probably about B. C. 256. He was succeeded by several kings, whose names and titles appear on their coins, with Greek legends; the fabric and the types of the coins themselves being in imitation of those of the Seleucidae, till we come to Eucratides, whose reign commenced about B. C. 181, and who was contemporary with Mithradates (Justin. xli. 6); though, from the extent of the conquests of Mithradates in the direction of India, it is probable that the Parthian king survived the Bactrian ruler for several years. The reign of Eucratides must have been long and prosperous, as is evinced by the great abundance of his coins which are found in Bactriana. Strabo (xvi. p. 685) states, that he was lord of 1000 cities; and that his sway extended over some part of India (Justin, xli. 6) is also confirmed by his coins, the smaller and most abundant specimens of which bear duplicate legends, with the name and title of the king on the obverse in Greek, and on the reverse in Bactrian Pali. Eucratides was followed by several

kings, whose coins have been preserved, but who are little known in history till we come to Menander about B. C. 126. Strabo (xi. p. 515) and Plutarch (*de Rep. Ger.* p. 821) call him king of Bactriana: it has, however, been doubted whether he was ever actually a king of Bactria. Prof. Wilson (*Ariana*, p. 281) thinks he ruled over an extensive district between the Paropamisus mountains and the sea, a view which is supported by the statement of the author of the *Periplus* (p. 27, ed. Huds.), that, in his time (the end of the first century B. C.), the drachms of Menander were still current at Barygaza (*Baroach*, on the coast of *Guzerat*), and by the fact that they are at present discovered in great numbers in the neighbourhood of *Kábul*, in the *Hazára* mountains, and even as far E. as the banks of the *Jumna*. It may be remarked, that the features of the monarch on his coins are strikingly Indian. Menander was succeeded by several princes, of whom we have no certain records except their coins; till at length the empire founded by the Greeks in Bactria was overthrown by Scythian tribes, an event of which we have certain knowledge from Chinese authorities, though the period at which it took place is not so certain. Indeed, the advance of the Scythians was for many years arrested by the Parthians. About B. C. 90 they were probably on the Paropamisus, and towards the end of the first century A. D. they had spread to the mouth of the Indus, where Ptolemy (vii. 1. § 62) and the author of the Periplus (*l. c.*) place them. These Scythian tribes are probably correctly called by the Greeks and Hindus, the Sacas. In Strabo (xi. p. 511) they bear the names of Asii, Pasiani, Tochari, and Sacarauli; in Trogus Pompeius, Asiani and Sarancae; they extended their conquests W. and S., and established themselves in a district called, after them, Sacastene (or Sakasthán, "the land of the Sakas), probably, as Prof. Wilson observes, the modern *Sejestán* or *Seistán*. (*Ariana*, p. 302.) On their subsequent attempt to invade India, they were repulsed by Vikramadítya, king of Ujayin B. C. 56, from which period the well-known Indian Saca æra is derived. (Colebrooke, *Ind. Algebra*, p. 43.) The coins of the kings, who followed under the various names of Hermaeus, Mayes, Azes, Palirisus, &c., bear testimony to their barbaric origin: their legends are, for a while, clear and legible, the forms of the Greek letters bearing great resemblance to those of the Parthian princes; till, at length, on the introduction of some Parthian rulers, Vonones, Undopherres, &c., the Greek words are evidently engraven by a people to whom that language was not familiarly known.

Next to the Saca princes, but probably of the same race with their predecessors, come a people, whom it has been agreed to call Indo-Scythian, whose seat of power must have been the banks of the *Kábul* river, as their coins are discovered in great numbers between *Kábul* and *Jelálabád*. The date of the commencement of their sway has not been determined, but Prof. Wilson and Lassen incline to place the two most important of their kings, Kadphises and Kanerkes, at the end of the first and the beginning of the second century A. D. Greek legends are still preserved on the obverses of the coins, and the principal names of the princes may generally be deciphered; but words of genuine Indian origin, as Rao for Rajah, are found written in Greek characters: on those of Kanerkes the words Nanaia or Nana Rao occur, which it has been conjectured represent the Anaitis or Anakid of the Persians,—the Artemis of the Greeks, and who has been identified with Anaia or Nanaea, the tutelary goddess of Armenia. (Avdall, *Journ. As. Soc. Beng.* vol. v. p. 266; see also *Maccab.* ii. c. 1, v. 13, where Nanaea appears as the goddess of Elymais, in whose temple Antiochus was slain.) With the Indo-Scythic princes of *Kábul*, the classical history of Bactriana may be considered to terminate. On the successful establishment of the Sassanian empire in Persia, the rule of its princes appears to have extended over Bactriana to the Indus, along the banks of which their coins are found constantly. They, in their turn, were succeeded by the Muhammedan governors of the eighth and subsequent centuries. (Wilson, *Ariana;* Bayer, *Hist. Reg. Graec. Bactr.* Petrop. 1738, 4to.; Lassen, *Geschichte d. Gr. u. Indo-Scyth. Kön. in Bactr.*; Raoul-Rochette, *Médailles des Rois d. l. Bactr.*, in *Journ. d. Sav.* 1834; Jacquet, *Méd. Bactr.*, *J. Asiat.* Feb. 1836; C. O. Müller, *Indo-Griekh. Münz.*, *Gött. Gel. Anzg.* 1838, Nos. 21—27.) [V.]

BACTRUS (Βάκτρος, Strab. xi. p. 516; Curt. vii. 4. § 31; Polyaen. vii. 7; Lucan, iii. 267; Plin. vi. 16), the river on which Bactra, the capital town of Bactriana, was situated. It is supposed to be represented by the present *Dakash*. Harduin, in commenting on the words of Pliny (vi. 16), "Bactri, quorum oppidum Zariaspe, quod postea Bactrum a flumine appellatum est," incloses within a parenthesis the words "quod postea Bactrum," leaving the inference that the river was called Zariaspe. Ptolemy does not mention the river at all. [BACTRA; BACTRIANA.] [V.]

BACUA'TAE (Βακουᾶται), a people of Mauretania Tingitana, about the neighbourhood of Fez. (Ptol. iv. 1. § 10.) There is an extant Latin inscription to the memory of a youth, son of Aurelius Canartha, chief of the tribes of the Baquates (*principis Gentium Baquatium*, Orelli, No. 525.) In the *Chronicon Paschale* (vol. i. pp. 46, 57) the name occurs in the form of Μακουακοί. In the same list as the Bacuatae, but at the extreme S., Ptolemy places the Οὐακανᾶται, probably only another form of the name. [P. S.]

BACU'NTIUS, a small river in Lower Pannonia, which falls into the Savus not far from the town of Sirmium. (Plin. iii. 28.) Its modern name is *Bossuth*. [L. S.]

BADACA (Βαδακή, Diod. xix. 19), a town in Susiana whither Antigonus retired after he had been defeated by Eumenes. It is said to have been on the Eulaeus (probably the *Shahpúr* or *Karún*), but its exact position is not known. Rawlinson (*J. Geogr. Soc.* vol. ix. p. 91) places it about 25 miles NW. of Susa. It has been supposed, but without much reason, to be the same as Babytace. (See also Layard, *J. Geogr. Soc.* vol. xvi. p. 92.) [V.]

BADARA (Βαδάρα, Ptol. vi. 21. § 5), a town in Gedrosia, on the sea coast. According to Marcian (p. 26), who calls it τὰ Βάδαρα, it was 250 stad. E. of the river Zorambus. It is not improbably the same as the Barna (τὰ Βάρνα) of Arrian (c. 26). There was another place of the same name in Carmania. (Ptol. vi. 8. § 9.) [V.]

BADERA, is placed by the Table on the road from *Toulouse* to *Narbonne*, at the distance of xv from Toulouse, which means 15 Roman miles. D'Anville considers this to identify the place with *Basiège*. [G. L.]

BADEI-REGIA (Βαδεὼ βασίλειον, Ptol. vi. 7. § 6), the metropolis of the Cassaniti, a people on the west coast of Arabia, in the modern district of Hed-

jaz, written Vadei by Pliny, and described as a large town (vi. 28. s. 32). Identified with *Beyadhye*, near *Jidda*, by Forster (*Geog. of Arab.* vol. ii. pp. 142, 143). The south promontory of the Gulf of Jidda is also called *Ras-Bad.* [G. W.]

BADI'A or BATHEIA (Βαθεῖα, Plut.), a town of Spain, only mentioned as the scene of an incident related of the elder Scipio Africanus; but supposed, chiefly from the resemblance of name, to be *Badajoz.* (Val. Max. iii. 7. § 1; Plut. *Reg. et Imp. Apophthegm.* p. 196; Cellarius, vol. i. p. 67; Ukert, vol. ii. pt. 1. p. 392.) [P. S.]

BADUHENNAE LUCUS, "the grove of Baduhenna," a forest in the country of the Frisians. (Tac. *Ann.* iv. 73.) It is believed by some to be the same as the modern *Holtpade*, which forms part of the forest of *Levenwalde* in *West-Friesland*, while others identify it with the modern *Veluwe.* The grove was no doubt a sacred one, and may have owed its name to a divinity of the name of Baduhenna, whose altar it contained. (M. Alting, *Notit. Bat. et Fris. Antiq.* i. p. 15; v. Wersebe, *Die Völker Teutschl.* p. 103.) [L. S.]

BAEBRO (*Cabra*), one of the principal inland cities of Hispania Baetica, between the Baetis and the ocean, in the conventus of Corduba. (Plin. iii. 1. s. 3; some MSS. have Aegabro. comp. Moral. *ap.* Ortel. *Thesaur. Geogr. s. v.*; Ukert, vol. ii. pt. 1. p. 368.) [P. S.]

BAECOLICUS MONS (τὸ Βαικολικὸν ὄρος), a range of mountains, forming part of the S. boundary of Cyrenaica, placed by Ptolemy NE. of the Velpi Montes, in 51° long. and 26½° lat. (Ptol. iv. 4. § 8.) [P. S.]

BAECOR (Βαικόρ), a town of Hispania Baetica, only mentioned by Appian; apparently in the neighbourhood of BAECULA. (Appian. *Hisp.* 65.) [P. S.]

BAE'CULA (Βαίκυλα: *Eth.* Βαικυλεύς Steph. B.). 1. A town of Hispania Baetica, in the territory of Castulo, and near the silver mines W. of that city. It was the scene of Scipio's victories over Hasdrubal (B. C. 209), and over Mago and Masinissa, B. C. 206. (Polyb. x. 38, xi. 20; Liv. xxvii. 18—20; xxviii. 13.) It is apparently the Βαιτύκη of Appian (vi. 24), and it seems to correspond to the modern *Baylen.* (Ukert, vol. i. p. 379; Forbiger, vol. iii. p. 64.)

2. A town of the Ausetani, in Hispania Tarraconenses. [AUSETANI.] [P. S.]

BAE'DYES. [GALLAECI.]

BAELON. [BELON.]

BAEMI. [BOII.]

BAENAE. [LOBETANI.]

BAENIS. [MINIUS.]

BAESIPPO. [BESIPPO.]

BAETANA. [ARIACA.]

BAETERRAE (Βαίτερα, Ptol.; Βαίταρρα, Stephan. *s. v.* Βαιταρροῦς; and Βαίταρρα and Βήτηρρα on the coins: *Eth.* Βαιταρρίτης, Biterrensis, Baeterrensis: *Béziers*). The name of this place is written Βιλτέρα incorrectly in the ordinary texts of Strabo (p. 182). Pliny (iii. 4) calls the place "Baeterrae Septimanorum," and also Mela (ii. 5), whence it appears that the place received some soldiers of the seventh legion as a colony. Baeterrae is on the Orbis (*Orbe*), and on the road from *Narbonne* to *Nîmes*, at the distance of xvi Roman miles from Narbonne. On this part of the road the Romans constructed a causeway over the marsh of Cap-estang, of which some traces exist (D'Anville). There are said to be at *Béziers* the vestiges of an amphitheatre, and the remains of an aqueduct. Pliny (xiv. 6) mentions the wine of Baeterrae as good; and it is so still. The antiquity of *Béziers* and of the present name is proved by the passage of Festus Avienus (589):

"Dehinc
Besaram stetisse fama casca tradidit;"

and the canton of Béziers is said to retain the name of *Besarès*, or *Bezarès.* [G. L.]

BAE'TICA. [HISPANIA.]

BAE'TII MONTES (τὰ Βαίτια ὄρη, Ptol. vi. 19. § 1), a chain of mountains to the N. of Gedrosia between it and Drangiana and Arachosia. They are represented now by the *Wáshátí mountains* in *Baluchistán.* They extend to the banks of the Indus, in a direction nearly E. and W. [V.]

BAETIS (Βαῖτις, Strab., &c., Βέτις, Agathem.), or BAETES (*Guadalquivir*, a corruption of the Arabic *Wad-el-Kebir*, the *Great River*), was the name of the chief river of Hispania Baetica, running through the whole province from E. to W., and draining the great basin between the mountains Marianus (*Sierra Morena*) on the N., and Ilipula (*Sierra Nevada*) on the S. Its native name was CERTIS (Liv. xxviii. 22), or PERCES (Πέρκης; Steph. B. *s. v.* Βαῖτις). The ancient Greeks seem to have given it the name which has such various applications to this part of Spain, Tartessus. (Stesich. *ap.* Strab. iii. p. 148; Ταρτησσοῦ ποταμοῦ παρὰ παγὰς ἀπείρονας ἀργυρορίζους.) Pausanias calls it Ταρτήσσιος ποταμός, and adds, that those of later times called it Baetis (vi. 19. § 3; see also Eustath. *ad Dion. Perieg.* 337; Avien. *Or. Marit.* 284; comp. TARTESSUS). The name Baetis is most probably of Phoenician origin; but no very satisfactory etymology has been proposed.

Strabo (iii. 139) observes that the Baetis has its origin from the same parts as the TAGUS and the ANAS, that is, in the E. of Spain, and flows in the same general direction, namely, to the W.; but that it resembles the Anas still more closely, for the two rivers have their sources near each other, and, flowing first to the W. and afterwards turning to the S., fall into the sea on the same coast, namely, the SW. coast. In magnitude, he says, the Baetis is between the other two, that is, greater than the Anas, but less than the Tagus; referring to its volume, not its length, for it is shorter than the Anas. Pausanias calls it the greatest of the rivers of Iberia, probably following ancient accounts, when little was known of Central Spain and the Tagus (vi. 19. § 3.). Agathemerus mentions it as one of the rivers which are great at the mouth (ii. 10, p. 235, Gronov. p. 48, Hudson).

The sources of the river lie in the mountain which runs N. and S. between the *Sierra Morena* and the *Sierra Nevada*, forming the E. boundary of the basin of the Baetis, and called by the ancients Orospeda. Its true source is in that part of Orospeda called ARGENTARIUS (*Sierra Cazorla*), near Castulo, 15 miles ESE. of the town which still bears its ancient name of UBEDA. (Strab. iii. pp. 148, 162.) Not far from its source it receives two affluents, much larger than itself, first, on the left, the *Guadiana Menor* (i. e. *Lesser Guadiana*), which flows from the *Sierra Nevada*, and enters the Baetis above Ubeda; and, further down, on the right, the *Guadalimar*, from the NE. According to Polybius (*ap.* Strab. p. 148) the sources both of the Anas and the Baetis were in Celtiberia, at

the distance of 900 stadia (90 geog. miles); the former statement implying, as Strabo observes, a further extension of the Celtiberi to the S. than is usually assigned to them. It might be supposed that Polybius referred to the chief affluent of the Baetis, the *Guadalimar*, which has one of its sources near that of the Anas, in the same mountain; but this supposition is excluded by the distance he gives. Pliny (iii. 1. s. 3) makes a very precise statement; that the Baetis rises in the province of Tarraconensis, not, as some said, near the town of Mentisa [MENTESA], but in the Tugiensis Saltus, near the source of the Tader (*Segura*), which waters the territory of Carthago Nova. Turning westward, he adds, it enters the province, to which it gives its name, in the district of Ossigitania [OSSIGI]. So also Strabo (p. 162) says, that it flows out of ORETANIA into Baetica. Small at first, says Pliny, it receives many rivers, from which it takes both their waters and their fame; and, flowing smoothly through its pleasant bed, it has many towns both on the right and on the left. Of its tributaries besides the two already mentioned the most important were, on the right side, flowing from the N., the MENOBA (*Guadiamar*), near its mouth; and, on the left, the SINGULIS (*Xenil*). Of the numerous cities on its banks, the most important were CORDUBA (*Cordova*), about 1200 stadia from the sea; ILIPA; and HISPALIS (*Sevilla*), nearly 500 stadia from the sea. From a little above the first of these it was navigable by river boats (ποταμίοις σκάφεσι), from the second by small vessels (ὁλκάσιν ἐλάττοσι), and from the third by large ones (ὁλκάσιν ἀξιολόγοις: Strab. iii. p. 142). The country through which it flows, the fairest portion of the romantic *Andalucia*, was famed of old for its beauty, fertility, and wealth. It is well described by Strabo (*l.c.*). The river runs near the N. edge of its own basin, at the foot of Marianus, the spurs of which were full of mineral treasures, chiefly silver, which was most abundant in the parts near Ilipa and Sisapon; while copper and gold were found near Cotinae; and tin in the river itself. (Eustath. *ad Dion. Perieg.* 337.) On its left, or S. side, extended the great plain of *Andalucia*, rising up towards the *Sierra Nevada*, abounding in the finest fruits, trees, and arable culture. The banks of the river, and the islands in it, were cultivated to the highest pitch (ἐξείργασται περιττῶς). The wool of the country was famed among the Romans for its excellence and the brilliancy of its colour. (Mart. viii. 28, ix. 62, xii. 100; Juv. xii. 40.)

The length of the Baetis was reckoned at 3000 stadia. (Marcian. Heracl. *Peripl.* p. 40; Aethic. Ister, *Cosmograph.* p. 17; it is, in fact, about 300 miles). In its lower course, some distance below Hispalis, it is described as forming a lake, out of which it flowed in two arms, enclosing an island 100 stadia or more in breadth, in which some placed the ancient city of TARTESSUS. (Strab. iii. p. 140; Mela, iii. 1; Paus., Eustath., Avien. *Il. cc.*; Ptol. i. 12. § 11, 14. § 9, ii. 4. § 5.) There has since been a considerable alteration. The upper, or W. mouth, which fell into the Ocean near Asta (Ptol.), still remains, but the E. branch, the mouth of which was near Gades (*Cadiz*), no longer reaches the sea, but joins the other arm near its mouth, forming, with it and an intermediate arm, two islands, *Isla Mayor* and *Isla Menor*. Strabo (iii. p. 174) and other writers refer to the circumstances of the tides extending to a considerable distance up the river.

Respecting a town of the same name, mentioned only by Strabo (ii. p. 141), see HISPALIS. [P. S.]

BAE'TIUS (Βαίτιος), a river of the country of the Cinaedocolpitae, on the west coast of Arabia, in the modern Hedjaz. (Ptol. vi. 7. §§ 5, 13.) Diodorus Siculus describes it as flowing through the midst of the country of the Deb (Δέβαι), the proper native name (sometimes written Δεβέδαι) for the tribe which Ptolemy designates by its Greek *sobriquet*. Diodorus (iii. 44) describes it as so rich in gold dust, that the alluvial deposit at its mouth glittered with the precious metal; but the natives, he adds, were quite ignorant of the method of working it. (Conf. Strab. xvi. p. 1104.) That the *Bardilloi* is the modern representative of the Baetius is proved by the fact that it is the only stream of the Hedjaz whose waters reach the sea, and that it flows through the country of the *Zebeyde* tribe (a branch of the great Harb nation), whose name and position exactly correspond with the Debedae of Agatharcides. (Forster, *Arabia*, vol. i. p. 73, ii. pp. 130—134.) This stream falls into the Red Sea at Jidda; but the accounts of its precious metalliferous deposits are commonly supposed to be mythical, as no traces of gold, are now to be found in the peninsula, " ni dans les vivières, ni dans les mines." (Niebuhr, *Description de l'Arabie*, p. 124.) [G. W.]

BAETULO, or BAETULLO, a small river of Hispania Tarraconensis, on the E. coast, between the Iberus and the Pyrenees, with a small town of the same name, on the sea-shore near its mouth, an *oppidum civium Romanorum*. (Mela, ii. 6. § 3; Plin. iii. 3. s. 4.) The river is the *Besos*, and the town *Badelona*, a little E. of *Barcelona*. (Muratori, p. 1033. a. 3; Florez, *Esp. S.* xxiv. 56, xxix. 31; Marca Hisp. ii. 15, p. 159; Ukert, vol. ii. pt. 1. pp. 292, 421.) [P. S.]

BAETU'RIA (ἡ Βαιτουρία), the N. and N.W. part of Hispania Baetica, along the river Anas (*Guadiana*), and S. of it as far as the Marianus M. (*Sierra Morena*), a district consisting chiefly of arid plains. (Strab. iii. p. 142; Liv. xxxix. 29; Appian. *Hisp.* 68; Plin. iii. 1 s. 3.) [P. S.]

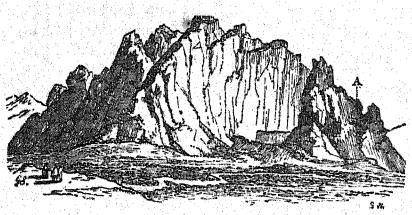
BAGA. [VACCA.]

BAGACUM (*Bavay*), a town of the Nervii, a Belgic people. In the text of Ptolemy it is generally Baganum, which is an error. Ptolemy only mentions this town of the Nervii, from which circumstance, and its being the centre of so many roads, D'Anville concludes that it was the chief town of the Nervii. The following Roman roads met here: from Turnacum (*Tournai*), Camaracum (*Cambrai*), Durocortorum (*Rheims*), Atuatuca Tungrorum (*Tongern*). The remains of two other roads are nearly entire: one to Tablae (*Ablas*), in the Insula Batavorum, passing by *Mons* and *Antwerp;* and the other to Augusta Veromanduorum (*St. Quentin*), called the *Chaussée de Brunehaut*. Bast (*Recueil d'Antiquités*, &c.) says that eight Roman roads met at Bavay. An inscription was found at *Bavay* in 1716, which records the visit of Tiberius to Gallia before he was emperor, from which we may conclude that the place existed then, though the name is not mentioned in the inscription. (Walckenaer, *Géographie*, &c. p. 473.) This seems to be the visit to Gallia mentioned by Velleius (ii. 104). Bagacum, under the empire, was a flourishing place, but it is supposed to have been destroyed by the northern invaders about the close of the fourth century of our aera, and it is now a small town. Many Roman remains have been disinterred in modern times. The site of the circus

may still be traced within the limits of *Bavay;* and subterranean vaults of Roman construction, and mosaics, have also been discovered. The Romans brought water to *Bavay* from *Florésiès*, on the opposite side of the *Sambre*, a distance of 10 miles. The water is said to have been brought under the bed of the *Sambre*. [G. L.]

BAGADA'NIA (Βαγαδανία, Βαγαδαονία, Steph. *s. v.*: *Eth.* Βαγαδάονες), a large elevated plain in Cappadocia between Argaeus and Taurus, a cold region which hardly produces a fruit tree (Strab. p. 73): it was a pastoral country. In Casaubon's edition the name is Bagadania, in lib. ii. (p. 73); but in the other passage (p. 539), he has the reading Gabadania, evidently a transcriber's blunder. This plain lay, according to Strabo, at the base of Taurus; and probably it is the tract SE. of Argaeus. [G. L.]

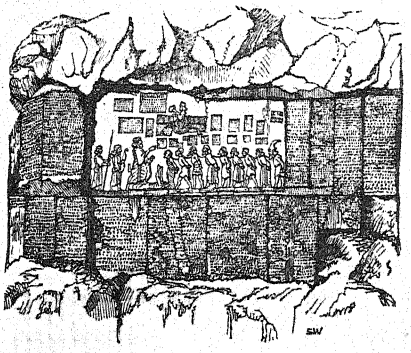
BAGAZE. [Libya.]



BAGE (Βάγη: *Eth.* Βαγηνός), a Lydian town in the valley of the Hermus on the right bank of the river, and nearly opposite to *Sirghie*, a Turkish village between *Kula* and *Yenisher*. (See the map in Hamilton's *Asia Minor*.) The site was identified from an inscription found by Keppel. There are coins of Bage with the epigraph Βαγηνῶν. (Cramer, *Asia Min.* vol. i. p. 435.) [G. L.]

BAGISARA (Βαγίσαρα, Arrian, *Indic.* 26. § 2), a place on the sea coast of Gedrosia in the territory of the Icthyophagi. [V.]

BAGISTANUS MONS (ὄρος Βαγίστανον, Diod. ii. 13; Steph. B.), a mountain on the confines of Media, at which Semiramis is said to have halted her army on her march from Babylon to Ecbatana in Media Magna. The description of Diodorus (vi. 13) is very curious:—"Semiramis," he says, "having accomplished her labours (at Babylon) marched upon Media with a vast army; but when she had arrived at the mountain called Bagistanon, she encamped near it, and prepared a Paradise, whose circumference was twelve stadia, and which being in the plain, had a great spring, from which all the plants could be watered. The mountain itself is sacred to Zeus, and has abrupt rocks on the side towards the garden, rising to seventeen stadia in height. Having cut away the lower part of the rock, she caused her own portrait to be sculptured there, together with those of a hundred attendant guards. She engraved also the following inscription in Syrian (Assyrian) letters:—'Semiramis having piled up one upon the other the trapping of the beasts of burthen which accompanied her, ascended by these means from the plain to the top of the rock.'" In another place Diodorus (xvii. 110), describing the march of Alexander the Great from Susa to Ecbatana, states that he visited Bagistane, having turned a little out of his course, in order to see a most delightful district abounding in fruits and in all other things appertaining to luxury. Thence he passed on through some plains, which rear abundance of horses, and are called (though incorrectly) by Arrian (vii. 13) the *Nisaean* plains, where he halted thirty days. Stephanus B. speaks of a city of Media called Bagistana; and Isid. Charax (*ap. Hudson.* p. 6) of a town called Baptana seated on the mountains, where there was a statue and pillar of Semiramis. The district around he calls Cambadene. The geography of this neighbourhood has been of late years very carefully investigated, chiefly by Col. Rawlinson (*Journ. Geogr. Soc.* vol. ix. 1839), and by C. Masson (*J. R. As. Soc.* vol. xii. pt. 1. 1849). Both travellers assert that they have been able to verify every position and almost every line of measurement in the route of Isidorus. Col. Rawlinson points out the coincidence between the name Bagistanon and the Persian *Baghistán*—which signifies a place of gardens, and of which *Bostán* applied to some sculptures in the neighbourhood is a corruption—and conjectures that the Baptana of Isidorus may be a yet further corruption of the same name. Mr. Masson (p. 108) states that *Bisitun* is the name now popularly used for the locality. *Behistun*, the form which Col. Rawlinson has adopted in his Memoir on the Cuneiform Inscriptions (*As. Journ.* vol. x.) is derived by Mr. Masson from *Behist-tan*, the Place of Paradise or Delight—a more natural derivation, however, would make it come from *Bagistanon* or *Baghistán*.



Mr. Masson in his memoir has pointed out very clearly that the rocks in the neighbourhood contain remains of four distinct periods. 1. On the upper part of the principal mass of rock, the whole surface of which has been scarped away, are the remains of the heads of three colossal figures, and above them are traces of characters. The heads are in basso-rilievo, and, according to Mr. Masson, who is we believe the only traveller who has described them, of very early workmanship. 2. At the N. extremity of Bagistanon, in a nook or retiring angle of the hill, high upon the rock, and almost inaccessible, is a group of thirteen figures, the one on the extreme left representing the king, and carved on the face of the rock, which is cut away horizontally, so as to allow a place to stand on. About the figures are tablets with inscriptions in the Cuneiform character. These figures and inscriptions, we now know, refer to Dareius the son of Hystaspes and his victories. 3. Still further to the N., of much later workmanship, is a group composed originally of five or six figures, but now much mutilated, representing a person to whom a Victory is presenting a wreath as trampling on a prostrate enemy. Over it is a Greek inscription in which the name Gotarzes may be detected. Rawlinson and Masson concur in supposing that this Gotarzes was an Arsacid prince, who fought a great battle near this spot with Meherdates. (Joseph. *Ant.* xx. 3. § 4; Tac. *Ann.* xi. 8.) It is worthy of remark that Tacitus (*Ann.* xii. 13) states that Gotarzes took up his position on Mt. Sambulos. There is every reason to suppose that Mt. Sambulos is the same as Bagistanon, it being a generic name for the range of which the latter formed one projecting portion. If so, *Baghistan* might have acquired its name, as that part traditionally connected with the labours of Semiramis. Tacitus says Mt. Sambulos was sacred to Hercules, probably meaning Jupiter; it is called by Pliny (vi. 27) Mons Cambalidus, in a passage ("super Chosicos ad septentrionem Mesobatene sub monte Cambalido"), which seems to prove that there is a connection between the names Mesobatene, Baptana or Batana in Isidorus, and the present *Máh-Subadán*. Diodorus, too (*l. c.*), in describing Alexander's march, speaks of Sambea, a place abounding with the necessaries of life, which is, no doubt, the Mons Cambalidus of Pliny, the Cambadene of Isidore, and the present *Kirmánsháh*. 4. Is a comparatively modern inscription in Arabic, recording a grant of land in endowment of the adjacent caravanserai.

A peculiar interest attaches to the rock of *Baghistan* or *Behistun*, owing to the successful interpretation within the last few years by Col. Rawlinson of the Cuneiform inscriptions, which are on the tablets

MONS BAGISTANUS. (A, Sculptures.)

above and beside the thirteen figures to which we have alluded. Col. Rawlinson has published a complete account of his labours in the *Journ. Roy. As. Soc.* vol. x. with copies of the inscriptions themselves, and translations in Latin and English of the

SCULPTURES ON MONS BAGISTANUS.

original Persian. In this memoir, he has shown that the standing Royal figure is that of Dareius himself, and that the figures in front of him are those of different impostors, who had claimed the throne of his ancestors, and were successively compelled to succumb to his power. The inscriptions above, in the three forms of the Cuneiform writing, Persian, Assyrian, and Median, proclaim the ancestral right of Dareius to the throne of Persia, with the names of the kings of the Achaemenid race who had preceded him: they give an account of his gradual, but, in the end, successful triumph over the different rebels who rose against him during the first four years of his reign. Col. Rawlinson thinks, that, in the fifth year B. C. 516, Dareius commenced constructing this monument, the completion of which must have been the work of several years. It is evident, that the Persian monarch took the greatest pains to ensure the permanency of his record. It is placed at an elevation of about 300 feet from the base of the rock, and the ascent is so precipitous, that scaffolding must have been erected to enable the workmen to carve the sculpture. In its natural state, the face of the rock, on which the figures are placed, is almost unapproachable. The execution of the figures themselves is, perhaps, not equal to those at Persepolis, but this is natural, as an earlier effort of the artist's skill. "The labour," says Col. Rawlinson, "bestowed on the whole work, must have been enormous. The mere preparation of the surface of the rock must have occupied many months, and on examining the tablets minutely, I observed an elaborateness of workmanship, which is not to be found in other places. Wherever, in fact, from the unsoundness of the stone, it was difficult to give the necessary polish to the surface, other fragments were inlaid, imbedded in molten lead, and the fittings so nicely managed that a very careful scrutiny is required, at present, to detect the artifice. Holes or fissures, which perforated the rock, were filled up also with the same material, and the polish, which was bestowed upon the entire sculpture, could only have been accomplished by mechanical means. But the real wonder of the work, I think, consists in the inscriptions. For extent, for beauty of execution, for uniformity and correctness, they are, perhaps, unequalled in the world. . . . . It would be very hazardous to speculate on the means employed to engrave the work in an age when steel was supposed to have been unknown, but I cannot avoid noticing a very extraordinary device, which has been employed, apparently, to give a finish and durability to the writing. It was evident to myself, and to those who, in company with myself, scrutinized the execution of the work, that, after the engraving of the rock had been accomplished, a coating of siliceous varnish had been laid on to give a clearness of outline to each individual letter, and to protect the surface against the action of the elements. This varnish is of infinitely greater hardness than the limestone rock beneath it. It has been washed down in several places by the trickling of water for three and twenty centuries, and it lies in flakes upon the foot-ledge like thin layers of lava. It adheres in other portions of the tablet to the broken surface, and still shows with sufficient distinctness the forms of the characters, although the rock beneath is entirely honeycombed and destroyed. It is only, indeed, in the great fissures, caused by the outbursting of natural springs, and in the lower part of the tablet, where I suspect artificial mutilation, that the varnish has entirely disappeared." (Rawlinson, *Journ. As. Soc.* vol. x.; Masson, *ibid.* vol. xii. pt. 1; Ker Porter, *Travels*, vol. ii.) [V.]

BAGO'US MONS (Βαγῶον ὄρος, Ptol. vi. 17. § 1, 19. § 1), a chain of mountains mentioned by Ptolemy as being between Asia and Drangiana, to the south of the former, and to the north of the latter. The name is probably of Persian or Arian origin, but is not mentioned elsewhere. [V.]

BA'GRADA or BA'GRADAS (ὁ Βαγράδας, gen. -α: *Mejerdah*), the chief river of the Carthaginian territory (afterwards the Roman province of Africa), had its source, according to Ptolemy (vi. 3. §§ 1, 8), in the mountain called MAMPSARUS, in Numidia, and flowed NE. into the Gulf of Carthage. Though one of the largest rivers of N. Africa, after the MALVA, it was inconsiderable as compared with the rivers of other countries. It is fordable in many places near its mouth. Shaw compares it in size to the *Isis* after its junction with the *Cherwell*.

The main stream is formed by the union of two branches, the southern of which, the ancient Bagradas, is now called *Mel'ag* (*Meskianah*, in its upper course). This is joined by the other branch, the *Hamiz* (which flows from the W.), NW. of *Kaf*, the ancient Sicca Veneria. The *Hamiz*, to which the ancients give no specific name, has its sources near *Tiffesh*, the ancient TIPASA, E. of CIRTA (*Constantineh*). The united stream flows to the NE., and falls into the sea, at present, just within the W. extremity of the *Gulf of Tunis*, after passing immediately under the ruins of UTICA. Its ancient course, however, was somewhat different. It fell into the sea between

Utica and Carthage, but much nearer to the latter than it now does. Flowing through the alluvial plain of western Zeugitana [AFRICA], it carried down in its turbid waters a great quantity of soil, and the deposits thus formed have enlarged its delta and altered the coast line. The quality and operation of the river are noticed by the ancient poets. (Lucan, iv. 588:—

"Bagrada lentus agit, siccae sulcator arenae."

Sil. Ital. vi. 140—143:—

"Turbidus arentes lento pede sulcat arenas
Bagrada, non ullo Libycis in finibus amne
Victus limosas extendere latius undas,
Et stagnante vado patulos involvere campos.")

The alterations thus caused in the coast-line can be traced by aid of statements in the ancient writers; to follow which, however, a few words are necessary on the present state of the coast. The great *Gulf of Tunis* is divided into three smaller gulfs by two promontories, which stand out from its E. and W. sides. On the latter of these promontories stood Carthage, S. by E. of the Apollinis Pr. (*C. Farina*), the western headland of the whole gulf. Between Carthage and this headland lies a bay, the coast of which is formed by a low and marshy plain, whose level is broken by an eminence, evidently the same on which the elder Scipio Africanus established his camp when he invaded Africa. [CASTRA CORNELIA.] This hill, though now far inland, is described by Caesar (*B. C.* ii. 24) as jutting out into the sea; and its projection formed a harbour. (Appian, *Pun.* 25; Liv. xxx. 10.) North of the Castra Cornelia, at the distance of a mile in a straight line, but of six miles by the road usually taken to avoid a marsh between the two places, lay Utica, also on the sea-coast; and on the S., between the Castra Cornelia and Carthage, the Bagradas fell into a bay which washed the N. side of the peninsula of Carthage. But now this bay is quite filled up; the river flows no longer between Carthage and Scipio's camp, but to the N. of the latter, close under the ruins of Utica, which, like the hill of the camp, are now left some miles inland: the great marsh described by Caesar has become firm land, and similar marshes have been formed in what was then deep water, but now an alluvial plain. (Strab. xvii. p. 832; Caes. *B. C.* ii. 24, 26; Liv. xxx. 25; Appian, *B. C.* ii. 44, 45; Mela, i. 7; Plin. v. 3. s. 4; Ptol. iv. 3. § 6, where the Greek numbers denoting the latitudes are corrupted; Agathem. ii. 10, p. 236, Gronov., p. 49, Huds.; Shaw, *Travels*, *&c.* pp. 146, foll., pp. 77, foll., 2d ed.; Barth, *Wanderungen*, *&c.*, pp. 81, 109, 110, 199.) Respecting the enormous serpent killed by Regulus on the banks of the Bagradas, see Gellius (vi. 3) and Florus (ii. 2. § 21, where, as also in iv. 2. § 70, the old editions and some MSS. read Bragadam).

Polybius (i. 75) mentions the river under the name of MACARAS (Μακάρα, gen.), which Gesenius considers to be its genuine Punic name, derived from Mokar the Tyrian Hercules (*Monumenta Phoenicia*, p. 95). That the Phoenicians, like the Greeks and Romans, assigned divine dignity to their rivers, is well known; but it may be worth while to notice the proof furnished, in this specific case, by the treaty of the Carthaginians with Philip, in which the rivers of the land are invoked among the attesting deities (Polyb. vii. Fr. 3). Of the very familiar corruption by which the *m* has passed into a *b*, the very passage referred to presents an example, for we have there the various reading Βακάρα (Suidas gives Βουκάρας). The modern name *Mejerdah* furnishes one among many instances, in the geography of N. Africa, in which the ancient Punic name, corrupted by the Greeks and Romans, has been more or less closely restored in the kindred Arabic. The conjecture of Reichard, that the river PAGIDA, or PAGIDAS, mentioned in the war with Tacfarinas, is the Bagradas, seems to have no adequate proof to support it. (Tac. *Ann.* iii. 20; Reichard, *Kleine Geogr. Schriften*, p. 550.)

Ptolemy places another river of the same name in Libya Interior, having its source in MT. USARGALA, nearly in the same longitude as the former river. (Ptol. iv. 6. § 10.) [P. S.]

BAGRADAS (ὁ Βαγράδας, Ptol. vi. 4. § 2; vi. 8. § 3, Bagrada; Amm. Marc. xxiii. 6; Marcian, p. 19 20, 23), a small river which flowed into the Persian Gulf, and which appears to have been the boundary of the provinces of Persis and Carmania. It has been conjectured that it is either the Rhoganis of Arrian (*Ind.* c. 39), or the Granis of the same writer. (*l. c.*) It is probably represented by the present *Nabend*, which divides *Laristán* and *Fárs* (Burnes's *Map*), or by the *Bender-begh*. (Vincent, *Navig. of Indian Ocean*, vol. i. p. 401.) [V.]

BAGRAUDANE'NE (Βαγραυδανηνή, vulg. Βαγρανανδηνή, Ptol. v. 13), one of the cantons of Armenia, lying to the E., near the sources of the Tigris. The Tauraunites mentioned by Tacitus (*Annals*, xiv. 24) are placed by Forbiger (vol. ii. p. 602) in this district. [E. B. J.]

BAHURIM, a town of Benjamin, on the eastern slope of the Mount of Olives. (2 *Sam.* xvi. 5.) It must have been situated near Bethany, and has been conjecturally assigned to the site of a modern village named *Abu Dis* (Shubert, cited by Robinson, *Bib. Res.* vol. ii. p. 103, note 3), which, however, was without the border of Benjamin. [G. W.]

BAIAE (Βαΐαι: *Eth.* Baianus: *Baja*), a place on the coast of Campania, celebrated for its warm baths, as well as for the beauty and pleasantness of its situation, on the SW. side of the bay between Cape Misenum and Puteoli, which was commonly known as the Sinus Baianus. We find no mention of a *town* of the name in early times, but its port was celebrated from a remote period, and was supposed to have derived its name from Baius, one of the companions of Ulysses, who was buried there. (Lycophr. *Alex.* 694; Strab. v. p. 245; Sil. Ital. xii. 114; Serv. *ad Aen.* vi. 107, ix. 710.) But it was never a place of any note till it became a favourite resort of the wealthy and luxurious Roman nobles towards the end of the Republic: a favour for which it was almost equally indebted to the abundance and variety of its warm springs, and to the charms of its beautiful situation. Horace speaks of the bay of "the pleasant Baiae" as surpassed by no other in the world (*Ep.* i. 1, 83); and its praises are not less celebrated by later poets, as well as prose writers. (Mart. xi. 80; Stat. *Silv.* iii. 5.96; Tac. *Ann.* xii. 21.) It appears to have come into fashion before the time of Cicero: Lucullus had a villa here, as well as at a still earlier period C. Marius, and the example was followed both by Pompey and Caesar (Varr. *R. R.* iii. 17. § 9; Seneca, *Ep.* 51; Tac. *Ann.* xiv. 9.) The villas of the latter were on the hill above Baiae, but subsequent visitors established themselves on the very edge of the sea, and even threw out vast substructions into the midst of the

waters, upon which to erect their magnificent palaces. (Hor. *Carm.* ii. 18. 20; Plin. *Ep.* ix. 7.) Baiae thus speedily became noted as an abode of indolence and luxury, and is indignantly termed by Seneca "diversorium vitiorum," a place where all restraint was thrown off, and nothing was thought of but pleasure and dissipation. (*Ep. l. c.*). Statius also terms it *Desides Baiae.* (*Silv.* iv. 7. 19.) Several Roman emperors, in succession, followed the prevailing fashion, and erected splendid villas, or rather palaces, at Baiae. Nero seems to have regarded it with especial favour, and it was in his villa here that he received his mother Agrippina for the last time, immediately before she fell a victim to his designs upon her life. (Tac. *Ann.* xiv. 4, 5; Suet. *Ner.* 34; Joseph. *Ant.* xviii. 7. § 2.) Caligula also resided frequently at Baiae, and one of his most celebrated feats of extravagance was the construction of a temporary bridge across the bay from thence to Puteoli, which, though formed of boats, was covered with earth, and rendered passable both for horsemen and chariots. Suetonius states that it was 3,600 paces in length, but the real distance across (whether measured from the *Castello di Baja*, or from Bauli, which Dion Cassius makes the point of its commencement) is little more than two Roman miles. (Suet. *Cal.* 19; Dion Cass. lix. 17; Joseph. *Ant.* xix. 1. § 1.) It was at Baiae also that the emperor Hadrian died, and at a later period Alexander Severus erected several villas here on a splendid scale. (Spartian. *Hadr.* 25; Lamprid. *Alex. Sev.* 26.)

It was, however, to its warm springs that Baiae was first indebted for its celebrity; and these appear to have been frequented for medical purposes long before the place became a fashionable resort. They are first mentioned by Livy under the name of the "aquae Cumanae" as early as B.C. 176: and are celebrated by Lucretius. (Liv. xli. 16; Lucret. vi. 747.) Pliny also speaks of them as surpassing all others in number and variety, some being sulphureous, others aluminous, acidulous, &c., so that their different properties rendered them efficacious in all kinds of diseases. The establishments of Thermae for the use of them were numerous, and on a scale of the greatest splendour; and we learn from a letter of Cassiodorus that these continued in use as late as the 6th century. (Plin. xxxi. 2; Flor. i. 16. § 4; Joseph. *l. c.*; Cassiod. *Var.* ix. 6; Hor. *Ep.* i. 15, 2—7; Stat. *Silv.* iii. 2. 17; Vitruv. ii. 6. § 2.)

Though Baiae must have grown up under the Roman Empire into a considerable town, it never obtained the privileges of a separate Municipium, and continued for all such purposes to be dependent upon the poor and decayed city of Cumae, in the territory of which it was included. (Romanelli, vol. iii. p. 512; Oreil. *Inscr.* 2263.) We have little information concerning it during the middle ages; but it appears to have fallen into neglect, and gradually became subject, as it still continues, to the noxious effects of the malaria. The modern *Castello di Baja* was erected in the reign of Charles V.; but the name of *Baja* is still applied to the whole line of coast from thence to the Lucrine Lake. Both the coast itself and the ridge of hill above it are covered with detached ruins and fragments of ancient buildings, to which it is impossible to assign any name. One of the most conspicuous edifices near the sea-shore is commonly known as the Temple of Venus, who appears to have been the tutelary deity of the place (Mart. xi. 80. 1); but it is more probable that both this and the two other buildings, called the Temples of Diana and Mercury, really belonged to Thermal establishments. (Romanelli, vol. iii. p. 514; Iorio, *Guida di Pozzuoli*, pp. 129—136; Eustace's *Classical Tour*, vol. ii. p. 410, &c.). [E.H.B.]

BAIAE (Βαΐαι: *Bayas*), a small place on the gulf of Issus, placed between Issus and the Cilician gates in the Antonine Itin. The site is identified by the name. "At the site of the Baiae or baths of the Romans, there is now a splendid Saracenic structure combining citadel, mosque, a covered bezestein, an elegant khan, and baths." (Ainsworth, *Travels in the Track of the Ten Thousand*, &c. p. 56.) Baiae may be a Roman name; but nothing appears to be known of its origin. [G. L.]

BAIOCASSES, the name of a Celtic people mentioned in the Notitia. Pliny (iv. 18) speaks of the "Viducasses, Bodiocasses, Unelli;" and the Bodiocasses are supposed to be the Baiocasses. The name Baiocassis occurs in Ausonius. (Com. Prof. Burd. iv. 7.) The modern name of *Bayeux* in the department of Calvados is supposed to represent the name Baiocasses. [AUGUSTODURUS.] [G. L.]

BALANEA (Βαλανεία, Strab. xvi. p. 733; Βαλανέαι, Steph. B.; Βαλαναῖαι, Ptol. v. 15; Βαλανέα, Hierocles; Balanea, Plin. v. 18; *Eth.* Βαλανεώτης, Belinas: *Banias*), a town of Syria subject to Aradus. (Strab. *l. c.*) It was situated 27 M. P. from Gabala, and 24 M. P. from Antaradus. The Balneis of the Peutinger Tables, which is fixed at pretty nearly the same distance from Antaradus and Gabala, must be identified with Balanea. The name arose no doubt from the baths in the neighbourhood. For coins of Balanea both Autonomous, and belonging to the Empire, see Rasche (vol. i. p. 1444) and Eckhel (vol. iii. p. 310). This city was pleasantly situated, facing the sea to the N., and having the river *Banias* on the S. and W. The foundations of a handsome church are still visible, and Roman remains cover the plain to some considerable extent. Near the sea are many granite columns, marking the site of some public building. To the E., on a low hill, are what appear to be the ruins of the Acropolis. The name of a bishop of Balanea occurs in the acts of the Council of Nice, and it is mentioned by the Crusaders under the name of *Valania.* (Wilken, *die Kreuz*, vol. i. p. 255, ii. 596, iii. (2) 257.) It is now utterly deserted. (Pococke, *Trav.* vol. ii. pt. 1. p. 200; Buckingham, *Arab Tribes*, p. 526; Thomson, *Bibl. Sacra*, vol. v. p. 257; Chesney, *Euphrat. Exped.* vol. i. p. 452.) [E. B. J.]

BALARI (Βαλαροί), one of the tribes or nations who inhabited the interior of Sardinia. They are mentioned both by Pliny and Strabo as one of the most considerable of the native races; the latter tells us that they inhabited a mountainous district, dwelling principally in caves, and in common with the other tribes of the interior raised but little produce of their own, and subsisted in great measure by plundering the more fertile districts on the coast. (Plin. iii. 7. s. 13; Strab. v. p. 225.) According to Pausanias they derived their origin from a body of African or Iberian mercenaries in the service of the Carthaginians, who took refuge in the mountains and there maintained their independence: he adds, that the name of Balari signified "fugitives," in the Corsican language. (Paus. x. 17. § 9.) Their geographical position cannot be determined with any certainty. [E. H. B.]

BALBU'RA (Βάλβουρα: *Eth.* Βαλβουρεύς), a

Lycian town, the site of which is fixed (Spratt's *Lycia*, vol. i. p. 267) at *Katara* on both sides of the *Katara Soo*, the most northern branch of the Xanthus. The acropolis hill is about 300 feet above the plain of Katara, and the plain is 4500 feet above the level of the sea. The ruins occupy a considerable space on both sides of the stream. There are two theatres at Balbura; one is on the south side of the acropolis hill, and the other is in a hollow in the front of the mountain on the south side of the stream: the hollow in the mountain formed the cavea. There are also remains of several temples at *Katara;* and of Christian churches. The Ethnic name Βαλθουρεύς occurs on two inscriptions at least at *Katara*. The site was discovered by Hoskyn and Forbes.

The name Balbura is a neuter plural. (Steph *s. v.* Βάλθουρα.) There was a district Cabalia (Plin. v. 27), named Cabalis by Strabo (p. 631), which contained Balbura and two other cities, Bubon and Oenoanda. [CABALIS.]

(Hoskyn and Leake, in *London Geog. Jour.* vol. xii. p. 143; Spratt's *Lycia.*) [G. L.]

BALCE'A (Βαλκεία, Steph. B. *s. v.*) is placed by Stephanus about, that is near, the Propontis. It is mentioned by Pliny (v. 30), who places it in Teuthrania, a district which contains Pergamum. His position, therefore, differs altogether from that which is vaguely assigned by Stephanus. [G. L.]

BALEARES (Βαλλιαρεῖς, Diod. v. 17, Eustath. *ad Dion.* 457; Βαλιαρεῖς, Βαλιαρίδες, Steph. B.; Βαλεαρίδες, Strab.; Βαλλιαρίδες, Ptol. ii. 6. § 78; Βαλεαρίαι, Agathem.; Βαλερίαι ἤτοι ἰγιειναί, the Iberian name, according to Dion Cass. ap. Tzetz. *ad Lycoph.* 633; Valeriae, *Geog. Rav.* v. 27: *Eth.* Βαλεαρεῖς, &c., Baleares, Balearici, sing. Balearis: Polybius expressly says that the islands and the people were called by the same name [iii. 33]: the forms with *e* are generally used by the Romans, those with *i* by the Greeks, but *Baliares* also occurs on Latin inscriptions [Gruter, p. 298. 3; Gori, iii. p. 173, No. 214, and in some MSS.]), or GYMNE'SIAE (Γυμνησίαι: *Eth.* Γυμνήσιος, fem. Γυμνησία, Γυμνησίς, Steph. B.), a group of islands in the Mediterranean, lying off that part of the E. coast of Spain, which is between the rivers Sucro (*Turia*) and Iberus (*Ebro*), E. of the PITYUSAE, and (roughly speaking) between 39° and 40° N. lat., and between 2¼° and 4½° E. long. The number of islands in the group is stated differently: some make them seven (Eustath. *l. c.*); some mention only one (Steph. B. *s. v.*; Strab. ii. p. 123, ἡ Γυμνησία, where, however, Groskurd and Kramer read *αἱ* Γυμνησίαι), but nearly all the ancient writers used the term to include merely the two large islands called the *Greater*, BALEARIS MAJOR (ἡ μείζων), and the *Lesser*, BALEARIS MINOR (ἡ ἐλάττων), or, as they were called in the Byzantine period, MAJORICA and MINORICA (Μαιόρικά τε καὶ Μινόρικα: Procop. *B. V.* i. 1, ii. 5; Zonar. *Ann.* ix. p. 435), whence the common modern names, *Majorca* and *Minorca*, or in Spanish *Mallorca* and *Menorca*.

It should be remembered that the Balearic group, in the modern sense of the word, includes also the PITYUSAE of the ancients, namely Ebusus (*Iviza*), and Colubraria or Ophiusa (*Formentera*). Indeed, the passage in Strabo (iii. p. 167), τὰς μὲν Πιτυούσσας δύο καὶ τὰς Γυμνησίας δύο (καλοῦσι καὶ Βαλιαρίδας) has been taken as if the words in the parenthesis referred to both groups: but that they only refer to the Gymnesiae is pretty clear, both from the consent of other writers, and from another passage of Strabo himself (xiv. p. 654). Lycophron calls the islands Χοιράδες, from their rocky nature. (*Cassand.* 633; comp. Tzetz. *ad loc.*)

There were various traditions respecting their population, some of a very fabulous complexion. The story, preserved by Lycophron (*l. c.*, Eustath. *ad Dion. Perieg. l. c.*), that certain shipwrecked Boeotians were cast naked on the islands, which were therefore called Gymnesiae (διὰ τὸ γυμνοὺς καὶ ἀχλαίνους, ἐκεῖ ἐξενεχθῆναι), is evidently invented to account for the name. There is also a tradition that the islands were colonized from Rhodes after the Trojan war (Strab. xiv. p. 654: the Rhodians, like the Baleares, were celebrated slingers: Sil. Ital. iii. 364, 365:—

"Jam cui Tlepolemus sator, et cui Lindus origo,
Funda bella ferens Balearis et alite plumbo."

At all events, they had a very mixed population, of whose habits several strange stories are told (Diod., Strab., Eustath., *ll. cc.*): that they went naked, or clothed only in sheep-skins (Tzetz. *ad Lycophr. l. c.*) — whence the name of the islands (an instance of a fact made out of an etymology), — until the Phoenicians clothed them with broad-bordered tunics (Strab. p. 168: this seems the true sense of the passage; see Groskurd's note: it is usually understood to mean that the Baleares invented the *latus clavus*, and so it was understood by Eustathius, whose note is chiefly taken from Strabo; others make them naked only in the heat of summer, Tzetz. *ad Lycophr. l. c.*): that they lived in hollow rocks and artificial caves: that they were remarkable for their love of women, and, when any were taken captive by pirates, they would give three or four men as the ransom for one woman: that they had no gold or silver coin, and forbade the importation of the precious metals, so that those of them who served as mercenaries took their pay in wine and women instead of money. Their peculiar marriage and funeral customs are related by Diodorus (v. 18).

The Baleares were, however, chiefly celebrated for their skill as slingers, in which capacity they served, as mercenaries, first under the Carthaginians, and afterwards under the Romans. They went into battle ungirt, with only a small buckler, and a javelin burnt at the end, and in some cases tipt with a small iron point; but their effective weapons were their slings, of which each man carried three, wound round his head (Strab. p. 168; Eustath. *l. c.*), or, as others tell us, one round the head, one round the body, and one in the hand. (Diod. *l. c.*; Tzetz. *ad Lycophr. l. c.*) The three slings were of different lengths, for stones of different sizes; the largest they hurled with as much force as if it were flung from a catapult; and they seldom missed their mark. To this exercise they were trained from infancy, in order to earn their livelihood as mercenary soldiers. It is said that the mothers only allowed their children to eat bread when they had struck it off a post with the sling. (Strab., Diod., *ll. cc.*; Flor. iii. 8; Tzetz. *ad Lycophr. l. c.*)

The Greek and Roman writers generally derive the name of the people from their skill as slingers (βαλεαρεῖς, from βάλλω); but Strabo assigns to the name a Phoenician origin, observing that it was the Phoenician equivalent for the Greek γυμνῆτας, that is, light-armed soldiers. (Strab. xiv. p. 654.) Though his explanation be wrong, his main fact is

probably right. The root BAL points to a Phoenician origin; perhaps the islands were sacred to the deity of that name; and the accidental resemblance to the Greek root ΒΑΛ (in βάλλω), coupled with the occupation of the people, would be quite a sufficient foundation for the usual Greek practice of assimilating the name to their own language. That it was not, however, Greek at first, may be inferred with great probability from the fact that the common Greek name of the islands is not Βαλεαρεῖς, but Γυμνησίαι, the former being the name used by the *natives*, as well as by the Carthaginians and Romans. (Plin.; Agathem.; Dion Cass. *ap.* Tzetz. *ad Lycophr.* 533; Eustath. *l. c.*) The latter name, of which two fancied etymologies have been already referred to, is probably derived from the light equipment of the Balearic troops (γυμνῆτας). (Strab. xiv. p. 654; Plin. *l. c.*)

The islands were taken possession of in very early times by the Phoenicians (Strab. iii. pp. 167, 168); a remarkable trace of whose colonization is preserved in the town of Mago (*Mahon in Minorca*), which still gives the name of a princely family of Carthage to a noble house of England. After the fall of Carthage, the islands seem to have been virtually independent. Notwithstanding their celebrity in war, the people were generally very quiet and inoffensive. (Strab.; but Florus gives them a worse character, iii. 8.) The Romans, however, easily found a pretext for charging them with complicity with the Mediterranean pirates, and they were conquered by Q. Caecilius Metellus, thence surnamed Balearicus, B. C. 123. (Liv. *Epit.* lx.; Freinsh. *Supp.* lx. 37; Florus, Strab. *ll. cc.*) Metellus settled 3,000 Roman and Spanish colonists on the larger island, and founded the cities of Palma and Pollentia. (Strab., Mel., Plin.) The islands belonged, under the empire, to the conventus of Carthago Nova, in the province of Hispania Tarraconensis, of which province they formed, with the Pityusae, the fourth district, under the government of a *praefectus pro legato*. An inscription of the time of Nero mentions the PRAEF. PRAE LEGATO INSULAR. BALIARUM. (Orelli, No. 732, who, with Muratori, reads *pro* for *prae*.) They were afterwards made a separate province, probably in the division of the empire under Constantine. (*Not. Dig. Occid.* c. xx. vol. ii. p. 466, Böcking.)

The ancient writers describe the Balearic islands sometimes as off the coast of Tyrrhenia (περὶ τὴν Τυρρηνίδα, Steph. B.), sometimes as the first islands, except the Pityusae, to one entering the Mediterranean from Gades. (Plin. *l. c.*) The larger island, BALEARIS MAJOR (*Mallorca*), or COLUMBA (*Itin. Ant.* p. 511) was a day's sail from the coast of Spain: it is, in fact, 43 miles NE. of *Iviza*, which is 50 miles E. of *C. St. Martin*. Pliny makes the distance from Dianium Pr. (*C. S. Martin*), on the coast of Spain to the Pityusae (*Iviza*, &c.), 700 stadia, and the Baleares the same distance further out at sea. The Antonine Itinerary (*l. c.*) places the Baleares 300 stadia from Ebusus (*Iviza*). The smaller island, BALEARIS MINOR (*Menorca*), or NURA (*Itin. Ant.* p. 512), lies to the E. of the larger, from which it is separated by a strait 22 miles wide. The little island of *Cabrera*, S. of *Mallorca*, is the CAPRARIA of the ancients. In magnitude the islands were described by Timaeus (*ap.* Diod. *l. c.*; Strab. xiv. p. 654) as the largest in the world, except seven—namely, Sardinia, Sicily, Cyprus, Crete, Euboea, Corsica, and Lesbos; but Strabo rightly observes that there are others larger. Strabo makes the larger island nearly 600 stadia long by 200 wide (iii. p. 167); Artemidorus gave it twice that size (Agathem. i. 5); and Pliny (*l. c.*) makes its length 100 M. P. and its circuit 375: its area is 1,430 square miles. Besides the colonies of PALMA (*Palma*) and POLLENTIA (*Pollenza*), already mentioned, of which the former lay on the SW., and the latter on the NE., it had the smaller towns of Cinium (*Sineu*), near the centre of the island, with the *Jus Latii* (Plin. *l. c.*); Cunici (*Alcudia?*), also a *civitas Latina* (Plin. *l. c.*, where Sillig now reads *Tucim*); and Gujunta (*Inscr.* ap. Gruter. p. 378. No. 1.)

The smaller island MINOR (*Menorca*) is described by Strabo as lying 270 stadia E. of Pollentia on the larger: the Antonine Itinerary (p. 512) assigns 600 stadia for the interval between the islands, which is more than twice the real space: Pliny makes the distance 30 M. P. (240 stadia), the length of the island 40 M. P., and its circuit 150. Its true length is 32 miles, average breadth 8, area about 260 square miles. Besides MAGO (*Port Mahon*), and JAMNO or JAMNA (*Ciudadela*), at the E. and W. ends respectively, both Phoenician settlements, it had the inland town of Sanisera (*Alajor*, Plin. *l. c.*).

Both islands had numerous excellent harbours, though rocky at their mouth, and requiring care in entering them (Strab., Eustath. *ll. cc.*: *Port Mahon* is one of the finest harbours in the world). Both were extremely fertile in all produce, except wine and olive oil. (Aristot. *de Mir. Ausc.* 89; Diod., but Pliny praises their wine as well as their corn, xiv. 6. s. 8, xviii. 7. s. 12: the two writers are speaking, in fact, of different periods.) They were celebrated for their cattle, especially for the mules of the lesser island; they had an immense number of rabbits, and were free from all venomous reptiles. (Strab., Mel., *l. c.*; Plin. *l. c.*, viii. 58. s. 83, xxxv. 19. s. 59; Varro, *R. R.* iii. 12; Aelian, *H. A.* xiii. 15; Solin. 26.) Among the snails valued by the Romans as a diet, was a species from the Balearic isles, called *cavaticae*, from their being bred in caves. (Plin. xxx. 6. s. 15.) Their chief mineral product was the red earth, called *sinope*, which was used by painters. (Plin. xxxv. 6. s. 13; Vitruv. vii. 7.) Their resin and pitch are mentioned by Dioscorides (*Mat. Med.* i. 92). The population of the two islands is stated by Diodorus (*l. c.*) at 30,000.

Twelve Roman miles S. of the larger island (9 miles English) in the open sea (xii. M. P. in altum) lay the little island of Capraria (*Cabrera*), a treacherous cause of shipwrecks (*insidiosa naufragiis*, Plin. *l. c*; *naufragalis*, Mart. Cap. *de Nupt. Phil.* vi.); and opposite to Palma the islets called Maenariae, Tiquadra, and parva Hannibalis. (Plin.)

The part of the Mediterranean E. of Spain, around the Balearic isles, was called Mare Balearicum (τὸ Βαλλεαρικὸν πέλαγος, Ptol. ii 4. § 3), or Sinus Balearicus. (Flor. iii. 6. § 9.)

For further information respecting the islands and the people, see the following passages, in addition to those already quoted. (Polyb. i. 67, iii. 113; Diod. ix. 106; Liv. xxi. 21, 55, xxii. 37, xxviii. 37; Hirt. *B. A.* 23; Lucan, i. 229, iii. 710; Suet. *Galb.* 10; Oros. i. 2; Serv. *ad Virg. Aen.* vii. 661.)

The islands still contain some monuments of their original inhabitants, in the shape of tumuli, such as those which Diodorus describes them as raising over their dead. These tumuli consist of large unhewn stones, and are surrounded by a fence of flat stones

set up on end; and a spiral path on the outside leads to the summit of the mound. From this arrangement, and from their being generally erected on elevated spots, they are supposed to have been used as watch-towers. The Roman remains have been almost destroyed by the Vandal conquerors; the principal ruin is that of an aqueduct near Pollentia. (Wernsdorf, *Antiq. Balear.*; Dameto, *Hist. of the Balearic Kingdom;* Armstrong's *Minorca.*) [P.S.]

BALE'SIUM, or BALE'TIUM, a town of Calabria, mentioned by Pliny (iii. 11. s. 16), who enumerates the name between Lupiae and Caelium, is evidently the same place which is called BALENTIUM in the Tabula (VALENTIA in the Itin. Hierosol., p. 609), and VALETIUM by Mela (ii. 4), all which authorities place it between Brundusium and Lupiae. Its site is clearly identified by the remains of a ruined town still visible near *S. Pietro Vernotico*, a village on the road from *Brindisi* to *Lecce*, about 12 miles from the former, and 16 from the latter city. The site is still called *Baleso* or *Valesio*, and is traversed by an ancient Roman road, still known to the peasantry of the neighbourhood as the Via Trajana. Vases, inscriptions, and other remains of antiquity have been discovered here, but the circuit of the ancient walls indicates that it was only a small town. (Galateus, *de Situ Japygiae*, pp. 73, 74; Romanelli, vol. ii. p. 79; Mommsen, *U. I. Dialekte*, p. 60.) [E. H. B.]

BALISSUS (Βαλίσσος, Plut. *Crass.* 23), a small river in Mesopotamia, below Carrhae, where the first battle took place between the soldiers of Crassus and the Parthians; and where Publius, the son of Crassus, and many of his men, were cut off. The name of this river appears under various forms, but there can be no doubt that the Balissus of Plutarch, the Belias of Ammianus (xxiii. 3), and the Bilecha (Βίληχα) of Isid. Char. (p. 3), are one and the same stream. It flowed in a westerly direction from the Chaboras (*Khabúr*), past Callinicum, and fell into the Euphrates. Its present name is said to be *Belikhe*. (Forbiger, vol. ii. p. 628.) [V.]

BALLA, or VALLA (Βάλλα, Steph. B. *s. v.*; Οὐάλλαι, Ptol. iii. 13. § 40: *Eth.* Βαλλαῖος, Steph.; Vallaeus, Plin. iv. 10. s. 17), a town of Macedonia, placed in Pieria by Ptolemy and Pliny, the inhabitants of which were removed to Pythium. (Steph. *l. c.*) As Pythium was in Perrhaebia, at the south-western foot of the Pierian mountains, Leake places Balla in the mountainous part of Pieria, and supposes that *Velvendó* may have derived its name from it. In that case it would be a different place from the BALA of the *Table*, which stood about midway between Dium and Berrhoea. (Leake, *Northern Greece*, vol. iii. p. 425.)

BALO'MUM (Βάλωμον), the name of part of the sea-coast of Gedrosia. It is not mentioned, except by Arrian (*Ind.* 23) in his account of the voyage of Nearchus, and cannot now be identified. (Vincent, *Navig. of Ind. Ocean*, vol. i. p. 249.) [V.]

BALONGA (Βαλόγγα: *Pahang*), the chief city of the "Pirates' country" (Λῃστῶν χώρα), on the Sinus Magnus, on the E. coast of the peninsula of India extra Gangem. (Ptol. vii. 2. § 7; he also places a Βαλόγκα in the Aurea Chersonesus, vii. 2. § 25.) [P. S.]

BALSA (Βάλσα: *Eth.* Balsenses, *Tavira*), a considerable town of Lusitania in Spain, on the S. coast. It was the first station W. of the Anas, after Esuris at the river's mouth, at the distance of 24 M. P. (*It. Ant.* p. 426.) It belonged to the Lusitani (Plin. iv. 21. s. 35), or to the Turduli. (Ptol. ii. 5. § 2.) Pliny enumerates its people among the *stipendiarii;* its coins show that it was a municipium, with the epithet of *Felix*. (Plin., *It. Ant.*, Ptol. *ll. cc.*; Mela, iii. 1; Marc. Heracl. p. 42; Geog. Rav. iv. 43; Sestini, *Med.* p. 3; Mionnet, Suppl. vol. i. p. 3; Resendi, *Antiq. Lusit.* iv. p. 197; Florez, *Esp. S.* vol. xiv. pp. 201, 209; Ukert, vol. ii. pt. 1. p. 388.) [P. S.]

BALTIA. Three days' sail from the coast of Scythia lay an island of immense magnitude, called Baltia; this being the name which Pliny found in Xenophon of Lampsacus. Pytheas, on the other hand, called it Basilia. (Plin. xxxvii. 7. s. 11.) For the confusion on this point, see BASILIA.

Whatever may be the uncertainties as to the exact geographical position of the ancient Baltia, the word itself is important as being the origin of our term *Baltic*. Little less certain is its Slavonic or Lithuanian origin, since so little is it German that, except in England, the usual name for the Baltic, amongst the Gothic nations, is the *East*-Sea. This helps us in certain points of criticism. In the first place, it suggests an explanation of the ambiguities of the early writers, who took their names from two sources. If *Baltia* was Slavonic, the name Ωστιαῖοι (*Eastmen*), who dwelt on its coast, was German. Yet each is found in Pytheas. Hence the likelihood of two names to the same locality, and the confusion arising therefrom. Again, the fact of the name being strange to the present Germans makes the assumption of an erroneous application of it all the more likely. Name for name, nothing represents the ancient Baltia so closely as the Great and the Little *Belts* between the Danish isles and Jutland. But these are the names of *straits* of *water*, not of *islands* of *land*. Yet the present writer believes that the Baltia of Pytheas was the island of *Fyen* or *Sealand* (one or both), and that the name Baltia is retained in that of the waters that bound them. He would not, however, believe this, if there had been no change in language. Had that been uniform from the beginning, the confusion which he assumes would have been illegitimate.

Another speculation connects itself with the root *Balt-*. In the article AVARI, a principle which will bear a wide application has been suggested. It is as follows: *when the name of a non-historical individual coincides with that of an historical population (or locality), the individual is to be considered as an eponymus.* Now, the legends of the country of the *Getae* connected them with the *Guttones* of the Baltic; indeed, when the name *Goth* became prominent, the original seat of the stock was laid on that sea, sometimes on the southern coast in the amber-country, sometimes as far north as Scandinavia. More than this, the two royal lines were those of the *Balt*-ungs (*Baltidae*), and the *Amal*-ungs (*Amalidae*). For a *Balt*, or an *Amal*, as real personages, we look in vain. Populations, however, to which they were *Eponymi*, we find in the two localities Baltia and Abalus — associated localities in the accredited mother-country. [R. G. L.]

BALYRA (Βαλύρα, Paus. iv. 33. § 3), a tributary of the Pamisus in Messenia. [MESSENIA.]

BAMBOTUS. [LIBYA.]

BANACHA (Βάναχα, or, according to another reading, Nachaba), a city of that part of Arabia Petraea which was situated towards Mesopotamia. (Ptol. v. 19. § 7.) Forster takes it to be equivalent to Beni-Nachath, i. e. the sons of Nahath, one of the

dukes of Edom, the son of Reuel, the son of Esau. (*Gen.* xxxvi. 4; Forster, *Arabia*, vol. ii. p. 52.) [G. W.]

BANADEDARI. [ARAE PHILAENORUM.]

BA'NASA (Βάνασα, Ptol. iv. l. § 13), a colony of Mauretania Tingitana, founded by Augustus, and bearing the epithet of Valentia. (Plin. v. 1.) Its site is difficult to fix. That it stood on the river Subur (*Sebou*) is clear (Plin. *l. c.*), but whether at its mouth, or higher up, is uncertain. Ptolemy places it among the *inland* cities; a term, it is true, not used by him in the context with great strictness, but the longitude he assigns to Banasa places it some distance from the sea. Pliny seems to make it inland; and, moreover, states its distance from Lixus at 75 M. P., while he places the mouth of the Subur 50 M. P. from the same place. The *Itinerary* (p. 7) gives a distance of only 40 M. P. from Banasa to Lixus (namely, Frigidis 24, Lix colonia 16); and the difficulty cannot be removed by a correction of these numbers, for the total, from Sala to Lixus, of which they form a part, is correct. The site, if on the coast, corresponds to *Mehediah;* if inland to *Mamora*, about 30 miles higher up the river, where are considerable ruins. [P. S.]

BANATIA, a town of the Vacomagi, mentioned by Ptolemy (ii. 3. § 13). Name for name, it coincides with *Bean*-Castle near Nairn, where, in 1460, Roman coins were found. [R. G. L]

BANDOBE'NE (Βανδοβηνή), a district in the extreme N. of India intra Gangem, about the river Choaspes. (Strab. xv. p. 697.) [P. S.]

BANDUSIAE FONS, a fountain in Apulia, a few miles from Venusia, celebrated by Horace in a beautiful and well-known ode. (*Carm.* iii. 13.) The name not being elsewhere mentioned, it was supposed by many writers, beginning with the old scholiast Acron (*ad loc.*), that the fountain in question was in the neighbourhood of his Sabine farm. But the Abbé Chaupy proved that a fountain about 6 miles S. of Venusia was known, as late as the beginning of the 12th century, by the name of Fons Bandusinus; and an ancient church is mentioned in ecclesiastical documents as "ecclesiam SS. MM. Gervasi et Protasi *in Bandusino Fonte apud Venusiam.*" Both the church and the fountain have now disappeared, but the site of the former is well known, and immediately close to it was a copious source called *Fontana Grande*, the waters of which are still abundant, though the fountain itself has been intentionally destroyed by the proprietor of the spot. (Chaupy, *Découverte de la Maison d'Horace*, vol. iii. pp. 364, 538—543.) The documentary evidence seems conclusive in favour of the Venusian fountain; but a source, or rather basin, not far from the site of his Sabine farm in the valley of *Licenza;* now called *Fonte Bello*, is still shown to travellers as the Fons Bandusiae, and its claim to that distinction is strenuously advocated by Dennis, in a letter inserted in Milman's *Life of Horace* (p. 103). The name is written, in the older editions of Horace, BLANDUSIA, but the best MSS. have BANDUSIA. (Obbarius, in his edition of the *Odes of Horace*, Jena, 1848, has collected all the authorities upon the subject in a note on the ode in question.) [E. H. B.]

BANIA'NA. [TURDULI.]

BANIENSES. [NORBA CAESAREA.]

BANIZOMENES, a maritime tribe of the western coast of Arabia, towards the north of the Red Sea, situated next to the country of the Nabataei. Diodorus (iii. 43) describes their coast as a bay 500 stadia deep, the mouth of which is so obstructed by precipitous rocks as to be inaccessible to ships. The inhabitants lived on the produce of their hunting. There was there a most sacred temple, held in great veneration by all the Arabs. Burckhardt describes the *Beni-Omran* as inhabiting "the mountains between Akaba and Moeyleh, on the eastern coast of the Red Sea;" and there is perhaps sufficient similarity between the names to justify Forster's identification, particularly if, as is said, the description of the gulf and of the three adjacent islands, in Diodorus, exactly corresponds with the Bay of Moilah, and the three islands off it to the south. (Forster, *Arabia*, vol. i. p. 323, ii. p. 117.) [G. W.]

BANNA. [PETRIANA.]

BANNIO. [GOBANNIO.]

BANNOMANNIA. [MENTONOMON.]

BANOVALLUM. [ISANNAVATIA.]

BA'NTIA (Βαντία: *Eth.* Bantinus), a small town about 13 miles SE. of Venusia. Pliny reckons the Bantini among the Lucanians; but Livy speaks of it as in Apulia, and Acron, in his notes on Horace, also calls it expressly "civitas Apuliae." Horace himself alludes to it as one of the places, in the neighbourhood of Venusia, familiar to his boyhood; and his expressions indicate the wooded character of its territory. (*Saltus Bantinos*, Hor. *Carm.* iii. 4, 15; Plin. iii. 11. s. 16; Liv. xxvii. 25; Acron, *ad loc.*) An ancient abbey, named *Sta. Maria di Banzi*, still marks its site, and Holstenius (*Not. in Cluver*, p. 202) tells us that in his time some remains of the ancient town were visible in its immediate neighbourhood. The district is still covered with a thick forest, now called *Bosco dell' Abadia.* (Romanelli, vol. ii. p. 241.) It was among the wooded hills between Bantia and Venusia that the Roman consuls M. Marcellus and T. Quinctius Crispinus encamped in B. C. 208, and where the skirmish took place in which Marcellus was killed, and his colleague mortally wounded. (Liv. xxvii. 25—27.) We learn from inscriptions that Bantia enjoyed the rights of a Municipium under the Roman Empire; and one of the most interesting monuments of its class is a bronze tablet, commonly known as the Tabula Bantina, which was discovered in the year 1790, at *Oppido*, 8 miles from Banzi. This contains a Roman law, or plebis-scitum, relative to the municipal affairs of Bantia, and derives its chief interest from the circumstance that it is written both in Latin and Oscan, of which last language it is one of the most important relics. (Mommsen, *Unter Italischen Dialekte*, p. 145—168; Bullett. *dell Inst. Arch.* 1847, p. 157.) [E. H. B.]

BA'NTIA (Βαντία), a town of the Calicoeni, in the district of Dassaretia in Illyria. (Polyb. v. 108.)

BANTOMANNIA. [MENTONOMON.]

BANU'BARI (Βανούβαροι), a people of the west coast of Arabia, situated between the Darrae on the north, and the Arsae on the south, towards the north of the modern district of *Hedjaz.* (Ptol. vi. 7. § 4; Forster, *Arabia*, vol. ii. pp. 127, 129.) [G. W.]

BAPHYRAS, or BA'PHYRUS (Βαφύρας), a small river of Macedonia, flowing by Dium through marshes into the sea. It was celebrated for the excellence of its τευθίδες, or cuttle-fish. (Liv. xliv. 6; Athen. vii. p. 326, d.; Lycophr. 274.) Pausanias (ix. 30. § 8) relates that this was the same river as the Helicon, which, after flowing 75 stadia above ground, has then a subterraneous course of 22 stadia, and on its reappearance is navigable under the name of Baphyras. (Leake, *Northern Greece*, vol. iii. p. 411.)

BAPTANA. [BAGISTANUS MONS.]

BAQUA'TES. [BACUATAE.]

BA'RACE. [LIMYRICA.]

BA'RACES. [TAPROBANE.]

BARATE (*Βάραττα, Βαράτη*), on the road from Iconium (*Koniyeh*) to Tyana, and 50 M. P. from Iconium. Hamilton found on his route eastward from *Koniyeh*, near *Kara Bounar*, a remarkable trachytic crater, and there were in the neighbourhood several similar cones. The distance on the map from *Koniyeh* is more than 50 geographical miles. He thinks that these Barathra are the Barata of the Tables, for "the name, which signifies 'deep pits,' cannot well apply to anything else than these remarkable craters, which must have attracted the attention of the ancients." (*Researches*, &c., vol. ii. p. 217.) The conjecture seems probable. [G. L.]

BARBANA (*Bojana*), a river of Illyria, rising in the Bebian Mountains, flows through the lake Labeatis, and forms, with the Clausula, which flows into it just below Scodra, the river called Oriundus. Livy seems to have supposed the Oriundus was a third stream rising in Mt. Scardus, into which the other two discharged themselves. (Liv. xliv. 31.)

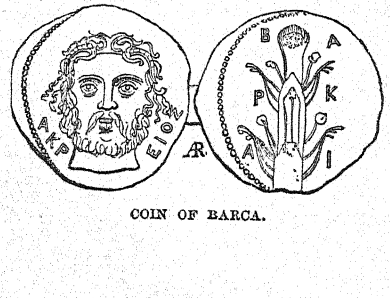
BARBARIA'NA. 1. A town in the extreme S. of Hispania Baetica, 10 M. P. from CALPE, on the road to Malaca (*It. Ant.* p. 406), identified by some with BARBESULA. (Wesseling, *ad loc.*) It is usually supposed to be near *Ximena de la Frontera*; but this seems very doubtful. (Ukert, vol. ii. pt. 1 p. 347.) 2. [AUTRIGONES.] [P. S.]

BARBA'RIUM PR. (*Βαρβάριον ἄκρον*, Ptol. ii. 5. § 4; C. *Espichel*), a promontory of Lusitania, about 18 miles S. of the mouth of the Tagus, called by other writers MAGNUM PROMONTORIUM [P. S.]

BARBE'SULA (*Βαρβησόλα*), a town on the coast of Hispania Baetica, a little E. of Calpe, on a river of the same name, now the *Guadiaro*, on the E. bank of which are still seen the ruins of the place, with inscriptions. (Mela, ii. 6; Plin. iii. 3; Marc. Herac. pp. 39, 40; Geogr. Rav. iv. 42; Tzetz. *Chil.* viii. 712; Ptol. ii. 4. §§ 6, 7; Florez, *Esp. S.* ix. 51, xii. 307; Ukert, *Geograph.* vol. ii. pt. 1. pp. 295, 348.) [P. S.]

BARBO'STHENES, a mountain in Laconia, said by Livy to have been 10 M.P. from Sparta, was situated NE. of the city. It is identified by Leake with the height immediately south of the *Khan of Krevatá*. (Liv. xxxv. 27, 30; Leake, *Peloponnesiaca*, p. 344.)

BARCA, or BARCE (*Βάρκη, ἡ πόλις Βαρκέων*, Scyl., *Eth. Βαρκαῖος*, Barcaeus; also in the form *Βαρκαῖα, Eth. Βαρκαιάτης*, Steph. B.), an inland city of Cyrenaica, founded by a body of seceders from Cyrene, under the Battiadae, Perseus, Zacynthus, Aristomedon, and Lycus, who were driven, by the treatment they received from their brother Arcesilaus II., king of Cyrene, to renounce their allegiance, and to establish this new city (about B. C. 554). At the same time they induced the Libyans of the interior (*τοὺς Λίβυας*) to join in their revolt, and from this cause, as well as from being founded in the midst of the Libyans, the city had from the first a Greco-Libyan character, which it always retained. (Herod. iv. 160.) An indication of this Libyan element seems to be furnished by the name of the king Alazir (Herod. iv. 164); and it is an interesting fact that nearly the same name, Aladdeir, occurs in an ancient genealogical table found at Cyrene. (Böckh, *Corp. Inscr.* No. 5147, vol. iii. p. 523.)



Arcesilaus II. attempted to chastise his revolted Libyan subjects. They fled for refuge to the kindred tribes in the deserts on the east, towards Egypt, and, as Arcesilaus pursued them, they turned upon him and utterly defeated him, killing 7000 of his soldiers: soon after which he was strangled by his own brother Learchus. The intestine troubles of Cyrene now gave the Barcaeans an opportunity of extending their power over the whole of the W. part of Cyrenaica, including the district on the coast (as far as Hesperides), where we find the important port of TEUCHIRA (aft. Arsinoë), belonging to them. If we are to trust traditions preserved by Servius (*ad Virg. Aen.* iv. 42), they carried their arms on land far W. over the region of the Syrtes towards Carthage, and acquired such a maritime power as to defeat the Phoenicians in a naval battle. The terror inspired by the Persian conquest of Egypt induced the princes of Barca, as well as those of Cyrene, to send presents to Cambyses, and to promise an annual tribute; and in the subsequent constitution of the empire, they were reckoned as belonging to the satrapy of Egypt. (Herod. iii. 13, 91.) But meanwhile the rising power of Barca had received a disastrous overthrow. In the conflicts of faction at Cyrene, Arcesilaus III. had fled to his father-in-law, Alazir, king of Barca; but certain exiles from Cyrene, uniting with a party of the Barcaeans, attacked both kings in the marketplace, and killed them. Upon this, Pheretima, the mother of Arcesilaus, one of those incarnations of female revenge whom history occasionally exhibits, applied for aid to Aryandes, who had been appointed satrap of Egypt by Cambyses, and retained the office under Dareius. Herodotus was doubtless right in supposing that Aryandes welcomed the opportunity which seemed to present itself, for effecting the conquest of Libya. He collected a powerful army and fleet; but, before commencing hostilities he sent a herald to Barca, demanding to know who had slain Arcesilaus. The Barcaeans collectively took the act upon themselves, for that they had suffered many evils at his hands. The desired pretext being thus gained, Aryandes despatched the expedition. (Herod. iv. 164.) After a fruitless siege of nine months, during which the Barcaeans displayed skill equal to their courage, they were outwitted by a perfidious stratagem; the Persians obtained possession of the city, and gave over the inhabitants to the brutal revenge of Pheretima. Those of the citizens who were supposed to have had most share in her son's death she impaled all round the circuit of the walls, on which she fixed as bosses the breasts of their wives. The members of the family of the Baltiadae, and those who were clearly guiltless of the murder, were suffered to remain in the city. The rest of the inhabitants were led into captivity by the Persians into Egypt, and were afterwards sent to Dareius, who settled them in a village of Bactria, which was still called Barca in the time of Herodotus (iv. 200—204). These events occurred about B. C. 510.

The tragic history of Barca would be incomplete without a mention of the fate of Pheretima. Returning with the Persian army to Egypt, she died there of a loathsome disease (*ζῶσα γὰρ εὐλέων ἐξέζεσε*), "for thus," adds the good old chronicler, "do men provoke the jealousy of the gods by the excessive indulgence of revenge" (iv. 205): to which the modern historian adds another reflection, curiously illustrative of the different points of view

from which the same event may be contemplated:—"It will be recollected that in the veins of this savage woman the Libyan blood was intermixed with the Grecian. Political enmity in Greece Proper kills, but seldom, if ever, mutilates. or sheds the blood of women." (Grote, *History of Greece*, vol. iv. p. 66.)

We hear little more of Barca, till its political extinction was completed, under the Ptolemies, by the removal of the great body of its inhabitants to the new city of PTOLEMAIS, erected on the site of the former port of Barca. Indeed, the new city would seem to have received the name of the old one; for after this period the geographers speak of Barca and Ptolemais as identical. (Strab. xvii. p. 837; Plin. v. 5; Steph. B.) Ptolemy, however, distinguishes them properly, placing Barca among the inland cities (iv. 4. § 11); a proof that, however decayed, the city still existed in the 2nd century of our era. In fact, it long survived its more powerful rival, Cyrene. Under the later empire it was an episcopal see, and under the Arabs it seems (though some dispute this) to have risen to renewed importance, on account of its position on the route from Egypt to the western provinces of North Africa. (Edrisi, iii. 3; Barth, *Wanderungen*, &c. p. 405.) Meanwhile its name has survived to the present day in that of the district of which it was the capital, the province of *Barca*, in the regency of *Tripoli;* and it was transferred, under the Romans, to the turbulent Libyan people, who lived as nomads in that district. (BARCAEI: comp. Polyaen. vii. 28; Aen. Poliorc. 37.) The Barcaeans were celebrated for their race of horses; and a Greek writer repeats a traditionary boast that they had learnt the breeding of horses from Poseidon, and the use of the chariot from Athena. (Steph. B. *s. v.*) These were the horses which gained the last Arcesilaus of Cyrene his place in the poetry of Pindar.

The position of Barca is accurately described by Scylax (pp. 45, 46, Hudson), who places its harbour (λιμὴν ὁ κατὰ Βάρκην) 500 stadia from Cyrene, and 620 from Hesperides, and the city itself 100 stadia from the sea, that is, by the most direct route, up a ravine, for the road is much longer. It stood on the summit of the terraces which overlook the W. coast of the Greater Syrtis, in a plain which, though surrounded by the sands of the desert table-land (*Desert of Barca*), is well watered, and beautifully fertile. The plain is called *El-Merjeh*, and the same name is often given to the ruins which mark the site of Barca, but the Arabs call them *El-Medinah*. These ruins are very inconsiderable, which is at once accounted for by the recorded fact that the city was built of brick (Steph. B.), and, in all probability, unburnt brick. (Barth, p. 405.) The few ruins which remain are supposed by Barth to belong to the Arab city, with the exception of those of the cisterns, on which this, like the other great cities of Africa,

COIN OF BARCA.

was entirely built, and of which three still remain. Eastward of the valley in which the city stands the route to Cyrene lies across the desert, and through a narrow defile, the difficulty of which may have been one cause of the ease with which the power of Barca appears to have been established. (Beechey, De la Cella, Pacho, Barth; comp. CYRENAICA.)

The above coin represents, on the obverse, the head of Ammon, and on the reverse the plant silphium, for the growth of which Cyrenaica was famous, with the legend BAPKAI for Βαρκαίων. (Eckhel, vol. iv. p. 128.) [P. S.]

BARCA BACTRIANAE. [BACTRIANA.]

BARCAEA. [BARCA, BARCAEI.]

BARCAEI (Βαρκαῖοι), the people of BARCA. This is made a separate article for the purpose of correcting the error of most compilers, who mention a Libyan tribe of the name on the authority of Herodotus. That the city was in the midst of Libyan tribes, and that its population was to a great extent Libyan, is unquestionable; but the name *Barcaei*, in Herodotus, always refers to the city and its neighbourhood; and it may easily be inferred from his statements that the Libyan people, among whom the city was founded, were the AUSCHISAE. Herodotus expressly distinguishes the Barcaei, together with the Cyrenaeans, from the neighbouring Libyan tribes. (iii. 13, 91.) It is true that Ptolemy calls the native tribes above the Libyan Pentapolis BARCITAE (Βαρκεῖται, iv. 4. § 9), and that Virgil (*Aen.* iv. 42), by a poetical anticipation, mentions the Barcaei among the native peoples of N. Africa:

"Hinc deserta siti regio lateque furentes Barcaei."

But such expressions belong to a period when the name had been long since extended from the city to the district of which it was the capital, and which Herodotus calls BARCAEA (Βαρκαίη, iv. 171), from which district in turn, as usual, the Libyan inhabitants of later time received their name. (See also Steph. B. *s.v.* Βάρκη: καὶ Βαρκαῖον τὸν Λίβυν, φασὶ Βαρκαῖον ἔθνος, but the reading is doubtful, and recent editors give ἔπος.)

It is not meant to be denied that the name may possibly have been of Libyan origin; but it is somewhat important to observe that Herodotus does not make the statement usually ascribed to him. For the arguments in favour of the existence of Barca as a Libyan settlement before its Grecian colonization, see Pacho (*Voyage dans la Marmarique*, p. 175, foll.). [P. S.]

BA'RCINO (Βαρκινών, Ptol. ii. 6. § 8), BA'RCENO (*Itin. Ant.* pp. 390, 398), in the later writers BA'RCELO (Avien. *Or. Mar.* 520) and BARCELONA (*Geogr. Rav.* iv. 42, v. 3; Aeth. *Cosmogr.* p. 50, ed. Basil. 1575), which name it still preserves, was a city of the Laletani, on the E. coast of Hispania Tarraconensis, a little N. of the river Rubricatus (*Llobregat*), and about half way between the Iberus (*Ebro*) and the Pyrenees. The only information respecting its early history consists in some native traditions referred to by the later Roman writers, to the effect that it was founded by Hercules 400 years before the building of Rome, and that it was rebuilt by Hamilcar Barcas, who gave it the name of his family. (Oros. vii. 143; Miñano, *Diccion.* vol. i. p. 391; Auson. *Epist.* xxiv. 68, 69, *Punica Barcino.*) Under the Romans it was a colony, with the surname of *Faventia* (Plin. iii. 3. s. 4), or, in full, *Colonia Faventia Julia Augusta Pia Barcino.* (Inscr. *ap.* Gruter, p. 426, nos. 5, 6.)

Mela (ii. 6) mentions it among the small towns of the district, probably as it was eclipsed by its neighbour Tarraco; but it may be gathered from later writers that it gradually grew in wealth and consequence, favoured as it was with a beautiful situation and an excellent harbour. (Avien. *Or. Mar. l. c.*; "Et Barcilonum amoena sedes ditium.") It enjoyed immunity from imperial burthens. (Paul. Dig. l. tit. 15, de Cens.) In modern times it has entirely supplanted TARRACO in importance, owing to its submitting to the Moors when they destroyed the latter city.

As the land has gained upon the sea along this coast, the modern city stands for the most part E. of the ancient one, only a portion of the site being common to the two. The ruins of the ancient city are inconsiderable; they are described by Laborde (*Itin. de l'Espagne*, vol. ii. p. 41, 3rd ed.), Miñano (*Diccion. l. c.*), and Ford (*Handbook of Spain*, p. 229).

There is a coin of Galba, with the epigraph, COL. BARCINO. FAVENTIA. (Rasche, *Lex. Rei Num. s. v.*) [P. S.]

BARDERATE, a town of Liguria, included by Pliny (iii. 5. s. 7) among the "nobilia oppida" of the interior of that province, between the Apennines and the Padus; but notwithstanding this epithet, we find no other mention of the name; and its situation is wholly unknown. The modern town of *Brà*, supposed by some writers to occupy its site, is certainly too near Pollentia. [E. H. B.]

BARDINES. [CHRYSORRHOAS.]

BARDO, a city of Hispania Ulterior, mentioned by Livy (xxiii. 21). Its site is not known. [P. S.]

BARE'A (Βαρεία, Ptol. ii. 4. § 8; Baria, *Geogr. Rav.* iv. 42: *Vera*), a town of the Bastuli, on the coast of Spain, in the extreme SE., reckoned as belonging to the province of Baetica, though within the boundaries of Tarraconensis. (Plin. iii. 3. s. 4, *adscriptum Baeticae Barea;* Florez, *Esp. S.* x. 4, ix. 4; coins, Sestini, p. 35.) [P. S.]

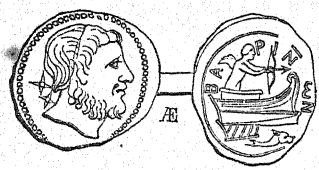
BA'RGASA (Βάργασα: *Eth.* Βαργασηνός), a city of Caria. The Ethnic name is given by Stephanus on the authority of Apollonius in his *Carica*. There are also coins of Bargasa with the epigraph Βαργασηνῶν. It is mentioned by Strabo (p. 656), who, after speaking of Cnidus, says, "then Ceramus and Bargasa, small places above the sea." The next place that he mentions is Halicarnassus. Bargasa is therefore between Cnidus and Halicarnassus. Leake places Bargasa in his map, by conjecture, at the head of the gulf of Cos, at a place which he marks *Djovata;* this seems to be the *Giva* of Cramer. Neither of them states the authority for this position. [G. L.]

BARGULUM, a town in Epeirus of uncertain site. (Liv. xxix. 12.)

BARGU'SII (Βαργούσιοι), one of the lesser peoples E. of the Ilergetes, in Hispania Tarraconensis, probably along the river *Sagarra*. (Polyb. iii. 35; Liv. xxi. 19, 23; Steph. B. *s. v.*; Ukert, *Geographie*, vol. ii. pt. 1, p. 427.) [P. S.]

BARGY'LIA (τὰ Βαργυλία: *Eth.* Βαργυλιάτης: and Bargyletes, Cic. *ad Fam.* xiii. 56), a city of Caria (Steph. *s. v.*), "which the Carians name Andanus, calling it a foundation of Achilles; and it is near Iasus and Myndus." Mela (i. 16), who calls it Bargylos, also places it on the bay of Iasus; and the bay of Iasus was also called Bargylieticus. (Liv. xxxvii. 17; Polyb. xvi. 12.) Chandler, who was in these parts, could not find Bargylia. Leake conjectures that it may be on the bay between *Pasha Limáne* and *Asýn Kálesi*.

There was at Bargylia a statue of Artemis Cindyas under the bare sky, probably in a temple, about which statue the incredible story was told, that neither rain nor snow ever fell on it. (Polyb. xvi. 12; comp. the corrupt passage in Strabo, p. 658, and Groskurd's note, vol. iii. p. 54.) Philip III. of Macedonia had a garrison in Bargylia, which the Romans required him to withdraw as one of the terms of peace (Liv. xxxiii. 30; Polyb. xvii. 2, xviii. 31); and the Bargyliatae were declared free. [G. L.]



BARIS (Βάρις), a mountain of Armenia, situated, according to Nicholas of Damascus (Joseph. *Antiq.* i. 3. § 26), near the district of Minyas, the Minni of Scripture. According to this historian it was this place where the ark rested before the deluge. St. Martin (*Mém. sur l'Armenie*, vol. i. p. 265) identifies it with *Mt. Varaz*, situated in the centre of Armenia. (Comp. Chesney, *Exped. Euphrat.* vol. ii. p. 7; Ritter, *Erdkunde*, vol. x. p. 83.) [E. B. J.

BARIS, a river of LIMYRICA, in India. [P. S.]

BARIS. [VERETUM.]

BA'RIUM (Βάριον, Βαρῖνος: *Eth.* Barinus), a maritime city of Apulia, situated on the coast of the Adriatic, about 75 miles from Brundusium, and 36 from the mouth of the Aufidus. (Strabo, vi. p. 283, gives 700 stadia for the former, and 400 for the latter distance; but both are greatly overstated. Comp. Itin. Ant. p. 117; Tab. Peut.; and Romanelli, vol. ii. p. 160.) It is still called *Bari*, and is now one of the most considerable cities in this part of Italy, but does not appear to have enjoyed equal consideration in ancient times. No mention of it is found in history previous to the conquest of Apulia by the Romans, and we have no account of its origin, but its coins attest that it had early received a great amount of Greek influence, probably from the neighbouring city of Tarentum; and prove that it must have been a place of some consideration in the 3rd century B. C. (Millingen, *Numismatique de l'Italie*, p. 149; Mommsen, *Das Römische Münzwesen*, p. 335.) It is incidentally mentioned by Livy (xl. 18), and noticed by Horace as a fishing-town. (*Bari moenia piscosi, Sat.* i. 5, 97.) Tacitus also mentions it as a Municipium of Apulia, and the name is found in Strabo, Pliny, and the other geographers among the towns belonging to that province. (Tac. *Ann.* xvi. 9; Strab. vi. p. 283; Plin. iii. 11. s. 16; Ptol. iii. 1. § 15; Mela, ii. 4; *Lib. Colon.* p. 211.) Its position on the Via Appia or Trajana, as well as its port, contributed to preserve it from decay, but it does not seem to have risen above the condition of an ordinary municipal town until after the fall of the Western Empire. But in the 10th century, after its possession had been long disputed by the Lombards, Saracens, and Greeks, it fell into the hands of the Greek emperors, who made it the capital of Apulia, and the residence of the Catapan or governor of the province. It still contains near 20,000 inhabitants, and is the see of an archbishop and the chief town of the province now called the *Terra di Bari*. No vestiges of antiquity remain there, except several inscriptions of Roman date; but excavations in the neighbourhood have brought to light numerous painted vases, which, as well as its coins, attest the influence of Greek art and civilization at Barium. (Romanelli, vol. ii. p. 158; Swinburne's *Travels*, vol. i. p. 191—200; Giustiniani, *Diz. Geogr.* vol. ii. p. 178—197.) A cross road leading direct from Barium to Tarentum is mentioned in the Itin. Ant.

(p. 119); the distance is correctly given at 60 R. miles. [E. H. B.]

COIN OF BARIUM.

BARNA (Βάρνα, Arrian. *Ind.* 27), a small village at which the fleet of Nearchus halted for a short time. It was the next place to Balomum, and is probably the same as the Badara (Βαδάρα Γεδρωσίας) of Ptolemy. (vi. 21. § 5.) (Vincent, *Navig. of Indian Ocean*, vol. i. p. 250.) [V.]

BARNUS (Βαρνοῦς), a town on the Via Egnatia, and apparently upon the confines of Illyria and Macedonia, between Lychnidus and Heraclea. (Polyb. ap. Strab. vii. p. 322.) Leake, however, conjectures that it may be the same place as Arnissa, B being a common Macedonian prefix. (Leake, *Northern Greece*, vol. iii. p. 316.) [ARNISSA.]

BAROMACI. [CAESAROMAGUS.]

BARSAMPSE (Βαρσάμψη), a place mentioned by Ptolemy (v. 18. § 5) as being on the E. bank of the Euphrates. Lat. 36° 15′, long. 72° 20′. Ritter (*Erdkunde*, vol. x. p. 1000) fixes its position S.E. of Betham-maria at the spot where the Euphrates makes a bend to the W. opposite to the caves and ruins of *El Akatin*. The name is Syrian, and has been identified as Beth-Shemesh, or Temple of the Sun. [E. B. J.]

BARSITA. [BORSIPPA.]

BARYGA'ZA, BARYGAZE'NUS SINUS. [INDIA.]

BASA or BASAG, a place on the south coast of Arabia, mentioned only by Pliny (vi. 28. s. 32), perhaps identical with Ptolemy's Abisa or Abissagi, a city situated on the Gulf of Salachitae, near the Straits of the Persian Gulf. This ancient site Forster identifies with *Abissa*, a town at the eastern extremity of the Gulf of Bassas, between Harmin and Ras-al-Had, under the Palheiros Mountains, which he conceives to be the Didymi montes of Ptolemy. (*Arabia*, vol. ii. pp. 182, 235.) [G. W.]

BASANITES MONS (Βασανίτου λίθου ὄρος, Ptol. iv. 5. § 27), formed a portion of the rocky boundary of the Nile Valley to the east. It lay about lat. 23° N., between Syene and Berenice on the Red Sea. In its immediate neighbourhood were probably the Castra Lapidariorum of the Notitia Imperii. The stone (Βάσανος), from which the mountain derived its name, was the Lapis Lydius of Pliny (xxxvi. 20. § 22), and was used in architecture for cornices of buildings, for whetstones, and also in the assay of metals. Geologists doubt whether the Basanus were basalt or hornblende. [W. B. D.]

BASANTE, a town in Lower Pannonia, called ad Basante in Peutinger. Table, whereas in several Itineraries (*Ant.* p. 131, *Hier.* p. 563) and by Ptolemy (ii. 16. § 8) it is called Bassiana (Βασσίανα.) Ruins of the place are still existing near the village of Dobrincze. [L. S.]

BASHAN (Βασάν, Βασανῖτις), sometimes represented as identical with Batanaea; but as Bashan was comprehended in the country called Peraea by Josephus,—which he extends from Machaerus to Pella, and even north of that—(for he reckons Gadara as the capital of Peraea, *B. J.* iv. 7. § 3), and Peraea is distinguished from Batanaea (*Ant.* xvii. 13. § 4, *B. J.* iii. 3. § 5), they are certainly distinct. It was inhabited by the Amorites at the period of the coming in of the children of Israel, and on the conquest of Og, was settled by the half-tribe of Manasseh. (*Numb.* xxi. 33—35, xxxii.; *Deut.* iii. 1—17.) It extended from the brook Jabbok (*Zurka*) to Mount Hermon (*Gebel-esh-Sheikh*), and was divided into several districts, of which we have particular mention of "the country of Argob,"—afterwards named from its conqueror "Bashan-havoth-Jair" (*Ib.* v. 13, 14),—and Edrei, in which was situated the royal city Astaroth. (*Deut.* i. 4, *Josh.* xiii. 12, 29—31.) It was celebrated for the excellency of its pastures; and the sheep and oxen of Bashan were proverbial. (*Deut.* xxxii. 14; *Psal.* xxii. 12; *Ezek.* xxxix. 18; *Amos*, iv. 1.) For its civil history see PERAEA. [G.W.]

BASI'LIA. 1. (*Basel*, or *Bâle*), in the Swiss canton of *Bâle*, is first mentioned by Ammianus Marcellinus (xxx. 3), who speaks of a fortress, Robur, being built near Basilia by the emperor Valentinian I. A.D. 374. After the ruin of Augusta Rauracorum (*Augst*), Basilia became a place of importance, and in the Notitia it is named Civitas Basiliensium. It is not mentioned in the Itineraries or the Table.

2. This name occurs in the Antonine Itin. between Durocortorum (*Rheims*), and Axuenna [AXUENNA], and the distance is marked x. from Durocortorum and xii. from Axuenna. D'Anville (*Notice*) makes a guess at its position. [G. L.]

BASI'LIA. The island which Pytheas called Abalus, Timaeus called Basilia. (Plin. xxxvii. 7. s. 11.) It produced amber. On the other hand, the Baltia of Pytheas was the Basilia of Timaeus. Zeuss (p. 270) reasonably suggests that, although there is a confusion in the geography which cannot be satisfactorily unravelled, the word Basilia is the name of the present island *Oesel*. [BALTIA and MENTONOMON.] [R. G. L.]

BA'SILIS (Βάσιλις, Βασιλίς: *Eth.* Βασιλίτης), a town of Arcadia in the district Parrhasia, on the Alpheius, said to have been founded by the Arcadian king Cypselus, and containing a temple of the Eleusinian Demeter. It is identified by Kiepert in his map with the Cypsela mentioned by Thucydides (v. 33). There are a few remains of Basilis near *Kyparissia*. (Paus. viii. 30. § 5; Athen. p. 609, e.; Steph. B. *s. v.*; Leake, *Morea*, vol. ii. p. 293; Ross, *Reisen im Peloponnes*, vol. i. p. 89.) [CYPSELA.]

BASSAE. [PHIGALIA.]

BASSIANA. [BASANTE.]

BASTA, a town of Calabria, described by Pliny (iii. 11. s. 16) as situated between Hydruntum and the Iapygian Promontory. Its name is still retained by the little village of *Vaste* near *Poggiardo*, about 10 miles SW. of *Otranto*, and 19 from the *Capo della Leuca* (the Iapygian Promontory). Galateo, a local topographer of the 16th century, speaks of the remains of the ancient city as visible in his time; while without the walls were numerous sepulchres, in which were discovered vases, arms, and other objects of bronze, as well as an inscription, curious as being one of the most considerable relics of the Messapian dialect. (Galateo, *de Situ Iapygiae*, pp. 96, 97; Romanelli, vol. ii. p. 30, 31; Gruter, *Inscr.* pp. 145-5; Mommsen, *Unter Italischen Dialekte*, p. 52—56.)

The BASTERBINI of Pliny, mentioned by him shortly afterwards among the "Calabrorum Mediterranei," must certainly be the inhabitants of Basta, though the ethnic form is curious. [E. H. B.]

BASTARNAE (Βαστάρναι) or BASTERNAE (Βαστέρναι), one of the most powerful tribes of Sarmatia Europaea, first became known to the Romans in the wars with Philip and Perseus, kings of Macedonia, to the latter of whom they furnished 20,000 mercenaries. Various accounts were given of their origin; but they were generally supposed to be of the German race. Their first settlements in Sarmatia seem to have been in the highlands between the *Theiss* and *March*, whence they pressed forward to the lower Danube, as far as its mouth, where a portion of the people, settling in the island of PEUCE, obtained the name of PEUCINI. They also extended to the S. side of the Danube, where they made predatory incursions into Thrace, and engaged in war with the governors of the Roman province of Macedonia. They were driven back across the Danube by M. Crassus, in B. C. 30. In the later geographers we find them settled between the Tyras (*Dniester*) and Borysthenes (*Dnieper*), the Peucini remaining at the mouth of the Danube. Other tribes of them are mentioned under the names of Atmoni and Sidones. They were a wild people, remarkable for their stature and their courage. They lived entirely by war; and carried their women and children with them on waggons. Their main force was their cavalry, supported by a light infantry, trained to keep up, even at full speed, with the horsemen, each of whom was accompanied by one of these foot-soldiers (παραβάτης). Their government was regal. (Polyb. xxvi. 9; Strab. ii. pp. 93, 118, vi. pp. 291, 294, vii. p. 305, et seq.; Scymn. *Fr.* 50; Memnon, 29; Appian, *Mithr.* 69, 71, *de Reb. Maced.* 16; Dion Cass. xxxiv. 17, li. 23, et seq.; Plut. *Aem. Paul.* 12; Liv. xl. 5, 57, et seq., xliv. 26, et seq.; Tac. *Ann.* ii. 65, *Germ.* 46; Justin, xxxii. 3; Plin. iv. 12. s. 25; Ptol. iii. 5. § 19; and many other passages of ancient writers; Ukert, *Georg. d. Griech. u. Röm.* vol. iii. pt. 2, pp. 427, 428.) [P. S.]

BASTETA'NI, BASTITA'NI, BASTU'LI (Βαστηταvοί, Βαστιτανοί, Βαστοῦλοι), according to Strabo, were a people of Hispania Baetica, occupying the whole of the S. coast, from Calpe on the W. to Barca on the E., which was called from them BASTETANIA (Βαστηταvία). They also extended inland, on the E., along M. Orospeda. But Ptolemy distinguishes the Bastuli from the Bastetani, placing the latter E. of the former, as far as the borders of the ORETANI, and extending the Bastuli W. as far as the mouth of the Baetis. They were a mixed race, partly Iberian and partly Phoenician, and hence Ptolemy speaks of them as Βαστοῦλοι οἱ καλουμενοὶ Ποινοί, and Appian calls them Βλαστοφοίνικες (*Hisp.* 56). (Strab. iii. pp. 139, 155, 156, 162; Mela, iii. 1; Plin. iii. 1. s. 3; Ptol. ii. 4. §§ 6, 9; Ukert, vol. ii. pt. 1, pp. 308, 309, 315, 406). [P. S.]

BA'STIA. [MENTESA BASTIA.]

BATA (Βάτα), a village and harbour in Sarmatia Asiatica, on the Euxine, 400 stadia S. of Sinda, and near the mouth of the river Psychrus. (Strab. xi. p. 496; Ptol. v. 9. § 8.) [P. S.]

BATANA. [ECBATANA.]

BATANAEA (Βαταναία), a district to the NE. of Palestine, situated between Gaulonitis (which bounded Galilee on the east, and extended from the Sea of Tiberias to the sources of the Jordan) and Ituraea or Auranitis, having Trachonitis on the north. (Reland, *Palaest.* p. 108.) It was added to the kingdom of Herod the Great by Augustus (Joseph. *Ant.* xv. 10. § 1), and afterwards comprehended with Ituraea (or Aulonitis) and Trachonitis, in the tetrarchy of Philip (xvii. 13. § 4; comp. *St. Luke*, iii. 1; Reland, pp. 108, 202.) It is reckoned to Syria by Ptolemy (v. 15. § 25). [G. W.]

BATAVA CASTRA (*Passau*), also called Batavinum oppidum, a town or rather a fort in Vindelicia, at the point where the Aenus flows into the Danube, and opposite the town of Boiodurum. It derived its name from the fact that the ninth Batavian cohort was stationed there. (Eugipp. *Vit. Sever.* 22. and 27; *Notit. Imper.*) [L. S.]

BA'TAVI, or BATA'VI (Βατουοί, Βατάουοι), for the Romans seem to have pronounced the name both ways (Juven. viii. 51; Lucan, i. 431), a people who are first mentioned by Caesar (*B. G.* iv. 10). The name is also written Vatavi in some MSS. of Caesar; and there are other varieties of the name. The Batavi were a branch, or part of the Chatti, a German people, who left their home in consequence of domestic broils, and occupied an island in the Rhine, where they became included in the Roman Empire, though they paid the Romans no taxes, and knew not what it was to be ground by the Publicani: they were only used as soldiers. (Tac. *Germ.* i. 29, *Hist.* iv. 12.) They occupied this island in Caesar's time, B. C. 55, but we do not know how long they had been there. The Batavi were good horsemen, and were employed as cavalry by the Romans in their campaigns on the Lower Rhine, and in Britain (Tac. *Hist.* iv. 12), and also as infantry (*Agric.* 36). In the time of Vitellius (A. D. 69) Claudius Civilis, a Batavian chief, who, or one of his ancestors, as we may infer from his name, had obtained the title of a Roman citizen, rose in arms against the Romans. After a desperate struggle he was defeated, and the Batavi were reduced to submission. (Tac. *Hist.* iv. 12—37; 54—79, v. 14—26.) But as we learn from the passage of Tacitus already cited (*Germ.* 29), they remained free from the visits of the Roman taxgatherer; and they had the sounding title of brothers and friends of the Roman people. Batavian cavalry are mentioned as employed by the emperor Hadrian, and they swam the Danube in full armour (Dion Cass. lxix. 9; and note in the edition of Reimarus, p. 1482). During the Roman occupation of Britain, Batavi were often stationed in the island.

The Batavi were employed in the Roman armies as late as the middle of the fourth century of the Christian aera; and they are mentioned on one occasion as being in garrison at Sirmium in Pannonia. (Zosim. iii. 35.)

The Batavi were men of large size (Tac. *Hist.* iv. 14, v. 18), with light or red hair (Martial, xiv. 176; Auricomus Batavus, Sil. iii. 608).

The Batavi were included within the limits of Gallia, as Gallia is defined by Caesar (*B. G.* iv. 10), who makes the Rhine its eastern boundary from its source in the Alps to its outlet in the Ocean. The names of the places within the limits of their settlement appear to show that this country was originally Gallic. The Batavi occupied an island (Insula Batavorum, Caesar, *B. G.* iv. 10). Caesar was informed, for he only knew it by hearsay, that the Mosa received a branch from the Rhine; this branch was called Vahalis, or Vacalus, according to some of the best MSS. of Caesar, now the *Waal*. The meaning of the passage of Caesar, in which he describes the "Insula Batavorum," appears to be

that the island of the Batavi was formed by the *Waal*, or the branch from the Rhine, the Mosa, and the main stream of the Rhine, so that the Ocean would bound the island on the west; but this is not what he says, according to some texts (see Schneider's *Caesar*, iv. p. 326). Tacitus (*Ann.* ii. 6) describes the Rhine as dividing into two streams at the point where the Batavian territory begins (apud principium agri Batavi), and continuing its rapid course, under the same name, to the Ocean. The stream on the Gallic side, which is wider and less rapid, receives from the natives the name Vahalis, which name is soon changed to that of Mosa, by the outlet of which river it enters the same Ocean as the Rhine — We may infer from this passage that Tacitus conceived the island as formed by the main branch of the Rhine, by the other branch called the Vahalis, which flows into the Mosa, by the course of the Mosa to the sea, after it had received the Vahalis, and by the Ocean on the west. And the interpretation, which is the true meaning of his words, is confirmed by another passage (*Hist.* iv. 12), in which he says that the Ocean was the western boundary of the island (a fronte). Pliny (iv. 15) makes the Insula Batavorum nearly 100 M. P. in length, which is about the distance from the fort of *Schenkenschanz*, where the first separation of the Rhine takes place, to the mouth of the *Maas*. This fort was built on the site of a fort named Herispick, which place, as we learn from a writer of the ninth century, was at that time the point of separation of the Rhine and Waal, which are described as surrounding the "Provincia Batua." (Walckenaer, *Géog.* &c., vol. i. p. 493.) The result of all these authorities appears to be that the island was formed by the bifurcation of the Rhine, the northern branch of which enters the sea at Katwyck, a few miles north of Leyden, by the Waal, and the course of the Maas after it has received the Waal, and by the sea. The Waal seems to have undergone considerable changes, and the place of its junction with the Maas may have varied. Walckenaer, following Oudendorp's text, endeavours to explain the passage in Caesar, who, according to that text, says that the "Mosa .... having received a portion of the Rhine, which is called Vahalis, and makes the Insula Batavorum, flows into the Ocean, and it is not further from the Ocean than lxxx. M.P., that it passes into the Rhenus." But Walckenaer's attempt is a failure, and he helps it out by slightly altering Oudendorp's text, which he professed to follow. Though Caesar's text is uncertain, it is hardly uncertain what he means to say.

The first writer who calls this island Batavia is Zosimus (iii. 6), and he says that in the time of Constantius (A. D. 358), this island, which was once Roman, was in the possession of the Salii, who were Franks. Batavia was no doubt the genuine name, which is preserved in *Betuwe*, the name of a district at the bifurcation of the Rhine and the Waal. The Canninefates, or Canninefates (Plin. iv. 15; Tac. *Hist.* iv. 15), a people of the same race as the Batavi, also occupied the island, and as the Batavi seem to have been in the eastern part, it is supposed that the Canninefates occupied the western part. The Canninefates were subdued by Tiberius in the reign of Augustus. (Vell. Pat. ii. 105.) The chief place was Lugdunum (*Leyden*). This name, Lugdunum, is Celtic as well as Batavodurum, the other chief town of the island, which confirms the supposition that the Celtic nation originally extended as far north as the mouth and lower course of the Rhine; and Tacitus (*Hist.* iv. 12) states this distinctly. In the time of Nero (Tac. *Ann.* x. 20) the Roman commander Corbulo, who was in the island, employed his soldiers who had nothing to do, in digging a canal to unite the Rhine and the Maas. It was 23 M. P. in length, or 170 stadia according to Dion Cassius (lx. 30). It ran from Lugdunum past *Delft* to the Maas below *Rotterdam*, and entered the *Maas* at or near *Vlaardingen*. A Roman road ran from *Leyden* through Trajectum (*Utrecht*) to Burginatio, apparently a word that contains the Teutonic element, *burg*; and the site of Burginatio seems to be that of Schenken-schanz. [G. L.]

BATAVODU'RUM, a place on the Rhine (Tac. *Hist.* v. 20), where the Romans had a legion, the Secunda, during the war with Civilis. The name Batavo-dur, um means a Batavian place on a stream. The site is generally supposed to be what was called *Dorestade* in the middle ages, and now *Wyck-te-Durstede*, which is in the angle formed by the *Leck* and the *Kromme Rhyn*, a position which is consistent with the attempt of the German auxiliaries of Civilis to destroy a bridge at Batavodurum, if we suppose that they came from the German or north side of the Rhine to attack the place. Some geographers fix Batavodurum at Noviomagus, generally supposed to be *Nymegen*, in favour of which something may be said. [G. L.]

BATAVO'RUM INSULA. [BATAVI.]

BATAVO'RUM O'PPIDUM, is mentioned in Tacitus (*Hist.* v. 19), as it stands in most texts. Civilis, after being defeated by the Romans at Vetera, and not being able to defend the "Batavorum Oppidum" retreated into the Batavorum Insula. If *Nymegen* were Batavodurum, the Batavorum Oppidum and Batavodurum might be the same place. If we read in Tacitus (*Hist.* v. 19) "Oppida Batavorum," as one MS. at least has, there must have been Batavian towns out of the Insula as well as in it; and this may be so, as Lipsius contends, and cites in support of his opinion Tacitus (*Hist.* iv. 12). *Batenburg*, on the right bank of the Maas, and nearly due west of *Nymegen*, will suit very well the position of the Oppidum Batavorum, so far as the events mentioned in Tacitus show; and in this case also we have a Batavian town which is not within the Insula. [G. L.]

BATHINUS, a river of Dalmatia in Illyricum, the situation of which is unknown. (Vell. Pat. ii. 114.)

BATHOS (Βάθος), a place of Arcadia in the district Parrhasia, between Trapezus and Basilis. Near to a neighbouring fountain called Olympias fire was seen to issue from the ground. In the ravine, which Pausanias indicates by the name *bathos*, the earth burnt for several years about 30 or 40 years ago, but without any flames. (Paus. viii. 29. § 1; Ross, *Reisen im Peloponnes*, vol. i. p. 90.)

BATHY'NIAS (Βαθύνιας), a river in Thrace, emptying itself into the Propontis not far from Byzantium. (Plin. iv. 18; Ptol. iii. 11. § 6.) This river is probably the same as the one called Bathyrsus by Theophanes (vol. v. p. 340, ed. Bonn), and Bithyas by Appian (*Mithrid.* 1). [L. S.]

BATHYS (Βαθύς), a small river on the coast of Pontus, 75 stadia north of the Acampsis (Arr. p. 7), and of course between that river and the Phasis. It is also mentioned by Pliny (vi. 4), who places only one stream between it and the Phasis. [G. L.]

BATHYS PORTUS. [AULIS.]

BATIAE (Βατίαι), a town of Thesprotia in Epeirus, mentioned along with Elateia, and situated in the interior in the neighbourhood of Pandosia. (Strab. vii. p. 324; Theopomp. ap. Harpocrat. *s. v.* Ἐλάτεια; Leake, *Northern Greece*, vol. iv. p. 74.)

BATIA'NA, in Gallia Narbonensis, is placed in the Table between Acunum (*Ancone*) and Valentia (*Valence*). It appears in the geographer of Ravenna, under the name Vatiana. D'Anville fixes the position at *Baix*, on the west bank of the Rhone; but Walckenaer (*Géog.* &c, vol. ii. p. 204) places it opposite to Baix, at a place named *Bancs*, which is the same name as the Vancianis of the Jerusalem Itin. Probably there was a road on both sides of the river between Valentia and Acunum. [G. L.]

BATI'NI (Βατεινοί), a German tribe, which Ptolemy (ii. 11. § 20) places between Mount Sudeta and Asciburgius. Some believe the Batini to have been the same as the Butones, who, together with other tribes, were subdued by Maroboduus. (Strab. vii. p. 290, where however Cramer reads Γοὐτωνες.) Modern writers connect the names Budissin or Budia with the ancient Butini. (See Kruse, *Budorgis*, p. 113.) [L. S.]

BATINUS, a river of Picenum, mentioned only by Pliny (iii. 13. s. 18), who places it between the Vomanus (*Vomano*), and the Truentus (*Tronto*). There can be little doubt that it was the river now called the *Tordino*, which flows by *Teramo* (Interamna), and enters the Adriatic near *Giulia Nuova*. [E. H. B.]

BATNAE (Βάτναι: *Eth.* Βατναῖος). 1. A town of Osroene. This name of Syriac origin is found in the Arabic, and means a place in a valley where waters meet. (Milman, note on *Gibbon's Decl. and Fall*, vol. iv. p. 144; St. Martin, note on *Le Beau*, vol. iii. p. 56.) According to Amm. Marcellinus (xiv. 3. § 3) it was a municipal town in the district of Anthemusia, built by the Macedonians at a little distance from the Euphrates. Many opulent traders resided here, and during the month of September a large fair was held, which was attended by merchants from India and China. Dion Cassius mentions that Trajan, after his capture of Batnae and Nisibis, assumed the name of Parthicus. At Batnae it is recorded that the emperor Julian met with one of those disastrous presages which had so much influence upon him. (Amm. Marc. xxiii. 2.) Zosimus (iii. 12) merely mentions his march from it to Carrhae. Procopius (*B. P.* ii. 12) describes it as a small and unimportant town at about a day's journey from Edessa, which was easily taken by Chosroes. Justinian afterwards fortified it, and it became a place of some consideration. (Procop. *De Aedif.* xii. 8.) The Syrian Christians called this city Batna Sarugi, or Batna in Sarugo. (Assemanni, *Bibl. Orient.* vol. i. p. 285.) Afterwards the name of Batnae seems to have given way to that of Sarug; and under that title its later history is fully given in Assemann (*Bibliotheca Orientalis*). In the Peutinger Tables it appears under the name of Batnis, between Thiar (Deoera) and Charris (Carrhae), and the Antonine Itinerary places it at 10 M. P. from Edessa; the unintelligible affix of "Mari" to the name being, according to Wesseling, an abbreviation of "Municipium." This place is mentioned also by Hierocles. Colonel Chesney speaks of remains of this city, and describes two colossal unfinished lions at *Aulan Tágh*, about 8 miles S. of Batnae, as of peculiar interest. (*Exped. Euphrat.* vol. i. p. 114.)

The ruins of which Lord Pollington (*Journal Geog. Soc.* vol. x. p. 451) speaks as being on the road from *Edessa* to *Bir*, are conjectured by Ritter to belong to this place. (*Erdkunde*, vol. xi. p. 282.)

2. A village of Syria, which has often been confounded with the city of the same name on the other side of the Euphrates; according to the Antonine Itinerary it was situated between Beroea and Hierapolis, 54 M. P. from the former, and 21 M. P., or, according to the Peutinger Tables, 18 M. P. from the latter. It is to this place that the well-known description of Julian, Βαρβαρικὸν ὄνομα τοῦτο, χωρίον ἐστὶν Ἑλληνικόν (*Epist.* 27), applies. The emperor describes it as situated in a grove of cypresses, and prefers it to Ossa, Pelion, and Olympus. Abúlfedá (*Tab. Syr.* p. 192) speaks of it in a manner to justify these praises. [E. B. J.]

BATRASABBES (or Batrasaves), a town of the Omani (now *Omàn*) in Arabia, at the mouth of the Persian Gulf, and near to Cape Mussendom (Plin. vi. 28. s. 32), identical in situation with the Black Mountains and Cape of Asabi, and still marked by a town and district named Sabee, close to C. Mussendom. (Forster, *Arabia*, vol. ii. p. 225.) [G. W.]

BATULUM, a town of Campania, mentioned by Virgil (*Aen.* vii. 739) in conjunction with Rufrae and Celenna; and by Silius Italicus (viii. 566), who associates it with Mucrae and Bovianum. The latter author clearly regards it as a Samnite city; but Virgil seems to be enumerating only places which adjoined the Campanian plain, and Servius in his note on the passage calls both Rufrae and Batulum "castella Campaniae, a Samnitibus condita." The name is not mentioned by any other author, and its site is wholly unknown. [E. H. B.]

BAUDOBRICA is placed in the Table, where it is named Bontobrice, above Confluentes (*Coblenz*) at the junction of the *Rhine* and *Mosel*. The Notitia places it between Coblenz and *Bingen*. It is twice mentioned in the Antonine Itin., under the name of Baudobrica; but it is erroneously placed between Antunnacum (*Andernach*) and *Bonn*. The distances in the Table and the column of Tongern, where it is named Bondobrica, fix the site at Boppart, which is on the west bank of the Rhine, between *Oberwesel* and *Coblenz*. The name *Boppart* is the same as the name Bobardia, which occurs in mediaeval documents. [G. L.]

BAULI (Βαῦλοι), a place on the coast of Campania, between Baiae and Cape Misenum. It was merely an obscure village before it became, in common with the neighbouring Baiae, a place of resort for wealthy Romans; but late writers absurdly derived its name from Boaulia (Βοαύλια), and pretended that Hercules stabled his oxen there; whence Silius Italicus calls it "Herculei Bauli." (xii. 156; Serv. *ad Aen.* vi. 107; Symmach. *Ep.* i. 1.) The orator Hortensius had a villa here with some remarkable fish-ponds, which were the wonder of his contemporaries; they afterwards passed into the possession of Antonia, the wife of Drusus. (Varr. *R. R.* iii. 17; Plin. ix. 55. s. 81.) It is in this villa that Cicero lays the scene of his supposed dialogue with Catulus and Lucullus, which forms the second book of the Academics. (Cic. *Acad.* ii. 3, 40.) Nero afterwards had a villa here, where Agrippina landed, and was received by him just before he caused her to be put to death. Dion Cassius represents it as the actual scene of her murder, but, from the more detailed narrative of Tacitus, it

appears that she proceeded from thence to Baiae, and there embarked with the view of returning to Bauli; and when the attempt to drown her on the passage failed, took refuge in her own villa near the Lucrine Lake, where she was soon after assassinated. (Tac. *Ann.* xiv. 4—8; Suet. *Ner.* 34; Dion Cass. lxi. 13; Mart. iv. 63.) We learn from a letter of Symmachus that Bauli had lost nothing of its pleasantness, and was still occupied by numerous villas, as late as the reign of Theodosius; but we have no subsequent account of it. The modern village of *Bacolo* stands on a ridge of hill at some height above the sea, but it is evident, both from the expression of Silius Italicus, "ipso in litore" (*l. c.*), and from the narrative of Tacitus, that the ancient Bauli was close to the sea-shore; the range of villas probably joining those of Baiae, so that the two names are not unfrequently interchanged. There still exist on the shore extensive ruins and fragments of ancient buildings, which have every appearance of having belonged to the palace-like villas in question. Adjoining these are a number of artificial grottoes or galleries, commonly called *Le Cento Camerelle*, opening out to the sea; the precise object of which is unknown, but which were doubtless connected with some of the villas here. On the hill above is an immense subterranean and vaulted edifice, which appears to have been a reservoir for water; probably designed for the supply of the fleet at Misenum. It is one of the greatest works of the kind now extant, and is commonly called *La Piscina Mirabile*. (Eustace's *Class. Tour*, vol. ii. p. 417; Romanelli, vol. iii. p. 510.) [E. H. B.]

BAUTAE is placed in the Antonine Itin., on a road from Darantasia (*Moutiers en Tarentaise*) to Geneva. D'Anville fixes Bautae at *Vieux Annecy*, a little distance north of the town of *Annecy* in *Savoy*. [G. L.]

BAUTES, BAUTIS, or BAUTISUS (Βαύτης, Βαύτισος: *Hoang-ho* or *Yellow River*), one of the two chief rivers of SERICA, rising, according to Ptolemy, from three sources, one in the Casii M., another in the Ottocorras M., and a third in the Emodi M.; and flowing into the country of the Sinae. (Ptol. vi. 16. § 3; Amm. Marc. xxiii. 6.) The three sources of Ptolemy have not been identified with any certainty. [P. S.]

BAUZANUM (*Botzen*), a town in Rhaetia. (Paul. Diac. v. 36.)

BAVO (Plin. iii. 26. s. 30), or BOA (Cod. Theod. 16. tit. 5. s. 53; also Boae, Amm. Marc. xxii. 3; Boia, *Ant. Itin.* p. 523, Wess.: *Bua*), an island off the coast of Dalmatia in Illyricum, used as a place of banishment under the emperors.

BAZI'RA (τὰ Βάζιρα) or BEZI'RA, a fort of the Assaceni, at the S. foot of M. Paropamisus, taken by Alexander on his march into India. (Arrian, *Anab.* iv. 27, 28; Curt. viii. 10. § 2.) It is usually identified with *Bajore* or *Bishore*, NW. of *Peshawer*; but it is by no means certain that this is the true site. [P. S.]

BAZIUM (Βάζιον ἄκρον, Ptol. iv. 5. § 8), a promontory which formed the southern extremity of Foul Bay (Sinus Immundus), and appears to be the modern *Ras el Naschef*. It was in lat. 24° 5′ N., in the Regio Troglodytica, and was the northernmost projection of Aethiopia Proper on the coast of the Red Sea. [W. B. D.]

BEA'TIA (*Inscr.*), BIA'TIA (Βιατία, Ptol. ii. 6. § 9), or VIA'TIA (Plin. iii. 3. s. 4), a city of the Oretani in Hispania Tarraconensis, on the frontier of Baetica: now *Baeza*, on the upper *Guadalquivir*. (Florez, vii. p. 97; Ukert, vol. ii. pt. 1. p. 408.) [P. S.]

BE'BII MONTES. [ILLYRICUM.]

BEBRY'CES (Βέβρυκες, their country Βεβρυκία). 1. A nation on the Pontus in Asia. Stephanus (*s. v.* Βυσναῖοι) also mentions the Bysnaei as a tribe of Bebryces. Strabo (p. 295) supposes the Bebryces to have been of Thracian stock, and that their first place of settlement in Asia was Mysia. Dionysius Periegetes (805; and see the commentary of Eustathius) places the Bebryces where the river Cius enters the Propontis, that is, about the Gulf of Cius. Eratosthenes (Plin. v. 30) enumerates the Bebryces among the Asiatic nations that had perished. In fact, the Bebryces belong to mythology rather than to history. [G. L.]

2. An Iberian people, regarded as aboriginal, dwelling on both sides of the Pyrenees. They were wild and uncivilized, and subsisted on the produce of their flocks and herds. (Avien. *Or. Marit.* 485; Sil. Ital. iii. 420—443, xv. 494; Tzetz. *ad Lycophr.* 516, 1305; Zonar. viii. 21; Humboldt, *die Urbewohner Hispaniens*, p. 94.) [P. S.]

BECHEIRES (Βέχειρες, Βέχειροι), a barbarous tribe on the coast of the Pontus (Apoll. Rhod. ii. 396, 1246; Dionys. Perieg. 765), mentioned with the Macrones, and as east of the Macrones. Scylax, following the coast from east to west, names the Becheires, and then the Macrocephali, supposed by Cramer to be the Macrones; but Pliny (vi. 3) distinguishes the Macrones and Macrocephali. Pliny's enumeration of names often rather confuses than helps us; and it is difficult to say where he places the Becheires. But we might infer from Pliny and Mela (i. 19) that they were west of Trapezus, and east of the Thermodon. [G. L.]

BEDA, a position placed on the road between Augusta Trevirorum (*Trier*) and *Cologne*, 12 Gallic leagues from *Trier*. It appears to be a place called *Bidburg*. The name Pagus Bedensis occurs in the notice of the division made A.D. 870 of the possessions of Lothaire between his brothers Louis the German and Charles the Bald. [G. L.]

BEDAIUM or BIDAIUM (Βάδακον), a town in Noricum. (Ptol. ii. 14. § 3; *Itin. Ant.* pp. 236, 257, 258; Tab. Peuting.) Modern geographers identify it with *Bamburg* or with *Burghausen* near the point where the *Salzach* flows into the Danube. (Comp. Orelli, *Inscript.* No. 1694, where a god Bedaius is mentioned, who was probably worshipped at Bedaium.) [L. S.]

BEDRIACUM or BEBRIACUM (the orthography of the name is very uncertain, but the best MSS. of Tacitus give the first form: Βηδριακόν, Joseph.; Βητριακόν, Plut.: *Eth.* Bedriacensis), a village or small town (vicus) of Cisalpine Gaul, situated between Verona and Cremona. Though in itself an inconsiderable place, and not mentioned by any of the ancient geographers, it was celebrated as the scene of two important and decisive battles, the first in A.D. 69, between the generals of Vitellius, Caecina and Fabius Valens, and those of Otho; which ended in the complete victory of the former: the second, only a few months later, in which the Vitellian generals were defeated in their turn by Antonius Primus, the lieutenant of Vespasian. But the former battle, from its being immediately followed by the death of Otho, obtained the greatest note, and is generally meant when the "pugna Bedriacensis" is mentioned. Neither of the two actions was, however, in fact, fought at, or close to,

Bedriacum, but on the road from thence to Cremona, and considerably nearer to the latter city: the assailing army having, in both instances, advanced from Bedriacum. (Tac. *Hist.* ii. 23, 39—44, 49, iii. 15, 20—25, 27; Plut. *Otho*, 8, 11—13; Joseph. *B. J.* iv. 9. § 9; Suet. *Oth.* 9; Eutrop. vii. 17; Vict. *Epit.* 7; Juv. ii. 106, and Schol. *ad loc.*) The position of Bedriacum has been the subject of much controversy. From the detailed narrative of Tacitus we learn that it was on the high road from Verona to Cremona; while the Tabula places Beloriaco (evidently a mere corruption of Bebriaco) on the road from Cremona to Mantua, at the distance of 22 M. P. from the former city. This distance coincides exactly with a point on the modern road from Cremona to Mantua, about 2 miles E. of *S. Lorenzo Guazzone*, the same distance NW. of *Bozzolo*, and close to the village of *Calvatone*, from whence a perfectly direct line of road (now abandoned, but probably that of the Roman road) leads by *Goito* to Verona. If this position be correct Bedriacum was situated just at the point of separation of the two roads from Cremona, one of which appears from Tacitus (*Hist.* iii. 21) to have been called the Via Postumia. Cluverius placed Bedriacum at *Canneto*, a small town on the *Oglio* (Ollius) a few miles NW. of the place just suggested: Mannert fixes it at *S. Lorenzo Guazzone:* D'Anville at *Cividale*, about 3 miles S. of *Bozzolo;* but this is probably too near the Padus. The precise position must depend upon the course of the Roman road, which has not been correctly traced. We learn from Tacitus that, like the modern high roads through this flat and low country, it was carried along an elevated causeway, or *agger;* both sides being occupied with low and marshy meadows, intersected with ditches, or entangled with vines trained across from tree to tree. (Cluver. *Ital.* pp. 259—262; Mannert, *Italien*, vol. i. p. 153; D'Anville, *Geogr. Anc.* p. 48.) [E.H.B.]

BEDU'NIA, BEDUNENSES. [ASTURES.]

BEER (Βηρά), mentioned only once in Scripture (*Judges*. ix. 21). It is placed by Eusebius and St. Jerome in the great plain, ten miles north of Eleutheropolis (*Beit Jebrin*), and a deserted village named *el-Bîreh*, situated near the site of Beth-Shemesh, serves to confirm their notice. It is sometimes supposed to be identical with the following, though they are distinguished by the above-cited authors. [G.W.]

BEEROTH (Βηρώθ), the plural form of Beer, signifies *Wells*. It is placed by Eusebius at the distance of seven miles from Jerusalem, on the road to Nicopolis, or Emmaus (now *'Amwâs*). But St. Jerome's version of the Onomasticon places it on the road to Neapolis (*Nablûs*) at the same distance from Jerusalem. This would correspond very nearly with the site of the modern village of *el-Bîreh*, which is about three hours, i. e. eight or nine miles, north of Jerusalem, on the high road to *Nablûs*. "Many large stones, and various substructions testify to the antiquity of the site" (Robinson, *Bib. Res.* vol. ii. p. 130), and there are remains of two large reservoirs, formerly fed by a copious fountain, to which the city probably owed its name. It was one of the four cities of the Gibeonites, and fell to the lot of the tribe of Benjamin. (*Josh.* ix. 17, xviii. 25; Reland, *Palaest.* pp. 484, 618.) [G.W.]

BEERSHEBA (Βηρσαβεί, "The Well of the Oath;" so named from an incident in the life of Abraham (*Gen.* xxi. 25, &c.), and afterwards the site of a city, situated in that part of Judah, which was assigned to the tribe of Simeon. (*Josh.* xv. 28, xix. 2.) It is proverbial as the southernmost extremity of the Land of Israel, and was in the time of Eusebius a very extensive village twenty miles south of Hebron. It was then occupied by a Roman garrison. Its name is still preserved, and the site is marked by two fine ancient wells, and extensive ruins. (Reland, *s. v.*; Robinson, *Bib. Res.* vol. ii. pp. 301—303.) It is 12 hours, or more than 30 Roman miles, S.W. by W. of Hebron. [G.W.]

BEGORRI'TIS LACUS, mentioned only by Livy (xlii. 53), was situated in Eordaea in Macedonia, and probably derived its name from a town Begorra. Leake supposes Begorra to have been situated at *Kaliâri*, and the Begorritis Lacus to be the small lake of *Kitriní*. (Leake, *Northern Greece*, vol. iii. pp. 289, 316.)

BELBINA (Βέλβινα: *Eth.* Βελβινίτης, Her., more correctly Βελβινήτης, Steph. B.: *St. George*), a small island, very lofty and difficult of access situated at the entrance of the Saronic gulf, about 10 miles from the promontory of Sunium. Although nearer Attica than the Peloponnesus, it was reckoned to belong to the latter. Hence, it was doubtless inhabited by Dorians, and was probably a colony from Belemina (also written Belmina and Belbina), a town on the confines of Laconia and Arcadia. [BELEMINA.] Themistocles quotes the name of this island as one of the most insignificant spots in Hellas. (Herod. viii. 125.) The island was inhabited in antiquity. On all the slopes of the hills there are traces of the ancient terraces; and on one of the summits are remains of the ancient town. But neither inscriptions nor coins have yet been found on the island. (Scylax, p. 20; Strab. viii. p. 375, ix. p. 398; Steph. B. *s. v.*; Plin. iv. 12. s. 19; Ross, *Reisen auf den Griech. Inseln*, vol. ii. p. 172.)

BELEA, a place which is mentioned in the Antonine Itin., between Genabum, Orléans, and Brivodurum (*Briare*). Its site is unknown. [G. L.]

BELEMI'NA, BELMI'NA, or BELBI'NA (Βελεμίνα, Βέλμινα, Βελβίνα: *Eth.* Βελβινήτης, Steph. B.), a town in the NW. frontier of Laconia, the territory of which was called Belminatis. (Βελμινᾶτις, Polyb. ii. 54; Strab. viii. p. 343.) It was originally an Arcadian town, but was conquered by the Lacedaemonians at an early period, and annexed to their territory; although Pausanias does not believe this statement. (Paus. viii. 35. § 4.) After the battle of Leuctra Belbina was restored to Arcadia; most of its inhabitants were removed to the newly founded city of Megalopolis; and the place continued to be a dependency of the latter city. (Paus. viii. 27. § 4; Plut. *Cleom.* 4; Polyb. ii. 54.) In the wars of the Achaean league, the Belminatis was a constant source of contention between the Spartans and Achaeans. Under Machanidas or Nabis, the tyrants of Sparta, the Belminatis was again annexed to Laconia; but upon the subjugation of Sparta by Philopoemen in B.C. 188, the Belminatis was once more annexed to the territory of Megalopolis. (Liv xxxviii. 34.) The Belminatis is a mountainous district, in which the Eurotas takes its rise from many springs. (Strab. *l. c.*; Paus. iii. 21. § 3.) The mountains of Belemina, now called *Tzimbarú*, rise to the height of 4108 feet. Belemina is said by Pausanias (*l. c.*) to have been 100 stadia from Pellana, and is placed by Leake on the summit of Mount *Khelmós*, upon which there are Hellenic remains. (Leake, *Morea*, vol. iii. p. 20; *Peloponnesiaca*, pp. 203 234, 237 366.)

BELENDI, a people of Aquitania, mentioned by Pliny (iv. 19), whose name appears to be preserved in that of *Bélin*, a small place in the *Landes*, between *Bordeaux* and *Bayonne*. The place is called Belinum in some old documents, and the passage of the river Pons Belini. *Bélin* is on the small river *Leyre*, in the department of Les Landes, which runs through the dreary Landes into the *Bassin d'Arcachon*. [G. L.]

BELE'RIUM, the *Land's End*, in Britain. Belerium is the form in Diodorus Siculus (v. 21). Ptolemy (ii. 3. § 3) has Bolerium; specially stating that Bolerium and Antivestaeum were synonymous. [R. G. L.]

BELGAE. Caesar (*B. G.* i. 1) makes the Belgae, by which he means the country of the Belgae, one of the great divisions of Gallia. The Belgae were separated from their southern neighbours the Celtae by the *Seine* and the *Marne* (Matrona), a branch of the Seine. Their boundary on the west was the Ocean; on the east and north the lower course of the *Rhine*. Caesar's Gallia extends as far as the outlets of the Rhine (*B. G.* iv. 10), and includes the Insula Batavorum [BATAVORUM INSULA]; but there is a debated point or two about the outlets of the Rhine, which is better discussed elsewhere [RHENUS]. Caesar does not fix the boundary of the Belgae between the source of the Marne and the Rhine; but as the Lingones and the Sequani seem to be the most northern of the Celtae in these parts, the boundary may have run from the source of the Marne along the *Côte d'Or* and the *Faucilles* to the *Vosges* (Vosegus Mons); and the Vosegus was the boundary from the north bank of the *Doubs* (Dubis) to its termination in the angle formed by the juncture of the *Nahe* and the *Rhine*, near *Bingen*, with this exception that the Mediomatrici extended to the Rhine (*B. G.* iv. 10). The people on the east of the Vosges were Germans, Vangiones, Nemetes, Tribocci, who occupied the plain of Alsace, and perhaps somewhat more. (Tacit. *German.* 28.) These three tribes, or a part of each, were in the army of Ariovistus. (Caes. *B. G.* i. 51.) As to the Tribocci at least, their position on the left bank of the Rhine in Caesar's time, is certain (*B. G.* iv. 10). Strabo (p. 194) speaks of them as having crossed the Rhine into Gallia, without mentioning the time of this passage. The Nemetes and Vangiones may have settled west of the Rhine after Caesar's time, and this supposition agrees with Caesar's text, who does not mention them in *B. G.* iv. 12, which he should have done, if they had then been on the Gallic side of the Rhine. Caesar's military operations in Gallia did not extend to any part of the country between the *Mosel* and the *Rhine*. The battle in which he defeated Ariovistus was probably fought in the plain of Alsace, north of Bâle; but Caesar certainly advanced no further north in that direction, for it was unnecessary: he finished this German war by driving the Germans into the Rhine.

Caesar gives to a part of the whole country, which he calls the country of the Belgae, the name of Belgium (*B. G.* v. 12, 24, 25); a term which he might form after the fashion of the Roman names, Latium and Samnium. But the reading "Belgio" is somewhat uncertain, for the final *o* and the *s* may easily have been confounded in the MSS.; and though the MSS. are in favour of "Belgio" in v. 12, 25, they are in favour of "Belgis" in v. 24. The form "Belgio" occurs also in Hirtius (*B. G.* viii. 46, 49, 54), in the common texts. The form "Belgium," which would decide the matter, does not occur in the Gallic war. But whether Belgium is a genuine form or not, Caesar uses either Belgium or Belgae, in a limited sense, as well as in the general sense of a third part of Gallia. For in v. 24, where he is describing the position of his troops during the winter of the year B. C. 54—53, he speaks of three legions being quartered in Belgium or among the Belgae, while he mentions others as quartered among the Morini, the Nervii, the Essui, the Remi, the Treviri, and the Eburones, all of whom are Belgae, in the wider sense of the term. The part designated by the term Belgium or Belgae in v. 24, is the country of the Bellovaci (v. 46). In Hirtius (viii. 46, 47) the town of Nemetocenna (*Arras*), the chief place of the Atrebates, is placed in Belgium. The position of the Ambiani, between the Bellovaci and the Atrebates, would lead to a probable conclusion that the Ambiani were Belgae; and this is confirmed by a comparison with v. 24, for Caesar placed three legions in Belgium, under three commanders; and though he only mentions the place of one of them as being among the Bellovaci, we may conclude what was the position of the other two from the names of the Ambiani and Atrebates being omitted in the enumeration in v. 24. There was, then, a people, or three peoples, specially named Belgae, whom Caesar places between the *Oise* and the upper basin of the *Schelde*, in the old French provinces of *Picardie* and *Artois*. We might be inclined to consider the Caleti as Belgae, from their position between the three Belgic peoples and the sea; and some geographers support this conclusion by a passage in Hirtius (viii. 6), but this passage would also make us conclude that the Aulerci were Belgae, and that would be false.

In *B. G.* ii. 4, Caesar enumerates the principal peoples in the country of the Belgae in its wider sense, which, besides those above enumerated, were: the Suessiones, who bordered on the Remi; the Menapii in the north, on the lower *Maas*, and bordering on the Morini on the south and the Batavi on the north; the Caleti, at the mouth of the *Seine;* the Velocasses on the *Seine*, in the *Vexin;* the Veromandui, north of the Suessiones, in *Vermandois*, and the Aduatuci on the *Maas*, and probably about the confluence of the *Maas* and *Sambre*. The Condrusi, Eburones, Caeraesi, and Paemani, who are also mentioned in *B. G.* ii. 4, were called by the general name of Germani. They were all in the basin of the *Maas*, extending from *Tongern*, southwards, but chiefly on the east side of the *Maas;* and the Eburones extended to the *Rhine*. The Aduatuci were said to be Teutones and Cimbri. (*B. G.* ii. 29.)

Besides these peoples, there are mentioned by Caesar (*B. G.* v. 5) the Meldi, who are not the Meldi on the *Seine*, but near *Bruges*, or thereabouts; and the Batavi, in the Insula Batavorum. [BATAVORUM INSULA.] The Segni, mentioned in *B. G.* vi. 32 with the Condrusi, were probably Germans, and situated in *Namur*. The Ambivareti (*B. G.* iv. 9, vii. 90) are of doubtful position. The Mediomatrici, south of the Treviri, were included in Caesar's Belgae; and also the Leuci, south of the Mediomatrici. The Parisii, on the *Seine*, were Celtae. These are the peoples included in Caesar's Belgae, except some few, such as those mentioned in *B. G.* v. 39, of whom we know nothing.

This division of Gallia comprehends part of the basin of the *Seine*, the basin of the *Somme*, of the *Schelde*, and of the *Maas;* and the basin of the *Mosel*, which belongs to the basin of the *Rhine*. It

is a plain country, and contains no mountain range except the *Vosges*. The hills that bound the basin of the *Mosel* are inconsiderable elevations. The tract of the *Ardennes* (the Arduenna Silva), is rugged, but not mountainous. There is also the hilly tract along the *Maas* between *Dinant* and *Liège*, and north and east as far as *Aix-la-Chapelle*. The rest is level, and is a part of the great plain of Northern Europe.

Caesar (*B. G.* i. 1) makes the Belgae distinct from the Celtae and Aquitani in usages, political constitution, and language; but little weight is due to this general expression, for it appears that those whom Caesar calls Belgae were not all one people; they had pure Germans among them, and, besides this, they were mixed with Germans. The Remi told Caesar (*B. G.* ii. 4) that most of the Belgae were of German origin, that they had crossed the Rhine of old, and, being attracted by the fertility of the soil, had settled in the parts about there, and expelled the Galli who were the cultivators of those parts. This is the true meaning of Caesar's text: a story of an ancient invasion from the north and east of the Rhine by Germanic people, of which we have a particular instance in the case of the Batavi [BATAVI]; of the Galli who were disturbed, being at that remote time an agricultural people, and of their being expelled by the Germans. But Caesar's words do not admit any further inference than that these German invaders occupied the parts near the Rhine. The Treviri and Nervii affected a German origin (Tacit. *German.* 28), which, if it be true, must imply that they had some reason for affecting it; and also that they were not pure Germans, or they might have said so. Strabo (p. 192) makes the Nervii Germans. The fact of Caesar making such a river as the *Marne* a boundary between Belgic and Celtic peoples, is a proof that he saw some marked distinction between Belgae and Celtae, though there were many points of resemblance. Now, as most of the Belgae were Germans or of German origin, as the Remi believed or said, there must have been some who were not Germans or of German origin; and if we exclude the Menapii, the savage Nervii, and the pure Germans, we cannot affirm that any of the remainder of the Belgae were Germans. The name of the Morini alone is evidence that they are not Germans; for their name is only a variation of the form Armorici.

Within the time of man's memory, when Caesar was in Gallia, Divitiacus, a king of the Suessiones, was the most powerful prince in all Gallia, and had established his authority even in Britain (*B. G.* ii. 4). Belgae had also passed into Britain, and settled there in the maritime parts (*B. G.* v. 12), and they retained the names of the peoples from which they came. The direct historical conclusion from the ancient authorities as to the Belgae, is this: they were a Celtic people, some of whom in Caesar's time were mixed with Germans, without having lost their national characteristics. Caesar, wanting a name under which he could comprehend all the peoples north of the *Seine*, took the name of Belgae, which seems to have been the general name of a few of the most powerful peoples bordering on the *Seine*. Strabo (p. 176), who makes a marked distinction between the Aquitani and the rest of the people of Celtica or Gallia Transalpina, states that the rest have the Gallic or Celtic physical characteristics, but that they have not all the same language, some differing a little in tongue, and in their political forms and habits a little; all which expresses as great a degree of uniformity among peoples spread over so large a surface as could by any possibility exist in the state of civilization at that time. Strabo, besides the *Commentarii* of Caesar, had the work of Posidonius as an authority, who had travelled in Gallia.

When Augustus made a fourfold division of Gallia, B. C. 27, which in fact subsisted before him in Caesar's time,—for the Provincia is a division of Gallia independent of Caesar's threefold division (*B. G.* i. 1),—he enlarged Aquitania [AQUITANIA], and he made a division named Lugdunensis, of which Lugdunum (*Lyon*) was the capital. Strabo's description of this fourfold division is not clear, and it is best explained by considering the new division of Gallia altogether. [GALLIA.] Strabo, after describing some of the Belgic tribes, says (p. 194), "the rest are the peoples of the Paroceanitic Belgae, among whom are the Veneti." The word Paroceanitic is the same as Caesar's Armoric, or the peoples on the sea. He also mentions the Osismi, who were neighbours of the Veneti. This passage has been used to prove (Thierry, *Hist. des Gaulois, Introd.*) that these Paroceanitic Belgae, the Veneti and their neighbours, and the Belgae north of the *Seine*, were two peoples or confederations of the same race; and as the Veneti were Celts, so must the Belgae north of the *Seine* be. It might be said that Strabo here uses Belgae in the sense of the extended Belgian division, for he clearly means to say that this division comprehended some part of the country between the *Loire* and the *Seine*, the western part at least. But his account of the divisions of Gallia is so confused that it cannot be relied on, nor does it agree with that of Pliny. It is certain, however, that some changes were made in the divisions of Gallia between the time of Augustus and the time of Pliny. [GALLIA.] [G. L.]

BELGAE. A *British* population, is first mentioned under the name of Belgae by Ptolemy (ii. 3. § 28). Caesar's notice extends only to the fact of the interior of the island being inhabited "by those who are recorded to have been born in the island itself; whereas the sea-coast is the occupancy of immigrants from the country of the Belgae, brought over for the sake of either war or plunder. All these are called by names nearly the same as those of the states they came from—names which they have retained in the country upon which they made war, and in the land whereon they settled." (*B. G.* v. 12.)

How far do Caesar and Ptolemy notice the same population? Ptolemy's locality, though the exact extent of the area is doubtful, is, to a certain degree, very definitely fixed. The Belgae lay to the south of the Dobuni, whose chief town was Corineum (*Cirencester*). They also lay to the east and north of the Durotriges of *Dor*-setshire. Venta (*Winchester*) was one of the towns, and Aquae Sulis (*Bath*) another. Calleva (*Silchester*) was *not* one of them: on the contrary, it belonged to the Attrebatii. This coincides nearly with the county of Wilts, parts of Somerset and Hants being also included. It must be observed that the Belgae of Ptolemy agree with those of Caesar only in belonging to the southern part of Britain. They are chiefly an inland population, and touch the sea only on the south and west; not on the east, or the part more especially opposite Belgium. It must also be observed that Wilts is the county where the monumental remains of the ancient occupants of Britain are at once the most numerous and characteristic.

But the Belgic area of Britain may be carried further eastwards by considering the Attrebatii as a Belgic population; in which case *Belgae* is a generic term, and Attrebatii the specific name of one of the divisions it includes; and by admitting the evidence of Richard of Cirencester we may go further still. [BIBROCI.] To this line of criticism, however, it may be objected, that it is as little warranted by the text of Caesar as by that of Ptolemy.

The Belgae of Caesar require *Kent* and *Sussex* as their locality: those of Ptolemy, *Wilts* and *Somerset*. The reconciliation of these different conditions has been attempted. An extension westward between the times of the two writers has given one hypothesis. But this is beset with difficulties. To say nothing about the extent to which the time in question was the epoch of conquests almost exclusively Roman, the reasons for believing the *sources* of Ptolemy to have been earlier than the time of Caesar are cogent.

In the mind of the present writer, the fact that Ptolemy's authorities dealt with was the existence in Britain of localities belonging to populations called Belgae and Attrebatii; a fact known to Caesar also. Another fact known to Caesar was, the existence of Belgic immigrants along the shores of *Kent* and *Sussex*. Between these there is as little necessary connection as there is between the settlements of the modern Germans in London, and the existence of German geographical names in *-sted*, *-hurst*, &c., in *Kent*. But there *is* an apparent one; and this either Caesar or his authorities assumed. Belgae and Attrebates he found in *Kent*, just as men from Delmen-*horst* may probably be found at present; and populations called Belgae and Attrebates he heard of in parts not very distant just as men of Gould-*hurst* or Mid-*hurst* may be heard of now. He connected the two as nine ethnologists out of ten, with equally limited data, would have done,—logically, but erroneously.

The professed Keltic scholar may carry the criticism further, and probably explain the occurrence of the names in question—and others like them—upon the principle just suggested. He may succeed in showing that the forms Belg- and Attrebat-, have a geographical or political signification. The first is one of importance. The same, or a similar, combination of sounds occurs in Blatum *Bulg*-ium, a station north of the Solway; in the *Numerus* A-*bulc*-orum stationed at Anderida; and in the famous Fir-*bolgs* of Ireland. Two observations apply to these last. Like the Attacotti [ATTACOTTI], they occur only in the fabulous portion of Irish history. Like the *-libet* in such words as quod-*libet*, quibus-*libet*, the *Bolg* is unflected, the *fir-* only being declined—so that the forms are Fir-Bolg (*Belgae*), Feroib-Bolg (*Belgis*). This is against the word being a true proper name. Lastly, it should be added, that, though the word *Belgae* in Britain is not generic, it is so in Gaul, where there is no such population as that of the *Belgae*, except so far as it is Nervian, Attrebatian, Menapian, &c.

That the Belgae of Britain were in the same ethnological category with the Belgae of Gaul, no more follows from the identity of name, than it follows that Cambro-Briton and Italian belong to the same family, because each is called *Welsh*. The truer evidence is of a more indirect nature, and lies in the fact of the Britannic *Belgae* being in the same category with the rest of the Britons, the rest of the Britons being as the Gauls, and the Gauls as the continental Belgae. That the first and last of these three propositions has been doubted is well known; in other words, it is well known that good writers have looked upon the Belgae as Germans. The *Gallic* Belgae, however, rather than the Britannic, are the tribes with whom this question rests. All that need be said here is, that of the three Belgic towns mentioned by Ptolemy (Ischalis, Aquae Sulis, and Venta), none is Germanic in name, whilst one is Latin, and the third eminently British, as may be seen by comparing the *Venta* Silurum and the *Venta* Icenorum with the *Venta* Belgarum. [R. G. L.]

BE'LGICA. [GALLIA.]

BELGINUM. [GALLIA.]

BE'LGIUM. [BELGAE.]

BELIAS. [BALISSUS.]

BE'LION. [GALLAECIA.]

BELISAMA (Aestuarium), in Britain, mentioned by Ptolemy (ii. 3. § 2) as south of Morecambe (*Morecame Bay*), and, consequently, most probably the mouth of the *Ribble*, though Horsley identifies it with that of the *Mersey*. [R. G. L.]

BELLI (Βελλοί), one of the smaller tribes of the Celtiberi, in Hispania Tarraconensis, with the powerful city of Segeda (Σεγήδη), the revolt of which commenced the Celtiberian War. (Polyb. xxxv. 2; Appian. *de Reb. Hisp.* 44, 45.) [P. S.]

BELLINTUM, a place in Gallia, marked in the Jerusalem Itin. between *Avignon* and *Arles*. The distance identifies it with *Barbentane*, according to D'Anville, and with *Lauzac*, according to others. [G. L.]

BELLOCASSES. [VELLOCASSES.]

BELLO'VACI (Βελλοάκοι, Strabo, p. 195), a Belgic people, the first of the Belgae in numbers and influence (*B. G.* ii. 4, 8; vii. 59). It was reported to Caesar that they could muster 100,000 armed men. [BELGAE.] Their position was between the *Somme* (Samara) and the *Seine*, S. of the Ambiani, E. of the Caleti, and W. of the Suessones. It is conjectured that the small tribe of the Sylvanectes, E. of the *Oise*, who are not mentioned in Caesar, were in his time included among the Bellovaci. The whole extent of the territory of the Bellovaci probably comprehended the dioceses of *Beauvais* and of *Senlis*. Ptolemy mentions Caesaromagus (*Beauvais*) as the capital of the Bellovaci in his time. The only place that Caesar mentions is Bratuspantium. [BRATUSPANTIUM.] [G. L.]

BELON (Βέλων, Strab. iii. p. 140, Steph. B.: *Eth.* Βελόνιος, comp. *s. v.* Βῆλος), or BAELON (Βαίλων, Ptol. ii. 4. § 5; Marc. Herac. p. 40; Geogr. Rav. iii. 42; coins), a city on the S. coast of Hispania Baetica, at the mouth of a river of the same name (probably the *Barbate*), which Marcian places between 150 and 200 stadia S. E. of the Prom. Junonis (*C. Trafalgar*). The city was a considerable port, with establishments for salting fish; and it is 6 m. p. W. of Mellaria and 12 E. of BESIPPO (*Itin. Ant.* p. 407, where it has the surname *Claudia*), at the entrance of the Fretum Gaditanum (*Straits of Gibraltar*) from the Atlantic (Mela, ii. 6; Plin. iii. 3. s. 1), directly opposite to Tingis, in Mauretania, and was the usual place of embarcation for persons crossing over to that city (Strab. *l. c.*), the distance to which was reckoned 30 Roman miles (Plin. v. 1), or 220 stadia (*Itin. Ant.* p. 495). Its ruins are still seen at the place called *Belonia*, or *Bolonia*, 3 Spanish miles W. of *Tarifa*. There is a coin with the epigraph BAILO. (*Philos. Trans.* vol. xxx. p. 922; Florez, *Med de Esp.* vol. ii. p. 635, vol. iii. p. 152; Mionnet,

vol. i. p. 7, Suppl. vol. i. p. 14; Sestini, p. 33; Eckhel, vol. i. p. 16; Ukert, vol. ii. pt. 1, pp. 295, 343.) [P. S.]

BELSI'NUM, a place marked in the Antonine Itin. between Climberris (*Auch*) and Lugdunum Convenarum (*St. Bertrand de Comminges*). Belsinum is probably the Besino of the Table. D'Anville supposes that the site may be *Bernet;* others take it to be *Masseure:* but neither distances nor names seem to enable us to fix the site with certainty. [G. L.]

BELSI'NUM (Βέλσινον, Ptol. ii. 6. § 58), a city of the Celtiberians, in Hispania Tarraconensis, afterwards called Vivarium. Its site is marked at *Vivel*, near *Segarbe* in *Valencia*, by Roman ruins and inscriptions. (Laborde, *Itin. de l'Espagne*, vol. ii. p. 346, 3rd ed.) [P. S.]

BELU'NUM or BELLUNUM (Βελοῦνον), a considerable town in the interior of Venetia, still called *Belluno*. It was situated in the upper valley of the Plavis (*Piave*), about 20 miles NE. of Feltria, and almost on the borders of Rhaetia. It was probably in ancient as well as modern times the capital of the surrounding district. (Plin. iii. 19. s. 23; Ptol. iii. 1. § 30; P. Diac. vi. 26; Orell. *Inscr.* 69.) [E. H. B.]

BELUS (Βηλεύς), called also Pagida by Pliny (v. 19), a small river of Palestine, described by Pliny as taking its rise from a lake named *Cendevia*, at the roots of Mount Carmel, which after running five miles enters the sea near Ptolemais (xxxvi. 26) two stadia from the city, according to Josephus. (*B. J.* ii. 2. § 9.) It is chiefly celebrated among the ancients for its vitreous sand, and the accidental discovery of the manufacture of glass is ascribed by Pliny to the banks of this river, which he describes as a sluggish stream, of unwholesome water, but consecrated by religious ceremonies. (Comp. Tac. *Hist.* v. 7.) It is now called *Nahr Na'mân;* but the lake Cendevia has disappeared. It is an ingenious conjecture of Reland that its ancient appellation may be the origin of the Greek name for glass, ὕελος, or ὑαλός. (*Balaest.* p. 290.) [G. W.]

BEMBINA. [Nemea.]

BENA'CUS LACUS (Βήνακος λίμνη, Strab.: Βαίνακος, Ptol.), a lake in Cisalpine Gaul, at the foot of the Alps, formed by the river Mincius, now called the *Lago di Garda*. (Plin. iii. 19. s. 23; Virg. *Aen.* x. 205.) It is the largest of all the lakes in Italy, greatly exceeding both the Lacus Larius and Verbanus in breadth and superficial extent, though inferior to them in length. Strabo, on the authority of Polybius, states its length at 500 stadia, and its breadth at 130 (iv. p. 209): but the former distance is greatly exaggerated, its real length being less than 30 G. miles, or 300 stadia: its greatest breadth is nearly 10 G. miles. The northern half of it, which is pent in between lofty and very precipitous mountains, is however comparatively narrow: it is only the southern portion which expands to the considerable breadth above stated. The course of the lake is nearly straight from NNE. to SSW., so that the north winds from the high Alps sweep down it with unbroken force, and the storms on its surface exceed in violence those on any other of the Italian lakes. Hence Virgil justly speaks of it as rising into waves, and roaring like the sea. (*Fluctibus et fremitu assurgens Benace marino*, Virg. *G.* ii. 160; Serv. *ad loc.*) The shore at its southern extremity is comparatively low, being bounded only by gently sloping hills, from which projects a narrow tongue of land, forming the beautiful peninsula of Sirmio, which divides this part of the lake into two nearly equal portions. The river Mincius issues from its SE. extremity, where stood the town of Ardelica, on the site of the modern fortress of *Peschiera*. Most ancient writers speak of the Mincius as having its source in the lake Benacus (Serv. *ad Aen.* x. 205; Vib. Seq. pp. 6, 14; Isidor. *Orig.* xiii. 19), but Pliny tells us that it flowed *through* the lake without allowing their waters to mix, in the same manner as the Addua did through the Larian Lake, and the Rhone through the Lacus Lemannus. (ii. 103. s. 106.) It is evident, therefore, that he must have considered the river which enters the lake at its northern extremity, and is now called the *Sarca*, as being the same with the Mincius, which would certainly be correct in a geographical point of view, though not in accordance with either ancient or modern usage. According to the same author vast quantities of eels were taken at a certain season of the year where the Mincius issued from the lake. (Plin. ix. 22. s. 38.)

Several inscriptions have been found, in which the name of the Benacenses occurs, whence it has been supposed that there was a town of the name of Benacus. But it is more probable that this name designates the population of the banks of the lake in general, who would naturally combine for various purposes, such as the erection of honorary statues and inscriptions. The greater part of these have been found at a place called *Toscolano*, on the W. bank of the lake, about 5 miles N. of *Salò;* the ancient name of which is supposed to have been Tusculanum. (See however Orelli, 2183.) It appears to have had a temple or sanctuary, which was a place of common resort from all parts of the lake. The name of Benacus occurs in an inscription found at *S. Vigilio* on the opposite shore, as that of the tutelary deity of the lake, the "Pater Benacus" of Virgil. (Rossi, *Memorie di Brescia*, pp. 200, 201; Cluver. *Ital.* p. 107.) The modern town of *Garda*, from whence the lake derives its present appellation, appears from inscriptions discovered there to have been inhabited in Roman times, but its ancient name is unknown. [E. H. B.]

BENAMERIUM (Βηναμαρήμ), a village of Palestine to the north of *Zorah* (*q. v.*) mentioned only by Eusebius and St. Jerome. (*Onomast. s. v.* Νεκηρίμ, lege Νεμερίμ.) [G. W.]

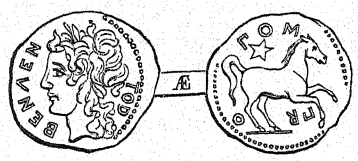
BENAVENTA. [Isannavatia.]

BENE (Βήνη: *Eth.* Βηναῖος), a town of Crete, in the neighbourhood of Gortyn, to which it was subject, only known as the birthplace of the poet Rhianus. (Steph. B. *s. v.* Βήνη; Suid. *s. v.* Ῥιανός.)

BENEHARNUM, a place first mentioned in the Antonine Itin. It is placed 19 Gallic leagues, or 28½ M. P., from Aquae Tarbellicae (*Dax*), on the road to *Toulouse*. But the road was circuitous, for it passed through Aquae Convenarum; and between Beneharnum and Aquae Convenarum the Itin. places Oppidum Novum (*Naye* on the *Gave*), 27 M. P. from Beneharnum. Another road from Caesar Augusta (*Saragossa*) to Beneharnum, passes through Aspa Luca (*Pont l'Esquit*) and Iluro (*Oléron*), on the *Gave d'Oléron*. Iluro is 18 M. P. from Beneharnum. If then we join *Oléron* and *Naye* by a straight line, we have the respective distances 18 and 27 M. P. from *Oléron* and *Naye* to Beneharnum, as the other sides of the triangle. Walckenaer, on the authority of these two routes and personal observation, places Beneharnum at *Vieille Tour* to the E. of *Maslac;* Reichard, at *Navarreins;* and D'Anville places it near *Orthez*. Walckenaer's site is at *Cas-*

telnon, between *Maslac* and *Lagor*, in the department of *Basses Pyrénées*. Beneharnum was undoubtedly the origin of the name of *Béarn*, one of the old divisions of France. Beneharnum, under the name of Benarnum, existed in the sixth century of our aera, and had a bishop. There are no ancient remains which can be identified as the site of Beneharnum. (D'Anville, *Notice, &c.*; Walckenaer, *Géog.* vol. ii. p. 401, &c.) [G. L.]

BENEVENTUM (Βενεβεντός, Steph. B. App.; Βενεουεντόν, Strab. Ptol.: *Eth.* Beneventanus: *Benevento*), one of the chief cities of Samnium, and at a later period one of the most important cities of Southern Italy, was situated on the Via Appia at a distance of 32 miles E. from Capua; and on the banks of the river Calor. There is some discrepancy as to the people to which it belonged: Pliny expressly assigns it to the Hirpini; but Livy certainly seems to consider it as belonging to Samnium Proper, as distinguished from the Hirpini; and Ptolemy adopts the same view. (Plin. iii. 11. s. 16; Liv. xxii. 13; Ptol. iii. 1. § 67.) All writers concur in representing it as a very ancient city; Solinus and Stephanus of Byzantium ascribe its foundation to Diomedes; a legend which appears to have been adopted by the inhabitants, who, in the time of Procopius, pretended to exhibit the tusks of the Calydonian boar in proof of their descent. (Solin. 2. § 10; Steph. B. *s. v.*; Procop. *B. G.* i. 15.) Festus, on the contrary (*s. v. Ausoniam*), related that it was founded by Auson, a son of Ulysses and Circe; a tradition which indicates that it was an ancient Ausonian city, previous to its conquest by the Samnites. But it first appears in history as a Samnite city (Liv. ix. 27); and must have already been a place of strength, so that the Romans did not venture to attack it during their first two wars with that people. It appears, however, to have fallen into their hands during the Third Samnite War, though the exact occasion is unknown. It was certainly in the power of the Romans in B. C. 274, when Pyrrhus was defeated in a great battle, fought in its immediate neighbourhood, by the consul M'. Curius. (Plut. *Pyrrh.* 25; Frontin. *Strat.* iv. 1. § 14.) Six years later (B. C. 268) they sought farther to secure its possession by establishing there a Roman colony with Latin rights. (Liv. *Epit.* xv.; Vell. Pat. i. 14.) It was at this time that it first assumed the name of Beneventum, having previously been called Maleventum (Μαλόεντον, or Μαλεβεντός), a name which the Romans regarded as of evil augury, and changed into one of a more fortunate signification. (Plin. iii. 11. s. 16; Liv. ix. 27; Fest. *s. v. Beneventum*, p. 34; Steph. B. *s. v.*; Procop. *B. G.* i. 15.) It is probable that the Oscan or Samnite name was Maloeis, or Malieis, from whence the form Maleventum would be derived, like Agrigentum from Acragas, Selinuntium from Selinus, &c. (Millingen, *Numism. de l'Italie*, p. 223.)



As a Roman colony Beneventum seems to have quickly become a flourishing place; and in the Second Punic War was repeatedly occupied by Roman generals as a post of importance, on account of its proximity to Campania, and its strength as a fortress. In its immediate neighbourhood were fought two of the most decisive actions of the war: the one in B. C. 214, in which the Carthaginian general Hanno was defeated by Ti. Gracchus; the other in B. C. 212, when the camp of Hanno, in which he had accumulated a vast quantity of corn and other stores, was stormed and taken by the Roman consul Q. Fulvius. (Liv. xxii. 13, xxiv. 14, 16, xxv. 13, 14, 15, 17; Appian, *Annib.* 36, 37.) And though its territory was more than once laid waste by the Carthaginians, it was still one of the eighteen Latin colonies which in B. C. 209 were at once able and willing to furnish the required quota of men and money for continuing the war. (Liv. xxvii. 10.) It is singular that no mention of it occurs during the Social War; but it seems to have escaped from the calamities which at that time befel so many cities of Samnium, and towards the close of the Republic is spoken of as one of the most opulent and flourishing cities of Italy. (Appian, *B. C.* iv. 3; Strab. v. p. 250; Cic. *in Verr.* i. 15.) Under the Second Triumvirate its territory was portioned out by the Triumvirs to their veterans, and subsequently a fresh colony was established there by Augustus, who greatly enlarged its domain by the addition of the territory of Caudium. A third colony was settled there by Nero, at which time it assumed the title of Concordia; hence we find it bearing, in inscriptions of the reign of Septimius Severus, the titles "Colonia Julia Augusta Concordia Felix Beneventum." (Appian. *l. c.*; Lib. Colon. pp. 231, 232; Inscr. ap. Romanelli, vol. ii. pp. 382, 384; Orell. *Inscr.* 128, 590.) Its importance and flourishing condition under the Roman Empire is sufficiently attested by existing remains and inscriptions; it was at that period unquestionably the chief city of the Hirpini, and probably, next to Capua, the most populous and considerable of Southern Italy. For this prosperity it was doubtless indebted in part to its position on the Via Appia, just at the junction of the two principal arms or branches of that great road, the one called afterwards the Via Trajana, leading from thence by Equus Tuticus into Apulia; the other by Aeculanum to Venusia and Tarentum. (Strab. vi. p. 283.) [VIA APPIA.] The notice of it by Horace on his journey from Rome to Brundusium (*Sat.* i. 5, 71) is familiar to all readers. It was indebted to the same circumstance for the honour of repeated visits from the emperors of Rome, among which those of Nero, Trajan, and Sept. Severus, are particularly recorded. (Tac. *Ann.* xv. 34.) It was probably for the same reason that the noble triumphal arch, which still forms one of its chief ornaments, was erected there in honour of Trajan by the senate and people of Rome. Successive emperors seem to have bestowed on the city accessions of territory, and erected, or at least given name to, various public buildings. For administrative purposes it was first included, together with the rest of the Hirpini, in the 2nd region of Augustus, but was afterwards annexed to Campania and placed under the control of the consular of that province. Its inhabitants were included in the Stellatine tribe. (Plin. iii. 11. s. 16; Mommsen, *Topogr. degli Irpini*, p. 167, in *Bull. dell' Inst. Arch.* 1847.) Beneventum retained its importance down to the close of the Empire, and though during the Gothic wars it was taken by Totila, and its walls rased to the ground, they were restored, as well as its public buildings, shortly after; and P. Diaconus speaks of it as a very wealthy city, and the capital of all the surrounding provinces. (Procop. *B. G.* iii. 6; P. Diac. ii. 20; De Vita, *Antiq. Benev.* pp. 271, 286.) Under the Lombards it became the capital of a duchy which included all their conquests in Southern Italy, and continued to maintain itself as an independent state long after the fall of the Lombard kingdom in the north.

The modern city of *Benevento* is still a considerable place with about 13,000 inhabitants, and contains numerous vestiges of its ancient grandeur. The most conspicuous of these is a triumphal arch erected in honour of the emperor Trajan in A. D. 114, which forms one of the gates of the modern city, now called *Porta Aurea*. It is adorned with bas-reliefs representing the exploits of the Emperor, and is generally admitted to be the finest monument of its class existing in Italy; both from the original merit of its architecture and sculpture, and from its excellent state of preservation. Besides this there exist the remains of an amphitheatre, portions of the Roman walls, and an ancient bridge over the Calor; while numerous bas-reliefs and fragments of sculpture (some of them of a very high order of merit), as well as Latin inscriptions in great numbers are found in almost all parts of the city. Some of these inscriptions notice the public buildings existing in the city, among which was one called the "Caesareum," probably a kind of Curia or place for the assemblies of the local senate; a Basilica, splendid porticoes, and Thermae, which appear to have been erected by the Emperor Commodus. Others contain much curious information concerning the various "Collegia," or corporations that existed in the city, and which appear to have been intended not only for religious or commercial objects, but in some instances for literary purposes. (De Vita, *Antig. Benev.* pp. 159—174. 253—289; *Inscr. Benev.* p. 1—37; Orell. *Inscr.* 3164, 3763, 4124—4132, &c.) Beneventum indeed seems to have been a place of much literary cultivation; it was the birthplace of Orbilius the grammarian, who long continued to teach in his native city before he removed to Rome, and was honoured with a statue by his fellow-townsmen; while existing inscriptions record similar honours paid to another grammarian, Rutilius Aelianus, as well as to orators and poets, apparently only of local celebrity. (Suet. *Gram.* 9; De Vita, *l. c.* pp. 204—220; Orell. *Inscr.* 1178, 1185.)

The territory of Beneventum under the Roman empire was of very considerable extent. Towards the W., as already mentioned, it included that of Caudium, with the exception of the town itself; to the N. it extended as far as the Tamarus (*Tammaro*), including the village of *Pago*, which, as we learn from an inscription, was anciently called Pagus Veianus; on the NE. it comprised the town of Equus Tuticus (*S. Eleuterio*, near *Castel Franco*), and on the E. and S. bordered on the territories of Aeculanum and Abellinum. An inscription has preserved to us the names of several of the *pagi* or villages dependent upon Beneventum, but their sites cannot be identified. (Henzen, *Tab. Aliment. Baebian*, p. 93—108; Mommsen, *Topogr. degli Irpini*, p. 168—171.)

The Arusini Campi, mentioned by several writers as the actual scene of the engagement between Pyrrhus and the Romans (Flor. i. 18; Frontin. *Strat.* iv. 1. § 14; Oros. iv. 2), were probably the tract of plain country S. of the river Calor, called on Zannoni's map *Le Colonne*, which commences within 2 miles of Beneventum itself, and was traversed by the Via Appia. They are erroneously placed both by Florus and Orosius in Lucania; but all the best authorities place the scene of the action near Beneventum. Some writers would read "Taurasini," for Arusini in the passages cited, but there is no authority for this alteration.

The annexed coin, with the legend BENVENTOD (an old Latin form for Beneventor-um), must have been struck after it became a Latin colony. Other coins with the legend "Malies," or "Maliesa," have been supposed to belong to the Samnite Maleventum. (Millingen, *Numismatique de l'Anc. Italie*, p. 223; Friedländer, *Osk. Münz.* p. 67.) [E. H. B.]

COIN OF BENEVENTUM.

BENI. [Benna.]

BENJANIN. [Palestina.]

BENNA, or BENA (Βέννα: *Eth.* Βενναῖος, Steph. B.), a town in Thrace, from which one of the Ephesian tribes appears to have derived its name. (Guhl, *Ephesiaca*, p. 29.) Pliny (iv. 11. s. 18) speaks of a Thracian people of the name of Beni.

BENNA, seems to have been a place in Phrygia Epictetus, between *Kutaieh* and Azani, as is inferred from an inscription found by Keppel with the words τοις Βεννεταις at *Tatar-Bazarjek*. (Cramer, *Asia Minor*, vol. ii. p. 17.) [G. L.]

BERA. [Beer.]

BERCORATES, a people of Aquitania (Plin. iv. 19), or Bercorcates in Harduin's text. The name appears to exist in that of the *Bercouats*, the inhabitants of a place once named *Barcou*, now *Jouanon*, in the canton of *Born*, in the department of *Gironde*. (Walckenaer, *Géog. &c.* vol. ii. p. 241.) [G. L.]

BEREBIS, BOREVIS and VEREIS (Βερβίς), a town in Lower Pannonia, identified by some with the modern village of *Brecz*, and by others with a place near *Györgg*, on the right bank of the Drave. (Ptol. ii. 16. § 6; Geogr. Rav. iv. 19; Itin. Ant. p. 130; Itin. Hier. p. 562; Tab. Peuting.) [L. S.]

BERECYNTUS (Βερέκυντος: *Eth.* Βερεκύνται), a city of Phrygia, according to Stephanus (*s. v.*). But this town, and the Castellum Berecynthium of Vibius Sequester (p. 18, ed. Oberlin), on the Sangarius, are otherwise unknown. The Berecyntes (Strab. p. 469) were a Phrygian nation, who worshipped the Magna Mater. A district named Berecys is mentioned in a fragment of Aeschylus, quoted by Strabo (p. 580); but Aeschylus, after his fashion, confused the geography. Pliny (v. 29) mentions a "Berecyntius tractus" in Caria, which abounded in boxwood (xvi. 16); but he gives no precise indication of the position of this country. [G. L.]

BERECYNTUS. [Ida.]

BEREGRA (Βέρεγρα: *Eth.* Beregranus), a town of Picenum, mentioned both by Pliny and Ptolemy among the places in the interior of that province. The latter reckons it one of the towns of the Praetutii, but we have no clue to its precise position. Cluverius would place it at *Civitella di Tronto*, about 10 miles N. of *Teramo*, which is at least a plausible conjecture. (Plin. iii. 13. s. 18; Ptol. iii. 1. § 58; Cluver. *Ital.* p. 746.) The Liber Coloniarum (p. 259) mentions the "Veragranus ager" among those of Picenum, a name evidently corrupted from "Beregranus." [E. H. B.]

BERENICE. 1. (Βερενίκη, Strab. xvi. p. 770, xvii. p. 815; Plin. vi. 23, 26, 29, 33; Steph. B. *s. v.*; Arrian. *Peripl. M. Rub.*; Itin. Antonin. p. 173, f.; Epiphan. *Haeres.* lxvi. 1: *Eth.* Βερενι-

κεύς and Βερενικίδης, fem. Βερενίκεια), a city upon the Red Sea, was founded, or certainly converted from a village into a city, by Ptolemy II. Philadelphus, and named in honour of his mother, the daughter of Ptolemy Lagus and Antigone. It stood about lat. 23° 56′ N., and about long. 35° 34′ E., and being in the same parallel with Syene, was accordingly on the equinoctial line. Berenice, as modern surveys (Moresby and Carless, 1830—3) have ascertained, stood nearly at the bottom of the Sinus Immundus, or Foul Bay. A lofty range of mountains runs along this side of the African coast, and separates Berenice from Egypt. The emerald mines are in its neighbourhood. The harbour is indifferent, but was improved by art. Berenice stood upon a narrow rim of shore between the hills and the Red Sea. Its prosperity after the third century B. C. was owing in great measure to three causes: the favour of the Macedonian kings, its safe anchorage, and its being a terminus of the great road from Coptos, which rendered Berenice and Myos Hormos the two principal emporia of the trade between Aethiopia and Egypt on the one hand, and Syria and India on the other. The distance between Coptos and Berenice was 258 Roman miles, or eleven days' journey. The wells and halting places of the caravans are enumerated by Pliny (vi. 23. s. 26), and in the Itineraries (Antonin. p. 172, f.). Belzoni (*Travels*, vol. ii. p. 35) found traces of several of these stations. Under the empire Berenice formed a district in itself, with its peculiar prefect, who was entitled "Praefectus Berenicidis," or P. montis Berenicidis. (Orelli, *Inscr. Lat.* no. 3880, f.) The harbour of Berenice was sheltered from the NE. wind by the island Ophiodes (Ὀφιώδης νῆσος, Strab. xvi. p. 770; Diod. iii. 39), which was rich in topazes. A small temple of sandstone and soft calcareous stone, in the Egyptian style, has been discovered at Berenice. It is 102 feet long, and 43 wide. A portion of its walls is sculptured with well-executed basso relievos, of Greek workmanship, and hieroglyphics also occasionally occur on the walls. Belzoni confirmed D'Anville's original opinion of the true site of Berenice (*Mémoires sur l'Egypte Ancienne*), and says that the city measured 1,600 feet from N. to S., and 2,000 from E. to W. He estimates the ancient population at 10,000. (*Researches*, vol. ii. p. 73.)

2. Panchrysos, a city near Sabae in the Regio Troglodytica, and on the W. coast of the Red Sea, between the 20th and 21st degrees of N. latitude. It obtained the appellation of "all-golden" (πάνχρυσος, Steph. B. p. 164, *s. v.*; Strab. xvi. 771) from its vicinity to the gold mines of *Jebel Allaki* or *Ollaki*, from which the ancient Egyptians drew their principal supplies of that metal, and in the working of which they employed criminals and prisoners of war. (Plin. vi. 34.)

3. Epideires (ἐπὶ Δειρῆς, Steph. B. *s. v.*; Strab. xvi. pp. 769, 773; Mela, iii. 8; Plin. vi. 34; Ptol. viii. 16. § 12), or Berenice upon the Neck of Land, was a town on the W. shore of the Red Sea, near the Straits of *Bab-el-Mandeb*. Its position on a sandy spit or promontory of land was the cause of its distinctive appellation. Some authorities, however, attribute the name to the neighbourhood of a more considerable town named Deira; but the situation of the latter is unknown. [W. B. D.]

BERENI'CE. A Cilician city of this name is mentioned by Stephanus (*s. v.* Βερενίκη); and in the Stadiasmus a bay Berenice is mentioned. "As the Stadiasmus does not mention any distance between the Gulf of Berenice and Celenderis, there is reason to think that Berenice was the name of the *bay* to the eastward of the little *port* of *Kelénderi*." (Leake, *Asia Minor*, &c. p. 202.) [G. L.]

BERENI'CE, a town in Arabia, the name by which Ezion-Geber was called in the time of Josephus. (*Ant.* viii. 6. § 4.) It was situated on the Elanitic, or Eastern Gulf of the Red Sea, not far from Elath, Ailah, or Aelana. It is mentioned in the wanderings of the children of Israel (*Numb.* xxxiii. 35); and is celebrated as the naval arsenal of Solomon and Jehoshaphat. (1 *Kings*, ix. 26, xxii. 48.) The Arabic historian Makrizi speaks of an ancient city 'Asyûn near Ailah. (Burckhardt's *Syria*, p. 511.) [G. W.]

BERENI'CE, in Cyrenaica. [Hesperides.]

BEREUM or BERAEUM (*Ariklar?*), a town in Moesia (*Notit. Imp.* 28; Geogr. Rav. iv. 5; Itin. Ant. 225). [L. S.]

BERGA (Βέργη: *Eth.* Βεργαῖος), a town of Macedonia, lying inland from the mouth of the Strymon (Scymnus Ch. 654; Ptol. iii. 13. § 31) only known as the birthplace of the writer Antiphanes, whose tales were so marvellous and incredible as to give rise to a verb βεργαίζειν, in the sense of telling falsehoods. (Strab. i. p. 47, ii. pp. 102, 104; Steph. B. *s. v.*; *Dict. of Biogr.* vol. i. p. 204.) Leake places Berga near the modern *Takhynó*, upon the shore of the Strymonic lake. (Leake, *Northern Greece*, vol. iii. p. 229.)

BE'RGIDUM. [Astures.]

BERGINTRUM, a place on the Gallic side of the pass of the Alpes Graiae, lying on the road marked in the Antonine Itin. between Mediolanum (*Milan*) and Vienna (*Vienne*). D'Anville (*Notice*, &c.) places it, according to the Table, between Axima (*Aime*) and Alpis Graia. The distance from Bergintrum to Axima is marked viiii M. P. The Alpis Graia may be the watershed on the pass of the Little St. Bernard, which divides the waters that flow to the *Isère* from those which flow to the *Dora Baltea* on the Italian side. This is the place which D'Anville names *l'Hôpital*, on the authority of a manuscript map of the country. D'Anville supposes that Bergintrum may be *St. Maurice;* but he admits that xii, the distance in the Table between Bergintrum and Alpis Graia, does not fit the distance between *St. Maurice* and *l'Hôpital*, which is less. Walckenaer (*Géog.* &c. vol. iii. p. 27) supposes that two routes between Arebrigium and Darantasia have been made into one in the Table, and he fixes Bergintrum at *Bellentre*. He also attempts to show that in the Anton. Itin. between Arebrigium and Darantasia there has been confusion in the numbers and the names of places; and this appears to be the case. The position of Bergintrum cannot be considered as certain, though the limits between which we must look for it are pretty well defined. [G. L.]

BERGISTA'NI, a small people of Hispania Tarraconensis, who revolted from the Romans in the war about Emporiae, B. C. 195. (Liv. xxxiv. 16, 17.) They seem to have been neighbours of the Ilergetes, in the mountains of *Catalonia*, between *Berga* and *Manresa*. There can be no doubt that the place, afterwards mentioned by Livy (c. 21) as the stronghold of the rebels, *Bergium* or *Vergium castrum*, was one of the seven fortresses of the Bergistani, mentioned by him in the former passage, and that from which they took their name. It is probably *Berga*. (Marca, *Hisp.* ii. 23, p. 197; Florez, *Esp. S.* xxiv. 38; Ukert, vol. ii. pt. i. pp. 318, 426.) [P. S.]

BERGULE, BERGULAE, VIRGULAE or BERGULIUM (Βεργούλη, Βεργούλιον: *Dsjatal-Borgas*), a town in Thrace, which was in later times called Arcadiupolis. (Ptol. iii. 11. § 12; Geogr. Rav. iv. 6; Itin. Hier. p. 569; Cedren. p. 266; Theophan. p. 66.) [L. S.]

BERGOMUM (Βέργομον: *Eth.* Bergomas, atis: *Bergamo*), a city of Cisalpine Gaul, situated at the foot of the Alps, between Brixia and the Lacus Larius: it was 33 miles NE. from *Milan*. (Itin. Ant. p. 127.) According to Pliny, who follows the authority of Cato, it was a city of the Orobii, but this tribe is not mentioned by any other author, and Bergomum is included by Ptolemy in the territory of the Cenomani. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 31.) Justin also mentions it among the cities founded by the Gauls, after they had crossed the Alps, and expelled the Tuscans from the plains of northern Italy. (Justin. xx. 5.) No mention of it is, however, found in history previous to the Roman Empire, when it became a considerable municipal town, as attested by inscriptions as well as by Pliny and Ptolemy. It seems to have derived considerable wealth from valuable copper mines which existed in its territory. (Plin. xxxiv. 1. s. 2; Orell. *Inscr.* 3349, 3898.) In B. C. 452, it was one of the cities laid waste by Attila (*Hist. Miscell.* xv. p. 549); but after the fall of the Roman Empire it is again mentioned by Procopius as a strong fortress, and under the Lombard kings was one of the chief towns in this part of Italy; and the capital of a duchy. (Procop. *B. G.* ii. 12; P. Diac. ii. 15, iv. 3.) In late writers and the Itineraries the name is corruptly written Pergamus and Bergame: but all earlier writers, as well as inscriptions, have Bergomum. The modern city of *Bergamo* is a flourishing and populous place, but contains no ancient remains. [E. H. B.]

BERGU'SIUM or BERGU'SIA, in Gallia, on the road between Vienna (*Vienne*) and a place named Augustum. The Antonine Itin. and the Table agree very nearly as to the position of Bergusium, which is xx or xxi M. P. from Vienna, and supposed to be a place named *Bourgoin*. Augustum is supposed to be *Aoste*. [G. L.]

BERIS or BIRES (Βῆρις, Βίρης), a river of Pontus, which Arrian places 60 stadia from the Thoaris. Hamilton (*Researches*, &c. vol. i. p. 280) identifies it with the *Melitsch Chai*, "a deep and sluggish river," between *Unieh* and the Thermodon. He found it to be six miles, or 60 stadia, from the *Thurêh Irmak*, which he seems to identify correctly with the Thoaris. [G. L.]

BE'RMIUS MONS (τὸ Βέρμιον ὄρος: *Vérria*), a range of mountains in Macedonia, between the Haliacmon and Ludias, at the foot of which stood the city of Beroea. Herodotus relates that this mountain was impassable on account of the cold, and that beyond it were the gardens of Midas, in which the roses grew spontaneously. (Herod. viii. 138; Strab. vii. p. 330.) The Bermius is the same as the Bora of Livy (xlv. 29), and is a continuation of Mount Barnus. (Müller, *Dorians*, vol. i. p. 469, transl.; Leake, *Northern Greece*, vol. iii. p. 295.)

BEROEA. 1. (Βέροια, Βέρροια: *Eth.* Βεροαῖος, Steph. B.; Beroeus, Liv. xxiii. 39: *Verria*), a city of Macedonia, in the N. part of the province (Plin. iv. 10), in the district called Emathia (Ptol. iii. 13. § 39), on a river which flows into the Haliacmon, and upon one of the lower ridges of Mount Bermius (Strab. vii. p. 330). It was attacked, though unsuccessfully, by the Athenian forces under Callias, B. C. 432. (Thuc. i. 61.) The statement of Thucydides presents some geographical difficulties, as Beroea lies quite out of the way of the natural route from Pydna to Potidaea. Mr. Grote (*Hist. of Greece*, vol. vi. p. 96) considers that another Beroea, situated somewhere between Gigonus and Therma, and out of the limits of that Macedonia which Perdiccas governed, may probably be the place indicated by Thucydides. Any remark from Mr. Grote deserves the highest consideration; but an objection presents itself against this view. His argument rests upon the hypothesis that there was another Beroea in Thrace or in Emathia, though we do not know its exact site. There was a town called Beroea in Thrace, but we are enabled to fix its position with considerable certainty, as lying between Philippopolis and Nicopolis (see below), and no single authority is adduced to show that there was a second Beroea in Thrace between Gigonus and Therma.

Beroea surrendered to the Roman consul after the battle of Pydna (Liv. xliv. 45), and was assigned, with its territory, to the third region of Macedonia (xlv. 29). St. Paul and Silas withdrew to this city from Thessalonica; and the Jewish residents are described as more ingenuous and of a better disposition than those of the latter place, in that they diligently searched the Scriptures to ascertain the truth of the doctrines taught by the Apostle. (*Acts*, xvii. 11.) Sopater, a native of this town, accompanied St. Paul to Asia. (*Acts*, xx. 4.) Lucian (*Asinus*, 34) describes it as a large and populous town. It was situated 30 M. P. from Pella (*Peut. Tab.*), and 51 M. P from Thessalonica (*Itin. Anton.*), and is mentioned as one of the cities of the *thema* of Macedonia. (Constant. *de Them.* ii. 2.) For a rare coin of Beroea, belonging to the time of Alexander the Great, see Rasche, vol. i. p. 1492; Eckhel, vol. ii. p. 69.

Verria stands on the E. slope of the Olympene range of mountains, about 5 miles from the left bank of the *Vistritza* or *Injékara*, just where that river, after having made its way to an immense rocky ravine through the range, enters the great maritime plain. *Verria* contains about 2000 families, and, from its natural and other advantages, is described as one of the most agreeable towns in *Rumili*. The remains of the ancient city are very considerable. Leake (*Northern Greece*, vol. iii. p. 291), from whom this account of *Verria* is taken, notices the NW. angle of the wall, or perhaps of the acropolis; these walls are traceable from that point southward to two high towers towards the upper part of the modern town, which appears to have been repaired or rebuilt in Roman or Byzantine times. Only three inscriptions have been discovered. (Leake, *l. c.*)

2. (Βερήs, Steph. B.: *Eth.* Βερήσιος), a town in Thrace, 87 M. P. from Adrianopolis (*Itin. Anton.*; Hierocles), and situated somewhere between Philippopolis and Nicopolis. (Amm. Marc. xxvii. 4. § 12, xxxi. 9. § 1; Jornand. *de Rebus Geticis*, c. 18.) In later times it was called Irenopolis, in honour of the empress Irene, who caused it to be repaired. (Theophan. p. 385; Zonar. *Ann.* vol. ii. p. 115; *Hist. Misc.* xxxiii. p. 166, ap. Muratori.) St. Martin, in his notes to Le Beau (*Bas Empire*, vol. xii. p. 330), confounds this city with the Macedonian Beroea. Liberius was banished to this place from Rome, and spent two years in exile there. (Socrates, *H. E.* iv. 11.)

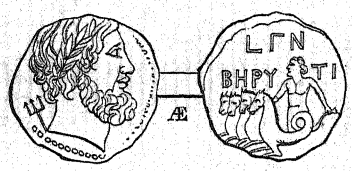
3. (Βέρροια, Βέροια, Βέροη, Βεροεία: *Eth.* Βερόευς, Steph. B.; Berooensis, Plin. v. 23; *Itin. An-*

ton.; Hierocles: *Haleb*, Aleppo), a town in Syria (Strab. xvi. p. 751), about midway between Antioch and Hierapolis. (Procop. *B. P.* ii. 7; Ptol. v. 15.) Julian, after a laborious march of two days from Antioch, halted on the third at Beroea. (Julian, *Epist.* xxvii.; Theodoret. iii. 22; Milman's Gibbon, vol. iv. p. 144; Le Beau, *Bas Empire*, vol. iii. p. 55.) Chosroes, in his inroad upon Syria, A. D. 540, demanded a tribute from Beroea, which he remitted afterwards, as the inhabitants were unable to pay it. (Procop. *B. P.* ii. 7; Milman's Gibbon, vol. vii. p. 315; Le Beau, vol. ix. p. 13.) A. D. 611 Chosroes II. occupied this city. (Gibbon, vol. viii. p. 225.) It owed its Macedonian name of Beroea to Seleucus Nicator, and continued to be called so till the conquest by the Arabs under Abu Obeidah, A. D. 638, when it resumed its ancient name of Chaleb or Chalybon. (Niceph. *H. E.* xiv. 39; Schulten's *Index Geog.* s. v. *Haleb*; Winer, *Bibl. Real-Wort. Buch.*) It afterwards became the capital of the Sultans of the race of Hamadan, but in the latter part of the tenth century was united to the Greek empire by the conquests of Zimisces, emperor of Constantinople. The excavations a little way eastward of the town, are the only vestiges of ancient remains in the neighbourhood. They are very extensive, and consist of suites of large apartments, which are separated by portions of solid rock, with massive pilasters left at intervals to support the mass above. (Chesney, *Exped. Euphrat.* vol. i. p. 435.) Its present population is somewhat more than 100,000 souls. For coins of Beroea, both autonomous and imperial, ranging from Trajan to Antoninus, see Rasche, vol. i. p. 1492; Eckhel, vol. iii. p. 359.

COIN OF BEROEA IN SYRIA.

4. (Βερέα, 1 *Macc.* ix. 4), a village in Judaea (Reland, *Palaest.* p. 640), which, according to Winer (*s. v.*), must not be confounded with the Berea mentioned 2 *Macc.* xiii. 4. [E. B. J.]

BERO'NES or VERO'NES (Βήρωνες), a people in the N. of Hispania Tarraconensis, along the upper course of the Iberus (*Ebro*), on its right bank, about *Logroño*, between the CELTIBERI on the S., and the CANTABRI on the N., SE. of the AUTRIGONES, and on the borders of the CONTESTANI. They were a Celtic people, and are mentioned by Strabo as forming, with the Celtiberi, the chief remnant of the old Celtic population of Spain. (Liv. *Fr.* xci., where the common reading is *Virones*: Strab. iii. pp. 158, 162; Ptol. ii. 6. § 55.) The following were their chief cities: TRITIUM METALLUM (Τρίτιον Μέταλλον, Ptol.: *Tricio*, near *Nagera*), in the Antonine Itinerary (p. 394) simply Tritium, on the high road from Legio VII. (*Leon*) to Caesaraugusta, 36 M.P. SE. of VIROVESCA; and not to be confounded with a place of the same name W. of Virovesca: VERELA, on the same road, 18 M.P. SE. of Tritium, and 28 NW. of CALAGURRIS (*Calahorra*, *Itin.* p. 393), undoubtedly the VAREIA or VARIA (Οὐάρεια, Οὐαρία) of Livy, Strabo, Pliny, and Ptolemy, which was the strongest city of the district (Liv. *l. c.*): it stood at a passage of the Iberus (Strab. p. 162), where the river commenced its navigable course of 260 M. P. (Plin. iii. 3. s. 4): it still bears its ancient name (*Varea*, a little below *Logroño*, with which some confound it; Florez, *Cantabr.* p. 198; Mentelle, *Esp. Med.* p. 363): OLIBA (Ὄλιβα, Ptol.: some assume a corruption by transposition, and identify it with the Ὀλβία mentioned by Stephanus Byzantinus as a city of Iberia); CONTREBRIA, also called Leucas, a stronghold of Sertorius, as being the most convenient head-quarters, from which to march out of the territory of the Berones into any of the neighbouring districts (Liv. *Fr.* xci. p. 27, where mention is also made of another important city of the same name belonging to the Celtiberi): Ukert takes it for the Cantabria on the *Ebro*, which is mentioned in the middle ages, and the ruins of which are seen between *Logroño* and *Piana*. (Sandoval, *Annot.* &c. quoted by D'Anville, *Mém. de l'Acad. des Inscr.* vol. xi. p. 771; Ukert, vol. ii. pt. i. pp. 321, 457, 458.) [P. S.]



BERO'THA (Βηρώθη), mentioned only by Josephus as a city of Upper Galilee, not far from Cadesh (Naphthali) (*Ant.* v. 1. § 18). He makes it the scene of the decisive battle which Joshua fought with the northern kings, "at the waters of Merom." (*Josh.* xi. 1—9.) [G. W.]

BERUBIUM, the third promontory on the north-west coast of Scotland, according to Ptolemy. Probably, *Noss Head*. [R. G. L.]

BERYA, a town in Apamene, according to the *Peutinger Tables*, SE. of Antioch, 25 M. P. from Chalcis and 54 M.P. from Bathna. Niebuhr (*Reise*, vol. iii. p. 95) found many ruins under the name of *Berua*. [E. B. J.]

BERYTUS (Βηρυτός, Berytus and Berytus: *Eth.* Βηρύτιος, Berytensis, Berytius, Steph. B. Scylax, p. 42; Dionys. Per. v. 911; Pomp. Mela, i. 12. § 5; Amm Mar. xiv. 8. § 9; Tac. *Hist.* ii. 81; *Itin. Anton.*; *Peut. Tab.*; *Geogr. Rav.*; Hierocles: *Beirût*), a town of Phoenicia, which has been identified by some with the Berotha or Berothai of the Hebrew Scriptures. (2 *Sam.* viii. 8; *Ezek.* xlvii. 16.) In the former passage Berothai is spoken of as belonging to the kingdom of Zobah (comp. v. 5), which appears to have included Hamath (comp. vv. 9, 10; 2 *Chron.* viii. 3). In the latter passage the border of Israel is drawn in poetic vision, apparently from the Mediterranean, by Hamath and Berothan, towards Damascus and Hauran. The Berotha here meant would, as Dr. Robinson (*Palestine*, vol. iii. p. 442) argues, more naturally seem to have been an inland city. After its destruction by Tryphon, B. C. 140 (Strab. xvi. p. 756), it was reduced by Agrippa, and colonised by the veterans of the v. Macedonica legio and viii. Augusta, and became a Roman colony under the name of Colonia Julia Augusta felix Berytus (Orelli, *Inscr.* n. 514, and coins in Eckhel, vol. iii. p. 356; Marquardt, *Handbuch der Röm. Alt*, p. 199), and was afterwards endowed with the rights of an Italian city. (Ulpian, *Dig.* 15. 1 § 1; Plin. v. 20.) It was at this city that Herod the Great held the mock trial over his two sons. (Joseph. *Ant.* xvi. 11. §§ 1—6.) The elder Agrippa greatly favoured the city, and adorned it with a splendid theatre and amphitheatre, beside baths and porticoes, inaugurating them with games and spectacles of every kind, including shows of gladiators. (Joseph. *Ant.* xix. 7. § 5.) Here, too, Titus celebrated the birthday of his father Vespasian by the exhibition of

similar spectacles, in which many of the captive Jews perished. (Joseph. *B. J.* vii. 3. § 1; comp. 5. § 1.) Afterwards Berytus became renowned as a school of Greek learning, particularly of law, to which scholars repaired from a distance. Its splendour may be computed to have lasted from the third to the middle of the sixth century. (Milman's Gibbon, vol. iii. p. 51.) Eusebius relates that the martyr Appian resided here for some time to pursue Greek secular learning (*De Mart. Paloest.* c. iv.), and Gregory Thaumaturgus repaired to Berytus to perfect himself in the civil law. (Socrates, *H. E.* iv. 27.) A later Greek poet describes it in this respect as "the nurse of tranquil life." (Nonnus, *Dionys.* xli. fin.) Under the reign of Justinian it was laid in ruins by an earthquake, and the school removed to Sidon, A. D. 551. (Milman's Gibbon, vol. vii. p. 420.) In the crusades, *Beirút*, which was sometimes called *Baurim* (Alb. *Aq.* v. 40, x. 8), was an object of great contention between the Christians and the Muslim, and fell successively into the hands of both. In A. D. 1110 it was captured by Baldwin I. (Wilken, *Die Kreuz.* vol. ii. p. 212), and in A. D. 1187 by Saláh eddín. (Wilken, vol. iii. pt. ii. p. 295.) It was in the neighbourhood of Berytus that the scene of the combat between St. George (who was so highly honoured in Syria) and the Dragon is laid. *Beirút* is now commercially the most important place in Syria. The town is situated on a kind of shoulder sloping towards the shore from the NNW. side of a triangular point, which runs more than two miles into the sea. The population amounts to nearly 15,000 souls. (Chesney, *Exped. Euphrat.* vol. i. p. 468. For coins of Berytus, both autonomous and imperial, ranging from Trajan to Antoninus, see Eckhel, vol. iii. p. 356; Rasche, *Lex. Num.* vol. i. p. 1492.) [E. B. J.]

COIN OF BERYTUS.

BESA or BESSA. [ATTICA, p. 331, b.]

BE'SBICUS (Βέσβικος: *Eth.* Βεσβικηνός), a small island in the Propontis, in the neighbourhood of Cyzicus. (Steph. B. *s. v.* Βέσβικος.) The mythical story, quoted by Stephanus from Agathocles, fixes the island near the outlet of the Rhyndacus. Pliny (v. 32) places Besbicus opposite to the mouth of the Rhyndacus, and gives it a circuit of 18 Roman miles. In another passage (ii. 88) he enumerates it among the islands which have been separated from the adjacent mainlands by earthquakes. The position assigned to Besbicus by Pliny and Strabo (p. 576) corresponds with that of *Kalolimno*, a small island which is about 10 miles N. of the mouth of the Rhyndacus. [G. L.]

BESE'DA (Βέσηδα: *S. Juan de la Badesas*), an inland city of the Castellani, in Hispania Tarraconensis. (Ptol. ii. 6. § 71; coins, *ap.* Sestini, p. 183; Ukert, vol. ii. pt. i. p. 426.) [P. S.]

BESIPPO or BAESIPPO (Βαισίππω), a city of the Turdetani, on or near the S. coast of Hispania Baetica, just outside the Straits, E. of the Pr. Junonis (*C. Trafalgar*), and 12 M. P. W. of Belo. (*Itin. Ant.* p. 408; Mela, ii. 6; Plin. iii. 1. s. 3; Ptol. ii. iv. § 14; *Geog. Rav.* iv. 43.) Some identify it with *Bejer de la Frontera;* but others argue that that place lies too far inland to agree with Pliny's statement that Besippo was a sea-port, and take the Roman ruins near *Porto Barbato* for its site. (Ukert, vol. ii. pt. i. p. 343.) [P. S.]

BESOR (Βάσελος), a brook in the south of Palestine, between the town of *Ziklag* (assigned to David by Achish king of the Philistines), and the country of the Amalekites. (1 *Sam.* xxvii. 6, xxx. 8, 9.) [G. W.]

BESSA (Βῆσσα: *Eth.* Βησσαῖος), a town in Locris, so called from its situation in a wooded glen, mentioned by Homer, but which had disappeared in the time of Strabo. (Hom. *Il.* ii. 532; Strab. ix p. 426; Steph. B. *l. c.*)

BESSI (Βησσοί), a Thracian tribe occupying the country about the rivers Axius, Strymon, and Nestus. They appear to have been a very numerous people, and at different times to have occupied a more or less extensive country. According to Herodotus (vii. 111), they belonged to the Satrae, a free Thracian people, and had the management of an oracle of Dionysus situated in the highest part of the mountains. In the time of Strabo (vii. p. 318) the Bessi dwelt all along the southern slope of Mount Haemus, from the Euxine to the frontiers of the Dardanians in the west. In the second century of our era their territory might seem to have been greatly reduced, as Ptolemy (iii. 11. § 9) mentions the Βεσσικὴ among the smaller στρατηγίαι of Thrace; but his statement evidently refers only to the western portion of the Bessi, occupying the country between the Axius and Strymon, and Pliny (iv. 11. 18) speaks of Bessi living about the Nestus and Mount Rhodope. Looking at the country they occupied, and the character given them by Herodotus, there can be no doubt that they were the chief people of Thrace; they were warlike and independent, and were probably never subdued by the Macedonians; the Romans succeeded in conquering them only in their repeated wars against the Thracians. It would seem that the whole nation of the Bessi was divided into four cantons (Steph. Byz. *s. v.* Τετραχωρῖται), of which the Diobessi mentioned by Pliny may have been one. In the time of Strabo the Bessi are said to have been the greatest robbers among the Thracians, who were themselves notorious as λησταί. That they were not, however, wholly uncivilised, is clear from the fact that they inhabited towns, the chief of which was called Uscudama (Eutrop. vi. 10). Another town, Bessapara, is mentioned by Procopius and others. (Comp. Dion Cass. liv. 34, and Baehr on Herodotus, *l. c.*) [L. S.]

BETA'SII, a people mentioned by Tacitus. In the war with Civilis, Claudius Labeo, a Batavian, mustered a force of Nervii and Betasii (*Hist.* iv. 56); and he opposed Civilis at a bridge over the Mosa with a hastily raised body of Betasii, Tungri, and Nervii (*Hist.* iv. 66). Pliny (iv. 17) mentions the Betasii, but he does not help us to fix their position. It seems probable that the Betasii were the neighbours of the Nervii and Tungri, and it is conjectured that the name is preserved in that of *Beetz*, on the left bank of the Geete, south of *Haalen*, in *South Brabant.* [G. L.]

BETHABARA (Βηθαβαρὰ), mentioned in St. John's Gospel (i. 28) as the place of our Lord's Baptism. It is placed by the Evangelist "beyond Jordan," i. e. on the eastern side of the river (comp. x. 40), perhaps identical with Beth-bara (*Judges*,

viii. 24), where was a ford, from which the place doubtless derived its name, equivalent to "*locus transitus*." (Reland, p. 626.) [G. W.]

BETHAGLA (Bethhogla), a town of Palestine, in the plain of Jericho, on the borders between the tribes of Judah and Benjamin, but reckoned to the latter. (*Josh.* xv. 6, xviii. 19, 21.) St. Jerome identifies it with the threshing-floor of Atad (*Gen.* l. 10, 11), the scene of the mourning for Jacob. (*Onomast. s. v. Area Atad.*) A fountain named *'Ain Hajla*, and a ruined monastery, *Kusr Hajla*, situated about two miles from the Jordan, and three from the northern shore of the Dead Sea, still preserve the name and memorial of this site. (Robinson, *B. R.* vol. ii. pp. 267—271.) [G. W.]

BETHAMMA'RIA (Βηθαμμαρία, Ptol. v. 15. § 14), a town on the W. bank of the Euphrates, the Betamali of the *Peutinger Tables*, 14 M.P. from Ceciliana. This place cannot be the Bemmaris of the *Antonine Itinerary*, as Bemmaris is placed above the Zeugma, and Bethammaria below it. [E. B. J.]

BETHANY (Βηθανία), a village 15 stadia from Jerusalem, at the eastern foot of the Mount of Olives, remarkable for the raising of Lazarus, and for other incidents in our Saviour's life. (*St. John*, xi. 18.) Its modern name is *El-Azarîyeh*, i. e. the village of Lazarus. (Robinson, *B. R.* vol. ii. p. 100.) [G. W.]

BETHAR (Bether, Bither, Βίθθηρα), a city celebrated in the history of the Jewish revolt under Hadrian (A. D. 131) as the last retreat of the Jews when they had been driven out of Jerusalem. They held out there for nearly three years. It is described as a very strong city not far distant from Jerusalem. (Euseb. *H. E.* iv. 6.) Its site was recovered and clearly identified in 1843. (Williams, *Holy City*, vol. i. pp. 209—213.) It is now called *Beitîr*, the exact Arabic form of its ancient name, and is a considerable village about six miles SSW. of Jerusalem, still retaining some traces of its fortifications, while the inhabitants of the modern village have received and preserved traditions of its siege. [G. W.]

BETHARAMATHUM (Βηθαράμαθον), identical with Amathus in Peraea (*q. v.*), as is proved by a comparison of Josephus, *Ant.* xvii. 12. § 6, *B. J.* ii. 4. § 2. (Reland, p. 560.) [G. W.]

BETHARAMPHTHA (Βηθαραμφθᾶ), a city of Peraea, which Herod Antipas encompassed with a wall, and changed its name to JULIAS, in honour of the wife of the emperor Tiberius. (*Ant.* xviii. 2. § 1.) It is certainly identical with that mentioned by Eusebius and St. Jerome as situated on the Jordan, originally named Betharamphta, and afterwards called Livias by Herod (*Onomast. s. v.*), and certainly *not* the same as the Julias which is placed by Josephus where the Jordan flows into the Sea of Tiberias (*B. J.* iii. 9. § 7), which was identical with Bethsaida. [BETHSAIDA.] But the names Julias and Livias are frequently interchanged, as are Julia and Livia. A still earlier name of this town, according to Eusebius and St. Jerome, was Beth-haram, a city of the tribe of Gad (*Josh.* xiii. 27), doubtless the same with Beth-haran (*Num.* xxxii. 36), which the Talmud also says was afterwards called *Bethramtha*. (Reland, p. 642; comp. pp. 869, 870, s. v. *Julias Peraeae.*) It is most probably only another form of the preceding *Betharamathum*, i. e. the modern *Amata*, near the Jabbok. [AMATHUS.] [G. W.]

BETHAVEN, commonly supposed to be identical with Bethel, so called after that city had become the scene of idol-worship, Beth-aven signifying "the house of vanity." But in *Josh.* (vii. 2) the two places are distinguished, Ai being placed "beside Beth-aven, on the east side of Bethel." Michmash is also placed "eastward from Bethaven." (1 *Sam.* xiii. 2.) It is joined with Gibeah and Ramah, and ascribed to Benjamin. (*Hos.* v. 8.) The LXX. translate it (in *Josh.* vii. 2) Βαιθήλ, (in xviii. 12) Βαιθών, (in *Hos.* v. 8) οἴκῳ Ὤν. [G. W.]

BETHDAGON (Βηθδαγών). Two cities of this name occur in the lists in the book of *Joshua*, one situated in the tribe of Judah, apparently towards the SW.; and the other in the tribe of Asher (xv. 41, xix. 27). There are two villages of this name, *Beit-dajan*, now in Palestine, one a few miles to the east of *Jaffa*, the other SE. of *Nablûs*. They doubtless represent ancient sites, but are not identical with either of those first named. The village of this name near Jaffa apparently occupies the site of Caphardagon, a large village mentioned by Eusebius (*Onomast. s. v. Beth-Dagon*) between Diospolis (*Lydda*) and Jamnia (*Yebna*). (Robinson, *B. R.* vol. iii. p. 30, n. 2.) The frequent recurrence of this name shows how widely spread was the worship of Dagon through Palestine. [G. W.]

BETH-DIBLATHAIM (οἶκος Δαιβλαθαίμ), a city of Moab, mentioned only by Jeremiah (xlviii. LXX. xxxi. 22). [G. W.]

BETHEL (Βαιθήλ, Βηθήλ), a border city of the tribe of Ephraim, for the northern boundary of Benjamin passed south of it. (*Josh.* xviii. 13; *Judges*, i. 22—26.) It was originally named LUZ, and was celebrated in the history of the early patriarchs. (*Gen.* xii. 5, xxviii. 10—19, xxxi. 1—15.) It owed its new name, signifying "the house of God," to the vision of Jacob's ladder, and the altar which he afterwards erected there. It afterwards became infamous for the worship of the golden calf, here instituted by Jeroboam. (1 *Kings*, xii. 28, 33. xiii.) It was inhabited after the captivity (*Ezra*, ii. 28; *Nehem.* vii. 32, xi. 31), and was fortified by Bacchides. (1 *Maccab.* ix. 50; Joseph. *Ant.* xiii. 1. § 3.) It was taken by Vespasian after he had subjugated the country between this and the coast. (*B. J.* iv. 9. § 9.) It is described by Eusebius and St. Jerome as a small village on the road from Jerusalem to Sichem (*Nablûs*), twelve miles from the former (*Onomast. s. v.* Ἄγγαι), on the left (or east) of the road going south, according to the Itin. Hierosol. Precisely in this situation are large ruins of an ancient city, bearing the name of *Beitîn*, according to a common variation of *in* for *el* in the termination of Arabic proper names. (Robinson, *Bib. Res.* vol. ii. p. 128, n. 1.) [G. W.]

BETH-GAMUL (οἶκος Γαιμώλ), a city of Moab, mentioned only by Jeremiah (xlviii. 23), probably represented by the modern village of *Um-el-Jemâl* or *Edjmal*, west of the ancient Bozrah. (Robinson, *B. R.* iii., Appendix, p. 153.) [G. W.]

BETHHACCAREM (Βαιθαχαρμά, Βηθαγγαρίμ), mentioned by Jeremiah (vi. 1.) as the place where the beacon fire should be lighted to give the alarm of the Chaldaeans' approach to Jerusalem. "Malchiah, the son of Rechab, the ruler of part of Bethhaccarem," is mentioned by Nehemiah (iii. 14), which would seem to intimate that it was a place of considerable importance after the captivity. St. Jerome (*Comment. in Jerem. l. c.*) speaks of it as a village of Juda, situated on a mountain between Aelia and Thecua—i. e. *Tekoa*. Its site was conjecturally fixed by Pocock (*Trav.* ii. p. 42) to a very remarkable conical hill, about three miles east of Bethlehem, and about the same distance north of

Tekoa, conspicuous over all the neighbourhood, called by the natives *Jebel Fureidis*, the Frank Mountain of European travellers, at the foot of which are the ruins of HERODIUM. (Robinson, *B. R.*, vol. ii. pp. 170, 174.) [G. W.]

BETH-HARAN [BETHARAMPHTHA.]

BETHHOGLA. [BETHAGLA.]

BETH-JESIMOTH (Eus. Βηθασιμούθ, LXX. Βαιτθασειμώθ, Ἀσειμώθ, Αἰσιμώθ), one of the last stations of the Israelites before crossing the Jordan, and near the Salt or Dead Sea (*Numb.* xxxiii. 49; *Josh.* xii. 3.) It was a city of the tribe of Reuben (*Josh.* xiii. 20), afterwards occupied by the Moabites. (*Ezek.* xxv. 9.) Eusebius confounds it with Jashimon (*q. v.*) [G. W.]

BETHLEHEM (Βαιθλεέμ, Βηθλεέμ, Βηθλεεμίτης), a town of the tribe of Judah, six miles south of Jerusalem, on the left of the road to Hebron, called also "Ephrathah" and "Ephrath" (*Gen.* xlviii. 7; *Mica.* v. 1), and its inhabitants Ephrathites (*Ruth*, i. 2; 1 *Sam.* xvii. 12). It probably owed both its names, Bethlehem—i. e. *the house of bread*, and Ephrathah—i. e. *fruitful*, to the fecundity of its soil, and it is still one of the best cultivated and most fertile parts of Palestine. It is situated on a lofty ridge, long and narrow, which projects into a plain formed by the junction of several valleys, affording excellent pasture and corn lands; while the hill side, terraced to its summit, is laid out in oliveyards and vineyards. It is first mentioned in the history of the Patriarch Jacob (*Gen.* xlviii. 7); but does not occur in the list of the cities of Judah in the Hebrew text of the Book of Joshua. The version of the LXX., however, gives it under both its names (Ἐφραθὰ, αὕτη ἐστὶ Βαιθλεέμ), with ten other neighbouring cities (in *Joshua*, xv., after verse 59 of the Hebrew). It occurs also in the history of the Book of Judges (xix. 1, 2), soon after the settlement of the Israelites, for Phinehas was then high priest (xx. 28). It is the scene of the principal part of the Book of Ruth—Boaz, the progenitor of David, being the principal proprietor at that period (ii. 1), as his grandson Jesse was afterwards. From the time of David it became celebrated as his birthplace, and is called "the city of David" (*St. Luke*, ii. 4, 11; *St. John*, vii. 42), and was subsequently yet more noted as the destined birthplace of the Messiah, the circumstances of whose nativity at that place are fully recorded by *St. Matthew* (ii.), and *St. Luke* (ii.). The place of the nativity is described by Justin Martyr (*Dial.* § 78) in language which implies that it was identified in his days (*cir.* A. D. 150). Origen (A.D. 252) says that the cave "was venerated even by those who were aliens from the Faith" (*c. Cels.* lib. i. p. 39), agreeably with which St. Jerome says that the place was overshadowed by a grove of Thammuz (Adonis) from the time of Hadrian for the space of 180 years (A. D. 135—315). (*Epitaph. Paul.* vol. iv. p. 564.) In A.D. 325, Helena, the mother of Constantine, erected a magnificent basilica over the Place of the Nativity (Eusebius, *Vit. Const.* iii. 41, 43), which still remains. In the following century, it became the chosen resort of the most learned of the Latin fathers, and the scene of his important labours in behalf of sacred literature, chief among which must be reckoned the Vulgate translation of the Bible. Its modern name is *Beitlahem*, a considerable village, inhabited exclusively by Christians. [G. W.]

BETHLEHEM (Βαιθλεέμ, Βαιθμάν), a city of the tribe of Zebulun. (*Josh.* xix. 15). The site and name are preserved in the modern village of *Beitlahem*, a few miles north of Nazareth, and eastward of *Sephûrieh* (formerly Diocaesarea). [G.W.]

BETHLEPTEPHA (τοπαρχία Βεθλεπτηφῶν), one of the ten toparchies of Judaea proper, the Bethleptephene of Pliny (v. 14). It was apparently situated in the south of Judaea, and in that part which is commonly called Idumaea by Josephus (*B. J.* iv. 8. § 1). Reland has remarked that the name resembles Beth-Lebaoth, a city of the tribe of Simeon (*Josh.* xix. 6), and the situation equally corresponds. [G. W.]

BETHMARCABOTH (1 *Chron.* iv. 31), or Beth-hamarkaboth (*Josh.* xix. 5) (Βαιθμαριμώθ, Βαιθμαχερέθ). A city of the tribe of Simeon, otherwise unknown. [G. W.]

BETHOGABRIS or BETHAGABRA (Βαιτογαβρά, Ptol., Βαιθγαύρη), the Betogabri of the Peutinger tables, between Ascalon and Aelia, 16 Roman miles from the former. It is reckoned to Judaea by Ptolemy (xvi. 4), and is probably identical with Βήγαβρις (al. Βήταρις) of Josephus, which he places in the middle of Idumaea. (*B. J.* iv. 8. § 1.) It was afterwards called ELEUTHEROPOLIS, as is proved as by other evidence, so by the substitution of one name for the other in the lists of episcopal sees given by William of Tyre and Nilus: as suffragans of the Patriarchate of Jerusalem. (Compare Reland's *Palaest.* p. 220 with 227.) That it was a place of considerable importance in the fourth century is proved by the fact that it is assumed as a centre (by Eusebius in his *Onomasticon*), from which to measure the distances of other localities, and the "district" or "region of Eleutheropolis," is his usual description of this part of the country. It has now recovered its ancient name *Beit-Jebrin*, and is a large Moslem village, about 20 miles west of Hebron. The name signifies "the house of Giants," and the city was situated not far from Gath, the city of Goliath and his family. The large caves about the modern village, which seem formerly to have served as habitations, suggest the idea that they were Troglotides who originally inhabited these regions. It was sometimes confounded with Hebron, and at another period was regarded as identical with Ramath-lehi (*Judges* xv. 9—19), and the fountain Enhakkore was found in its suburbs (Antoninus Mart. &c. ap. Reland. *Palaest.* p. 752); and it is conjectured by Reland (*l. c.*) that this erroneous opinion may have given occasion to its change of name, to commemorate in its new appellation the deliverance there supposed to have been wrought by Samson. St. Jerome, who gives a different and less probable account of its Greek name, makes it the northern limit of Idumaea. (Reland, *l. c.*) *Beit-Jebrin* still contains some traces of its ancient importance in a ruined wall and vaults of Roman construction, and in the substructions of various buildings, fully explored and described by Dr. Robinson (*B. R.* vol. ii. pp. 355, 356. 395—398).

BETH-SHITTA (Βηθσεέδ, al. Βασεεττά, LXX.), occurs only in *Judges* (vii. 22) as one of the places to which the Midianites fled after their defeat by Gideon in the valley of Jezreel (vi. 33). Dr. Robinson suggests that the modern village of *Shŭtta*, near the Jordan, SE. from Mount Tabor, may be connected with this Scripture name. (*B. R.* vol. iii. p. 219.) [G. W.]

BETH-ZACHARIAH (Βαιθζαχαρία, Βεθζαχαρία), a city of Judaea, 70 stadia distant from Bethsura or Bethzur [*q. v.*], on the road to Jerusalem.

(1 *Maccab.* vi. 23; Joseph. *Ant.* xii. 9. § 4; *B. J.* i. 1. § 5.) It was here that Judas Maccabaeus encamped at a mountain pass, to defend the approach to Jerusalem against Antiochus Eupator, and here an engagement took place, in which Judas was defeated, with the loss of his brother Eleazar, who was crushed to death by one of the elephants, which he had stabbed in the belly. (Joseph. *l. c.*) Sozomen calls it Χαφὰρ Ζαχαρία (*H. E.* ix. 17), and places it in the region of Eleutheropolis [BETHOGABRIS], and, apparently in order to account for the name, says that the body of Zachariah was found there. A village named *Tell-Zakariya* (Robinson, *B. R.* vol. ii. p. 350) still marks the site of the ancient town. It is situated in the SW. of *Wady-es-Sumt*, formerly the valley of Elah, in the narrowest part of the valley, so that the scene of Judas's conflict with the forces of Antiochus was not far distant from that of David's overthrow of the Philistine champion. [G. W.]

BETHORON (Βηθθορών, Βαιθωρών). There were two cities of this name in the northern border of the tribe of Benjamin (*Josh.* xvi. 5, xviii. 13), but belonging to the tribe of Ephraim, and assigned to the Levites. (*Josh.* xxi. 22.) Originally built by Sherah (1 *Chron.* vii. 24); they were fortified by Solomon. (2 *Chron.* viii. 5.) The two cities were distinguished as *the Upper* and *the Lower*, the Upper being situated more to the east, the Lower to the west, where the mountain country inclines towards the great western plain. It was in this neighbourhood that Joshua defeated the allied kings (x. 10, 11), and 15 centuries later that same "going down to Bethoron" was fatal to the Roman army under Cestius, retreating before the Jews from his unsuccessful attempt upon the city (*B. J.* ii. 19. §§ 2, 8), as it had been once again, in the interim, to the forces of Antiochus Epiphanes, under Seron, who lost 800 men in this descent after he had been routed by Judas Maccabaeus. (1 *Macc.* iii. 16, 24.) Bethoron was one of several cities fortified by Bacchides against Jonathan, the brother of Judas (ix. 50). These towns lay on the high road from Jerusalem to Caesarea, by way of Lydda, and are frequently mentioned in the line of march of the Roman legions (*ll. cc.*, *B. J.* ii. 19. §§ 1, 2, 8). The highway robbery of Stephanus, the servant of the emperor Claudius, one of the events which helped to precipitate the war, took place on this road (*B. J.* ii. 12. § 2), at the distance of 100 stadia from Jerusalem. (*cf. Ant.* xx. 5. § 4.) Eusebius and St. Jerome mention two villages of this name 12 miles from Aelia (Jerusalem), on the road to Nicopolis (Emmaus) [they would more correctly have written Diospolis (Lydda)]; and St. Jerome remarks that Rama, Bethoron, and the other renowned cities built by Solomon, were then inconsiderable villages. (*Comment. in Sophon.* c. 1.) Villages still remain on the sites of both of these ancient towns, and are still distinguished as *Beit-'ûr et-Tahta* and *el-Foka*, i. e. the Lower and the Upper. They both contain scanty remains of ancient buildings, and traces of a Roman road are to be found between them. They are about an hour (or three miles) apart. (Robinson, *B. R.* vol. iii. pp. 59—62.) [G. W.]

BETHPHAGE (Βηθφάγη), a place on Mount Olivet, between Bethany and Jerusalem (*St. Matth.* xxi. 1; *St. Luke*, xix. 29); for our Lord, having passed the preceding night at Bethany (*St. John*, xii. 1), came on the following morning to "Bethphage and Bethany," i. e., as Lightfoot explains it, to that part of the mountain where the district of Bethany met that of Bethphage. (*Chorograph. Cent.* ch. xxxvii.; *Exercitations on St. Luke*, xxiv. 50; Horae Heb. &c. in *Act. Ap.* i. 12.) This writer denies that there was any village of Bethphage, but assigns the name to the whole western slope of Mount Olivet as far as the city, explaining it to mean the "place of figs," from the trees planted on the terraced sides of the mount. (*Chorograph. Cent.* xxxvii.) Eusebius and St. Jerome, however, describe it as a small village on the Mount of Olives, and the latter explains the name to mean "villa (s. domus) sacerdotalium maxillarum" (*Comment. in St. Matth.* xxi.; *Epitaph. Paulae*), as being a village of the priests to whom the *maxilla* of the victims belonged. [G. W.]

BETHSAIDA (Βηθσαϊδά). 1. A town of Galilee, situated on the Sea of Tiberias. (*St. John*, xii. 21; *St. Mark*, vi. 45, viii. 22.) It was the native place of four of our Lord's apostles (*St. John*, i. 45), and probably derived its name from the occupation of its inhabitants = "vicus piscatorum." (Reland, *s. v.*) It is mentioned in connection with Chorazin and Capernaum as one of the towns where most of our Lord's mighty works were done (*St. Matth.* xi. 21—23; *St. Luke*, x. 13); and Epiphanius speaks of Bethsaida and Capernaum as not far distant from each other. (*Adv. Haer.* ii. p. 437.) At the NE. extremity of the plain of Gennesareth, where the western coast of the Sea of Tiberias joins the north coast, is a rocky promontory which is called *Ras* (Cape) *Seiyada*, and between this and some ruined waterworks of Roman construction — now called *Tavga* (mills), from some corn-mills still worked by water from the Roman tanks and aqueducts — are the ruins of a town on the shore which the natives believe to mark the site of Bethsaida.

2. Another town on the northern shore of the Sea of Tiberias, which Philip the Tetrarch enlarged and beautified, and changed its name to Julias, in honour of the daughter of Augustus and the wife of Tiberius. (*Ant.* xviii. 2. § 1.) As Julia was disgraced by Augustus before his death, and repudiated by Tiberius immediately on his assuming the purple, it is clear that the name must have been changed some time before the death of Augustus (A. D. 14), and probably before the disgrace of Julia (B. C. 2). And it is therefore nearly certain that this town is not (as has been supposed) the Bethsaida of the Gospels, since the sacred writers would doubtless, as in the parallel case of the town of Tiberias, have adopted its new name. Besides which, the Bethsaida of the Gospels was in Galilee (see supra, No. 1), while Julias was in Lower Gaulonitis (*B. J.* ii. 9. § 1), and therefore subject to Philip, as Galilee was not. Its exact situation is indicated by Josephus, where he says that the Jordan enters the Lake of Gennesareth at the city Julias. (*B. J.* iii. 9. § 7.) It was therefore on the left bank of the Jordan, at its embouchure into the Sea of Tiberias. It is not otherwise known in history except as the place of Philip the Tetrarch's death. (*Ant.* xviii. 5. § 6.) It is mentioned also by Pliny in connection with Hippo, as one of several agreeable towns near to the place where the Jordan enters the lake, and on the E. shore (v. 15). The small triangular plain between the lake and the river is thickly covered with ruins, but especially at *et-Tell*, a conspicuous hill at its NW. extremity. (Robinson, *Bib. Res.* vol. iii. pp. 304—308.) [G. W.]

BETHSAN (Bethshan, Βαιθσάν, Βεθσάνη), or SCYTHOPOLIS, a city of the Manassites, but lo-

cally situated in the tribe of Issachar. (Comp. *Judg.* i. 27; 1 *Chron.* vii. 29; *Josh.* xvii. 11.) It was situated to the east of the great Plain of Esdraelon (1 *Maccab.* v. 52), not far from the Jordan, and was 600 stadia distant from Jerusalem. (2 *Macc.* xii. 29.) In the time of Saul it was occupied by the Philistines, who, after the battle of Gilboa, hung the bodies of Saul and his sons to the walls of this city. (1 *Sam.* xxxi. 10, 12.) It is placed by Josephus at the southern extremity of Galilee. (*B. J.* iii. 3. § 1.) He calls it the chief city of the Decapolis, and near Tiberias. (*B. J.* iii. 8. § 7.) Elsewhere he states its distance from Tiberias to be 120 stadia. (Vita, § 65.) Ptolemy (v. 16) reckons it as one of the cities of Coelesyria. Pliny (v. 18), who assigns it to Decapolis [DECAPOLIS], says that it was formerly called Nysa, from the nurse of Bacchus, who was buried there. Several conflicting accounts are given of its classical name, *Scythopolis*, Pliny and others ascribing it to the Scythians, who are supposed to have occupied it on their invasion of Palestine (B. C. 568—596), recorded by Herodotus (i. 105). Reland (p. 983), who rejects this, suggests a derivation from the fact mentioned by St. Jerome, that the *Succoth* of *Gen.* xxxiii. 17, was near this place, on the opposite side of the Jordan, so making Σκυθόπολις equivalent to Συκοθόπολις. The modern Greeks derive it from Σκῦτος = δέρμα (a skin or hide), without offering any explanation of the name. This name is first used by the LXX. in their translation of *Judges*, i. 27 (Βαιθσὰν, ἥ ἐστι Σκυθῶν πόλις), and occurs in the Apocryphal books without its original name. (1 *Macc.* v. 52, vii. 36; 2 *Macc.* xii. 39.) It early became an episcopal see, and is famous in the annals of the Church. Its modern ruins bear witness to the extent and importance of the ancient city. Burckhardt found it 8¼ hours from Nazareth, "situated on a rising ground on the west side of the Ghor," the *μέγα πέδιον* of Josephus, *i. e.* the Valley of the Jordan. "The ruins are of considerable extent, and the town, built along the banks of a rivulet and in the valleys formed by its several branches, must have been nearly three miles in circuit." (*Travels*, p. 343.) Irby and Mangles approached it from Tiberias, and noticed traces of a Roman road on the way, and a Roman mile-stone. The principal object in the ruins is "the theatre, which is quite distinct, . . . 180 feet wide, and has this peculiarity above all other theatres we have ever seen, viz., that those oval recesses half way up the theatre, mentioned by Vitruvius as being constructed to contain the brass sounding tubes, are found here. . . . . There are seven of them, and Vitruvius mentions that even in his day very few theatres had them." (*Travels*, pp. 301, 303.) The necropolis is "at the NE. of the acropolis, without the walls: the sarcophagi remain in some of the tombs, and triangular niches for the lamps; some of the doors were also hanging on the ancient hinges of stone, in remarkable preservation." A fine Roman bridge, some remains of the walls and of one of the gates, among which are prostrate columns of the Corinthian order, and paved ways leading from the city are still existing. [G. W.]

BETHSHEMESH (Βήθσαμες), a priestly city on the northern border of the tribe of Judah (*Josh.* xv. 10, 45, xxi. 16), where the battle, provoked by Amaziah's foolish challenge, was fought between him and Jehoash (about B. C. 826). (2 *Kings*, xiv. 11—13.) It was erroneously ascribed to Benjamin by Eusebius and St. Jerome, and placed by them ten miles from Eleutheropolis, on the east of the road to Nicopolis. (*Onomast. s. v.*) This corrects the former error, for no place within ten miles of Eleutheropolis could possibly be in Benjamin; but it commits another, as we should read "west" instead of "east;" for there can be little doubt that the modern village of *'Ain Shems* represents the ancient Bethshemesh; and this would nearly answer to the description, with the correction above suggested. This view is confirmed by the narrative of 1 *Sam.* vi. 9—20, where this is mentioned as the first city to which the ark came on its return from the country of the Philistines; and this city, with some others in "the low country," was taken by the Philistines in the days of Ahaz. (2 *Chron.* xxviii. 18.) It is probably identical with Ir-shemesh in the border of Dan (*Josh.* xix. 41.) The manifest traces of an ancient site at *'Ain Shems*, further serve to corroborate its identity with Bethshemesh, which the name suggests, for "here are the vestiges of a former extensive city consisting of many foundations, and the remains of ancient walls and hewn stone." (Robinson, *B. R.* vol. iii. p. 17—19, and note 6, p. 19.)

There was another city of this name in Naphthali (*Josh.* xix. 38; *Judg.* i. 33), of which nothing is known. [G. W.]

BETH-SIMUTH (Βηθσιμούθ). [BETHJESIMOTH.]

BETHULIA (Βετυλούα), a strong city of Samaria, situated on the mountain range at the south of the Plain of Esdraelon, and commanding the passes. It is the scene of the book of Judith, and its site was recovered by Dr. Schultz in 1847, on the northern declivity of Mount Gilboa, south-west of Bisan. It is identified by its name *Beit Ilfah*, by its fountain (*Judith*, vii. 3. xii. 7), by considerable ruins, with rock graves, and sarcophagi, and by the names of several sites in the neighbourhood identical with those of the book of Judith. (See Dr. Schultz's Letter in Williams's *Holy City*, vol. i. Appendix, p. 469.) [G. W.]

BETH-ZUR (Βηθσούρ, Βηθσούρα: *Eth.* Βηθσουραῖος, Βηθσουρίτης), a city of the tribe of Judah, and one of those fortified by Rehoboam. (*Joshua*, xv. 58; 2 *Chron.* xi. 7.) In the books of Maccabees and in Josephus there is frequent mention of one, or perhaps two cities of this name, in *the south* of Judaea (1 *Macc.* xiv. 13), and therefore sometimes reckoned to Idumaea (1 *Macc.* iv. 29, but in verse 61, *κατὰ πρόσωπον τῆς Ἰδουμαίας*, compare 2 *Macc.* xiii. 19.) It is described as the most strongly fortified place of Judaea. (*Ant.* xiii. 5. § 7.) In the time of Judas Maccabaeus it stood a long siege from Antiochus Eupator, but was at length forced to capitulate (xii. 8. § 4, 5), and was held by the renegade Jews after other fortresses had been evacuated by their Syrian garrisons (xiii. 2. § 1), but at length surrendered to Simon (5. § 7). Josephus places it 70 stadia distant from Beth-Zachariah. (xii. 8. § 4.) Eusebius and St. Jerome speak of Βεθσούρ, or Βηθσορών, Bethsur, or Bethsoron, on the road from Aelia to Hebron, twenty miles from the former, and therefore only two from the latter. [G. W.]

BETIS. [BAETIS.]

BETONIM (Βοτανίμ, *Josh.* xiii. 26), a city of the tribe of Gad, apparently in the northern border, near the *Jabbok*. The place existed under the same name in the time of Eusebius. (Reland, p. 661.) There is a village of the name of Batneh in the

Balka, which corresponds nearly with the tribe of Gad, but as this is south of *es-Salt*, its situation hardly suits that of Betonim, though there is a striking similarity in the names. (Robinson, *Bib. Res.* vol. iii. p. 169 of the Appendix.) [G. W.]

BETULLO. [BAETULO.]

BEUDOS VETUS, a town of Phrygia, which Livy (xxxviii. 15), when describing the march of Manlius, places five Roman miles from Synnada, and between Synnada and Anabura. Hamilton (*Researches*, &c. vol. i. p. 467) is inclined to fix it at *Eski* (Old) *Kara Hissar*, which "is situated about 5 or 6 miles due north of the great plain of Phrygia Paroreius, throughout which are considerable remains of ancient monuments and inscriptions." But *Beiad*, a place NE. of *Eski Kara Hissar*, may be Beudos, for the names are the same. (Leake, *Asia Minor*, p. 56.) If the site of Synnada could be certainly ascertained, we might determine, perhaps, that of Beudos. [SYNNADA.] [G. L.]

BEVE (Βεύη: *Eth.* Βευαῖος), a town in Lyncestis in Macedonia, situated on the river Bevus, a tributary of the Erigon, and probably the southern branch of the latter river. (Steph. B. *s. v.*; Liv. xxxi. 33; Leake, *Northern Greece*, vol. iii. pp. 310, 314.)

BEZABDA (Βηζάβδη: *Jézireh-Ibn-'Omar*), a Roman fortress situated on a low sandy island in the Tigris, at about 60 miles below the junction of its E. and W. branches, about three miles in circumference, and surrounded on all sides by mountains. According to Ammianus Marcellinus (xx. 7. § 1) the ancient name was Phoenicia. As it was situated in a territory occupied by the tribe of the Zabdeni, it owed its name of Bezabda, a corruption of the Syriac words Beit-Zabda, to this circumstance. The Romans granted it the privileges of a municipal town; and in the reign of Constantius it was garrisoned by three legions, and a great number of native archers. It was besieged by Sapor A.D. 360, and captured. On account of the obstinate resistance of the inhabitants, a fearful massacre followed, in which neither women nor children were spared. Nine thousand prisoners, who had escaped the carnage, were transplanted to Persia, with their bishop Heliodorus and all his clergy.

The exiled church continued under the superintendence of his successor Dausus, who, A.D. 364, received the crown of martyrdom along with the whole of the clergy. (*Acta Mart. Syr.*, Asseman, vol. i. p. 134—140.)

Constantius made an unsuccessful attempt to recover this fortress. (Amm. Marc. xx. 11. § 6; Milman's *Gibbon*, vol. iii. p. 207; Le Beau, *Bas Empire*, vol. ii. p. 340.) The Saphe (Σαφή) of Ptolemy (v. 18) which he places between Dorbeta and Debe, has been identified by some with Bezabda. (Comp. Σαφά, Plut. *Lucull.* 22.) Mr. Ainsworth (*Journal Royal Geog. Society*, vol. xi. p. 15) assigns *Hisn Këifa* to Saphe, and *Jezireh* to Deba. The fortress occupies the greater part of the island, and is defended by a wall of black stone, now fallen into decay. (Kinneir, *Travels*, p. 450; Chesney, *Exped. Euphrat.* vol. i. p. 19; Ritter, *Erdkunde*, vol. i. p. 146; St. Martin, *Mém. sur l'Armenie*, vol. x. p. 162.) [E. B. J.]

BEZEK (Βεζέκ, Βεζέκη), a city of the Canaanites at the time of the entering in of the children of Israel; the capital of a district which gave its name to one of the petty kings or sheikhs of the country. (*Judg.* i. 4, 5.) It is only mentioned again in 1 *Sam.* xi. 8, though it may be doubted whether these two are identical, as the former was in Judah, and the latter apparently in Benjamin. Eusebius and St. Jerome (*Onom. s. v.*) mention two cities of that name, near each other, 17 miles from Neapolis, on the road to Scythopolis. But these cannot represent either of the Scripture sites. The Greeks mention a place in the eastern borders of the diocese of Bethlehem, now called Beletza, which they say was formerly Bezek: this would be in Judah. (Williams's *Holy City*, vol. i. Appendix, p. 493.) [G. W.]

BEZER (Bosor and Bosora, Βοσόρ, Βόσορα), the southernmost of the three cities of refuge, on the east of Jordan, in the wilderness, in the plain country, belonging to the Reubenites (*Deut.* iv. 43, *Josh.* xx. 8), assigned to the priests (xxi. 36). There is no further clue to its site, and it is misplaced by Eusebius, who confounds it with Bozra. Bossora and Bosor occur as two distinct cities in 1 *Macc.* v. 26, large and strong,—but are there placed in Gilead (comp. verses 27, 36). As, however, Bosor is mentioned as the first city to which Judas came after quitting the Nabathaeans, it was apparently the southernmost of all the cities named; it was, moreover, in *the wilderness* (verse 28; comp. Josephus, *Ant.* xii. 8. § 3), and therefore very probably the City of Refuge, in which case *Gilead* must be taken in a wider sense in the passages above cited. [G. W.]

BIABANNA (Βιαβάνα and Βιανάννα, Ptol. vi. 7), a town in the interior of Arabia Felix, 76° 30′, 23° 0′ of Ptolemy. Identical in position with the modern *Bubban*, on the south of the mountains Sumama (the Zametus of Ptolemy), mentioned by Captain Sadlier. (MS. Journal cited by Forster, *Arabia*, vol. ii. p. 313, note, comp. p. 250.) [G. W.]

BIAS (Βίας), a small river of Messenia, falling into the sea between the Pamisus and Corone. (Paus. iv. 34. § 4.)

BIA'TIA. [BEATIA.]

BIBACTA (Βίβακτα, Arrian, *Indic.* 21), an island two stadia from the coast of Gedrosia, and opposite to a harbour named by Nearchus *Alexandri Portus*. The whole district round it was called Sangada. (Arrian. *Indic.* 21.) It appears to be the same as the Bibaga of Pliny (vi. 21. s. 23), the description of shell fish mentioned by him as found there applying to the notice of its productions in Arrian. Its present name is *Chilney Isle*. It is called *Camelo* in Purchas's *Voyages*, and in the Portuguese Map, in Thevenot's Collection. (Vincent, *Voyage of Nearchus*, vol. i. p. 199.) [V.]

BIBALI. [GALLAECIA.]

BIBE, a place in Gallia, which the Table fixes between Calagum (*Chailli*) and Durocortorum (*Reims*). D'Anville (*Notice*, &c.) gives reasons for supposing that the site may be *Ablois*, a large bourg, which is separated from the Marne by a high hill. [G. L.]

BIBLIS (Βιβλίς), a fountain in the territory of Miletus. (Paus. vii. 5. § 10, vii. 24. § 5.) [G. L.]

BIBRACTE (*Autun*), the chief town of the Aedui, as it is called by Caesar (*B. G.* i. 23; vii. 55, 63), is the town which afterwards had the name of Augustodunum. It is not possible to find any site for Bibracte except Augustodunum; the position of which is well fixed at *Autun* by the itinerary measures from *Bourges* and *Châlons-sur-Saône*.

Caesar describes Bibracte as much the largest and richest town of the Aedui. When he was pur-

suing the Helvetii (B. c. 58), who had crossed the Saône, he came within 18 M.P. of Bibracte, and about this distance from the place was fought the great battle in which the Helvetii were defeated. Strabo, who follows Caesar in his description of Gallia, where he is not following Posidonius, has the name Bibracte (p. 192) and no other. Mela (iii. 2) is the first extant writer, who names Augustodunum as the capital of the Aedui, and under this name it is mentioned by Tacitus and Ptolemy. A passage of the orator Eumenius, who was a native of Augustodunum, shows that the town took the name, or wished to take the name, of Flavia, to show its gratitude to the Flavii, for both Constantine and his father Constantius Chlorus had been benefactors to the place. In this passage the orator states that Bibracte was once called Julia, Polla, Florentia, and it has been used as a proof that Augustodunum is not Bibracte. But the name Julia, which was the adopted gentile name of Augustus, is equivalent to Augusta, and indeed a place was often called both Julia and Augusta. Two inscriptions also, which mention the goddess Bibracte, have been found at *Autun*.

Augustodunum is mentioned in Tacitus (*Ann.* iii. 43) as having been seized by Sacrovir, an Aeduan, a desperate fellow, who, with other insolvents, saw no way of getting out of their difficulties except by a revolution (A. D. 21). The town, at that time also as in Caesar's time, the chief city of the Aedui, was the place of education for all the noblest youths of the Galliae. It was besieged and taken by Tetricus, who assumed the imperial title in Gaul and Britain in the time of Gallienus; and the damage that was then done was repaired by Constantius Chlorus and his son Constantine. Finally the place is said to have been destroyed by Attila and his Huns.

Autun is on the *Arroux*, a tributary of the *Loire*, but it occupies only a part of the site of Augustodunum. It contains many Roman remains. The walls are about 3½ English miles in circuit, and inclose an oblong space between the *Arroux* and a brook from *Mont Jeu* (Mons Jovis), which falls into the *Arroux*, after bounding two sides of the town. The walls are built, like the walls of *Nîmes*, of stones well fitted together; and they were flanked by numerous towers, 220 according to one French authority. The number of gates is uncertain; but two still remain, the *Porte d'Arroux* and the *Porte St. André*. The *Porte d'Arroux* is above 50 ft. high, and more than 60 in width, built of stone without cement. It contains two large arched ways for foot passengers. Above the entablature over the arches is a second story, consisting of arches with Corinthian pilasters: seven arches still remain. The *Port St. André* is less ornamented than the *Porte d'Arroux*, and less regular. It is above 60 feet high, and more than 40 feet wide. It has also two large arched passages; and there were two wings or pavilions on each side, but one is said to be destroyed. The town was intersected by two main streets, one leading from the *Porte d'Arroux* to the opposite side of the town, and the other from the *Porte St. André* to the side opposite to that gate. At the intersection of these streets, and in the centre of the town, is the *Marchau*, as it is called now. This place must have been the Forum. Near to the *Porte d'Arroux*, and on the opposite bank of the river, is the *Chaumar*, evidently a corruption of Campus Martius. There are within the walls the ruins of a theatre, and traces of an amphitheatre; and in their neighbourhood was a naumachia, a large basin, one diameter of which was above 400 feet.

Outside of the town, and on the border of the *Chaumar*, are the remains of a temple of Janus, three sides of which still remain. (*Guide du Voyageur, &c.*, par Richard et E. Hocquart.) They were constructed of stones cut of a small size. This seems to have been a magnificent building. There are other remains at *Autun*.

On the hill of *Montjeu*, near *Autun*, there are three large ponds which once supplied the aqueduct and the naumachia. The line of this aqueduct has been discovered in recent times. There are several remains near *Autun* which appear to be Celtic, and some of them may be of earlier date than the Roman conquest of Gaul. One of them is called the *Pyramide* or *Pierre de Couhard*, built of stones, joined by very hard cement. It is about 60 feet high; authorities differ very much as to the dimensions of the four sides of the base.

The most curious relic of antiquity found at *Autun* was an ancient chart or map, cut on marble, and since buried, it is said, under the foundations of a house. Eumenius, in one of his orations, speaks of such maps: "let the youth see in these porticoes, and let them daily contemplate all lands and all seas—the sites of all places with their names, spaces, intervals are marked down;" with more to the same effect, in a verbose, rhetorical style, but clearly showing that there were such maps or delineations for the use of the youths at Autun. (D'Anville, *Notice*, &c.; Walckenaer, *Géographie*, &c. vol. i. p. 326.) [G. L.]

BIBRAX, a town of the Remi, viii M. P. distant from the camp of Caesar, which was on the Axona (*Aisne*), and near a bridge. (*B. G.* ii. 5, 6.) The narrative shows that Bibrax was on the north side of the *Aisne*, and D'Anville fixes it at *Bièvre*, which is on the road from *Pont-à-Vere* on the *Aisne* to *Laon*; and the distances agree. [G. L.]

BIDA (Βίδα κολωνία, Ptol. iv. 2. § 28, VR. Βήδα, Βοήδα; Syda Muncip., *Tab. Peut.*: *Belidah*, Ru.), an inland city of Mauretania Caesariensis, 40 M. P. W. of Tubusuptus. The *Notitia Imperii* mentions a *Praepositus limitis Bidensis*. (Shaw, *Travels*, &c. c. 6, pp. 74, 75.) [P. S.]

BIDIS (Βῖδος, Steph. B.: *Eth.* Bidīnus), a small town of Sicily, mentioned by Cicero (*Verr.* ii. 22), who relates at length the persecutions to which its principal citizen Epicrates was subjected by Verres. He calls it "oppidum tenue sane, non longe a Syracusis." But it appears from his account that, however small, it enjoyed full municipal rights: and we find the Bidini again mentioned in Pliny's list of the stipendiary towns of the interior of Sicily (Plin. iii. 8. s. 14). Stephanus calls it only a φρούριον, or "castellum." Its site is considered by Fazello and Cluverius to be marked by an ancient church, called *S. Giovanni di Bidino*, about 15 miles W. of Syracuse, where, according to the latter, the remains of an ancient town were still visible in his day. The name is written on modern maps *Bibino*. (Fazell. x. 2. p. 453; Cluver. *Sicil.* p. 359; see however Amico, *Not. ad Fazell.* p. 456.) [E. H. B.]

BIDUCE'SII, a Gallic people mentioned by Ptolemy. Walckenaer affirms that D'Anville has improperly confounded them with the Viducasses of Pliny. He places them in the diocese of *Bidué*, or *St. Brieuc*, on the north coast of Bretagne. [VIDUCASSES.] [G. L.]

BIENNUS (Βίεννος: *Eth.* Βιέννιος: *Vidnos*), a

small city of Crete which the coast-describer (*Geogr. Graec. Minor.* ed. Gail, vol. ii. p. 495) places at some distance from the sea, midway between Hierapytna and Leben, the most eastern of the two parts of Gortyna. The Blenna of the Peutinger Table, which is placed at 30 M. P. from Arcadia, and 20 M. P. from Hierapytna, is no doubt the same as Biennus. In Hierocles, the name of this city occurs under the form of Bienna. The contest of Otus and Ephialtes with Ares is said to have taken place near this city. (Homer, *Il.* v. 315; Steph. B. *s. v.*) From this violent conflict the city is said to have derived its name. Mr. Pashley, in opposition to Dr. Cramer, who supposes that certain ruins said to be found at a considerable distance to the E. of *Haghii Saranta* may represent Biennus, fixes the site at *Viános*, which agrees very well with the indications of the coast-describer. (Pashley, *Travels*, vol. i. p. 267.) [E. B. J.]

BIESSI (Βίεσσοι, Ptol. iii. 5. § 20), a people of Sarmatia Europaea, on the N. slope of M. Carpates, W. of the Tagri, probably in the district about the city of *Biecz* in Galatia. (Forbiger, vol. iii. p. 1122.) [P. S.]

BIGERRA (Βίγερρα), a city of the Bastetani, in the E. of Hispania Baetica. (Liv. xxiv. 41; Ptol. ii. 6. § 61.) Ukert identifies it with *Becerra*, N. of *Cazorla*. (*Geogr.* vol. ii. pt. 1. p. 410.) [P. S.]

BIGERRIO'NES, a people of Aquitania, who, among others, surrendered to Crassus, the legatus of Caesar, in B. C. 56. (*B. G.* iii. 27.) Pliny (iv. 19) calls them Begerri. The name still exists in *Bigorre*, a part of the old division of Gascogne. It contains part of the high Pyrenees. The capital was Turba, first mentioned in the Notitia, which was afterwards called Tarria, Tarba, and finally *Tarbes*. The territory of the Bigerriones also contained Aquensis Vicus, now *Bagnères*. [G. L.]

BI'LBILIS (Βίλβιλις, Strab. iii. p. 162; Βίλβις, Ptol. ii. 6. § 58; Belbili, Geogr. Rav. iv. 43), the second city of the Celtiberi in Hispania Tarraconensis, next in importance to Segobriga, but chiefly celebrated as the birthplace of the poet Martial, who frequently mentions it with a mixture of affection for it as his native home, and of pride in the honour he had conferred on it, but not too without some apology for the rude sound of the Celtiberian names in the ears of his friends at Rome. (iv. 55, x. 103, 104, xii. 18.) The city stood in a barren and rugged country, on a rocky height, the base of which was washed by the river Salo, a stream celebrated for its power of tempering steel; and hence Bilbilis was renowned for its manufacture of arms, although, according to Pliny, it had to import iron from a distance. It also produced gold. (Mart. i. 49. 3, 12, reading, in the former line, *aquis* for *equis;* iv. 55. 11—15, x. 20. 1, 103. 1, 2, foll. 104. 6, xii. 18. 9; Plin. xxxiv. 14. s. 41; Justin. xliv. 3, where the river *Bilbilis* seems to mean the Salo.) It stood on the high road from Augusta Emerita to Caesarangusta, 24 M. P. NE. of the baths named from it [Aquae Bilbitanae], and 21 M. P. SW. of Nertobriga (*Itin. Ant.* pp. 437, 439). Under the Roman empire it was a municipium, with the surname of Augusta (Martial. x. 103. 1.) The neighbourhood of Bilbilis was for some time the scene of the war between Sertorius and Metellus (Strab. iii. p. 162.) Several of its coins exist, all under the emperors Augustus, Tiberius, and Caligula, with the epigraphs Bilbili, Bilbilis, and Mun. Augusta. Bilbilis. (Florez, *Med.* vol. i. pp. 169, 184; Mionnet, vol. i. p. 30, Suppl. vol. i. p. 55; Sestini, p. 108; Eckhel, vol. i. pp. 35, 36; Rasche, *s. v.*) The site of Bilbilis is at *Bambola*, near the Moorish city of *Calatayud* (*Job's Castle*), which is built in great part out of its ruins (Rader, *ad Martial.* p. 124; Ukert, vol. ii. pt. i. pp. 460, 461; Ford, *Handbook of Spain*, p. 529). [P. S.]

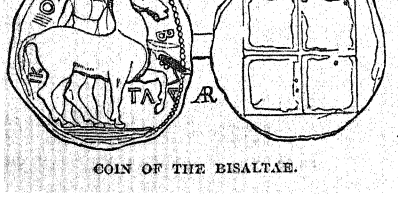
BI'LBILIS, the river, mentioned very vaguely by Justin (xi. iv. 3), is probably the Salo. [P. S.]

BILLAEUS (Βιλλαῖος), a river of Bithynia, which is the modern *Filyás*. [Bithynia.] Near the mouth of the river was the Greek town of Tios. The Billaeus is certainly a considerable stream, but the whole course does not appear to be accurately known at present. It is mentioned by Apollonius (ii. 792), and in the Periplus of Marcianus (pp. 70, 71), and by Arrian (*Peripl.* p. 14). In his list of Bithynian rivers, Pliny's text (v. 32) has Lilaeus, which may be intended for Billaeus. [G. L.]

BI'NGIUM (*Bingen*), a Roman station on the Rhine, at the junction of the Nava (*Nahe*) and the Rhine. It is mentioned by Tacitus in his history of the war of Civilis. (*Hist.* iv. 70.) Julian repaired the fortifications of Bingium while he was in Gallia. (Amm. Marc. xviii. 2.) The Antonine Itin. mentions Vincum on a road from Confluentes (*Coblenz*) to Treviri (*Trier*) and Divodurum (*Metz*), and as it makes the distance xxvi Gallic leagues from Confluentes to Vincum, we must suppose that Vincum is Bingium; for the Table makes viii from Confluentes to Bontobrice, ix from Bontobrice to Vosavia, and ix from Vosavia to Bingium, the sum total of which is xxvi. The Itinerary and the Table both agree in the number xii between *Bingen* and Moguntiacum, or *Mainz*. [G. L.]

BIRTHA. 1. (Βίρθα, Ptol. v. 18; Virta, Amm. Marc. xx. 7. § 17: *Tekrit*), an ancient fortress on the Tigris to the S. of Mesopotamia, which was said to have been built by Alexander the Great. It would seem, from the description of Ammianus (*l. c.*), to have resembled a modern fortification, flanked by bastions, and with its approaches defended by outworks. Sapor here closed his campaign in A. D. 360, and was compelled to retire with considerable loss. D'Anville (*Geog. Anc.* vol. ii. p. 416) identifies this place with *Tekrit*, in which Gibbon (vol. iii. p. 205) agrees with him. St. Martin (note on Le Beau, vol. ii. p. 345) doubts whether it lay so much to the S. The word Birtha in Syriac means a castle or fortress, and might be applied to many places. From the known position of Dura, it has been inferred that the remarkable passage of the Tigris by Jovian in A. D. 363 took place near *Tekrit*. (Amm. Marc. xxv. 6. § 12; Zosim. iii. 26.) Towards the end of the 14th century, this impregnable fortress was stormed by Taïmur-Bec. The ruins of the castle are on a perpendicular cliff over the Tigris, about 200 feet high. This insulated cliff is separated from the town by a broad and deep ditch, which was no doubt filled by the Tigris. At the foot of the castle is a large gate of brick-work, which is all that remains standing; but round the summit of the cliff the walls, buttresses, and bastions are quite traceable. There are the ruins of a vaulted secret staircase, leading down from the heart of the citadel to the water's edge. (Rich, *Kurdistan*, vol. ii. p. 147; comp. *Journ. Geog. Soc.* vol. ix. p. 448; Chesney, *Exped. Euphrat.* vol. i. pp. 26, 27; Ritter, *Erdkunde*, vol. x. p. 222.)

2. A town on the E. bank of the Euphrates, at the upper part of a reach of that river, which runs nearly N. and S., and just below a sharp bend in the



stream, where it follows that course after coming from a long reach flowing more from the W. This town has often been confounded with the Birtha of Ptolemy (v. 19; see below), but incorrectly. In fact, the name of Birtha occurs in no ancient writer. Zosimus (iii. 19) mentions that Julian, in his march to Maogamalcha, rested at a town called Bithra (Βίθρα), where there was a palace of such vast dimensions that it afforded quarters for his whole army. (Comp. Le Beau, *Bas Empire*, vol. iii. p. 93.) This town was no doubt the modern *Bîr* or *Birehjik* of the Turks (*Albirat*, Abulf. *Tab. Syr.* p. 127). The castle of *Bîr* rises on the left bank, so as to command the passage of the river on the opposite side. The town contains about 1700 houses, and is surrounded by a substantial wall, which, like the castle, is partly of Turkish architecture, partly of that of the middle ages. *Bîr* is one of the most frequented of all the passages into Mesopotamia. The bed of the river at this place has been ascertained to be 628¾ feet above the level of the Mediterranean Sea. (Buckingham, *Mesopotamia*, vol. i. p. 49; *Journ. Geog. Soc.* vol. x. pp. 452, 517; Chesney, *Exped. Euphrat.* vol. i. p. 46; Ritter, *Erdkunde*, vol. x. p. 976.)

3. A town to the SE. of Thapsacus, which Ptolemy (v. 19) places in 73° 40′ long., 35° 0′ lat. This place, the same as the Birtha of Hierocles, has been confounded by geographers with the town in the Zeugma of Commagene, which lies much further to the N. (Ritter, *Erdkunde*, vol. x. p. 976.) [E.B.J.]

BIS (Βίς, Isid. Char. p. 8), a small town placed by Isidorus in a district of Aria, called by him Anabon (Ἀνάβων). It seems, however, more likely that it is a place at the confluence of the Arkand-Ab and the Helmend, now called *Bost*. Isidorus (*l. c.*) speaks of a place called Βίν̓τ in this district, which is probably the same as he had previously called Βίς; and Pliny (vi. 23) says of the Erymanthus or *Helmend*, "Erymanthus praefluens Parabesten Arachosiorum," a mistake, doubtless, of his transcriber (i. e. Παρ' Αβήστην for Παρὰ Βήστην). This is rendered more likely by our finding in the Tab. Peuting. Bestia, and in Geo. Rav. (p. 39) Bestigia. (Wilson, *Ariana*, p. 158.) [V.]

BISALTES. [BISALTIA.]

BISA'LTIA (Βισαλτία), a district in Macedonia, extending from the river Strymon and the lake Cercinitis, on the E., to Crestonica on the W. (Herod. vii. 115.) It is called Bisaltica by Livy (xlv. 29). The inhabitants, called Bisaltae (Βισάλται), were a Thracian people. At the time of the invasion of Xerxes, B. C. 480, Bisaltia and Crestonica were governed by a Thracian prince, who was independent of Macedonia (Herod. viii. 116); but before the commencement of the Peloponnesian war, Bisaltia had been annexed to the Macedonian kingdom. (Thuc. ii. 99.) Some of the Bisaltae settled in the peninsula of Mt. Athos. (Thuc. iv. 109.) The most important town in Bisaltia was the Greek city of Argilus. [ARGILUS.] In this district there was a river Bisaltes (Βισάλτης), which Leake conjectures to be the river which joins the Strymon a little below the bridge of *Neokhório*, or Amphipolis; while Tafel supposes it to be the same as the Rechius of Procopius (*de Aedif.* iv. 3), which discharges into the sea the waters of the lake Bolbe. (Leake, *Northern Greece*, vol. iii. p. 228; Tafel, in *Pauly's Realencycl.* vol. i. p. 1115.) The annexed coin, which is one of great antiquity, bears on the obverse the legend ΒΙΣΑΛΤΙΚΟΝ.

COIN OF THE BISALTAE.

BISANTHE (Βισάνθη: *Eth.* Βισανθηνός: *Rodasto*, or *Rodostshig*), a great city in Thrace, on the coast of the Propontis, which had been founded by the Samians. (Steph. B. *s. v.*; Herod. vii. 137; Pomp. Mela, ii. 2, 6; Ptol. iii. 11. § 6.) About B. C. 400. Bisanthe belonged to the kingdom of the Thracian prince Seuthes. (Xen. *Anab.* vii. 2. § 38.) At a later period its name was changed into Raedestum or Raedestus (Ῥαίδεστον or Ῥαίδεστος); but when this change took place is unknown. In the 6th century of our era, the emperor Justinian did much to restore the city, which seems to have fallen into decay (Procop. *De Aedif.* iv. 9); but after that time it was twice destroyed by the Bulgarians, first in A. D. 813 (Simeon Magister, *Leon. Armen.* 9, p. 614, ed. Bonn), and a second time in 1206. (Nicetas, *Bald. Fland.* 14; Georg. Acropolita, *Annal.* 13.) The further history of this city, which was of great importance to Byzantium, may be read in Georg. Pachymeres and Cantacuzenus. It is generally believed that the town of Resistos or Resisto, mentioned by Pliny (iv. 18), and in the Antonine Itinerary (p. 176), is the same as Bisanthe; but Pliny (*l. c.*) mentions Bisanthe and Resistos as distinct towns. (Eckhel, vol. ii. p. 25.) [L.S.]

BISTONES (Βίστονες or Βίστωνες, Steph. B. *s. v.* Βιστονία), a Thracian people occupying the country about Abdera and Dicaea. (Plin. iv. 18; Strab. vii. p. 331; Herod. vii. 110.) From the fabulous genealogy in Stephanus B. about the founder of their race, it would seem that they extended westward as far as the river Nestus. The Bistones continued to exist at the time when the Romans were masters of Thrace. (Horat. *Carm.* ii. 19. 20; Plin. iv. 18.) It should however be observed that the Roman poets sometimes use the names of the Bistones for that of the Thracians in general. (Senec. *Agam.* 673; Claudian, *Proserp.* ii. Praef. 8.) Pliny mentions one town of the Bistones, viz. Tirida; the other towns on their coast, Dicaea, Ismaron, Parthenion, Phalesina and Maronea, were Greek colonies. The Bistones worshipped Ares (Steph. B. *l. c.*), Dionysus or Bacchus (Horat. *l. c.*), and Minerva. (Ov. *Ibis.* 379.) [L. S.]

BI'STONIS (Βιστονὶς λίμνη; *Lagos Buru*), a great Thracian lake in the country of the Bistones, from whom it derived its name. (Strab. i. p. 59, vii. p. 333; Ptol. iii. 11. § 7; Scymn. Chius, 673; Plin. iv. 18.) The water of the lake was brackish (whence it is called λιμνοθάλασσα), and abounded in fish. (Aristot. *H. A.* viii. 15.) The fourth part of its produce is said to have been granted by the emperor Arcadius to the convent of Vatopedi on Mount Athos. The river Cossinites emptied itself into the lake Bistonis (Aelian, *H. A.* xv. 25), which at one time overflowed the neighbouring country and swept away several Thracian towns. (Strab. i. p. 59.) [L. S.]

BITAXA (Βιτάξα, Ptol. vi. 17. § 4, viii. 25. § 4

Amm. Marc. xxiii. 6), a town in Aria, perhaps the same as the Βίς of Isidorus (p. 8), if, indeed, there were two towns of this name, one in Aria, and the other in Arachosia. [V.]

BITHRA. [BIRTHA.]

BITHYAS. [BATHYNIAS.]

BITHY'NI (Βιθυνοί). [BITHYNIA.]

BITHY'NIA (Βιθυνία, Βιθυνίς), a division of Asia Minor, which occupied the eastern part of the coast of the Propontis, the east coast of the Thracian Bosporus, and a considerable part of the coast of the Euxine. On the west it bordered on Mysia; on the south, on Phrygia and Galatia; the eastern limit is less definite. The Rhyndacus is fixed by some geographers as the western boundary of Bithynia; but the following is Strabo's statement (p. 563): "Bithynia, on the east, is bounded by the Paphlagones and Mariandyni, and some of the Epicteti; on the north by the Pontic Sea from the outlets of the Sangarius to the straits at Byzantium and Chalcedon; on the west by the Propontis; and to the south by Phrygia named Epictetus, which is also called Hellespontiaca Phrygia." His description is correct as to the northern coast line; and when he says that the Propontis forms the western boundary, this also is a correct description of the coast from Chalcedon to the head of the gulf of Cius. In his description of the western coast of Bithynia, he says, that after Chalcedon we come to the gulf of Astacus; and adjoining to (and south of) the gulf of Astacus is another gulf (the gulf of Cius), which penetrates the land nearly towards the rising sun. He then mentions Apameia Myrleia as a Bithynian city, and this Apameia is about half way between the head of the gulf of Cius and the mouth of the Rhyndacus. But he says nothing of the Rhyndacus being the boundary on the west. Prusa (*Brusa*), he observes, "is built on Mysian Olympus, on the confines of the Phrygians and the Mysians." (p. 564.) Thus we obtain a southern boundary of Bithynia in this part, which seems to extend along the north face of Olympius to the Sangarius. Strabo adds that it is difficult to fix the limits of the Bithyni, and Mysi, and Phryges, and also of the Doliones, and of the Mygdones, and of the Troes; "and the cause is this, that the immigrants (into Bithynia), being soldiers and barbarians, did not permanently keep the country that they got, but were wanderers, for the most part, driving out and being driven out."

It was a tradition, that the Bithyni were a Thracian people from the Strymon; that they were called Strymonii while they lived on that river, but changed their name to Bithyni on passing into Asia; it was said that they were driven out of Europe by the Teucri and the Mysi (Herod. vii. 75). Strabo (p. 541) observes, "that the Bithyni, being originally Mysi, had their name thus changed from the Thracians who settled among them, the Bithyni and Thyni, is agreed by most; and they give as proofs of this, with respect to the nation of the Bithyni, that even to the present day some in Thrace are called Bithyni; and with respect to the Thyni, they give as proof the acte called Thynias, which is at Apollonia and Salmydessus." Thucydides (iv. 75) speaks of Lamachus marching from the Heracleotis along the coast, through the country of the Bithyni Thraces, to Chalcedon. Xenophon, who had seen the coast of Bithynia, calls the shore between the mouth of the Euxine and Heracleia, "Thrace in Asia;" and he adds, that between Heracleia and the coast of Asia, opposite to Byzantium, there is no city either friendly or Hellenic, but only Thraces Bithyni (Anab. vi. 4). Heracleia itself, he places in the country of the Mariandyni. The name Bithynia does not occur in Herodotus, Thucydides, or Xenophon; but Xenophon (*Hell.* iii. 2. § 2) has the name Bithynis Thrace, and Bithynis. It appears, then, that the country occupied by the people called Bithyni cannot be extended further east than Heracleia, which is about half way between the Sangarius and the river Parthenius.

The name Bithyni does not occur in Homer. When the Bithyni passed over to Asia, they displaced the Mysi and other tribes. The Bithyni were subjected, with other Asiatic peoples, by Croesus, king of Lydia; but Herodotus (i. 28) makes Thracians their generic name, and Thyni and Bithyni the names of the two divisions of them. In course of time, the name Thyni fell into disuse, and the name Bithyni prevailed over the generic name of Thracians. Pliny's statement (v. 43) is, that the Thyni occupy (tenent) the coast of Bithynia from Cius to the entrance of the Pontus, and the Bithyni occupy the interior; a statement that certainly has no value for the time when he wrote, nor probably for any other time. The Bithyni were included in the Persian empire after the destruction of the Lydian kingdom by Cyrus and the Persians; and their country, the precise limits of which at that time we cannot ascertain, formed a satrapy, or part of a satrapy. But a Bithynian dynasty sprung up in this country under Doedalsus or Dydalsus, who having, as it is expressed (Memnon, *Ap. Phot. Cod.* 224), "the sovereignty of the Bithyni," got possession of the Megarian colony of Astacus [ASTACUS]. The accession of Doedalsus is fixed with reasonable probability between B. C. 430 and B. C. 440. Nine kings followed Doedalsus, the last of whom, Nicomedes III., began to reign B. C. 91. Doedalsus was succeeded by Boteiras; and Bas, the son of Boteiras, defeated Calantus, the general of Alexander of Macedonia, and kept the Macedonians out of the Bithynian territory. Bas had a son, Zipoetes, who became king or chief B. C. 326, and warred successfully against Lysimachus and Antiochus the son of Seleucus. Nicomedes I., the eldest son of Zipoetes, was his successor; and his is a genuine Greek name, from which we may conclude that there had been intermarriage between these Bithynian chieftains and Greeks. This Nicomedes invited the marauding Galli to cross the Bosporus into Asia soon after his accession to power (B. C. 278), and with their aid he defeated a rival brother who held part of the Bithynian country (Liv. xxxviii. 16). Nicomedes founded the city Nicomedeia, on the gulf of Astacus, and thus fixed his power securely in the country along the eastern shore of the Propontis. The successor of Nicomedes was Zielas, who treacherously planned the massacre of the Gallic chieftains whom his father had invited into Asia; but the Galli anticipated him, and killed the king. His son Prusias I., who became king in B. C. 228, defeated the Galli who were ravaging the Hellespontine cities, and massacred their women and children. He acquired the town of Cius, on the gulf of Cius, and also Myrleia (Strab. p. 563), by which his dominions on the west were extended nearly to, or perhaps quite, to the Rhyndacus. He also extended his dominions on the east by taking Cierus in the territory of Heracleia, to which he gave the name Prusias, as he had done to Cius on

the Propontis. He also took Tius at the mouth of the Billaeus, and thus hemmed in the Heracleotae on both sides; but he lost his life in an attempt on Heracleia. His successor (B. C. 180) was Prusias II., who was followed by Nicomedes II. (B. C. 149); and the successor of Nicomedes II. was his son Nicomedes III. (B. C. 91). This last king of Bithynia after being settled in his kingdom by the Romans in B. C. 90, was driven out by Mithridates Eupator B. C. 88 (Liv. *Ep.* 76), but he was restored at the peace in B. C. 84. He died childless, and left his kingdom to the Romans B. C. 74. (Appian, *Mithrid.* c. 71.) The history and chronology of the kings of Bithynia are given in Clinton's Fasti.

Mithridates Eupator added to his dominions, or kingdom of Pontus, the sea coast of Asia Minor westward as far as Heracleia. The parts beyond Heracleia, that is, west of it to the straits, and to Chalcedon, remained to the Bithynian king; but when the kings were put down (as Strabo expresses it), the Romans preserved the same limits, so that Heracleia was attached to Pontus, and the parts on the other side belonged to the Bithyni. (Strab. p. 541.) On the death of Nicomedes III. the Romans reduced his kingdom, according to their phrase, into the form of a province (Liv. *Epit.* 93); and after the death of Mithridates, they added to Bithynia the western part of the Pontic kingdom, or the coast from Heracleia to Sidene, east of Themiscyra; and Cn. Pompeius divided it into eleven communities or municipalities. (Dion Cassius, xxxviii. 10—12; Strab. p. 541.) It is proved that Amisus belonged at this time to Bithynia, from the coins of Amisus, on which the name of C. Papirius Carbo, the first known proconsul of Bithynia, occurs; and Themiscyra and Sidene belonged to the territory of Amisus. That part of the kingdom of Mithridates which Pompeius gave to the descendants of Pylaemenes, was in the interior, about mount Olgassys, a range which lies between the Billaeus and the Halys; and this part Augustus appears to have added to Bithynia in B. C. 7, together with the Pontic town of Amasia on the Iris. So large a part of Pontus being added to Bithynia, the province may be more properly called Bithynia and Pontus, a name which it had at least from A. D. 63, as we see from inscriptions (Procos. provinciae Ponti et Bithyniae), though it is sometimes simply called Bithynia. (Tacit. *Ann.* i. 74.) The correspondence of Pliny, when he was governor of Bithynia, shows that Sinope and Amisus were within his jurisdiction, and Amisus is east of the Halys. (Plin. *Ep.* x. 93, 111.) And in several passages of his letters, Pliny speaks of the "Bithynae et Ponticae civitates," or of the "Bithyni et Pontici," from which it appears that his province, which he calls Bithynia, comprehended the original Bithynia and a large part of the Mithridatic kingdom of Pontus. The governor of Bithynia was first a Propraetor, sometimes called Proconsul. (Tacit. *Ann.* i. 74; xvi. 18.) On the division of the provinces under Augustus, Bithynia was given to the senate; but under Trajan it belonged to the emperor, in return for which the senate had Pamphylia. Afterwards the governors were called Legati Aug. Pr. Pr.; and in place of Praetores there was Procuratores.

The regulations (Lex Pompeia) of Cn. Pompeius for the administration of Bithynia, are mentioned several times by the younger Plinius (*Ep.* x. 84, 85, &c.). The chief town of Bithynia, properly so called, or of the part west of Heracleia, was Nicomedeia, which appears with the title of Metropolis on a coin of the time of Germanicus, though Nicaea disputed this title with it; but Nicaea is said to have got the title of Metropolis under Valentinian and Valens. The Ora Pontica had for its metropolis the city of Amastris; this Bithynia was the part which Pompeius distributed among eleven municipalities. (Strab. p. 541.) The third division, already mentioned as made in B. C. 7, had two metropoleis; Pompeiopolis for Paphlagonia; and Amasia, on the Iris, for the portion of Pontus that was joined to this Paphlagonia.

The remaining part of Pontus commenced south of Amasia, about the city of Zela, and was probably bounded on the south by the mountains which form the southern side of the basin of the Iris. On the coast it extended from Side to Trapezus (*Trebizond*). This country was given by M. Antonius, B. C. 36, to king Polemo, and this kingdom, after passing to his widow and to his son Polemo, was made into a separate province by Nero, A. D. 63; but the administration seems to have been sometimes joined to that of Galatia.

This explanation is necessary to remove the confusion and error that appear in many modern books, which make the Parthenius the eastern boundary of Bithynia. In the maps it is usual to mark Paphlagonia as if it were a separate division like Bithynia, and the limits of Bithynia are consequently narrowed a great deal too much. In fact, at one time even Byzantium belonged to the government of Bithynia (Plin. *Ep.* x. 57), though it was afterwards attached to Thrace. Prusa, under Trajan, was raised to the condition of an independent town. Among the towns of Bithynia and Pontus in the imperial period, Chalcedon, Amisus, and Trapezus, in Pontus, were free towns (liberae); and Apameia, Heracleia, and Sinope, were made coloniae, that is they received Roman settlers who had grants of land. (Strab. pp. 564, 542, 546.) Sinope was made a colony by the dictator Caesar, B. C. 45. Nicomedeia is not mentioned as a colonia till the third century A. D. It was not till after Hadrian's time that the Province of Bithynia was allowed to have a common religious festival; the place of assembly for this great solemnity was, at least at one time, Nicomedeia. The Romans also were very jealous about the formation of clubs and guilds of handicraftsmen in this province, for such associations, it was supposed, might have political objects. (Plin. *Ep.* x. 36, 96.) During the administration of the younger Pliny in Bithynia, he was much troubled about the meetings of the Christians, and asked for Trajan's advice, who in this matter was more liberally disposed than his governor. (Plin. *Ep.* x. 97, 98.)

The southern boundary of Bithynia may be determined, in some degree, by the towns that are reckoned to belong to it. Prusa (*Brusa*), in the western part, is at the foot of the northern face of Olympus; and Hadriani, south of Brusa, belongs to Bithynia. East of Prusa, and a little more north, is Leucae (*Lefke*), on a branch of the Sangarius, and perhaps within the limits of Bithynia. Claudiopolis, originally Bithynium, was a Bithynian town. Amasia, on the Iris, has been mentioned as ultimately included in the province of Bithynia; but to fix precisely a southern boundary seems impossible.

The coast line of Bithynia from the Rhyndacus to the Bosporus contained the bays of Cius and Astacus, which have been mentioned; and a narrow channel called the Thracian Bosporus separated it from Byzantium and its territory. From the mouth of the Bosporus the coast runs nearly due east to the promontory and port of Calpe, which was visited by Xenophon (*Anab.* vi. 4). The mouth of the Sangarius is east of Calpe; and east of the Sangarius the coast makes a large curve to the north as far as the Acherusia Chersonesus, near the town of Heracleia. The Acherusia Chersonesus is described by Xenophon (*Anab.* vi. 2). From Heracleia to the promontory Carambis (*Kerempe*) the coast has a general ENE. direction; and between these two points is the mouth of the Billaeus, and east of the Billaeus the city of Amastris on the coast. From Cape Carambis the coast line runs east to the promontory Syrias or Lepte, from which the coast turns to the south, and then again to the east, forming a bay. On the peninsula which forms the east side of this bay is the town of Sinope (*Sinub*). Between Sinope and the mouth of the Halys, the largest river of Asia Minor, the coast forms a curve, but the mouth of the Halys is near half a degree further south than the promontory of Lepte. From the mouth of the Halys the coast turns to the south, and then turns again to the north. A bay is thus formed, on the west side of which, 900 stadia from Sinope, and about 30 miles further south than the mouth of the Halys, is the town of Amisus (*Samsun*). At the extremity of a projecting tract of country which forms the east side of this bay are the outlets of the Iris, the river on which Amasia stands, and a river that has a much longer course than is given to it in the older maps. The coast of the province Bithynia extended still further east, as it has been shown; but the description of the remaining part of the coast to Trapezus may more appropriately be given under PONTUS.

The principal mountain range in Bithynia is Olympus, which extends eastward from the Rhyndacus. Immediately above Brusa Olympus is covered with snow even to the end of March. It is not easy to say how far the name Olympus extended to the east; but probably the name was given to part of the range east of the Sangarius. The mountains on the north side of Asia have a general eastern direction, but they are broken by transverse valleys through which some rivers, as the Sangarius and Halys, have a general northern course to the sea. A large part of the course of the Billaeus, if our maps are correct, lies in a valley formed by parallel ranges, of which the southern range appears to be the continuation of Olympus, on the southern border of Bithynia. The Arganthonius occupies the hilly country in the west between the bays of Astacus and Cius. The Ormenium of Ptolemy is in the interior of Bithynia, south of Amastris, between the sea and the southern range of Bithynia. The Olgassys (Strab. p. 562) is one of the great interior ranges, which extends westward from the Halys, a lofty and rugged region. The country along the coast of Bithynia, east of the Sangarius, is hilly and sometimes mountainous; but these heights along the coast are inferior to the great mountain masses of the interior, the range of Olympus, and those to the east of it. Bithynia west of the Sangarius contains three considerable lakes. Between Nicomedeia and the Sangarius is the lake *Sabanja*, probably Sophon, a name which occurs in the Greek writers of the Lower Empire; and certainly the lake which Pliny, when he was governor of Bithynia, proposed to Trajan to unite to the gulf of Astacus by a canal (*Ep.* x. 50). The Ascania [ASCANIA] on which Nicaea stands is larger than lake *Sabanja*. Both these are mountain basins filled with water. The lake of *Abullionte*, through which the Rhyndacus flows, is also a mountain lake, and abounds in fish. This is the Apolloniatis of Strabo, but the basin of the Rhyndacus does not appear to have belonged to Bithynia. The part of Bithynia west of the Sangarius is the best part of the country, and contains some fertile plains. It was formerly well wooded, and there are still extensive forests, which commence in the country north of Nicomedeia (*Izmid*), and extend nearly to *Boli* on the Sangarius. The large towns of Bithynia are west of the Sangarius. The places east of the Sangarius in the interior were of little note; and the chief towns were the Greek settlements on the coast. The interior, east of the Sangarius, was a wooded tract, and there are still many forests in this part. One great road ran along the sea from the point where the coast of the Euxine commences near the temple of Jupiter Urius, past Heraclea, Amastris, and Sinope, as far as Amisus. A road ran from Chrysopolis, which is near the junction of the Bosporus and Propontis, to Nicomedeia. But there is no road east of the Sangarius, that we can trace by the towns upon it, which did not lie far in the interior; nor do there appear at present to be any great roads in the interior in an eastern direction, except those that run a considerable distance from the coast, a fact which shows the mountainous character of the interior of Bithynia.

There is a paper in the *London Geog. Journal*, vol. ix., by Mr. Ainsworth, *Notes of a Journey from Constantinople by Heraclea to Angora*, which contains much valuable information on the physical character of Bithynia. [G. L.]

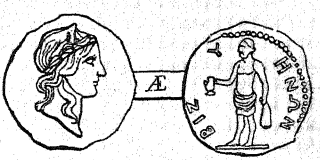
BITHY'NIUM (Βιθύνιον: *Eth.* Βιθυνιεύς, Βιθυνιάτης), a city in the interior of Bithynia, lying above Tius, as Strabo (p. 565) describes it, and possessing the country around Salon, which was a good feeding country for cattle, and noted for its cheese. (Plin. xi. 42; Steph. B. *s. v.* Σαλωνεία.) Bithynium was the birthplace of Antinous, the favourite of Hadrian, as Pausanius tells us (viii. 9), who adds that Bithynium is beyond, by which he probably means east of, the river Sangarius; and he adds that the remotest ancestors of the Bithynians are Arcadians and Mantineis. If this is true, which however does not seem probable, a Greek colony settled here. Bithynium was afterwards Claudiopolis, a name which it is conjectured it first had in the time of Tiberius (Cramer, *Asia Minor*, vol. i. p. 210); but it is strange that Pausanias does not mention this name. Dion Cassius (lxix. 11. ed. Reimarus, and his note) speaks of it under the name of Bithynium and Claudiopolis also. It has been inferred from the words of Pausanias that Bithynium was on or near the Sangarius, but this does not appear to be a correct interpretation. Leake, however, adopts it (*Asia Minor*, p. 309); and he concludes from the dubious evidence of Pausanias that, having been originally a Greek colony, it was probably not far from the mouth of the Sangarius. But this is quite inconsistent with Strabo, who places it in the interior; as Pliny (v. 32) does also. It seems probable that Claudiopolis was in the basin of the Billaeus; and this seems to agree with Ptolemy's determination of Claudiopolis. [G. L.]

BITU'RIGES. Livy (v. 34) represents the Bituriges as the chief people of Gallia Celtica in the time of Tarquinius Priscus. They gave a king to the Celtic nation, and his name was Ambigatus. Livy calls the Celtae the third part of Gallia, in which he follows Caesar's division (i. 1); but in the time of Ambigatus, the name Celtica must have comprehended what was afterwards Gallia Narbonensis, and perhaps all Transalpina Gallia. However, the list of peoples whom Livy represents as emigrating into Italy under Bellovesus, the nephew of Ambigatus, comprehends only those who were within the limits of Caesar's Celtica; and among the emigrants were Bituriges. In Caesar's time (vii. 5) the Bituriges were under the supremacy of the Aedui, and the boundary between them was the upper part of the Ligeris or *Loire*, below the junction of the *Loire* and the *Allier*. D'Anville makes the territory of the Bituriges correspond to the old diocese of *Bourges*, which extended beyond the province of *Berri* into a part of *Bourbonnois*, and even into *Touraine*. The Bituriges were altogether within the basin of the *Loire*, and part of the course of the *Indre*, and the greater part of that of the *Cher*, were within their territory. Caesar describes their capital Avaricum (*Bourges*), as almost the finest town in all Gallia (vii. 15).

At the commencement of the insurrection under Vercingetorix (B.C. 52), when Caesar was preparing to attack Avaricum, above twenty cities of the Bituriges were burnt in one day, with the consent of the Gallic confederates, to prevent them from falling into the hands of the Romans. The Bituriges intreated earnestly that Avaricum might be excepted; and finally, against the opinion of Vercingetorix, it was resolved that Avaricum should be defended against Caesar. [AVARICUM.]

These are the Bituriges to whom Strabo (p. 190) and Pliny (iv. 19) give the name of Bituriges Cubi. The same appears on the naumachia of Lyon, where it indicates the place which was reserved for the representatives of these people at the games; and it occurs in several other inscriptions. The Bituriges had iron mines in their territory (Strab. p. 191); and Caesar (*B. G.* vii. 22), when describing the siege of Avaricum, speaks of the people as skilled in driving galleries, and in the operations of mining, as they had great iron works (magnae ferrariae) in their country. (Comp. Rutilius, *Itin.* i. 351: "Non Biturix largo potior strictura metallo.") Pliny (xiv. 2) speaks of the good quality of the Bituric wines, and also Columella; but they may perhaps be speaking of the wines of the Bituriges Vivisci.

The Bituriges were included in the extended province of Aquitania [AQUITANIA], and Pliny calls them "liberi," a term which implies a certain degree of independence under Roman government, the nature of which is now well understood. [G.L.]



BITU'RIGES CUBI. [BITURIGES.]

BITU'RIGES VIVISCI. Strabo (p. 190) says that the *Garonne* flows between the Bituriges called Iosci and the Santones, both of which are Celtic nations; for this nation of the Bituriges is the only people of a different race that is settled among the Aquitani, and is not reckoned among them; and they have for their place of trade Burdigala (*Bordeaux*). Caesar does not name them. In Pliny (iv. 19) the name is Ubisci, and in Ptolemy it is Vibisci in the old Latin translation. Ausonius (*Mosella*, v. 438) has the form Vivisci: "Vivisca ducens ab origine gentem." An inscription is also mentioned as having been found at *Bordeaux*, with the words: "Genio civitatis Bit. Viv.;" but it is of doubtful authority. Ptolemy mentions another city of the Vivisci, which he calls Noviomagus; but the site is uncertain.

The limits of the old diocese of *Bordeaux* are said to indicate the extent of the territory of the Vivisci, part of which was east of the *Garonne*. It was included in the present department of *Gironde*. Pliny calls these Bituriges also "liberi." It was a wine country in the Roman period, as it is now. [G.L.]

BIZO'NE (Βιζώνη: *Eth.* Βιζώνιος), a town of Lower Moesia on the coast of the Euxine, between Callatis and Apollonia, which is said to have been destroyed by an earthquake. (Strab. i. p. 54, vii. p. 319; Pomp. Mela, ii. 2. 5; Plin. iv. 18; Steph. Byz. *s. v.*; Arrian, *Peripl.* p. 24, who calls it Bizon, and the Geogr. Rav. iv. 6, who calls it Bizoi.) [L.S.]

BIZYA (Βιζύη: *Eth.* Βιζυηνός), a town in Thrace, the capital of the tribe of the Asti. (Steph. Byz. *s. v.*; Solin. 10; Plin. iv. 18.) [L.S.]

COIN OF BIZYA.

BLABIA. [BLAVIA.]

BLAE'NE (Βλαηνή), a fertile tract which Strabo (p. 562) places in the neighbourhood of the range of Olgamys. [BITHYNIA.] He mentions it with Domanitis, through which the Amnias flows, but he gives no further indication of its position. [G.L.]

BLANDA (Βλάνδα), a city of Lucania, mentioned by Ptolemy among the inland towns of that province; but placed both by Pliny and Mela on or near the coast of the Tyrrhenian Sea. The former writer includes it in Bruttium, but this seems to be a mistake: Livy, who mentions Blanda among the towns which had revolted to the Carthaginians, but were recovered by Fabius in B.C. 214, expressly calls it a Lucanian city. (Liv. xxiv. 20; Plin. iii. 5. s. 10; Mel. ii. 4; Ptol. iii. 1. § 70.) The Tab. Peut. also places it on the road along the coast of Lucania: the adjoining names are corrupt; but if the distance from Cerilli may be depended upon, we may place Blanda at or near the modern *Maratea*, a small town on a hill about a mile from the Gulf of *Policastro*, where there are said to be some ancient remains. It is 12 miles SE. of *Policastro* (the ancient Buxentum), and 16 N. of the river Laus, the frontier of Lucania. (Holsten. *Not. in Cluver.* p. 288; Romanelli, vol. i. p. 379.) [E.H.B.]

BLANDO'NA (*Itin. Ant.*) or BLANO'NA (Βλανῶνα, Ptol. ii. 17. § 10), a town of Liburnia in Illyricum, on the road between Iadera and Scardona.

BLARIACUM is placed in the Table between Atuaca, which is supposed to be Caesar's Aduatuca (*Tongern*) and Noviomagus (*Nymegen*). It is 42 Gallic leagues or 63 Roman miles from Atuaca to Blariacum, which seems to correspond to *Blerick* on the left bank of the Maas, in the Dutch province of Limburg. [G.L.]

BLASCON (Βλάσκων). Strabo (p. 181) places this small island close to the Sigium hill, or Sitium, as it should be read, which divides the Gallicus Sinus into two parts. (Groskurd, *Trans. Strab.* i. p. 312.) The name Setium or Sitium appears in the modern

name *Cette*, though the promontory is west of *Cette*. Blascon is *Brescon*, a small island or rock about half a mile from the coast and off Agathe or *Agde*. It is mentioned by Avienus (*Or. Mar.* v. 600, &c.) and by Pliny. Ptolemy has both an island Blascon, and an island Agathe, but the island Agathe does not exist. (D'Anville, *Notice*, &c.) [G. L.]

BLASTOPHOENI'CES. [BASTETANI.]

BLATUM BULGIUM, in Britain, one of the stations of the Itinerary. Lying immediately north of Luguvallum (*Carlisle*), it best agrees with *Middleby*, where Roman remains occur at the present time. [R. G. L.]

BLAUDUS (Βλαῦδος), a place in Phrygia, mentioned by Stephanus (*s. v.* Βλαῦδος) and Strabo (p. 567). Speaking of the Galatian Ancyra, Strabo says: "They had a strong place, Ancyra, with the same name as the Phrygian small town near Blaudos, towards Lydia." This does not tell us much. Forbiger thinks that Blaudos is very probably *Bolat*, mentioned by Hamilton (*Royal Geog. Journ.* vol. viii. p. 140). But the position of *Bolat* is not well fixed, nor is it near the place which Hamilton supposes to be the Phrygian Ancyra. [ANCYRA.] [G.L.]

BLAUNDUS (Βλαῦνδος), a place in Phrygia, probably the Blaeandrus of Ptolemy. Hamilton (*Researches, &c.* vol. i. p. 127, &c.) places Blaundus at *Suleimanli*, which is east of Philadelphia, near the *Kopli Su*, a branch of the Maeander. He found at the neighbouring village of *Göbek*, an inscription, which, he was informed, was brought from *Suleimanli*. It begins Βλαυνδεων Μοκεδονων, and speaks of the Βουλη and Δημος. It belongs to the Roman period, as appears from the name Κουαδρατου (Quadrati). Another inscription, given by Arundell, from a tomb, contains the name of L. Salvius Crispus, and a Greek translation (τουτο το μνημειον κληρονομοις ουκ ακολουθησεν) of the usual Roman monumental formula, "hoc monumentum heredes non sequitur." From this it appears that Roman law had found a footing at this place. Hamilton also copied a small fragment of two Roman inscriptions at *Suleimanli*, but he found no trace of the ancient name. There is an acropolis at *Suleimanli*, and near the foot of it the remains of a theatre. There are also the remains of a gateway, on each side of which is "a massive square tower, built of Hellenic blocks, which, as well as the connecting wall, were originally surmounted by a Doric frieze, with triglyphs, part of which is still remaining." Within the walls are the ruins of a beautiful temple, heaped together in great confusion. The ornaments on the architraves resemble those of the Erechtheium at Athens and the temple of Jupiter at Azani. There are remains of many other buildings and temples, and the ruined arches of an aqueduct for the supply of the acropolis. This was evidently once a considerable place.

Arundell (*Discoveries in Asia Minor*, vol. i. p. 80, &c.) has given a view of *Suleimanli*, and a plan of the place. He obtained there two coins of Ephesus, one of Sebaste, and one of Blaundus, all unquestionably found on the spot. The Peutinger Table has, on the road between Dorylaeum and Philadelphia, a place Aludda, then another Clanudda, and then Philadelphia; and Arundell concludes that *Suleimanli* is Clanudda, as the distances agree very well with the road. Arundell also mentions two medals, both of which he had seen, with the epigraph ΚΛαυνουδεων. This name Clanudda occurs in no ancient writer, nor in the Notitiae, and Hamilton and others suppose Clanudda to have originated in a corruption of Blaundus and Aludda. Certainly, the name Aludda, in the Table, makes Clanudda somewhat suspicious. Hamilton says that he is informed that the medal of Clanudda which was in the possession of Mr. Borrell of Smyrna, is the same that Mr. Arundell speaks of as being in the possession of Lord Ashburnham. Mr. Arundell saw both, but it seems that he was not aware that Lord Ashburnham's was that which had been Mr. Borrell's. Lord Ashburnham's is said to be lost. (Hamilton.) Mr. Hamilton has several autonomous coins of Blaundus, some of which he procured at *Göbek*, and the name on these coins is always written Mlaundus. This interchange of M and B is curious, for it appears in the forms of other Greek words not proper names (*βροτός, μορτός*, for instance). He observes, that "nothing was more easy than to mistake M for ΚΛ, supposing it to be written ΚΛ, which I cannot help thinking has been the case with the supposed coin of Clanudda." "*Suleimanli*," he adds, "is nearly on the direct line of road between Philadelphia and *Kutahiyah*, and by which the caravans now travel." The question is curious, and perhaps not quite determined; but the probability is in favour of Hamilton's conclusion, that *Suleimanli* is Blaundus, and that Clanudda never existed. [G. L.]

BLAVIA (*Blaye*), on the right bank of the Garonne, and on the road from Burdigala (*Bordeaux*) to Mediolanum of the Santones, or *Saintes*. In the Antonine Itin. the name varies, according to the MSS., between Blavium and Blavatum, but the Table has it Blavia, as it is in Ausonius. (Epist. 10) —

Aut iteratarum qua glarea trita viarum
Fert militarem ad Blaviam.

The distances from *Bordeaux* do not agree either with the Itinerary or the Table, but the site of Blavia cannot be doubtful.

The Blabia of the Notitia is supposed by D'Anville and others to be at the mouth of the *Blavet*, in the department of *Morbihan*. [G. L.]

BLE'MYES (Βλέμυες, Steph. B. *s. v.*; Strab. xvii. p. 819; Blemyae, Plin. v. 8. § 8, § 44, 46; Solin. iii. 4; Mela, i. 4. § 4, 8. § 10; Isidor. *Orig.* xi. 3. § 17; Blemyes, Avien. *Descript. Orb.* v. 239; Blemyi, Prisc. *Perieg.* 209; Claud. *Nil.* v. 19), were an Aethiopian tribe, whose position varied considerably at different epochs of history. Under the Macedonian kings of Egypt, and in the age of the Antonines, when Ptolemy the geographer was compiling his description of Africa, the Blemyes appear S. and E. of Egypt, in the wide and scarcely explored tract which lay between the rivers Astapus and Astaboras. But as a nomade race they were widely dispersed, and the more ancient geographers (Eratosth. *ap. Strabon.* xvii. p. 786; Dionys. *Perieg.* v. 220) bring them as far westward as the region beyond the Libyan desert and into the neighbourhood of the oases. In the middle of the 2nd century A. D., the Blemyes had spread northward, and infested the Roman province of Egypt below Syene with such formidable inroads as to require for their suppression the presence of regular armies. They were doubtless one of the pastoral races of Nubia, which, like their descendants, the modern Barabra and Bisharee Arabs, shifted periodically with the rainy and the dry seasons from the upland pastures of the Arabian hills to the level grounds and banks of the feeders of the Nile. Their predatory habits, and strange and savage life, filled the guides and merchants of the caravan-traffic with dread of

the name of Blemyes; and travellers brought back with them to Egypt and Syria the most exaggerated reports of their appearance and ferocity. Hence the Blemyes are often represented in ancient cosmography as one of those fabulous races, like the still less known Atlantic and Garamantid tribes, whose eyes and mouths were planted in their breasts, and who, like the Pygmaei, were midway between the negroes and the apes. (See Augustin, *Civ. D.* xvi. 8.) According to Ptolemy, however (iv. 7), they were an Aethiopian people of a somewhat debased type. The Blemyes first came into collision with the Romans in the reign of the emperor Decius, A. D 250. They were then ravaging the neighbourhood of Philae and Elephantine. (Chron. Pasch. p. 505, ed. Bonn.) They are mentioned by Vopiscus (*Aurelian*, 33) as walking in the triumphal procession of Aurelian in A. D. 274, and bearing gifts to the conqueror. In the reign of Probus (A. D. 280) captive Blemyes excited the wonder of the Roman populace. The emperor Diocletian attempted to repress the inroads of the Blemyes by paying an annual tribute to their chiefs, and by ceding to them the Roman possessions in Nubia. But even these concessions do not appear to have entirely satisfied these barbarians, and almost down to the period of the Saracen invasion of the Nile valley, in the 7th century A. D., the Blemyes wasted the harvests and carried off captives from the Thebaid. (Procop. *B. Pers.* i. 19.)

BLEMI'NA. [BELEMINA.]

BLE'NDIUM. [CANTABRI.]

BLERA (Βλήρα: *Eth.* Bleranus), a city of Etruria, mentioned both by Pliny and Strabo among those which were still existing in their time, but classed by the latter among the minor cities (πόλιχναι) of the province. (Plin. iii. 5. s. 8; Strab. v. p. 226; Ptol. iii. 1. § 50.) The name is also found (though corrupted into Olera) in the Tabula, which places it apparently (for this part of it is very confused) on the line of the Via Claudia between Forum Clodii and Tuscania (*Toscanella*): a position that coincides with the site of the modern village of *Bieda*, about 12 miles SW. of *Viterbo*: a name which is evidently but a slight corruption of that of Blera. In documents of the middle ages the inhabitants are called *Bledani*.

No further information concerning Blera is to be found in ancient writers: but it derives considerable interest from the remains of Etruscan antiquity which have been of late years discovered at *Bieda*. The ancient town appears to have occupied the same site with the present village, on a narrow tongue of land, bounded on each side by deep glens or ravines, with precipitous banks of volcanic tufo. The soft rock of which these cliffs are composed is excavated into numerous caverns, all decidedly of a sepulchral character, ranged in terraces one above the other, united by flights of steps carved out of the rock: while many of them are externally ornamented with architectural façades, resembling in their general character those of *Castel d'Asso* [AXIA], but presenting greater variety in their mouldings and other decorations. Others again are hewn out of detached masses of rock, fashioned into the forms of houses, as is seen also in the tombs at Suana. Besides this Necropolis, one of the most interesting in Etruria, there remain at *Bieda* only some slight fragments of the ancient walls, and two bridges, one of a single arch, supposed to be Etruscan, the other of three arches, and certainly of Roman construction.

(A complete description of the ancient remains found at *Bieda* is given in Dennis's *Etruria*, vol. i. pp. 260—272.) [E. H. B.]

BLE'STIUM, in Britain, the next station in the Itinerary to Burrium (*Usk*), and probably near *Monmouth* or *Old Town*. [R. G. L.]

BLETISA. [VETTONES.]

BLU'CIUM (Βλούκιον), a place in Galatia, in the division of the Tolistobogii. It was the residence of the Gallic king Deiotarus (Strab. p. 567) in defence of whom Cicero made an oration, addressed to the Dictator Caesar. In the text of Cicero (*pro Reg. Deiot.* 6, 7), the name is read Luceium (ed. Orelli), and, accordingly, Groskurd (Transl. Strab. vol. ii. p. 512) corrects Strabo by writing Λούκειον. But the name is as likely to be correct in Strabo's text as in Cicero's. The site of the place is unknown. [G. L.]

BOACTES (Βοάκτης, Ptol. iii. 1. § 3), a river of Liguria, mentioned only by Ptolemy, who describes it as a confluent of the Macra or *Magra*: hence it may safely be identified with the *Vara*, the only considerable tributary of that stream, which rises in the mountains at the back of *Chiavari*, and flows through a transverse valley of the Apennines till it joins the *Magra* about 10 miles from its mouth. [E. H. B.]

BOAE. [BAVO.]

BOAGRIUS. [LOCRIS.]

BOCANI. [TAPROBANE.]

BO'CANUM HE'MERUM (Βοκανὸν ἥμερον), mentioned by Ptolemy (iv. 1. § 15) among the inland cities of Mauretania Tingitana, SE. of Dorath, and NE. of Vala, in 9° 20′ long., and 29½° N. lat., is supposed by some geographers to answer to the position of *Marocco*, where ancient ruins are found: but the identification is very uncertain. (Graberg, *Specchio Geografico et Statistico dell' Impero di Marocco*, p. 37.) [P. S.]

BO'CARUS. [SALAMIS.]

BODENCUS. [PADUS.]

BODERIA [BODOTRIA.]

BODINCOMAGUS. [INDUSTRIA.]

BODIONTICI, a Gallic people described by Pliny (iii. 4) under Gallia Narbonensis. He observes that the Avantici and Bodiontii, Inalpine tribes, were added to Narbonensis by the emperor Galba. Their chief place was Dinia (*Digne*). The two tribes were comprised within the limits of the diocese of *Digne*. [AVANTICI.] [G. L.]

BODO'TRIA, the *Firth of Forth*, in Scotland. (Tac. *Agr.* 23, 25.) [R. G. L.]

BODU'NI. [DOBUNI.]

BOEAE (Βοιαί: *Eth.* Βοιάτης), a town in the south of Laconia, situated between the promontories Malea and Onugnathos, in the bay called after it Boeaticus Sinus (Βοιατικὸς κόλπος). The town is said to have been founded by Boeus, one of the Heraclidae, who led thither colonists from the neighbouring towns of Etis, Aphrodisias, and Side. (Paus. iii. 22. § 11.) It afterwards belonged to the Eleutherolacones, and was visited by Pausanias, who mentions a temple of Apollo in the forum, and temples of Aesculapius and of Sarapis and Isis elsewhere. At the distance of seven stadia from the town there were ruins of a temple of Aesculapius and Hygieia. The remains of Boeae may be seen at the head of the gulf, now called *Vatika*. (Paus. i. 27. § 5, iii. 21. § 7, iii. 22. § 11, seq.; Scylax, p. 17; Strab. viii. p. 364; Polyb. v. 19; Plin. iv. 5. s. 9; Boblaye, *Recherches*, &c. p. 98.)

BOEBE (Βοίβη, Steph. B.), a town in Crete, of which we only know that it was in the Gortynian

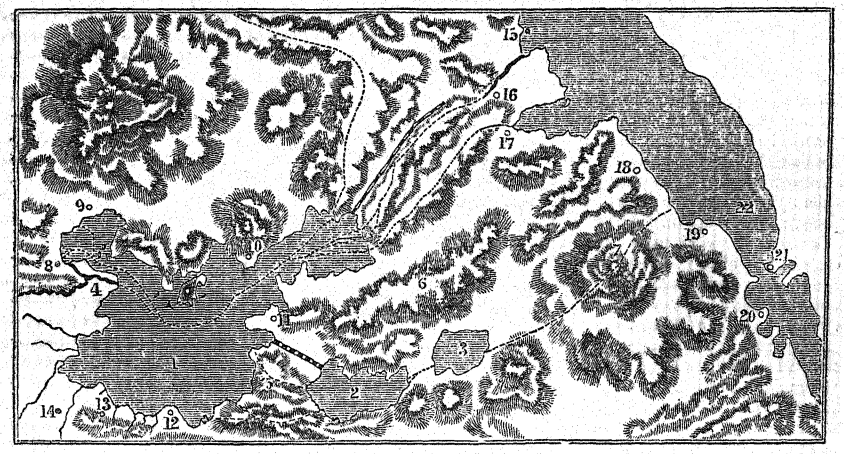
district; a village called *Bobia*, near the edge of the plain of *Mesará*, is supposed to indicate the site. (Pashley, *Trav.* vol. i. p. 299.) [E. B. J.]

BOEBE (Βοίβη: *Eth.* Βοιβεύς, fem. Βοιβηΐς), a town of Magnesia in Thessaly, mentioned by Homer, and situated on the eastern side of the lake, called after it BOEBEIS LACUS (Βοιβηΐς λίμνη, Hom. *Il.* ii. 712; Herod. vii. 129, et alii; also Βοιβία λίμνη, Eurip. *Alc.* 590; and Βοιβιάς, Pind. *Pyth.* iii. 34.) The lake is frequently mentioned by the ancient writers, but the name of the town rarely occurs. The lake receives the rivers Onchestus, Amyrus, and several smaller streams, but has no outlet for its waters. From its proximity to Mt. Ossa, it is called "Ossaea Boebeis" by Lucan (vii. 176). Athena is said to have bathed her feet in its waters (Hes. *ap.* Strab. ix. p. 442), which is perhaps the reason why Propertius (ii. 2. 11) speaks of "sanctae Boebeidos undae." The lake is a long narrow piece of water, and is now called *Karla* from a village which has disappeared. It produces at present a large quantity of fish, of which no mention is made in the ancient writers, unless, as Leake suggests, Βοίβη should be substituted for Bolbe in a fragment of Archestratus quoted by Athenaeus (vii. p. 311, a.). The same writer remarks that the numerous flocks on the heights around the villages of *Káprena* and *Kanália* on the lake illustrate the epithet πολυμηλοτάτη bestowed upon Boebe by Euripides (*l. c.*); while the precipitous rocks of Petra are probably the Βοιβιάδος κρημνοί alluded to by Pindar (*l. c.*).

The town of Boebe was at a later time dependent upon Demetrias. Its site and remains are described by Leake. "It occupied a height advanced in front of the mountain [of *Kanália*], sloping gradually towards the plain, and defended by a steep fall at the back of the hill. It appears to have been constructed of Hellenic masonry, properly so called. The acropolis may be traced on the summit, where several large quadrangular blocks of stones are still in their places, among more considerable ruins formed of small stones and mortar. Of the town walls there are some remains at a small church dedicated to St. Athanasius at the foot of the hill, where are several large masses of stone showing, by their distance from the acropolis, that the city was not less than two miles in circumference." (Besides the references already given, see Strab. ix. pp. 430, 436, 441, seq. xi. 503, 530; Liv. xxxi. 41; Plin. iv. 8. s. 15; Ov. *Met.* vii. 231; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iv. pp. 421—431.)

BOEBE'IS LACUS. [BOEBE.]

BOEO'TIA (Βοιωτία: *Eth.* Βοιωτός), one of the political divisions of Greece, lying between Attica and Megaris on the south, and Locris and Phocis on the north, and bounded on the other two sides by the Euboean sea and Corinthian gulf respectively. It may be described as a large hollow basin, shut in on the south by Mts. Cithaeron and Parnes, on the west by Mt. Helicon, on the north by the slopes of Mt. Parnassus and the Opuntian mountains, and on the east by mountains, a continuation of the Opuntian range, which extend along the Euripus under the names of Ptoum and Messapium as far as the mouth of the Asopus. This basin however is not an uniform tract, but is divided into two distinct portions by Mts. Ptoum and Phoenicium or Sphingium, which run across the country from the Euboean sea to Mt. Helicon. The northern of these two divisions is drained by the Cephissus and its tributaries, the waters of which form the lake Copais: the southern is drained by the Asopus, which discharges its waters into the Euboean sea. Each of these two basins is again broken into smaller vallies and plains. The surface of Boeotia contains 1119 square miles, according to the calculation of Clinton.



I. NORTHERN BOEOTIA.

1. *Basin of the Copais and its subterraneous Channels.* — This district is enclosed by mountains on every side; and like the vallies of Stympalus and Phenëus in Arcadia, the streams which flow into it only find an outlet for their waters by subterraneous channels called katavóthra in the limestone mountains. There are several of these katavóthra at the eastern end of the lake Copais, which is separated from the sea by Mt. Ptoum, about four or five miles across. The basin of the Copais is the receptacle of an extensive drainage. The river Cephissus, which finds its way into this plain through a cleft in the mountains, brings with it a large quantity of water from Doris and Phocis, and receives in Boeotia numerous steams, descending from Mt. Helicon and its offshoots. It flows in a south-easterly direction towards the katavóthra at the eastern end of the lake. If these katavóthra were sufficient to carry off the waters of the Cephissus and its tributaries, there would never be a lake in the plain. In the summer time the lake Copais almost entirely disappears; and even in the winter its waters scarcely deserve the name of a lake. Col. Mure, who visited it when its waters were at their full, describes it as "a large yellow swamp, overgrown with sedge, reeds, and canes, through which the river could be distinguished oozing its sluggish path for several miles. Even where the course of the stream could no longer be traced in one uninterrupted line, the partial openings among the reeds in the distance appeared but a continuation of its windings. Nor is the transition from dry land to water in any place distinctly perceptible; the only visible line of boundary between them, unless where the mountains stretch down to the shore, is the encroachment of the reeds on the arable soil, or the absence of the little villages with which the terra firma is here studded in greater numbers than usual." (*Tour in Greece*, vol. i. p. 227.)

The number of katavóthra of the lake Copais is considerable, but several of these unite under the mountains; and if we reckon their number by their separate outlets, there are only four main channels. Of these three flow from the eastern extremity of the lake, between the Opuntian mountains (*Clomó*) and Ptoum into the Euboean sea; and the fourth from the southern side of the lake under Mt. Sphingium into the lake Hylica. The most northerly of the three katavóthra issues from the mountains south of the southern long walls of Opus. The central one, which carries off the greater part of the waters of the Cephissus, after a subterraneous course of nearly four miles, emerges in a broad and rapid stream at Upper Larymna, from which it flows above ground for about a mile and a half, till it joins the sea at Lower Larymna. (Strab. ix. p. 405, seq.) The third katavóthrum on the east side falls into the Euboean sea at *Skroponéri*, the ancient Anthedon. The fourth katavóthrum, as mentioned above, flows under Mt. Sphingion into the lake Hylica. From Hylica there is probably a subterraneous channel into the small lake of *Moritzi* or *Paralimni*, and

from the latter another channel flowing under Mt. Messapium into the Euboean sea.

These katavóthra were not sufficient to carry off the waters of the lake, which consequently often inundated the surrounding plain. The tradition of the Ogygian deluge probably refers to such an inundation; and it is also related that a Boeotian Athens and Eleusis were also destroyed by a similar calamity. (Strab. ix. p. 407; Paus. ix. 24. § 2.) To guard against this danger, the ancient inhabitants of the district constructed at a very early period two artificial Emissarii or Tunnels, of which the direction may still be distinctly traced. One of them runs from the eastern end of the lake, and is carried through the rock as far as Upper Larymna, almost parallel to the central of the three katavóthra men-

MAP OF THE BASIN OF THE COPAIS.

16. Upper Larymna.
17. Anthedon.
18. Salganeus.
19. Chalia.
20. Aulis.
21. Chalcis.
22. The Euripus or Channel of Euboea.

The preceding map, copied from Forchhammer's *Hellenika*, is designed more particularly to show the course of the subterraneous channels which drained the lake Copais. Those marked - - - - - are the katavóthra or natural channels; those marked ▬ ▬ ▬ ▬ ▬ are the artificial emissarii or tunnels.

tioned above; it is nearly four miles in length, with about twenty vertical shafts let down into it along the whole distance. These shafts are now choked up, but the apertures, about four feet square, are still visible. The deepest of them is conjectured to have been from 100 to 150 feet deep. The second tunnel unites the lakes Copais and Hylica, running under the plain of Acraephium, and is much shorter. As the whole plain is now cultivated, the apertures of the shafts are more difficult to find, but Forchhammer counted eight, and he was informed that there were fifteen in all.

These two great works are perhaps the most striking monuments of what is called the heroic age. Respecting the time of their execution history is silent; but we may safely assign them to the old Minyae of Orchomenus, which was one of the most powerful and wealthy cities of Greece in the earliest times. Indeed, it was partly through these tunnels that Orchomenus obtained much of its wealth; for while they were in full operation, there was an abundant outlet for the waters of the Cephissus, and nearly the whole of what is now the lake Copais was a rich plain. These tunnels are said to have been stopped up by the Theban hero Heracles, who by this means inundated the lands of the Minyae of Orchomenus (Diod. iv. 18; Paus. ix. 38. § 5; Polyaen. i. 3. § 5), and it is probable that after the fall of the power of the Minyae these tunnels were neglected, and thus became gradually choked up. In the time of Alexander the Great Crates was employed to clear them out, and partially succeeded in his task; but the work was soon afterwards interrupted, and the tunnels again became obstructed. (Strab. ix. p. 407.) Strabo states that Crates cleared out the katavóthra, but it is very improbable that these natural channels were ever choked up; and there is little doubt that he has confounded them with the two artificial tunnels, as many modern writers also have done. (The best account of the katavóthra and tunnels of the lake Copais is given by Forchhammer, *Hellenika*, p. 159, seq.; comp. Grote, vol. ii. sub fin.)

The lake COPAIS (Κωπαΐς λίμνη) was in more ancient times called CEPHISSIS (Κηφισσίς λίμνη, Hom. *Il.* v. 709; Strab. ix. p. 407), from the river of this name. It also bore separate denominations from the towns situated upon it, Haliartus, Orchomenus, Onchestus, Acraephia, and Copae (Strab. ix. p. 410, seq.); but the name of Copais finally became the general one, because the north-eastern extremity of the basin, upon which Copae stood, was the deepest part. Strabo says (ix. p. 407) that the lake was 380 stadia in circumference; but it is impossible to make any exact statement respecting its extent,

since it varied so much at different times of the year and in different seasons. On the northern and eastern sides its extent is limited by a range of heights, but on the opposite quarter there is no such natural boundary to its size.

2. *Mountains.* — At the northern extremity of the Copaic lake, and between the lake, the Cephissus, and the Assus, a tributary of the latter, there are four or five long bare mountains, offshoots of Mt. *Chlomó*. They bore the general name of HYPHANTEIUM (τὸ Ὑφαντεῖον ὄρος, Strab. ix. p. 424). Strabo says in one passage (*l. c.*) that Orchomenus was situated on HYPHANTEIUM; but since in another passage (ix. p. 416) he places this celebrated city on Mt. ACONTIUM (τὸ Ἀκόντιον ὄρος), we may regard the latter as one of the mountains of Hyphanteium. Between the latter range and the Assus there lies a smaller hill called HEDYLIUM (τὸ Ἡδύλιον or Ἡδύλειον ὄρος, Strab. ix. p. 424; Dem. *de Fals. Leg.* p. 387; Plut. *Sull.* 16, foll.).

PTOUM (Πτῷον), was situated at the south-eastern end of the lake, and extended from the Euboean sea inland as far as Lake Hylica. On this mountain was a celebrated sanctuary of Apollo Ptous. (Paus. ix. 23. § 5; Herod. viii. 135; for details see ACRAEPHIA.) It is a long even ridge, separated from Phoenicium or Phicium, mentioned below, by the opening in which stands the modern village of *Kardhítza*. It is now known in different parts by the names of *Paleá*, *Strútzina*, and *Skroponéri*.

PHOENICIUM (Φοινίκιον, Strab. ix. p. 410), PHICIUM (Φίκιον, Hes. *Sc. Herc.* 33; Φίκειον, Apollod. iii. 5. § 8; Steph. B. *s. v.*), or SPHINGIUM (Σφίγγιον, Palaeph. *de Incred.* 7. § 2), now called *Fagá*, the mountain between the lakes Copais and Hylica, connecting Mt. Ptoum with the range of Helicon. Forchhammer supposes that Phoenicium and Sphingium are the names of two different mountains separated from one another by the small plain of the stream *Daulos;* but the name of Phoenicium rests only on the authority of Strabo, and is probably a corruption of Phicium, which occurs in other writers besides those quoted above. Φίξ is the Aeolic form of Σφίγξ (Hes. *Theog.* 326); and therefore there can be no doubt that Phicium and Sphingium are two different forms of the same name. This mountain rises immediately above the Copaic lake, and on the upper part of its surface there is a block of stone which resembles a woman's head looking into the lake. Hence arose the legend that the Sphinx threw her victims into the lake. (Comp. Paus. ix. 26.)

TILPHOSSIUM (Τιλφόσσιον, Strab ix. p. 413; Τιλφούσιον, Paus. ix. 33. § 1; Τιλφωσσαῖον, Harpocrat. *s. v.*), a mountain on the southern side of the lake Copais, between the plains of Haliartus and Coroneia, may be regarded as the furthest offshoot of Mt. Helicon, with which it is connected by means of Mount Leibethrium. At the foot of the hill was the small fountain Tilphossa or Tilphussa, where the seer Teiresias is said to have died. (Strab., Paus., *ll. cc.*) The hill bears the form of a letter T, with its foot turned towards the north. It is now called *Petra*. From its position between the lake and Leibethrium, there is a narrow pass on either side of the hill. The pass between Tilphossium and Leibethrium is now called the pass of *Zagorá;* the other, between Tilphossium and the lake, was one of great importance in antiquity, as the high road from northern Greece to Thebes passed through it. This pass was very narrow, and was completely commanded by the fortress Tilphossaeum or Tilphusium, on the summit of the hill. (Dem. *de Fals. Leg.* pp. 385, 387; comp. Diod. iv. 67, xix. 53.)

LEIBETHRIUM, one of the offshoots of Mt. Helicon, and connecting the latter with Tilphossium, now called *Zagorá*, is described under Helicon. [HELICON.]

LAPHYSTIUM (Λαφύστιον), another offshoot of Mt. Helicon, running towards the Copaic lake, and separating the plains of Coroneia and Lebadeia. It is now called the Mountain of *Gránitza*, and is evidently of volcanic origin. In its crater the village of *Gránitza* is situated, and there are warm springs at its foot near the mills of *Kalámi*. Pausanias (ix. 34. § 5) describes Laphystium as distant about 20 stadia from Coroneia, and as possessing a temenos of Zeus Laphystius. According to the Boeotians, Hercules is said to have dragged Cerberus into the upper world at this spot; a tradition probably having reference to the volcanic nature of the mountain.

THURIUM (Θούριον), also called ORTHOPAGUM (Ὀρθοπάγον), described by Plutarch as a rugged pine-shaped mountain, separated the plains of Lebadeia and Chaeroneia. (Plut. *Sull.* 13.)

3. *Passes across the Mountains.* — The principal pass into northern Boeotia was along the valley of the Cephissus, which enters the plain of Chaeroneia from Phocis through a narrow defile, formed by a ridge of Mount Parnassus jutting out towards Mt. Hedylium. Since this pass was the high road from northern Greece, the position of Chaeroneia was one of great military importance; and hence the plain in which this city stood was the scene of some of the most memorable battles in antiquity. [CHAERONEIA.] There was likewise a pass across the mountains leading from Chaeroneia by Panopeus to Daulis, and thence to Delphi. (Paus. x. 4. § 1.)

Boeotia was connected with Locris by a road leading across the mountains from Orchomenus to Abae and Hyampolis, and from thence to Opus on the Euboean sea. (Paus. x. 35. § 1.)

4. *Rivers.* — The only river of importance in the northern part of Boeotia is the CEPHISSUS (Κήφισσος), which rises in Phocis near the town of Lilaea, where it bursts forth from the rocks with a loud noise. (Hom. *Il.* ii. 522, *Hymn. in Apoll.* 240; Strab. ix. pp. 407, 424; Paus. x. 33. §§ 4, 5; Plin. iv. 3. s. 7; Stat. *Theb.* vii. 348.) It first flows to the north-east, and thence to the south-east through the plain of Elateia, receives the river Assus near the city Parapotamii, and then enters Boeotia through a narrow defile in the mountains. [See above.] Its course through Boeotia, and its subterraneous passage through the katavóthra at the eastern end of the lake Copais, till it emerges at Upper Larymna, have been described above.

There are several other smaller streams in the western part of northern Boeotia descending from Mt. Helicon and its offshoots, and flowing into the Cephissus or the Copais. Of these the names of the following have been preserved: i. MORIUS (Μώριος), rising in Mt. Thurium near Chaeroneia, and flowing into the Cephissus. Its name is perhaps preserved in *Mera*, a village in the valley. (Plut. *Sull.* 17; Leake, *Northern Greece*, vol. ii. p. 199.) — ii. HERCYNA (Ἕρκυνα, Paus. ix. 39. § 2, seq.; Plut. *Narr. Am.* 1), rising near Lebadeia, at the foot of Mt. Laphystius, and falling into — iii. PROBATIA (Προβατία, Theophr. *Hist. Plant.* iv. 12), which flows into the Copaic gulf. — iv, v. PHALARUS (Φάλαρος, Paus. ix. 34. § 5; Φλίαρος, Plut. *Lys.* 29), and CUARIUS or CORALIUS (Κουάριος, Strab. ix. p. 411;

Κωράλιος, Alcaeus, *ap. Strab. l. c.*), the former flowing to the left, and the latter to the right of Coroneia, and from thence into the lake Copais. On the banks of the Cuarius stood the temple of Athena Itonia. — vi. ISOMANTUS (Ἰσόμαντος) or HOPLIAS (Ὁπλίας), a small stream flowing into the Phalarus. (Plut. *Lys.* 29.)—vii. TRITON (Τρίτων, Paus. ix. 33. § 8), flowing by Alalcomenae into the lake Copais. It was from this stream, and not from the one in Libya, that Athena derived the surname of Tritogeneia. — viii. OCALEA (Ὠκαλέα, Strab. ix. p. 410), a river flowing midway between Haliartus and Alalcomenae, with a city of the same name upon its banks. Leake describes it as rising in the eastern part of Mount Leibethrium, and issuing through a precipitous gorge lying between the eastern end of Tilphossium and a rocky peak (vol. ii. p. 205). — ix. LOPHIS (Λοφίς, Paus. ix. 33. § 4), a small stream near Haliartus, apparently the same as the HOPLITES (Ὁπλίτης) of Plutarch (*Lys.* 29), where Lysander fell. — x, xi. PERMESSUS (Περμησσός) and OLMEIUS (Ὀλμειός), two streams rising in Mt. Helicon, which, after uniting their waters, flow into the lake Copais near Haliartus. Leake regards the *Kefalári* as the Permessus, and the river of *Zagará* as the Olmeius. (Strab. ix. pp. 407, 411; Schol. ad Hesiod. *Theog.* 5; Paus. ix. 29. § 2; Leake, vol. ii. p. 212.)

There are very few streams flowing into the eastern side of the lake Copais, as the mountains rise almost immediately above this side of the lake. The only one of importance is the MELAS (Μέλας), now *Mavropotámi*, names derived from the dark colour of its deep transparent waters. It rises at the foot of the precipitous rocks on the northern side of Orchomenus, from two katavóthra, which accounts for the statement of Plutarch (*Sull.* 20), that the Melas was the only river of Greece navigable at its sources. These two fountains are probably those called Phoenix and Elaea by Plutarch (*Pelop.* 16). They form two considerable rivers. One flows north-eastward, and joins the Cephissus at the distance of little more than half a mile; the other, which is to the westward of the former, follows for a considerable distance the foot of the cliffs of Orchomenus, and is then lost in the marshes of the lake Copais. (Plut. *ll. cc.*; Paus. ix. 38. § 6; Strab. ix. pp. 407, 415; Leake, vol. ii. p. 154, seq.) Plutarch says (*Sull.* 20) that the Melas augmented at the summer solstice like the Nile. Strabo states (ix. p. 407) that the Melas flowed through the territory of Haliartus: hence some modern writers suppose that there was a river Melas on the western side of the lake Copais, and others that the territory of Haliartus extended to the other side of the lake; but it is more probable that Strabo was ignorant of the locality. The dark waters of the Melas are often contrasted with the white waters of the Cephissus; and hence it was said that the former dyed the wool of sheep black, and the latter white. (Plin. ii. 103. s. 106; comp. Vitruv. viii. 3; Senec. *N. Q.* iii. 25; Solin. 7.)

II. SOUTHERN BOEOTIA.

Southern Boeotia is divided into two distinct parts by the mountain Teumessus. The northern of these two divisions is to a great extent a plain, in which Thebes stands; the southern is drained by the Asopus and its tributaries. Hence the southern part of Boeotia may be divided into the plain of Thebes, and the valley of the Asopus.

1. *Plain of Thebes.* — In the northern part of the plain of Thebes is the lake HYLICA (Ὑλικὴ λίμνη, Strab. ix. p. 407, xv. p. 708), now called *Livádhi* or lake of *Sénzina*, separated, as we have already remarked, from the lake Copais by Mt. Phicium or Sphingium. This lake is a deep crater, entirely surrounded by mountains, with unusually clear and deep water. Hence the Ismenus and the other streams, descending from the mountains which bound the Theban plain, cannot flow into this lake, as is represented in the maps. They are said to flow into a separate marsh to the south of Hylica; but the waters of this marsh find their way into the lake Hylica through a narrow ravine in the mountains. (Forchhammer, p. 166.) The lake Hylica is much lower than the Copais; which fact accounts for the formation of the tunnel to carry off a portion of the waters of the latter into the former. It has been mentioned above that there was a small lake to the east of Hylica, now called *Moritzi* or *Paralímni*, and that there is probably a katavóthrum flowing from the Hylica to this lake, and from the latter again across Mount Messapium to the sea. This lake is only a shallow marsh, and in summer is reduced to small dimensions. Its ancient name is uncertain. Forchhammer calls it SCHOENUS (Σχοινοῦς, Strab. ix. p. 410), the name of the river upon which the town of Schoenus stood. Leake, however, supposes that the river Schoenus is the *Kanavári*, which rises near Thespiae. Müller conjectures that it was called HARMA (τὴν καλουμένην Ἅρμα λίμνην, Aelian, *V. H.* iii. 45), from a town of the same name.

The only running streams in the plain of Thebes are the *Kanavári* mentioned above, and the two rivulets, the ISMENUS and DIRCE, upon which Thebes stood. The two latter are described under THEBAE. Nicander (*Theriac.* 887) also mentions a river called CNOPUS (Κνῶπος), which the Scholiast says was the same as the Ismenus. The LEOPUS in Dicaearchus (106) is supposed by Müller to be a false reading for Cnopus.

The north-western portion of the plain of Thebes, lying south-east of Mt. Phicium, was called the TENERIC PLAIN (τὸ Τηνερικὸν πεδίον, Strab. ix. p. 413; Paus. ix. 26. § 1.) To the west of Thebes were the plains of Thespiae and Leuctra.

The course of the Asopus is described in a separate article. [ASOPUS.] The only other rivers in the southern half of the southern portion of Boeotia are the OEROE (Ὠερόη), which rises in Mt. Cithaeron, flows by Plataeae, and falls into the Corinthian gulf [PLATAEAE]; and the THERMODON (Θερμώδων, Herod. ix. 43; Paus. ix. 19. § 3), which rises in Mt. Hypatus, and flows into the Asopus near Tanagra. South-west of Thebes is the plain of Plataeae, forming a lofty track of table land. Its centre forms the point of partition for the waters which flow into the Euboean and Corinthian gulfs respectively.

The range of hills separating the plain of Thebes from the valley of the Asopus, to which we have given the name of Teumessus, is a low range branching from the eastern end of Mt. Helicon, and extending as far as the Euripus. The falls of these hills descending towards Parnes divide the valley of the Asopus into three parts — the plain of Parasopia, the plain of Tanagra, and the plain of Oropus. The highest peak in the range is now called *Soró*, from which an offshoot approaches so near to Mt. Parnes that there is only a narrow rocky ravine between them, through which the Asopus finds its way from the plain of Parasopia into that of Tanagra. (Leake, vol. ii. p. 221.) The plain of Oropus, which

physically belonged to Boeotia, since it lies on the Boeotian side of Mt. Parnes, was eventually conquered by the Athenians, and annexed to Attica. [OROPUS.]

The name of Teumessus was given to this range of hills from an insulated height a little to the north of the range, upon which was a town bearing the same name, situated upon the road from Thebes to Chalcis. (Paus. ix. 19. §§ 1, 2; Hom. *Hymn. in Apoll.* 228; Eurip. *Phoen.* 1107; Strab. ix. p. 409; Steph. B. *s. v.*)

The mountain called HYPATUS (Ὕπατος, Paus. ix. 19. § 3) bounded the Theban plain on the east. It is described by Leake as bold and rocky, with a flat summit. Its modern name is *Samata* or *Siamata*.

MESSAPIUM (Μεσσάπιον), lying between Hypatus and the Euripus, now called *Khtypá*. It is connected with Mt. Ptoum on the north by a ridge of hills. At its foot was the town Anthedon. (Aesch. *Agam.* 293; Paus. ix. 22. § 5; Strab. ix. p. 405.)

CERYCEIUM (Κηρύκειον, Paus. ix. 20. § 3), one of the slopes of Teumessus descending down to Tanagra.

The important passes across Mts. Cithaeron and Parnes, connecting Boeotia and Attica, are described under the latter name [pp. 322, 329, 330].

III. CLIMATE AND PRODUCTS.

The climate of Boeotia presents a striking contrast to that of Attica. Instead of the pure and transparent atmosphere, which is one of the chief characteristics of the Attic climate, the air of Boeotia is thick and heavy in consequence of the vapours rising from the valleys and lakes. Moreover, the winter in Boeotia is frequently very cold and stormy, and snow often lies upon the ground for many days together. (Theophr. *de Vent.* 32.) Hesiod gives a lively picture of the rigours of a Boeotian winter (*Op. et Dies*, 501, seq.); and the truth of his description is confirmed by the testimony of modern travellers. Thus Dr. Wordsworth, who suffered from excessive cold and snowstorms passing through Boeotia in the month of February, was surprised to hear, upon arriving at Athens, that the cold had not been severe, and that scarcely any snow had fallen. (Wordsworth, *Athens and Attica*, p. 241, seq.) The spring in Boeotia also commences later than in most other parts of Greece; and the snow sometimes covers the sides of the mountains even in the months of May and June. The soil of Boeotia presents an equally striking contrast to that of Attica. In the latter country the soil is light and arid, possessing little land adapted for the cultivation of corn; while the Boeotian soil, consisting for the most part of a rich mould, is very fertile, and produced in antiquity, as well as in the present day, abundant crops of corn. (Comp. Theophr. *de Caus. Plant.* iv. 9. § 5, *Hist. Plant.* viii. 4. § 15.) The plain of the Copais is particularly distinguished for its fertility. Colonel Leake counted 900 grains on one cob of maize. Nor was the country deficient in rich pasture land. Numerous flocks and herds were reared in the meadows around Orchomenus, Thebes, and Thespiae; and from the same meadows the Boeotian cavalry obtained excellent horses, which ranked among the best in Greece. Vegetables and fruit were also cultivated with great success, especially in the neighbourhood of Thebes, Anthedon, and Mycalessus. Even palm-trees flourished in the sheltered bay of Aulis. (Paus. ix. 19. § 8.) The vine prospered on the sides of the mountains; and it was in Boeotia that the vine is said to have been first planted by Dionysus, whom the legends represent as a native of Thebes. (Paus. ix. 25. § 1.)

From the mountains on the eastern coast of Boeotia, as well as from those on the opposite coast of Euboea, iron was obtained in very early times. The Boeotian swords and Aonian iron enjoyed great celebrity (Dionys. Perieg. 476, with the note of Eustathius). The mountains also yielded black and grey marble, which was used in public buildings, and gave the Boeotian cities a sombre appearance, very different from the dazzling whiteness of the Pentelic marble of Attica. Potter's earth was found near Aulis. (Paus. ix. 19. § 8.)

Among the natural productions of Boeotia, one of the most important, on account of its influence upon the development of Greek music, was the auletic, or flute-reed (δονάξ), which grew in the marshes of the lake Copais. (Pind. *Pyth.* xii. 46; Theophr. *Hist. Plant.* iv. 12; Plin. xvi. 35. s. 66; Strab. ix. p. 407.) The marshes of the Copais were frequently covered with water-fowl, and large quantities of fish were caught in the lake. These, as well as many other productions of Boeotia, found a ready sale in the Athenian market. (Aristoph. *Acharn.* 872, seq.) The eels of the lake Copais were, however, most prized by the Athenians; they still retain their ancient celebrity, and are described by a modern traveller as "large, white, of delicate flavour, and light of digestion." (Aristoph. *Pac.* 1005; *Acharn.* 880, seq.; Athen. vii. p. 297, seq.; Pollux, vi. 63; Leake, vol. ii. p. 157.) The plain of Thebes abounds with moles, and their skins were an article of foreign commerce. (Aristoph. *Acharn.* 879.) Pliny remarks (viii. 58. s. 83), that though moles are not found at Lebadeia, they exist in great numbers in the lands of Orchomenus; but he has probably made some confusion respecting the locality, since Colonel Mure did not observe a single mole-hill in any portion of the Cephissian Plain; but upon entering that of Thebes, he found the ground covered with them in every direction. (Mure, vol. ii. p. 252.)

IV. INHABITANTS.

Boeotia was originally inhabited by various barbarous tribes, known by the names of Aones, Ectenes, Temmices, and Hyantes, some of whom were probably Leleges and others Pelasgians. (Strab. ix. p. 401; Paus. ix. 5; Lycophr. 644, 786, 1209.) Mention is also made of other ancient inhabitants of Boeotia, such as Thracians, Gephyraei, and Phlegyae, who are spoken of under their respective names. But in addition to all these tribes, there were two others, of far greater importance, who appear as the rulers of Boeotia in the heroic age. These two were the Minyae, and the Cadmeans or Cadmeones, — the former dwelling at Orchomenus, and the latter at Thebes. The history of these two tribes is given in another part of this work; and accordingly we pass over at present the question, whether the Cadmeans are to be regarded as a Phoenician colony, according to the general testimony of antiquity, or as Tyrrhenian Pelasgians, as is maintained by many modern scholars. [MINYAE; ORCHOMENUS; THEBAE.] It is only necessary to mention in this place that Orchomenus was originally the more powerful of the two cities, though it was afterwards obliged to yield to the supremacy of Thebes. The description previously given of the physical peculiarities of Boeotia, by which it is seen how completely the country is divided into two distinct valleys, almost leads one to

expect the division of the country into two great political leagues, with Orchomenus and Thebes as the respective heads of each.

Sixty years after the Trojan war, according to the chronology of Thucydides, an important change took place in the population of Boeotia. The Boeotians, an Aeolian people, who had hitherto dwelt in the southern part of Phthiotis in Thessaly, on the Pagasaean gulf, and whose chief town was Arne, were expelled from their homes by the Thessalians, who are said to have come from Thesprotia.* These expelled Boeotians thereupon penetrated southwards, and took possession of the land, then called Cadmeis, but to which they gave their own name of Boeotia. (Thuc. i. 12; comp. Strab. ix. p. 401.) The Minyans and Cadmeans were partly driven out of their cities, and partly incorporated with the conquering race. A difficulty has arisen respecting the time of this Boeotian immigration, from the fact that, in mentioning the wars of the Seven chiefs and of their sons against Thebes, Homer always calls the inhabitants of this city Cadmeones (*Il.* iv. 385, v. 804, xxiii. 680); while at the time of the Trojan war the inhabitants of the same country are invariably called Boeotians in the Iliad, and their chieftains, Peneleus, Leitus, Arcesilaus, Prothenor, and Clonius, are connected, both by genealogy and legends, with the Aeolic Boeotians who came from Thessaly. According to this it would follow that the migration of the Aeolian Boeotians ought to be placed between the time of the Epigoni and that of the Trojan war; but it is more probable that Thucydides has preserved the genuine legend, and that Homer only inserted the name of the Boeotians in the great national war of the Greeks to gratify the inhabitants of the country of his time. But so great was the authority of Homer, that in order to reconcile the statement of the poet with other accounts, Thucydides added (*l. c.*) that there was a portion of Aeolian Boeotians settled in Boeotia previously, and that to them belonged the Boeotians who sailed against Troy.

But at whatever time the Boeotians may have settled in the country named after them, it is certain that at the commencement of the historical period all the cities were inhabited by Boeotians, Orchomenus among the number, and that the Minyans and other ancient races had almost entirely disappeared. The most important of these cities formed a political confederacy under the presidency of Thebes. Orchomenus was the second city in importance after Thebes. Of these greater cities, which had smaller towns dependent upon them, there appear to have been originally fourteen, but their names are variously given by different writers. Müller supposes these fourteen states to have been Thebes, Orchomenus, Lebadeia, Coroneia, Copae, Haliartus, Thespiae, Tanagra, Anthedon, Plataeae, Ocaleae, Chalia, Onchestus, and Eleutherae. There can be little doubt that the first ten were members of the confederacy; but whether the last four belonged to it is questionable. Oropus, which was afterwards subject to Athens, was probably at one time a member of the league. Plataeae withdrew from the confederacy, and placed itself under the protection of Athens, as early as B. C. 519. The affairs of the confederacy were managed by certain magistrates or generals, called Boeotarchs, two being elected by Thebes, and one apparently by each of the other confederate states. At the time of the battle of Delium (B. C. 424) there were eleven Boeotarchs (Thuc. iv. 91); whence it has been inferred that the confederacy at that time consisted of ten cities. There was a religious festival of the league, called Pamboeotia, which was held at the temple of Athena Itonia, in the neighbourhood of Coroneia. (Paus. ix. 34. § 1.) Each of the confederate states was independent of the other; but the management of the confederacy was virtually in the hands of the Thebans, and exercised for their interests. For further details respecting the constitution of the Boeotian League, see *Dict. of Ant.* art. *Boeotarches.*

The political history of Boeotia cannot be separated from that of the separate towns; and even the events relating to the general history of the country are so connected with that of Thebes, that it is more convenient to relate them under the later name. After the battle of Chaeroneia (B. C. 338), and the destruction of Thebes by Alexander three years afterwards (B. C. 335), Boeotia rapidly declined, and so low had it sunk under the Romans, that even as early as the time of Strabo, Tanagra and Thespiae were the only two places in the country which could be called towns; of the other great Boeotian cities nothing remained but ruins and their names. (Strab. ix. pp. 403, 410.) Both Tanagra and Thespiae were free towns under the Romans. (Plin. iv. 7. s. 12.)

The Boeotians are represented as a dull and heavy race, with little susceptibility and appreciation of intellectual pleasures. It was especially their lively neighbours the Athenians, who reproached them with this failing, which they designated by the name of ἀναισθησία. (Dem. *de Coron.* p. 240, *de Pac.* p. 61.) Their natural dulness was generally ascribed to the dampness and thickness of their atmosphere (Cic. *de Fat.* 4; Hor. *Ep.* ii. 1. 244), but was probably as much owing to the large quantities of food which they were accustomed to take, and which the fertility of their country furnished in abundance. Their dulness and sensuality gave rise to the proverbs Βοιωτία ὗς and Βοιώτιον οὖς, which was an old national reproach even in the time of Pindar. (*Ol.* vi. 151.) The Boeotians paid more attention to the development of their bodily powers than to the cultivation of their minds. ("Omnes Boeoti magis firmitati corporis quam ingenii acumini inserviunt," Corn. Nep. *Alc.* ii.; Diod. xv. 50.) They therefore did not gain much distinction in literature and in art; but at the same time they do not deserve the universal condemnation which the Athenians passed upon them. In the quiet vallies of Mt. Helicon a taste for music and poetry was cultivated, which at all times gave the lie to the Βοιώτιον οὖς; and Hesiod, Corinna, Pindar, and Plutarch, all of whom were natives of Boeotia, are sufficient to redeem the people from the charge of universal dulness.

V. Towns.

The following is a list of the Boeotian towns, of each of which an account is given separately. Upon the lake Copais and its immediate neighbourhood, beginning with Orchomenus, and turning to the east, were Orchomenus; Tegyra; Aspledon; Olmones; Copae; Erythrae(?); Acraephia; Arne; Medeon; Onchestus; Haliartus; Ocalea; Tilphossium; Alalcomenae; Coroneia; Lebadeia; Mideia. Chaeroneia was situated at a little distance from the Copais, west of Orchomenus; and Cyrtone and Hyettus north of the lake.

Along the Euripus from N. to S. were: Larymna and Upper Larymna, at one time belonging to

Locris; PHOCAE; ANTHEDON; ISUS probably at a little distance from the coast, south of Anthedon; CHALIA; SALGANEUS; MYCALESSUS at a little distance from the coast; AULIS; CERCAS; DELIUM; and lastly OROPUS, which originally belonged to Boeotia, but was subsequently included in the territory of Attica.

Along the Corinthian gulf from W. to E., CHORSEIA upon the frontiers of Phocis; THISBE; TIPHAE or SIPHAE; CREUSIS. Inland between the Corinthian gulf and the cities on the lake Copais, also from W. to E., HIPPOTAE; ASCRA; CERESSUS and DONACON, both S. of Ascra; THESPIAE; EUTRESIS, S. of Thespiae; LEUCTRA.

THEBAE was situated in the plain between the lake Hylica and Mt. Teumessus. Near lake Hylica were HYLE; TRAPHEIA; PETEON and SCHOENUS. Between Thebes and the Euripus TEUMESSUS; GLISAS; CNOPIA and HARMA. S. of Thebes, POTNIAE and THERAPNAE.

In the valley of the Asopus, between Mt. Teumessus and Attica from W. to E., PLATAEAE; HYSIAE; ERYTHRAE; SCOLUS; SIDAE; ETEONUS or SCARPHE; ELEUM; TANAGRA; PHERAE; OENOPHYTA.

(The principal works on Boeotia are the Travels of Clarke, Holland, Hobhouse, Dodwell, Gell, Mure, and more especially of Leake and Ulrichs; K. O. Müller, *Orchomenos*, Breslau, 1844, 2nd ed., and the article *Boeotien* in Ersch and Gruber's *Encyclopädie*, vol. xi.; Forchhammer, *Hellenika*, Berlin, 1837, a work of great value; Kruse, *Hellas*, vol. ii. pt. i.; Raoul-Rochette, *Sur la forme, &c. de l'état fédératif des Béotiens*, in *Mém. de l'Acad. des Inscr.*, vol. viii. p. 214, seq.; Klütz, *de Foedere Boeotico*, Berol. 1821; ten Breujel, *de Foedere Boeotico*, Groning. 1834; Koppius, *Specimen historicum exhibens historiam reipublicae Boeotorum*, Groning. 1836.)

COIN OF BOEOTIA.

BOII, a Celtic people who emigrated from Transalpine Gaul to Italy in company with the Lingones (Liv. v. 35) by the pass of the Pennine Alps or the Great *St. Bernard*. Their original abode seems, therefore, to have been near the territory of the Lingones, who were between the upper *Saône* and the highest parts of the *Seine* and *Marne*. Those Boii who joined the Helvetii in their march to the country of the Santones, had crossed the Rhine (*B. G.* i. 5), and it seems that they came from Germany to join the Helvetii. After the defeat of the Helvetii Caesar gave them a territory in the country of the Aedui (*B. G.* i. 28, vii. 9), which territory D'Anville supposes to be in the angle between the *Allier* and the *Loire*. The Boia of Caesar (vii. 14) may be the country of these Boii; if it is not, it is the name of a town unknown to us. Walckenaer places these Boii in the modern diocese of *Auxerre* (Autesiodurum), which he supposes to be part of their original territory that had been occupied by the Aedui. But this supposition is directly contradicted by the narrative of Caesar (*B. G.* vii. 9, 10, 11). The town of the Boii was Gergovia according to the common texts of Caesar, but the name is corrupt, and the site is unknown. No conclusion can be derived as to the position of these Boii from the passage of Tacitus (*Hist.* ii. 61), except that they were close to the Aedui, which is known already. Pliny's enumeration (iv. 18), under Gallia Lugdunensis, of "intus Hedui federati, Carnuti federati, Boii, Senones, Aulerci," places the Boii between the Carnutes and the Senones, and agrees with Walckenaer's conjecture; but this is not the position of the Boii of Caesar.

The name Boii also occurs in the Antonine Itin. on the road from Aquae Augustae or Tarbellicae (*Dax*) to *Bordeaux*. The name is placed 16 Gallic leagues or 24 Roman miles from *Bordeaux*. These Boii are represented by the Buies of the *Pays de Buch*, or *Bouges*, as Walckenaer calls them (*Géog.* &c. vol. i. p. 303). The name Boii in the Itin. ought to represent a place, and it is supposed by D'Anville that *Tête de Buch*, on the *Bassin d'Arcachon*, may represent it; but he admits that the distance does not agree with the Itin.: and besides this, the *Tête de Buch* seems to lie too much out of the road between *Dax* and *Bordeaux*. [G. L.]

BOII, a people of Cisalpine Gaul, who migrated from Transalpine Gaul, as mentioned above. They found the plains N. of the Padus already occupied by the Insubres and Cenomani, in consequence of which they crossed that river, and established themselves between it and the Apennines, in the plains previously occupied by the Umbrians. (Liv. v. 35; Pol. ii. 17; Strab. iv. p. 195.) They are next mentioned as co-operating with the Insubres and Senones in the destruction of Melpum, an event which was placed by Cornelius Nepos in the same year with the capture of Veii by Camillus, B. C. 396. (Corn. Nep. *ap. Plin.* iii. 17. s. 21.) According to Appian (*Celt.* 1), the Boii took part in the expedition of the Gauls into Latium in B. C. 358, when they were defeated by the dictator C. Sulpicius; but Polybius represents them as taking up arms against the Romans for the first time after the defeat and destruction of their neighbours the Senones. Alarmed at this event, they united their forces with those of the Etruscans, in B. C. 283, and were defeated together with them at the Vadimonian Lake. Notwithstanding this disaster, they took up arms again the next year, but being a second time defeated, concluded a treaty with Rome, to which they appear to have adhered for 45 years, when the occupation by the Romans of the territory that had been previously held by the Senones again alarmed them for their own safety, and led to the great Gallic war of B. C. 225, in which the Boii and Insubres were supported by the Gaesatae from beyond the Alps. (Pol. ii. 20—31.) Though defeated, together with their allies, in a great battle near Telamon in Etruria, and compelled soon after to a nominal submission, they still continued hostile to Rome, and at the commencement of the Second Punic War (B. C. 218) did not wait for the arrival of Hannibal, but attacked and defeated the Romans who were founding the new colony of Placentia. (Pol. iii. 40; Liv. xxi. 25; Appian, *Annib.* 5.) The same year they supported Hannibal with an auxiliary force at the battle of the Trebia; and two years afterwards they suddenly attacked the consul Postumius as he was marching through their territory with a force of 25,000 men, and entirely destroyed his whole army. (Pol. iii. 67; Liv. xxiii. 24.) Again, after the close of the Second Punic War, the Boii took a prominent part in the revolt of

the Gauls under Hamilcar, and the destruction of Placentia, in B. C. 200 (Liv. xxxi. 2, 10), and from this time, during a period of ten years, notwithstanding repeated defeats, they continued to carry on the contest against Rome, sometimes single-handed, but more frequently in alliance with the Insubrians and the neighbouring tribes of Ligurians. At length, in B. C. 191, they were completely reduced to submission by Scipio Nasica, who put half their population to the sword, and deprived them of nearly half their lands. (Liv. xxxii. 29—31, xxxiii. 36, 37, xxxiv. 21, 46, 47, xxxv. 4, 5, 22, xxxvi. 38—40.) In order to secure the territory thus acquired, the Romans soon after established there the colony of Bononia, and a few years later (B. C. 183) those of Mutina and Parma. The construction in B. C. 187 of the great military road from Ariminum to Placentia, afterwards so celebrated as the Via Aemilia, must have contributed greatly to the same result. (Liv. xxxvii. 57, xxxix. 2, 55.)

But the conquerors do not appear to have been contented even with these precautions, and ultimately compelled all the remaining Boians to migrate from their country and recross the Alps, where they found a refuge with the kindred tribe of the Tauriscans, and established themselves on the frontiers of Pannonia, in a portion of the modern Bohemia, which derives its name from them. Here they dwelt for above a century, but were ultimately exterminated by the Dacians. (Strab. v. p. 213, vii. pp. 304, 313.) Hence both Strabo and Pliny speak of them as a people that had ceased to exist in Italy in their time. (Strab. v. p. 216; Plin. iii. 15. s. 20.) It is therefore almost impossible to determine with any accuracy the confines of the territory which they occupied. Polybius speaks of the Ananes as bordering on them on the W., but no other author mentions that nation; and Livy repeatedly speaks of the Boii as if they were conterminous with the Ligurians on their western frontier. Nor is the exact line of demarcation between them and the Senones on the E. better marked. Livy expressly speaks of the three colonies of Parma, Mutina, and Bononia as established in the territory of the Boii, while Arminum was certainly in that of the Senones. But the limit between the two is nowhere indicated.

The long protracted resistance of the Boii to the Roman arms sufficiently proves that they were a powerful as well as warlike people; and after so many campaigns, and the repeated devastation of their lands, they were still able to bring not less than 50,000 men into the field against Scipio Nasica. (Liv. xxxvi. 40.) Cato even reported that they comprised 112 different tribes (*ap. Plin. l. c.*). Nor were they by any means destitute of civilization. Polybius, indeed, speaks of them (in common with the other Gauls) as inhabiting only unwalled villages, and ignorant of all arts except pasturage and agriculture (Pol. ii. 17); but Livy repeatedly alludes to their towns and fortresses (castella), and his account of the triumph of Scipio Nasica over them proves that they possessed a considerable amount of the precious metals, and were able to work both in silver and bronze with tolerable skill. (Liv. xxxvi. 40.) A large portion of their territory seems, however, to have been still occupied by marshes and forests, among which last one called the LITANA SILVA was the scene of more than one conflict with the Roman armies. (Liv. xxiii. 24, xxxiv. 22; Frontin. *Strat.* i. 6, § 4.) [E. H. B.]

BOIOHE'MUM, the name of the country in which Maroboduus resided. (Vell. Pat. ii. 109.) The meaning of the name is evidently "home of the Boii," *Boienheim*, *Böheim*, that is, Bohemia. [L. S.]

BOIODU'RUM (Βοιόδουρον: *Innstadt*), a town or fort in Noricum, opposite to Batava Castra, at the point where the *Inn* (Aenus) empties itself into the Danube. (Ptol. iii. 13. § 2; Notit. Imp.; Itin. Ant. p. 249; Eugipp. *Vit. Sever.* 19, 22.) The name of the place indicates that it was probably built by the Boii. [L. S.]

BOIUM (Βοιόν), a town of Doris, and one of the original towns of the Doric tetrapolis, the ruins of which are placed by Leake near *Mariolátes*. (Thuc. i. 107; Scymn. Ch. 592; Strab. ix. p. 427; Scylax, p. 24; Conon, *Narr.* 27; Plin. iv. 7. s. 13; Tzetz. *ad Lycophr.* 741; Ptol. iii. 15. § 15; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. pp. 91, 94.)

BOLA or BOLAE (Βῶλα: *Eth.* Βωλανός, Bolanus), an ancient city of Latium, which is repeatedly mentioned in the early history of Rome. Its foundation is expressly ascribed by Virgil (*Aen.* vi. 776) to the kings of Alba, and its name is found also in the list given by Diodorus of the colonies of that city. (Diod. vii. *ap. Euseb. Arm.* p. 185.) Hence there is no doubt that it was properly a Latin city, though its name does not appear among the list of those that composed the league. (Dionys. v. 61.) But it fell at an early period into the hands of the Aequians. Dionysius describes it as one of the towns taken by Coriolanus, together with Toleria and Labicum (Id. viii. 18; Plut. *Cor.* 28); and though Livy does not notice its conquest upon that occasion, he speaks of it as an Aequian town, when the name next occurs in history, B. C. 411. In this instance the Bolani were among the foremost to engage in war, and ravaged the lands of the neighbouring Labicum, but being unsupported by the rest of the Aequians, they were defeated, and their town taken. (Liv. iv. 49; Diod. xiii. 42.) It was, however, recovered by the Aequians, and a fresh colony established there, but was again taken by the Romans under M. Postumius; and it was on this occasion that the proposal to establish a Roman colony there, and portion out its lands among the settlers, gave rise to one of the fiercest seditions in Roman history. (Liv. iv. 49—51.) Whether the colony was actually sent, does not appear: according to Livy, the town was again in the hands of the Aequians in B. C. 389, when they were defeated beneath its walls by Camillus; but Diodorus represents it as then occupied by the Latins, and besieged by the Aequians. (Liv. vi. 2; Diod. xiv. 117.) This is the last mention of the name in history (for in Diod. xx. 90, Bola is certainly a mistake or corruption of the text for Bovianum): it was probably destroyed during these wars, as we find no subsequent trace of its existence; and it is enumerated by Pliny among the towns which had in his time utterly disappeared (iii. 5. s. 9). The site is very uncertain: it is commonly placed at a village called *Poli*, situated in the mountains about 8 miles N. of Praeneste; but Livy tells us (iv. 49) that its "ager" bordered on that of Labicum, and the narratives of Dionysius and Plutarch above cited seem clearly to point to a situation in the neighbourhood of Labicum and Pedum. Hence it is much more probable, as suggested by Ficoroni and Nibby, that it occupied the site of *Lugnano*, a village about 5 miles S. of *Palestrina* (Praeneste), and 9 SE. of *La Colonna* (Labicum). The position is, like that of most of the other towns in this neighbourhood, naturally fortified by the ravines that surround it: and

its situation between the Aequian mountains on the one side, and the heights of Mt. Algidus on the other, would necessarily render it a military point of importance both to Aequians and Latins. (Ficoroni, *Memorie di Labico*, pp. 62—72; Nibby, *Dintorni di Roma*, vol. i. pp. 291—294.) [E. H. B.]

BOLAX (Βώλαξ), a town of Triphylia in Elis, which surrendered to Philip in the Social War. Its site is uncertain; but Leake, judging from similarity of name, places it at *Volántza*, a village on the left bank of the Alpheius, about four miles above its mouth. (Polyb. iv. 77. § 9, 80. § 13; Leake, *Morea*, vol. ii. p. 207.)

BOLBE. 1. (Ἡ Βόλβη λίμνη), a lake in Mygdonia in Macedonia, at no great distance from the sea. (Aesch. *Pers.* 486; Scylax, p. 27; Thuc. i. 58, iv. 103; Cantacuz. ii. 25.) The lake empties itself into the Strymonic gulf, by means of a river flowing through the pass called Aulon or Arethusa. (Thuc. iv. 103.) The name of this river is not mentioned by Thucydides, but it is evidently the same as the Rechius (Ῥήχιος) of Procopius (*de Aedif.* iv. 4). Among the smaller streams flowing into the lake we find mention of the Ammites (Ἀμμίτης) and Olynthiacus (Ὀλυνθιακός). (Athen. viii. p. 334, e.) The perch (λάβραξ) of the lake was particularly admired by the gastronomic poet Archestratus. (Athen. vii. p. 311, a.) The lake is now called *Besikia*. It is about 12 miles in length, and 6 or 8 in breadth. (Clarke, *Travels*, vol. ii. 3. p. 376; Leake, *Northern Greece*, vol. iii. pp. 170, 231, 462; Tafel, *Thessalonica*, p. 14, seq.)

2. A town of the same name, situated upon the lake (Steph. B. *s. v.* Βόλβαι), to which Procopius (*de Aedif.* iv. 4) gives the name of Bolbus (Βολβός). Leake places it on the northern side of the lake, on the site of the modern town of *Besikia*. (Leake, *Northern Greece*, vol. iii. p. 231.)

BOLBE'NE (Βολβηνή), a district of Armenia Major, which Ptolemy (v. 13) places to the W. Eustathius, in his commentary on Dionysius Periegetes (*Geog. Graec. Min.* vol. iv. p. 124), in his account of the changes made by the Emperor Justinian in the division of Roman Armenia, mentions a subdivision of Armenia IV. by the name of Balbitene (Βαλβιτηνή), which probably represented the Bolbene of Ptolemy. (St. Martin, *Mém. sur l'Arménie*, vol. i. p. 24.) [E. B. J.]

BOLBITINE (Βολβιτίνη, Hecataeus, *fr.* 285, *ap.* Steph. B. *s. v.*; Diod. i. 33), was a town of the Delta, on the Bolbitic arm of the Nile [Nilus]. It corresponds to the modern *Raschîd* or *Rosetta*. (Niebuhr, *Travels*, vol. i. p. 56; Champollion, *l'Egypte*, vol. i. p. 241) From the apparently proverbial phrase — Βολβίτινον ἄρμα — cited by Stephanus of Byzantium (*l. c.*), we may infer that Bolbitine was celebrated for its manufactory of chariots. If Bolbitine were the modern *Rosetta*, the Rosetta stone, with its triple inscription, must have been originally erected, as it was in the last century discovered, there. This stone was inscribed and set up in the reign of Ptolemy V., Epiphanes, about B. C. 193, when the town of Bolbitine was perhaps enlarged or restored by the Macedonian king. The inscription, in hieroglyphics, in the enchorial character, and in Greek letters, belongs to the years of that monarch's minority. It commemorates the piety and munificence of Ptolemy, his remission of fiscal imposts and arrears, his victories over rebels, and his protection of the lands by dams against the encroachments of the Nile. [W. B. D.]

BO'LEI (οἱ Βολεοί), the name of a stone structure in the district Hermionis, in Argolis. Its site is uncertain; but Boblaye places it near the village of *Phurni*. (Paus. ii. 36. § 3; Boblaye, *Recherches, &c.*, p. 62; comp. Leake, *Peloponnesiaca*, p. 290.)

BOLE'RIUM. [Belerium.]

BOLINA. [Patrae.]

BOLINAEUS. [Achaia, p. 13, b.]

BOMI. [Aetolia, p. 63, b.]

BOMIENSES. [Aetolia, p. 65, a.]

BO'MIUM, in Britain, mentioned in the Itinerary as lying between Nedum (*Neath*) and Isca Legionum (*Caerleon*). Probably *Ewenny*. [R. G. L.]

BONCHNAE (Βόγχναι, Steph. B. *s. v.*), a tribe of Mesopotamia, adjoining the Carrheni, according to Stephanus, who cites as his authority Quadratus, between the rivers Euphrates and Cyrus. As there is no river of the name of Cyrus in this neighbourhood, Bochart in *Geogr. Sacr.* has suggested for Cyrus, Carrha, inferring the existence of a stream of that name from Stephanus's description of the town of Carrhae. (Κάρραι πόλις Μεσοποταμίας, ἀπὸ Καρρᾶ ποταμοῦ Σύρίας.) [V.]

BONCONICA, a town on the left bank of the Rhine, placed by the Itineraries between Moguntiacum (*Mainz*) and Borbetomagus (*Worms*). The Antonine Itin. and the Table do not agree exactly in the distance of Bonconica from Moguntiacum and Borbetomagus; but there can be no doubt that *Oppenheim* represents Bonconica. [G. L.]

BONNA (*Bonn*), a town of the Ubii, on the left bank of the Rhine. The sameness of name and the distances in the Itineraries prove the site of Bonna to be *Bonn* without any difficulty. The Antonine Itinerary and the Table agree in giving 11 Gallic leagues as the distance between Bonna and Colonia Agrippina (*Cöln*); and as the road along the river is pretty straight, it is easy to verify the distance.

Bonna was one of the towns of the Ubii after this German people were removed from the east to the west side of the Rhine, under the protection of M. Vipsanius Agrippa. Drusus, the step-son of Augustus, when he was sent into these parts by the emperor, made a bridge, probably of boats, over the Rhine at Bonn (B. C. 12, or 11). This seems to be the meaning of the passage in Florus (iv. 12; and the notes in Duker's edition).

Bonna was an important Roman station. In A. D. 70, some cohorts of Batavi and Canninefates attacked and defeated the Roman commander at Bonna. (Tacit. *Hist.* iv. 20.) The narrative shows that Bonna was then a fortified place, or at least the Romans had an entrenched camp there. It was at this time the winter quarters of the first legion (Tacit. *Hist.* iv. 25), and it continued to be a military station under the empire, as is proved by numerous inscriptions. (Forbiger, *Geogr.* vol. iii. p. 154.) Bonna, in the time of Tacitus, was considered to be in that subdivision of Gallia Belgica which the Romans called Germania Secunda or Inferior (*Hist.* i. 55). Tacitus mentions (A. D. 70) the first, fifth, fifteenth, and sixteenth legions as stationed in Germania Inferior; and the first, as already observed, he places at Bonna. We may infer that Bonna had been taken and plundered by the Alemanni, and probably other German peoples, from the fact of Julianus, during his government of Gallia, recovering possession of Bonna, and repairing the walls, about A. D. 359. (Ammian. Marcell. xviii. 2.)

Numerous Roman remains have been found about Bonn, and there is a collection of antiquities there.

The Ara Ubiorum was probably near Bonna. [ARA UBIORUM.] [G. L.]

BONO'NIA (Βονωνία: *Eth.* Bononiensis: *Bologna*), an ancient and important city of Cispadane Gaul, situated on the river Rhenus, immediately at the foot of the Apennines, and on the great line of road called the Via Aemilia, which led from Ariminum to Placentia. Its foundation is expressly ascribed to the Tuscans, by whom it was named FELSINA; and its origin was connected with Perusia by a local tradition that it was first established by Aucnus or Ocnus, brother of Aulestes the founder of Perusia. Hence it is called by Silius Italicus "Ocni prisca domus." (Plin. iii. 15. s. 20; Serv. *ad Virg. Aen.* x. 198; Sil. Ital. viii. 600; Müller, *Etrusker*, vol. i. pp. 132, 139, vol. ii. p. 275.) Pliny even calls it "princeps Etruriae;" by which he probably means only that it was the chief of the Etruscan cities north of the Apennines; and this is confirmed by a statement (*ap. Serv. l. c.*) that Mantua was one of its colonies. It afterwards passed into the hands of the Boian Gauls, and is mentioned by Livy, as late as B. C. 196, under the name of Felsina; so that it appears to have first assumed that of Bononia when it became a Roman colony in B. C. 189. (Liv. xxxiii. 37, xxxvii. 57; Vell. Pat. i. 15.) Three thousand colonists, with Latin rights, were established there, with the view of securing the territory newly wrested from the Boians: and two years afterwards the consul C. Flaminius constructed a road from thence across the Apennines direct to Arretium, while the opening of the Via Aemilia about the same time established its communications both with Ariminum and Placentia. (Liv. xxxix. 2.) Its position thus became equally advantageous in a military and commercial point of view: and it seems to have speedily risen into a flourishing and important town. But its name does not again occur in history until the period of the Civil Wars; when during the siege of Mutina (B. C. 43) it became a point of importance, and was occupied with a strong garrison by M. Antonius, but was afterwards seized by Hirtius without resistance. It was here that Pansa died of his wounds after the battle of Mutina, and here too that, shortly after, Octavian at the head of his army met the combined forces of Antonius and Lepidus, and arranged the terms of the Second Triumvirate. (Cic. *ad Fam.* xi. 13, xii. 5; Dion Cass. xlvi. 36, 54; Appian. *B. C.* iii. 69; Suet. *Aug.* 96.) It appears to have been under the especial patronage of the Antonian family, and the triumvir in consequence settled there many of his friends and dependents, on which account, in B. C. 32, Octavian exempted it from the general requisition to take up arms against Antonius and Cleopatra: but after the battle of Actium he increased its population with partisans of his own, and raised it afresh to the rank of a Colonia. Its previous colonial condition had been merged in that of a Municipium by the effect of the Lex Julia. (Suet. *Aug.* 17; Dion Cass. l. 6; Fest. Epit. v. *Municipium;* Zumpt, *de Coloniis*, pp. 333, 352.) Hence we find Bononia distinguished as a colony both by Pliny and Tacitus; and it appears to have continued under the Roman Empire an important and flourishing place. In A. D. 53, it suffered severely from a conflagration, but was restored by the munificence of Claudius. (Suet. *Ner.* 7; Tac. *Ann.* xii. 58, *Hist.* 53, 67, 71; Plin. iii. 15. s. 20; Strab. v. p. 216; Ptol. iii. 1. § 46; Mart. iii. 59.) St. Ambrose speaks of it as much decayed in the fourth century (*Ep.* 39), but in A. D. 410 it was able successfully to withstand the arms of Alaric (Zosim. vi. 10), and seems to have in a great measure retained its prosperity after the fall of the Roman Empire, so that it is ranked by P. Diaconus in the 7th century among the wealthy cities (*locupletes urbes*) of the province of Aemilia (Procop. iii. 11; P. Diac. ii. 18): but it was not till a later period that it obtained the pre-eminence which it still enjoys over all the other cities in this part of Italy. The modern city of *Bologna* contains few remains of antiquity, except a few fragments of sculpture and some inscriptions preserved in the Museum of the University. They have been published by Malvasia (*Marmora Felsinea*, 4to. Bonon. 1690).

About a mile to the W. of Bononia flowed the river Rhenus (*Reno*), and it was in a small island formed by the waters of this stream that most writers place the celebrated interview between Octavian, Antonius, and Lepidus, when they agreed on the terms of the Second Triumvirate, B. C. 43. But there is much difficulty with regard to the exact spot. Appian, the only writer who mentions the name of the river, places the interview near Mutina in a small islet of the river Lavinius, by which he evidently means the stream still called *Lavino*, which crosses the Aemilian Way about 4 m. W. of *Bologna*, and joins the *Reno* about 12 miles lower down. Plutarch and Dion Cassius, on the contrary, both fix the scene of the interview near Bononia, in an island of the river which flows by that city: thus designating the Rhenus, but without mentioning its name. (Appian, iv. 2; Plut. *Cic.* 46, *Ant.* 19; Dion Cass. xlvi. 54, 55.) Local writers have fixed upon a spot called *la Crocetta del Trebbo*, about 2 m. from *Bologna*, as the scene of the meeting, but the island formed by the *Reno* at that point (described as half a mile long and a third of a mile in breadth) seems to be much too large to answer to the description of the spot in question. It is contended by some that the *Lavino* formerly joined the *Reno* much nearer *Bologna*, and at all events it seems certain that the beds of both streams are subject to frequent changes, so that it is almost impossible to identify with any certainty the Island of the Triumvirs. (Calindri, *Dissertazione dell' Isola del Triumvirato*, Cramer's *Italy*, vol. i. p. 88.) [E. H. B.]

BONO'NIA (Βονωνία). 1. (*Banostor?*) a fort built by the Romans in Pannonia, opposite to Onagrinum on the Danube, in the district occupied by the Iazyges. It was the station of the fifth cohort of the fifth legion, and of a squadron of Dalmatian horsemen. (Ptol. ii. 15. § 4; Amm. Marc. xxi. 9, xxxi. 11; Itin. Anton. p. 243; Notit. Imp.)

2. A town of the Iapydes in Illyris Barbara, of which ruins are still extant near *Bunich*. (Ptol. ii. 14. § 4, who however places this town also in Pannonia.)

3. A town in Upper Moesia, on the Danube, generally identified with the town of *Bonus* near *Widdin*. (Amm. Marc. xxxi. 11; Itin. Ant. p. 219.) It is probably the same place as the Benopia (Βενοπία) mentioned by Hierocles (p. 655; comp. Procop. *De Aedif.* iv. 6. p. 290.) [L. S.]

BONO'NIA. [GESORIACUM.]

BONTOBRICE. [BAUDOBRICA.]

BO'ON (Βοών: *Vona*), a cape and port on the coast of Pontus (Arrian, p. 417), 90 stadia east of Cape Jasonium. The Turks call the port *Vona Liman*. "It is considered the best winter harbour on this side of Constantinople, preferable even to that of Sinope, on account of the greater depth of water." (Hamilton, *Researches, &c.*, vol. i. p. 269.) [G. L.]

BOOSU'RA (Βοόσουρα). Strabo (xiv. p. 683), in

his account of Cyprus, mentions this place along with Treta, as following Kurion, and it has been identified with *Bisur*, on the road from Kurion to Paphos. Ptolemy (v. 14) fixes the position of a place which he calls the "Ox's Tail" (Οὐρὰ Βοός, in the Palat. Κλεῖδες Ἄκρα), quite to the NE. of the island of Cyprus. In Kiepert's map Boosura has this position. Unless there were two places of this name, it is impossible to reconcile Strabo and Ptolemy. (Engel, *Kypros*, vol. i. p. 120.) [E.B.J.]

BORA. [BERMIUS.]

BORBETOMAGUS (*Worms*), the chief town of the Vangiones, who were on the left bank of the Rhine south of *Mainz*. The position of *Worms* on the road between *Mainz* and *Strassburg* identifies it with the Borbetomagus of the Itineraries. The town was also designated, like most of the capital towns in Gallia, by the name of the people, as we see in the enumeration of Ammianus (xvi. 2): "Argentoratum .... Nemetas, et Vangionas et Moguntiacum civitates barbaros possidentes." The name Wormatia, which was in use in the middle ages, according to D'Anville, is evidently a corruption of Borbetomagus. [G. L.]

BORCOVICUS, *House-steeds*, on the line of the Vallum in Britain, mentioned for the first time in the *Notitia Dignitatum*. [R. G. L.]

BORE'UM, BORI'ON (Βόρειον ἄκρον). 1. (*Ras Teyonus*), a promontory on the W. coast of Cyrenaica, forming the E. headland of the Greater Syrtis, and the W. boundary of the Cyrenaic Pentapolis, being a little SW. of Hesperides or Berenice. (Strab. xvii. p. 836; Plin. v. 4.; Ptol. iv. 4. § 3; *Stadiasm.* p. 447, where the error of 700 for 70 is obvious; Barth, *Wanderungen*, &c. p. 365). Adjacent to the promontory was a small port; but there was a much more considerable sea-port town of the same name, further S., which was inhabited by a great number of Jews, who are said to have ascribed their temple in this place to Solomon. Justinian converted the temple into a Christian church, compelled the Jews to embrace Christianity, and fortified the place, as an important post against the attacks of the barbarians (*Itin. Ant.* p. 66; Tab. Peut.; *Stadiasm. l. c.*; Procop. *Aedif.* vi. 2). The exact position of this southern Boreum is difficult to determine. (Barth, *l. c.* SYRTES.)

2. (*Pt. Pedro* and *North Cape*), the northern headland of the island of Taprobane (*Ceylon*) opposite to the promontory of Cory, in India. (Ptol. vii. 4. § 7; Marc. Heracl. p. 26.) [P. S.]

BORE'UM PROM. (Βόρειον ἄκρον, Ptol. ii. 2), the most north-western promontory of Ireland, *Malin Head*. [R. G. L.]

BORGODI, a tribe of Arabians, on the east of the Peninsula. (Pliny, vi. 28. § 32.) From their neighbourhood to the Catharrei—doubtless identical with the Cadara of Ptolemy (vi. 7), on the Persian Gulf,—they must have been situated between *Ras Anfir* and *Ras Mussendom*. Forster finds the name in the modern *Godo*. (*Arabia*, vol. ii. p. 222.) [G.W.]

BORI'UM. [BOREUM.]

BORMANUM. [DACIA.]

BORSIPPA (Βόρσιππα, Steph. B.; Strab. xvi. p. 738; Βόρσιππος, Joseph. *c. Apion.* i. 20: *Eth.* Βορσιππηνός), a town in Babylonia, according to Strabo, but according to Stephanus, a city of the Chaldaeans. There has been much doubt as to its exact situation, and it has been supposed, from the notice in Stephanus, that it must have been in the southern part of Babylonia. It is, however, more likely that it was near Babylon, as Berossus states that Nabonnedus (Belshazzar) fled thither, on the capture of Babylon by Cyrus. (Joseph. *c. Apion.* i. 20; Euseb. *Praep. Evang.* ix.) There can be little doubt that the Barsita (Βάρσιτα) of Ptolemy (v. 20. § 6, viii. 20. § 28) represents the same place. Strabo (*l. c.*) states that Borsippa was sacred to Apollo and Diana; and that it abounded in a species of bat (νύκτερις), which, when salted, was used for food. He mentions also a sect of Chaldaean astronomers who were called Borsippeni, probably because they resided in that town. According to Justin (xii. 13) Alexander, on his return from India, when warned by the Magi not to enter Babylon, retired to Borsippa, then a deserted place.

It has been suspected in modern days that the ancient Borsippa is represented by the celebrated mound of the *Birs-i-Nimrúd*, and Mr Rich (*Mem. on Babylon*, p. 73) remarks that the word *Birs* has no meaning in Arabic (the common language of the country), while these ruins are called by the natives *Boursa*, which resembles the Borsippa of Strabo (ibid. p. 79). He adds, that the Chaldee word, *Borsip*, from which the Greeks took their name, is, according to the Talmud, the name of a place in Babel, near the Tower. (Rich, *l. c.*) On the black obelisk found by Mr. Layard at *Nimrúd*, Col. Rawlinson reads the name Borsippa, where it is mentioned as one of the cities of Shinar, remarking that in his opinion this name is undoubted; as it occurs in every notice of Babylon, from the earliest time to the latest, being written indifferently, Bartsebah, Bartseleh, or Bartsira. (*As. Journ.* xii. pt. 2, pp. 436-7.) [V.]

BORY'STHENES (Βορυσθένης), BORU'STHENES (Inscr. *ap.* Gruter. pp. 297, 453), afterwards DANAPRIS (Δάναπρις: *Dnieper*, *Dnyepr*, or *Dnepr*), the chief river of Scythia, according to the early writers, or, according to the later nomenclature, of Sarmatia Europaea, and, next to the Ister (Danube), the largest of the rivers flowing into the Euxine, was known to the Greeks from a very early period, probably about the middle of the seventh century B. C. (Eudoc. p. 294; Tzetz. *ad Hes.* pp. 24, 25, Gaisf.; Hermann, *Opusc.* vol. ii. p. 300; Ukert, *Geogr.* &c. vol. iii. pt. ii. p. 17.) By means of the constant intercourse kept up with the Greek colonies on the north coast of the Euxine, and through the narratives of travellers, it was more familiar to the Greeks than even the Ister itself; and Aristotle reproaches the Athenians for spending whole days in the market place, listening to the wonderful stories of voyagers who had returned from the Phasis and the Borysthenes (*ap.* Ath. i. p. 6; comp. Ukert, pp. 36, 449). Herodotus, who had himself seen it, and who regarded it as the greatest and most valuable river of the earth (iv. 17, 18, 53) after the Nile, describes it as falling into the Pontus (*Black Sea*) in the middle of the coast of Scythia; and, as known as far up as the district called GERRHUS, forty days' sail from its mouth (iv. 53: respecting the difficulty which some have found in the number, see Baehr's note; but it should be observed that, as the *main* object of Herodotus is not to describe how far it was *navigable*, but how far it was *known*, he might be supposed to use the word πλόος in a loose sense, only, in c. 71, he distinctly says that the river is *navigable*, προσπλωτός, as far as the Gerrhi). Above this its course was unknown; but below Gerrhus it flowed from N. to S. through a country which was supposed to be desert, as far as the agricultural Scythians, who dwelt along its lower course through a distance of ten (or eleven) days' sail from its mouth.

Near the sea its waters mingled with those of the HYPANIS (*Boug*), that is, as the historian properly explains, the two rivers fell into a small lake (ἕλος), a term fairly applicable to the land-locked gulf still called the *Lake of Dnieprovskoi*, just as the *Sea of Azov* also was called a lake. The headland between the two rivers was called the Promontory of Hippolaïs (Ἱππόλεω ἄκρη), and upon it stood the temple of the Mother of the Gods, and beyond the temple, on the banks of the Hypanis, the celebrated Greek colony of the Borystheneitae [OLBIA]. Though not to be compared with the Nile for the benefits it conferred on the people living on its shores, Herodotus regarded the Borysthenes as surpassing, in these respects, all other rivers; for the pastures on its banks were most rich and beautiful, and the cultivated land most fertile; its fish were most abundant and excellent; it was most sweet to drink, and its stream was clear, while the neighbouring rivers were turbid; and at its mouth there were large salting-pits, and plenty of great fish for salting. (Comp. Scymn. *Fr.* 66, foll., ed. Hudson, 840, foll., ed. Meineke; Dio Chrysost. Or. xxxi. p. 75; Eustath. *ad Dion. Perieg.* 311; Plin. ix. 15. s. 17.) The only tributary which Herodotus mentions is the PANTICAPES, falling into the Borysthenes on its eastern side (iv. 54). He considered the Gerrhus as a branch thrown off by the Borysthenes (iv. 56; GERRHUS). The account of Herodotus is, as usual, closely followed by Mela (ii. 1. § 6).

As to the sources of the river, Herodotus declares that neither he nor any other Greek knew where they were; and that the Nile and the Borysthenes were the only rivers whose sources were unknown; and the sources were still unknown to Strabo (ii. p. 107, vii. p. 289). Pliny says that it takes its rise among the Neuri (iv. 12. s. 26; comp. Solin. 15; Mart. Cap. vi.; Amm. Marc. xxii. 8. § 40). Ptolemy (iii. 5. § 16) assigns to the river two sources; the northernmost being SW. of M. Budinus, in 52° long. and 53° lat., by which he evidently means that which is still regarded as the source of the river, and which lies among the swamps of the *Alansk* hills N. of *Smolensk*: the other branch flows from the lake Amadocas, which he places in 53° 30′ long., and 50° 20′ lat. Some geographers suppose that this branch was the *Beresina*, which, being regarded by the Greeks as the principal stream, gave its name to the whole river, in the Hellenized form Βορυσθένης; but this view can hardly be reconciled with the relative positions as laid down by Ptolemy, unless there be an error in the numbers.

The statement of Herodotus, that the river was navigable for 40 days' sail from its mouth, is repeated by Scymnus of Chios and other late writers (Scymn. *Fr.* 70, ed. Hudson, 843, ed. Meineke; Anon. *Peripl. Pont.* p. 8); but Strabo makes its navigable course only 600 stadia, or 60 geographical miles (vii. p. 306). The discrepancy may be partially removed by supposing the former statement to refer to the whole navigation of the river, which extends from *Smolensk* to the mouth, with an interruption caused by a series of thirteen cataracts near *Kidack*, below *Kieff*; and the latter to the uninterrupted navigation below these cataracts; but still the difficulty remains, that the space last mentioned is 260 miles long; nor does it seem likely that Herodotus was acquainted with the river above the cataracts.

The mouth of the river is placed by Strabo at the N. extremity of the Euxine, on the same meridian with Byzantium, at a distance of 3800 stadia from that city, and 5000 stadia from the Hellespont: opposite to the mouth is an island with a harbour (Strab. i. p. 63, ii. pp. 71, 107, 125, vii. 289, 306). Pliny gives 120 M. P. as the distance between its mouth and that of the Tyras (*Dniester*), and mentions the lake into which it falls (iv. 12. s. 26; see above). Ptolemy places its mouths, in the plural, in 57° 30′ long. and 48° 30′ lat. (iii. 5. § 6). He also gives a list of the towns on its banks (§ 28). Dionysius Periegetes (311) states that the river falls into the Euxine in front of the promontory of Criu-Metopon, and (542) that the island of Leuce lay opposite to its mouth. [LEUCE.]

In addition to the statements of Herodotus respecting the virtues of the river, the later writers tell us that its banks were well wooded (Dio Chrysost. *l. c.*; Amm. Marc. *l. c.*); and that it was remarkable for the blue colour which it assumed in the summer, and for the lightness of its water, which floated on the top of the water of the Hypanis, except when the wind was S., and then the Hypanis was uppermost. (Ath. ii. p. 42; Aristot. *Probl.* xxiii. 9; Plin. xxxi. 5. s. 31.)

The later writers call it by the name of Danapris, and sometimes confound it with the Ister (Anon. *Per. Pont. Eux.* pp. 148, 150, 151, 166; Gronov. pp. 7, 8, 9, 16, Hudson): indeed they make a confusion among all the rivers from the Danube to the Tanaïs, which proves that their knowledge of the N. shore of the Euxine was inferior to that possessed in the classical period. (Ukert, *Geogr.* vol. iii. p. 191.) A few minor particulars may be found in the following writers (Marcian. Herac. p. 55; Priscian. *Perieg.* 304, 558; Avien. *Descript. Orb.* 721). Respecting the town of the same name, and the people Borystheneitae, see OLBIA. [P. S.]

BOSARA (Βόσαρα), a town of the Sachalitae (Ptol. vi. 7), at the south-east of Arabia, near the Didymi Montes. [See BASA.] Forster finds it in *Masora*, a little to the south of Ras-el-Had. (*Arabia*, vol. ii. p. 182.) [G. W.]

BO'SPORUS CIMME'RIUS (Βόσπορος Κιμμέριος, Herod. iv. 12, 100; Κιμμερικός, Strab.; Polyb.: *Strait of Yeni Kalé*), the narrow passage connecting the Palus Maeotis with the Euxine. The Cimmerians, to whom it owes its name (Strab. vii. p. 309, xi. p. 494), are described in the Odyssey (xi. 14) as dwelling beyond the ocean-stream, immersed in darkness, and unblest by the rays of Helios. This people, belonging partly to legend, and partly to history, seem to have been the chief occupants of the Tauric Chersonese (*Crimea*), and of the territory between that peninsula and the river Tyras (*Dniester*), when the Greeks settled on these coasts in the 7th century B. C. (Grote, *Hist. of Greece*, vol. iii. p. 313.)

The length of the strait was estimated at 60 stadia (Polyb. iv. 39), and its breadth varied from 30 (Polyb. *l. c.*) to 70 stadia. (Strab. p. 310.) An inscription discovered on a marble column states "that in the year 1068, Prince Gleb measured the sea on the ice, and that the distance from *Tmutaracan* (*Taman*) to *Kertsch* was 9,384 fathoms. (Jones, *Travels*, vol. ii. p. 197.) The greater part of the channel is lined with sand-banks, and is shallow, as it was in the days of Polybius, and as it may always be expected to remain, from the crookedness of the passage, which prevents the fair rush of the stream from the N., and favours the accumulation of deposit. But the soundings deepen as the passage

opens into the Euxine. (*Journ. Geog. Soc.* vol. i. p. 106.)

Panticapaeum or Bosporus, the metropolis, a Milesian colony, was situated on the W. edge of the strait, where the breadth of the channel was about 8 miles. (Strab. p. 309.) [PANTICAPAEUM.] From Panticapaeum the territory extended, on a low level line of coast well known to the Athenian merchants, for a distance of 530 stadia (Strab. *l. c.*), or 700 stadia (Arrian, *Peripl. Mar. Eux.*) to Theodosia, also a Milesian colony. [THEODOSIA.] The difference of distance may be accounted for by the lower estimate being probably inland distance; the other, the winding circuit of the coast. Between these two ports lay the following towns from N. to S.: DIA (Plin. iv. 24; Steph. B. places it on the Phasis *s. v. Tyrectata?* of Ptolemy, iii. 6); NYMPHAEUM (Νυμφαῖον, Ptol. *l. c.*; Strab. p. 309; Plin. *l. c.*; Anon. *Peripl. Mar. Eux.*), of which there are ruins (Jones, *Travels*, vol. ii. p. 214); ACRA (Ἄκρα, Strab. xi. p. 494; Anon. *Peripl.*; Plin. *l. c.*; Hierocles); CYTAEA or CYTAE (Κύταια, Steph.; Κύται, Anon. *Peripl.*; Plin. *l. c.*); CAZECA (Κάζεκα, Arrian, *Peripl.*), 280 stadia from Theodosia. To the N. of Panticapaeum lay, at a distance of 20 stadia (Strab. p. 310), MYRMECIUM (Μυρμήκιον, Strab. *l. c.*, p. 494; Mel. ii. 1. § 3; Plin. *l. c.*), and, at double that distance, PARTHENIUM (Παρθένιον, Strab. *l. c.*). Besides the territory already described, the kings of the Bosporus had possessions on the Asiatic side of the strait. Their cities commencing with the N. are CIMMERICUM (Κιμμερικόν, Strab. p. 494), formerly called CERBERION (Plin. vi. 6: *Temruk?*); PATRAEUS (Πατραεύς, Strab. *l. c.*); CEPI MILESIORUM (Κῆποι, Κῆποι, Strab. *l. c.*; Anon. *Peripl.*; Pomp. Mel. i. 19. § 5: *Sienna*), where was the monument of the Queen Comosanja; and PHANAGORIA (*Tmutarakan* or *Taman*). [PHANAGORIA.]

The political limits of the Cimmerian Bosporus varied considerably. In its palmiest days the territory extended as far N. as the Tanais (Strab. p. 495), while to the W. it was bounded on the inland side by the mountains of Theodosia. This fertile but narrow region was the granary of Greece, especially of Athens, which drew annually from it a supply of 400,000 medimni of corn.

Panticapaeum was the capital of a Greek kingdom which existed for several centuries. The succession of its kings, extending for several centuries before and after the birth of Christ, would be very obscure were it not for certain passages in Strabo, Diodorus Siculus, Lucian, Polyaenus, and Constantine Porphyrogeneta, with the coins and inscriptions found on the coasts of the Black Sea.

It is only necessary in this place to enumerate the series of the kings of the Bosporus, as full information is under most of the heads given in the *Dictionary of Biography*. The list has been drawn up mainly from the article in *Ersch and Gruber's Encyclopädie*, compared with Eckhel, vol. iii. p. 306, and Clinton, *Fasti Hell.* vol. ii. App. 13; see also *Mém. de l'Acad. des Inscr.* vol. vi. p. 549; Raoul Rochette, *Antiquités Grecques du Bosphore Cimmerien.*

First Dynasty.

	B. C.
Archaeanactidae	502—480.
Spartacus (on coins Spartocus)	480—438.
Seleucus	431—427.
Satyrus	407—393.
Leucon	393—353.
Spartacus II.	353—348.
Parysades	348—310.
Satyrus II.	310.
Prytanis	310—309.
Eumelus	309—304.
Spartacus III.	304—284.

* * * *An Interval of* 20 *Years.*

Here the copies of Diodorus desert us. The following names have been made out from Lucian and Polyaenus in the interval between Spartacus III. and Mithridates, to whom the last Parysades surrendered his kingdom.

Leucanor, treacherously murdered. (Lucian, *Toxar.* 50.)
Eubiotus, bastard brother of Leucanor. (Lucian, *Toxar.* 51.)
Satyrus III. (Polyaenus, viii. 55.)
Gorgippus. (Polyaenus, *l. c.*)
Spartacus IV.
Parysades II., who gave up the crown to Mithridates.
Mithridates VI., king of Pontus.
Machares, regent of the Bosporus under his father for 14 years.

	B. C.
Pharnaces II.	63—48.
Asander	48—14.
Scribonius, usurper	14—13.
Polemon I.	13—12.
Pythodoris	— —

Rhescuporis I., and his brother Cotys.
Sauromates I., his wife Gepaepiris, contem. with Tiberius.

	A. D.
Polemon II.	38—42.
Mithridates II.	42—49.
Cotys	49—83.

Rhescuporis, contem. with Domitian.
Sauromates II., contem. with Trajan.
Cotys II., died A. D. 132.

Rhaemetalces	132—164.
Eupator	164

Sauromates III.
Rhescuporis III.
Cotys III., contem. with Caracalla and Severus.

	A. D.
Ininthemerus	235—239.
Rhescuporis IV.	235—269.
Sauromates IV. (V.)	276.

Teiranes reigned 2 or 3 years.
Thothorses reigned 25 years, cotem. with Diocletian.

Sauromates V. (VI.)	302—305.
[Rhadameadis or Rhadampsis]	311—319.
Sauromates VI. (VII.)	306—320.
Rhescuporis V.	320—344.
Sauromates VII. (VIII.)	

[E. B. J.]

BO'SPORUS THRA'CIUS (*Βόσπορος Θρᾴκιος: Eth.* Βοσπόριος, Βοσπορία, Βοσποριανός, Βοσπορηνός, Steph. B.: *Adj.* Bosporanus, Bosporeus, Bosporicus, Bosporius), the strait which unites the waters of the Euxine and the Propontis.

I. *The Name.* — According to legend, it was here that the cow Io made her passage from one continent to the other, and hence the name, celebrated alike in the fables and the history of antiquity. (Apollod.

ii. 1. § 2.) Before this it had been called Πόρος Θρᾴκιος. (Apollod. *l. c.*) Afterwards the natives gave it the name of Μύσιος Βόσπορος. (Dionys. *ap. Strab.* xii. p. 566.) Finally the epithet Θρᾴκιος came into use. (Strab. *l. c.*; Herod. iv. 83; Eustath. *ad Dionys. Perieg.* 140.) Sometimes τὸ στόμα τοῦ Πόντου. (Xenoph.; Strab.; Polyb.) So also the Latin writers Os Ponticum (Tac. *Ann.* ii. 54), Os Ponti (Cic. *Verr.* ii. 4, 58), and Ostium Ponti (Cic. *Tusc.* i. 20). Pomponius Mela (i. 19. § 5) calls it "canalis," and divides it into the strait "fauces" and the mouth "os." Its modern name is the *Channel of Constantinople*, in Turkish *Boghas*.

II. *Physical Features.* — The origin of the Thracian Bosporus has attracted attention from the earliest times; among the ancients the commonly received opinion was, that the Euxine had been originally separated from the Mediterranean, and that this channel, as well as that of the Hellespont, had been made by some violent effort of nature, or by the so-called deluge of Deucalion. (Diod. v. 47; Plin. vi. 1; comp. Arist. *Meteorolog.* i. 14, 24.) The geological appearances, which imply volcanic action, confirm this current tradition. Clarke (*Travels*, vol. ii.) and Androssy (*Voyage à l'Embouchure de la Mer Noire, ou Essai sur le Bosphore*) have noticed the igneous character of the rocks on either side of the channel. Strickland (*Geol. Trans.* 2nd series, vol. v. p. 386), in his paper on the geology of this district, states that these pyrogenous rocks, consisting of trachyte and trachytic conglomerate, protrude through beds of slate and limestone, which, from the fossils they contain, he assigns to the Silurian system. The prevailing colour of these rocks is greenish, owing to the presence of copper, which gave the name of Cyaneae to the weather-beaten rocks of the Symplegades. (Daubeny, *Volcanos*, p. 335.) This channel forms, in its windings, a chain of seven lakes. According to the law of all estuaries, these seven windings are indicated by seven promontories, forming as many corresponding bays on the opposite coast; the projections on the one shore being similar to the indentations on the other. Seven currents, in different directions, follow the windings of the coast. Each has a counter current, and the water, driven with violence into the separate bays, flows upward in an opposite direction in the other half of the channel. This phenomenon has been noticed by Polybius (iv. 43); he describes "the current as first striking against the promontory of Hermaeum. From thence it is deflected and forced against the opposite side of Asia, and thence in like manner back again to that of Europe, at the Hestiaean promontory, and from thence to Bous, and finally to the point of Byzantium. At this point, a small part of the stream enters the Horn or Port, while the rest or greater part flows away towards Chalcedon." Rennel (*Comp. Geog.* vol. ii. p. 404), in his discussion upon the harbour current of Constantinople, remarks that it is probable Polybius was not altogether accurate in his description of the indented motions of the stream, or where he says that the outer current flows toward Chalcedon. The stream in a crooked passage is not (as Polybius supposes) bandied about from one point to another, but is rather thrown off from one bay to the bay on the opposite side, by the agency of the intermediate point.

Herodotus (iv. 85) makes the length of the Bosporus to be 120 stadia, but does not state where it begins or ends. Polybius (iv. 39) assigns to it the same length; this seems to have been the general computation, the measurement being made from the New Castles to as far as the town of Chalcedon. (Milman's Gibbon, vol. iii. p. 5; comp. Menippus, *ap. Steph. B. s. v.* Χαλκήδων.) The real length appears to be about 17 miles. The breadth is variously estimated by different writers. Strabo (ii. p. 125; comp. vii. p. 319) seems to say the narrowest part is 4 stadia broad, and Herodotus (*l. c.*) makes the width the same at the entrance into the Euxine. But Polybius (iv. 43) says the narrowest part is about the Hermaean promontory, somewhere midway between the two extremities, and computes the breadth at not less than 5 stadia. Pliny (iv. 24) says that at the spot where Dareius joined the bridge the distance was 500 paces. Chesney (*Exped. Euphrat.* vol. i. p. 326) makes out the width at the narrowest point, between *Rúmili-Hisár* and *Anadóli-Hisár*, to be about 600 yards. Further onwards the channel varies in breadth, from 600 or 700 yards to about 1000 yards, and at the gate of the Seraglio it extends as far as 1640 yards. The two great continents, though so slightly removed from one another, are not, it seems, as Pliny (vi. 1) states, quite within the range of the human voice, nor can the singing of the birds on one coast, nor the barking of dogs on the other, be heard. With regard to the well-known theory of Polybius as to the choking up of the Black Sea (Euxeinus), it may be observed, that the soundings which have been made in this strait show a great depth of water. (*Journ. Geog. Soc.* vol. i. p. 107.)

III. *History and Antiquities.* — The pressing forward by the Hellenic race towards the east about twelve centuries before our aera, when regarded as an historical event, is called the Expedition of the Argonauts to Colchis. According to Humboldt (*Cosmos*, vol. ii. p. 140, Eng. trans.), the actual reality, which in this narration is clothed in a mythical garb, or mingled with ideal features to which the minds of the narrators gave birth, was the fulfilment of a national desire to open the inhospitable Euxine. In accordance with this, the names of many of the places of the two opposite coasts bear evidence to their supposed connection with this period of Grecian adventure, while the crowd of temples and votive altars which were scattered in such lavish profusion upon the richly wooded banks of the strait displayed the enterprise or the fears of the later mariners who ventured on the traces of the Argonauts. The Bosporus has been minutely described by Dionysius of Byzantium, the author of an *ἀνάπλους Βοσπόρου*, about A. D. 190 (Hudson, *Geog. Minor*, vol. iii.), and by P. Gyllius, a French traveller of the 16th century (Gronovii *Thesaurus*, vol. vi. p. 3086), Tournefort (*Voyage au Levant*, Lettre xv.), and Von Hammer (*Constantinopel und die Bosporus*).

A. *The European Coast.*

1. Aianteion (*Funduklu*), an altar erected to Ajax, son of Telamon, and the temple of Ptolemaeus Philadelphus, to whom the Byzantines paid divine honours. (Dionys. B.)

2. Petra Thermastis (*Beschiktasche* or *Cradle Stone*), a rock distinguished for its form; the roadstead near this rock was formerly called Pentecoricon, or Anchorage of the Fifty-oared Ships. Not far from this was the Jasonium, called by the later Greeks Diplokion, or double column, and the laurel grove. (Comp. Steph. B. *s. v.* Δάφνη.)

3. ARCHIAS (*Ortakoi*).

4. ANAPLUS (*Kurutschesme*) or VICUS MICHAELICUS, from the celebrated church to the archangel Michael, which Constantine the Great erected (Sozomen, *H. E.* ii. 3), and Justinian renewed with so much magnificence. (Procop. *Aedif.* i. 8.) In the 5th century this place was remarkable for the Stylites or Pillar Saints. (Cedrenus, p. 340.)

5. HESTIAE (*Arnaudkoi*), the point of the rocky promontory which here shuts in the Bosporus within its narrowest breadth, and therefore produces the greatest current in the channel (*μέγα ῥεῦμα*, Polyb. *l. c.*). Here stood the church of S. Theodora, in which, under Alexius, the son of Manuel Comnenus, the conspiracy against the Protosebast was commenced. (Le Beau, *Bas Empire*, vol. xvi. p. 314.)

6. CHELAE (*Bebek*), a bay on which was a temple to Artemis Dictynna.

7. PROMONTORIUM HERMAEUM (*Rúmili-Hisár*), the promontory at the foot of which Mandrocles built the bridge of Dareius, though its site must not be looked for in a straight line between *Rúmili-Hisár* and *Anadoli-Hisár*, but a little higher up, where the sea is more tranquil. On this and on the opposite side were the *old castles* which, under the Greek empire, were used as state prisons, under the tremendous name of Lethe, or towers of oblivion (Gibbon, vol. iii. p. 6), and were destroyed and strengthened by Mohammed II. before the siege of Constantinople.

8. PORTUS MULIERUM (*Baltaliman*, Plin. iv. 12; comp. Steph. B. *s. v.* *Γυναικοπόλις*).

9. SINUS LASTHENES or LEOSTHENES (*Stenia*, Steph. B. *l. c.*). The reading in Pliny (*l. c.*) should be Leosthenes, instead of Casthenes, called by the later Byzantines Sosthenes (Niceph. p. 35; comp. *Epigram* by Leont. Schol. *Anthol. Planud.* 284), the fairest, largest, and most remarkable harbour of the whole Bosporus.

10. CAUTES BACCHIAE (*Jenikoi*), so called because the currents, dancing like Bacchanals, beat against the shore.

11. PHARMACIA (*Therapia*), derived its name from the poison which Medea threw upon the coast. The euphemism of later ages has converted the poison into health.

12. CLAVES PONTI (*Kefelikoi*), the key of the Euxine, as here the first view of the open sea is obtained.

13. SINUS PROFUNDUS (Βαθύκολπος: *Bujukdereh*).

14. SIMAS (*Mesaibuonu*).

15. SCLETRINAS (*Sarigavi*).

16. SERAPEION (*Rúmili-kawák*, Polyb. iv. 39). Strabo (vii. p. 319) calls it the temple of the Byzantines, and the one on the opposite shore the temple of the Chalcedonians. The Genoese castles, which defended the Strait and levied the toll of the Bosporus in the time of the Byzantine empire, were situated on the summits of two opposite hills.

17. GYPOPOLIS (*Karibdsche*), the mass of rock which closes the harbour of *Bujukliman* (PORTUS EPHESIORUM).

18. CYANEAE INSULAE (Κυανέαι, Herod. iv. 85, 89; Diod. v. 47, xi. 3; Strab. i. p. 21; Dem. *de Fals. Leg.* p. 429; Συμπλήγαδες, Eurip. *Med.* 2, 1263; *Iphig. in Taur.* 241; Apollod. i. 9. § 22; Πλαγκταί, Apoll. Rhod. iv. 860, 939; comp. Plin. vi. 12), the islands which lie off the mouth of the channel. Strabo (p. 319) correctly describes their number and situation; he calls them "two little isles, one upon the European, and the other on the Asiatic side of the strait, separated from each other by 20 stadia." The more ancient accounts, representing them as sometimes separated, and at other times joined together, were explained by Tournefort, who observed that each of them consists of one craggy island, but that when the sea is disturbed the water covers the lower parts, so as to make the different points of either resemble insular rocks. They are, in fact, each joined to the mainland by a kind of isthmus, and appear as islands when this is inundated, which always happens in stormy weather. Upon the one on the European side are the remains of the altar dedicated by the Romans to Apollo. (Clarke, *Travels*, vol. ii. p. 431.)

B. *The Asiatic Coast.*

1. ANCYRAEUM PROM. (*Jum-burun*).

2. CORACIUM PROM. (*Fil-burun*).

3. PANTEICHION or MANCIPIUM.

4. ESTIAE (Plin. v. 43).

5. HIERON (*Anadóli-kawák*), the "sacred opening" at which Jason is said to have offered sacrifice to the twelve gods. (Polyb. iv. 43.) Here was the temple of Zeus Urius (Arrian, *Peripl.* ad fin.), or temple of the Chalcedonians. (Strab. p. 319.) It has been supposed that it was from this temple that Dareius surveyed the Euxine. (Herod. iv. 85.) But as it is not easy to reconcile Herodotus's statement with the common notion of the situation of the temple, it may be inferred that this took place somewhere at the mouth of the strait, as, from its peculiar sanctity, the whole district went under this general title. This spot, as the place for levying duties on the vessels sailing in and out of the Euxine, was wrested from the Byzantines by Prusias, who carried away all the materials. On making peace, he was obliged to restore them. (Polyb. iv. 50—52.) Near this place, on a part of the shore which Procopius (*Aedif.* i. 9) calls MOCHADIUM, Justinian dedicated a church to the archangel Michael; the guardianship of the strait being consigned to the leader of the host of heaven.

6. ARGYRONIUM PROM., with a Nosocomium or hospital built by Justinian. (Procop. *l. c.*)

7. THE COUCH (κλίνη) OF HERACLES (*Juscha Tagh*), or mountain of Joshua, because, according to Moslem belief, Joshua is buried here. — *Giant's Mountain.*

8. SINUS AMYCUS (*Begkos*), with the spot named Δάφνη Μαινομένη, from the laurel which caused insanity in those that wore the branches. Situated 80 stadia from Byzantium, and 40 from the temple of Zeus Urius (Arrian, *Peripl.*), formerly famous for the sword-fish, which have now disappeared from the Bosporus.

9. NICOPOLIS (Plin. v. 43; comp. Steph. B. *s. v.*).

10. ECHAEA περίῤῥοον, or "stream-girt" (*Kandili*).

11. PROTOS and DEUTEROS DISCUS (Ῥιζοῦσαι Ἄκραι: *Kulle-bagdschessi*), or bluffs against which the waters beat. At this part of the coast, called by Procopius (*Aedif.* i. 8) Βρόχοι, or, in earlier times, Πρόοχθοι, from its jutting out, Justinian built the church to the archangel Michael which faced the one on the European coast.

12. CHRYSOPOLIS. [CHRYSOPOLIS.] [E. B. J.]

BOSTRA (τὰ Βόστρα, ἡ Βόστρα: O. T. BOZRAH, properly BOTZRAH; LXX. Βοσόρ: *Eth.* Βοστρηνός, Βοστραῖος, Steph. B.: *Busrah, Boszrah, Botzra*, Ru.), a city of Arabia, in an oasis of the Syrian Desert, a little more than 1° S. of Damascus. It lay in the

S. part of the district of Auranitis, the modern *Haouran*, of which it was the capital in the middle ages (Abulfeda), and is still one of its chief cities.

Respecting its earliest history, doubts have been thrown upon the identity of the *Bozrah* of the O. T. with the Bostra of writers under the Roman empire, chiefly on the ground that the former was a principal city of the Edomites, whose territory, it is urged, lay too far S. to include the site of Bostra (*Gen.* xxxvi. 33; *Is.* xxxiv. 6, lxiii. 1; *Jer.* xlix. 13, 22; *Amos*, i. 12), while, in one passage (*Jer.* xlviii. 24), a Bozrah of the Moabites is mentioned; and hence, by a well-known expedient of hasty criticism, it has been inferred that there were two Bozrahs, the one belonging to Edom, and the other to Moab; the latter corresponding to Bostra in Auranitis, and the former occupying the site of the modern *Busseyra*, in the mountains of Idumea. But, as the notices of Bozrah in the O. T. have all the appearance of referring to some one well-known place, and as the extent of the territories of the border peoples varied greatly at different times, it is at least equally probable that the possessions of Edom extended as far as Bostra, and that, from being on the frontier of the Moabites, it had been taken by the latter when Jeremiah wrote. The notice of Bossora (Βόσσορα) in the first book of Maccabees (1 *Macc.* v. 26) confirms this view. (Calmet, *ad Jer.* xlix. 13; Von Raumer, *Palästi.* p. 165, and in Berghaus's *Annalen*, 1830, p. 564; Winer, *Bibl. Realworterbuch, s. v.*; Kitto, *Pict. Bibl.* n. on *Jer.* xlix. 13.)

Cicero mentions an independent chieftain of Bostra (*Bostrenum: ad Q. F.* ii. 12). The city was beautified by Trajan, who made it the capital of the Roman province of Arabia, an event commemorated by the inscription NEA TPAIANH BOCTPA on its coins, and also by a local era, which dated from A. D. 105. (*Chron. Pasch.* p. 253, ed. Paris, p. 472, ed. Bonn; Eckhel, *Doctr. Num. Vet.* vol. iii. p. 500, et seq.: John Malala erroneously ascribes its elevation to Augustus, instead of Trajan, *Chron.* ix. p. 233, ed. Bonn.) Under Alexander Severus it was made a colony, and its coins bear the epigraph NOVA TRAJANA ALEXANDRIANA COL. BOSTRA. (Damasc. *ap. Phot. Cod.* 272; Eckhel, *l. c.*) The emperor Philip, who was a native of the city, conferred upon it the title of *Metropolis*. (Amm. Marc. xiv. 8; Eckhel, p. 502) It is described at this period as a great, populous, and well fortified city (Amm. Marc. *l. c.*), lying 24 M. P. north-east of Adraa (*Edrei*), and four days' journey S. of Damascus. (Euseb. *Onom.*; Hierocl.; *Not. Imp. Or.*) Ptolemy mentions it, among the cities of Arabia Petraea, with the surname of Λεγίων, in allusion to the Legio III. Cyrenaïca, whose head-quarters were fixed here by Trajan. It is one of his points of recorded astronomical observation, having 14½ hours in its longest day and being distant about two-thirds of an hour E. of Alexandria. (Ptol. v. 17. § 7, viii. 20. § 21.)

Ecclesiastically, it was a place of considerable importance; being the seat, first of a bishopric, and afterwards of an archbishopric, ruling over twenty bishoprics, and forming apparently the head-quarters of the Nestorians. (*Act. Concil. Nic. Ephes. Chalced. &c.*)

Its coins range from the Antonines to Caracalla. Several of them bear emblems referring to the worship of the Syrian Dionysus, under the name of Dusares, a fact of importance in connection with the reference to the vineyards of Bozrah in the magnificent prophecy of Isaiah (lxiii. 1—3). Some scholars even derive its name from its vineyards. The verbal root *botzar* signifies *to cut off*, and hence, on the one hand, *to gather the vintage*, and, on the other hand, *to make inaccessible;* and hence some make *Botzrah a place of vineyards*, others *an inaccessible fortress.* (Eckhel, p. 502; Gesenius, *Lexicon, s. v.*)

The important ruins of the city are described by Burckhardt (*Travels*, p. 226) and Robinson (*Bibl. Researches*, vol. iii. p. 125). The desolation of this great city, which, at the time of its capture by the Arabs, was called "the market-place of Syria, Irak, and the Hejaz," furnishes a striking commentary on the prophecy of Jeremiah (xlix. 13). [P. S.]

BOSTRE'NUS (Βοστρηνός: *Nahr el-Auly*), the "graceful" river upon whose waters Sidon was situated. (Dionys. Per. 913.) The stream rises in Mount Lebanon, NE. of *Deir-el-Kamr* and *Bteddîn*, from fountains an hour and a half beyond the village of *El-Bárúk;* it is at first a wild torrent, and its course nearly south-west. (Burkhardt, *Syria*, p. 206; Robinson, *Travels*, vol. iii. p. 429; Chesney, *Exped. Euphrat.* vol. i. p. 467.) [E. B. J.]

BOTERDUM, a place near Bilbilis, in Hispania Tarraconensis, only mentioned by Martial (xii. 18. 10—12):—

"Hic pigri colimus labore dulci
Boterdum Plateamque: Celtiberis
Haec sunt nomina crassiora terris." [P. S.]

BOTIAEIUM (Βοτιάειον, Steph. *s. v.*: *Eth.* Βοτιαεύς), a city of Phrygia, on a lake Attaea, which produces salt. As the lake is in Phrygia, and a salt lake, it is possible that this Attaea may be Strabo's Tattaea. [G. L.]

BOTRYS (Βότρυς; Botrys, Botrus, *Peut. Tab.*: Βοστρός, Theophan. *Chronogr.* p. 193: *Eth.* Βοτρυηνός, Steph. B.; Hierocles; Plin. v. 20; Pomp. Mela i. 12. § 3: *Bátrún*), a town of Phoenicia, upon the coast, 12 M. P. north of Byblus (Tab. Peut.), and a fortress of the robber tribes of Mt. Libanus (Strab. xvi. p. 755), which was, according to the historian Menander, as quoted by Josephus (*Antiq.* viii. 3. § 2), founded by Ithobal, king of Tyre. It was taken with other cities by Antiochus the Great in his Phoenician campaign. (Polyb. v. 68.) *Bátrún* is a small town, with a port and 300 or 400 houses, chiefly belonging to Maronites, with a few which are occupied by Greeks and Turks. (Chesney, *Exped. Euphrat.* vol. i. p. 454.) [E. B. J.]

BOTTIAEA. [MACEDONIA.]

BOVIA'NUM (Βοίανόν, or Βουίανον: *Eth.* Bovianensis: *Bojano*), a city of Samnium, situated in the very heart of that country, close to the sources of the river Tifernus, and surrounded on all sides by lofty mountains. We learn from Livy (ix. 31) that it was the capital of the tribe of the Pentri, and a very wealthy and powerful city. Hence it plays no unimportant part during the wars of the Romans with the Samnites, especially the second, during which the scene of the contest lay principally in the country of the Pentrians. It was first besieged, but without success, by the Roman consuls M. Poetelius and C. Sulpicius in B. C. 314; but three years afterwards was taken by C. Junius Bubulcus, when a greater booty fell into the hands of the victors than from any other Samnite city. (Liv. ix. 28, 31.) The Romans, however, did not retain possession of it: and though it was again taken by their armies in B. C. 305, they appear to have evacuated it shortly afterwards: as at the commencement of the Third Samnite War, B. C. 298, it was a third time taken by

the consul Cn. Fulvius. (Liv. ix. 44, x. 12; Niebuhr, vol. iii. pp. 242, 243.) In the Second Punic War it was more than once made the head-quarters of a Roman army, as a point of importance in a military view (Liv. xxv. 13), and during the great Social War it again assumed a position of the highest rank, being made for a time, after the fall of Corfinium, the capital of the confederates and the seat of their general council. (Appian, *B. C.* i. 51.) It was, however, taken by Sulla by a sudden assault; but fell again into the hands of the Marsic general Pompaedius Silo, before the close of the war, and was the scene of his latest triumph. (App. *l. c.*; Jul. Obseq. 116.) In the devastation of Samnium which followed, Bovianum fully shared, and Strabo speaks of it as in his day almost entirely depopulated (v. p. 250). We learn, however, that a military colony was established there by Caesar, and Pliny even speaks of two colonies of the name: "Colonia Bovianum vetus et alterum cognomine Undecumanorum." The latter was probably that established by Caesar: the epoch of the former is uncertain, but it appears from its name to have occupied the site of the ancient Samnite city. (Plin. iii. 12. s. 17; Lib. Colon. p. 231; Zumpt *de Colon.* pp. 256, 305.) No subsequent author notices this distinction: but the continued existence of Bovianum under the Roman Empire as a municipal town, apparently of some consideration, with its senate (Ordo Bovianensium) and other local magistrates, is attested by inscriptions as well as by Ptolemy and the Itineraries. (Ptol. iii. 1. § 67; Itin. Ant. p. 102; Tab. Pent.; Inscrr. ap Romanelli, vol. i. pp. 442, 443.)

The Roman city of Bovianum, which appears to have been situated in the plain or low grounds on the banks of the Tifernus, was almost entirely destroyed by an earthquake in the 9th century: its site is now covered with marshy alluvial soil, in which ancient remains have been discovered. The modern city of *Bojano* occupies a rocky hill, one of the last off-shoots of the lofty mountain mass called *Monte Matese*, which completely overshadows it on the S. W.: and it is probable that this was the site of the ancient Samnite city. Some portions of its ancient walls, constructed of polygonal blocks in a very massive style, are still visible. (Romanelli, vol. ii. p. 441; Craven's *Abruzzi*, vol. ii. p. 160.) Mommsen, however, the latest author who has investigated the topography of these regions, regards the modern *Bojano* as the site only of "Bovianum Undecumanorum," and would transfer the ancient Samnite city "Bovianum Vetus" to a place called *Pietrabbondante* near *Agnone*, about 20 miles to the N., where there certainly appear to be the remains of an ancient city. (Mommsen, *Unter Ital. Dialecte*, p. 171—173.) The expression of Silius Italicus (*Bovianaa lustra*, viii. 566) is strikingly descriptive of the scenery in the neighbourhood of *Bojano:* the "narrow glens and impenetrable thickets" of the *Monte Matese.* (Craven, *l. c.*). [E. H. B.]

BOVILLAE (Βοΐλλαι: *Eth.* Βοϊλλανός, Bovillanus), an ancient city of Latium, situated on the Appian Way about 12 miles from Rome. It is one of the towns whose foundation is expressly assigned to a colony from Alba Longa (*Orig. Gentis Rom.* 17; Comp. Diod. vii. *ap. Euseb. Arm.* p. 185): and the inhabitants appear indeed to have claimed a special relation with that city, whence we find them assuming in inscriptions, of Imperial date, the titles "Albani Longani Bovillenses" (Orell. *Inscr.* 119, 2252). After the fall of Alba, Bovillae became an independent city, and was one of the thirty which in B. C. 493 composed the Latin League. (Dionys. v. 61, where we should certainly read Βοϊλλανῶν, and not Βωλανῶν. Niebuhr, in his discussion of this important passage, has accidentally omitted the name.) Hence we find it long afterwards noticed as partaking in the sacrifices on the Alban Mount. (Cic. *pro Planc.* 9.) It is mentioned both by Dionysius and Plutarch among the cities taken by the Volscians under Coriolanus (Dionys. viii. 20; Plut. *Cor.* 29, where we should read Βοΐλλαι for Βόλλαι): the former calls it at this time one of the most considerable cities of Latium, but its name is not again mentioned during the wars of Rome with the Volscians. Florus indeed speaks of the Romans as having celebrated a triumph over Bovillae (I. 11. § 6), but this is probably a mistake, or a rhetorical inaccuracy. Like many other Latin towns it seems to have fallen into decay in the later ages of the Republic, and though Sulla established a military colony there (Lib. Colon. p. 231), Cicero speaks of it in his time as a poor decayed place, though still retaining its municipal privileges. (*Pro Planc.* 9.)

It was on the Appian Way, close to Bovillae, that Clodius was killed by Milo, whence Cicero alludes to that event by the phrase of "pugna Bovillana" (Appian. *B. C.* ii. 21; Cic. *ad Att.* v. 13); and it was here that the body of Augustus rested on its way to Rome, and where it was met by the funeral convoy of Roman knights who conducted it from thence to the city. (Suet. *Aug.* 100.) The Julian family appears to have had previous to this some peculiar sacred rites or privileges at Bovillae, probably owing to their Alban origin: and after this event, Tiberius erected there a chapel or "sacrarium" of the Julia gens; and instituted Circensian games in its honour, which continued to be celebrated for some time. (Tac. *Ann.* ii. 41, xv. 23.) Owing to the favours thus bestowed on it, as well as to its favourable situation close to the Appian Way, and at so short a distance from Rome (whence it is called "suburbanae Bovillae" by Propertius and Ovid), it appears to have recovered from its declining condition, and became under the Roman empire a tolerably flourishing municipal town. (Propert. iv. 1. 33; Ovid. *Fast.* iii. 667; Martial, ii. 6. 15; Tac. *Hist.* iv. 2, 46; Orell. *Inscr.* 2625, 3701.) The name (corruptly written 'Bobellas') is found for the last time in the Tabula: the period of its destruction is unknown, but it appears to have completely ceased to exist in the middle ages, so that its very site was forgotten. Holstenius placed it at a spot called the *Osteria delle Fratocchie*, rather too near Rome: the actual town, as proved by the ruins lately discovered, lay a short distance to the right of the Appian Way, and a cross road or *diverticulum*, which led to it, branched off from the high road at the 12th milestone. The station given in the Tabula must have been at this point, and it is therefore clear that the distance should be xii. instead of x. Recent excavations have brought to light the remains of the Circus, in which the games noticed by Tacitus were celebrated, and which are in unusually good preservation: also those of a small theatre and the ruins of an edifice, supposed with much plausibility to be the sanctuary of the Julian gens. A curious altar of very ancient style, with the inscription 'Vedioveï Patrei Gentiles Juliei,' confirms the fact of the early connexion of this gens with Bovillae. (Nibby, *Dintorni di Roma*, vol. i. pp. 302—312; Gell's *Top. of*

Rome, pp. 123—125; Orell. *Inscr.* 1287; Klausen, *Aeneas und die Penaten*, vol. ii. p. 1083. [E. H. B.]

BOVINDA (Βουουίνδα, Ptol. ii. 2 § 8), a river in Ireland, the *Boyne*. [R. G. L.]

BO'VIUM, a place in Britain, ten miles, according to the Itinerary, from Deva (*Chester*), in the direction of Uroconium (*Uroxeter*), and placed, by modern inquirers, at *Bangor*, *Aldford*, *Bunbury*, *Stretton*, and other unsatisfactory localities south of *Chester*. In order to increase the claims of *Bangor* the *v* has been changed into *n*, and *Bonium* suggested. (Horseley, *Britannia Romana*, iii. 2.) [R. G. L.]

BOXUM, a place in Gallia, on the road between Aquae Nisineii (*Bourbon l'Anci*), and Augustodunum (*Autun*), according to the Table. D'Anville supposes that it may be *Bussière*, the distance of which from *Autun* agrees pretty well with the distance 8 in the Table from Boxum to Augustodunum. [G. L.]

BOZRAH. [Bostra.]

BRABONIACUM, mentioned only in the Notitia, and probably but another form for Bremetonacae (*Overborough*). [R. G. L.]

BRA'CARA AUGUSTA (Βραίκαρ Αὐγουστα, Ptol. ii. 6. § 39; Augusta Bracaria, Geog. Rav. iv. 43; *Braga*, Ru.), a city in the NW. of Hispania Tarraconensis, the capital of the Callaïci Bracarii, who dwelt between the rivers Durius and Minius, and the seat of a conventus juridicus. It stood at the meeting of four roads, some distance from the sea, and not far from the left bank of the river Naebis (*Cavado*). Among its ruins are the remains of an aqueduct and amphitheatre. (Plin. iv. 20. s. 34; *Itin. Ant.* pp. 420, 422, 423, 427, 429; Auson. *de Nob. Urb.* 8, *quaeque sinu pelagi jactat se Bracara dives;* Morales, *Ant.* pp. 102, 103; Miñano, *Diccion.* vol. ii. p. 136.) [P. S.]

BRA'CARI, BRACA'RII. [Gallaecia.]

BRA'CCIUM. The following inscription found at *Brugh*, near *Askrigg*, has suggested the word *Bracchium*, as the name *Brugh*, in its Roman form.

IMP. CAES. L. SEPTIMIO
PIO. PERTINACI. AVGV. .
IMP. CAESARI. M. AURELIO. A. . . .
PIO. FELICI. AVGVSTO. . .
. . . . . .
. . . . .
BRACCHIO. CAEMENTICIVM.
VI. NERVIORUM. SVB. CVRA. L. A.
SENECION. AMPLISSIMI.
OPERI. L. VI. SPIUS. PRAE.
. . LEGIO. [R. G. L.]

BRACHMA'NES (Βραχμᾶνες, Steph. B.: in other writers generally in the genitive, τὸ ἔθνος Βραχμάνων, τὸ φῦλον Βραχμάνων: also Βρᾶχμαι, Steph. B.), the Brahmins, or priestly caste of the Hindoos, called by the Greeks *σοφισταί*, and, from their habit of practising bodily asceticism in a state of nudity, Γυμνοσοφισταί. In the expedition of Alexander, their peculiar sentiments and practices and position among the natives excited the conqueror's attention, and led to inquiries, the results of which are preserved in the fragments of the contemporary historians, and in the compilations of later writers. The particulars of these accounts, agreeing as they do, to a great extent, with the better information gained through our own intercourse with India, it is superfluous to insert here; the reader who wishes to compare them with modern knowledge must carefully consult the original authorities. It should be observed that Alexander's intercourse with them was not entirely peaceful; for they are found inciting the natives to resist the invader, and suffering severely in consequence. (Aristob. Fr. 34. p. 105, ed. Didot; ap. Strab. xv. p. 714; Onesicrit. Fr. 10, p. 50, ed. Didot, ap. Strab. xv. p. 715, and Plut. *Alex.* 65, Fr. 33, p. 57, ap. Lucian. *de Mort. Peregr.* 25; Nearch. Fr. 7, p. 60, ap. Strab. xv. p. 716, Fr. 11, p. 61, ap. Arrian. *Ind.* 11, Fr. 37, p. 71, ap. Arrian. *Anab.* vii. 3. § 8; Cleitarch. Fr. 22. a, p. 83, ap. Diog. Laërt. Procem. § 6; Diod. xvii. 102—107; Strab. xv. pp. 712, foll.; Arrian. *Anab.* vi. 7. § 4, vi. 16. § 5; Lucian. *Fugit.* 6; Plut. *Alex.* 69; Aelian, *V. H.* ii. 41; Curt. viii. 9. §. 31; Cic. *Tusc.* v. 25; Plin. vi. 21; vii. 2; Apul. *Flor.* vol. ii. p. 130, Bip.; Suid. *s. v.*; Schneider, *Annot. ad Aristot. de Animal.* vol. ii. p. 475; Bohlen, *Alt. Ind.* vol. i. pp. 279, 287, 319, vol. ii. p. 181; Creuzer, *Symbolik*, vol. i. p. 482; Droysen, *Alex.* p. 503; Lassen, *de Nominibus quibus a veteris appellantur Indorum philosophi*, in the *Rhein. Mus.* 2nd series, vol. i. p. 171, for 1832. See also India.) In several of the passages now cited, the Brachmans are spoken of as a distinct tribe, having their own cities; and various geographical positions are assigned to them. This natural result of imperfect information assumes a definite form in Diodorus (xvii. 102, 103), who mentions Harmatelia (Ἁρματήλια) as the last city of the Brachmans on the Indus, and in Ptolemy (vii. 1. § 74), who places the Βραχμάναι μάγοι at the foot of a mountain called Bettigo (Βηττιγώ), and says that they extend as far as the Batae, and have a city named Brachma (Βράχμη). [P. S.]

BRACHO'DES (Βραχώδης ἄκρα, Ptol. iv. 3. § 10), a promontory on the E. coast of Byzacium, in N. Africa, forming the N. headland of the Lesser Syrtis. It is called Ammonis (ἄκρα Ἄμμωνος Βαλίθωνος) by Strabo, who mentions the tunny-fisheries off it (xvii. p. 834). It was called Caput Vada (Καπούτ Βάδα) in the time of Justinian, who built upon it a town of the same name, in memory of the landing of Belisarius in the Vandalic War (Procop. *Aed.* vi. 6); and it still retains the name *Kapoudia*, with the ruins of the city. (Shaw, *Travels*, p. 101; Barth, *Wanderungen*, pp. 176, 190.) [P. S.]

BRADANUS, a river of Lucania, the name of which is found only in the Itinerary of Antoninus (p. 104), but which is undoubtedly the same still called the *Bradano*, a considerable river, which rises in the mountains near Venusia, and flows into the gulf of Tarentum, immediately to the N. of Metapontum. It appears to have formed in ancient times the boundary between Lucania and Apulia or Calabria, as it still does between the provinces of *Basilicata* and *Terra d'Otranto*. Appian (*B. C.* v. 93) speaks of a river *of the same name* (πόταμος ἐπώνυμος), near Metapontum, which can hardly be any other than the *Bradano:* hence it would appear that near its mouth it was known by the name of that city, although in the upper part of its course it was termed the Bradanus. [E. H. B.]

BRA'NCHIDAE (Βράγχιδαι). "After Poseideion, the promontory in the territory of the Milesians, is the oracle of Apollo Didymeus at Branchidae, about 18 stadia the ascent (from the sea)." (Strab. p. 634.) The remains of the temple are visible to one who sails along the coast. (Hamilton, *Researches*, &c., vol. ii. p. 29.) Pliny (v. 29) places it 180 stadia from Miletus, and 20 from the sea. It was in the Milesian territory, and above the harbour Panormus. (Herod. i. 157.) The name of the site of the temple

was Didyma or Didymi (Δίδυμα, Steph. *s. v.*; Herod. vi. 19), as we might also infer from the name of Apollo Didymeus; but the place was also called Branchidae, which was the name of a body of priests who had the care of the temple. Croesus, king of Lydia (Herod. i. 46, 92), consulted the oracle, and made rich presents to the temple. The god of Branchidae was consulted by all the Ionians and Aeolians; and Necos, king of Egypt, after he had taken Cadytis (Herod. ii. 159), sent to the god the armour in which he had been victorious. We may infer that the fame of this god had been carried to Egypt by the Milesians, at least as early as the time of Necos. After the revolt of Miletus, and its capture by the Persians (B. C. 494) in the time of the first Darius, the sacred place at Didyma, that is the sacred place of Apollo Didymeus, both the temple and the oracular shrine were robbed and burnt by the Persians. If this is true, there was hardly time for the temple to be rebuilt and burnt again by Xerxes, the son of Darius, as Strabo says (p. 634); who also has a story that the priests (the Branchidae) gave up the treasures to Xerxes when he was flying back from Greece, and accompanied him, to escape the punishment of their treachery and sacrilege. (Comp. Strab. p. 517.)

The temple was subsequently rebuilt by the Milesians on an enormous scale; but it was so large, says Strabo, that it remained without a roof. A village grew up within the sacred precincts, which contained several temples and chapels. Pausanias (vii. 2) says that the temple of Apollo at Didymi was older than the Ionian settlements in Asia. The tomb of Neleus was shown on the way from Miletus to Didymi, as Pausanias writes it. It was adorned with many most costly and ancient ornaments. (Strabo.)

A road called the Sacred Way led from the sea up to the temple; it "was bordered on either side with statues on chairs, of a single block of stone, with the feet close together and the hands on the knees,—an exact imitation of the avenues of the temples of Egypt." (Leake, *Asia Minor*, p. 239.) Sir W. Gell copied from the chair of a sitting statue on this way, a Boustrophedon inscription, which contains τωπολλωνι, that is τῷ Απολλωνι. The temple at Branchidae was of white marble, in some parts bluish. There remain only two columns with the architrave still standing; the rest is a heap of ruins. The height of the columns is 63 feet, with a diameter of 6½ feet at the base of the shaft. It has 21 columns on the flanks, and 4 between the antae of the pronaos, 112 in all; for it was decastyle dipteral. Chandler describes the position and appearance of the ruins of Apollo's temple at Didyma (c. 43, French Tr. with the notes of Servois and Barbié Du Bocage; see also the *Ionian Antiquities*, published by the Dilettanti Society). [G. L.]

BRANCHIDAE (Βραγχίδαι, Strab. xiv. p. 633; τὸ τῶν Βραγχίδων ἄστυ, Strab. xi. p. 517), a small town in Sogdiana which Alexander the Great destroyed, because it was said to have been built by the priests of the temple of Apollo Didymeus, near Miletus. [See above.] Xerxes subsequently allowed them to settle at a place in Sogdiana, which they named Branchidae. Curtius (vii. 5) gives a graphic account of what he justly calls the cruel vengeance of Alexander against the descendants of these traitors, remarking that the people still retained the manners of their former country, and that, though they had acquired also the native language of their new home, they still spoke their own tongue with little degeneracy. [V.]

BRANNODU'NUM, in Britain, mentioned in the *Notitia* as being under the "Comes Littoris Saxonici per Britanniam." Name for name, and place for place, it agrees with *Brancaster*, in Norfolk, and was the most northern station of the Litus. It was under a Praepositus Equitum Dalmatarum. [R. G. L.]

BRANNOGE'NIUM (Βραννογένιον), a place in Britain, mentioned by Ptolemy (ii. 3. § 18) as a town of the Ordovices. H. Horsely agrees with Camden in considering it to be the Branonium, and also the Bravinnium, of the Itinerary, but differs from him in fixing it in the parts about *Ludlow*, rather than at *Worcester*. [R. G. L.]

BRANNOVICES or BRANNOVII, a Gallic people mentioned by Caesar (*B. G.* vii. 75). D'Anville conjectures that they may have been in the canton of *Brionnois*, in the diocese of *Mâcon*. Walckenaer (*Géog.* vol. i. p. 331) has some remarks on these people. In Caesar (*B. G.* vii. 75) there are also readings "Blannovicibus" and "Blannoviis (Oudendorp. ed. Caes.);" and Walckenaer proposes to place the Blannovices or Brannovices in the district of *Mâcon*, where D'Anville also places the Brannovices or Brannovii. Walckenaer urges, in favour of this supposition, the existence of a place called *Blannot* in the district of *Mâcon*. There is another *Blannot* in the department of *Côte d'Or*, about 4 leagues from *Arnay*, and here Walckenaer places the Blannovii. All this is very uncertain. [G. L.]

BRASIAE. [PRASIAE.]

BRA'TTIA (*Brazza*), an island off the Dalmatian coast of Illyricum. (Plin. iii. 26. s. 30; Tab. Peut.; It. Ant.; Geogr. Rav.)

BRATUSPA'NTIUM, a town of the Bellovaci. Caesar (*B. G.* ii. 13), in B. C. 57, marched from the territory of the Suessiones into the territory of the Bellovaci, who shut themselves up and all they had in Bratuspantium. After the surrender of the place he led his troops into the territory of the Ambiani. The old critics concluded that Bratuspantium was the chief town of the Bellovaci, but D'Anville (*Notice, &c.*) being informed that there existed two centuries before his time some traces of a town called *Bratuspante*, one quarter of a league from *Breteuil*, was inclined to suppose that this was the Bratuspantium of Caesar. But Walckenaer (*Géog.* vol. i. p. 423) shows that there is not sufficient authority, indeed, hardly anything that can be called authority, to prove the existence of this name *Bratuspante*, or *Bransuspans*, before the 16th century, though there has been undoubtedly a Roman town near *Breteuil*. Now as Caesar mentions no town of the Bellovaci except Bratuspantium, and as everything that he says seems to show that was their chief place, even if they had other towns, it is a reasonable conclusion that this town was the place which Ptolemy calls Caesaromagus, which is the Bellovaci of the late empire, and the modern *Beauvais*. It is true, that we cannot determine what Roman town occupied the site near *Breteuil*, and this is a difficulty which is removed by the supposition of its being Bratuspantium, a name however which occurs only in Caesar. [G. L.]

BRAURON. [ATTICA, p. 332, a.]

BRAVINNIUM (Bravincum, Bravonium), in Britain, mentioned in the Itinerary; and probably *Leintwardine*, in Shropshire. Placed, also, at *Ludlow* and *Worcester*. [R. G. L.]

BREGAE'TIUM, BREGE'TIO, BRIGI'TIO, BREGE'NTIO or BREGE'NTIUM (Βρέγαιτιον),

one of the chief towns in Lower Pannonia. It was a very strong place of the rank of a Roman municipium, and was situated on the Danube, to the east of the river Arrabo, on the road from Carnuntum to Aquincum. The fifth cohort of the Legio I. Adjutrix had its head-quarters there, and the emperor Valentinian died there, in the midst of his preparations against the Quadi. Ruins of the place still exist near *Szöny*, in *Hungary*, a little to the east of *Comorn*. (Ptol. ii. 15. § 3; Amm. Marc. xxx. 5, foll.; Aurel. Vict. *Epit.* 45; *Itin. Ant.* pp. 263, 265; Orelli, *Inscr.* no. 499; Notit. Imp.) [L. S.]

BREMENIUM (Βρέμενιον, Ptol. ii. 3. § 10), in Britain, is simply mentioned in Ptolemy as a city of the Ottadini. It appears also in the list of the Geographer of Ravenna. In the Itinerary it is placed 20 miles in a north or north-western direction of Corstorpitum (*Corbridge*). Name for name *Brampton* coincides with it. *Riechester*, *Newcastle*, have also been suggested. [R. G. L.]

BREMETENRACUM, in Britain, either *Old Penrith*, or a misplacement in the Notitia of Brementacae (*Overborough*). [R. G. L.]

BRENTHE (Βρένθη: *Eth.* Βρενθαῖος, Βρενθιεύς), a town of Arcadia in the district Cynuria, near the right bank of the river Alpheius, and on a small tributary called Brentheates (Βρενθεάτης), only 5 stadia in length. It corresponds to the modern *Karitena*. (Paus. viii. 28. § 7, v. 7. § 1; Leake, *Morea*, vol. ii. p. 292; Ross, *Reisen im Peloponnes*, vol. i. p. 90.)

BRE'TTIA. [BRITANNIA.]

BREUCI (Βρευκοί), a tribe in Lower Pannonia. (Ptol. ii. 16. § 3; Strab. vii. p. 314.) Their war with the Romans under their chief Baton, and their defeat, are described by Dion Cassius (lv. 29, foll.; comp. Plin. *H. N.* iii. 28). [L. S.]

BREUNI, BREONES or BRIONES (Βρεῦνοι), a Raetian tribe dwelling in the north of the modern Tyrol, about Mount Brenner, whose capital is called by Pliny (iii. 24), Breunorum caput, and is probably identical with the modern *Brunecken*. The Breuni were one of the Alpine tribes conquered in the reign of Augustus. (Plin. *l. c.*; Strab. iv. p. 206; Hor. *Carm.* iv. 14. 11; Venant. Fortunat. *Vit. S. Martini*, p. 470, ed. Luchi; Cassiod. *Var.* i. 11; Paul. Diac. *Longob.* ii. 13.) [L. S.]

BREVIODU'RUM, in Gallia, is placed in the Antonine Itin. on a road between Juliobona (*Lillebonne*), in the country of the Caleti, on the north side of the *Seine*, and Noviomagus (*Lisieux*), in the department of *Calvados*, on the south side of the Seine. The Table, in which it is called Breviodorum, places it on a road between Juliobona and Rotomagus (*Rouen*). The name shows that it was at the ford or passage of a river. D'Anville places it at *Pont-Audemer*, on the *Risle* or *Rille*. The Itin. makes 17 and the Table 18 Gallic leagues between Juliobona and Breviodurum, which seems a great deal too much, as the direct distance is only about half of this. But the distance from *Rouen* to *Pont-Audemer* agrees better with the 20 of the Table, between Rotomagus and Breviodurum. Walckenaer places Breviodurum at *Pont-Authon*, 4 or 5 miles from *Montfort-sur-Rille*. [G. L.]

BRIANA (Βρίανα), a place in Phrygia Pacatiana, in the list of Hierocles. Its existence is confirmed by the evidence of two coins, one autonomous, with the epigraph Βριανων. (Cramer, *Asia Minor*, vol. ii. p. 55.) [G. L.]

BRICINNIAE (Βρικιννίαι), a small town of Sicily, mentioned by Thucydides, who calls it a fortress or stronghold (ἔρυμα) in the territory of Leontini. It was occupied in B. C. 422 by a body of exiles from Leontini, who held it against the Syracusans. (Thuc. v. 4.) But no subsequent mention of the name occurs, except in Stephanus of Byzantium, who probably took it from Thucydides. It was evidently but a small place, and its site cannot now be determined with precision. [E. H. B.]

BRIGAECI'NI (Βριγαικινοί, Ptol. ii. 6. § 30), a tribe of the ASTURES in Hispania Tarraconensis, with a capital Brigaecium (Βριγαίκιον, Ptol.) or Brigecum (*Itin. Ant.* pp. 439, 440), 40 M. P. SE. of Asturica, near *Benevente*. The Trigaecini of Florus (iv. 12) are probably the same people. [P. S.]

BRIGANTES (Βρίγαντες). 1. A people of Britain, the subjects of Cartismandua, reduced by Ostorius, occupants of the parts between the *Humber* and *Tyne*. (Tac. *Ann.* xii. 32, *Hist.* iii. 45, *Agr.* 17; Ptol. ii. 3. § 16.)

2. Of Ireland, mentioned by Ptolemy (ii. 2. § 7) as the most south-eastern Hibernians: their probable locality being the county *Kilkenny*. [R. G. L.]

BRIGA'NTII (Βριγάντιοι), a tribe of the Vindelici, on the eastern shore of the Lacus Brigantinus. Their capital Brigantium or Brigantia (the modern *Bregenz*) was situated on the lake, on the great high road leading from the east into Gaul. In the 7th century the town was already in ruins (*Vita S. Magni*, 6), but several objects of antiquarian interest are still discovered there from time to time. The Brigantii must not be confounded with the Raetian tribe of the Brixantae of Ptolemy (ii. 12. § 3), who occupied the district of the modern *Brixia* (Strab. iv. p. 206; Ptol. ii. 12. § 5, viii. 7. § 3; Amm. Marc. xv. 6; *Itin. Anton.* pp. 237, 259.) [L. S.]

BRIGANTI'NUS LACUS (*Bodensee*, or *Lake of Constanz*), also called Lacus Brigantiae (Amm. Marc. xv. 4), while Pomponius Mela (iii. 2) mentions it under the names of Lacus Venetus and Lacus Acronius, the former being probably the name of the upper part of the lake, and the latter that of the lower. (Comp. Plin. ix. 29; Solin. 24; Strab. iv. pp. 192, 207, vii. pp. 292, 313, who mentions the lake without stating its name.) The general opinion of the ancients is, that the lake is formed by the Rhine, but that its waters do not mix with those of the river. This belief, however, is unfounded. According to Strabo, the lake was one day's journey from the sources of the Ister, and the tribes dwelling around it were the Helvetians in the south, the Raetians in the south-east, and the Vindelicians in the north. According to Ammianus Marcellinus, the form of the lake was round, and the lake itself 360 stadia in length. Its shores were covered with thick and impenetrable forests, notwithstanding which the Romans made a high road through the thickets, of which traces still exist at some distance from the northern shore, where the lake anciently appears to have extended further than it now does. Not far from an island in the lake, probably the island of *Reichenau*, Tiberius defeated the Vindelicians in a naval engagement. (Strab. vii. p. 292; comp. G. Schwab, *Der Bodensee*, Stuttgart, 1828, 8vo.) [L. S.]

BRIGA'NTIUM (*Briançon*, in the department of Hautes Alpes) is marked in the Table as the first place in Gallia after Alpis Cottia (*Mont Genèvre*). At Brigantium the road branched, to the west through *Grenoble* to Vienna (*Vienne*), on the Rhone; to the south through Ebrodunum (*Embrun*), to Vapincum (*Gap*). Both the Itin. and the Table give the route from Brigantium to Vapincum. The Table

places Brigantium 6 M.P. from Alpis Cottia. Strabo (p. 179) mentions the village Brigantium, and on a road to the Alpis Cottia, but his words are obscure. Ptolemy mentions Brigantium as within the limits of the Segusini, or people of Segusio, *Susa*, in Piedmont; but it seems, as D'Anville observes, to be beyond the natural limits of the Segusini. Walckenaer (vol. i. p. 540) justifies Ptolemy in this matter by supposing that he follows a description of Italy made before the new divisions of Augustus, which we know from Pliny. Walckenaer also supports his justification of Ptolemy by the Jerusalem Itin., which makes the Alpes Cottiae commence at Rama (*La Casse Rom*) between *Embrun* and *Briançon*. [G. L.]

BRIGA'NTIUM (Βριγάντιον, Dion Cass. xxxvii. 53; Flavium Brigantium, Φλαούιον Βριγάντιον, Ptol. ii. 6. § 4; Brigantia, Oros. ii. 2), an important seaport town of the Callaïci Lucenses, on the Magnus or Artabrorum Portus (*Bay of Ferrol and Coruña*), 35 M. P. NW. of Lucus Augusti (*Itin. Ant.* p. 424). Some geographers identify it with *El Ferrol*, others with *Betanzos*, and others with *La Coruña*, identifying the ancient tower at this place with the great lighthouse of Brigantium mentioned by Orosius. (Florez, *Esp. S.* xix. 14; Ukert, vol. ii. pt. 1. p. 437.) [P. S.]

BRIGA'NTIUM. [Brigantii.]

BRIGE (*Brough-ton*), a place in Britain, mentioned in the Itinerary between Venta Belgarum (*Winchester*) and Sorbiodunum (*Old Sarum*). [R. G. L.]

BRIGIA'NI, an Alpine people, whose name occurs in the trophy of the Alps which is preserved in Pliny (iii. c. 20). A certain order is observed in the names; and as the Brigiani are mentioned with the Caturiges, the Brigiani may represent the people of Brigantium. [G. L.]

BRIGIOSUM, a place in Gallia, on the road between Mediolanum Santonum (*Saintes*) and Limonum (*Poictiers*), according to the Table. D'Anville places it at *Briou*. [G. L.]

BRILESSUS. [Attica, p. 322, a.]

BRINIA'TES, a Ligurian tribe, known to us only from a passage in Livy (xli. 19), from which we learn that they dwelt beyond (i. e. to the N. of) the Apennines. But the exact sense in which he uses this expression is uncertain: and there seems some reason to believe that the upper valley of the *Vara* (a confluent of the *Magra*) was the abode of the Briniates. The name of *Brugnato*, a small town in this district, seems to preserve some trace of the ancient appellation. (Walckenaer, *Géogr. des Gaules*, vol. i. p. 158.) [E. H. B.]

BRISOANA (Βρισοάνα, Ptol. vi. 4. § 2; Βρίζανα, Arrian. *Ind.* 39), a small river on the coast of Persia, described by Arrian as a winter torrent, near which Nearchus found the anchorage very difficult owing to the breakers and shoals on the coast. Its position cannot be determined accurately, nor what is its modern name. It is stated to be two stadia from Rhogonis, which Dr. Vincent identifies with the modern *Bunderuk*. Dr. Vincent considers that the Brisoana of Ptolemy and the Brixana of Arrian, cannot be the same place, unless the Brisoana of the former geographer has been transposed from the east to the west of the headland he calls Chersonesus. (Vincent, *Voyage of Nearchus*, vol. i. pp. 404, 405.) [V.]

BRITANNICAE INSULAE (Νῆσοι Βρεττανικαὶ, Aristot. *de Mund.* 3; Ptol. ii. 2. § 1, 3. § 1; Νῆσοι Βρεττανικαὶ, Polyb. iii. 57; Strab. ii. p. 93; Βρεττανία, Dion Cass. lix. 21; Βριτταννία, Paus. viii. 43. § 4; Νῆσοι Βρετάννιδες, Dionys. Per. 566; Βρεττανοὶ, *Ibid.* 283; Πρεττανικαὶ Νῆσοι, Marcian.: in Lat. Britannia, Britanni).

I. Orthography.

Assuming that the texts represent the best MSS., the orthography seems to be with the double τ in the Greek, and with the single *t* in the Latin classics, at least amongst the prose writers. In verse there is a slight difference. Though the *Britannia* of the Latin is always short, the Greek form is not always long; on the contrary, Dionysius Periegetes gives—

——————ἔνθα Βρεττανοὶ
Λεύκα τε φῦλα, κ.τ.λ. (283.)

Also—

Δισσαὶ νῆσοι ἔασι Βρετάννιδες, κ.τ.λ. (566.)

It must be remembered, however, that the earliest Greek poets who give us the name of the British Isles in any form are later than the majority of the Roman ones.

II. How far the same as Brittia or Brettia?

A statement in Procopius gives us a more equivocal form than any above-mentioned — *Brittia* (Βριττία and Βρεττία). The extent to which it is distinguished from Britannia may be seen in the extract itself; besides which there are several other passages to the same effect, *i. e.* distinguishing the *Britanni* of *Britannia* from the *Brittones* of *Brittia*. "About this time, war and contest arose between the nation of the Varni and the insular soldiers, who dwell in the island called Brittia, from the following cause. The Varni are seated beyond the river Ister, and they extend as far as the Northern Ocean and the river Rhine, which separates them from the Franks and the other nations situated in this quarter. The whole of those, who formerly dwelt on either side of the river Rhine, had each a peculiar name, of which one tribe is called Germans, a name commonly applied to all. In this (northern) ocean lies the island *Brittia*, not far from the continent, but as much as 200 stadia, right opposite to the outlets of the Rhine, and is between *Britannia* and the island Thule. For Britannia lies somewhere towards the setting sun, at the extremity of the country of the Spaniards, distant from the continent not less than 4,000 stadia. But Brittia lies at the hindermost extremity of Gaul, where it borders on the ocean, that is to say, to the north of Spain and Britain; whereas Thule, so far as is known to men, lies at the farthest extremity of the ocean towards the north; but matters relating to Britain and Thule have been discoursed of in our former narrative. Three very numerous nations possess Brittia, over each of which a king presides, which nations are named Angili, Phrissones, and those surnamed from the island Britones; so great indeed appears the fecundity of these nations, that every year vast numbers migrating thence with their wives and children go to the Franks, who colonize them in such places as seem the most desert parts of their country; and upon this circumstance, they say, they formed a claim to the island. Insomuch indeed, that not long since, the king of the Franks dispatching some of his own people on an embassy to the Emperor Justinian at Byzantium, sent them also certain of the Angili; thus making a show as though this island also was ruled by him. Such, then, are the

matters relating to the island called Brittia." (Procop. *de Bell. Goth.* iv. 20.)

Brittia, then, was not *Britannia*. As little was it *Thule*. The Thule of Procopius seems to have been Scandinavia: "Thule is extremely large, being ten times larger than Britain, from which it is very far distant to the north." (*Bell. Goth.* ii. 15.)

The following passage engenders fresh complication:—"Moreover, in this isle of Brittia, men of ancient time built a long wall, cutting off a great portion of it; for the soil and the men, and all other things, are not alike on both sides; for on the eastern side of the wall, there is an wholesomeness of air in conformity with the seasons, moderately warm in summer, and cool in winter. Many men inhabit here, living much as other men. The trees with their appropriate fruits flourish in season, and their corn lands are as productive as others; and the district appears sufficiently fertilized by streams. But on the western side all is different, insomuch indeed that it would be impossible for a man to live there even half an hour. Vipers and serpents innumerable, with all other kinds of wild beasts, infest that place; and what is most strange, the natives affirm, that if any one, passing the wall, should proceed to the other side, he would die immediately, unable to endure the unwholesomeness of the atmosphere; death also attacking such beasts as go thither, forthwith destroys them. But as I have arrived at this point of my history, it is incumbent on me to record a tradition very nearly allied to fable, which has never appeared to me true in all respects, though constantly spread abroad by men without number, who assert that themselves have been agents in the transactions, and also hearers of the words. I must not, however, pass it by altogether unnoticed, lest when thus writing concerning the island Brittia, I should bring upon myself an imputation of ignorance of certain circumstances perpetually happening there. They say, then, that the souls of men departed are always conducted to this place; but in what manner I will explain immediately, having frequently heard it from men of that region who relate it most seriously, although I would rather ascribe their asseverations to a certain dreamy faculty which possesses them.

"On the coast of the land over against this island Brittia, in the ocean, are many villages, inhabited by men employed in fishing and in agriculture, and who for the sake of merchandize pass over to this island. In other respects they are subject to the Franks, but they never render them tribute; this burden, as they relate, having been of old remitted to them for a certain service which I shall immediately describe. The inhabitants declare that the conducting of souls devolves on them in turn. Such of them, therefore, as on the ensuing night are to go on this occupation in their turn of service, returning to their dwellings as soon as it grows dark, compose themselves to sleep, awaiting the conductor of the expedition. All at once, at night, they perceive that their doors are shaken, and they hear a certain indistinct voice, summoning them to their work. Without delay, arising from their beds, they proceed to the shore, not understanding the necessity which thus constrains them, yet nevertheless compelled by its influence. And here they perceive vessels in readiness, wholly void of men; not, however, their own, but certain strange vessels, in which embarking they lay hold on the oars, and feel their burden made heavier by a multitude of passengers, the boats being sunk to the gunwale and rowlock, and floating scarce a finger above the water. They see not a single person; but having rowed for one hour only, they arrive at Brittia; whereas, when they navigate their own vessels, not making use of sails, but rowing, they arrive there with difficulty, even in a night and a day. Having reached the island, and been released form their burden, they depart immediately, the boats quickly becoming light, suddenly emerging from the stream, and sinking in the water no deeper than the keel. These people see no human being either while navigating with them, nor when released from the ship. But they say that they hear a certain voice there, which seems to announce to such as receive them the name of all who have crossed over with them, and describing the dignities which they formerly possessed, and calling them over by their hereditary titles. And also if women happen to cross over with them, they call over the names of the husbands with whom they lived. These, then, are the things which men of that district declare to take place; but I return to my former narrative." (Procop. *Bell. Goth.* iv. 20, seq.; *the translation from the Monumenta Britannica*, pp. lxxxiv., seq.)

A reference to the article AESTUI will suggest the notion that one author of antiquity, at least, confounded the Prutheni (*Prussians*) of the Baltic with the Britanni of Britain, and that the language of the amber-country of East Prussia and Courland, which Tacitus calls *Britannicae propior*, was really Pruthenian. How far will the hypothesis of a similar confusion on the part of Procopius explain the difficult passages before us? It will not do so without the further alteration of certain minor details. In the first place, the locality of the Varni requires alteration. The *Rhine* of Procopius was probably the *Elbe;* on the northern bank of which, in the present duchies of Lauenburg and Mecklenburg Schwerin, we find the *Varnavi, Warnabi*, and *Varnahi* of the Carlovingian historians (*Adam of Bremen, Helmoldus*, &c.).

Two islands then claim notice, Heligoland and Rugen. The former lies more in conformity with the description of Procopius, and was almost certainly peopled by Frisians and Angles (in the eyes of whom it was a holy island), but not so certainly by any population akin to the Pruthenian, and, as such, likely to be confounded with the Britanni. Rugen, on the other hand, might easily have been so peopled, or at least, it might be resorted to by the Pruthenians of Prussia and their allied populations. To the Angle and Frisian it would be less accessible, though by no means an impossible, locality. Each island, then, has its claims; but we may go a step further towards reconciling them.

Rugen and Heligoland are the two islands which have, upon different degrees of evidence, been supposed to represent the holy island, with its sacred grove (*castum nemus*) of the Germania of Tacitus, —an object of respectful visitation to the various tribes of Reudigni, *Angli*, Aviones, *Varini*, Eudoses, Suardones, and Nuithones (c. 40); and the preceding remarks have led to the notion that the Brittia of Procopius and island of Tacitus are one and the same. Its relations to the Angli and Varini, its relations to Britain and Thule, its mysterious and holy character, all indicate this. So that what applies to the one applies to the other also. Yet the statement of Tacitus is difficult. The very fact of

some commentators identifying his island with Rugen, and others with Heligoland, shows this.

Now, the following are the reasons for believing that the *Brittia* of Procopius and the *Island of the Sacred Grove* of Tacitus, was neither Rugen exclusively, nor Heligoland exclusively; but a *tertium quid*, so to say, arising out of a confusion between the attributes of the two. The parts about the Lower Elbe were really in the neighbourhood of two holy islands; *i. e.*, Rugen was as truly a holy island as Heligoland, and *vice versâ*. Heligoland, when the full light of history first illustrates its mythology, was the sacred isle of the Angles and Frisians, Germanic tribes whose worship would be that of the goddess *Hertha*. Rugen, when similarly illustrated, is just as sacred; sacred, however, not with the Germanic *Angli*, but with the Slavonic *Varnahi* (*Varini*), near neighbours of the Angles, and not distant ones of the *Prutheni*. Now this, in the case of so good a writer as Tacitus, and, *à fortiori*, with one like Procopius, gives us the elements of a natural and excusable error,—since the holy islands with corresponding *casta nemora* were two in number, at no great distance from each other, and visited, respectively, by neighbouring nations. How easily would the writer, when he recognised the insular character of the two modes of *cultus*, refer them to one and the same island; how easily, when he knew the general fact that the Angli and Varini each worshipped in an island, be ignorant of the particular fact that each worshipped in a separate one.

The *hypothesis*, then, that explains the *Brittia* of Procopius, separates it from *Britannia*, identifies it with the island of the *castum nemus* of Tacitus, and sees in the latter an island so far real as to be *either* Heligoland *or* Rugen, but so far unreal as to be made out of a mixture of the attributes of the two.

Lest the suggested confusion between the ancient names of Britain and Prussia be considered unlikely, the reader is reminded that the *ss* in the latter word represents the combination *ts*, or *tsh*, as is shown by the name *Bruteno*, the eponymus of the ancient Prussians:—"duces fuere duo, nempe *Bruteno* et Wudawutto, quorum alterum Bruteno sacerdotem crearunt, alterum scilicet Wudawutto in regem elegerunt." (*Fragment from the Borussorum Origo ex Domino Christiano*, Voigt, vol. i. p. 621.)

Again, when we investigate the language in which the ultimate sources of the information of Tacitus lay, we find that it must have been either German or Slavonic. Now, in either case, the terms for British and Prussian would be alike, *e. g.*:—

English,	*British*,	*Prussian*.
German,	*Bryttisc*,	*Pryttisc*.
Slavonic,	*Britskaja*,	*Prutskaja*.

III. Authorities.

The term *British Isles* is an older name than *Britannia*; and the *British Isles* of the writers anterior to Caesar are the two large ones of *Albion* and *Ierne*, along with the numerous smaller ones that lie around and between them. Albion means England and Scotland; Ierne, *Ire*-land. The distinction between Britannia (= Great Britain), as opposed to Ierne, begins with Caesar; the distinction between Britannia (= South Britain), as opposed to Caledonia, is later still. The Greek writers keep the *general* powers of the term the longest.

Herodotus, as may be expected, is the earliest author who mentions any country that can pass for our island, writing, "that of the extremities of Europe towards the west" he "cannot speak with certainty. Nor" is he "acquainted with the islands called Cassiterides, from which tin is brought" (iii. 115). A refinement upon this passage will be found in the sequel, embodying a reason, more or less valid, for believing that between the Azores and the British Isles a confusion may have arisen,—the one being truly the Cassiterides (or Tin Islands), and the other the Oestrymnides, a different group. However, as the criticism stands at present, the two words are synonymous, and the knowledge of the one group implies that of the other,—the designation only being varied.

Still, taking the text of Herodotus as it stands, the *real* fact it embodies is that the tin country of western Europe was known to him; though, whether all the statements that apply to it are unequivocal, is doubtful. His sources were, of course, Phoenician.

So are those of Aristotle:—"Beyond the Pillars of Hercules the ocean flows round the earth; in this ocean, however, are two islands, and those very large, called Bretannic, Albion and Ierne, which are larger than those before mentioned, and lie beyond the Kelti; and other two not less than these, Taprobane beyond the Indians, lying obliquely in respect of the main land, and that called Phebol, situate over against the Arabic Gulf; moreover, not a few small islands, around the Bretannic Isles and Iberia, encircle as with a diadem this earth, which we have already said to be an island." (*De Mundo*, c. 3.)

Polybius' notice contains nothing that is not involved in those of Aristotle and Herodotus, special mention being made of the tin (iii. 57).

The assertion that Herodotus is the first author who mentions the British Isles, merely means that he is the first author whose name, habitation, and date are clear, definite, and unequivocal. What if a notice occur in the Orphic poems, so-called? In such a case the date is earlier or later according to the views of the authorship. This may be later than the time of Herodotus, or it may not. It is earlier, if we refer the extract to any of the Onomacratean forgeries. Be this as it may, the ship Argo, in a so-called Orphic poem, is made to say (1163):—

Νῦν γὰρ δὴ λυγρῇ τε καὶ ἀλγεινῇ κακότητι
Ἔρχομαι ἣν νήσοισιν Ἰερνίσιν ἆσσον ἴκωμαι, κ.τ.λ.

And again (1187):—

ἵν' εὐρέα δώματ' ἀνάσσης
Δημητρός.

Now, nothing is more certain than that, when we get to notices of Britain which are at one and the same time Roman in origin, and unequivocal in respect to the parts to which they apply, nothing explanatory of these *Demetrian* rites appears. And it is almost equally certain, that when we meet with them—and we *do* so meet with them—in writers of the fourth, fifth, and sixth centuries, the passages in which the allusion occurs must by no means be considered as independent evidence; on the contrary, they are derived from the same source with the Orphic extracts, and may *possibly* [see Cassiterides and Oestrymnides] have their application elsewhere.

Strabo and Diodorus, though later than Caesar, are more or less in the same predicament. Their authorities were those of Herodotus and Aristotle.

Caesar himself must be criticised from two points of view It may be that, in nine cases out of ten, he

writes as Caesar the personal observer; yet in the tenth, perhaps oftener, he writes as Caesar the scholar. This is better shown in Gaul than in Britain. His specific details are his own. His generalities are taken from the Alexandrian geographers.

Strabo's authority, in respect to the similarity of the British rites to those of Ceres, was also an Alexandrian, Artemidorus (iv. p. 277).

Ptolemy's notices are important. He specially quotes Marinus Tyrius, and, generally, seems to speak on the strength of Phoenician authorities. His account of Great Britain, both in respect to what it contains and what it omits, stands in contrast to those of all the Roman authors; and, besides this, he is as minute in the geography of *Hibernia*, as in that of Britannia and Caledonia. Now Ireland was a country that, so far as it was known at all, was known through the Greeks, the Iberians, and the Phoenicians (Punic or Proper Phoenician, as the case might be), rather than through the Britons, Gauls, and Romans.

How far were the Oestrymnides and Cassiterides exclusively Britannic?—A question has been suggested which now claims further notice. Just as a statement that applies to Brittia may not apply to Britain, a statement that applies to the Cassiterides may not always apply to the Tin Country. The true tin country was Cornwall, rather than the Scilly Isles; the Cassiterides, "*ten* in number, lying near each other in the ocean, towards the north from the haven of the Artabri" (Strab. iii. p. 239), are the Scilly Isles rather than Cornwall. Again, "one of them is a desert, but the others are inhabited by men in black cloaks, clad in tunics reaching to the feet, and girt about the breast, walking with staves, and bearded like goats. They subsist by their cattle, leading for the most part a wandering life." This may or may not be Cornish; it may or may not be British. The following is both: viz., that "they have metals of tin and lead." Hence, some part of Strabo's account is undoubtedly, some part probably, British. In the next writer, however, we find, side by side with something that *must* be British, something that *cannot* be so. That writer is Festus Avienus. The islands he notices are the Oestrymnides; his authority, Phoenician. His language requires notice in detail.

"Sub hujus autem prominentis vertice
Sinus dehiscit incolis *Oestrymnicus*
In quo Insulae sese exserunt *Oestrymnides*,
Laxe jacentes, et metallo divites
Stanni atque plumbi."

Thus far the Oestrymnides are Britannic. Then follows a sketch of their occupants, equally Britannic. So is the geographical notice as to their relations to Ireland:

"Ast hinc duobus in *Sacram* (sic Insulam
Dixere prisci) solibus cursus rati est.
Haec inter undas multa cespitem jacet,
Eamque late gens Hibernorum colit.
Propinqua rursus insula Albionum patet."

The term *Sacra Insula* shows two things:—1st, that the name *Eri* is of great antiquity; 2nd, that it passed from the Phoenician language to the Greek, wherein *Eri* became Ἰέρα (Νῆσος).

What follows is any but British:—

"Tartessiisque in terminos Oestrymnidum
Negotiandi mos erat; Carthaginis
Etiam coloni, et vulgus, inter Herculis
Agitans columnas haec adibat aequora:

Quae *Himilco Poenus* mensibus vix quatuor,
Ut ipse semet re probâsse *retulit*
Enavigantem, posse transmitti adserit,
* * * * * * *
Adjicit et illud plurimum inter gurgites
Exstare *fucum*, et saepe virgulti vice
Retinere puppim; dicit hic nihilominus
Non in profundum terga demitti maris
Parvoque aquarum vix supertexi solum."

Orae Maritim. Descript. l. 94, et seq.

This, as already stated, is not Britannic; yet is not a fiction. The *fucus* that checked the hardy mariners of Himilco was the floating *Sargassum* of the well-known *Sargasso Sea*. In the eyes of the naturalist this floating *fucus* fixes the line of Himilco's voyage as definitely as the amber-country fixes the Aestui of Tacitus. Yet the Cassiterides are not simply and absolutely the Azores, nor yet are the Oestrymnides simply and absolutely the Scilly Isles. As in the supposed case of the isles of Rugen and Heligoland, there is a confusion of attributes—a confusion of which the possibility must be recognised, even by those who hesitate to admit the absolute fact,—a confusion which should engender caution in our criticism, and induce us to weigh each statement as much on its own merits as on the context. That there were orgies in Britain, and that there was tin, stand upon the same testimony, since Strabo mentions both. Yet the certainty of the two facts is very different. The orgies—and even the black tunics and long beards—may, possibly, be as little British as the *fucus* of the Sargasso Sea. The *fucus* of the Sargasso Sea belongs to the Azores. Its notice is a great fact in the history of early navigation. The orgies and the bearded men may go with it, or go with the tin.

Upon the whole, the notices of certain isles of the west, as often as they occur in authors writing from Phoenician sources, are only unimpeachably Britannic when they specially and definitely speak to the tin-country and the tin-trade, and when they contain British names, or other facts equally unequivocal. The Britannic locality of the Demetrian orgies (in the later writers they become *Bacchic*) is only a *probability*.

The *Roman authorities* will be considered when the historical sketch of Roman Britain is attempted. The point that at present requires further notice is the extent to which the two sources differ.

As a general rule, the Greek authorities differ from the Roman in being second-hand (*i. e.* derived from Phoenicia), in dealing with the *western* parts of the island, in grouping their facts around the leading phenomena of the tin trade, in recognising the existence of certain orgies, and in being, to a certain extent, liable to the charge of having confused Britain with the Azores, or the true Cassiterides with the Oestrymnides: the Roman authorities, so far as they are based upon Greek ones, being in the same category. Josephus, who alludes incidentally to Britain, is *à fortiori* Phoenician in respect to his sources.

The *Phoenician* origin of the Greek evidence is the general rule; but it is only up to a certain date that the Greek authorities are of the kind in question; *i. e.* Phoenician in their immediate origin. It is only up to the date of the foundation of the colony of Massilia (*Marseilles*), when commerce had developed itself, and when there were two routes of traffic—one *viâ* the Spanish ports and in the hands of the Phoenicians, the other *overland*.

Of the latter Diodorus gives an account. It was probably the Massilian Greeks that converted Ιερ-νη into Ἱέρα Νῆσος. See HIBERNIA.

The Byzantine historians will be noticed in the sequel.

IV. ORIGIN OF THE WORD BRITANNIA.

Supposing the Phoenicians to have been the first who informed the Greeks of a country named Britain, who informed the Phoenicians? in other words, in what language did the names *Britanni* and *Britannia* originate? The usual doctrine is that these were native terms; *i. e.* that the occupants of the British Islands called themselves so, and were therefore so called by their neighbours. Yet this is by no means certain.

The most certain fact connected with the gloss is that it was Greek before it was Roman. Whence did the Greeks get it? From one of two sources. From the Phoenicians, if they had it anterior to the foundation of Marseilles, and from the population of the parts around that city in case they got it subsequent to that event. Now, if it were Phoenician, whence came it originally? More probably from Spain than from either Gaul or Britain—in which case *Britannia* is the *Iberic* name for certain British islanders rather than the native one. It *may*, of course, have been native as well: whether it were so is a separate question.

And if it were Massilian (*i. e.* from the neighbourhood of Marseilles), whence came it? Probably from the Gauls of the parts around. But this is only a probability. It may have been *Iberic* even then; since it is well known that the Iberians of the Spanish Peninsula extended so far westward as the Lower Rhone. Hence, as the question stands at present, the presumption is rather in favour of the word being Iberic.

Again, the *form* is Iberic. The termination *-tan*, comparatively rare in Gaul, abounds in the geography of ancient Iberia; *e. g.* Turde-*tan*-i, Carpe-*tan*-i, &c.

In all speculations upon the etymology of words, the preliminary question as to the language to which the word under notice is to be referred is of importance. In the present instance it is eminently so. If the root *Brit.* be Gallic (or Keltic), the current etymologies, at least, deserve notice. If, however, it be Iberic, the philologist has been on the wrong track altogether, has looked in the wrong language for his doctrine, and must correct his criticism by abandoning the Keltic, and having recourse to the Basque. Again, if the word be Iberic, the *t* is no part of the root, but only an inflexional element. Lest, however, we overvalue the import of the form *-tan* being Iberic, we must remember that the similarly-formed name Aqui-*tan*-ia, occurs in Gaul; but, on the other hand, lest we overvalue the import of this, we must remember that *Aquitania* itself may possibly be Iberic.

Probably the word was Iberic and Gallic as well. It was certainly Gallic in Caesar's time. But it may have been Gallic without having been native, *i. e.* British. And this was probably the case. There is not a shadow of evidence to the fact of any part of the population of the British Isles having called themselves *Britons*. They were called so by the Gauls; and the Gallic name was adopted by the Romans. This was all. The name may have been strange to the people to whom it was so applied, as the word *Welsh* is to the natives of the Cambro-Briton principality.

Probably, too, it was only until the trade of Massilia had become developed that the root *Brit.* was known at all. As long as the route was *viâ* Spain, and the trade exclusively Phoenician, the most prominent of the British isles was *Ireland*. The Orphic extract speaks only to the *Iernian Isles*, and Herodotus only to the Cassiterides.

V. THE TIN-TRADE OF BRITAIN.

One of the instruments in the reconstruction of the history of the early commerce and the early civilising influences of Britain is to be found in the fact of its being one of the few localities of a scantily-diffused metal — tin. This, like the amber of the coasts of Prussia and Courland, helps us by means of archaeology to history. Yet it is traversed by the fact of the same metal being found in the far east—in Banca and the Malayan peninsula. Hence, when we find amongst the antiquities of Assyria and Egypt—the countries of pre-eminent antiquity—vessels and implements of bronze, the inference that the tin of that alloy was of British origin is by no means indubitable. It is strengthened indeed by our knowledge of an actual trade between Phoenicia and Cornwall; but still it is not unexceptionable. When, however, writers so early as Herodotus describe tin as a branch of Phoenician traffic in the fifth century B.C., we may reasonably carry its origin to an earlier date; a date which, whatever may be the antiquity of the Aegyptian and Assyrian alloys, is still reasonable. An early British trade is a known fact, an equally early Indian one a probability. In round numbers we may lay the beginning of the Phoenician intercourse with Cornwall at B.C. 1000.

The next question is the extent to which the metallurgic skill thus inferred was native. So far as this was the case, it is undoubtedly a measure of our indigenous civilisation. Now if we remember that it was almost wholly for tin that the Phoenicians sought the Cassiterides, we shall find it difficult to deny to the earliest population of the tin-districts some knowledge and practice—no matter how slight — of metallurgic art; otherwise, it must have been either an instinct or an accident that brought the first vessel from the Mediterranean to the coast of Cornwall. Some amount, then, of indigenous metallurgy may be awarded to its occupants.

Perhaps they had the art of smelting copper as well — though the reasoning in favour of this view is of the *à priori* kind. Copper is a metal which is generally the first to be worked by rude nations; so that whenever a metal less reducible is smelted, it is fair to assume that the more reducible ore is smelted also. On the other hand, however, the absence of pure copper implements in the old *tumuli* suggests the notion that either the art of alloying was as old as that of smelting, or else that tin was smelted first.

From the knowledge of reduction and alloys, we may proceed to the question as to the knowledge of the art of casting. The main fact here is the discovery of moulds, both of stone and bronze, for the casting of axes and spear-heads. The former we can scarcely suppose to have been imported, whatever opinion we may entertain respecting the latter. Whether the invention, however, of either was British, or whether the Phoenicians showed the way, is uncertain. The

extent to which the moulds of different countries — France, Germany, Scandinavia—resemble each other, even in points of apparently arbitrary detail, is (to a certain extent) against the native claim.

The uniformity of the alloy is no more than what we expect from the chemical conditions necessary for the achievement of a good implement—indeed it is rather less. It varies from one of tin and seven of copper, to one of tin and twelve of copper; whilst it is the opinion of experienced metallurgists that the best alloy (one tin to ten copper) could easily be hit upon by different artists wholly independent of intercommunication.

The Damnonian Britons sold tin. What did they take in payment? In all histories of commerce these questions are correlative. Dr. Wilson (*Prehistoric Annals of Scotland*, p. 196) truly remarks that Strabo's account of the Cassiterides is not greatly to be relied on. For their tin and lead they took in exchange salt, skins, and bronze vessels (χαλκώματα). This latter is a strange article of import for a country of tin, copper, and moulds.

The earliest *gloss* that has a bearing upon the geography of Britain is the word *Cassiterides;* for it must be observed that whilst the word *Britannia* is non-existent in Herodotus, the Orphic extract knows only the Irish (*Iernian*) isles. Now this, though bearing upon Britain, is no British word. It is the oriental term *Kastira.*

This distinction is important. Were the word *British* in origin, we should be enabled to enhance the antiquity of the Cornish tin-trade — since the word κασσίτερος occurs both in Homer and Hesiod. Who, however, shall say that, however much the probabilities may be in favour of the Homeric and Hesiodic tin having been Cornish, it was not Indian —*i. e.* Malayan? The *name*, at least, is in favour of the greater antiquity of the Eastern trade. The two trades may have been concurrent; the Eastern being the older — at least this is what is suggested by the name.

Britannia Proper.

We may now deal with the proper British portion of the British isles, *i. e.* South Britain and Caledonia.

VI. History.

When the archaeological period ceases and the true and proper civil history of Britain begins, we find that a portion of the island, at least, was in political relations with Gaul—Divitiacus, the king of the Suessiones, a Belgic tribe, holding the sovereignty. In the following year these relations are also Gallic, and the *Veneti*, of the parts about the present town of *Vannes*, obtain assistance against Caesar from the Britons. Thus early are our maritime habits attested. In chastisement of this, Caesar prepares his first invasion (B.C. 55); Volusenus, one of his lieutenants, having been sent on beforehand, to reconnoitre.

We may measure the intercourse between Britain and Gaul by some of the details of these events. His intended invasion is known almost as soon as it is determined on, and ambassadors are sent from Britain to avert it. These are sent back, and along with them Commius the Attrebatian, of whose influence in Britain Caesar made use. Having embarked from Gessoriacum, lands; is opposed; conquers; and again receives an embassy. His fleet suffers during the high tides of the month of August, and in September he returns to Gaul. His successes (such as they are) are announced by letter at Rome, and honoured with a twenty-day festival.

His second expedition takes place in the May of the following year. He is opposed on landing by Cassivelaunus. The details of this second expedition carry us as far westward as the present county of Herts,—wherein the Hundred of Cassio is reasonably supposed to give us the stockaded village, or headquarters of Cassivelaunus, with whom the Trinobantes, Cenomagni, Ancalites, and Bibroci are in political relations. The reduction of Cassivelaunus is incomplete, and Caesar, when he departs from the island, departs with the whole of his army, and with the real independence of the country unimpaired. The boundary between the counties of Oxford and Berks seems to have been the most western part of the area affected, either directly or indirectly, by the second invasion of Caesar. The first was confined to the coast.

The best evidence as to the condition of Britain under Augustus is that of the Monumentum Ancyranum:

ΠΡΟΣ ΕΜΕ ΙΚΕΤΑΙ ΚΑΤΕΦΥΓΟΝ ΒΑΣΙΛΕΙΣ ΠΑΡΘΩΝ ΜΕΝ ΤΕΙΡΙΔΑΤΗΣ ΚΑΙ ΜΕΤΕΠΕΙΤΑ ΦΡΑΑΤΗΣ ΒΑΣΙΛΕΩΣ ΦΡΑ[Α]ΤΟΥ ΤΙΟΣ ΜΗΔΩΝ [Δ]Ε ΑΡΤΑ * * * * * * * * ΒΡΕΤΑ[Ν]ΝΩΝ ΔΟΜ[ΝΩΝ ΒΕ]ΛΛΑΥΝΟΣ[ΤΕ] ΚΑΙ[ΤΙΜ] * * *.

The commentary on this comes no earlier than Dion Cassius. From him we learn, that although it was the intention of the emperor to have reduced Britain, he proceeded no farther than Gaul, where he received an embassy. So late a writer as Jornandes is our authority for believing that he exercised sovereignty over it,—"servire coegit, Romanisque legibus vivere" (*De Regn. Success.*)—for the inscription only shows that certain Britons sought the presence of Augustus at Rome. The further statement that *tribute* was taken is from the utterly uncritical Nennius, whose evidence seems to rest upon the scriptural expression that "all the world was taxed," and upon the inference that, if so, *à fortiori*, Britain. His text is "tenente Octaviano Augusto Monarchiam totius mundi; et *censum* ex Britannia ipse solus accepit; ut Virgilius,

'Purpurea intexti tollunt aulaea Britanni.'"

The use of the word *census* instead of *tributum* is important. The original word is κῆνσος; and, Nennius, who uses it, took his English history from the Evangelists.

A single event is referrible to the reign of Tiberius. The petty kings (*reguli*) sent back to Germanicus some of his soldiers, who had been either thrown on the coast of Britain by stress of weather, or sold. (Tac. *Ann.* ii. 24.) *Friendly relations* is all that is proved by this passage. The notion that Tiberius succeeded to the empire, and (amongst other nations) ruled Britain, rests on a passage of Henry of Huntingdon, evidently an inference from the likelihood of the successor of Augustus exercising the same sway as Augustus himself. — "Tiberius, privignus Augusti, post eum regnavit annos xxiii, tam super Britanniam quam super alia regna totius mundi."

The evidence of Caligula's *intentions* is essentially the same as that of Augustus: namely, Dion Cassius. Caligula having passed the Rhine, "seemed to meditate an attack upon Britain, but retreated from the very ocean." (lix. 21.) Then follows the ac-

count of his giving orders that the shells of the sea-shore should be picked up, and a conquest over the sea itself be announced (c. 25). The story appears in Suetonius also: as do the details concerning Adminius, the son of Cynobelin. Expelled from Britain by his father, he crossed the channel with a few followers, and placed himself under the power of Caligula, who magnified the event into a cession of the whole island. (Suet. *Cal.* 44.)

It is safe to say that the *bonâ fide* reduction of Britain begins no earlier than the reign of Claudius; the tribute that was paid to Augustus being wholly unhistorical, and the authority of Tiberius a mere inference from a notice of it. In simple truth, the reign of Cynobelin, coinciding with that of the last-named emperor, gives us the measure of the early British civilisation — civilisation which was of native, of Gallic, of Gallo-Roman, of Phoenician, and Ibero-Phoenician origin.

The reign of Cynobelin is illustrated by coins. Whether these were struck in Gaul or Britain is uncertain. Neither is the question important. Wherever the mint may have been, the legend is in Roman letters; whilst numerous elements of the classical mythology find place on both sides of the coins; *e. g.* a Pegasus, a Head of Ammon, a Hercules, a Centaur, &c.: on the other hand, the names are British; TASCIOVANUS, with SEGO-; *ibid*, with VER-; *ibid*, with CYNOBELIN; CYNOBELIN alone; CYNOBELIN with CAMVL-; *ibid*, with SOLIDV-; *ibid*, with A . ., or V . .; *ibid*, with VERULUMUM. Of course, the interpretations of these legends have been various; the notion, however, that Tasciovanus, sometimes alone, and sometimes conjointly with a colleague, was the predecessor of Cynobelin, and that Cynobelin, sometimes alone and sometimes with a colleague, was the successor of Tasciovanus, seems reasonable.

The reduction of Britain by the Romans begins with the reign of Claudius: on coins we find the name of that emperor, and on inscriptions those of his generals Plautius and Suetonius.

The next earliest coins to those of Claudius bear the name of Hadrian. Wales westwards and Yorkshire northwards (the *Silures*, *Ordovices*, and *Brigantes*) were more or less completely reduced before the accession of Nero.

By Nero, Suetonius Paulinus is sent into Britain, and under him Agricola takes his first lessons in soldiership. A single inscription preserves the name of Paulinus. The next in point of date belongs to the reign of Nerva. The Agricola, however, of Tacitus has the historical value of contemporary evidence. From this we learn that the work of Nero's general was the recovery and consolidation of the conquests made under Claudius rather than the achievement of new additions. The famous queen of the Iceni (Norfolk and Suffolk) is the centre of the groupe here. Subordinate to her are the Druids and Bards of the Isle of Anglesey, their chief stronghold, where they are reduced by Paulinus. Lastly comes the usurious philosopher Seneca, who, having lent a large sum in Britain, suddenly calls it in. The distress thus created is the cause of the revolt—a measure of the extent to which Roman habits (either directly from Italy, or indirectly from Romanised Gaul) had established themselves.

Reduction and consolidation, rather than acquisition, seems to have been the rule during the short reigns of Galba, Otho, and Vitellius, and the first ten years of the reign of Vespasian.

These objects employed Agricola during his first two campaigns. In the third, however (A. D. 80), he advanced from the northern boundaries of the Brigantes to the Firth of Tay; and the five next years were spent in the exploration of parts before unknown, in new conquests more or less imperfect, in the formation of ambitious designs (including the reduction of Ireland), and in the circumnavigation of Great Britain. A line of forts between the Firths of Forth and Clyde was the limit of the Roman Empire in Britain, as left by Agricola. What had been done beyond this had been done imperfectly. The battle on the Grampian Range, against the Caledonians of Galgacus, had ended in the Horesti giving hostages. The reduction of the Orkneys is mentioned by Tacitus in a general and somewhat lax manner — not as a specific historical fact, in its proper place, and in connection with other events, but as an *obiter dictum* arising out of the notice of the circumnavigation of the Island,— "incognitas, ad id tempus, insulas, Orcadas invenit *domuitque*. Despecta est et Thule."

A revolt under Arviragus is incidentally mentioned as an event of the reign of Domitian.

For the reign of Trajan we have inscriptions; for that of Hadrian inscriptions and coins as well: coins, too, for the reigns of the two Antonines, and Commodus,— but no contemporary historian. It is the evidence of Spartianus (*Hadr.* 11) upon which the belief that "a wall eighty miles in length, dividing the Romans from the barbarians, was first built by Hadrian" is grounded. Dion, as he appears in the compendium of Xiphilinus, merely mentions a "wall between the Roman stations and certain nations of the island." (lxxii. 8.) This raises a doubt. The better historian, Dion, may as easily mean the wall of Agricola as aught else: the inferior one, Spartianus, is evidently wrong in his expression "*primus duxit*," and may easily be wrong in his account altogether. The share that different individuals took in the raising of the British walls and ramparts is less certain than is usually believed. We have more builders than structures.

That Antoninus (Pius) deprived the Brigantes of a portion of their land because they had begun to overrun the country of the Genuini, allied to Rome, is a statement of Pausanias (viii. 43. § 4.) No one else mentions these Genuini. Neither is it easy to imagine who they could have been. Genuini, independent enough to be allies rather than subjects, and Brigantes, who could be free to conquer them, are strange phenomena for the reign of Antoninus. The possibility of German or Scandinavian settlers, thus early and thus independent, is the only clue to the difficulty. The evidence, however, to the fact is only of third-rate value.

The Vallum Antonini seems to have been a reality. Its true basis is the following inscription:

IMP. C. T. AELIO. HADR
IANO ANTONINO AUG.
P. P. VEX. LEG. VI.
VICTRICS P * F.
OPVS VALLI P.
MMM CCXL P.

(*Monumenta Britannica*, No. 48.)

Others give the name of his Lieutenant Lollius Urbicus; but this alone mentions the OPUS VALLI. The *author* nearest the date of the event commemorated is Capitolinus. By him we are told that the rampart was of *turf*, and that it was a

fresh one,—"Britannos—vicit, *alio* muro cespiticio —ducto." (*Anton. Pius*, 5.)

Coercion and consolidation are still the rule; the notices for the reigns of Commodus and Pertinax, though brief and unimportant, being found in so good an historian as Dion. Dion, too, is the chief authority for the reign of Severus. He would have been sufficient single-handed; but he is supported by both coins and inscriptions. At the same time, he never attributes the erection of any wall to Severus. On the contrary, he speaks of one as already existing. Spartianus is the authority for the usual doctrine. (*Sever.* 18.)

When Caledonia—as opposed to Britain in general —comes under notice, a further reference to the text of Dion respecting the actions of Severus will be made.

A. D. 211, on the fourth of February, Severus dies at York. British history, never eminently clear, now becomes obscurer still. An occasional notice is all that occurs until the reign of Diocletian. This begins A. D. 284. The usurpers Carausius and Allectus now appear in the field. So do nations hitherto unnoticed—the Franks and the Saxons. Whatever may be the value of the testimony of Gildas, Beda, and the other accredited sources of Anglo-Saxon history, in respect to the fact of Hengist and Horsa having at a certain time, and in a certain place, invaded Britain; the evidence that they were the *first Germans* who did so is utterly insufficient. The Panegyric of Eumenius — and we must remember that, however worthless the panegyrists may be as authors, they have the merit of being contemporary to the events they describe —contains the following remarkable passage:— "By so thorough a consent of the Immortal Gods, O unconquered Caesar, has the extermination of all the enemies, whom you have attacked, *and of the Franks more especially*, been decreed, that even those of your soldiers, who, having missed their way on a foggy sea, reached the town of London, destroyed promiscuously and throughout the city the whole remains of that mercenary multitude of barbarians, that, after escaping the battle, sacking the town, and, attempting flight, was still left—a deed, whereby your provincials were not only saved, but delighted by the sight of the slaughter." (Eumen. *Panegyr. Constant. Caes.*)

The Franks and Picts are first mentioned in Britain in the reign of Diocletian: the Attacotts and Scots under that of Julian (A. D. 360). The authorities now improve—being, chiefly, Ammianus Marcellinus and Claudian. It will, nevertheless, be soon seen that the ethnology of Britain is as obscure as its archaeology. The abandonment of the isle by the Romans, and its reduction by the Saxons, are the chief events of the 5th and 6th centuries, all obscure. It is even more difficult to say how the Germanic populations displaced the Roman, than how the Roman displaced the Keltic.

And this introduces a new question, a question already suggested, but postponed, viz.: the value of the writers of the beginning of the Byzantine and the end of the proper Roman period. It is evident that no author much earlier than the times of Honorius and Arcadius can tell us much about the decline and fall of the Roman supremacy in the west. It is evident, too, that the literature passes from Paganism to Christianity. Procopius is the most important of the Pagans. The little he tells us of *Britain* is correct, though unimportant; for it must be remembered, that his blunders and confusion are in respect to *Brittia*. This, as aforesaid, he separates from *Britannia*. Those who confound the two are ourselves — the modern writers.

To Jornandes we refer in vain for anything of value; although from the extent to which he was the historian of certain nations of Germanic extraction, and from the degree to which Britain was in his time Germanised, we expect more than we find. Hence from the time of Ammianus to the time of Gildas—the earliest British and Christian writer of our island—from about A. D. 380 to A. D. 550—we have no author more respectable than Orosius. He alone, or nearly so, was known to the native historians, and what he tells us is little beyond the names of certain usurpers. When Britain is next known to the investigator, it has ceased to be Roman. It is German, or Saxon, instead. Such is the sketch of the history of Roman Britain, considered more especially in respect to the authorities on which it rests. The value of the only author who still demands notice, Richard of Cirencester, is measured in the article MORINI.

VII. ETHNOLOGICAL RELATIONS OF THE POPULATION.

It is well known that the bulk of the South Britons of Caesar's time belonged to the same stock as the Gauls, and that the Gauls were Kelts. But whether the *North* Britons were in the same category; whether the Britons of Caesar were descended from the first occupants of the islands; and, lastly, whether the population was wholly homogeneous, are all points upon which opinions vary. A reference to the article BELGAE shows that, for that population, a Germanic affinity has been claimed; though, apparently, on insufficient grounds. The population of North Britain may have been, such as it is now, Gaelic. Occupants, too, earlier than even the earliest Kelts of any kind, have been assigned to the island by competent archaeologists. Nothing less than an elaborate monograph specially devoted to the criticism of these complicated points, would suffice for the exhibition of the arguments on both sides. The present notice can contain only the result of the writer's investigations.

Without either denying or affirming the existence of early Iberian, German, or Scandinavian settlements in particular localities, he believes them to have been exceedingly exceptional; so that, to all intents and purposes, the population with which the Phoenicians traded and the Romans fought were Kelts of the British branch, *i. e.* Kelts whose language was either the mother-tongue of the present Welsh, or a form of speech closely allied to it.

The ancestors of this population he believes to have been the earliest occupants of South Britain at least. Were they so of North Britain? There are points both of internal and external evidence in this question. In the way of internal evidence it is certain, that even in those parts of Scotland where the language is most eminently Gaelic, and, as such, more especially connected with the speech of Ireland, the *oldest* geographical terms are British rather than Erse. Thus, the word for *mountain* is *ben*, and never *sliabh*, as in Ireland. Again, the words *aber* and *inver*, in such words as *Aber*-nethy and *Inver*-nethy, have long been recognised as the Shibboleths (so to say) of the British and Gaelic populations. They mean the same thing — a mouth of a river, sometimes the junction of two. Now whilst *aber*

is never found in the exclusively and undoubtedly Gaelic country of Ireland, *inver* is unknown in Wales. Both occur in Scotland. But how are they distributed? Mr. Kemble, who has best examined the question, finds that the line of separation "between the Welsh or Pictish, and the Scotch or Irish, Kelts, if measured by the occurrence of these names, would run obliquely from SW. to NE., straight up Loch Fyne, following nearly the boundary between Perthshire and Argyle, trending to the NE. along the present boundary between Perth and Inverness, Aberdeen and Inverness, Banf and Elgin, till about the mouth of the river Spey." On the one side are the *Aber*-corns, *Aber*-deens, and *Aber*-dours, which are Welsh or British; on the other the *Inver*-arys and *Inver*-aritys, which are Irish and Gaelic. Now, assuredly, a British population which runs as far north as the mouth of Spey, must be considered to have been the *principal* population of Caledonia. How far it was aboriginal and exclusive is another question. The external evidence comes in here, though it is not evidence of the best kind. It lies in the following extract from Beda: "procedente autem tempore, Britannia, post Brittones et Pictos, tertiam Scotorum nationem in Pictorum parte recepit, qui duce Reuda de Hibernia progressi vel amicitia vel ferro sibimet inter eos sedes quas hactenus habent vindicarunt: a quo videlicet duce usque hodie Dalreudini vocantur; nam lingua eorum 'Dal' partem significat." (*Hist. Eccles.* i.) This passage is generally considered to give us either an Irish or a Scotch tradition. This may or may not be the case. The text nowhere connects itself with anything of the kind. It is just as likely to give us an inference of Beda's own, founded on the fact of there being Scots in the north-east of Ireland and in the south-west of Scotland. It is, also, further complicated by the circumstance of the gloss *dal* being not Keltic, but *Norse*, i. e. Danish or Norwegian.

The evidence, then, of the present Gaelic population of Scotland being of Irish origin, and the corresponding probability of the earliest occupancy of Caledonia having been *British*, lies less in the so-called tradition, than in the absence of the term *sliabh = mountain;* the distribution of the forms in *aber;* and, above all, the present similarity between the Irish and Scotch Gaelic — a similarity which suggests the notion that the separation is comparatively recent. They are far, however, from deciding the question. That South Briton was British, and Ireland Gaelic, is certain. That Scotland was originally British, and afterwards Gaelic, is probable.

The Gaels and Britons are the fundamental populations of the British Isles. The Picts were either aboriginal or intrusive. If aboriginal, they were, like the Gaels and Britons, Keltic. Whether, however, they were Gaelic Kelts or British Kelts, or whether they constituted a third branch of that stock, is doubtful.

If it were absolutely certain that every word used on Pictish ground belonged to the Pict form of speech, the inference that they were aborigines rather than intrusive settlers, and Britons rather than Gaels, would be legitimate. The well-known gloss *penn fahel = caput valli* is a gloss from the Pict district, of which the first part is British. In Gaelic, the form *= pen = head* is *ceann*. Neither does this stand alone. The evidence in favour of the British affinities can be strengthened. But what if the gloss be Pict, only in the way that *father* or *mother*, &c. are Welsh; *i. e.* words belonging to some other tongue spoken in the Pict country? In such a case the Picts may be Gaels, Germans, Scandinavians, &c. Now the word *dal*, to which attention has already been drawn, was not Scottish, *i. e.* not Gaelic. It probably was strange to the Scottish language, notwithstanding the testimony of Beda. If not Scot, however, it was almost certainly Pict. Yet it is, and was, pure Norse. Its existence cannot be got over except by making either the Scots or Picts Scandinavian. Each alternative has its difficulties: the latter the fewest. Such are the reasons for believing that the Picts are less unequivocally British than the researches of the latest and best investigators have made them. And Beda, it should be remembered, derives them from Scythia; adding that they came without females. This, perhaps, is only an inference; yet it is a just one. The passage that he supplies speaks to an existing custom: "Cumque uxores Picti non habentes peterent a Scottis, ea solum conditione dare consenserunt, ut ubi res perveniret in dubium, magis de foeminea regum prosapia quam de masculina regem sibi eligerent: quod usque hodie apud Pictos constat esse servatum." (*Hist. Eccles.* i.) Now, whatever may be the value of this passage, it entirely neutralises the evidence embodied in a well-known list of Pict kings. Here the names are Keltic, — chiefly British, — but, in two or three cases, Gaelic. Whichever they were, they were *not* Pict.

The Picts, then, may or may not have been intrusive rather than aboriginal. The ancestors of the present English were certainly in the former category. Whence were they? When did their intrusion begin? They were Germans. This is certain. But how were they distributed amongst the different divisions and subdivisions of the German populations? The terms Saxon and Frank tell us nothing. They were general names of a somewhat indefinite import. It is, perhaps, safe to say, that they were Frisians and Angles, rather than aught else; and, next to these, Scandinavians. This they may have been to a certain extent, even though the Picts were Keltic.

The date of their intrusion, in some form or other, was long earlier than the aera of Hengist and Horsa; and it is only by supposing that an author in the unfavourable position of Gildas was likely to be correct in the hazardous delivery of a negative assertion, and that in the very face of the notice of Eumenius and others, that the usual date can be supported. In proportion as their invasions were early their progress must have been gradual. In the opinion of the present writer, the Saxons and Franks of the later classics are *certainly* the lineal predecessors of the Angles of England; the Picts *possibly* the lineal predecessors of the Northmen, — *i. e.* on the *father's* side.

The ethnology, then, of Britain takes the following forms: —

1. In Hibernia, a Gaelic basis suffers but slight modification and admixture; whereas, —

2. In Britannia, —

a. South Britain is British, and Britanno-Roman, with Phoenician, Gaelic, and Germanic elements, — the latter destined to replace all the others; whilst, —

b. North Britain is British, and Gaelic, with Pict elements — whatever they were — of admixture in larger proportions than South Britain, and Roman elements in smaller.

The Roman element was itself complex; and, in minute ethnology, it may, perhaps, be better to speak of the *Legionary* population rather than of the Latin. This is because a Roman population might be any-

thing but native to Rome. It might be strange to Italy, strange to the Italian language. What might thus have been the case, actually was so. The imperial forces which occupied Britain, and supplied what is usually called the Roman element to the original Keltic basis, were Germans, Gauls, Iberians, &c., as the case might be; rarely pure Roman. The *Notitia Utriusque Imperii*, a document referrible to some time subsequent to the reign of Valens,—inasmuch as it mentions the Province of *Valentia*,—gives us, as elements of our Legionary population,—

1. *Germans, i. e.* Tungricani, Tungri, Turnacenses, Batavi.

2. *Gauls:* Nervii (in three quarters), Morini (see *in voc.*), Galli.

3. *Iberians:* Hispani.

4. *Probable Slavonians:* Dalmatae, Daci, Thraces, Thaifalae.

5. *Syri;* and 6. *Mauri.*

Of these the non-Roman character is the most patent; and these, at least, we may separate from the occupants of Italian blood. Of others, the foreign extraction is more uncertain. Sometimes the reading of the MSS. is doubtful, sometimes the term inexplicable. Thus, whilst it is difficult to say who the Solenses or Pacenses were,—opinions being different,—the authenticity of such a text as *Tribunus cohortes primae* Frixagorum *Vindobala* is doubtful. In such a case, the assumption that it meant *Frisians*, and the speculation as to the presence of a *Frisian* cohort, are unsatisfactory.

The analysis of the German populations, out of which the present nationality of England has grown, scarcely belongs to *classical* Britain. As far as it goes, however, it is to be sought under the heads Angli, Frisii, Saxones.

The extent to which the native population, whether exclusively Keltic or mixed, was uniform in manners and appearance, is chiefly to be measured by the remark of Tacitus, that the "physical appearance varied;" that the "Caledonians were red-haired, and large-limbed;" that the "Silurians were high-coloured and curly-haired;" and, lastly, that the natives of the parts nearest Gaul were Gallic in look and manner. The text in full has given rise to considerable speculation. It stands thus: "Habitus corporum varii; *atque ex eo argumenta.* Namque rutilae Caledoniam habitantium comae, magni artus, Germanicam originem adseverant. Silurum colorati vultus, et torti plerumque crines, et posita contra Hispania, Iberos veteres trajecisse, easque sedes occupasse fidem faciunt." (*Agric.* 11.) The words in Italics show that both the Germanic and the Iberic hypotheses were not historical facts, but only *inferences.* The only *facts* that Tacitus gives us is the difference of appearance in different parts of the island. This is undoubted. At the present moment the inhabitants of South Wales have florid complexions and dark hair; whilst the Scotch Highlanders, though of uncertain and irregular stature, are, on the whole, red; or, at least, sandy-haired. The *inference* from this is as free to the inquirer of the present century as it was to Tacitus. In respect to the opinions on this point, it is safe to say that the Germanic hypothesis is wholly, the Iberic nearly, unnecessary. The Scotch conformation is equally Keltic and Germanic: that of the South-Welsh is less easily explained. It re-appears, however, in certain parts of England —oftener on the coal-measures than elsewhere, but still elsewhere. The fact still requires solution.

VIII. Language.

A continuation of the previous extract gives us the standard text respecting the language of Britain — "sermo haud multum diversus," (*i. e.* from that of Gaul). What does this apply to? Not necessarily to the Britons altogether — only to those nearest Gaul. Yet it by no means excludes the others. It leaves the question open for the north and western parts of the island. The belief that the speech of Western Britain was essentially that of the eastern parts, rests partly upon the principle of not multiplying causes unnecessarily, and partly upon the present existence of the Welsh language. The Welsh of Wales and the Bretons of Brittany, are closely allied. This, however, is valid only in the eyes of the inquirer, who admits that the present Breton represents the ancient Gallic. It has no weight against the belief that it is of British origin—derived from the Bretons of the southern coast, who, at the Saxon invasion, transplanted themselves and their speech to the opposite shore of Armorica. The advocate of this view requires further evidence. Nor is it wanting. It has been shown more than once—by no one better than the late Mr. Garnett in the Transactions of the Philosophical Society—that the old Gallic glosses are not only significant in the Keltic language of western and northern Britain, but that they are most so in the Welsh or British branch of it. Contrary to the criticism of the time of Tacitus, it is the British language which now illustrates that of Gaul, and not the Gallic which explains the British. The proper British glosses are few. Two of them, however, are still existent with the island. Κοῦρμι (Dioscorid. *Mat. Med.* ii. 110), as the name of the British beverage, is the Welsh *cwrrw* = *cerevisia* = *beer;* and ἀγασσαῖος, the British species of hound, is the present word *gaze*-hound (Oppian, *Cyneget.* i. 471.)

The geographical terms in the ancient British are numerous; and one class of them illustrates a deflection from the Gallic form of speech. In Gaul the compounds of the root *dur-* invariably take that combination as an *affix* (*e. g.* Marco-*durum*): in Britain it is as invariably a *pre*-fix (*e. g.* *Duro*-vernum).

IX. Antiquities.

These fall into two clear and definite classes: 1. the Proper British; 2. the Roman. A third — the German—is less certain. A fourth is possible; but, in the opinion of the present writer, unnecessary. The last two will be considered first.

In such sepulchral monuments as bear the marks of the greatest antiquity, the implements and ornaments are of stone, to the exclusion of metal. The skulls, also, are of a small average magnitude, with certain peculiarities of shape. The inference that has been drawn from this is, that the population who worked without metals was of a different stock from those that used them. Again, the doctrine suggested by Arndt, expanded by Rask, and admitted in its very fullest extent by the Scandinavian school of philologists, ethnologists, and antiquarians, and which is known as the "Finn hypothesis," goes the same way. This means that, before the spread of the populations speaking the languages called Indo-European—before the spread of the Slavonians, Germans, Kelts, and Brahminic Hindus—an earlier population extended from Cape Comorin to Lapland,

from Lapland to Cape Clear, from Archangel to the Straits of Gibraltar, continuously. The Finns of Finland now best represent this—a population with which the Basks of the Pyrenees were once continuous. In this class, enormous displacements on the part of the so-called Indo-Europeans have obliterated the aborigines of the British Isles, Central Europe, and Northern Hindostan. If so, the Finn hypothesis coincides with the evidence of the older tumuli. Suggestive as this view is, it has still to stand the full ordeal of criticism.

The German hypothesis depends upon the extent to which certain antiquities of North Britain are, at one and the same time, of great antiquity in respect to date, and Germanic in origin. The Scandinavian doctrine as to the origin of the Picts support this: or, denying this, such independent evidence as can be brought in favour of any Germans or Northmen having made settlements on any part of Britain anterior to the expulsion of the Romans, helps to confirm it. Such settlements it is as hard to prove as to deny. Possibly, perhaps probably, the Shetland Isles, the Orkneys, the northern parts of Scotland, the Hebrides, parts of Ulster, the Isle of Man, and the coast of Galloway, may give us an area along which the Northmen of Norway spread themselves, and left memorials, at an epoch of any antiquity. Again, it would be over-bold to assert that certain parts of Britain, now eminently Danish (*e. g.* Lincolnshire), and which cannot be proved to have been at once Keltic and Roman (*i. e.* Roman on a Keltic basis) were not Norse equally early.

The two classes in question, however, are uncertain; and this leads us to the other two.

1. *British.*—The extent of this division is subject to the validity of the Finn and German hypotheses. If the former be true, the oldest tumuli are *prae*-Keltic; if the latter, the remarkable remains of Orkney and the North of Scotland (their antiquity being admitted) are German,—and, if German, probably Scandinavian. But, independent of these, we have the numerous *tumuli*, or barrows, of later date, in all their varieties and with all their contents; we have earth-mounds, like Silbury Hill; and vast monolithic structures, like those of Stonehenge. We have also the cromlechs and cairns. We have no inscriptions; and the coins are but semi-Britannic, *i.e.* wherever the mint may have been, the letters and legend represent the civilisation of the classical rather than the Keltic populations. Iron was a metal during part of this period, and, *à fortiori*, gold and bronze.

2. *Roman.*—The Keltic remains in Britain are a measure of the early British civilisation; the Roman ones merely give us a question of *more or less* in respect to the extent of their preservation. They are essentially the Roman antiquities of the Roman world elsewhere:—pavements, altars, metallic implements and ornaments, pottery (the specimens of the Samian ware being both abundant and beautiful), earthworks, encampments, walls, roads, coins, inscriptions. A few of these only will be noticed.

Of the *inscriptions*, the Marmor Ancyranum, although referring to Britain, is not from a British locality. Neither are those of the reign of Claudius. They first predominate on British ground in the reign of Trajan. Thenceforward they bear the names of Hadrian, Severus, Gordian, Valerian, Gallienus, Tetricus, Numerian, Diocletian, Constantine, and Julian. Next to the names of the emperors, those of certain commanders, legions, and cohorts are the most important, as they are more numerous; whilst such as commemorate particular events, and are dedicated to particular deities, are more valuable than either. One with another, they preserve the names, and give us the stations, of most of the legions of the Notitia. One of them, at least, illustrates the formation of the Vallum. One of them is a dedication

DEO SANCTO
SERAPI.

a clear proof that the religion of the Roman Legionaries was no more necessarily Roman than their blood.

The chronological range of the coins varies in many points from that of the inscriptions. They often speak where the latter are silent, and are silent where the latter speak. The head and legend of Antoninus (Caracalla) and Geta are frequent; but then, there are none between them and the reign of Diocletian. Then come the coins, not of that emperor himself, but of the usurpers Carausius and Allectus, more numerous than all the others put together. And here they end. For the later emperors there is nothing.

None of our Roman *roads* are known under their Roman names. The *Itinerarium Antonini*, a work of uncertain date, and, as will be explained in the sequel [see MURIDUNUM], of doubtful value in its current form, merely gives the starting-places and the termini; *e. g.* Iter a Londinio ad Portum Dubris M. P. lxvii, &c. The *itinera*, however, are fifteen in number, and, in extent, reach from Blatum Bulgium, in Dumfrieshire, to Regnum, on the coast of Sussex, north and south; and from Venta Icenorum (*Norwich*) to Isca Damnoniorum (*Exeter*), east and west. In North Wales, Cornwall, and Devonshire, the *Wealds* of Sussex and Kent, Lincolnshire, and the district of Craven in Yorkshire, the intercommunication seems to have been at the *minimum*. In the valleys of the Tyne and Solway, the Yorkshire Ouse, the Thames, the Severn, in Cheshire, South Lancashire, Norfolk, Suffolk, and the parts *round* the Wealds of Kent and Sussex, it was at its *maximum*.

Mr. Kemble draws a clear contrast between the early British *oppida*, as described by Caesar, and the true *municipia* and *coloniae* of the Romans. The *oppidum* of Cassivelaunus was a stockaded village, in some spot naturally difficult of access. The *municipia* and *coloniae*, of which Camelodunum was the earliest, were towns whose architecture and whose civil constitution were equally Roman. So was their civilisation. The extent, however, to which the sites of British *oppida* and the Roman *municipalities* coincided, constitutes a question which connects the two. It is safe to assume that they *did* so coincide, —not exactly, but generally. The Keltic *oppida* were numerous, were like those of Gaul, and—a reasonable inference from the existence of the war-chariot—were connected by roads. Hence, "when less than eighty years after the return of the Romans to Britain, and scarcely forty after the complete subjugation of the island by Agricola, Ptolemy tells us of at least fifty-six cities in existence here, we may reasonably conclude that they were not all due to the efforts of Roman civilisation." Certainly not. The Roman origin of the Hibernian πολεῖς (Ptolemy's term) is out of the question: neither is it certain that some of the Ptolemaean notices may not apply to an ante-Roman period. The Roman municipality, then, as a general rule, presupposes a British *oppidum*. How far does the English town imply a Roman municipality? The writer just quoted believes

the Saxons adopted the Roman sites *less* than the Romans did those of the Britons, the Germanic condition of a city being different from the Roman. As such, it directed the architectural industry of the Anglo-Saxon towards the erection of independent towns out of the materials supplied by the older ones, in the neighbourhood — but not on the absolute site — of the pre-existent municipality. Without admitting this view in its full integrity, we may learn from it the necessity of determining the ancient sites of the Roman cities on the special evidence of each particular case; it being better to do this than to argue at once from the present names and places of the English towns of the present time. Place for place, the old towns and the new were near each other, rather than on absolutely identical spots.

London, St. Albans, Colchester, Gloucester, Winchester, Norwich, Cirencester, Bath, Silchester, York, Exeter, Dorchester, Chichester, Canterbury, Wroxeter, Lincoln, Worcester, Leicester, Doncaster, Caermarthen, Caernarvon, Portchester, Grantchester, Carlisle, Caerleon, Manchester, have the best claims to represent the old Roman cities of England, the lists of which, considering the difference of the authorities, are not more discrepant from each other than is expected. The number of Ptolemy's πολεῖς is 56, all of which he names. Marcianus Heracleota, without naming any, gives 59. Nennius, at a later period, enumerates 34; the Saxon invasion having occurred in the interval.

The *valla* are described in a separate article. [VALLUM.]

X. DIVISIONS.

The divisions of the British Isles are only definite where they are natural, and they are only natural where the ocean makes them. Hibernia is thus separated from Albion simply by its insular condition — *ex vi termini*. So are the smaller islands, Vectis, the Orcades, &c.; all of which were known to the ancients. But this is not the case with the ancient analogies of North and South Britain — if such analogies existed. No one can say where Britannia ended and Caledonia began — or rather no one can say how far Britannia and Caledonia are the names of natural and primary divisions. In the way of ethnology, it is safe to say that all the Caledonii were comprised within the present limits of North Britain, except so far as they were intrusive invaders southwards. It is safe to say the same of the Scots. But it is not safe to say so of the Picts; nor yet can we affirm that all the Britons belonged to the present country of England. In Ptolemy the Caledonii are a specific population, forming along with Cornabii, Creones, and others, the northern population of Albion — the name having no generality whatever. Dion's Caledonii are certainly beyond the wall, but between them and the wall are the Meatae. In Tacitus the Caledonii are either the political confederacy of Galgacus, or the natives of the district around the Grampians. The wider extent to the word is a point in the history of the *term*, less than a point in the history of the *people*.

The practical primary division which *can* be made is that between *Roman* Albion and *Independent* Albion; the former of which coincided more or less closely with Britannia in the restricted sense of the term, and with the area subsequently named England; the latter with Caledonia and Scotland.

Britannia appears to have been constituted a Roman province after the conquest of a portion of the island in the reign of Claudius. The province was gradually enlarged by the conquests of successive Roman generals; but its boundary on the south was finally the wall which extended from the Solway Frith (Ituna Aestuarium) to the mouth of the river Tyne. Britain continued to form one Roman province, governed by a consular legatus and a procurator, down to A. D. 197, when it was divided into two provinces, *Britannia Superior* and *Inferior*, each, as it appears, under a separate Praeses (Herodian, iii. 8. § 2; Dig. 28. tit. 6. s. 2. § 4). It was subsequently divided into four provinces; named *Maxima Caesariensis*, *Flavia*, *Britannia prima*, *Britannia secunda* (S. Rufus, *Brev.* 6), probably in the reign of Diocletian or of Constantine. To these a fifth province, named *Valentia*, was added in A. D. 369 (Amm. Marc. xxviii. 3. § 7), so that at the beginning of the fifth century, Britain was divided into five provinces; two governed by Consulares, namely, *Maxima Caesariensis* and *Valentia;* and three by Praesides, namely, *Britannia Prima*, *Britannia Secunda*, and *Flavia Caesariensis*. All these governors were subject to the *Vicarius Britanniae*, to whom the general government of the island was entrusted. The *Vicarius* appears to have usually resided at Eboracum (*York*), which may be regarded as the seat of government during the Roman dominion. (*Not. Dig. Occ.* c. 22; Böcking, *ad loc.* p. 496, seq.; comp. Marquardt, in Becker's *Handbuch der Römisch. Alterth.* vol. iii. pl. i. p. 97, seq.)

The distribution and boundary of these five provinces we do *not* know — though they are often given.

Respecting the next class of divisions we do not know even this. We do not know, when talking of (*e. g.*) the Ordovices, the Iceni, or the Novantae, to what class the term belongs. Is it the name of a natural geographical division, like *Highlands* and *Lowlands*, *Dalesmen* or *Coastmen?* or the name of a political division, like that of the English counties? that of a confederacy? that of a tribe or clan? Is it one of these in some cases, and another in another? *Some* of the terms are geographical. This is all that it is safe to say. Some of the terms are geographical, because they seem to be compounded of substantives significant in geography; *e. g.* the prefixes *car-*, and *tre-*, and *dur-*.

The only systematic list of these divisions is Ptolemy's; and it gives us the following names, each of which is noticed separately. They are enumerated, however, at present, for the sake of showing the extent to which, not only Roman but Independent Albion was known to the writers of the second century, and also because some of them illustrate the general geography of the British Isles.

1. North of the Clyde and Forth, the line of defences drawn by Agricola, lay the Epidii, *Ce*rones, *Cr*eones, *Car*nonacae, *Car*eni, *Cor*nabii, Caledonii, Cantae, Logi, Mertae, Vacomagi, Venecontes, Taizalae, — in all thirteen. The apparently Keltic elements in these names are printed in Italics. They are British rather than Gaelic; and, as such, evidence in favour of the *oldest* population of Scotland, having belonged to that division. This inference, however, is traversed by the want of proof of the names having been *native*. Hence, when such truly British names as *Cantae* and *Cornabii* (compare *Cantium* and *Cornubii*) appear on the extreme north of Scotland, they may have been the names used by the British informants of Ptolemy's

authorities, rather than the true Caledonian designations in use among the Caledonians themselves. They may, in other words, have belonged to Caledonia, just as *Welsh* and *Wales* belong to the Cambro-British principality, *i. e.* not at all.

2. Between the Clyde and Forth, and the Tyne and Solway, *i. e.* between the two valla, lay the Novantae, the Selgovae, the Gadeni, the Ottadini, and the Damnii, five in number. This was, afterwards, the chief Pict area.

3. South of the Tyne and Solway, *i. e.* in the thoroughly Roman Britannia, were the Brigantes, the Parisi, the *Cor*navii, the *Cor*itavi, the Catyeuchlani, the Simeni, the *Tri*noantes (Trinobantes), the Dobuni, the Att*re*bates, the Cantii, the Regni, the Belgae, the *Du*rotriges, the Damnonii, all English rather than Welsh; and the Silures, Dimetae, and Ordovices, Welsh rather than English. Total seventeen.

All these names apparently belong to one language, that being the British branch of the Keltic.

The list of Roman *coloniae* and *municipia* can scarcely be given with confidence. The distinction between them and mere military stations or post-houses is difficult, often impracticable. The specific histories of given towns have nowhere come down to us. The clear and definite prominence that such cities as *Treves* and *Arles* take in the history of Gaul belongs to no town of Britain, and few facts only are trustworthy Camelodunum (*Colchester*) was the earliest municipality: Londinium and Eboracum the most important. Then came Verulamium, Glevum (*Gloucester*), Venta Belgarum (*Winchester*), Venta Icenorum (*Norwich*), Corinium (*Cirencester*), Calleva Attrebatum (*Silchester*), Aquae Solis (*Bath*), Durnovaria (*Dorchester*), Regnum (*Chichester?*), Durovernum (*Canterbury*), Uriconium (*Wroxeter*), Lindum (*Lincoln*). To these may, probably, be added the more important harbours; such as Rutupae (*Richborough*), Portus Dubris (*Dover*), Portus Lemanis (*Lympne*), Portus Adurni (*Aldrington*), all to the south of the Thames. Of these towns the notices are variously and most irregularly distributed. Some, such as Londinium, Lindum, Eboracum, Camelodunum, Corineum, Aquae Sulis (Ὕδατα Θερμὰ), appear in Ptolemy; whereas the majority are taken from later sources—the Antonine Itinerary and the Notitia. No town, however, throughout the whole length and breadth of Britannia is known to us in respect to its internal history, and the details of its constitution; in other words, there are no notices whatever of the *Curiales*, the *Decuriones*, the *Ordo*, or the *Senatus* of any town in Britain. That such existed is a matter of inference—inference of the most legitimate kind, but still only inference.

For all the towns above mentioned we have (*a*) a notice in some Latin or Greek author, (*b*) an identification of the site, and (*c*) the existence of Roman remains at the present time; in other words our evidence is of the highest and best kind. In the majority of cases, however, there is a great falling off in this respect. Sometimes there is the ancient name, without any definite modern equivalent; sometimes the modern without an ancient one; sometimes Roman remains with a name; sometimes a name without remains. Sometimes the name is only partially Roman—being a compound. Such is the case with the forms in *-coln* (*colonia*) and *-chester* (*castra*). In the Danish part of the island this becomes *-caster* (An-*caster*). Even this class is occasionally equivocal; since the element *-wich*, as in Green-*wich*, &c., may either come directly from the Latin *vicus* or from the Norse *vik*. Compounds of *villa* are in a similar category. They may have come direct from the Latin, or they may simply represent the French *ville*. The element *street*, as in *Strat*-ford, denotes a *road* rather than a *town*. The extent of these complications may be measured by a comparison of the ancient and modern maps of (*e. g.*) Norfolk. The localities of which the ancient names are known are four—Brannodunum (*Bran-caster*), Venta Icenorum, Gariannonum (*Burgh Castle*), and ad Taum (*Taesburg*). The spots marked in Mr. Hughes' map of Britannia Romana (*vid. Monumenta Britannica*), as the localities of Roman remains (over and above the four already mentioned) are fifteen—*Castle Rising, Sth. Creake, Cromer, Burgh, Oxnead, Castle Acre, Narborough, Osburg, Ixburg, Colney, Whetacre, Burgh St. Peter, Caistor, Holme, North Elmham*—all unnamed, or, if capable of being provided with an ancient designation, so provided at the expense of some other locality.

Upon the whole, it is not too much to say that the parallel which has frequently been drawn between Britain and Dacia, in respect to the late date of their reduction, and the early date of the loss, holds good in respect to the details of their history during the Roman and ante-Roman period. In each case we have obscurity and uncertainty—names without a corresponding description, sometimes without even a geographical position; remains without a site, and sites without remains to verify them.

The chief complementary notices to this article are CALEDONIA, FRISII, HIBERNIA, MORINI, SAXONES, VALLUM. (Camden's *Britannia;* Horseley's *Britannia Romana;* Stukely's *Stonehenge and Abury;* Stuart's *Caledonia Romana;* Wilson's *Prehistoric Annals of Scotland;* Wright, *The Kelt, The Roman, and The Saxon;* Kemble's *Saxons in England; Monumenta Britannica.*) [R. G. L.]

BRITANNI. Pliny (iv. 17) places Britanni on the Gallic coast, between a people who belong to the pagus of Gesoriacum (*Boulogne*) and the Ambiani. They would, therefore, be about the river *Canche*. Whether this is a blunder of Pliny, or a corruption in his text, or whether there were Britanni on this coast, we have no means of determining. [G.L.]

BRIU'LA (Βριουλα: *Eth.* Briullites), a place in Lydia (Strab. p. 650; Plin. v. 29), in the neighbourhood of Nysa. Its position is not known, but it may have been near Mastaura, also mentioned in the same sentence by Strabo, the site of which is known [MASTAURA]. [G. L.]

BRIVA ISARAE (*Pontoise*), or the bridge of the Isara, is near to the site of *Pontoise*, which is on the road from *Paris* to *Rouen*. As the Isara is the *Oise*, *Pontoise* is manifestly a corruption of Pons Isarae. The Antonine Itin. and the Table give 15 Gallic leagues as the distance from Briva Isarae to Lutetia (*Paris*), which distance should probably be estimated from *La Cité*, the original Lutetia. [G. L.]

BRIVAS, a town of the Arverni, is mentioned by Sidonius Apollinaris (*Carm.* xxiv. 16):—

"Hinc te suscipiet benigna Brivas."

The place is *Brioude* on the *Allier*. Some authorities speak of a Roman bridge there, and say that the old church was built in the time of Constantine. The name Brivas indicates the passage of a river. [G. L.]

BRIVATES PORTUS (Βριουάτης λιμήν), a place in Gallia, is fixed by Ptolemy (ii. 8. § 1) between the mouth of the *Loire* and a river which he calls the Herius, supposed by D'Anville to be the *Vilaine*, and by others to be the *Rivière d'Auray*. Accordingly, some geographers place this port at *Brivain* near *Croisic*, on the coast, in the department of *Morbihan*. The resemblance of the name Brivates to *Brest*, however, induces D'Anville to suppose that this large bay may be the Brivates of Ptolemy. Indeed, it is difficult to conceive that Ptolemy, with any tolerable materials at hand for the coast of Gallia, should not have found among them the position of *Brest*. Walckenaer makes the Gesocribate of the Table to be *Brest*. The Table gives a route from Juliomagus (*Angers*), through *Nantes*, Duretie, Dartoritum, Sulim, and Vorgium, to Gesocribate. D'Anville supposes that Gesocribate ought to be Gesobrivate. The distance from *Nantes* to Gesocribate is 138 Gallic leagues or 207 M. P. There is no doubt that the harbour of *Brest* is the termination of this road, and as to the difficulty of reconciling all the distances, we cannot be surprised at this in a road along such a coast. Vorgium or Vorganium, the next station to Gesocribate, is placed by some geographers at *Concarneau*, on the present road between *Hennebon* and *Quimper*. [G. L.]

BRIVODU'RUM, a place on a river, as the name imports. The place is perhaps *Briare*, on the right bank of the *Loire*, near *Châtillon-sur-Loire*. The Antonine Itin. and the Table place Belca between Brivodurum and Genabum (*Orléans*), and Condate, *Cosne* (Massava in the Table), between Brivodurum and Nevirnum (*Nevers*). There is the usual difficulty about the numbers. Walckenaer places Brivodurum at *La Villeneuve* near *Bonny*. The road evidently followed the right bank of the *Loire*, as it does now from *Nevers* to *Orléans*. [G. L.]

BRIXELLUM or BRIXILLUM (Βρίξελλον, Ptol.; Βριξίλλον, Plut.: *Eth.* Brixillanus, Inscr.: *Brescello*), a town of Cisalpine Gaul, situated on the S. bank of the Padus, about 12 miles NE. of Parma, and 16 from Regium. Pliny calls it a colony (iii. 15. s. 20), but we have no account of the time when it became such, nor does any other writer assign it that rank; but it was certainly one of the principal towns in this part of Italy. (Zumpt, *de Colon.* p. 348; Ptol. iii. 1. § 45; Plin. vii. 49. s. 50.) It is chiefly celebrated as the place to which the emperor Otho retired, when he quitted his army previous to the battle of Bedriacum, and where he put an end to his life on learning the defeat of his troops by the lieutenants of Vitellius. (Tac. *Hist.* ii. 33, 39, 51, 54; Plut. *Oth.* 10, 15—17; Suet. *Oth.* 9.) He was buried on the spot, and his monument was seen there by Plutarch. (Tac. *Hist.* 49; Plut. *Oth.* 18.) Its selection on that occasion seems to prove that it was a place of strength; and again, at a much later period, it appears as a strong fortress in the time of the Lombard kings. (P. Diac. iii. 17, iv. 29.) No other mention of it is found in history; but an inscription attests its municipal condition in the reign of Julian, and it is noticed as a considerable town by Sidonius Apollinaris in the account of his journey to Rome. (*Ep.* i. 5; Orell. *Inscr.* 37, 34.) The Itineraries place it on the road from Cremona to Regium, which probably crossed the Padus at this point; but the distance of 40 M. P. from thence to Regium is certainly corrupt. (*Itin. Ant.* p. 283.) The modern town of *Brescello* was, at one time, a fortress of some consideration, but is now a poor place with only 2000 inhabitants. [E. H. B.]

BRI'XIA (Βριξία, Ptol.; Βρηξία, Strab.: *Eth.* Brixianus: *Brescia*), a city of Cisalpine Gaul, in the territory of the Cenomani, between Bergomum and Verona. It was situated on the small river Mela or Mella, at the very foot of the lowest underfalls of the Alps; and about 18 miles W. of the lake Benacus. Both Justin and Livy agree in describing it as one of the cities founded by the Cenomani, after they had passed the Alps and occupied this part of Italy; and the latter author expressly calls it their capital. (Justin. xx. 5; Liv. v. 35, xxxii. 30.) Pliny and Ptolemy also concur in assigning it to the Cenomani: so that Strabo is clearly mistaken in reckoning it, as well as Mantua and Cremona, a city of the Insubres. (Strab. v. p. 213; Plin. iii. 19. s. 23; Ptol. iii. 1. § 31.) The "Brixiani Galli" are mentioned by Livy in B. C. 218, as assisting the Romans against the revolt of the Boii (xxi. 25); and on a later occasion they appear to have held aloof, when the greater part of the Cenomani were in arms against Rome. (Id. xxxii. 30.) But this is all we hear of it previous to the Roman conquest, and the incorporation of Gallia Transpadana with Italy. Under the Roman Empire we find Brixia a flourishing and opulent provincial town. Strabo (*l. c.*) speaks of it as inferior to Mediolanum and Verona, but ranks it on a par with Mantua and Comum. Pliny gives it the title of a colony, and this is confirmed by inscriptions: in one of these it is styled "Colonia Civica Augusta," whence it appears that it was one of the colonies founded by Augustus, and settled with citizens, not soldiers. (Plin. *l. c.*; Orell. *Inscr.* 66; Gruter, *Inscr.* p. 464. 5; Donat. *Inscr.* p. 210. 7; Zumpt, *de Colon.* p. 351.) Numerous other inscriptions record its local magistrates, sacerdotal offices, corporations or "collegia" of various trades, and other circumstances that attest its flourishing municipal condition throughout the period of the Roman Empire. (Orell. *Inscr.* 2183, 3744, 3750, &c.; Rossi, *Memorie Bresciane*, p. 230—324.) It was plundered by the Huns under Attila in A. D. 452 (*Hist. Miscell.* xv. p. 549), but recovered from this disaster, and under the Lombard rule was one of the principal towns of this part of Italy, and the capital of one of the duchies into which their kingdom was divided. (P. Diac. ii. 32, v. 36.)

Catullus terms Brixia the mother-city of Verona, a strong proof of the belief in its antiquity. He describes it as *traversed* by the river Mela (Flavus quam molli *percurrit* flumine Mela, *Carm.* xvii. 33); but at the present day that river (still called the *Mella*) flows about a mile to the W. of it; while *Brescia* itself is situated on a much smaller stream called the *Garza*. Existing remains prove that the ancient city occupied the same site with the modern one; nor is it likely that the river has changed its course: and Philargyrius, writing in the fourth century, correctly describes it as *flowing near* Brixia. (Philarg. *ad Georg.* iv. 278.) The "Cycnea Specula" mentioned by Catullus in the same passage, was probably a tower or mounument on one of the hills which rise immediately above *Brescia*, and which are of moderate elevation, though immediately connected with more lofty ridges, and form one of the last offshoots of the Alps towards the plain of Lombardy.

The remains of antiquity still extant at *Brescia* are of considerable importance. Of the buildings the most remarkable is that commonly called the temple of Hercules, though it is very doubtful whether it was

not a basilica or court-house, rather than a temple. Some portions of the theatre may also be traced, though buried under modern buildings, as well as some Corinthian columns supposed to have been part of the forum. The beauty, number, and variety of other architectural fragments, which have been discovered in different parts of the town, is such as to give a very high opinion of the condition of this art in a second-class provincial town under the Roman Empire. Some ancient works in bronze have also been found here, among which a statue of Victory is deservedly celebrated. The collection of inscriptions is unusually extensive, having been commenced as early as the year 1480, and all that have been found, diligently preserved. (The monuments recently discovered at *Brescia*, have been described and published by Labus, in 1834; see also the *Ann. dell' Inst. Arch.* 1839, pp. 182—183. The older work of Rossi, *Memorie Bresciane*, 4to. Brescia, 1693, contains many fables and fancies, but has still preserved much that is valuable.)

Brixia appears in ancient times to have possessed an extensive territory or "ager," of which it was the municipal head; and several of the Alpine tribes who inhabited the neighbouring vallies were subjected to its rule. Among these we may certainly include the TRIUMPILINI, who occupied the upper valley of the Mela, still called the *Val Trompia;* the SABINI, who inhabited the *Val Sabbia*, or valley of the *Chiese;* and the inhabitants of the western bank of the Lake Benacus. Among the smaller towns which were dependent on Brixia, we find mentioned in inscriptions: Voberna, still called *Vobarno*, in the valley of the *Chiese;* Edrum (Edrani), now *Idro*, which gives name to the *Lago d' Idro*; and Vargadum (Vargadenses), the name of which is slightly distorted in that of the modern *Gavardo*, a small town on the river *Chiese*, about 12 miles E. of *Brescia*. (Plin. iii. 20. s. 24; Cluver. *Ital.* pp. 107, 108, 252; Rossi, *Mem. Bresciane*, pp. 196, 271, 279.) [E. H. B.]

BROCOMAGUS (*Brumath*), a town of the Tribocci, on the road from Argentoratum (*Strassburg*) to *Cologne*. It is Βρευκόμαγος in Ptolemy (ii. 9. § 18). Julian (Amm. Marc. xvi. 2) defeated some Germans here. This town also occurs in the Antonine Itin. It is easily identified with *Brumath* on the *Zorn*, in the department of *Bas Rhin*, between *Strassburg* and *Haguenau*. Many Roman remains have been found about it. Ruins of Roman walls are said to exist north of the *Zorn*, and traces of a Roman road to *Selz*. [G. L.]

BRODIONTII, a people mentioned by Pliny (iii. 20. s. 24) in the inscription from the trophy of the Alps. They are generally supposed to be the same as the Bodiontici; but Walckenaer (*Géog.* vol. ii. p. 38) finds their name in a mountain called *Brodon*, one of the largest that form the valley of the *Olle*. The river *Olle* joins the *Isère* on the left bank, below *Grenoble*. [G. L.]

BROMAGUS, in the Antonine Itin., Viromagus in the Table, is between Mennodunum (supposed to be *Moudon*) and Viviscus (*Vevai*), on the lake of Geneva. There is a place called *Promasens*, which may be Bromagus. *Promasens* is on a little stream, the *Broye;* and Bromagus may mean the town on the Bro. [G. L.]

BROMISCUS (Βρομίσκος), a town of Mygdonia in Macedonia, near the river by which the waters of the lake Bolbe flow into the Strymonic gulf. (Thuc. iv. 103.) It was either upon the site of this place or of the neighbouring Arethusa that the fortress of Rentine was built, which is frequently mentioned by the Byzantine historians. (Tafel, *Thessalonica*, p. 68.) Stephanus calls the town Bormiscus, and relates that Euripides was here torn to death by dogs; but another legend supposes this event to have taken place at Arethusa, where the tomb of the poet was shown. [ARETHUSA, No. 6.]

BRU'CTERI (Βρούκτεροι), a great German tribe on the river Amasia (*Ems*), which is first mentioned by Strabo (vii. p. 290) as having been subdued by Drusus. (Comp. Tac. *Ann.* i. 60.) The Bructeri, like several other tribes, were divided into the lesser and the greater, and the river Lupia (*Lippe*) flowed through the country of the former. (Strab. vii. p. 291; Ptol. ii. 11. § 16, who, however, calls them Βουσάκτεροι.) From these authors it is clear that the Bructeri occupied not only the country between the rivers Amasia and Lupia, but extended beyond them. The Bructeri majores appear to have dwelt on the east, and the minores on the west of the Amasia. That they extended beyond the Lupia is attested not only by Strabo, but also by the fact that the celebrated prophetess of the Bructeri, Velleda, dwelt in a tower on the banks of the Lupia. (Tac. *Hist.* iv. 61, 65, v. 22.) From Claudian (*De IV. Cons. Honor.* 450) it might be inferred that they extended even as far as the Hercynian forest, but the name Hercynia Silva is probably used in a loose and indefinite sense by the poet. In the north they were contiguous to the Chauci (Tac. *Ann.* xiii. 55, foll.), and in the north-east to the Angrivarii. (Tac. *Ann.* ii. 8.) Velleius Paterculus (ii. 105) relates that the Bructeri were subdued by Tiberius; but in the battle in the forest of Teutoburg they appear still to have taken an active part, as we must infer from the fact that they received one of the Roman eagles taken in that battle. (Tac. *Ann.* i. 60.) It can scarcely be believed, on the authority of Tacitus, that they were entirely destroyed by other German tribes, for Pliny (*Ep.* ii. 7) and Ptolemy still mention them as existing, and even at a much later period they occur as one of the tribes allied with the Franks. (Eumen. *Paneggyr. Const.* 12.) Ledebur (*Das Land u. Volk der Bructerer*, Berlin, 1827) endeavours to give to the Bructeri more importance than they deserve in history. (Comp. Middendorf, *Die Wohnsitze der Bructerer*, Coesfeld, 1837; Wersebe, *Voelker des alten Deutschlands*, p. 83, &c.; Latham on Tac. *Germania*, p. 111.) [L. S.]

BRUNDI'SIUM or BRUNDU'SIUM* (Βρεντέσιον: *Eth.* Βρεντεσῖνος, Brundusinus or Brundisinus: *Brindisi*), one of the most important cities of Calabria, situated on the coast of the Adriatic Sea, 50 miles from Hydruntum, and 38 from Egnatia. It was distant from Tarentum 44 miles; but the direct distance across the peninsula to the nearest point of the Gulph of Tarentum does not exceed 30 miles. (Itin. Ant. pp. 118, 119.) Its name was derived from the peculiar configuration of its celebrated port, the various branches of which, united into one at the entrance, were thought to resemble a stag's head, which was called, in the native dialect of the Messapians, Brention or Brentesion. (Strab. vi. p. 282; Steph. B. *s. v.* Βρεντέσιον.†) It appears

* Concerning the orthography of the name in Latin see Orell. *Onom. Tullian.* p. 98; Cortius *ad Lucan.* ii. 609; Tzschucke *ad Melam.* On the whole, the preponderance of authority appears to be in favour of *Brundisium.*

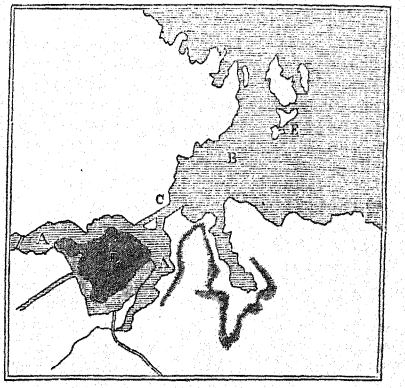
† It seems probable that the real native word

to have been in very early times one of the chief towns of the Sallentines: hence tradition generally ascribed its foundation to a colony from Crete, the same source from whence the origin of the Sallentines themselves was derived. (Strab. *l. c.*; Lucan, ii. 610.) An obscure and confused tale related by Justin (xii. 2) represents it as founded by the Aetolians under Diomed, who were, however, expelled by the native inhabitants of the country, whom he calls Apulians. Both legends point to the fact that it was in existence as a Messapian or Sallentine city before the settlement of the Greek colonies in its neighbourhood. According to Strabo, it had long been governed by its own kings, at the time of the foundation of Tarentum by Phalanthus, and afforded a place of refuge to that chieftain himself when expelled by civil dissensions from his newly founded city. Hence the monument of the hero was shown at Brundusium. (Strab. *l. c.*; Justin. iii. 4.) We have very little information concerning its history prior to the Roman conquest; but it seems to have been a place of comparatively little importance, being obscured by the greatness of its neighbour Tarentum, which, at this period, engrossed the whole commerce of this part of Italy. (Pol. x. 1.) Brundusium, however, appears to have retained its independence, and never received a Greek colony. Hence Scylax, though he notices Hydruntum, makes no mention of Brundusium, and Scymnus Chius terms it the port or emporium *of the Messapians*. (Scyl. § 14; Scymn. Ch. 363.) The name is only once mentioned incidentally by Herodotus (iv. 99), but in a manner that shows it to have been familiar to the Greeks of his day.

But the excellence of its port, and its advantageous situation for the purpose of commanding the Adriatic, both in a commercial and naval point of view, appear to have early attracted the attention of the Romans; and the possession of this important port is said to have been one of the chief objects which led them to turn their arms against the Sallentines in B. C. 267. (Zonar. viii. 7.) But though the city fell into their hands on that occasion, it was not till B. C. 244 that they proceeded to secure its possession by the establishment there of a Roman colony. (Liv. *Epit.* xix.; Vell. Pat. i. 14; Flor. i. 20.) It is from this period that the importance of Brundusium must be dated: the new colony appears to have risen rapidly to wealth and prosperity, for which it was indebted partly to the fertility of its territory, but still more to its commercial advantages; and its importance continually increased, as the Roman arms were carried in succession, first to the opposite shores of Macedonia and Greece, and afterwards to those of Asia. Its admirable port, capable of sheltering the largest fleets in perfect safety, caused it to be selected as the chief naval station of the Romans in these seas. As early as the First Illyrian War, B. C. 229, it was here that the Romans assembled their fleet and army for the campaign (Pol. ii. 11); and during the Second Punic War it was again selected as the naval station for the operations against Philip, king of Macedonia. (Liv. xxiii. 48, xxiv. 10, 11.) Hannibal, on one occasion, made a vain attempt to surprize it; but the citizens continued faithful to the Roman cause, and at the most trying period of the war Brundusium was one of the eighteen colonies which came forward readily to furnish the supplies required of them. (Id. xxv. 22, xxvii. 10.) During the subsequent wars of the Romans with Macedonia, Greece, and Asia, the name of Brundusium continually recurs: it was almost invariably the point where the Roman generals assembled the fleets and armies with which they crossed the Adriatic; and where, likewise, they landed on their return in triumph. (Id. xxxi. 14, xxxiv. 52, xxxvii. 4, xliv. 1, xlv. 14, &c.) After the Roman dominion had been permanently established over the provinces beyond the Adriatic, the constant passage to and fro for peaceful purposes added still more to the trade and prosperity of Brundusium, which thus rose into one of the most flourishing and considerable cities of Southern Italy.

The position of Brundusium as the point of direct communication between Italy and the eastern provinces, naturally rendered it the scene of numerous historical incidents during the later ages of the republic, and under the Roman empire, of which a few only can be here noticed. In B. C. 83 Sulla landed here with his army, on his return from the Mithridatic war to make head against his enemies at Rome: the citizens of Brundusium opened to him their gates and their port, a service of the highest importance, which he rewarded by bestowing on them an immunity from all taxation, a privilege they continued to enjoy during a long period. (Appian, *B. C.* i. 79) In B. C. 57 they witnessed the peaceful return of Cicero from his exile, who landed here on the anniversary of the foundation of the colony (*natali Brundisinae coloniae die*, Cic. *ad Att.* iv. 1), a day which was thus rendered the occasion of double rejoicing. During the civil war between Caesar and Pompey, Brundusium became the scene of important military operations. Pompey had here gathered his forces together with the view of crossing the Adriatic, and a part of them had already sailed, when Caesar arrived, and after investing the town on the land side endeavoured to prevent the departure of the rest. For this purpose, having no fleet of his own, he attempted to block up the narrow entrance of the port, by driving in piles and sinking vessels in the centre of the channel. Pompey however succeeded in frustrating his endeavours until the return of his fleet enabled him to make his escape to Illyricum. (Caes. *B. C.* i. 24—28; Cic. *ad Att.* ix. 3, 13, 14, 15; Lucan. ii. 609—735; Dion Cass. xli. 12; Appian, *B. C.* ii. 40.) After the death of the dictator, it was at Brundusium that the youthful Octavius first assumed the name of Caesar; and the veteran cohorts in garrison there were the first that declared in his favour. (Appian, *B. C.* iii. 11.) Four years later (B. C. 40) it was again besieged by Antony and Domitius Ahenobarbus, and Octavian in vain attempted to raise the siege: but its fall was averted by the intervention of common friends, who effected a reconciliation between the two triumvirs (Id. v. 56, 57—60; Dion Cass. xlviii. 27—30). The peace thus concluded was of short duration, and in B. C. 41 Antony having again threatened Brundusium with a fleet of 300 sail, Maecenas and Cocceius proceeded thither in haste from Rome, and succeeded once more in concluding an amicable arrangement. It was on this last occasion that they were accompanied by Horace, who has immortalised in a well-known satire his journey from Rome to Brundusium. (Hor. *Sat.* i. 5; Plut. *Ant.* 35; Appian, *B. C.* v. 93.) In B. C. 19, Virgil died at Brundusium on his return from Greece.

was Brendon or Brenda (see Hesych. *s. v.* Βρενδον), whence Festus tells us (p. 33) that Brenda was used by some writers as a poetic form for Brundusium.



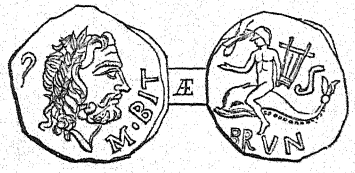
(Donat. *Vit. Virgil.*) At a later period Tacitus has left us an animated picture of the mournful spectacle, when Agrippina landed here with the ashes of her husband Germanicus. (Tac. *Ann.* iii. 1.) Under the empire we hear comparatively little of Brundusium, though it is certain that it retained its former importance, and continued to be the point of departure and arrival, both for ordinary travellers and for armies on their way between Italy and the East. (Capit. *M. Ant.* 9, 27; Spartian. *Sev.* 15.) The period at which the Appian Way was continued thither, and rendered practicable for carriages is uncertain: but the direct road from Rome to Brundusium through Apulia, by Canusium and Egnatia, which was only adapted for mules in the time of Strabo, was first completed as a highway by Trajan, and named from him the Via Trajana. The common route was to cross from hence direct to Dyrrhachium, from whence the Via Egnatia led through Illyricum and Macedonia to the shores of the Bosporus: but travellers proceeding to Greece frequently crossed over to Aulon, and thence through Epeirus into Thessaly. During the later ages of the empire Hydruntum appears to have become a frequent place of passage, and almost rivalled Brundusium in this respect; though in the time of Pliny it was reckoned the less safe and certain passage, though the shorter of the two. (Strab. vi. pp. 282, 283; Itin. Ant. pp. 317, 323, 497; Plin. iii. 11. s. 16; Ptol. iii. 1. § 14; Mel. ii. 4.)

After the fall of the Western Empire Brundusium appears to have declined in importance, and during the Gothic wars plays a subordinate part to the neighbouring city of Hydruntum. Its possession was long retained by the Byzantine emperors, together with the rest of Calabria and Apulia; but after they had long contested its possession with the Goths, Lombards, and Saracens, it was finally wrested from them by the Normans in the eleventh century.

The excellence of the port of Brundusium is celebrated by many ancient writers. Strabo speaks of it as superior to that of Tarentum, and at a much earlier period Ennius (*Ann.* vi. 53) already called it

"Brundisium pulcro praecinctum praepete portu."

It was composed of two principal arms or branches, running far into the land, and united only by a very narrow strait or outlet communicating with the sea. Outside this narrow channel was an outer harbour or roadstead, itself in a great degree sheltered by a small island, or group of islets, now called the *Isola di St. Andrea*; the ancient name of which appears to have been Barra. (Fest. *v. Barium*, p. 33.) It was occupied by a Pharos or lighthouse similar to that at Alexandria. (Mela, ii. 7.) Pliny speaks of these islands as "forming the port of Brundusium." Hence he must designate by this term the outer harbour; but the one generally meant and described by Caesar and Strabo was certainly the *inner* harbour, which was completely landlocked and sheltered from every wind, while it was deep enough for the largest ships; and the narrowness of the entrance rendered it easily defensible against any attack from without. This channel is now almost choked up with sand, and the inner port rendered in consequence completely useless. This has been ascribed to the works erected by Caesar for the purpose of obstructing the entrance; but the port continued in full use many centuries afterwards, and the real origin of the obstruction dates only from the fifteenth century. Recent attempts to clear out the channel have, however, brought to light many of the piles driven in by Caesar, and have thus proved that these works were constructed, as he has himself described them, at the narrowest part of the entrance. (Caes. *B. C.* i. 25; Strab. vi. p. 282; Lucan. *Phars.* ii. 610, &c.; Swinburne's *Travels*, vol. i. pp. 384—390.)



PLAN OF BRUNDUSIUM.

AA. Inner harbour.
B. Outer harbour.
C. Spot where Caesar tried to block up the entrance of the inner harbour.
D. Modern city of *Brindisi*.
E. Islands of *St. Andrea*, the ancient Barra.

The modern city of *Brindisi* is a poor and declining place, though retaining about 6000 inhabitants: it possesses very few vestiges of antiquity, except two lofty columns of *cipolline* marble, one of which is still erect, and which appears to have been designed in ancient times to bear lights, and serve as beacons or lighthouses to guide ships into the inner harbour. Numerous fragments of an architectural kind also remain, and many inscriptions, but for the most part of little interest. They are collected by Mommsen (*Regni Neapolitani Inscript. Latinae*, pp. 27—30). Many other remains of its ancient splendour are said to have been destroyed in the 16th century, when the modern castle was constructed by Charles V. The territory of *Brindisi* is still fertile, especially in olives; in ancient times also it was noted for its abundance of oil and wine, though the latter was of inferior quality. Strabo speaks of its territory as superior in fertility to that of Tarentum; but we learn from Caesar that it was in ancient, as well as modern times, an unhealthy neighbourhood, and his troops that were quartered there in the autumn of B. C. 49 suffered severely in consequence. (Strab. vi. p. 282; Caes. *B. C.* iii. 2; Varr. *R. R.* i. 8. § 2; Swinburne, *l. c.*; Giustiniani, *Diz. Geogr.* vol. ii. pp. 360—380.)

The coins of Brundusium all belong to the period of the Latin colony. Those with Greek legends cited by some early numismatists are false. [E. H. B.]

COIN OF BRUNDUSIUM.

BRU'TTII (Βρέττιοι), a people who inhabited the southern extremity of Italy, from the frontiers of Lucania to the Sicilian Straits and the promontory of Leucopetra. Both Greek and Latin writers expressly tell us that Bruttii was the name of the *people:* no separate designation for the country or province appears to have been adopted by the Romans, who almost universally use the plural form, or name of the nation, to designate the region which they inhabited. Thus Livy uses "Consentia in Bruttiis," "extremus Italiae angulus Bruttii," "Bruttii provincia," &c.: and the same usage prevailed down to a very late period. (Treb. Poll. *Tetricus*, 24; Notit. Dign. ii. pp. 10, 120.) The name of BRUTTIUM, to designate the province or region, though adopted by almost all modern writers on ancient geography appears to be unsupported by any classical authority: Mela, indeed, uses in one passage the phrase "in Bruttio," but it is probable that this is merely an elliptic expression for "in Bruttio agro," the term used by him in another passage, as well as by many other writers. (Mela, ii. 4, 7; In Flor. iii. 20. § 13, Bruttium is also an adjective.) The Greeks, however, used Βρεττία for the name of the country, reserving Βρέττιοι for that of the people. (Pol. ix. 7, 25, xi. 7; Strab. vi. p. 255.) Polybius, in more than one passage, calls it ἡ Βρεττιανὴ χώρα (i. 56, ix. 27).

The land of the Bruttians, or Bruttium (as we shall continue to designate it, in accordance with modern usage), was bounded on the N. by Lucania, from which it was separated by a line drawn from the river Laus near the Tyrrhenian Sea to the Crathis near the Gulf of Tarentum. On the W. it was washed by the Tyrrhenian Sea, and on the S. and E. by that known in ancient times as the Sicilian Sea, including under that appellation the Gulf of Tarentum. It thus comprised the two provinces now known as *Calabria Citra* and *Calabria Ultra*, with the exception of the northernmost portion of the former, which was included in Lucania. The region thus limited is correctly described by Strabo (*l. c.*) as a peninsula including within it another peninsula. The breadth from sea to sea, at the point where its frontier joins that of Lucania, does not exceed 300 stadia, or 30 Geog. miles; it afterwards widens out considerably, forming a mountainous tract of above 50 Geog. miles in breadth, and then again becomes abruptly contracted, so that the isthmus between the Terinaean Gulf and that of Scyllacium is less than 17 Geog. miles in width (Strabo calls it 160 stadia, which is very near the truth). The remaining portion, or southernmost peninsula, extending from thence to the promontory of Leucopetra (*Capo dell' Armi*), is about 60 miles long by 37 in its greatest width. The general form of the Bruttian peninsula may be not inaptly compared to a boot, of which the heel is formed by the Lacinian Promontory near Crotona, and the toe by that of Leucopetra. It is traversed throughout its whole extent by the chain of the Apennines, to which it owes its entire configuration. This range of mountains enters the Bruttian territory on the confines of Lucania, and descends along the western coast of the province as far as the Terinaean Gulf. Throughout this extent the central chain approaches very close to the shore of the Tyrrhenian Sea, while the great outlying mountain mass of the *Sila* (to the E. of the main chain, from which it is partly separated by the valley of the Crathis, though at the same time closely connected with the same mountain system) fills up the whole centre of the peninsula, and sends down its ridges to the Ionian Sea, where they form a projecting mass that separates the Gulf of Tarentum from that of Scyllacium. The extreme angles of this mass are formed by the *Punta dell' Alice* (the ancient Cape CRIMISA) and the more celebrated LACINIAN Promontory. South of this, the coast is deeply indented on each side by two extensive bays: the one known in ancient times as the Terinaean or Hipponian Gulf (now the *Golfo di Sta Eufemia*) on the W.; that of Scyllacium (still called *Golfo di Squillace*) on the E. Between the two occurs the remarkable break in the chain of the Apennines, already noticed in the description of those mountains [APENNINUS], so that the two seas are here separated only by a range of low hills of tertiary strata, leaving on each side a considerable extent of marshy plain. Immediately S. of this isthmus, however, the Apennines rise again in the lofty group or mass of mountains now called *Aspromonte*, which completely fill up the remaining portion of the peninsula, extending from sea to sea, and ending in the bold headland of Leucopetra, the extreme SW. point of Italy. The peninsula thus strongly characterized by nature was the country to which, according to Antiochus of Syracuse, the name of Italy was originally confined. (Antioch. *ap. Dionys.* i. 35; Arist. *Pol.* vii. 10.) [ITALIA.] It is evidently the same to which Plutarch applies the name of "the Rhegian peninsula" (ἡ Ῥηγινῶν χερρόνησος, *Crass.* 10).

The natural characters of the land thus constituted result at once from its physical conformation. The two great mountain groups of the *Sila* and the *Aspromonte*, have formed in all times wild and rugged tracts, covered with dense forests almost impenetrable to civilization. On the western coast, also, from the river Laus to the Terinaean Gulf, the Apennines approach so close to the sea that they leave scarcely any space for the settlement of considerable towns; and the line of coast throughout this extent affords no natural harbours. The streams which flow down from the mountains to the sea on either side have for the most part a very short course, and are mere mountain torrents: the only considerable valley is that of the CRATHIS, which has a northerly course from the neighbourhood of Consentia for near 20 miles, separating the forest-covered group of the *Sila* on the E. from the main chain of the Apennines on the W., until at length it emerges through a narrow gorge into a rich alluvial plain, through which it flows in an easterly direction to the sea. There is also a considerable tract of alluvial marshy plain on the shores of the Terinaean Gulf, and another, though of less extent, on the opposite side of the isthmus, adjoining the Gulf of Scyllacium. A plain of some extent also exists on the banks of the river *Mesima*, near its mouth; but with these few exceptions, the whole tract from sea to sea is occupied either by the mountain ranges of the Apennines, or by their less elevated offsets and underfalls. The slopes of these hills towards the sea are admirably adapted for the growth both of olives and vines; and modern travellers speak with great admiration of the beauty and fertility of the coasts of *Calabria*. But these advantages are limited to a small portion of the country; and it is probable that even when the Greek settlements on the coast were the most flourishing, neither culture nor civilization had made much progress in the interior. The mountain tract of the Sila was celebrated for its forests, which produced both timber and pitch of the highest value for

ship-building. The latter especially was under the Romans an important source of revenue to the state. (Dionys. xx. Fr. Mai, 5, 6.)

All ancient authors agree in stating that neither the name nor the origin of the Bruttians could claim a very remote antiquity. The country occupied by them was inhabited, in the earliest times of which we have any knowledge, by the OENOTRIANS—a tribe of Pelasgian origin, of which the CHONES and MORGETES appear to have been merely subordinate divisions. [See the respective articles.] It was while the Oenotrians were still masters of the land that the first Greek settlers arrived; and the beauty of the climate and country, as well as the rapid prosperity attained by these first settlements, proved so attractive that within a few years the shores of Bruttium were completely encircled by a belt of Greek colonies. These were (beginning from the Crathis, and proceeding southwards): 1. CROTONA, an Achaean colony, founded in B. C. 710, probably the most ancient, and at one time the most powerful of all: 2. SCYLLACIUM or SCYLLETIUM, according to Strabo, an Athenian colony, but of uncertain date: 3. CAULONIA, a colony of Crotona: 4. LOCRI, founded by the people of the same name in Greece: 5. RHEGIUM, a Chalcidic colony, founded shortly before the first Messenian war: 6. MEDMA, a colony, and probably a dependency, of Locri: 7. HIPPONIUM, also a colony from Locri: 8. TERINA, a colony of Crotona. We have scarcely any knowledge of the exact relations between these Greek cities and the native Oenotrian tribes; but there appears little doubt that the latter were reduced to a state of dependence, and at one time at least of complete subjection. We know that the territories of the Greek cities comprised the whole line of coast, so that those of Crotona and Thurii met at the river Hylias, and those of Locri and Rhegium were separated only by the Halex (Thuc. iii. 99, vii. 35); and when we find both Crotona and Locri founding colonies on the opposite side of the peninsula, there can be little doubt that the intermediate districts also were at least nominally subject to them.

Such appears to have been the state of things at the time of the Peloponnesian war; but in the course of the following century a great change took place. The Sabellian tribe of the Lucanians, who had been gradually extending their conquests towards the south, and had already made themselves masters of the northern parts of Oenotria, now pressed forwards into the Bruttian peninsula, and established their dominion over the interior of that country, reducing its previous inhabitants to a state of vassalage or serfdom. This probably took place after their great victory over the Thurians, near Laos, in B.C. 390; and little more than 30 years elapsed between this event and the rise of the people, properly called Bruttians. These are represented by ancient authors as merely a congregation of revolted slaves and other fugitives, who had taken refuge in the wild mountain regions of the peninsula: it seems probable that a considerable portion of them were the native Oenotrian or Pelasgic inhabitants, who gladly embraced the opportunity to throw off the foreign yoke. (Niebuhr, vol. i. p. 98.) But Justin distinctly describes them as headed by youths of Lucanian race; and there appears sufficient evidence of their close connexion with the Lucanians to warrant the assumption that these formed an important ingredient in their national composition. The name of Bruttii (Βρεττιοι) was given them, it seems, not by the Greeks, but by the Lucanians, and signified in their language fugitive slaves or rebels (δραπέται, ἀποστάται). But though used at first as a term of reproach, it was subsequently adopted by the Bruttians themselves, who, when they had risen to the rank of a powerful nation, pretended to derive it from a hero named Bruttus (Βρέττος), the son of Hercules and Valentia. (Diod. xvi. 15; Strab. vi. p. 255; Justin xxiii. 1; Steph. Byz. *s. v.* Βρέττος.) Justin, on the other hand, represents them as deriving their name from a woman of the name of Bruttia, who figured in their first revolt, and who, in later versions of the legend, assumes the dignity of a queen. (Justin. *l. c.*; Jornand. *de Reb. Get.* 30; P. Diac. *Hist.* ii. 17.)

The rise of the Bruttian people from this fortuitous aggregation of rebels and fugitives is assigned by Diodorus to the year 356, B.C.; and this accords with the statement of Strabo that they arose at the period of the expedition of Dion against the younger Dionysius. The wars of the latter, as well as of his father, with the Greek cities in southern Italy, and the state of confusion and weakness to which these were reduced in consequence, probably contributed in a great degree to pave the way for the rise of the Bruttian power. The *name* must indeed have been much more ancient if we could trust to the accuracy of Diodorus, who, in another passage (xii. 22), speaks of the *Bruttians* as having expelled the remainder of the Sybarites, who had settled on the river Traens after the destruction of their own city. But it is probable that this is a mere inaccuracy of expression, and that he only means to designate the inhabitants of the country, who were afterwards called Bruttians.* The progress of the latter, after their first appearance in history, was rapid. Composed originally, as we are told, of mere troops of outlaws and banditti, they soon became numerous and powerful enough to defy the arms of the Lucanians, and not only maintained their independence in the mountain districts of the interior, but attacked and made themselves masters of the Greek cities of Hipponium, Terina, and Thurii. (Diod. xvi. 15; Strab. vi. p. 255.) Their independence seems to have been readily acknowledged by the Lucanians; and less than 30 years after their first revolt, we find the two nations uniting their arms as allies against their Greek neighbours. The latter applied for assistance to Alexander, king of Epirus, who crossed over into Italy with an army, and carried on the war for several successive campaigns, during which he reduced Heraclea, Consentia, and Terina; but finally perished in a battle against the combined forces of the Lucanians and Bruttians, near Pandosia, B.C. 326. (Liv. viii. 24; Justin. xii. 2, xxiii. 1; Strab. v. p. 256.) They next had to contend against the arms of Agathocles, who ravaged their coasts with his fleets, took the city of Hipponium, which he converted into a strong fortress and naval station, and

* Stephanus of Byzantium, indeed, cites Antiochus of Syracuse, as using the name of *Brettia* for this part of Italy, but this seems to be clearly a mistake. (Comp. Dionys. i. 12.) It is more remarkable that, according to the same authority, the name of *Brettian* as an adjective (μελαίνη γλῶσσα Βρεττία) was used by Aristophanes, at least 30 years before the date assigned for the rise of the nation.

compelled the Bruttians to conclude a disadvantageous peace. But they soon broke this treaty, and recovered possession of Hipponium. (Diod. xxi. 3, 8; Justin. xxiii. 1.) This appears to have been the period when the Bruttian nation had reached its highest pitch of power and prosperity; it was not long before they had to contend with a more formidable adversary, and as early as B.C. 282 we find them uniting their arms with those of the Lucanians and Samnites against the growing power of Rome. (Liv. Epit. xii.; Fast. Capit.) A few years later they are mentioned as sending auxiliaries to the army of Pyrrhus; but after the defeat of that monarch, and his expulsion from Italy, they had to bear the full brunt of the war, and after repeated campaigns and successive triumphs of the Roman generals, C. Fabricius and L. Papirius, they were finally reduced to submission, and compelled to purchase peace by the surrender of one-half of the great forest of Sila, so valuable for its pitch and timber. (Dionys. xx. Fr. Mai and Didot; Fast. Capit.; Zonar. viii. 6.)

Their submission however was still but imperfect; and though they remained tranquil throughout the First Punic War, the successes of Hannibal in the Second, proved too much for their fidelity, and the Bruttians were among the first to declare in favour of the Carthaginian general after the battle of Cannae. (Liv. xxii. 61.) The defection of the people did not indeed in the first instance draw with it that of the towns: but Petelia and Consentia, which had at first held aloof, were speedily reduced by the Bruttians, assisted by a small Carthaginian force, and the more important cities of Locri and Crotona followed not long after. Rhegium alone remained firm, and was able to defy the Carthaginian arms throughout the war. (Id. xxiii. 20, 30, xxiv. 1—3.) In B.C. 215 Hanno, the lieutenant of Hannibal, after his defeat at Grumentum by Tib. Gracchus, threw himself into Bruttium, where he was soon after joined by a body of fresh troops from Carthage under Bomilcar: and from this time he made that region his stronghold, from whence he repeatedly issued to oppose the Roman generals in Lucania and Samnium, while he constantly fell back upon it as a place of safety when defeated or hard pressed by the enemy. The physical character of the country, already described, rendered it necessarily a military position of the greatest strength: and after the defeat and death of Hasdrubal Hannibal himself withdrew all his forces into the Bruttian peninsula, where he continued to maintain his ground against the Roman generals, long after they were undisputed masters of the rest of Italy. (Id. xxvii. 51.) We have very little information concerning the operations of the four years during which Hannibal retained his position in this province: he appears to have made his headquarters for the most part in the neighbourhood of Crotona, but the name of Castra Hannibalis retained by a small town on the Gulf of Scyllacium, points to his having occupied this also as a permanent station. Meanwhile the Romans, though avoiding any decisive engagement, were continually gaining ground on him by the successive reduction of towns and fortresses, so that very few of these remained in the hands of the Carthaginian general, when he was finally recalled from Italy.

The ravages of so many successive campaigns must have already inflicted a severe blow upon the prosperity of Bruttium: the measures adopted by the Romans to punish them for their rebellion completed their humiliation. They were deprived of a great part of their territory, and the whole nation reduced to a state bordering on servitude: they were not admitted like the other nations of Italy to rank as allies, but were pronounced incapable of military service, and only employed to attend upon the Roman magistrates as couriers or letter-carriers, and attendants for other purposes of a menial character. (Appian. *Annib.* 61; Strab. v. p. 251; Gell. *N. A.* x. 3.) It was however some time before they were altogether crushed: for several years after the close of the Second Punic War, one of the praetors was annually sent with an army to watch over the Bruttians: and it was evidently with the view of more fully securing their subjection that three colonies were established in their territory, two of Roman citizens at Tempsa and Crotona, and a third with Latin rights at Hipponium, to which the name of Vibo Valentia was now given. A fourth was at the same time settled at Thurii on their immediate frontier. (Liv. xxxiv. 45, xxxv. 40.)

From this time the Bruttians as a people disappear from history: but their country again became the theatre of war during the revolt of Spartacus, who after his first defeats by Crassus, took refuge in the southernmost portion of Bruttium (called by Plutarch the Rhegian peninsula), in which the Roman general sought to confine him by drawing lines of intrenchment across the isthmus from sea to sea. The insurgent leader however forced his way through, and again carried the war into the heart of Lucania. (Plut. *Crass.* 10, 11; Flor. iii. 20.) During the Civil Wars the coasts of Bruttium were repeatedly laid waste by the fleets of Sextus Pompeius, and witnessed several conflicts between the latter and those of Octavian, who had established the headquarters both of his army and navy at Vibo. (Appian, *B. C.* iv. 86, v. 19, 91, 103, &c.) Strabo speaks of the whole province as reduced in his time to a state of complete decay. (vi. p. 253.) It was included by Augustus in the Third Region, together with Lucania; and the two provinces appear to have continued united for most administrative purposes until the fall of the Roman empire, and were governed conjointly by a magistrate termed a "Corrector." The Liber Coloniarum however treats of the "Provincia Bruttiorum" as distinct from that of Lucania. (Plin. iii. 5. s. 10; Not. Dign. ii. 18. p. 64; Orell. *Inscr.* 1074, 1187; Lib. Colon. p. 209.)

After the fall of the Western Empire Bruttium passed with the rest of Italy under the dominion of the Goths: but was reconquered by the generals of Justinian, and continued from thenceforth subject to the Byzantine emperors till the 11th century. It was during this interval that a singular change took place in its name. During the greater part of this period it appears that Bruttium and a small part of the Calabrian peninsula were all that remained to the Greek emperors in Italy, and that the name of Calabria came to be gradually applied to the two provinces thus united under their government. But when they eventually lost their possessions in the eastern peninsula, the name of Calabria, which had originally belonged to that only, came to be used on the contrary to designate exclusively the Bruttian peninsula, which has in consequence retained to the present day the name of *Calabria*. It is impossible to trace exactly the progress, or determine the period of this change: but it appears to have been completely established before the provinces in question were finally wrested from the Greek Empire by the

Normans, who assumed the titles of Dukes of Apulia and Calabria, meaning by the latter the ancient Bruttium, and including the Calabria of the Romans under the title of Apulia. [CALABRIA.]

There was hardly any province of Italy, which was more deeply imbued with Greek influences than Bruttium. The Greek colonies around its coasts left the impress not only of their manners and civilization, but of their language; and even in the time of Ennius, the two languages current in the peninsula were Greek and Oscan. (Fest. v. *Brutates.*) The long continuance of the Byzantine power in these regions must have tended to preserve and renew this element: but it is probable that the traces of Greek language, and especially the Greek names, such as *Pagliopoli*, *Ieropotamo*, &c., which have been preserved down to modern times, are due to fresh colonies of Albanian Greeks introduced by the Neapolitan kings in the fifteenth century: and have not been transmitted, as supposed by Niebuhr, without interruption from the colonists of Magna Graecia. (Niebuhr, vol. i. p. 62; Swinburne's *Travels*, vol. i. p. 348—353; K. Craven's *Travels*, p. 312.)

The rivers of Bruttium are, as already observed, mostly but inconsiderable streams, mere mountain torrents having but a short course from the central ranges of the Apennines to the sea. Those of which the ancient names are preserved to us are here enumerated. Beginning from the LAUS (*Lao*), which separated Bruttium from Lucania, and proceeding along the coast of the Tyrrhenian Sea, we find: 1. the "Batum flumen" of Pliny, a very small stream, still called the *Bato*, the mouth of which is only about a mile S. of that of the *Lao*: 2. the SABATUS of the Itineraries (*Itin. Ant.* pp. 105, 110) placed by them S. of Consentia, is evidently the *Savuto*, a considerable stream, which rises in the mountains S. of Cosenza, and enters the sea about 7 miles S. of the modern *Amantea*. This is identified by most modern topographers with the river called OCINARUS (Ὦκίναρος) by Lycophron (*Alex.* 729, 1009), on the banks of which was situated the city of Terina [TERINA]: 3. the *Lamato*, another considerable stream which rises in the same group of mountains, but has a more circuitous course, and falls into the Terinaean Gulf, about 16 miles S. of the *Savuto*, was called by the Greeks the LAMETUS, and gave name to the neighbouring town of Lametini (Steph. B. *s. v.* Λαμητῖνοι). 4. The ANGITULA of the Tabula, is a small stream called *Angitola*, about 6 miles S. of the preceding. 5. The MEDMA, or MESMA, which gave name to the city on its banks, is still called the *Mesima*, a stream of some importance, flowing into the Gulf of *Gioja*: 6. the Metaurus of Pliny, now called the *Marro*, about 7 miles S. of the *Mesima*. 7. The CRATAEIS (Plin. *l. c.*), supposed to derive its name from the mother of Scylla (Hom. *Od.* xii. 124) is considered to be the *F. di Solano*, a small stream which flows between the rock of *Scilla* and the town of *Bagnara*. After passing the Straits of Messana no stream of any note is found till after rounding the headland of Leucopetra, when we come to (8) the HALEX, still called *Alice*, which was for a long time the boundary between the territories of Locri and Rhegium. [HALEX.] 9. The CAECINUS of Thucydides (iii. 103) has been identified with the *F. Piscopio*, about 5 miles E. of the preceding. 10. The BUTHROTUS, mentioned by Livy (xxix. 7) as a river not far from the walls of Locri, is probably the modern *F. Novito*, which enters the sea about 3 miles from *Gerace*. [LOCRI.] 11. The LUCANUS (Λούκανος) of Ptolemy, still called the *Locano*, a few miles from the preceding. 12. The SAGRAS, a much more celebrated stream, memorable for the great defeat of the Crotoniats on its banks, but which there is great difficulty in identifying with certainty: it is probably the *Alaro*. [SAGRAS.] 13. The HELORUS, or HELLEPORUS, celebrated for the defeat of the combined forces of the Italiot Greeks by the elder Dionysius, B. C. 389, was probably the *Callipari*, a small stream about 14 miles N. of the *Capo di Stilo*. 14. The *Ancinale*, a more considerable stream, about 6 miles N. of the preceding, flowing into the Gulf of *Squillace*, may probably be the CARCINES, or CARCINUS of Pliny and Mela. (Plin. iii. 15.) 15. In the same passage Pliny speaks of four other *navigable* rivers as flowing into the same gulf, to which he gives the names of CROTALUS, SEMIRUS, AROCHAS, and TARGINES: the similarity of names, and order of occurrence, enable us to identify these, with tolerable certainty, as the streams now called respectively the *Corace*, *Simmari*, *Crocchio*, and *Tacina*, though none of them certainly deserves to be called navigable. 16. The AESARUS, on the banks of which stood the celebrated city of Crotona, is still called the *Esaro*. 17. About 9 miles further N. is the mouth of the NEAETHUS, still called *Neto*, which is, next to the Crathis, the most considerable river of Bruttium. [NEAETHUS.] 18. The HYLIAS mentioned by Thucydides (vii. 35) as the limit between the territories of Crotona and Thurii, is probably the *Fiumenicà*, a small stream about 8 miles W. of the *Capo dell' Alice*. 19. The TRAENS, or TRAIS, celebrated for the bloody defeat of the Sybarites on its banks, is probably the *Trionto*. 20. The CRATHIS, as already mentioned, formed at its mouth the boundary between Lucania and Bruttium, though by far the greater part of its course belonged to the latter.

Although Bruttium is throughout almost its whole extent a mountainous country, few names or designations of particular heights have been preserved to us. The name of Sila, given in modern times to the great outlying mass of mountains between Consentia and Crotona, appears to have been applied by the ancients more especially to the southern mass, now called *Aspromonte*: as both Strabo and Pliny place it in the immediate neighbourhood of Locri and Rhegium. (Strab. vi. p. 261; Plin. iii. 5. s. 10.) Probably the name (which is evidently only another form of *silva*, or ὕλη, *the forest*) was at first applied indiscriminately to all the Apennines in this part of Italy. These are not, like those of Lucania and Central Italy, of calcareous character, but are composed for the most part of granite and other primary rocks, though bordered on each side by a band of tertiary strata, which give rise to the more fertile hills and vallies on the coasts. The Mons Clibanus of Pliny, and the Latymnius of Theocritus (Λατύμνιον ὄρος, *Id.* iv. 17), appear to have been both of them situated in the neighbourhood of Crotona, but cannot be identified with any certainty.

The only islands on the coasts of Bruttium are mere rocks, utterly unworthy of notice, were it not for the traditions by which they were connected with the mythological legends of the Greeks. Thus a barren rocky islet off Cape Lacinium was identified with the island of Calypso, the OGYGIA of Homer (Plin. iii. 10. s. 15): two equally insignificant rocks

opposite to Hipponium were called the ITHACESIAE INSULAE, from a fancied connexion with Ulysses (*Id.* 7. s. 13); and a rock near Terina (supposed to be the one now called *Pietra della Nave*) was called LIGEA, from the name of one of the Sirens, who was cast ashore there. (Solin. 2. § 9; Lycophr. *Alex.* 726.)

The Greek colonies around the coasts of Bruttium have been already enumerated. Besides these we find the following cities and towns mentioned by ancient historians and geographers. On the coast of the Tyrrhenian Sea, proceeding from the mouth of the Laus towards the Sicilian Strait, were CERILLI, CLAMPETIA, TEMPSA and NUCERIA, LAMETIUM and NAPETIUM, on the Terinaean Gulf, METAURUM at the mouth of the river of the same name, and SCYLLAEUM on the rock or headland of Scylla. On the E. coast were, MYSTIA near the promontory of Cocinthus, CASTRA HANNIBALIS on the Scyllacian Gulf, PETELIA a few miles inland near the mouth of the Neaethus, and CRIMISA near the promontory of the same name. The chief towns of the interior were CONSENTIA, which was at one time the capital of the Bruttian nation, PANDOSIA and APRUSTUM in the same neighbourhood; MAMERTIUM in the southern peninsula, and TISIA. Besides these a number of small towns are mentioned by Livy (xxx. 19) during the operations of the Romans in Bruttium towards the close of the Second Punic War, the names of which are otherwise wholly unknown. He himself calls them "ignobiles populi." Of these, Argentanum is probably a place still called *Argentina* near *Montalto*, and Besidiae, the modern *Bisignano* (Besidianum), but the other four, Uffugum, Vergae, Hetriculum, and Sypheum cannot be identified, the localities assigned to them by local antiquarians being purely conjectural. (Holsten. *Not. in Cluv.* p. 307; Barrius, *de Sit. Calabr.* ii. 5; Romanelli, vol. i. p. 114.) Equally uncertain are several towns mentioned by Stephanus of Byzantium and by Lycophron, and placed by them among inland towns of the Oenotrians. To this class belong MACALLA, CHONE, Badiza, Ixias, Brystacia, Ariantha or Arintha, Cyterium, Menecina, Ninaea, Erimon, and Sestium. Almost all these names are quoted by Stephanus from Hecataeus, who wrote at a time when the flourishing Greek colonies on the coast naturally led to more frequent intercourse with the petty Oenotrian towns of the interior. In later times they had either disappeared or undergone a change of name. Siberena mentioned only by the same author (v. Σιβερήνη) is supposed with some plausibility to be the modern *Sta Severina*, a place of some importance as a fortress during the middle ages, and Taurania (Ταυρανία) is probably the Taurianum of the Itineraries, which must be placed on the river Metaurus. On the other hand, we find in the Itineraries mention of some towns which had probably grown up at a comparatively late period: such are, Caprasia, probably *Tarsia* on the Crathis, Roscianum (*Rossano*), which we are expressly told by Procopius (*B. G.* iii. 28) was a fortress constructed by the Romans; Paternum, near the headland of Crimisa; and on the other side of the peninsula Nicotera (which still retains its name) a few miles N. of the river *Mesima*. But the greater part of the stations recorded by the Itineraries in this part of Italy are utterly obscure, and were probably mere *mutationes*, places where relays of horses were kept: the paucity of towns showing the decayed condition of the country.

On the W. coast we find mention of some *ports*, which appear to have been in use as such in the time of Pliny and Strabo, without any towns having grown up adjoining them. Of these are the Portus Parthenius, placed by Pliny (iii. 5. s. 10) between the Laus and Clampetia, but the position of which cannot be determined with more accuracy: the Portus Herculis (Plin. *ib.*; Strab. vi. p. 256) between Hipponium and Medma, probably *Tropea:* the Portus Orestis (Plin. *l. c.*) apparently in the neighbourhood of the Metaurus, and the Portus Balarus noticed by Appian (*B. C.* iv. 85) as situated in the neighbourhood of the Sicilian Strait, probably the modern *Bagnara.*

The principal ancient line of road through Bruttium passed down the centre of the peninsula, following nearly the same line with the modern high road from Naples to *Reggio.* It is considered in the Itineraries as a branch of the Appian Way (Itin. Ant. p. 106), but it was probably known originally as the Via Popillia, as an inscription has preserved to us the fact that it was originally constructed by C. Popillius. It proceeded from Muranum (*Murano*) in Lucania to Caprasia (probably *Tarsia*), ascended the valley of the Crathis to Consentia, thence descended into the plain of the Lametus, and passed through Vibo Valentia, and from thence followed with little deviation the W. coast as far as Rhegium. Another line of road preserved to us by the same authority (*Itin. Ant.* p 114) proceeded from Thurii along the E. coast by Roscianum and Paternum to Syllacium, leaving Crotona on the left, and thence round the coast to Rhegium. It was probably this line which, as we learn from another inscription, was constructed under the emperor Trajan at the same time with the road through the Sallentine peninsula. A third, given only in the Tabula, and probably the least frequented of all, led from Blanda in Lucania down the W. coast of Bruttium, keeping close to the Tyrrhenian sea, as far as Vibo Valentia, where it joined the road first described.

The modern provinces of Calabria have been less explored by recent travellers than any other part of Italy, and their topography is still but very imperfectly known. None of the ancient cities which formerly adorned their shores have left any striking monuments of their former magnificence, and even the site of some of them has never yet been determined. The travels of Swinburne and Keppel Craven give a good account of the physical characters and present condition of the country; but throw very little light upon its ancient topography, and the local writers who have treated expressly of this subject are deserving of little confidence. The principal of these is Barrio, whose work, *De Antiquitate et Situ Calabriae* (Roma. 1571, 8vo.), was republished in 1737 with copious illustrations and corrections by Tommaso Aceti. The original work is inserted in Burmann's *Thesaurus Antiquitatum Italiae*, vol. ix. part 5. In the more comprehensive

COIN OF BRUTTII.

work of Romanelli (the *Antica Topografia Istorica del Regno di Napoli*, Naples, 1815) the author has followed almost exclusively the authority of Barrio and his commentators. There is no doubt that a careful examination of the localities themselves by a well-informed and enterprising traveller would add greatly to our knowledge of their ancient geography and condition. [E. H. B.]

BRU'TTIUM. [BRUTTII.]

BRUZUS, probably in Phrygia. Cramer (*Asia Minor*, vol. ii. p. 55) refers to this place a coin with the epigraph Βρουζηνων, and he supposes that Druzon, which Ptolemy places among the cities of Phrygia Magna, should be Bruzon. [G. L.]

BRYA'NIUM (Βρυάνιον), a town of Macedonia, in the district Deuriopus in Paeonia. Stephanus erroneously calls it a town of Epirus. (Liv. xxxi. 39; Strab. vii. p. 327; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iii. p. 307.)

BRYGI (Βρύγοι), called BRIGES (Βρίγες) by the Macedonians, a Thracian people dwelling in Macedonia, north of Beroea in the neighbourhood of Mt. Bermius. They attacked the army of Mardonius, when he was marching through Macedonia into Greece in B. C. 492. (Herod. vi. 45, vii. 73, 185; Strab. vii. pp. 295, 330; Steph. B. *s. v.* Βρίγες.) It was generally believed that a portion of this Thracian people emigrated to Asia Minor, where they were known under the name of Phrygians. (Herod. vii. 73; Strab. *ll. cc.*) [PHRYGIA.] Stephanus mentions two Macedonian towns, Brygias (Βρυγίας) and Brygium (Βρύγιον), which were apparently situated in the territory of the Brygi.

Some of the Brygi were also settled in Illyricum, where they dwelt apparently north of Epidamnus. Strabo assigns to them a town Cydriae. (Strab. vii. pp. 326, 327; Appian, *B. C.* ii. 39.)

BRY'LLION (Βρύλλιον: *Eth.* Βρυλλιανός; Steph. *s. v.*), a city on the Propontis in Bithynia. Stephanus reports that it was Cius, according to Ephorus, by which he probably means that Bryllium was the old name of Cius. There was a district Bryllis which contained the small town of Dascyleium. Pliny (v. 32) mentions Bryllium, which he evidently takes to be a different place from Cius, but near to it. [G. L.]

BRYSEAE (Βρυσειαί, Hom. *Il.* ii. 583; Βρυσεαί, Paus. iii. 20. § 3; Βρυσιαί, Steph. B. *s. v.*), a town of Laconia, SW. of Sparta, at the foot of the ordinary exit from Mt. Taygetus. Its name occurs in Homer, but it had dwindled down to a small village in the time of Pausanias, who mentions, however, a temple of Dionysus at the place, into which women alone were permitted to enter, and of which they performed the sacred rites. Leake discovered the site of Bryseae at the village of *Sinánbey* near *Sklavokhóri*. He remarks that the marble from *Sklavokhóri*, which was presented by the Earl of Aberdeen to the British Museum, probably came from the above-mentioned temple at Bryseae: it bears the name of two priestesses, and represents various articles of female apparel. Leake found another marble at *Sinánbey*, which is also in the British Museum. (Leake, *Morea*, vol. i. p. 187, *Peloponnesiaca*, pp. 163, 166.)

BUANA (Βουάνα, Ptol. v. 13. § 21), a city of Armenia, about the site of which there has been considerable difference of opinion. Rawlinson (*Lond. Geog. Journ.* vol. x. p. 90) considers that the great city of *Salban*, with the capture of which the second campaign of Heraclius terminated (Theophanes, p. 260; comp. Milman's *Gibbon*, vol. viii. p. 245; Le Beau, *Bas Empire*, vol. xi. p. 186), is the same word which is written Buana by Ptolemy, and Iban by Cedrenus (ii. p. 774). *Sál* is evidently the Kurdish *Shál* or *Shár* (for the *l* and *r* are constantly confounded), signifying a city, and Salban thus becomes the city of *Ván*. According to this view, the second campaign of Heraclius, in which Gibbon supposes him to have penetrated into the heart of Persia, must be confined to the countries bordering on the Araxes. D'Anville, who has illustrated the campaign of Heraclius (*Mém. de l' Acad.* vol. xxviii. pp. 559—573), has not attempted to fix a site for *Salban*, and finds in Artemita [ARTEMITA] the ancient representative of *Ván*. [E. B. J.]

BUBALIA. [BUDALIA.]

BUBASSUS (Βυβασσός: *Eth.* Βυβάσσιος), a town in Caria. Ephorus, according to Stephanus, wrote Βύβασσον and Βυβάστιον; and Diodorus (v. 62) means the same place, when he calls it Bubastus of the Chersonesus. Pliny (v. 28) has a "regio Bubassus;" and he adds, "there was a town Acanthus, otherwise called Dulopolis." He places the "regio Bubassus" next to Triopia, the district of Triopium. Finally, Mela mentions a Bubassius Sinus (i. 16). The Bubassia Chersonesus is mentioned by Herodotus (i. 174, where the MS. reading is Βυβλεσίης, but there is no doubt that it has been properly corrected Βυβασσίης). Herodotus tells a story of the Cnidians attempting to cut a canal through a narrow neck of land for the purpose of insulating their peninsula, and protecting themselves against the Persians; they were at the work while Harpagus was conquering Ionia. The isthmus where they made the attempt was five stadia wide, and rocky. This place cannot be the isthmus which connects the mainland with the high peninsula, now called *Cape Krio*, for it is sandy, and Strabo says that *Cape Krio* (p. 656) was once an island, but in his time was connected with the land by a causeway. Besides this, the chief part of the city of Cnidos was on the mainland, as Beaufort observes (*Karamania*, p. 81), though we cannot be sure that this was so in the time of Harpagus. The passage in Herodotus is somewhat obscure, but mainly because it is ill pointed. His description is in his usually diffuse, hardly grammatical, form. Herodotus says, "Both other Hellenes inhabit this country (Caria) and Lacedaemonian colonists, Cnidians, their territory being turned to the sea (the name is Triopium), and commencing from the Chersonesus Bubassie, and all the Cnidia being surrounded by the sea, except a small part (for on the north it is bounded by the Gulf Ceramicus, and on the south by the sea in the direction of Syme and Rhodus); now at this small part, being about five stadia, the Cnidians were working to dig a canal." It is clear, then, that he means a narrow neck some distance east of the town of Cnidus. "It is now ascertained, by Captain Graves' survey of the coast, that the isthmus which the Cnidians attempted to dig through is near the head of the Gulf of Syme." (Hamilton, *Researches, &c.* vol. ii. p. 78.) The writer of this article has not seen Captain Graves' survey. Mr. Brooke, in his Remarks on the Island and Gulf of Syme (*London Geog. Journal*, vol. viii. p. 134), places the spot where the canal was attempted N. by W. from Syme, "where the land sinks into a bay." It is very narrow, but he had not the opportunity of measuring it. He adds, "The Triopian peninsula

met the Bubassian or Bybessian peninsula, and at the junction was the proposed cut of the Cnidians. Nothing can agree better with our observations." This expresses the meaning of Herodotus, who says that all the territory of the Cnidians is called Triopium, and that it begins from the Chersonesus Bubassia; the plain meaning of which is that, where the Bubassie ends, the Triopium begins and runs westward to Cnidus. The Bubassie is therefore different from the Triopium, and it is a peninsula between the Triopium or Triopia and the main land. Captain Graves (*London Geog. Journal*, vol. viii. p. 428) says, "At about 2 miles to the northward of this (Gothic Island of Mr. Brook), at the head of a narrow creek, on each side of which are high and precipitous cliffs, is, I believe, the narrow isthmus forming the ancient Triopian promontory. We levelled it across and made a plan of the interesting locality, which agrees well with ancient authorities, and in no place do the gulfs approach so near each other, although at Dahtchak a bay on the north shore nearer to Cape Krio, there is no great distance." Mr. Brooke seems to mean the more western of these narrow necks. One of the two is certainly the place meant by Herodotus, and it seems to be the neck at the head of the Gulf of Syme, as the words of Herodotus indeed show. At the head of this gulf then is the Bubassius Sinus, a small bay, and the town of Acanthus; and the Bubassie is further east. [G. L.]

BUBASTIS, or BUBASTUS (Βούβαστις, Herod. ii. 59, 137; Βούβαστος, Strab. xvii. p. 805; Diod. xvi. 51; Plin. v. 9. s. 9; Ptol. iv. 5. § 52), the PHIBESETH of the O. T. (Ezek. xxx. 17), and the modern *Tel-Bustak*, was the capital of the nome Bubastites in the Delta, and was situated SW. of Tanis, upon the eastern side of the Pelusiac branch of the Nile. The nome and city of Bubastis were allotted to the Calasirian division of the Egyptian war-caste, and sacred to the goddess Pasht, whom the Greeks called Bubastis, and identified with Artemis. The cat was the sacred and peculiar animal of Pasht, who is represented with the head of that animal or of its nobler congener the lion, and frequently accompanies the deity Phtah in monumental inscriptions. The tombs at Bubastis were accordingly the principal depository in Egypt of the mummies of the cat. The 22nd dynasty of Egyptian monarchs consisted of nine, or, according to Eusebius (*Chronic.*) of three Bubastite kings, and during their reigns the city was one of the most considerable places in the Delta. Immediately to the S. of Bubastis were the allotments of land with which Psammitichus rewarded the services of his Ionian and Carian mercenaries (Herod. ii. 154); and on the northern side of the city commenced the Great Canal which Pharaoh Neco constructed between the Nile and the Red Sea. (Herod. ii. 158.) In B. C. 352, Bubastis was taken by the Persians, and its walls were then dismantled. (Diod. xvi. 51). From this period it gradually declined, although it appears in ecclesiastical annals among the episcopal sees of the province Augustamnica Secunda. Bubastite coins of the age of Hadrian exist. The most distinguished features of the city and nome of Bubastis were its oracle of Pasht, the splendid temple of that goddess and the annual procession in honour of her. The oracle gained in popularity and importance after the influx of Greek settlers into the Delta, since the identification of Pasht with Artemis attracted to her shrine both native Egyptians and foreigners. The ruins of *Tel-Bastak*, or the "Hills of Bustak," attest the original magnificence of the city. The entire circuit of the walls is, according to Hamilton (p. 367) not less than three miles in extent. Within the principal inclosure, where there has been the greatest accumulation of the ruins of successive edifices, is a large pile of granite-blocks which appear, from their forms and sculptures, to have belonged to numerous obelisks and gigantic propyla. The mounds which encompassed the ancient city were originally begun by Sesostris and completed by the Aethiopian invader Sabakos, who employed criminals upon these and similar works. (Herod. ii. 137.) The mounds were intended to redeem and rescue the site of the city, and possibly its gardens and groves, from the inundations of the Nile. From the general aspect of the ruins, and from the description given of it by Herodotus (ii. 138), they appear to have been raised concentrically around the temples of Pasht and Hermes, so that the whole place resembled the interior of an inverted cone. The only permanent buildings in Bubastis seem to have been the temples and the granite walls and corridors. The private houses were probably little better or more solid than the huts of the Fellahs, or labourers of the present day.

The following is the description which Herodotus gives of Bubastis, as it appeared shortly after the period of the Persian invasion, B. C. 525, and Mr. Hamilton remarks that the plan of the ruins remarkably warrants the accuracy of this historical eye-witness. (Herod. ii. 59, 60.)

Temples there are more spacious and costlier than that of Bubastis, but none so pleasant to behold. It is after the following fashion. Except at the entrance, it is surrounded by water: for two canals branch off from the river, and run as far as the entrance to the temple: yet neither canal mingles with the other, but one runs on this side, and the other on that. Each canal is a hundred feet wide, and its banks are lined with trees. The propylaea are sixty feet in height, and are adorned with sculptures (probably intaglios in relief) nine feet high, and of excellent workmanship. The Temple being in the middle of the city is looked down upon from all sides as you walk around; and this comes from the city having been raised, whereas the temple itself has not been moved, but remains in its original place. Quite round the temple there goes a wall, adorned with sculptures. Within the inclosure is a grove of fair tall trees, planted around a large building in which is the effigy (of Pasht). The form of that temple is square, each side being a stadium in length. In a line with the entrance is a road built of stone about three stadia long, leading eastwards through the public market. The road is about 400 feet broad, and is flanked by exceeding tall trees. It leads to the temple of Hermes.

The festival of Bubastis was the most joyous and gorgeous of all in the Egyptian calendar. Barges and river craft of every description, filled with men and women, floated leisurely down the Nile. The men played on pipes of lotus: the women on cymbals and tambourines, and such as had no instruments accompanied the music with clapping of hands and dances, and other joyous gestures. Thus did they while on the river: but when they came to a town on its banks, the barges were made fast, and the pilgrims disembarked, and the women sang and playfully mocked the women of that town. And

when they reached Bubastis, then held they a wondrously solemn feast: and more wine of the grape was drank in those days than in all the rest of the year. Such was the manner of this festival: and, it is said, that as many as seven hundred thousand pilgrims have been known to celebrate the Feast of Pasht at the same time. [W. B. D.]

BUBENTUM (Βουβεντανός), a city of Latium, mentioned by Dionysius (v. 61) as one of the thirty which composed the Latin League. No other notice is found of it, except that the Bubetani (which should probably be written Bubentani) are found in Pliny's list of the extinct "populi" of Latium: and there is no clue to its position. [E. H. B.]

BUBON (Βούβων). Stephanus (*s. v.* Βούβων) observes that "Bubon and Balbura are cities of Lycia:" the Ethnic name he adds, "ought to be Βουβώνιος, but it is Βουβωνεύς, for the Lycians rejoice in this form." The truth of this observation of Stephanus is proved by the inscription found on the spot: Βουβωνεων ἡ Βουλη καὶ ὁ Δημος. Bubon is placed in the map in Spratt's Lycia, near 37° N. lat. west of Balbura, near a place named *Ebajik*, and on a small stream that flows into the Indus, or *Horzoom Tchy*. Bubon is mentioned by Pliny, Ptolemy, and Hierocles, and Pliny (xxxv. 17) mentions a kind of chalk (creta) that was found about Bubon. The city stood on a hill side. The ruins are not striking. There is a small theatre built of sandstone, and on the summit of the hill was the Acropolis. Bubon is in a mountainous tract, which separates the basins of the Indus and the Xanthus, and it commands the entrance to the pass over the mountains. The pass is 6000 feet above the sea, and the mountains on each side of it 8000 or 9000 feet high. [Balbura; Cabalis; Cibyra.] (Spratt's *Lycia*, vol. i. p. 264.) [G. L.]

BUCA (Βοῦκα: *Eth.* Bucanus), a city of the Frentani on the coast of the Adriatic Sea. It is mentioned by all the geographers as one of the chief cities of the Frentani, but there is considerable difficulty in regard to its site. Strabo describes it as the southernmost of the Frentanian cities, so that its territory bordered on that of Teanum in Apulia. In another passage he tells us that it was 200 stadia from the mouth of a lake near the Garganus, which can certainly be no other than the *Lago di Lesina*. Ptolemy also places it between the mouth of the Tifernus and Histonium: but Pliny, on the contrary, enumerates it between Histonium and Ortona; and Mela, though less distinctly, appears also to place it to the N. of Histonium. (Strab. v. p. 242, vi. p. 285; Plin. iii. 12. s. 17; Ptol. iii. 1. § 18; Mela ii. 4.) The statements of Strabo accord well with the views of those who would place Buca at *Termoli*, a seaport town on a projecting point of land about 3 miles from the mouth of the *Biferno* (Tifernus), and 25 from the opening of the *Lago di Lesina:* and this is certainly the most probable position. On the other hand the authority of Pliny has been followed by most local antiquarians, who have placed Buca at a spot now called *Punta della Penna*, a projecting headland with a small port about 5 miles N. of *Il Vasto* (Histonium), where it is said that considerable ancient remains were still visible in the 17th century. Two inscriptions, said to have been discovered on this site, would be almost conclusive in favour of this view, but they are probably forgeries. This subject is further discussed in the article Frentani. (Romanelli, vol. iii. p. 40—42; Mommsen, *Inscr. Regn. Neapol.* App. p. 30.) [E. H. B.]

BUCEP'HALA or BUCEPHALI'A (τὰ Βουκέφαλα, Arrian, *Anab.* v. 29; Ptol. vii. 1. § 46; ἡ Βουκεφάλη, Arrian, *Anab.* v. 19; Diod. xvii. 95; Steph. B. *s. v.* Βοὸς Κεφαλαί; ἡ Βουκεφαλία, Strab. xv. p. 698; Plut. *de Fort. Alex.* i. 5; Suid. *s. v.*; ἡ Βουκεφάλεια, Hesych. *s. v.*; Steph. B.; ἡ Βουκέφαλος, *Peripl.* p. 27), a city of India, on the Hydaspes (*Jelum*), built by Alexander, after his great victory over Porus (B. C. 326), at the place where he had crossed the river before the battle, and in memory of his celebrated charger Bucephalus, who had expired in the hour of victory, from fatigue and old age, or from wounds. (Arrian. &c., *ll. cc.*; Curt. ix. 3. § 23.) The exact site is not ascertained; but the probabilities seem to be in favour of *Jelum*, at which place is the ordinary modern passage of the river, or of *Jellapoor*, about 16 miles lower down. (Court, *Journal of the Asiatic Society of Bengal*, 1836, pp. 468, foll.; Elphinstone, *Cabul*, p. 80; and an important note in Thirlwall, *Hist. of Greece*, vol. vii. p. 16.) It was one of Ptolemy's points of recorded astronomical observations, having about 14½ hours for its longest day, and being distant a little more than 4½ hours E. of Alexandria. [P. S.]

BUCE'PHALA (Βουκέφαλα ἄκρα), a promontory of Argolis, lying a little S. of Scyllaeum, in Troezenia, having three islands adjacent to it. (Paus. ii. 34. § 8.)

BUCE'PHALUS (Βουκέφαλος), a promontory of Corinthia, with a port of the same name, situated S. of Cenchreae, which must be distinguished from Bucephala in Argolis. (Mel. ii. 3; Ptol. iii. 16. § 12; Plin. iv. 5. s. 9.) Stephanus B. speaks of Βουκεφάλας λιμήν in Attica.

BUCES or BUGES LACUS (Plin. iv. 12. s. 26), BYCE or BYCES (ἡ Βύκη λίμνη, Ptol. iv. 5. §§ 9, 10), BICES (Val. Flacc. *Arg.* vi. 68), an almost enclosed gulf at the end of the Palus Maeotis (*Sea of Azov*), from which it is separated, says Pliny, by a ridge of rock (*petroso dorso*, now called the *Kosa Arabatskaia:* it is, however, rather sandy than rocky). Ptolemy mentions it as the E. boundary of the isthmus of the Tauric Chersonesus (*Crimea*). Strabo (vii. p. 308) gives a more particular description of it under the name of ἡ Σαπρὰ λίμνη, the *Putrid Lake*, by which it is still called; in Russian, *Sibaché* (or *Sivaché*) *Moré*. He describes it as 4000 stadia in length, and as the W. part of the Palus Maeotis, with which it is united by a large mouth (the strait is in fact only a furlong wide); it is very marshy, and scarcely navigable by boats made of hides sewn together, as the shallows are readily uncovered and covered again by the winds. (Strab. *l. c.*) It is in fact a great lagoon, covered with water when an E. wind blows the water of the *Sea of Azov* in at its narrow opening, but at other times a tract of pestilential mud. Mela (ii. 1), Pliny, and Ptolemy mention a river of the same name, the exact position of which is doubtful. (Ukert, vol. iii. pt. 2, pp. 170, 201, 356, 422, 462.) [P. S.]

BUCHAE'TIUM (Βουχαίτιον, Strab. vii. p. 324; Βουχετόν, Polyb. xxii. 9; Βούχετα, Dem. *de Halonn.* § 32; Harpocrat. *s. v.*), a city of the Cassopaei in Thesprotia, a little above the sea. (Strab. *l. c.*) It is placed by Leake at the harbour of St. John, a few miles E. of Parga. (Leake, *Northern Greece*, vol. iv. p. 73.)

BUCINNA, is mentioned by Pliny (iii. 8. s. 14) among the small islands on the W. coast of Sicily As he enumerates it next to Aegusa, it is supposed to be the same called by Ptolemy Phorbantia, now

Levanzo [AEGATES]. Steph. Byz. calls Bucinna (Βούκιννα) a *town* of Sicily; but if this refer to the Bucinna of Pliny, it can hardly be *Levanzo*, which appears to have been never inhabited by more than a few fishermen. (Smyth's *Sicily*, p. 247.) [E.H.B.]

BUCINOBANTES, a German tribe of the Alemanni, which appears to have occupied the country on the right bank of the Rhine, opposite *Mayence*. (Amm. Marc. xxix. 4; Notit. Imp.) [L. S.]

BUCO'LION (Βουκολίων), a place in Arcadia of uncertain site, to which the Mantineians retreated, when they were defeated by the Tegeatae in B. C. 423. But as the battle was probably fought in the valley of the Alpheius, near the spot where Megalopolis was afterwards built, Bucolion must have been somewhere in this neighbourhood. (Thuc. iv. 134, with Arnold's note.)

BUCOLORUM URBS (Βουκόλων πόλις), a town on the sea-coast of Palestine, between Ace (*Acre*) and Strato's Tower (Caesarea), mentioned only by Strabo (xvi. p. 758). [G. W.]

BUDA'LIA, a town in Lower Pannonia, not far from Sirmium, was the birthplace of the emperor Decius. (Eutrop. ix. 4; Aurel. Vict. *Epit.* 29, who calls the place Bubalia.) It is mentioned also in several of the Itineraries. [L. S.]

BUDEIUM (Βούδειον), a town of Thessaly mentioned by Homer (*Il.* xvi. 572), called BUDEIA (Βούδεια) by later writers, and described as a town of Magnesia. (Lycophr. 359; Steph. B. *s. v.*)

BU'DII (Βούδιοι, Herod. i. 101; Steph. B.). Herodotus mentions among the tribes by whom Media was inhabited the Budii and the Busae. (Βουσαί: see also Steph. *s. v.*) It is quite uncertain in what part of that country they dwelt. Ritter (*Erdk.* vol. ii. pp. 896, 799, 902) conjectures that they, as well as the Magi, belonged to the Priest-caste, supposing them (though without any apparent reason) to have been worshippers of Buddha. [V.]

BUDI'NI (Βουδῖνοι), a people of Sarmatia Asiatica, according to the division of the later ancient geographers, but within the limits of Europe, according to the modern division; of whom almost all we know is found in Herodotus. According to his view (iv. 21), Scythia does not extend, on the N. and NE., further than the Tanaïs (*Don*). Beyond this river, the first district was that of the Sauromatae (Sarmatians), beginning from the innermost recess (μυχός) of the Lake Maeëtis (Maeotis, *Sea of Azov*), and extending for 15 days' journey to the N. over a country bare of trees. Beyond them, the Budini inhabit the second region, which is well wooded; and beyond them, on the N., is first a desert, for seven days' journey; and beyond the desert, inclining somewhat to the E., dwell the Thyssagetae, among whom four great rivers take their rise, and flow through the Maeëtae (Maeotae) into the lake Maeëtis (Maeotis), namely the Lycus, Oarus, Tanaïs, and Syrgis, of which the Oarus is supposed to be the *Volga*, and the Lycus and Syrgis either the *Oural* and the *Outzen*, or else tributaries of the *Volga*. (Herod. iv. 22, 123: the course of the *Volga*, before its sudden turn to the SE., might very easily suggest the mistake of its falling into the *Sea of Azov* instead of the *Caspian*.) Besides this general statement of their position, Herodotus gives elsewhere a particular account of the Budini (iv. 108, 109). They were a great and numerous people, γλαυκόν τε πᾶν ἰσχυρῶς ἐστι καὶ πυρρόν, words which we give in the original on account of the great diversity of opinions respecting their meaning. Some translate them, "with blue eyes and a ruddy complexion," others "with blue eyes and red hair," others "having a bluish and ruddy colour all over (πᾶν)," while others take them to refer to the custom of painting the body, which is distinctly stated to have prevailed among tribes closely connected with the Budini, the GELONI and AGATHYRSI. They had a city, built entirely of wood, the name of which was Gelonus; in which were temples of the Greek divinities, fitted up in the Greek fashion, with images and altars and shrines of wood. They celebrated a triennial festival to Dionysus, and performed Bacchic rites. These points of Hellenism are explained by Herodotus from the close association of the Budini with the Geloni, which he regards as originally Greeks, who had left the Grecian settlements on the Euxine, and gone to dwell among the Budini, and who, though speaking the Scythian language, observed Greek customs in other respects. The Budini, however, differed from the Geloni, both in their language and in their mode of life, as well as their origin; for the Budini were indigenous, and were nomads, and eat lice (the true translation of φθειροτραγέουσι, see the commentators, Baehr, &c.), while the Geloni were an agricultural people: they differed also in form and complexion. The Greeks, however, confounded the two people, and called the Budini Geloni. The country of the Budini was covered with forests of all sorts, in the largest of which was a great lake, and a marsh, surrounded by reeds, and here were caught otters and beavers and other animals with square faces (τετραγωνοπρόσωπα), whose skins were used as cloaks, and parts of their bodies for medicinal purposes. Again, he tells us (iv. 122, 123), that when Darius invaded Scythia, he pursued the Scythians as far as the country of the Budini, whose wooden city the Persians burnt; although their king was in the camp as an ally, having joined Darius through enmity to the Scythians (iv. 119).

Mela (i. 19. § 19) gives to the Budini only a few words, in which, as usual, he follows Herodotus. Pliny mentions them, with the Neuri, Geloni, Thyssagetae, and other tribes, as on the W. side of the Palus Maeotis (iv. 12. s. 26). Ptolemy mentions, in European Sarmatia, W. of the Tanaïs, a people named Bodini (Βωδινοί or Βωδηνοί) and a mountain of the same name (τὸ Βουδινὸν or Βωδινὸν ὄρος) near the sources of the Borysthenes (iii. 5. §§ 15, 24).

Few peoples have given more exercise to the critical skill or invention of geographers and ethnologists than the Budini. As to their ethnical affinities, some, insisting on their (supposed) blue eyes and fair hair, and finding a resemblance, in their name and position, to the Butones of Strabo (vii. p. 290, where Kramer reads Γούτωνας), the Guttones of Pliny (iv. 14), and the Batini of Ptolemy (ii. 11. § 20), take them for the original Gothic ancestors of the Germans, and derive their name from that of the god Odin or Wodan (Mannert, *Geogr.* vol. iii. pp. 9 et seq., 15 et seq., 493, vol. iv. pp. 103, 108); others, from the marshy woodlands, in which they dwelt, identify them with the Wends, whose name is derived from water, and can be easily transmuted, by known etymological equivalents, into Budini, thus, *Wenda* (Polish) = *Woda* (Sclavonic), and W becomes B in Greek (Worbs, in Ersch and Gruber's *Encyklopädie*, *s. v.*); while Ritter, referring back their Hellenic customs, and their worship of Dionysus, to their Asiatic originals, and deriving their name from Buddha, boldly brings them to the support of his theory respecting

the great primeval migration from India and Central Asia to the shores of the Maeotis, and to Northern Europe. (*Vorhalle*, pp. 25 et seq., 30, 153 et seq.). It is unnecessary to discuss the various geographical positions assigned to them, as there are several wooded and marshy districts in Central Russia, which might answer to the description of Herodotus. Nearly all writers agree in placing them between the *Don* and the *Volga*, somewhere to the N. of the country of the Don Cossacks; but the special reasons on which each writer assigns their position more particularly are rather fanciful: perhaps the most plausible view is that which places them in the government of *Novgorod*, and regards their wooden city as a great emporium of the ancient inland traffic, and the original of the celebrated and very ancient mart of *Nijni-Novgorod*. Full particulars of the various and curious theories about this people are given by the following writers, besides those already quoted: Rennell, *Geog. of Herod.* vol. i. pp. 110—123; Heeren, *Ideen*, vol. i. pt. 2. p. 209; Eichwald, *Geogr. d. Casp. Meeres*, pp. 276 et seq.; Brehmer, *Entdeckungen im Alterthum*, vol. i. p. 484, et seq.; Georgii, *Alte Geographie*, vol. ii. pp. 304, et seq.; Ukert, *Geogr. d. Griech. u. Röm.*, vol. iii. pt. 2, pp. 537, et seq., and other writers quoted by Ukert. [P. S.]

BUDO'RUS. 1. A small river in Euboea, near Cerinthus. [CERINTHUS.]

2. A promontory and fortress of Salamis. [SALAMIS.]

BU'DROAE, two rocks rather than islands, which Pliny (iv. 12. s. 20) couples with Leuce (*Hághios Theódhoros*), as lying off the coast of Crete. According to Hoeck (*Kreta*, vol. i. p. 384), their present name is *Turlure*. [E. B. J.]

BULIS (Βοῦλις), a town of Phocis, on the frontiers of Boeotia, situated upon a hill, and distant 7 stadia from the Crissaean gulf, 80 stadia from Thisbe, and 100 from Anticyra. It was founded by the Dorians under Bulon, and for this reason appears to have belonged to neither the Phocian nor the Boeotian confederacy. Pausanias, at least, did not regard it as a Phocian town, since he describes it as bordering upon Phocis. But Stephanus, Pliny, and Ptolemy all assign it to Phocis. Near Phocis there flowed into the sea a torrent called Heracleius, and there was also a fountain named Saunium. In the time of Pausanias more than half the population was employed in fishing for the murex, which yielded the purple dye, but which is no longer caught on this coast. (Paus. x. 37. § 2, seq.; Steph. B. *s. v.*; Plin. iv. 3. s. 4; Ptol. iii. 15. § 18, who calls it Βούλεια; Plut. *de Prud. Anim.* 31, where for Βουνῶν we ought to read Βούλεων, according to Müller, *Orchomenus*, p. 482, 2nd ed.) The harbour of Bulis, which Pausanias describes as distant 7 stadia from the city, is called MYCHUS (Μυχός) by Strabo (ix. pp. 409, 423). The ruins of Bulis are situated about an hour from the monastery of *Dobó*. Leake describes Bulis as "occupying the summit of a rocky height which slopes on one side towards a small harbour, and is defended in the opposite direction by an immense βράχος, or lofty rock, separated by a torrent from the precipitous acclivities of Helicon." The harbour of Mychus is now called *Zálitza*. (Leake, *Northern Greece*, vol. ii. p. 518, seq.)

BULLA RE'GIA (Βούλλα Ῥηγία, Ptol. viii. 14. § 10, corrupted into Βουλλαρία, Ptol. iv. 3. § 30; *Boul*, Ru.), an inland town of Numidia, S. of Tha braca, and 4 days' journey WSW. of Carthage, on a tributary of the Bagradas, the valley of which is still called *Wad-el-Boul*. The epithet Regia shows that it was either a residence or a foundation of the kings of Numidia, and distinguishes it from a small place of the same name, S. of Carthage, Bulla Mensa (Βουλλαμῆνσα, Ptol. iv. 3. § 35). Under the Romans it was a considerable place, and a *liberum oppidum*, not a *municipium*, as Mannert asserts on the authority of an inscription at *Beja*, which he mistakes for the site of Bulla. (Plin. v. 3. s. 2; *Itin. Ant.* p. 43; *Tab. Peut.*; *Geogr. Rav.*; Procop. *B. V.* i. 25). According to Ptolemy's division, Bulla Regia was in that part of the province of Africa which he calls New Numidia. It was one of his points of recorded astronomical observations, having its longest day 14⅛ hours, and being distant from Alexandria 2 hours to the West. [P. S.]

BULLIS, or BYLLIS (Βουλλίς, Ptol. iii. 13. § 4; Βύλλις, Steph. B.: *Eth.* Βυλλινοί, Scylax; Byllini, Liv. xliv. 30; Βυλλίονες, Strab. vii. p. 326; Bulliones, Cic. *ad Fam.* xiii. 42, *Phil.* xi. 11; Buliones, Plin. iii. 23. s. 26; Βυλλιεῖς, Steph. B.; Bullienses or Bullidenses, Cic. *in Pis.* 40; Caes. *B. C.* iii. 12, Plin. iv. 10. s. 17), a Greek city in Illyria frequently mentioned along with Apollonia and Amantia, in whose neighbourhood it was situated. Its name often occurs at the time of the civil wars (Cic. *Phil.* xi. 11; Caes. *B. C.* iii. 40. et alii), but of its history we have no account. In the time of Pliny it was a Roman colony, and was called Colonia Bullidensis. (Plin. iv. 10. s. 17.) Its territory is called Βυλλιακή by Strabo (vii. p. 316), who places it between Apollonia and Oricum. The ruins of Bullis were discovered by Dr. Holland at *Gráditza*, situated on a lofty hill on the right bank of the Aous (*Viosa*), at some distance from the coast. There can be little doubt that these ruins are those of Bullis, since Dr. Holland found there a Latin inscription recording that M. Valerius Maximus had made a road from the Roman colony of Bullis to some other place. Stephanus and Ptolemy, however, place Bullis on the sea-coast; and the narrative of Livy (xxxvi. 7), that Hannibal proposed to Antiochus to station all his forces in the Bullinus ager, with the view of passing over to Italy, implies, that at least a part of the territory of Bullis was contiguous to the sea. Hence Leake supposes, that both Ptolemy and Stephanus may have referred to a λιμήν, or maritime establishment of the Bulliones, which at one period may have been of as much importance as the city itself. Accordingly, Leake places on his map two towns of the name of Bullis, the Roman colony at *Gráditza*, and the maritime city at *Kanina*. (Holland, *Travels*, vol. ii. p. 320, seq., 2nd ed.; Leake, *Northern Greece*, vol. i. p. 35.)

BUMADUS (Βουμώδος, Arrian, iii. 8; Curt. iv. 9; Βουμήλος, Arrian, vi. 11), a small stream in Assyria about sixty stadia from Arbela. The name is met with in the MSS. with various spellings—Bumadus, Bumodus, Bumelus, Bumolus. It is said (Forbiger, *Handbuch*, vol. ii. p. 608) to be now called the *Khazir*. Tavernier (ii. c. 5.) states that he met with a stream called the *Bohrus*, which, he thinks, may be identified with it.

BUPHA'GIUM (Βουφάγιον), a town of Arcadia, in the district Cynuria, situated near the sources of the river Buphagus (Βουφάγος), a tributary of the Alpheius, which formed the boundary between the territories of Heraea and Megalopolis. It is placed

by Leake at *Papadha*, and by Boblaye, near *Zula-Sarakini*. (Paus. viii. 26. § 8, 27. § 17, v. 7. § 1; Leake, *Morea*, vol. ii. pp. 67, 92, *Peloponnesiaca*, p. 233; Boblaye, *Recherches*, p. 161.)

BUPHAGUS. [BUPHAGIUM.]

BU'PHIA (Βουφία: *Eth.* Βουφιεύς), a village in Sicyonia, mentioned by Stephanus (*s. v.*) is probably the same place as PHOEBIA (Φοιβία), a fortress taken by Epaminondas in his march from Nemea to Mantineia. (Paus. ix. 15. § 4.) Stephanus appears to have made a mistake in naming Buphia and Phoebia as separate places. Ross supposes the remains of a fortress on a summit of Mt. Tricaranum, about two miles north-eastward of the ruins of Philius, to be those of Buphia or Phoebia; but Leake maintains that they represent Tricarana, a fortress mentioned by Xenophon. (Ross, *Reisen im Peloponnes*, p 40; Leake, *Peloponnesiaca*, p. 401.)

BUPHRAS. [MESSENIA.]

BUPORTHMUS (Βούπορθμος), a lofty promontory of Argolis, running out into the sea near Hermione. On it was a temple of Demeter and her daughter, and another of Athena Promachorma. The name Buporthmus, Leake observes, seems clearly to point to Cape *Muzáki* and the narrow passage between it and the island *Dhokó*. (Paus. ii. 34. § 8; Leake, *Peloponnesiaca*, p. 284; Boblaye, *Recherches*, p. 60.)

BUPRA'SIUM (Βουπράσιον: *Eth.* Βουπρασιεύς, Βουπράσιος), a town of Elis, and the ancient capital of the Epeii, frequently mentioned by Homer, was situated near the left bank of the Larissus, and consequently upon the confines of Achaia. The town was no longer extant in the time of Strabo, but its name was still attached to a district on the left bank of the Larissus, which appears from Stephanus to have borne also the name of Buprasius. (Hom. *Il.* ii. 615, xi. 755, xxiii. 631; Strab. viii. pp. 340, 345, 349, 352, 357, 387; Steph. B. *s. v.*)

BURA (Βοῦρα: *Eth.* Βουραῖος, Βούριος), a town of Achaia, and one of the 12 Achaean cities, situated on a height 40 stadia from the sea, and SE. of Helice. It is said to have derived its name from Bura, a daughter of Ion and Helice. Its name occurs in a line of Aeschylus, preserved by Strabo. It was swallowed up by the earthquake, which destroyed Helice, B. C. 373 [HELICE], and all its inhabitants perished except those who were absent from the town at the time. On their return they rebuilt the city, which was visited by Pausanias, who mentions its temples of Demeter, Aphrodite, Eileithyia and Isis. Strabo relates that there was a fountain at Bura called Sybaris, from which the river in Italy derived its name. On the revival of the Achaean League in B. C. 280, Bura was governed by a tyrant, whom the inhabitants slew in 275, and then joined the confederacy. A little to the E. of Bura was the river Buraïcus; and on the banks of this river, between Bura and the sea, was an oracular cavern of Heracles surnamed Buraicus. (Herod. i. 145; Pol. ii. 41; Strab. pp. 386, 387, and 59; Diod. xv. 48; Paus. vii. 25. § 8, seq.) The ruins of Bura have been discovered nearly midway between the rivers of *Bokhusia* (Cerynites), and of *Kalavryta* (Buraicus) near *Trupia*. (Leake, *Morea*, vol. iii. p. 399, *Peloponnesiaca*, p. 387.) Ovid says that the ruins of Bura, like those of Helice, were still to be seen at the bottom of the sea; and Pliny makes the same assertion. (Ov. *Met.* xv. 293; Plin. ii. 94.) Hence it has been supposed that the ancient Bura stood upon the coast, and after its destruction was rebuilt inland; but neither Pausanias nor Strabo states that the ancient city was on the coast, and their words render it improbable.

BURAICUS. [ACHAIA; CYNAETHA.]

BURCHANA (Βουρχανίς: *Borcum*), called Fabaria, from a kind of wild beans growing there, was an island at the mouth of the Amasia (*Ems*), which was discovered and conquered by Drusus. (Strab. vii. 291; Plin. iv. 27.) [L. S.]

BURDI'GALA or BURDE'GALA (Βουρδίγαλα: *Bourdeaux* or *Bordeaux*), the chief town of the Bituriges Vivisci, on the left bank of the *Garonne*, or, as Strabo (p. 190), the first writer who mentions the place, describes it, on the aestuary (λιμνοθάλασσα) of the Garonne, which aestuary is named the *Gironde*. The position of Burdigala at *Bordeaux* is proved by the various roads in the Table and the Antonine Itin. which run to this place from Mediolanum (*Saintes*), from Vesunna (*Perigeux*), Aginnum (*Agen*), and from other places. It was the emporium or port of the Bituriges Vivisci, and a place of great commerce under the empire. Ausonius, a native of Burdigala, who lived in the fourth century, describes it in his little poem entitled "Ordo Nobilium Urbium;" and though he describes it last, he describes it more particularly than any of the rest. Ausonius is our authority for the pronunciation of the name:—

"Burdigala est natale solum, clementia caeli
Mitis ubi, et riguae larga indulgentia terrae."

It was in the early centuries of the Christian aera one of the schools of Gallia. Ausonius (*Commem. Prof. Burd.*) records the fame of many of the professors, but they are all rhetoricians and grammarians; for rhetoric and grammatic, as the terms were then used, were the sum of Gallic education. Tetricus assumed the purple at *Burdigala*, having been proclaimed emperor by the soldiers when he was governor of Aquitania. (Eutrop. ix. 10.) The importance of Burdigala in the Roman period appears from the fact of its having the title of Metropolis of Aquitania Secunda (Metropolis Civitas Burdegalensium), after the division of Aquitania into several provinces. Burdigala was taken by the Visigoths, and it was included in their kingdom during their dominion in the south-west of Gaul; but *Toulouse* was their capital.

We know little of Burdigala except from the verses of Ausonius. He describes the city as quadrangular, with walls and very lofty towers. The streets were well placed, and it contained large open places or squares (plateae). He mentions a stream that ran through the middle of the city into the Garonne, wide enough to admit ships into the town when the tide rose. In fact, the channel of this little stream was converted into a dock; but it does not exist now. Ausonius mentions a fountain named Divona, which supplied the city with water. Some traces of a subterraneous aqueduct have been discovered near *Bordeaux*, a short distance from the *Porte d'Aquitaine* on the great road from *Bordeaux* to *Langon*. The only remaining Roman monument at Bordeaux is the amphitheatre commonly called the *Arènes* or the *Palais Gallien*. This building had externally two stories surmounted by an Attic, altogether above 65 feet high. The length of the arena was about 240 English feet, and the width about 175 feet. The thickness of the constructions, which supported the seats, is estimated at about 91 feet, which makes the extreme length 422 feet.

Of the two great entrances at each extremity of the ellipse, the western entrance alone remains, and it is still complete (1842). This noble edifice has been greatly damaged at different times, and is now in a deplorable condition. (Notice in the *Guide du Voyageur*, par Richard et Hocquart, from M. de Caumont.) Another Roman edifice, probably a temple, existed till the time of Louis XIV., when it was demolished. [G. L.]

BURGINA'TIUM is placed by the Table and the Antonine Itin. between Colonia Trajana and Arenatio, or Harenacio, 6 M. P. from Arenatio, and 5 from Colonia. It is generally agreed that this place is represented by *Schenkenschanz*, at the point of the bifurcation of the *Rhine* and *Waal* in the present kingdom of the Netherlands. But some geographers assign other positions to Burginatium. [G. L.]

BURGUNDIO'NES, BURGUNDII (Βουργουνδιῶνες, Βουργοῦνδοι, Βουργίωνες, Φρουγουνδιῶνες, Οὐρουγοῦνδοι), are mentioned first by Pliny (iv. 28) as a branch of the Vandals, along with the Varini, Carini, and Guttones. This circumstance proves that they belonged to the Gothic stock; a fact which is also recognised by Zosimus (i. 27, 68), Agathias (i. 3, p. 19, ed. Bonn), and Mamertinus (*Paneg.* ii. 17). But this view is in direct contradiction to the statement of Ammianus Marcellinus (xviii. 5), who declares them to be descendants of ancient Roman settlers, and of Orosius, who relates that Drusus, after subduing the interior of Germany, established them in different camps; that they grew together into a great nation, and received their name from the fact that they inhabited numerous townships, called *burgi*. The difficulty arising from these statements is increased by the different ways in which the name is written, it becoming a question whether all the names given at the head of this article belong to one or to different peoples. Thus much, at any rate, seems beyond a doubt, that a branch of the Vandal or Gothic race bore the name of Burgundians. In like manner, it is more than probable, that the Buguntes mentioned by Ptolemy (ii. 11. §§ 15, 18) as occupying the country between the Vistula and Viadus are the same as the Burgundiones. That they dwelt on and about the Vistula is clear also from the statement, that Fastida, king of the Gepidae about the Carpathians, almost destroyed the Burgundiones. (Jornand. *De Reb. Goth.* 17; comp. Mamert. *Paneg.* ii. 17; Zosim. i. 68.) It is accordingly a fact beyond all doubt, that the Burgundians were a Gothic people dwelling in the country between the Viadus and the Vistula.

But besides these north-eastern Burgundians, others occur in the west as neighbours of the Alemanni, without its being possible to say what connection existed between them; for history affords no information as to how they came into the south-west of Germany, where we find them in A. D. 289. (Mamert. *Paneg.* i. 5.) At that time they seem to have occupied the country about the Upper Maine, and were stirred up by the emperor Valentinian against the Alemanni, with whom they were often at war. (Amm. Marc. xxviii. 5; comp. xviii. 2.) An army of 80,000 Burgundians then appeared on the Rhine, but without producing any permanent results, for they did not obtain any settlements there until the time of Stilico, in consequence of the great commotion of the Vandals, Alani, and Suevi against Gaul. (Oros. vii. 32.) In the year 412, Jovinus was proclaimed emperor at Mayence, partly through the influence of the Burgundian king Gunthahar. The year after this they crossed over to the western bank of the Rhine, where for a time their further progress was checked by Aëtius. (Sidon. Apollin. *Carm.* vii. 233.) But notwithstanding many and bloody defeats, in one of which their king Gunthahar was slain, the Burgundians advanced into Gaul, and soon adopted Christianity. (Oros. *l. c.*; Socrates, vii. 30.) They established themselves about the western slope of the Alps, and founded a powerful kingdom.

Although history leaves us in the dark as to the manner in which the Burgundians came to be in the south-west of Germany, yet one of two things must have been the case, either they had migrated thither from the east, or else the name, being an appellative, was given to two different German peoples, from the circumstance of their living in burgi or burghs. (Comp. Zeuss, *Die Deutschen u. d. Nachbar Stämme*, p. 443, foll.; v. Wersebe, *Völker u. Volkerbünd.* p. 256, foll.; Latham, on *Tacit. Germ.* Epileg. p. lv. foll.) [L. S.]

BU'RII or BURI (Βοῦροι, Βοῦῤῥοι), a German people, which is first mentioned by Tacitus (*Germ.* 43) in connection with the Marsigni, Gothini, and as dwelling beyond the Marcomanni and Quadi. (Ptol. ii. 11. § 20; Dion Cass. lxviii. 8; Jul. Capitol. *Ant. Philos.* 22.) We must therefore suppose that the Burii dwelt to the north-east of the Marcomanni and Quadi, where they seem to have extended as far as the Vistula. In the war of Trajan against the Dacians, the Burii were his allies (Dion Cass. lxviii. 8); in the time of M. Aurelius, they likewise sided with the Romans, while they are said to have been constantly at war with the Quadi (lxxi. 18). In the peace concluded by Commodus with the Marcomanni and Quadi, the Burii are expressly mentioned as friends of the Romans (lxxii. 2). But this friendly relation between them and the Romans was not without interruptions (lxxii. 3; Jul. Capit. *l. c.*). Ptolemy, who calls them Λούγιοι Βοῦροι, seems to consider them as a branch of the Lygian race, while Tacitus regards them as a branch of the Suevi. (Zeuss, *Die Deutschen u. d. Nachbarstämme*, pp. 126, 458; Wilhelm, *Germanien*, p. 246.) [L. S.]

BURNUM, a town of Liburnia in Illyricum, of uncertain site. (Plin. iii. 21. s. 26; Tab. Peut.)

BURSAO, BURSAVOLENSES. [AUTRIGONES.]

BURUNCUS, a station on the left bank of the Rhine, between *Cologne* and Novesium (*Neuss*). The first place on the road to Novesium from *Cologne*, in the Antonine Itin. is Durnomagus, then Buruncus, and then Novesium. But D'Anville ingeniously attempts to show that Durnomagus and Buruncus should change places in the old road book, and thus Buruncus may be at *Woringen* or near it. Some of these obscure positions not worth the trouble of inquiry, especially when we observe that three critics differ from D'Anville, and each differs from the other as to the site of Buruncus. [G. L.]

BUSAE. [BUDII.]

BUSI'RIS (Βούσιρις, Herod. i. 59, 61, 165; Strab. xvii. p. 802; Plut. *Is. et Osir.* 30; Ptol. iv. 5. § 51; Plin. v. 9. *s.* 11: Hierocl. p. 725; Steph. B. *s. v.*: *Eth.* Βουσιρίτης), the modern *Busyr* or *Abousir*, of which considerable ruins are still extant, was the chief town of the nome Busirites, in Egypt, and stood S. of Sais, near the Phatnitic mouth and on the western bank of the Nile. The town and nome of Busiris were allotted to the Hermotybian division of the Egyptian militia. It was regarded as one of the birthplaces of Osiris, as perhaps, etymologically

the name itself implies. The festival of Isis at Busiris came next in splendour and importance to that of Artemis at Bubastis in the Egyptian calendar. The temple of Isis, indeed, with the hamlet which sprang up around it, stood probably at a short distance without the walls of Busiris itself, for Pliny (v. 10. s. 11) mentions "Isidis oppidum" in the neighbourhood of the town. The ruins of the temple are still visible, a little to the N. of *Abousir*, at the hamlet of *Bahbeyt*. (Pococke, *Travels*, vol. i. p. 34; Minutoli, p. 304.)

Busiris was also the name of a town in Middle Egypt, in the neighbourhood of Memphis and the Great Pyramid. Its site is marked by the modern village of *Abousir* in that district. There are considerable catacombs near the ancient town (Pliny xxxvi. 12. s. 16): indeed to the S. of Busiris one great cemetery appears to have stretched over the plain. The Heptanomite Busiris was in fact a hamlet standing at one extremity of the necropolis of Memphis. [W. B. D.]

BU'TADAE, a demus of Attica, of uncertain site. [See p. 333, No. 33.]

BUTHOE or BUTUA (Βυθόη, Steph. B. *s. v.*; Scylax, p. 9; Butua, Plin. iii. 23. s. 26; Βουλούα, an error for Βουτούα, Ptol. ii. 16. § 5: *Eth.* Βουθοαῖος: *Budoa*), a town of Dalmatia in Illyricum, said to have been founded by Cadmus, after he had migrated from Thebes and taken up his residence among the Illyrian tribe of the Enchelees.

BUTHRO'TUM (Βουθρωτόν, Strab., Ptol.; Βουθρωτός, Steph. B.: *Eth.* Βουθρώτιος), a town of Thesprotia in Epirus, was situated upon a peninsula at the head of a salt-water lake, which is connected with a bay of the sea by means of a river three or four miles in length. This lake is now called *Vutzindró*, and bore in ancient times the name of PELODES (Πηλώδης), from its muddy waters; for though Strabo and Ptolemy give the name of Pelodes only to the harbour (λιμήν), there can be little doubt that it belonged to the lake as well. (Strab. vii. p. 324; Ptol. iii. 14. § 4; called Παλόεις by Appian, *B. C.* v. 55.) The bay of the sea with which the lake of *Vutzindró* is connected is called by Ptolemy the bay of Buthrotum, and must not be confounded with the inland lake Pelodes. The bay of Buthrotum was bounded on the north by the promontory Posidium.

Buthrotum is said to have been founded by Helenus, the son of Priam, after the death of Pyrrhus. Virgil represents Aeneas visiting Helenus at this place, and finding him married to Andromache. (Virg. *Aen.* iii. 291, seq.; Ov. *Met.* xiii. 720.) Virgil describes Buthrotum as a lofty city ("*celsam* Buthroti ascendimus urbem"), resembling Troy: to the river which flowed from the lake into the sea Helenus had given the name of Simois, and to a dry torrent that of Xanthus. But its resemblance to Troy seems to have been purely imaginary; and the epithet of "lofty" cannot be applied with any propriety to Buthrotum. The town was occupied by Caesar afted he had taken Oricum (Caes. *B. C.* iii. 16); and it had become a Roman colony as early as the time of Strabo. (Strab. *l. c.*; Plin. iv. 1. s. 1.) Atticus had an estate at Buthrotum. (Cic. *ad Att.* iv. 8, *ad Fam.* xvi. 7.)

"The ruins of Buthrotum occupy a peninsula which is bounded on the western side by a small bay in the lake, and is surrounded from the north to the south-east by the windings of the river just above its issue. The walls of the Roman colony still exist in the whole circumference, which is about a mile, and are mixed with remains both of later and of Hellenic work, showing that the city always occupied the same site. The citadel was towards the bay of the lake, where the side of the peninsula is the highest and steepest." (Leake, *Northern Greece*, vol. i. p. 99, seq.; comp. Prokesch, *Denkwürdigk.* vol. i. p. 22, seq.)

BU'TICUS LACUS (ἡ Βουτικὴ λίμνη, Strab. xvii. p. 802), was one of the lagoons formed by the Nile near its junction with the Mediterranean Sea. The Butic Lake, the modern *Burlos*, was northward of the town of Butos, and contained the islet of Chemmis or Chembis, from which the nome Chemmites derived its appellation. (Steph. B. p. 690). This island which at one time was said to be floating, was the original site of the temple of Buto, since here Isis took refuge when pursued by Typhon. (Anton. Lib. *Metam. Fab.* 28.) [W. B. D.]

BUTOS, or BUTO (οὖτος, Herod. ii. 59, 63, 155; Βουτώ, Steph. B. p. 183, *s. v.*: *Eth.* Βούτιος, Βουτοΐτης, Βουτοίτης), was the capital town, or according to Herodian, merely the principal village of the Delta, which Herodotus (*l. c.*) calls the Chemmite nome; Ptolemy the Phthenothite (Φθενότης, iv. 5. § 48) and Pliny (v. 9. s. 11) Ptenetha. Butos stood on the Sebennytic arm of the Nile, near its mouth, and on the southern shore of the Butic Lake. (Βουτικὴ λίμνη, Strab. xvii. p. 802.) The town was celebrated for its monolithite temple (Herod. ii. 155) and oracle of the goddess Buto (Aelian. *V. Hist.* ii. 41), whom the Greeks identified with Leto or Latona. A yearly feast was held there in honour of the goddess. At Butos there was also a sanctuary of Apollo (Horus) and of Artemis (Bubastis). It is the modern *Kem Kasir*. (Champollion, *l'Egypte*, vol. ii. p. 227.) The name Buto (Βουτώ) of the Greeks is nearly allied to that of Muth or Maut, which is one of the appellations of Isis, as "Mother of the World." (Plut. *Is. et Osir.* 18, 38.) The shrewmouse was worshipped at Butos. (Herod. ii. 67.) [W. B. D.]

BU'TRIUM (Βούτριον), a town of Gallia Cispadana, placed by Strabo on the road from Ravenna to Altinum. This is confirmed by the Tab. Peut., which places it 6 miles from Ravenna: Pliny also says that it was near the sea-coast, and calls it an Umbrian city. Strabo, on the other hand, says it was a colony or dependency of Ravenna. (Strab. v. p. 214; Plin. iii. 15. s. 20; Steph. Byz. *s. v.* Βούτριον; Tab. Peut.) No remains of it are extant, and its site cannot be identified: there is a place still called *Budrio* about 10 miles NE. of *Bologna*, but this is much too far from the sea-coast: the ancient Butrium must have been near the entrance of the lagunes of *Comacchio*. The Butrium mentioned by Ptolemy (iii. 1. § 31) among the cities of the Cenomani, in conjunction with Tridentum, must have been quite a different place. [E. H. B.]

BUTUA. [BUTHOE.]

BUTUNTUM (Βυτοντῖνος: *Eth.* Butuntinensis: *Bitonto*), an inland city of Apulia, distant 12 miles W. from Barium, and about 5 from the sea. From its position it must certainly have belonged to the Peucetian district of Apulia, though reckoned by Pliny, as well as in the Liber Coloniarum, among the cities of Calabria (Plin. iii. 11. s. 16; Lib. Colon. p. 262). It is correctly placed by the Itineraries on the road from Barium to Canusium, 12 M.P. from Barium and 11 from Rubi. (Itin. Ant. p. 117; Itin. Hier. p. 609.) No mention of it is found in history

but its coins attest that it must have been in early times a place of some importance. They bear the Greek legend ΒΥΤΟΝΤΙΝΩΝ, and the types indicate a connexion with Tarentum. (Eckhel, vol. i. p. 144; Millingen, *Num. de l'Italie*, p. 150.) [E. H. B.]

BUXENTUM, called by the Greeks PYXUS (Πυξοῦς: Ptolemy however writes the name Βούξεντον: *Eth.* Πυξούντιος, Buxentinus: *Policastro*), a city on the W. coast of Lucania, on the Gulf now known as the *Golfo di Policastro*, which appears to have been in ancient times called the Gulf of Laus. The Roman and Greek forms of the name are evidently related in the same manner as Acragas and Agrigentum, Selinus and Selinuntium, &c. All authors agree in representing it as a Greek colony. According to the received account it was founded as late as B. C. 470 by a colony from Rhegium, sent out by Micythus, the successor of Anaxilaus. (Diod. xi. 59; Strab. vi. p. 253; Steph. B. *s.v.* Πυξοῦς.) But from coins still extant, of a very ancient style of fabric, with the name of Pyxus (ΠΥΞΟΕΣ) on the one side, and that of Siris on the other, it is evident that there must have been a Greek city there at an earlier period, which was either a colony of Siris, or of kindred origin with it. (Eckhel, vol. i. p. 151; Millingen, *Numismatique de l'Italie*, p. 41.) The colony of Micythus according to Strabo did not last long: and we hear no more of Pyxus until after the conquest of Lucania by the Romans, who in B. C. 197 selected it as the site of one of the colonies which they determined to establish in Southern Italy. The settlement was not however actually made till three years afterwards, and in B. C. 186 it was already reported to be deserted, and a fresh body of colonists was sent there. (Liv. xxxii. 29, xxxiv. 42, 45, xxxix. 22; Vell. Pat. i. 15.) No subsequent mention of it is found in history, and it seems to have never been a place of much importance, though its continued existence as a municipal town of Lucania is attested by the geographers as well as by the Liber Coloniarum, where the "ager Buxentinus" is erroneously included in the province of the Bruttii. (Plin. iii. 5. s. 10; Strab. vi. p. 253; Mela ii. 4; Ptol. iii. 1. § 8; Lib. Colon. p. 209.) It appears to have still been the see of a bishop as late as A. D. 501. (Romanelli, vol. i. p. 375.)

Strabo tells us (*l. c.*) that besides the city there was a promontory and a river of the same name. The latter still retains its ancient name, the river which flows near the modern city of *Policastro* being still called the *Busento*. The promontory is probably the one now called *Capo degli Infreschi*, which bounds the Gulf of *Policastro* on the W. Cluverius speaks of the vestiges of an ancient city as still visible at *Policastro*: but no ruins appear to be now extant there: and the only ancient remains are two inscriptions of the reign of Tiberius. There is, however, little doubt that *Policastro*, the name of which dates from about the 11th century, occupies nearly, if not precisely, the site of Buxentum. (Cluver. *Ital.* p. 1261; Romanelli, vol. i. p. 373.)

The coin of Pyxus above alluded to, is figured under SIRIS. [E. H. B.]

BU'ZARA. [MAURETANIA.]

BYBLOS (Βύβλος, Steph. B.; Βίβλος, Zosim. i. 58: *Eth.* Βύβλιος, Βίβλιος, *LXX.*; Ptol. v. 15; Plin. v. 20; Pomp. Mel. i. 12. § 3; Hierocl.; Geogr. Rav.: *Jubeil*), a city of Phoenicia, seated on a rising ground near the sea, at the foot of Lebanon, between Sidon and the Promontory Theoprosopon (Θεοῦ πρόσωπον). (Strab. xvi. p. 755.) It was celebrated for the birth and worship of Adonis or Syrian Thummuz. (Eustath. *ad Dionys.* v. 912; Nonnus, *Dionys.* iii. v. 109; Strab. *l. c.*) "The land of the Giblites," with all Lebanon, was assigned to the Israelites (*Josh.* xiii. 5), but they never got possession of it. The Giblites are mentioned as "stonesquarers" (1 *Kings*, v. 18), and supplied caulkers for the Tyrian fleet (*Ezek.* xxvii. 9). Enylus, king of Byblus, when he learnt that his town was in the possession of Alexander, came up with his vessels, and joined the Macedonian fleet. (Arrian, *Anab.* ii. 15. § 8, 20. § 1.) Byblus seems afterwards to have fallen into the hands of a petty despot, as Pompey is described as giving it freedom, by beheading the tyrant. (Strab. *l. c.*) This town, under the name of Giblah (Abulf. *Tab. Syr.* p. 94; Schulten's *Index Vit. Salad. s. v. Sjiblia*), after having been the see of a bishop, fell under Moslem rule. The name of the modern town is *Jubeil*, which is enclosed by a wall of about a mile and a half in circumference, apparently of the time of the Crusades. (Chesney, *Exped. Euphrat.* vol. i. p. 453.) It contains the remains of an ancient Roman theatre: the "cavea" is nearly perfect, with its concentric ranks of seats, divided by their "praecinctiones," "cunei," &c., quite distinguishable. (Thomson. *Bibl. Sacra*, vol. v. p. 259.) Many fragments of fine granite columns are lying about. (Burkhardt, *Syria*, p. 180.) Byblus was the birthplace of Philon, who translated Sanchuniathon into Greek. The coins of Byblus have frequently the type of Astarte; also of Isis, who came here in search of the body of Osiris. (Eckhel, vol. iii. p. 359.)

(Winer, *Real Wörtbuch, s.v.*; Rosenmüller, *Bibl. Alt.* vol. ii. pt. 1, p. 17; *Mém. de l'Acad. des Inscr.* vol. xxxiv. p. 252.) [E. B. J.]

BYBLOS (Βύβλος, Steph. B. *s. v.*; Ctesias, *ap. Phot. Bibl.* ed. Bekker, p. 33: *Eth.* Byblites), a town of the Egyptian Delta, supposed by some to be the modern *Babel*. Byblos was seated in the marshes, and, as its name imports, was in the centre of a tract where the Byblus or Papyrus plant—Cyperus papyrus of Linnaeus, the Cyperus Antiquorum of recent botanists—grew in abundance. The root of the byblus furnished a coarse article of food, which the Greeks ridiculed the Egyptians for eating. (Aeschyl. *Suppl.* 768.) Its leaves and rind were manufactured into sandals and girdles for the inferior order of Egyptian priests, and into sailcloth for the Nile-barges (Theophr. *Hist. Plant.* iv. 8); while its fibres and pellicles were wrought into the celebrated papyrus, which, until it was superseded by cotton paper or parchment about the eleventh century A. D., formed a principal article of Egyptian export, and the writing material of the civilised world. Pliny (xiii. 11. s. 12) has left an elaborate description of the manufacture, and Cassiodorus (*Epist.* xi. 38) a pompous panegyric of the Papyrus or Byblus plant. Its history is also well described by Prosper Alpinus, in his work "de Medicina Aegyptiorum." [W. B. D.]

BYCE, BYCES. [BUCE.]

BYLAZORA (Βυλάζωρα: *Velesá*, or *Velessó*), the greatest city of Paeonia in Macedonia, was situated on the Upper Axius, and near the passes leading from the country of the Dardani into Macedonia. (Pol. v. 97; Liv. xliv. 26; Leake, *Northern Greece*, vol. iii. p. 470.) It was a different place from the residence of the Paeonian kings on the river Astycus. [ASTYCUS.]

BYLLIS. [BULLIS.]

BYRSA. [CARTHAGO.]

BYSNAEI (*Βυσναῖοι*, Steph. *s. v.*), a tribe of Bebryces. [BEBRYCES.] [G. L.]

BYZACE'NA. [BYZACIUM.]

BYZACII. [BYZACIUM.]

BYZA'CIUM, BYZACE'NA (*sc.* regio provincia: *Βυζάκιον*, Procop. *B. V.* ii. 23, *de Aed.* vi. 6; *ἡ Βυζακία*, Steph. B., *ἡ Βυσσᾶτις*, Polyb. iii. 23, *ἡ Βυζακὶς χώρα*, Polyb. *ap.* Steph. B.; *ἡ Βυζακῖτις χώρα*, Ptol. iv. 3. § 26: *Eth.* *Βύζαντες*, *Βυζάκιοι*, Strab. ii. p. 131, *Βυζακηνοί*, Byzacii, Byzaceni), a district of N. Africa, lying to the S. of ZEUGITANA, and forming part of the Carthaginian territory, afterwards the S. part of the Roman province of Africa, and at last a distinct province.

In the exact position of the later Byzacium, Herodotus (iv. 194, 195) places a Libyan people called the Gyzantes (*Γύζαντες*, others read *Ζύγαντες*), who possessed the art of making artificial honey, in addition to the plentiful supply furnished by the bees of the country, and who painted themselves red, and ate apes, which were abundant in their mountains. (Comp. Eudoxus *ap.* Apol. Dysc. *de Mirab.* p. 38.) They dwelt opposite to the island of Cyraunis, which, from the description of Herodotus, can be none other than Cercina (*Karkenah*). Thus their position corresponds exactly with that of Byzacium, a district still famous for its natural honey, and where, as in other parts of *Tunis*, a sort of artificial honey is made from the date-palm: monkeys, too, are numerous in its mountainous parts. As to the name, the later writers place the Byzantes or Byzacii in the same position, and Stephanus (*s. v.* *Βύζαντες*) expressly charges Herodotus with an error in writing *Γύζαντες* for *Βύζαντες*. There is, therefore, little doubt that in the name of this Libyan people we have the origin of that of Byzacium. The limits of Byzacium under the Carthaginians, and its relation to the rest of their territory, have been explained under AFRICA (p. 68, b.); and the same article traces the political changes, by which the name obtained a wider meaning, down to the constitution of the separate province of Byzacium, or the Provincia Byzacena, as an imperial province, governed by a consularis, with Hadrumetum for its capital. This constitution is assigned to Diocletian, on the authority of inscriptions which mention the PROV. VAL. BYZACENA as early as A. D. 321 (Gruter, pp. 362, No. 1, 363, Nos. 1, 3; Orelli, Nos 1079, 3058, 3672). This province contained the ancient district of Byzacium, on the E. coast, a part of the Emporia on the Lesser Syrtis, and W. of these the inland region which originally belonged to Numidia. It was bounded on the E. by the Mediterranean and Lesser Syrtis; on the N. it was divided from Zeugitana by a line nearly coinciding with the parallel of 36° N. lat.; on the W. from Numidia by a S. branch of the Bagradas; on the SE. from Tripolitana, by the river Triton; while on the S. and SW. the deserts about the basin of the Palus Tritonis formed a natural boundary. The limits are somewhat indefinite in a general description, but they can be determined with tolerable exactness by the lists of places in the early ecclesiastical records, which mention no less than 115 bishops' sees in the province in the fifth century. (*Notit. Prov. Afr.*, Böcking, *N. D.* vol. ii. pp. 615, foll.) Among its chief cities were, on the S. coast, beginning from the Lesser Syrtis, THENAE, ACHILLA, THAPSUS, LEPTIS MINOR, RUSPINA, and HADRUMETUM, the capital: and, in the interior, ASSURAE, TUCCA TEREBINTHINA, SUFETULA, THYSDRUS, CAPSA, besides THELEPTE, and THEVESTE, which, according to the older division, belonged to NUMIDIA. [P. S.]

BYZANTES. [BYZACIUM.]

BYZA'NTIUM. [CONSTANTINOPOLIS.]

BYZE'RES (*Βύζηρες*), a nation in Pontus. Stephanus (*s. v.*), who mentions the Byzeres, adds that there is a *Βυζηρικὸς λιμήν*, whence we might infer that the Byzeres were on the coast, or at least possessed a place on the coast. Strabo (p. 549) mentions several savage tribes which occupied the interior above Trapezus and Pharnacia—the Tibareni, the Cheldaei, the Sanni who were once called Macrones, and others. He adds, that some of these barbarians were called Byzeres; but he does not say, as some interpret his words, that these Byzeres were the same as the Heptacometae. Dionysius (*Perieg.* 765) mentions the Byzeres in the same verse with the Becheires or Bechiri. The name of the people must have been well known as it occurs in Mela (i. 19), and in Pliny (vi. 3); but there are no means of fixing their position more precisely than Strabo has done. [G. L.]

C

CA'BALEIS. [CABALIS.]

CA'BALIS (*Καβαλίς*, *Καβαλλίς*, *Καβαλία*: *Eth.* *Καβαλεύς*, *Καβάλιοι*), a people of Asia Minor. Herodotus (iii. 90) mentions the Cabalii in the same nome (the second) with the Mysi, Lydi, Lasonii, and Hygenneis. He places the Milyeis in the first nome with the Lycians, Carians, and others. In another passage (vii. 77) he speaks of "Cabelees the Maeonians" (*Καβηλέες οἱ Μῆονες*), and says that they are called Lasonii. Nothing can be got from these two passages. Strabo (p. 629) speaks of the Cibyratis and Caballis: in another place (p. 631) he says that the Cibyratae are said to be descendants of those Lydians who occupied the Caballis; and again, "they say that the Cabaleis were Solymi." Strabo admits the difficulty of giving an exact account of this and some other parts of Asia, partly owing to the Romans not making their political divisions according to peoples, but adopting a different principle in determining their Conventus Juridici. Pliny (v. 27) places Cabalia in the interior of Lycia, and names its three cities Oenoanda, Balbura, and Bubon; and Ptolemy (v. 3) assigns the same three cities to Carbalia, which manifestly ought to be Cabalia. We thus obtain in a general way the position of Cabalia or Cabalis, if we can ascertain the sites of these cities, and they have been determined of late years [BALBURA; BUBON; OENOANDA]. The map which accompanies Spratt's *Lycia* places Balbura not far below the source of the Indus of Lycia, Bubon not far from the source of the Xanthus, and Oenoanda lower down on the same river. But Ptolemy has also Carbalia, that is Cabalia, in Pamphylia (v. 5), to which he assigns many towns — Cretopolis, Termessus, and even a town Milyas; and Pliny again (v. 32) makes a part of Galatia border on the Cabalia of Pamphylia. Stephanus mentions only a city Cabalis; though he quotes Strabo who, indeed, speaks of "Cibyra the great, Sinda, and Caballis," and perhaps he means to say that there is a city Caballis. From all this confusion we can now extract the fact that there were three cities at least, which have been enume-

rated above, in the Cabalis or Cabalia; and we can make Strabo agree with Pliny and Ptolemy, by supposing that these three cities (Balbura, Bubon, and Oenoanda) which Strabo mentions, belonged to his territory Caballis, though he does not say that they did. The connection of Cibyra with the towns of the Cabalis is explained under CIBYRA. [G. L.]

CA'BASA (Κάβασα, Ptol. iv. 5. § 48; Plin. v. 9, s. 9: Hierocles, p. 724; Κάβασσα, Conc. Ephes. p. 531, and Καύασσα), in the Delta of Egypt, the modern *Khabas*, was the principal town of the nome Cabasites. It was seated a little to the north of Sais and Naucratis. Remains of the ancient Cabasa are believed to exist at *Koum-Fara'un*, and in this district the names of several villages, e. g. *Khabâs-el-Meh*, *Khabâs-omar*, *Koum-Khabâs* — recall the Coptic appellation of the capital of the Cabasite nome. D'Anville (*Egypte*, p. 75) and Champollion (ii. p. 234) ascribe to the castle of *Khabas* the site of the original Cabasa. [W. B. D.]

CABASSUS (Καβασσός, or Καβησσός: *Eth.* Καβήσσιος, Καβησσίτης). According to Apion, quoted by Stephanus, a village of Cappadocia between Tarsus and Mazaca; not the Cabessus of Homer (*Il.* xiii. 363), certainly. Ptolemy places it in Cataonia. [G. L.]

CABE'LLIO (Καβαλλίων, Strab. p. 179: *Eth.* Καβελλιωνήσιος, Καβελλιωνίτης: *Cavaillon*), a town in Gaul, on the Druentia (*Durance*), and on a line of road between Vapincum (*Gap*) and Arelate (*Arles*). Stephanus (*s. v.* Καβελλίων), on the authority of the geographer Artemidorus, makes it a Massaliot foundation. Walckenaer (*Géog. &c.* vol. i. p. 187) says that M. Calvet has proved, in a learned dissertation, that there was a company of Utricularii (boatmen, ferrymen) at Cabellio, for the crossing of the river. Such a company or corpus existed at Arelate and elsewhere. Cabellio was a city of the Cavares, who were on the east bank of the Rhone. Pliny calls it an Oppidum Latinum (iii. 4), and Ptolemy a Colonia. It was a town of some note, and many architectural fragments have been found in the soil. The only thing that remains standing is a fragment of a triumphal arch, the lower part of which is buried in the earth. In the Notitia of the Gallic Provinces "civitas Cabellicorum" is included in Viennensis. [G. L.]

COIN OF CABELLIO.

CABILLO'NUM or CABALLI'NUM, with other varieties. Coins of this place, with the epigraph Caballo, are mentioned. Strabo (p. 192) has Καβυλλῖνον (*Eth.* Cabellinensis: *Châlon-sur-Saône*), a town of the Aedui, on the west bank of the Arar (*Saône*), which in Caesar's time (*B. G.* vii. 42) was a place which Roman negotiators visited or resided at. At the close of the campaign against Vercingetorix (B. C. 52), Q. Cicero, the brother of the orator, wintered here. The Antonine Itin. places it 33 M. P. or 22 Gallic leagues from *Autun*. Ammianus (xv. 11) mentions this place, under the name Cabillonus, as one of the chief places of Lugdunensis Prima; and from the Notitia Imp. it appears that the Romans kept a fleet of some description here. [G. L.]

CABI'RA (τὰ Κάβειρα), a place in Pontus, at the base of the range of Paryadres, about 150 stadia south of Eupatoria or Magnopolis, which was at the junction of the Iris and the Lycus. Eupatoria was in the midst of the plain, but Cabira, as Strabo says (p. 556), at the base of the mountain range of Paryadres. Mithridates the Great built a palace at Cabira; and there was a water-mill there (ὑδραλέτης), and places for keeping wild animals, hunting grounds, and mines. Less than 200 stadia from Cabira was the remarkable rock or fortress called Caenon (Καινόν), where Mithridates kept his most valuable things. Cn. Pompeius took the place and its treasures, which, when Strabo wrote, were in the Roman Capitol. In Strabo's time a woman, Pythodoris, the widow of King Polemo, had Cabira with the Zelitis and Magnopolitis. Pompeius made Cabira a city, and gave it the name Diopolis. Pythodoris enlarged it, and gave it the name Sebaste, which is equivalent to Augusta; and she used it as her royal residence. Near Cabira probably (for the text of Strabo is a little uncertain, and not quite clear; Groskurd, transl. vol. ii. p. 491, note) at a village named Ameria, there was a temple with a great number of slaves belonging to it, and the high priest enjoyed this benefice. The god Men Pharnaces was worshipped at Cabira. Mithridates was at Cabira during the winter that L. Lucullus was besieging Amisus and Eupatoria. (Appian, *Mithrid.* c. 78.) Lucullus afterwards took Cabira. (Plutarch, *Lucullus*, c. 18.) There are some autonomous coins of Cabira with the epigraph Καβηρων.

Strabo, a native of Amasia, could not be unacquainted with the site of Cabira. The only place that corresponds to his description is *Niksar*, on the right bank of the Lycus, nearly 27 miles from the junction of the Iris and the Lycus. But *Niksar* is the representative of Neocaesarea, a name which first occurs in Pliny (vi. 3), who says that it is on the Lycus. There is no trace of any ancient city between *Niksar* and the junction of the two rivers, and the conclusion that *Niksar* is a later name of Cabira, and a name more recent than Sebaste, seems certain. (Hamilton's *Researches, &c.* vol. i. p. 346.) Pliny, indeed, mentions both Sebastia and Sebastopolis in Colopena, a district of Cappadocia, but nothing certain can be inferred from this. Neocaesarea seems to have arisen under the early Roman emperors. Cramer (*Asia Minor*, vol. i. p. 315) states that the earliest coins of Neocaesarea bear the effigy of Tiberius; but Sestini, quoted by Forbiger (*Geog.* vol. ii. p. 428), assigns the origin of Neocaesarea to the time of Nero, about A. D. 64, when Pontus Polemoniacus was made a Roman province. The simplest solution of this question is that Neocaesarea was a new town, which might be near the site of Cabira. It was the capital of Pontus Polemoniacus, the birth-place of Gregorius Thaumaturgus, and the place of assembly of a council in A. D. 314. Ammianus Marcellinus (xxvii. 12) calls it the most noted city of Pontus Polemoniacus: it was, in fact, the metropolis. According to Paulus Diaconus the place was destroyed by an earthquake.

Cramer supposes that Neocaesarea is identical with Ameria, and he adds that Neocaesarea was "the principal seat of pagan idolatry and superstitions, which affords another presumption that it had risen on the foundation of Ameria and the worship of Men Pharnaces." But Ameria seems to have been at or near Cabira; and all difficulties are reconciled by supposing that Cabira, Ameria, Neo-

caesarea were in the valley of the Lycus, and if not on the same spot, at least very near to one another. Stephanus (*s. v.* Νεοκαισάρεια : *Eth.* Νεοκαισαριεύς) adds to our difficulties by saying or seeming to say that the inhabitants were also called Adrianopolitae. Where he got this from, nobody can tell.

Hamilton was informed at *Niksar* that on the road from *Niksar* to *Siwas*, and about fourteen hours from *Niksar*, there is a high perpendicular rock, almost inaccessible on all sides, with a stream of water flowing from the top, and a river at its base. This is exactly Strabo's description of Caenon. [G. L.]

CABUBATHRA MONS (Καβούβαθρα ὄρος), a mountain on the SW. coast of Arabia, mentioned by Ptolemy (vi. 7. §§ 8, 12) as the western extremity of the country of the Homeritae, 1½° E. of the Straits of the Red Sea (*Bab-el-Mandeb*). This situation would nearly coincide with the *Jebel Kurruz* in Capt. Haines's *Chart*, which rises to the height of 2772 feet. [G. W.]

CABURA BACTRIANAE. [Ortospana.]

CABY'LE or CALYBE (Καβύλη, Καλύβη), a town in the interior of Thrace, west of Develtus, on the river Tonsus. It was colonised by Philip with rebellious Macedonians, and afterwards taken by M. Lucullus. (Dem. *de Cherson.* p. 60; Pol. xiii. 10; Strab. vii. p. 330; Ptol. iii. 11. § 12; Eutrop. vi. 8; Sext. Ruf. *Brev.* 9; Plin. iv. 18; Steph. B. *s. v.*) Cabyle is probably the same as the town of Goloë mentioned by Anna Comnena (x. pp. 274, 281), and is generally identified with the modern *Golewitza* or *Chalil-Ovasi.* [L. S.]

CACHALES (Καχάλης), a river of Phocis, rising in Mt. Parnassus, and flowing by Tithorea into the Cephissus. (Paus. x. 32. § 11; Leake, *Northern Greece*, vol. ii. pp. 78, 81.)

CACYPARIS (Κακύπαρις), a river on the E. coast of Sicily, mentioned only by Thucydides (vii. 79) during the retreat of the Athenians from Syracuse; from whom we learn that it was the first river they met with in proceeding along the coast road towards Helorus, and had a course of some length, so as to afford a passage up its valley into the interior. It is still called the *Cassibili*, a considerable stream, which rises near *Palazzolo* (the ancient Acrae), about 15 miles from the sea, and flows through a deep valley. It is distant, by the road from Syracuse to *Noto*, 9 miles from the bridge over the Anapus. [E. H. B.]

CACYRUM (Κάκυρον : *Eth.* Cacyrinus), a town in Sicily, mentioned only by Pliny and Ptolemy, who afford no clue to its position. But it is supposed by Cluverius to be represented by the modern *Cassaro*, about 4 miles N. of *Palazzolo*, the ancient Acrae. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 14; Cluver. *Sicil.* p. 359.) [E. H. B.]

CADE'NA (τὰ Κάδηνα), a place in Cappadocia mentioned by Strabo (p. 537) as the royal residence of one Sisinas, who in the time of Strabo was aiming at the sovereignty of the Cappadocians. The site is unknown, though D'Anville fixed it at *Nigdé*. Cramer (*Asia Minor*, vol. ii. p. 132) writes the name Cadyna, and adds that Strabo seems to state that it was on the borders of Lycaonia; but see Groskurd's note (Transl. Strab. vol. ii. p. 452) on the passage. [G. L.]

CADI (Κάδοι: *Eth.* Καδηνός), a city of Mysia according to Stephanus (*s. v.* Κάδοι). Strabo (p. 576) mentions Cadi with Azani as a city of Phrygia Epictetus, but he adds that some assign it to Mysia Cadi is south of Azani, or *Tchavdour-Hissar*, and a traveller going from Azani to Cadi crosses the water-shed between the basin of the Rhyndacus and the basin of the Hermus. A town now called *Kedus* or *Ghiediz*, stands on a small stream, the *Ghiediz Chai*, which flows into the Hermus; but it is not the chief branch of the Hermus, though the Turks give the name of *Ghiediz Chai* to the Hermus nearer the sea. Hamilton says (*Researches*, &c., vol. i. p. 108) that hardly any ancient remains exist at *Ghiediz*, a place which he visited, but he heard of remains at a place higher up the Hermus, named *Ghieukler*, near the foot of *Morad Dagh*, Mons Dindymene, which contains the source of the Hermus. The coins of Cadi have not the Ethnic name Καδηνων, as Stephanus gives it, but Καδεηνων. The river Hermus is represented on them, but this will not prove, as Hamilton correctly observes, that the *Ghiediz Chai* is the Hermus, but only that Cadi was not far from the Hermus. Cadi may be the place which Propertius (iv. 6, 8) calls "Mygdonii Cadi." It was afterwards an episcopal see. [G. L.]

CADISTUS, a mountain of Crete, belonging to the ridge of the White Mountains. Its position has been fixed by Hoeck (*Kreta*, vol. i. p. 380) at *Cape Spádha*, the most northerly point of the whole island. In Ptolemy (iii. 17. § 8) this promontory bears the name of Ψάκον ἄκρον; while Strabo (x. p. 484) calls it Δικτύνναιον ἀκρωτήριον, and his remark that Melos lay at nearly the same distance from it as from the Scyllaean promontory, shows that he indicated this as the most northerly point of the island. The mass of mountain of which the cape was composed bore the double name of Cadistus and Dictynnaeus. (Plin. iv. 12. s. 20; Solin. 16.) It would seem that Pliny and Solinus were in error when they described Cadistus and Dictynnaeus as two separate peaks. Ψάκον ἄκρον and Cadistus were the original and proper names of the promontory and mountain, while Δικτύνναιον ἀκρώτηριον and ὄρος were epithets afterwards given, and derived from the worship and temple of Dictynna. [E. B. J.]

CADMEIA. [Thebae.]

CADMUS (Κάδμος), a mountain of Phrygia Magna (Strab. p. 578), which the Turks call *Baba Dagh:* the sides are well wooded. A river Cadmus flowed from the mountain, probably the *Gieuk Bonar*, which flows into the Lycus, a tributary of the Maeander. (Hamilton, *Researches*, &c., vol. i. p. 513.) The range of Cadmus forms the southern boundary of the basin of the Maeander in these parts. Pliny's remark about it (v. 29) does not help us. Ptolemy (v. 2) puts it in the latitude of Mycale, which is tolerably correct. [G. L.]

CADRA, in Cappadocia, an eminence on Taurus, which Tacitus (*Ann.* vi. 41) mentions with Davara, another strong place, which the Clitae occupied when they resisted Roman taxation. M. Trebellius compelled them to surrender. [G. L.]

CA'DREMA (Κάδρεμα: *Eth.* Καδρεμεύς), a city of Lycia, a colony of Olbia: the word is interpreted to mean "the parching of corn" (Steph. *s. v.* Κάδρεμα). It is conjectured (Spratt's *Lycia*, vol. i. p. 218) that the ruins at *Gormak*, at the extremity of the territory of Olbia [Attaleia] may be Cadrema. [G. L.]

CADRUSI (Plin. vi. 23. s. 25), a district on the Indian Caucasus or Paropamisus, in which was situated the Alexandreia founded by Alexander the Great on his march into Bactria. (Arrian, iii. 28,

iv. 22.) Solinus (c. 54) appears to have misunderstood the words of Pliny, and to have inferred that there was a city there called Cadrusia; for which, however, there is no authority. [V.]

CADURCI (*Καδούρκοι*), a Celtic people who occupied the basin of the Oltis (*Lot*), a branch of the *Garonne*, and lay between the Nitiobriges and Ruteni; on the north they bordered on the Arverni. The Cadurci were among the first who joined Vercingetorix (B. C. 52) in his rising against Caesar, and they took an active part in the war (*B. G.* vii. 4, 64). They are enumerated by Caesar with the Gabali and Velauni or Vellavi (*B. G.* vii. 75), as accustomed to admit the supremacy of the Arverni over them. In Caesar's text (vii. 75) they are called Eleutheri Cadurci; but the reading Eleutheri is doubtful (Oudendorp. ed. Caesar), and the name has never been satisfactorily explained. The chief town of the Cadurci was Divona, afterwards Civitas Cadurcorum, now *Cahors*. Uxellodunum, which was besieged and taken by Caesar (*B. G.* viii. 32, &c.), was also a town of the Cadurci. The territory of the Cadurci became Cadurcinum in the Latin middle age writers, which was corrupted into *Cahorsin* or *Caorsin*, whence the name *Querci*, in the ante-revolutionary geography of France. The territory of the Cadurci is supposed to have been co-extensive with the bishopric of *Cahors*.

The Cadurci wove linen cloth. (Strab. p. 191, Plin. xix. 1; and Forcellini, *s. v. Cadurcum.*) [G. L.]

CADU'SII (*Καδούσιοι*, Strab. xi. pp. 506, 507, 510, 525; Pol. v. 44; Ptol. vi. 2. § 5; Steph. B.; Arrian. *An.* iii. 19; Mela, i. 2. § 48; Plin. vi. 13. s. 15), a people inhabiting a mountainous district of Media Atropatene, on SW. shores of the Caspian Sea, between the parallels of 39° and 37° N. lat. This district was probably bounded on the N. by the Cyrus (*Kûr*), and on the S. by the Mardus or Amardus (*Sefid Rûd*), and corresponds with the modern district of Gilan. They are described by Strabo (xi. p. 525) as a warlike tribe of mountaineers, fighting chiefly on foot, and well skilled in the use of the short spear or javelin. They appear to have been constantly at war with their neighbours. Thus Diodorus (i. 33) speaks of a war between them and the Medians, which was not completely set at rest till Cyrus transferred the empire to the Persians; and they are constantly mentioned in the subsequent Eastern wars as the allies of one or other party. (Xen. *Hell.* ii. 1. § 13; Diod. xv. 18; Justin. x. 3; Pol. v. 79; Liv. xxxv. 48.) It is not improbable that the name of Gelae, a tribe who are constantly associated with them, has been preserved in the modern *Gilân*. [V.]

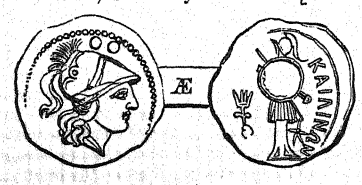
CADYANDA. [CALYNDA.]

CADYTIS. [JERUSALEM.]

CAECI'LIA CASTRA. [CASTRA CAECILIA.]

CAECILIO'NICUM. [CECILIONICUM.]

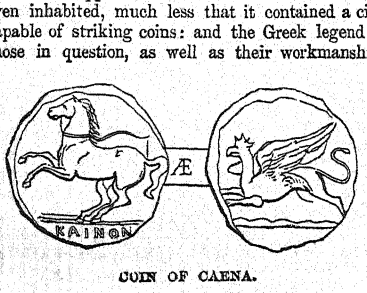
CAECINA or CECINA, a river of Etruria, mentioned both by Pliny and Mela, and still called *Cecina*. It flowed through the territory of Volaterrae, and after passing within 5 miles to the S. of that city, entered the Tyrrhenian sea, near the port known as the Vada Volaterrana. There probably was a port or emporium at its mouth, and Mela appears to speak of a town of the same name. The family name of Caecina, which also belonged to Volaterrae, was probably connected with that of the river, and hence the correct form of the name in Latin would be Caecina, though the MSS. both of Pliny and Mela have Cecina or Cecinna. (Plin. iii. 5. s. 8; Mela, ii. 4; Müller, *Etrusker*, vol. i. p. 405.) [E. H. B.]



CAECI'NUS (*Καικῖνος*, Thuc.: where the older editions have *Καϊκινός*), a river of Bruttium, in the territory of Locri, between that city and Rhegium. It is mentioned by Thucydides (iii. 103), in relating the operations of Laches with an Athenian fleet on the southern coast of Italy in B. C. 426, when that commander defeated on its banks a body of Locrian troops. It is also referred to by Pausanias, who tells us that it was the boundary between the territories of Locri and Rhegium, and mentions a natural phenomenon connected with it, which is referred by other writers to the neighbouring river HALEX:—that the cicadae (*τέττιγες*) on the Locrian side were musical, and chirped or sang as they did elsewhere; but those in the Rhegian territory were mute. (Paus. vi. 6. § 4.) Both Pausanias and Aelian relate that the celebrated Locrian athlete Euthymus disappeared in the stream of the Caecinus, in a manner supposed to be supernatural. (Paus. *l. c.*; Ael. *V. H.* viii. 18.) Local antiquarians suppose the small stream called on Zannoni's map the *F. Piscopio*, which flows by *Amendolea*, and enters the sea about 10 miles W. of *Cape Spartivento*, to be the ancient Caecinus; but there is no authority for this, except its proximity to the Halex, with which it appears to have been confounded. (Romanelli, vol. i. p. 137.)

The Caecinus of Pliny (iii. 10. s. 15), which he places N. of Scyllacium, is a false reading of the early editors for Carcines or Carcinus, the form found in the MSS. both of Pliny himself and Mela (ii. 4). It is evident that the river designated is wholly distinct from the Caecinus of Thucydides. [E. H. B.]

CAE'CUBUS AGER (*Καίκουβος*, Strab.), a district of Latium bordering on the Gulf of Amyclae, and included apparently in the territory of Fundi. The name seems to have been given to the marshy tract between Tarracina and Speluncae (*Sperlonga*), which extends about 8 miles along the coast, and 6 miles inland. Contrary to all analogy, these low and marshy grounds produced a wine of the most excellent quality, the praises of which are repeatedly sung by Horace, who appears to regard it as holding the first place among all the wines of his day; and this is confirmed by Pliny, who however tells us that in his time it had lost its ancient celebrity, partly from the neglect of the cultivators, partly from some works which had drained the marshes. But Martial speaks of it as still enjoying some reputation. (Hor. *Carm.* i. 20. 9, ii. 14, 25; Plin. xiv. 6. s. 8; Strab. v. p. 234; Mart. xii. 17. 6, xiii. 115; Colum. *R. R.* iii. 8. § 5; Dioscor. v. 10, 11; Athen. i. p. 27.) Strabo speaks of *τὸ Καίκουβον* as if it were a place, but it seems certain that there never was a town of the name. [E. H. B.]



CAE'LIA, CAE'LIUM, or CE'LIA (*Καιλία* or *Κελία*). 1. A town in the south of Apulia, mentioned both by Strabo and Ptolemy; of whom the former places it between Egnatia and Canusium, on the direct road from Brundusium to Rome; the latter enumerates it among the inland cities of the Peucetian Apulians. (Strab. vi. p. 282; Ptol. iii. 1. § 73.) The Tab. Peut. confirms the account of Strabo, and places Celia 9 miles from Butuntum, on the road to Egnatia; a distance which coincides with the position of a village still called *Ceglie*, 5 miles S. of *Bari*. Here numerous ancient remains, tombs, vases, &c. have been discovered. (Romanelli, vol. ii. p. 177; Mommsen, *Unter Ital. Dialekte*, p. 62.)

2. Another town of the same name existed in Calabria, about 27 miles W. of Brundusium, and 20 miles NE. of Tarentum; this also still retains the name of *Ceglie*, and is now a considerable town of about 6,000 inhabitants, situated on a hill about 12 miles from the Adriatic. Extensive portions of its ancient walls still remain, and excavations there have brought to light numerous vases, coins, and inscriptions in the Messapian dialect. (Mommsen, *l. c.*; Tomasi, in *Bull. dell. Inst.* 1834, pp. 54, 55.) It is evidently this Caelia that is enumerated by Pliny, together with Lupiae and Brundusium, among the cities of Calabria (iii. 11. s. 16), as well as the "Caelinus ager" mentioned by Frontinus among the "civitates provinciae Calabriae" (*Lib. Colon.* p. 262), though, from the confusion made by both writers in regard to the frontiers of Apulia and Calabria, these passages might have been readily referred to the Caelia in Peucetia. The evidence is, however, conclusive that there were two places of the same name, as above described. Numismatic writers are not agreed to which of the two belong the coins with the inscription ΚΑΙΛΙΝΩΝ, of which there are several varieties. These have been generally ascribed to the Calabrian city; but Mommsen (*l. c.*) is of opinion that they belong rather to the Caelia near *Bari*, being frequently found in that neighbourhood. (See also Millingen, *Num. de l'Italie*, p. 149.) The attempt to establish a distinction between the two places, founded on the orthography of the names, and to call the one Caelia or Caelium, the other Celia, is certainly untenable. [E. H. B.]

COIN OF CAELIA.

CAENA, a town of Sicily mentioned only in the Itinerary of Antoninus, which writes the name Cena, and places it on the SW. coast of the island, 18 miles W. of Agrigentum. (Itin. Ant. p. 88.) Though the name is not found in any earlier author, numismatists are generally agreed to assign to it the coins with the inscription KAINON, one of which is represented below. These coins, which are found in considerable numbers in Sicily, were previously ascribed to the island of CAENE, mentioned by Pliny (iii. 8. s. 14) among the smaller islands between Sicily and Africa, and generally identified with the little islet now called *Cani*, off the Gulf of Hippo on the coast of Africa. But we have no reason to suppose that this barren rock ever was even inhabited, much less that it contained a city capable of striking coins: and the Greek legend of those in question, as well as their workmanship,

COIN OF CAENA.

which is of a good Greek style, render it almost certain that they were struck in Sicily; though the existence of a city of the name of Caena in that island rests on very slight authority. (Eckhel. vol. i. p. 269; Sestini, *Lettere Numismatiche*, vol. i. p. 4.) [E. H. B.]

CAENAE (Καιναί, Xen. *Anab.* ii. 4. § 28), a town of some importance on the western bank of the Tigris; according to Xenophon, 34 parasangs N. of Opis, and south of the river Zabatus, or *Lesser Zab*. Its exact position cannot be determined, as he does not mention its distance from the *Zab*; but it has been conjectured that it is represented by a place now called *Senn*. (Mannert, vol. ii. p. 244.) [V.]

CAENE'POLIS or CAENE (Καινὴ πόλις, Ptol. iv. 5. § 72; Geog. Rav. p. 104), the modern *Chenè* was the southernmost town of the Panopolite nome in the Thebaid of Egypt. It stood upon the eastern bank of the Nile, 2 geographical miles NW. of Coptos. Herodotus (ii. 91) mentions a town Neapolis (Νέη πόλις), near Chemmis in Upper Egypt, which is probably the same with Caenepolis. (Comp. Mannert, vol. x. 1, p. 371.) Panopolis, which was north of Chemmis, at one period went by the name of Caene or Caene-polis. [W. B. D.]

CAENE'POLIS. [TAENARUM.]

CAE'NICA (Καινική), the name of one of the districts into which Thrace was divided by the Romans. It was situated on the Euxine (Ptol. iii. 11. § 9), and probably derived its name from the Thracian tribe of the CAENI or CAENICI, who dwelt between the Panysus and the Euxine. (Liv. xxxviii. 40; Steph. B. *s. v.* Καινοί.) [L. S.]

CAENICENSES, a people in Gallia Narbonensis, an "oppidum Latinum," as Pliny (iii. 4) calls them; probably on the river Caenus of Ptolemy, which he places between the eastern mouth of the Rhone and Massilia (*Marseille*). There are no means of fixing the position of the Caenus, which may be the river of *Aix* that flows into the *Etang de Berre*, or some of the other streams that flow into the same *étang*. Some would have it to be the canal and *étang* of *Ligagnan*. It has been suggested that the name in Pliny should be Caenienses. [G. L.]

CAENI'NA (Καινίνη: *Eth.* Καινίτης, Caeninensis), a very ancient city of Latium, mentioned in the early history of Rome. Dionysius tells us (ii. 35) that it was one of the towns originally inhabited by the Siculi, and wrested from them by the Aborigines; and in another passage (i. 79) incidentally alludes to it as existing before the foundation of Rome. It was, indeed, one of the first of the neighbouring petty cities which came into collision with the rising power of Rome, having taken up arms, together with Antemnae and Crustumerium, to avenge the rape of the women at the Consualia. The Caeninenses were the first to meet the arms of Romulus, who defeated them, slew their king Acron with his own hand, and took the city by assault. (Liv. i. 10; Dionys. ii. 32, 33; Plut. *Rom.* 16.) After this we are told that he sent a colony to the conquered city, but the greater part of the inhabitants migrated to Rome. (Dionys. ii. 35.) It is certain that from this time the name disappears from history, and no trace is found of the subsequent existence of Caenina, though its memory was perpetuated not only by the tradition of the victory of Romulus, on which occasion he is said to have consecrated the first Spolia Opima to Jupiter Feretrius (Propert. iv. 10; Ovid. *Fast.* ii. 135), but by the existence of certain religious rites and a peculiar

priesthood, which subsisted down to a late period, so that we find the "Sacerdotium Caeninense" mentioned in inscriptions of Imperial date. (Orell. *Inscr.* 2180, 2181, and others there cited.) Pliny enumerates Caenina among the celebrated towns (*clara oppida*) of Latium which had in his time completely disappeared: thus confirming the testimony of Dionysius to its Latin origin. Diodorus also reckons it one of the colonies of Alba, supposed to be founded by Latinus Silvius. (Diod. vii. *ap. Euseb. Arm.* p. 185.) Plutarch, on the contrary, and Stephanus of Byzantium, call it a Sabine town. (Plut. *l. c.*; Steph. B. *s. v.*) It is probable that it was in fact one of the towns of Latium bordering on the Sabines; and this is all that we know of its situation. Nibby supposes it to have occupied a hill 10 miles from Rome, on the banks of a stream called the *Magugliano*, and 2 miles SE. of *Monte Gentile*, which is a plausible conjecture, but nothing more. (Nibby, *Dintorni di Roma*, vol. i. pp. 332—335; Abeken, *Mittel-Italien*, p. 79.) [E. H. B.]

CAENO (Καινώ, Diod. v. 76), a city of Crete, which, according to the legend of the purification of Apollo by Carmanor at Tarrha, is supposed to have existed in the neighbourhood of that place and Elyrus. (Comp. Paus.) The Cretan goddess Britomartis was the daughter of Zeus and Carma, granddaughter of Carmanor, and was said to have been born at Caeno. (Diod. *l. c.*) Mr. Pashley (*Trav.* vol. ii. p. 270) fixes the site either on the so-called refuge of the Hellenes, or near *Hághios Nikólaos*, and supposes that Mt. Carma, mentioned by Pliny (xxi. 14), was in the neighbourhood of this town. (Comp. Hoeck, *Kreta*, vol. i. p. 392.) [E. B. J.]

CAENUS. [CAENICENSES.]

CAENYS (ἡ Καῖνυς), a promontory on the coast of Bruttium, which is described by Strabo as near the Scyllaean rock, and the extreme point of Italy opposite to the Pelorian promontory in Sicily, the Strait of Messana lying between the two. (Strab. vi. p. 257.) There can be little doubt that the point thus designated is that now called the *Punta del Pezzo*, which is the marked angle from whence the coast trends abruptly to the southward, and is the only point that can be properly called a headland. (Cluver. *Ital.* p. 1294; D'Anville, *Anal. Géogr. de l'Italie*, p. 259.) Some writers, however, contend that the *Torre del Cavallo* must be the point meant by Strabo, because it is that most immediately opposite to the headland of Pelorias, and where the strait is really the narrowest. (Holsten. *Not. in Cluv.* p. 301; Romanelli, vol. i. p. 81.) This last fact is, however, doubtful, and at all events might be easily mistaken. Strabo reckons the breadth of the strait in its narrowest part at a little more than six stadia: while Pliny calls the interval between the two promontories, Caenys in Italy, and Pelorus in Sicily, 12 stadia; a statement which accords with that of Polybius. (Strab. *l. c.*; Plin. iii. 5. s. 10; Pol. i. 42.) All these statements are much below the truth; the real distance, as measured trigonometrically by Capt. Smyth, is not less than 3,971 yards from the *Punta del Pezzo* to the village of *Ganziri* immediately opposite to it on the Sicilian coast. (Smyth's *Sicily*, p. 108.) Hence the statement of Thucydides (vi. 1), who estimates the breadth of the strait at its narrowest point at 20 stadia (4,047 yards), is surprisingly accurate. [E. H. B.]

CAEPIO'NIS TURRIS or MONUMENTUM (*Καιπίωνος πύργος: Cipiona*), a great lighthouse, built on a rock surrounded by the sea, on the S. side of the river Baetis (*Guadalquivir*) in Hispania Baetica (Strab. iii. p. 140; Mela, iii. 1, where some read *Geryonis*, and identify the tower with the *Gerontis* or *Geryonis arx* of Avienus, *Ora Marit.* 263, see Wernsdorf, *ad loc.*) Most commentators derive the name from Servilius Caepio, the conqueror of Lusitania; but others, ascribing to the lighthouse a Phoenician origin, regard the name as a corruption of *Cap Eon*, i. e. *Rock of the Sun*. (Ford, *Handbook of Spain*, p. 20.) [P. S.]

CAERA'TUS (Καίρατος: *Karteró*), a river of Crete, which flows past Cnossus, which city was once known by the same name as the river. (Strab. x. p. 476; Eustath. *ad Dionys. Perieg.* v. 498; Hesych.; Virg. *Ciris*, 113, flumina Caeratea; comp. Pashley, *Trav.* vol. i. p. 263.) [E. B. J.]

CAERE (Καῖρε, Ptol.; Καιρέα, Strab.; Καίρητα, Dionys.: *Eth.* Καιρετανὸς, Caeretanus, but the people are usually called Caerites), called by the Greeks AGYLLA (Ἀγυλλα: *Eth.* Ἀγυλλαῖος), an ancient and powerful city of Southern Etruria, situated a few miles from the coast of the Tyrrhenian Sea, on a small stream now called the *Vaccina*, anciently known as the "Caeretanus amnis." (Plin. iii. 5. s. 8; *Caeritis amnis*, Virg. Aen. viii. 59.) Its territory bordered on that of Veii on the E. and of Tarquinii on the N.; the city itself was about 27 miles distant from Rome. Its site is still marked by the village of *Cervetri*. All ancient writers agree in ascribing the foundation of this city to the Pelasgians, by whom it was named Agylla, the appellation by which it continued to be known to the Greeks down to a late period. Both Strabo and Dionysius derive these Pelasgians from Thessaly, according to a view of the migration of the Pelasgic races, very generally adopted among the Greeks. The same authorities assert distinctly that it was not till its conquest by the Tyrrhenians (whom Strabo calls Lydians), that it obtained the name of Caere: which was derived, according to the legend related by Strabo from the Greek word χαῖρε, with which the inhabitants saluted the invaders. (Strab. v. p. 220; Dionys. i. 20., iii. 58; Serv. *ad Aen.* viii. 597; Plin. iii. 5. s. 8.) We have here the clearest evidence of the two elements of which the population of Etruria was composed; and there seems no reason to doubt the historical foundation of the fact, that Caere was originally a Pelasgic or Tyrrhenian city, and was afterwards conquered by the Etruscans or Tuscans (called as usual by the Greeks *Tyrrhenians*) from the north. The existence of its double name is in itself a strong confirmation of this fact; and the circumstance that Agylla, like Spina on the Adriatic, had a treasury of its own at Delphi, is an additional proof of its Pelasgic origin (Strab. *l. c.*).

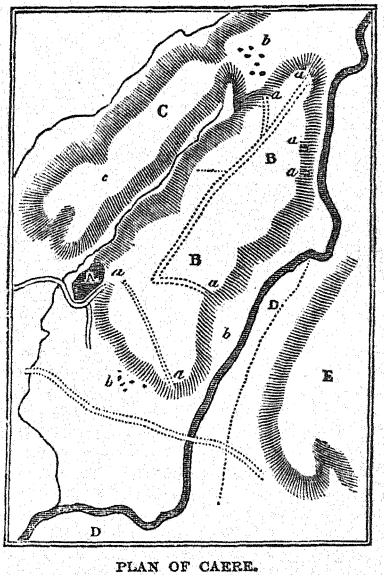
The period at which Caere fell into the hands of the Etruscans cannot be determined with any approach to certainty. Niebuhr has inferred from the narrative of Herodotus that the Agyllaeans were still an independent Pelasgic people, and had not yet been conquered by the Etruscans, at the time when they waged war with the Phocaeans of Alalia, about B. C. 535. But it seems difficult to reconcile this with other notices of Etruscan history, or refer the conquest to so late a period. It is probable that Agylla retained much of its Pelasgic habits and connexions long after that event; and the use of the Pelasgic name Agylla proves nothing, as it continued to be exclusively employed by

Greek authors down to a very late period. Roman authorities throw no light on the early history of Caere, though it appears in the legendary history of Aeneas as a wealthy and powerful city, subject to the rule of a king named Mezentius, a cruel tyrant, who had extended his power over many neighbouring cities, and rendered himself formidable to all his neighbours. (Liv. i. 2; Virg. *Aen.* viii. 480.)

The first historical mention of Agylla is found in Herodotus, who relates that the Agyllaeans were among the Tyrrhenians who joined the Carthaginians in an expedition against the Phocaean colonists at Alalia in Corsica; and having taken many captives upon that occasion, they put them all to death. This crime was visited on them by divine punishments, until they sent to consult the oracle at Delphi on the subject, and by its advice paid funeral honours to their victims, with public games and other ceremonies. (Herod. i. 166, 167.) It is clear, therefore, that at this time Agylla was a maritime power of some consideration; and Strabo speaks of it as having enjoyed a great reputation among the Greeks; especially from the circumstance that the Agyllaeans refrained from the piratical habits common to most of the other Tyrrhenian cities. (Strab. *l. c.*) This did not, however, preserve them at a later period from the attacks of Dionysius of Syracuse, who, having undertaken an expedition to the coasts of Tyrrhenia under pretence of putting down piracy, landed at Pyrgi, the seaport of Agylla, and plundered the celebrated temple of Lucina there, from which he carried off an immense booty, besides laying waste the adjoining territory. (Strab. v. p. 226; Diod. xv. 14.)

Caere plays a much less important part in the history of Rome than we should have expected from its proximity to that city, and the concurrent testimonies to its great wealth and power. From the circumstance of its being selected by the Romans, when their city was taken by the Gauls, as the place of refuge to which they sent their most precious sacred relics, Niebuhr has inferred (vol. i. p. 385) that there must have been an ancient bond of close connexion between the two cities; and in the first edition of his history he even went so far as to suggest that Rome was itself a colony of Caere; an idea which he afterwards justly abandoned as untenable. Indeed, the few notices we find of it prior to this time, are far from indicating any peculiarly friendly feeling between the two. According to Dionysius, the Caerites were engaged in war against the Romans under the elder Tarquin, who defeated them in a battle and laid waste their territory; and again, after his death, they united their arms with those of the Veientines and Tarquinians against Servius Tullius. (Dionys. iii. 58, iv. 27.) Caere was also the first place which afforded a shelter to the exiled Tarquin when expelled from Rome. (Liv. i. 60.) And Livy himself, after recounting the service rendered by them to the Romans at the capture of the city, records that they were received, *in consequence of it*, into relations of public hospitality (ut hospitium publicè fieret, v. 50), thus seeming to indicate that no such relations previously existed. From this time, however, they continued on a friendly footing, till B. C. 353, when sympathy for the Tarquinians induced the Caerites once more to take up arms against Rome. They were, however, easily reduced to submission, and obtained a peace for a hundred years. Livy represents this as freely granted, in consideration of their past services; but Dion Cassius informs us that it was purchased at the price of half their territory. (Liv. vii. 20; Dion Cass. fr. 33. Bekk.) It is probable that it was on this occasion also that they received the Roman franchise, but without the right of suffrage. This peculiar relation was known in later times as the *Caerite franchise*, so that "in tabulas Caeritum referre," became a proverbial expression for disfranchising a Roman citizen (Hor. *Ep.* i. 6, 62; and Schol. *ad loc.*), and we are expressly told that the Caerites were the *first* who were admitted on these terms. (Gell. xvi. 13. § 7.) But it is strangely represented as in their case a privilege granted them for their services at the time of the Gaulish war (Strab. v. p. 220; Gell. *l. c.*), though it is evident that the relation could never have been an advantageous one, and was certainly in many other cases rather inflicted as a punishment, than bestowed as a reward. Hence it is far more probable, that instead of being conferred on the Caerites as a privilege immediately after the Gallic War, it was one of the conditions of the disadvantageous peace imposed on them in B. C. 353, as a punishment for their support to the Tarquinians. (See on this subject, Niebuhr, vol. ii. p. 67, vol. iii. p. 185; Madvig. *de Colon.* p. 240; Mommsen, *Die Römische Tribus*, pp. 160, 161; *Das Römische Münzwesen*, p. 246.) It is uncertain whether the Caerites afterwards obtained the full franchise; we are expressly told that they were reduced to the condition of a Praefecture (Fest. *s.v. praefecturae*); but during the Second Punic War they were one of the Etruscan cities which were forward to furnish supplies to the armament of Scipio (Liv. xxviii. 45), and it may hence be inferred that at that period they still retained their nominal existence as a separate community. Their relations to Rome had probably been adjusted at the same period with those of the rest of Etruria, concerning which we are almost wholly without information. During the latter period of the Republic it appears to have fallen into decay, and Strabo speaks of it as having, in his time, sunk into complete insignificance, preserving only the vestiges of its former greatness; so that the adjoining watering place of the Aquae Caeretanae actually surpassed the ancient city in population. (Strab. v. p. 220.) It appears, however, to have in some measure revived under the Roman empire. Inscriptions and other monuments attest its continued existence during that period as a flourishing municipal town, from the reign of Augustus to that of Trajan. (Gruter, *Inscr.* p. 214. 1, 226. 4, 236. 4, 239. 9; *Bull. d'Inst. Arch.* 1840, pp. 5—8; Nibby, *Dintorni di Roma*, vol. i. p. 342—345.) Its territory was fertile, especially in wine, which Martial praises as not inferior to that of Setia. (Mart. xiii. 124; Colum. *R. R.* iii. 3. § 3.) In the fourth century it became the see of a bishop, and still retained its existence under its ancient name through the early part of the middle ages; but at the beginning of the thirteenth century, great part of the inhabitants removed to another site about 3 miles off, to which they transferred the name of Caere or *Ceri*, while the old town came to be called *Caere Vetus*, or *Cervetri*, by which appellation it is still known. (Nibby, *l. c.* p. 347.)

The modern village of *Cervetri* (a very poor place) occupies a small detached eminence just without the line of the ancient walls. The outline



of the ancient city is clearly marked, not so much by the remains of the walls, of which only a few fragments are visible, as by the natural character of the ground. It occupied a table-land, rising in steep cliffs above the plain of the coast, except at the NE. corner, where it was united by a neck to the high land adjoining. On its south side flowed the Caeretanus amnis (the *Vaccina*), and on the N. was a narrow ravine or glen, on the opposite side of which rises a hill called the *Banditaccia*, the Necropolis of the ancient city. The latter appears to have been from four to five miles in circuit, and had not less than eight gates, the situation of which may be distinctly traced; but only small portions and foundations of the walls are visible; they were built of rectangular blocks of tufa, not of massive dimensions, but resembling those of Veii and Tarquinii in their size and arrangement.

The most interesting remains of Caere, however, are to be found in its sepulchres. These are, in many cases, sunk in the level surface of the ground, and surmounted with tumuli; in others, they are hollowed out in the sides of the low cliffs which bound the hill of the *Banditaccia*, and skirt the ravines on each side of it. None of them have any architectural façades, as at *Bieda* and *Castel d'Asso*; their decoration is chiefly internal; and their arrangements present a remarkable analogy to that of the houses of the Etruscans. "Many of them had a large central chamber, with others of smaller size opening upon it, lighted by windows in the wall of rock, which served as the partition. This central chamber represented the *atrium* of Etruscan houses, and the chambers around it the *triclinia*, for each had a bench of rock round three of its sides, on which the dead had lain, reclining in effigy, as at a banquet. The ceilings of all the chambers had the usual beams and rafters hewn in the rock." (Dennis's *Etruria*, vol. ii. p. 32.) One tomb, called from its discoverer the Regulini-Galassi tomb, is entered by a door in the form of a rudely pointed arch, not unlike the gateway at Arpinum (see p. 222), and like that formed by successive courses of stones gradually approaching till they meet. Some of the tombs also have their interior walls adorned with paintings, resembling those at Tarquinii, but greatly inferior to them in variety and interest. Most of these are of comparatively late date, — certainly not prior to the Roman dominion, — but one tomb is said to contain paintings of a very archaic character, probably more ancient than any at Tarquinii. This is the more interesting, because Pliny speaks of very ancient paintings, believed to be of a date prior to the foundation of Rome, as existing in his time at Caere. (Plin. xxxv. 3. s. 6.) Another tomb, recently discovered at *Cervetri*, is curious from its having been the sepulchre of a family bearing the name of Tarquinius, the Etruscan form of which (TARCHNAS) is repeated many times in different inscriptions, while others present it in the Roman form and characters. There seems every reason to believe that this family, if not actually that of the regal Tarquins of Rome, was at least closely connected with them. (Dennis, *l. c.* p. 42—44; *Bull. d'Inst. Arch.* 1847, p. 56—61.)

The minor objects found in the sepulchres at Caere, especially those discovered in the Regulini Galassi tomb already mentioned, are of much interest, and remarkable for the very ancient character and style of their workmanship. The painted vases and other pottery have, for the most part, a similar archaic stamp, very few of the beautiful vases of the Greek style so abundant at Vulci and Tarquinii having been found here. Two little vessels of black earthenware, in themselves utterly insignificant, have acquired a high interest from the circumstance of their bearing inscriptions which there is much reason to believe to be relics of the Pelasgian language, as distinguished from what is more properly called Etruscan. (Dennis, *l. c.* pp. 54, 55; Lepsius, in the *Annali d'Inst. Arch.* 1836, pp. 186—203; Id. *Tyrrhenische Pelasger*, p. 40—42. For a fuller discussion of this point, see the article ETRURIA.)

There is no doubt that Caere, in the days of its power, possessed a territory of considerable extent, bordering on those of Veii and Tarquinii, and probably extending at one time nearly to the mouth of the Tiber. Its seaport was PYRGI, itself a considerable city, the foundation of which, as well as that of Agylla, is expressly ascribed to the Pelasgians. [PYRGI.] ALSIUM also, of which we find no notice in the early history of Rome, must at this period have been a dependency of Caere. Another place noticed as one of the subject towns in the territory of Caere is ARTENA, which others placed in the Veientine territory, but according to Livy erroneously (Liv. iv. 61). The grove sacred to Sylvanus, noticed by Virgil, and placed by him on the banks of the *Vaccina* (the "Caeritis amnis"), is supposed to have been part of the wood which clothed the *Monte Abbatone*, on the S. side of the river.

Caere was not situated on the line of the Via Aurelia, which passed nearer to the coast; but was probably joined to it by a side branch. Another ancient road, of which some remains are still visible

PLAN OF CAERE.

A. Village of *Cervetri*.
BB. Site of ancient city.
CC. Hill of the *Banditaccia* (Necropolis).
DD. Torrent of the *Vaccina* (Caeretanus Amnis).
E. *Monte Abatone*.
aa. Gates of ancient city.
bb. Sepulchres.

led from thence to join the Via Clodia at Careiae. (Gell, *Top. of Rome*, p. 12.)

The antiquities of Caere, and the various works of art discovered there, are fully described by Dennis (*Etruria*, vol. ii. p. 17—63). See also Canina (*Descrizione di Cere antica*, Roma, 1838), and Grifi (*Monumenti di Cera antica*, Roma, 1841). The annexed plan is copied from that given by Dennis. [E. H. B.]

CAERESI or CAERAESI (Cerosi, Oros. vi. 7; Haverkamp's note), a people mentioned by Caesar (*B. G.* ii. 4) with the Condrusi, Eburones, and Paemani, and he calls them Germans. The position of the Caeresi can only be conjectured. There is a river *Chiers*, which rises in *Luxembourg*, and flows into the *Maas* between *Mouzon* and *Sedan;* and it is conjectured by D'Anville that this river may indicate the position of the Caeresi. The Condrusi were in *Condroz*, in the territory of *Liège*. Walckenaer places the Caeresi in the *Carolgau*, the *Pays de Caros* of the middle ages, between *Bullange*, *Kerpen*, and *Pruyen*. *Kerpen* is on the *Erfft*, which joins the *Rhine* on the left bank, below *Cologne*, near *Neuss*. He adds, "they are thus situated near the Condrusi and the Eburones, as the text of Caesar requires;" an argument that is not worth much, for Caesar is not very particular about his order of enumeration in such a case as this. The exact site of these people must remain doubtful. [G. L.]

CAESARAUGUSTA (Καισαραυγούστα, Strab. iii. pp. 151, 161, 162; Mela, ii. 6; Plin. iii. 3. s. 4; *Itin. Ant.*), or CAESAREA AUGUSTA (Καισάρεια Αυγούστα, Ptol. ii. 6. § 63; Auson. *Epist.* xxiv. 84; Inscr. *ap.* Golz. *Thesaur.* p. 238: coins generally have C. A., CAES. AUGUSTA, or CAESAR. AUGUSTA, whence it may perhaps be inferred that the common shorter form has arisen from running together the two parts of the last-mentioned abbreviation: now *Zaragoza*, merely a corruption of the ancient name; in English works often *Saragossa*), one of the chief inland cities of Hispania Tarraconensis, stood on the right bank of the river Iberus (*Ebro*), in the country of the Edetani (Plin., Ptol.), on the borders of Celtiberia (Strab.). Its original name was SALDUBA, which was changed in honour of Augustus, who colonized it after the Cantabrian War, B. C. 25. (Plin. *l. c.*; Isid. *Orig.* xv. 1). It was a *colonia immunis*, and the seat of a *conventus juridicus*, including 152 communities (*populos* clii., Plin.) It was the centre of nearly all the great roads leading to the Pyrenees and all parts of Spain. (*Itin. Ant.* pp. 392, 433, 438, 439, 443, 444, 446, 448, 451, 452). Its coins, which are more numerous than those of almost any other Spanish city, range from Augustus to Caligula. (Florez, *Esp. S.* vol. iv. p. 254; *Med. de Esp.* vol. i. p. 186, vol. ii. p. 636, vol. iii. p. 18; Eckhel, vol. i. pp. 36—39; Sestini, *Med. Isp.* p. 114; Rasche, *s. v.*). There are no ruins of the ancient city, its materials having been entirely used up by the Moors and Spaniards. (Ford, *Handbook of Spain*, p. 580.)

The first Christian poet, Aurelius Prudentius, is said to have been born at Caesaraugusta (A. D. 348); but some assign the honour to Calagurris (*Calahorra*). The place is one of Ptolemy's points of recorded astronomical observations, having $15\frac{1}{12}$ hours in its longest day, and being distant $3\frac{1}{15}$ hours W. of Alexandria (Ptol. viii. 4. § 5). [P. S.]

CAESARE'A, in the Maritime Itinerary, is one of the islands off the north-west coast of France, the name of which is corrupted into *Jersey*. (D'Anville, *Notice, &c.*) [G. L.]

CAESAREIA (Καισάρεια: *Eth.* Καισαρεύς). 1. (*Kaisariyeh*), a city of the district Cilicia in Cappadocia, at the base of the mountain Argaeus. It was originally called Mazaca, afterwards Eusebeia. (Steph. *s. v.* Καισάρεια, quoting Strab. p. 537.) The site in the volcanic country at the foot of Argaeus exposed the people to many inconveniences. It was, however, the residence of the kings of Cappadocia. Tigranes, the ally of Mithridates the Great, took the town (Strab. p. 539; Appian, *Mithrid.* c. 67), and carried off the people with other Cappadocians to his new town Tigranocerta; but some of them returned after the Romans took Tigranocerta. Strabo has a story that the people of Mazaca used the code of Charondas and kept a law-man (*νομῳδός*) to explain the law; his functions corresponded to those of a Roman jurisconsultus (*νομικός*). The Roman emperor Tiberius, after the death of Archelaus, made Cappadocia a Roman province, and changed the name of Mazaca to Caesareia (Eutrop. vii. 11; Suidas, *s. v.* Τιβέριος). The change of name was made after Strabo wrote his description of Cappadocia. The first writer who mentions Mazaca under the name of Caesareia is Pliny (vi. 3): the name Caesareia also occurs in Ptolemy. It was an important place under the later empire. In the reign of Valerian it was taken by Sapor, who put to death many thousands of the citizens; at this time it was said to have a population of 400,000 (Zonar. xii. p. 630). Justinian afterwards repaired the walls of Caesareia (Procop. *Aed.* v. 4). Caesareia was the metropolis of Cappadocia from the time of Tiberius; and in the later division of Cappadocia into Prima and Secunda, it was the metropolis of Cappadocia Prima. It was the birth-place of Basilius the Great, who became bishop of Caesareia, A. D. 370.

There are many ruins, and much rubbish of ancient constructions about *Kaisaryeh*. No coins with the epigraph Mazaca are known, but there are numerous medals with the epigraph Ευσεβεια, and Καισαρεια, and Καισ. προς Αργαιω.

Strabo, who is very particular in his description of the position of Mazaca, places it about 800 stadia from the Pontus, which must mean the province Pontus; somewhat less than twice this distance from the Euphrates, and six days' journey from the Pylae Ciliciae. He mentions a river Melas, about 40 stadia from the city, which flows into the Euphrates, which is manifestly a mistake [MELAS].

COIN OF CAESAREIA MAZACA.

2. Of Bithynia. Ptolemy (v. 1) gives it also the name Smyrdaleia, or Smyrdiane in the Cod. Palat., and in the old Latin version. Dion Chrysostom (Or. 47. p. 526, Reiske) mentions a small place of this name near Prusa. Stephanus (*s. v.* Καισάρεια) does not mention it, though he adds that there are other places of this name besides those which he mentions. The site is unknown.

There is a place now called *Kesri* or *Balikesri*, that is, Old Kesri, on the Caicus, near the great

road from *Smyrna* to *Constantinople*. The place was probably a Caesarea, but it is not within the limits of Bithynia. (Leake, *Asia Minor*, p. 271, and map.)

3. Ad Anazarbum. [Anazarbus.] [G.L.]

4. A maritime city of Palestine, founded by Herod the Great, and named Caesareia in honour of Caesar Augustus. Its site was formerly occupied by a town named Turris Stratonis, which, when enlarged and adorned with white marble palaces and other buildings, was not unworthy of the august name that was conferred upon it. Chief among its wonders was the harbour, constructed where before there had been only an open roadstead on a dangerous coast. It was in size equal to the renowned Peiraeeus, and was secured against the prevalent south-west winds by a mole or breakwater of massive construction, formed of blocks of stone of more than 50 feet in length, by 18 in width, and 9 in thickness, sunk in water 20 fathoms deep. It was 200 feet in length, one half of which was exposed to the violence of the waves. The remainder was adorned with towers at certain intervals, and laid out in vaults which formed hostelries for the sailors, in front of which was a terrace walk commanding a view of the whole harbour, and forming an agreeable promenade. The entrance to the harbour was on the north. The city constructed of polished stone encircled the harbour. It was furnished with an agora, a praetorium, and other public buildings; and conspicuous on a mound in the midst, rose a temple of Caesar, with statues of the emperor and of the imperial city. A rock-hewn theatre, and a spacious circus on the south of the harbour, commanding a fine sea view, completed the adornment of this pagan monument of Herod's temporising character, on which he had spent twelve years of zealous and uninterrupted exertion, and enormous sums of money. (Joseph. *Ant.* xv. 10. § 6, *B. J.* i. 21. §§ 5—7.)

These great works, but especially its commodious harbour, soon raised Caesareia to the dignity of a metropolis ("caput Palaestinae," Tacit. *Hist.* ii. 79), and it is so recognised, not only in the early annals of the Christian Church, but in the civil history of that period. It was the principal seat of government to the Roman praefects and to the titular kings of Judaea, and the chief part of its inhabitants were Syrians, although there was now a Jewish community found there, which had not been the case at an earlier period of its history as Strato's Tower. (*Ant.* xx. 7. §§ 7, 9.)

Its name underwent another change, and Pliny (v. 14) happily identifies the three names with the one site. "Stratonis turris, eadem Caesarea, ab Herode rege condita: nunc colonia prima Flavia, a Vespasiano Imperatore deducta." But it still retained its ancient name and title in the Ecclesiastical records, as the metropolitan see of the First Palestine; and was conspicuous for the constancy of its martyrs and confessors in the various persecutions of the Church, but especially in the last. (Euseb. *H. E.* viii. sub fin.) It is noted also as the see of the Father of Ecclesiastical History, and the principal seat of his valuable literary labours.

It was a place of considerable importance during the occupation of the Holy Land by the Crusaders, as one stronghold along the line of coast, and it shared the various fortunes of the combatants without materially affecting them.

This once famous site, principally interesting as the place where "the door of faith was first opened to the Gentiles," is still marked by extensive ruins, situated where Josephus would teach us to look for them, halfway between Dora (*Tantura*) and Joppa (*Jaffa*),—retaining, in an Arabic form, the Greek name given it by Herod. The line of wall and the dry ditch of the Crusaders' town may be clearly traced along their whole extent; but the ancient city was more extensive, and faint traces of its walls may be still recovered in parts. The ruins have served as a quarry for many generations, and the houses and fortifications of *Jaffa*, *Acre*, *Sidon*, and even of *Beirout*, have been built or repaired with stones from this ancient site. Enough, however, still remains to attest the fidelity of the Jewish historian, and to witness its former magnificence, especially in the massive fragments of its towers and the substructions of its mole, over which may now be seen the prostrate columns of the pillars, which once formed the portico of its terraced walk. (See Traill's *Josephus*, vol. i. p. 49, &c.) Conspicuous in the midst of the ruins, on a levelled platform, are the substructions of the Cathedral of the Crusaders, which doubtless occupied the site of the Pagan temple described by Josephus. [G. W.]

Caesareia Mauretaniae. [Iol.]

Caesareia Philippi. [Paneas.]

Caesareia, Dio [Sepphoris.]

Caesarodu'num (Καισαρόδουνον, Ptol.: *Tours*), the chief town of the Turones or Turoni, a Celtic people in the basin of the *Loire*. Caesar mentions the Turones, but names no town. It is first mentioned by Ptolemy; and the same name, Caesarodunum, occurs in the Table; but it is called in the Notitia of the provinces of Gallia "civitas Turonorum," whence the modern name of *Tours*. The identity of Caesarodunum and *Tours* is proved by the four roads to this place from *Bourges*, *Poitiers*, *Orléans*, and *Angers*. The modern town is on the south bank of the *Loire*, and the ancient town seems to have been on the same site, though this opinion is not universally received. There are no Roman remains at *Tours*, except, it is said, some fragments of the ancient walls. [G. L.]

Caesaro'magus (Καισαρόμαγος, Ptol.: *Beauvais*), the capital of the Belgic people, the Bellovaci. Its position at *Beauvais* agrees with the determinations of the Antonine Itin. and the Table. In the Notitia of the Gallic provinces the "civitas Bellovacorum" belongs to Belgica Secunda. In the middle ages the name was Belvacus or Belvacum, whence, by an ordinary corruption in the French language, comes *Beauvais*. As to its identity with Bratuspantium, see that article. [G. L.]

Caesaro'magus, in Britain, is, in the fifth Itinerary, the first station from London (from which it is distant 28 miles) on the road to Lugubalium (*Carlisle*), *viâ* Colonia (*Colchester* or *Maldon*). *Writtle*, near *Chelmsford*, about 25 miles from London, best coincides with this measurement. In the ninth Itinerary, the same Caesaromagus, 12 miles from Canonium, is 16 from Durolitum, which is itself 15 from London,—in all 31. This indicates a second road. Further remarks upon this subject are made under Colonia. [R. G. L.]

Caese'na (Καίσηνα, Strab.; Καίσαινα, Ptol.: *Eth.* Caesenas, ātis: *Cesena*), a considerable town of Gallia Cispadana, situated on the Via Aemilia, 20 miles from Ariminum, and on the right bank of the small river Sapis (*Savio*). (Strab. v. p. 216; Plin. iii. 1. 5. s. 20; Ptol. iii. 1. § 46; Itin. Ant. pp. 100, 126.) An incidental mention of its name in Cicero

(*ad Fam.* xvi. 27) is the only notice of it that occurs in history until a very late period; but after the fall of the Western Empire it is frequently mentioned as a strong fortress, and plays no unimportant part in the wars of the Goths with the generals of Justinian. (Procop. *B. G.* i. 1, ii. 11, 19, 29, iii. 6.) It appears, however, to have been a flourishing municipal town under the Roman empire, and was noted for the excellence of its wines, which were among the most highly esteemed that were produced in Northern Italy; a reputation which they still retain at the present day. (Plin. xiv. 6.) It is distinguished in the Itin. Ant. (p. 286) by the epithet "Curva," but the origin of this is unknown. The modern city of *Cesena* is a considerable place, with a population of 15,000 inhabitants. [E. H. B.]

CAE'SIA SILVA, one of the great forests of Germany, between Vetera and the country of the Marsi, that is, the heights extending between the rivers *Lippe* and *Yssel* as far as *Coesfeld*. (Tacit. *Annal.* i. 50.) [L. S.]

CAE'TOBRIX (Καιτόβριξ, Ptol. ii. 5. § 3), CATOBRI'GA (*Itin. Ant.* p. 417), CETOBRIGA (*Geog. Rav.* iv. 23), a city of Lusitania, belonging to the Turdetani, on the road from Olisipo to Emerita, 12 M. P. E. of Equabona. It appears to correspond to the ruins on the promontory called *Troye*, opposite to *Setubal*, E. of the mouth of the Tagus (Nonius, c. 38; Mentelle, *Geog. Comp. Portug.* p. 87; Ukert, vol. ii. pt. 1. p. 390). [P. S.]

CAI'CUS (Κάϊκος), a river of Mysia (Herod. vi. 28; vii. 42), first mentioned by Hesiod (*Theog.* 343), who, as well as the other poets, fixes the quantity of the penultimate syllable:

Saxosumque sonans Hypanis, Mysusque Caicus.
Virg. *Georg.* iv. 370.

Strabo (p. 616) says that the sources of the Caicus are in a plain, which plain is separated by the range of Temnus from the plain of Apia, and that the plain of Apia lies above the plain of Thebe in the interior. He adds, there also flows from Temnus a river Mysius, which joins the Caicus below its source. The Caicus enters the sea 30 stadia from Pitane, and south of the Caicus is Elaea, 12 stadia from the river: Elaea was the port of Pergamum, which was on the Caicus, 120 stadia from Elaea. (Strab. p. 615.) At the source of the Caicus, according to Strabo, was a place called Gergitha. The course of this river is not well known; nor is it easy to assign the proper names to the branches laid down in the ordinary maps. The modern name of the Caicus is said to be *Ak-su* or *Bakir*. Leake (*Asia Minor*, p. 269) infers from the direction of L. Scipio's march (Liv. xxxvii. 37) from Troy to the Hyrcanian plain, "that the north-eastern branch of the river of *Bergma* (Pergamum) which flows by *Menduria* (Gergitha?) and *Balikesri* (Caesareia) is that which was anciently called Caicus;" and he makes the Mysius join it on the right bank. He adds "of the name of the southern branch (which is represented in our maps) I have not found any trace in extant history." The Caicus as it seems is formed by two streams which meet between 30 and 40 miles above its mouth, and it drains an extensive and fertile country. Cramer (*Asia Minor*, vol. i. p. 135) misinterprets Strabo when he says that the plains watered by the Caicus were at a very early period called Teuthrania. It is singular that the valley of the Caicus has not been more completely examined. [G. L.]

CAIE'TA (Καιήτη, Caietanus: *Gaëta*), a town of Latium on the coast of the Tyrrhenian Sea, between Tarracina and Formiae, celebrated for the excellence of its port. It was situated on a projecting headland or promontory which advances to some distance into the sea, opposite to the city of Formiae, and forms the northern extremity of the extensive bay anciently called the SINUS CAIETANUS, and still known as the *Golfo di Gaeta*. The remarkable headland on which it stood, with the subjacent port, could not fail to be noticed from very early times; and it was generally reported that Aeneas had touched there on his voyage to Latium, and that it derived its name from its being the burial-place of his nurse Caieta. (Virg. *Aen.* vii. 1; Ovid. *Met.* xiv. 443; Stat. *Silv.* i. 3. 87; Mart. v. 1. 5, x. 30. 8; Solin. 2. § 13.) Another and perhaps an earlier legend connected it with the voyage of the Argonauts, and asserted the name to have been originally Αἰήτης, from Aeetes, the father of Medea. (Lycophr. *Alex.* 1274; Diod. iv. 56.) Strabo derives the name from a Laconian word, Καιέρας or Καιάρας, signifying a hollow, on account of the caverns which abounded in the neighbouring rocks (v. p. 233). Whatever be the origin of the name, the port seems to have been frequented from very early times, and continued to be a place of great trade in the days of Cicero, who calls it "portus celeberrimus et plenissimus navium;" from which very circumstance it was one of those that had been recently attacked and plundered by the Cilician pirates. (*Pro leg. Manil.* 12.) Florus also (i. 16) speaks of the noble ports of Caieta and Misenum; but the *town* of the name seems to have been an inconsiderable place, and it may be doubted whether it possessed separate municipal privileges, at least previous to the time of Antoninus Pius, who added new works on a great scale to its port, and appears to have much improved the town itself. (Capit. *Ant. Pius*, 8; the inscription cited by Pratilli, *Via Appia*, ii. 4, p. 144, in confirmation of this, is of doubtful authenticity.) It was not till after the destruction of Formiae by the Saracens in the 9th century that *Gaëta* rose to its present distinction and became under the Normans one of the most considerable cities in the Neapolitan dominions.

The beautiful bay between Caieta and Formiae early became a favourite place of resort with the Romans, and was studded with numerous villas. The greater part of these were on its northern shore, near Formiae; but the whole distance from thence to Caieta (about 4 miles) was gradually occupied in this manner, and many splendid villas arose on the headland itself and the adjoining isthmus. Among others, we are told that Scipio Africanus and Laelius were in the habit of retiring there, and amusing their leisure with picking up shells on the beach. (Cic. *de Or.* ii. 6; Val. Max. viii. 8. 1.) Cicero repeatedly alludes to it as the port nearest to Formiae; it was here that he had a ship waiting ready for flight during the civil war of Caesar and Pompey B. C. 49, and it was here also that he landed immediately before his death, in order to take shelter in his Formian villa. Some late writers, indeed, say that he was put to death at Caieta; but this appears to arise merely from a confusion between that place and the neighbouring Formiae. (Cic. *ad Att.* i. 3, 4, viii. 3; Plut. *Cic.* 47; Appian, *B. C.* iv. 19, and Schweigh. *ad loc.*; Val. Max. i. 4. § 5; Senec. *Suasor.* 6.) At a later period the emperor Antoninus Pius had a villa here, where also the younger Faustina spent much of her time. (Capit. *Ant.*

Pius, 8, *M. Ant.* 19.) The ruins of their palace are said to be still known by the name of *Il Faustignano*. Besides these, there are extant at Gaëta the remains of a temple supposed to have been dedicated to Serapis, and those of an aqueduct. But the most interesting monument of antiquity remaining there is the sepulchre of L. Munatius Plancus, a circular structure much resembling the tomb of Caecilia Metella near Rome, which crowns the summit of one of the two rocky hills that constitute the headland of Gaëta, and is vulgarly known as the *Torre d'Orlando*. It is in excellent preservation, and retains its inscription uninjured. (Romanelli, vol. iii. p. 425; Hoare's *Classical Tour*, vol. i. pp. 125—127.) The inscription is given by Orelli (590). From extant vestiges it appears that a branch of the Appian Way quitted the main line of that road near Formiae, and led from thence to Caieta. [E. H. B.]

CAĪNAS (Καΐνάς: *Cane*), a navigable river of India intra Gangem, falling into the Ganges from the south, according to Arrian (*Ind.* 4) and Pliny (vi. 17. s. 21), though it really falls into the *Jumna*. [P. S.]

CALA'BRIA (Καλαβρία) was the name given by the Romans to the peninsula which forms the SE. promontory, or, as it has been frequently called, the *heel* of Italy, the same which was termed by the Greeks MESSAPIA or IAPYGIA. The use of these appellations seems indeed to have been sufficiently vague and fluctuating. But, on the whole, it may be remarked that the name of Iapygia, — which appears to have been the one first known among the Greeks, and probably in early times the only one, — was applied by them not only to the peninsula itself, but to the whole SE. portion of Italy, from the frontiers of Lucania to the promontory of Garganus, thus including the greater part of Apulia, as well as Calabria. (Scyl. § 14, p. 170; Pol. iii. 88.) Herodotus appears to have certainly considered Apulia as part of Iapygia (iv. 99), but has no distinguishing name for the peninsula itself. Neither he nor Thucydides ever use *Messapia* for the name of the country, but they both mention *the Messapians*, as a tribe or nation of the native inhabitants, to whom they apply the general name of Iapygians (Ἴηπυγες Μεσσάπιοι, Her. vii. 170; Thuc. vii. 33). Polybius and Strabo, on the contrary, use Messapia for the peninsula only, as distinguished from the adjoining countries; but the former reckons it a part of Iapygia, while the latter, who employs the Roman name of Apulia for the land of the Peucetians and Daunians, considers Iapygia and Messapia as synonymous. (Pol. iii. 88; Strab. vi. pp. 277, 282.) Antiochus of Syracuse also, as cited by Strabo (p. 279), as well as the pretended oracle introduced by him in his narrative, speaks of Iapygians as dwelling in the neighbourhood of Tarentum. At a later period we find the inhabitants of this district divided into two tribes; the SALLENTINI, who occupied the country near the Iapygian Promontory, and from thence along the southern coast of the peninsula towards Tarentum; and the CALABRI, who appear to have been certainly identical with the Messapians of the Greeks, and are mentioned by that name on the first occasion in which they appear in Roman history. (Fast. Capit. ap. Gruter. p. 297.) They inhabited the northern half and interior of the peninsula, extending to the confines of the Peucetians, and were evidently the most powerful of the two tribes, on which account the name of Calabria came to be gradually adopted by the Romans as the appellation of the whole district, in the same manner as that of Messapia was by the Greeks. This usage was firmly established before the days of Augustus. (Liv. xxiii. 34, xlii. 48; Mela, ii. 4; Strab. vi. p. 282; Hor. *Carm.* i. 31. 5.)

Calabria as thus defined was limited on the west by a line drawn from sea to sea, beginning on the Gulf of Tarentum a little to the W. of that city, and stretching across the peninsula to the coast of the Adriatic between Egnatia and Brundusium. (Strab. vi. p. 277.) It thus comprised nearly the same extent with the modern province called *Terra di Otranto*. But the boundary, not being defined by any natural features, cannot be fixed with precision, and probably for administrative purposes varied at different times. Thus we find Frontinus including in the "Provincia Calabriae" several cities of the Peucetians which would, according to the above line of demarcation, belong to Apulia, and appear, in fact, to have been commonly so reckoned. (Lib. Colon. p. 261; and see APULIA, p. 164.) The same remark applies to Pliny's list of the "Calabrorum mediterranei" (iii. 11. s. 16), and it is indeed probable that the Calabri or Messapians originally extended further to the W. than the arbitrary limit thus fixed by geographers. Strabo appears to have considered the isthmus (as he calls it) between Brundusium and Tarentum as much more strongly marked by nature than it really is; he states its breadth at 310 stadia, which is less than the true distance between the two *cities*, but considerably more than the actual breadth, if measured in a direct line from sea to sea; which does not exceed 25 G. miles or 250 stadia. This is, however, but little inferior to the average breadth of the province, which would indeed be more properly termed a great promontory than a peninsula strictly so called. The whole space comprised between this boundary line on the W. and the Iapygian promontory is very uniform in its physical characters. It contains no mountains, and scarcely any hills of considerable elevation; the range of rugged and hilly country which traverses the southern part of Apulia only occupying a small tract in the extreme NW. of Calabria, about the modern towns of *Ostuni* and *Ceglie*. From hence to the Iapygian Promontory (the *Capo di Leuca*) there is not a single eminence of any consequence, the whole space being occupied by broad and gently undulating hills of very small elevation, so that the town of *Oria*, which stands on a hill of moderate height near the centre of the peninsula, commands an uninterrupted view to the sea on both sides. (Swinburne, *Travels*, vol. i. pp. 210, 211; Craven, *Travels*, p. 164.) Hence Virgil has justly described the approach to Italy from this side as presenting "a low coast of dusky hills." (*Obscuros colles humilemque Italiam*, Aen. iii. 522.) The soil is almost entirely calcareous, consisting of a soft tertiary limestone, which readily absorbs all the moisture that falls, so that not a single river and scarcely even a rivulet is to be found in the whole province. Yet, notwitstanding its aridity, and the burning heat of the climate in summer, the country is one of great fertility, and is described by Strabo as having been once very populous and flourishing; though much decayed in his day from its former prosperity. Its soil is especially adapted for the growth of olives, for which it was celebrated in ancient as well as modern times: but it produced also excellent wines, as well as fruit of various kinds in great abundance, and honey and wool of the finest

quality. But the excessive heats of summer rendered it necessary at that season to drive the flocks into the mountains and upland vallies of Lucania. (Strab. vi. p. 281; Varr. *R. R.* ii. 2. § 18, 3. § 11; Colum. vii. 2. § 3, xi. 3. § 15, xii. 51. § 3; Hor. *Carm.* i. 31. 5, iii. 16, 33, *Epod.* i. 27, *Epist.* i. 7. 14.) Virgil also notices that it was infested by serpents of a more formidable character than were found in other parts of Italy. (*Georg.* iii. 425.)

Another source of wealth to the Calabrians was their excellent breed of horses, from whence the Tarentines supplied the cavalry for which they were long celebrated. Even as late as the third century B. C. Polybius tells us that the Apulians and Messapians together could bring into the field not less than 16,000 cavalry, of which probably the greater part was furnished by the latter nation. (Pol. ii. 24.) At the present day the *Terra di Otranto* is still one of the most fertile and thickly-peopled provinces of the kingdom of Naples.

The population of the Calabrian peninsula consisted, as already mentioned, of two different tribes or nations; the Messapians or Calabrians proper, and the Sallentines. But there seems no reason to suppose that these races were originally or essentially distinct. We have indeed two different accounts of the origin of the Messapians: the one representing them as a cognate people with the Daunians and Peucetians, and conducted to Italy together with them by the sons of Lycaon, Iapyx, Daunius, and Peucetius. (Antonin. Liberal. 31.) The other made Iapyx a son of Daedalus, and the leader of a Cretan colony (Antioch. ap. Strab. vi. p. 279): which is evidently only another version of the legend preserved by Herodotus, according to which the Cretans who had formed the army of Minos, on their return from Sicily, were cast upon the coast of Iapygia, and established themselves in the interior of the peninsula, where they founded the city of Hyria, and assumed the name of Messapians. (Her. vii. 170.) The Sallentines are also represented as Cretans, associated with Locrians and Illyrians; but their emigration is placed as late as the time of Idomeneus, after the Trojan War. (Strab. p. 281; Virg. *Aen.* iii. 400; Varro *ap. Prob. ad Virg. Ecl.* vi. 31; Festus *s. v.* Salentini, p. 329.) Without attaching any historical value to these testimonies, they may be considered as representing the fact that the population of this peninsula was closely connected with that of the opposite shores of the Ionian Sea, and belonged to the same family with those pre-Hellenic races, who are commonly comprised under the name of Pelasgic. The legend recorded by Antiochus (*l. c.*) which connected them with the Bottiaeans of Macedonia, appears to point to the same origin. This conclusion derives a great confirmation from the recent researches of Mommsen into the remnants of the language spoken by the native tribes in this part of Italy, which have completely established the fact that the dialect of the Messapians or Iapygians bore but a very distant analogy to those of the Oscan or Ausonian races, and was much more nearly akin to Greek, to which, indeed, it appears to have borne much the same relation with the native dialects of Macedonia or Crete. The Alexandrian grammarian Seleucus (who flourished about 100 B. C.) appears to have preserved some words of this language, and Strabo (p. 282) refers to the Messapian tongue as one still spoken in his time: the numerous sepulchral inscriptions still existing may be referred for the most part to the latter ages of the Roman Republic. (Mommsen, *Die Unter-Italischen Dialecte*, pp. 43—98.) This near relationship with the Hellenic races will explain the facility with which the Messapians appear to have adopted the manners and arts of the Greek settlers, while their national diversity was still such as to lead the Greek colonists to regard them as barbarians. (See Thuc. vii. 33; Paus. *Phoc.* x. 10. § 6.) A question has, however, been raised whether the CALABRI were originally of the same stock with the other inhabitants of the peninsula, and Niebuhr inclines to regard them as intruders of an Oscan race (vol. i. p. 149; *Vorträge über Länder u. Völker*, p. 499). But the researches above alluded to seem to negative this conjecture, and establish the fact that the Calabrians and Messapians were the same tribe. The name of the Calabri (Καλαθροί) is found for the first time in Polybius (x. 1); but it is remarkable that the Roman Fasti, in recording their subjection, employ the Greek name, and record the triumph of the consuls of the year 487 "de Sallentinis *Messapiisque*." (Fast. Triumph. ap. Gruter. p. 297.)

All the information we possess concerning the early history of these tribes is naturally connected with that of the Greek colonies established in this part of Italy, especially Tarentum. The accounts transmitted to us concur in representing the Messapians or Iapygians as having already attained to a certain degree of culture, and possessing the cities of Hyria and Brundusium at the period when the colony of Tarentum was founded, about 708 B. C. The new settlers were soon engaged in hostilities with the natives, which are said to have commenced even during the lifetime of Phalanthus. It is probable that the Tarentines were generally successful, and various offerings at Delphi and elsewhere attested their repeated victories over the Iapygians, Messapians, and Peucetians. It was during one of these wars that they captured and destroyed the city of Carbina with circumstances of the most revolting cruelty. But at a later period the Messapians had their revenge, for in B. C. 473 they defeated the Tarentines in a great battle, with such slaughter as no Greek army had suffered down to that day. (Paus. x. 10. § 6, 13. § 10; Clearch. *ap. Athen.* xii. p. 522; Her. vii. 170; Diod. xi. 52; Strab. vi. p. 282.) Notwithstanding this defeat the Tarentines gradually regained the ascendancy, and the Peucetians and Daunians are mentioned as joining their alliance against the Messapians: but the latter found powerful auxiliaries in the Lucanians, and it was to oppose their combined arms that the Tarentines successively invoked the assistance of the Spartan Archidamus and Alexander king of Epeirus, the former of whom fell in battle against the Messapians near the town of Manduria, B. C. 338. (Strab. vi. p. 281.) But while the inhabitants of the inland districts and the frontiers of Lucania thus retained their warlike habits, those on the coast appear to have adopted the refinements of their Greek neighbours, and had become almost as luxurious and effeminate in their habits as the Tarentines themselves. (Athen. xii. p. 523.) Hence we find them offering but little resistance to the Roman arms; and though the common danger from that power united the Messapians and Lucanians with their former enemies the Tarentines, under the command of Pyrrhus, after the defeat of that monarch and the submission of Tarentum, a single campaign sufficed to complete the subjection of the Iapygian peninsula.

(Flor. i. 20; Zonar. viii. 7, p. 128; Fast. Capit. *l. c.*) It is remarkable that throughout this period the Sallentini alone are mentioned by Roman historians; the name of the Calabri, which was afterwards extended to the whole province, not being found in history until after the Roman conquest. The Sallentini are mentioned as revolting to Hannibal during the Second Punic War, B. C. 213, but were again reduced to subjection. (Liv. xxv. 1, xxvii. 38.)

Calabria was included by Augustus in the Second Region of Italy; and under the Roman empire appears to have been generally united for administrative purposes with the neighbouring province of Apulia, in the same manner as Lucania was with Bruttium, though we sometimes find them separated, and it is clear that Calabria was never included under the name of Apulia. (Plin. iii. 11. s. 16; Lib. Colon. pp. 260, 261; Notit. Dign. ii. pp. 64, 125; Orell. *Inscr.* 1126, 1178, 2570, 3764.) After the fall of the Western Empire its possession was long and fiercely disputed between the Greek emperors and the Goths, the Lombards and the Saracens: but from its proximity to the shores of Greece it was one of the last portions of the Italian peninsula in which the Byzantine emperors maintained a footing; nor were they finally expelled till the establishment of the Norman monarchy in the 11th century. It is to this period that we must refer the singular change by which the name of Calabria was transferred from the province so designated by the Romans to the region now known by that name, which coincides nearly with the limits of the ancient Bruttium. The cause, as well as the exact period of this transfer, is uncertain; but it seems probable that the Byzantines extended the name of Calabria to all their possessions in the S. of Italy, and that when these were reduced to a small part of the SE. peninsula about Hydruntum and the Iapygian promontory, they still comprised the greater part of the Bruttian peninsula, to which, as the more important possession, the name of Calabria thus came to be more particularly attached. Paulus Diaconus in the 8th century still employs the name of Calabria in the Roman sense; but the usage of Italian writers of the 10th and 11th centuries was very fluctuating, and we find Constantine Porphyrogenitus, as well as Liutprand of Cremona in the 10th century, applying the name of Calabria, sometimes vaguely to the whole of Southern Italy, sometimes to the Bruttian peninsula in particular. After the Norman conquest the name of Calabria seems to have been definitively established in its modern sense as applied only to the southern extremity of Italy, the ancient Bruttium. (P. Diac. *Hist. Lang.* ii. 22; Const. Porphyr. *de Provinc.* ii. 10, 11; Liutpr. Cremon. iv. 12; Lupus Protospat. *ad ann.* 901, 981; and other chroniclers in Muratori, *Scriptores Rer. Ital.* vol. v.)

The whole province of Calabria does not contain a single stream of sufficient magnitude to be termed a river. Pliny mentions on the N. coast a river of the name of Iapyx, the situation of which is wholly unknown; another, which he calls Pactius, was situated (as we learn from the Tabula, where the name is written *Fastium*) between Brundusium and Baletium, and probably answers to the modern *Canale del Cefalo*, which is a mere watercourse. On the S. coast the two little rivers in the neighbourhood of Tarentum, called the Galaesus and the Taras, though much more celebrated, are scarcely more considerable.

Strabo tells us (p. 281) that the Iapygian peninsula in the days of its prosperity contained thirteen cities, but that these were in his time all decayed and reduced to small towns, except Brundusium and Tarentum. Besides these two important cities, we find the following towns mentioned by Pliny, Ptolemy, and others, of which the sites can be fixed with certainty. Beginning from BRUNDUSIUM, and proceeding southwards to the Iapygian Promontory, were BALETIUM, LUPIAE, RUDIAE, HYDRUNTUM, CASTRUM MINERVAE, BASTA, and VERETUM. Close to the promontory there stood a small town called LEUCA, from which the headland itself is now called *Capo di Leuca* [IAPYGIUM PROM.]; from thence towards Tarentum we find either on or near the coast, UXENTUM, ALETIUM, CALLIPOLIS, NERETUM, and MANDURIA. In the interior, on the confines of Apulia, was CAELIA, and on the road from Tarentum to Brundusium stood HYRIA or URIA, the ancient capital of the Messapians. South of this, and still in the interior, were SOLETUM, STURNIUM, and FRATUERTIUM. Bauota or Baubota (Βαύοτα), a town mentioned only by Ptolemy as an inland city of the Sallentini, has been placed conjecturally at *Parabita*. CARBINA (Athen. *l. c.*) is supposed by Romanelli to be the modern *Carovigno*. Sallentia, mentioned only by Stephanus Byzantinus (*s. v.*), is quite unknown, and it may be doubted whether there ever was a *town* of the name. [SALLENTINI.] Messapia (Plin.) is supposed by Italian topographers to be *Mesagne*, between Tarentum and Brundusium, but there is great doubt as to the correctness of the name. The two towns of Mesochoron and Scamnum, placed by the Tabula upon the same line of road, would appear from the distances given to correspond with the villages now called *Grottaglie* and *Latiano*. (Romanelli, vol. ii. pp. 115, 129.) The Portus Sasina, mentioned by Pliny as the point where the peninsula was the narrowest, has been supposed to be the *Porto Cesareo*, about half way between *Taranto* and *Gallipoli* (Romanelli, vol. ii. p. 51); while the Portus Tarentinus, placed by the same author between Brundusium and Hydruntum, has been identified with a large saltwater lake N. of *Otranto*, now called *Limene;* the Statio Miltopae (Plin. *l. c.*) appears to have been in the same neighbourhood, but the site assigned it at *Torre di S. Cataldo* is purely conjectural. (Id. pp. 81, 106.)

The names of Senum and Sarmadium, found in many MSS. and editions of Pliny, rest on very doubtful authority.

The only islands off the coast of Calabria are some mere rocks immediately at the entrance of the port of Brundusium, one of which is said to have been called Barra (Plin. iii. 26. s. 30; Fest. v. Barium); and two rocky islets, scarcely more considerable, off the port of Tarentum, known as the CHOERADES. (Thuc. vii. 33.)

The only ancient lines of roads in Calabria were: one that led from Brundusium to the Sallentine or Iapygian Promontory, another from Tarentum to the same point: and a cross line from Brundusium direct to Tarentum. The first appears to have been a continuation of the Via Trajana, and was probably constructed by that emperor. It proceeded from Brundusium through Lupiae to Hydruntum, and thence along the coast by Castra Minervae to the Promontory, thence the southern line led by Veretum, Uxentum, Aletia, Neretum and Manduria to Tarentum. The distance from Brundusium to Ta-

rentum by the cross road is given in the Itin. Ant. (p. 119) at 44 M. P.; the Tabula gives three intermediate stations: Mesochoro, Urbius and Scamnum: all three of which are otherwise wholly unknown.

For the modern geography of this part of Italy, as well as for local details concerning the ancient remains still visible in his time, see the work of Antonio dei Ferrari (commonly called, from the name of his birthplace, Galateo), *De Situ Japygiae* (first published at Basle in 1558, and reprinted by Burmann in the *Thesaur. Antiqu. Italiae*, vol. ix. part v.), one of the most accurate and valuable of its class; also Romanelli, *Topografia del Regno di Napoli*, vol. ii.; Swinburne, *Travels in the Two Sicilies*, vol. i. p. 205, foll.; Keppel Craven, *Tour through the Southern Provinces of Naples*, pp. 120—190. [E. H. B.]

CALACHE'NE (Καλαχηνή, Strab. xi. p. 529, xvi. p. 735), a district of Assyria, probably the same as that called by Ptolemy Calacine (Καλακινή, Ptol. vi. 1. § 2). It appears from Strabo (xvi. p. 735) to have been in the vicinity of Ninus (Nineveh), and it has therefore been supposed by Bochart and others to have derived its name from Calach, one of the primeval cities attributed to Nimrod or his lieuteuant Ashur. The actual situation of Calach has been much debated; the latest supposition is that of Colonel Rawlinson, who is inclined to identify it with the ruins of *Nimrud*. Ptolemy appears to consider it adjacent to the Armenian mountains, and classes it with Arrapachitis, Adiabene, and Arbelitis. It is not impossible that it may be connected with another town of a similar name, Chalach, to which the Israelites were transported by the King of Assyria (2 *Kings*, xvii. 6, xviii. 11); and Bochart has even supposed the people called by Pliny Classitae ought really to be Calachitae. (Rawlinson, *Comment. on Cuneiform Inscr.* Lond. 1850.) [V.]

CALACTE, or CALE ACTE (Καλάκτα, Ptol.: Καλὴ Ἀκτή, Diod. et al.: *Eth.* Καλακτῖνος, Calactinus: *Caronia*), a city on the N. coast of Sicily, about half way between Tyndaris and Cephaloedium. It derived its name from the beauty of the neighbouring country; the whole of this strip of coast between the Montes Heraei and the sea being called by the Greek settlers from an early period, "the Fair Shore" (ἡ Καλὴ Ἀκτή). Its beauty and fertility had attracted the particular attention of the Zanclaeans, who in consequence invited the Samians and Milesians (after the capture of Miletus by the Persians, B.C. 494) to establish themselves on this part of the Sicilian coast. Events, however, turned their attention elsewhere, and they ended with occupying Zancle itself. (Herod. vi. 22, 23.) At a later period the project was resumed by the Sicilian chief Ducetius, who, after his expulsion from Sicily and his exile at Corinth, returned at the head of a body of colonists from the Peloponnese; and having obtained much support from the neighbouring Siculi, especially from Archonides, dynast of Herbita, founded a city on the coast, which appears to have been at first called, like the region itself, Cale Acte, a name afterwards contracted into Calacte. (Diod. xii. 8, 29.) The new colony appears to have risen rapidly into a flourishing town; but we have no subsequent account of its fortunes. Its coins testify its continued existence as an independent city previous to the period of the Roman dominion; and it appears to have been in Cicero's time a considerable municipal town. (Cic. *in Verr.* iii. 43, *ad Fam.* xiii. 37.) Silius Italicus speaks of it as abounding in fish, "littus piscosa Calacte" (xiv. 251); and its name, though omitted by Pliny, is found in Ptolemy, as well as in the Itineraries; but there is considerable difficulty in regard to its position. The distances given in the Tabula, however (12 M. P. from Alaesa, and 30 M. P. from Cephaloedium), coincide with the site of the modern village of *Caronia*, on the shore below which Fazello tells us that ruins and vestiges of an ancient city were still visible in his time. Cluverius, who visited the locality, speaks with admiration of the beauty and pleasantness of this part of the coast, "littoris excellens amoenitas et pulchritudo," which rendered it fully worthy of its ancient name. (Cluver. *Sicil.* p. 291; Fazell. i. p. 383; *Tab. Peut. Itin. Ant.* p. 92; where the numbers, however, are certainly corrupt.) The celebrated Greek rhetorician Caecilius, who flourished in the time of Augustus, was a native of Calacte (or, as Athenaeus writes it, Cale Acte), whence he derived the surname of Calactinus. (Athen. vi. p. 272.) [E. H. B.]

COIN OF CALACTE.

CALAGUM, seems to be a town of the Meldi, a Gallic people on the Matrona (*Marne*). If Iatinum is *Meaux*, Calagum of the Table may be *Chailly*, which is placed in the Table at 18 M. P. from Fixtuinum, supposed to be the same as Iatinum. [G.L.]

CALAGURRIS (Calagorris, Calaguris, Καλάγουρις, Strab. iii. p. 161; Καλάγυρον, Appian. *B. C.* i. 112: *Eth.* Calagurritani: *Calahorra*), a city of the Vascones, in Hispania Tarraconensis, stood upon a rocky hill near the right bank of the Iberus (Auson. *Epist.* xxv. 57, *haerens scopulis Calogorris*), on the high road from Caesaraugusta (*Zaragoza*) to Legio VII. Gemina (*Leon*), 49 M. P. above the former city (*Itin. Ant.* p. 393). It is first mentioned in the Celtiberian War (B. C. 186: Liv. xxxix. 21); but it obtained a horrible celebrity in the war with Sertorius, by whom it was successfully defended against Pompey. It was one of the last cities which remained faithful to Sertorius; and, after his death, the people of Calagurris resolved to share his fate. Besieged by Pompey's legate Afranius, they added to an heroic obstinacy like that of Saguntum, Numantia, and *Zaragoza*, a feature of horror which has scarcely a parallel in history: in the extremity of famine, the citizens slaughtered their wives and children, and, after satisfying present hunger, salted the remainder of the flesh for future use! The capture and destruction of the city put an end to the Sertorian War (Strab. *l. c.*; Liv. Fr. xci., Epit. xciii.; Appian. *B. C.* i. 112; Flor. iii. 23; Val. Max. vii. 6, ext. 3; Juv. xv. 93; Oros. v. 23).

Under the empire, Calagurris was a *municipium* with the *civitas Romana*, and belonged to the conventus of Caesaraugusta (Plin. iii. 3. s. 4). It was surnamed NASSICA in contra-distinction to CALAGURRIS FIBULARIA, a stipendiary town in the same neighbourhood (Liv. Fr. xci.; Plin. *l. c.* calls the peoples respectively *Calaguritani Nassici* and *Calaguritani Fibularenses*). The latter place seems to be the Calagurris mentioned by Caesar as forming

one community with Osca (*B. C.* i. 60: Calaguritani qui erant cum Oscensibus contributi), and must be looked for near Osca, in all probability at *Loarre*, NW. of *Huesca;* but several writers take *Loarre* for Calagurris Nassica and *Calahorra* for the other. (See Ukert, vol. ii. pt. 1, p. 447.)

Whichever way the question of *name* be decided, there still remains some doubt whether the city N. of the *Ebro* (*Loarre*), ought not to be regarded, on account of its close connection with Osca, as the one so renowned in the Sertorian War. A similar doubt affects the numerous coins which bear the name of Calagurris; but the best numismatists regard them as belonging all to Calagurris Nassica. They are all of the reigns of Augustus and Tiberius, and the various epigraphs give the city the surnames, sometimes of NASSICA, sometimes of JULIA, and testify to its having been a municipium. (Florez, *Med. de Esp.* vol. i. p. 255, vol. iii. p. 22; Mionnet, vol. i. p. 34, Suppl. vol. i. p. 67; Sestini, *Med. Isp.* p. 119; Eckhel, vol. i. pp. 39—41; Rasche, *s. v.*) The favour it enjoyed under Augustus is shown by the fact that he had a body-guard of its people (Suet. *Octav.* 49).

Calagurris (*Calahorra*, in this case, without doubt) is celebrated in literary history as the birthplace of the rhetorician Quinctilian, and, according to some, of the first Christian poet, Prudentius, whom others make a native of CAESARAUGUSTA. (Auson. *de Prof.* i. 7; Prudent. *Hymn.* iv. 31, *Peristeph.* i. 117). [P. S.]

CALAGURRIS, a place in Aquitania, on the road between Lugdunum Convenarum and Tolosa, according to the Antonine Itin. It is marked 26 M. P. from Lugdunum. D'Anville fixes it at *Cazères*, others at *S. Martorris*, both of them on the left bank of the *Garonne*, in the department of *Haute-Garonne*. The distance from Lugdunum (*St. Bertrand de Comminges*) must be measured along the *Garonne*. The places between Calagurris and Tolosa, namely Aquae Siccae and Vernosole, seem to be identified by their names, and Calagurris ought not to be doubtful. *Cazères* and *S. Martorris* are not far distant from one another, and mosaic pavements and other remains are said to have been found at one or both. [G. L.]

CALAMA (τὰ Κάλαμα, Arrian, *Ind.* 26), a small place on the coast of Gedrosia, which was visited by Nearchus and his fleet. The modern name appears to be *Churmut*. In an old Portuguese map the place is called *Rio de la Kalameta*, which seems, as Vincent has suggested, to be intermediate between the ancient form Kalama and the more modern *Churmut*. (Vincent, *Voyage of Nearchus*, vol. i. p. 239.) [V.]

CALAMAE (Καλάμαι), a village of Messenia near Limnae, and at no great distance from the frontiers of Laconia, is represented by the modern village of *Kalámi*, at the distance of three-quarters of an hour NW. of *Kalamáta:* the latter is the site of the ancient Pharae, and must not be confounded with *Kalámi*. (Paus. iv. 31. § 3; Pol. v. 92; Leake, *Morea*, vol. i. p. 362, *Peloponnesiaca*, p. 183; Boblaye, *Recherches*, p. 105; Ross, *Reisen im Peloponnes*, p. 2)

CALAMI'NAE. Pliny (ii. 95, and Harduin's Note) mentions among floating islands some called Calaminae in Lydia. See Groskurd's Note (*Transl. of Strabo*, vol. ii. p. 624). [G. L.]

CALAMUS (Κάλαμος), a town of Phoenicia, mentioned by Pliny (v. 17) as following Trieris. Polybius (v. 68) speaks of it being burnt down by Antiochus. [E. B. J.]

CALAMYDE, a city of Crete, of which the Coast-describer (*Geogr. Graec. Min.* vol. ii. p. 496), who alone has recorded the name of the place, says that it was to the W. of Lissus and 30 stadia from Criu-Metopon. Mr. Pashley (*Trav.* vol. ii. p. 124) has fixed the site on the summit of the ridge between the vallies *Kontokyméghi* and *Kántanos:* on the W. and SW. sides of the city the walls may be traced for 300 or 400 paces; on the E. they extend about 100 paces; while on the S. the ridge narrows, and the wall, adapting itself to the natural features of the hill, has not a length of more than 20 paces. This wall is composed of polygonal stones, which have not been touched by the chisel. [E. B. J.]

CALARNA. [ARNAE.]

CALASARNA (Καλάσαρνα), a town in the interior of Lucania, mentioned only by Strabo (vi. p. 254), who affords no clue to its position. It has been placed by Italian topographers in Bruttium (Romanelli, vol. i. p. 215); but Strabo, who mentions it together with GRUMENTUM and Vertinae (the latter of which is equally unknown), assigns them all three to Lucania. [E. H. B.]

CALATHA'NA, a town of Thessaly in the district Thessaliotis, of uncertain site. (Liv. xxxii. 13.)

CALA'THIUS MONS. [MESSENIA.]

CALA'TIA (Καλατία: *Eth.* Calatinus), was the name of two cities on the confines of Samnium and Campania, which, from their proximity, have often been confounded with one another. Indeed, it is not always possible to tell to which of the two some passages of ancient writers refer. 1. A city of Samnium, in the valley of the Vulturnus, the site of which is retained by the modern *Caiazzo*, a small town on a hill, about a mile N. of that river, and 10 miles NE. of Capua. This is certainly the town meant by Livy, when he speaks of Hannibal as descending from Samnium into Campania "per Allifanum *Calatinumque* et Calenum agrum" (xxii. 13), and again in another passage (xxiii. 14) he describes Marcellus as marching from Casilinum to Calatia, and thence crossing the Vulturnus, and proceeding by Saticula and Suessula to Nola. Here also the *Samnite* Calatia, *north* of the Vulturnus, must be the one intended. At an earlier period we find it repeatedly noticed during the wars of the Romans with the Samnites, and always in connection with places in or near the valley of the Vulturnus. Thus, in B. C. 305, Calatia and Sora were taken by the latter (Liv. ix. 43); seven years before we are told that Atina and Calatia were taken by the consul C. Junius Bubulcus (Id. ix. 28): and there can be little doubt that the Calatia, where the Roman legions were encamped previous to the disaster of the Caudine Forks (Id. ix. 2), was also the Samnite and not the Campanian city. [CAUDIUM.] But after the Second Punic War we find no notice in history, which appears to refer to it, and it probably declined, like most of the Samnite towns, after the time of Sulla. Inscriptions, however, still preserved at *Caiazzo*, attest its existence as a considerable municipal town under the Roman Empire: and a portion of the ancient walls, of a very massive style of construction, is still visible. (Romanelli, vol. ii. p. 430—434; Maffei, *Mus. Veron.* p. 354; Orell. *Inscr.* 140.) In one of these inscriptions we find the name written "Mun. Caiat:" and the same form occurs on coins which have the legend CAIATINO.

2. A city of Campania, situated on the Appian Way, between Capua and Beneventum. (Strab. v. p. 249, vi. p. 203.) Strabo's precise testimony on this point is confirmed by the Tab. Peut., which places it six miles from Capua, as well as by Appian (*B. C.* iii. 40), who speaks of Calatia and Casilinum as two towns on the opposite sides of Capua. There is, therefore, no doubt of the existence of a Campanian town of the name, quite distinct from that N. of the Vulturnus, and this is confirmed by the existence of ruins at a place still called *le Galazze*, about half way between *Caserta* and *Maddaloni*. (Holsten. *Not. ad Cluver.* p. 268; Pellegrini, *Discorsi della Campania*, vol. i. p. 372; Romanelli, vol. iii. p. 588.)

The following historical notices evidently relate to this city. In B. C. 216, the Atellani and Calatini are mentioned as revolting to Hannibal after the battle of Cannae (Liv. xxii. 61): but in B. C. 211, both cities were again reduced to submission, and severely punished by the Romans for their defection. Shortly afterwards the inhabitants of Atella were compelled to remove to Calatia. (Liv. xxvi. 16, 34, xxvii. 3.) The latter appears, again, to have taken an active part in the Social War, and was punished for this by Sulla, who incorporated it with the territory of Capua, as a dependency of that city. But it was restored to independence by Caesar, and a colony of veterans established there, who after his death were among the first to espouse the cause of Octavian. (Lib. Colon. p. 232; Appian, *B. C* iii. 40; Cic. *ad Att.* xvi. 8; Vell. Pat. ii. 61; Zumpt, *de Colon.* pp. 252, 296.) Strabo speaks of it as a town still flourishing in his time, and its continued municipal existence is attested by inscriptions, as well as by Pliny (Plin. iii. 5. s. 9; Gruter. *Inscr.* p. 59. 6); but it must have subsequently fallen into decay, as notwithstanding its position on the Via Appia, the name is omitted by two out of the three Itineraries. It was probably, therefore, at this time a mere village: the period of its final extinction is unknown; but a church of *S. Maria ad Calatiam* is mentioned in ecclesiastical records as late as the 12th century. (Pellegrini, *l. c.* p. 374.) [E. H. B.]

CALATUM. [GALATUM.]

CALAUREIA (Καλαύρεια: *Eth.* Καλαυρείτης), a small island in the Saronic gulf opposite Pogon, the harbour of Troezen. It possessed an ancient temple of Poseidon, which was considered an inviolable asylum; and this god is said to have received the island from Apollo in exchange for Delos. The temple was the place of meeting of an ancient Amphictyony, consisting of the representatives of the seven cities of Hermione, Epidaurus, Aegina, Athens, Prasiae, Nauplia, and Orchomenus of Boeotia: the place of Nauplia was subsequently represented by Argos, and that of Prasiae by Sparta. (Strab. viii. p. 374; Paus. ii. 33. § 2.)

It was in this temple that Demosthenes took refuge when pursued by the emissaries of Antipater, and it was here that he put an end to his life by poison. The inhabitants of Calaureia erected a statue to the great orator within the peribolus of the temple, and paid divine honours to him. (Strab. Paus. *ll. cc.*; Plut. *Dem.* 29, seq.; Lucian, *Encom. Dem.* 28, seq.)

Strabo says (viii. pp. 369, 373), that Calaureia was 30 stadia in circuit, and was separated from the continent by a strait of four stadia. Pausanias (*l. c.*) mentions a second island in the immediate vicinity named SPHAERIA, afterwards HIERA, containing a temple of Athena Apaturia, and separated from the mainland by a strait so narrow and shallow that there was a passage over it on foot. At present there is only one island; but as this island consists of two hilly peninsulas united by a narrow sandbank, we may conclude with Leake that this bank is of recent formation, and that the present island comprehends what was formerly the two islands of Calaureia and Hiera. It is now called *Poro*, or the ford, because the narrow strait is fordable, as it was in ancient times.

The remains of the temple of Poseidon were discovered by Dr. Chandler in 1765, near the centre of the island. He found here a small Doric temple, reduced to an inconsiderable heap of ruins; and even most of them have since been carried off for building purposes. (Chandler, *Travels*, vol. ii. p. 261; Leake, *Morea*, vol. ii. p. 450, seq.; Ross, *Wanderungen in Griechenland*, vol. ii. p. 5, seq.)

CALBIS. [INDUS.]

CALCARIA, a place in southern Gallia, on the road from *Marseille* to Fossae Marianae or *Foz-les-Martigues*, 14 M. P. from Massilia, and 34 from Fossae Marianae. This road must have run from *Marseille* round the *Etang de Berre*, and the distances lead us to place Calcaria at the ford of the *Cadière*, 14 M. P. from *Marseille*. [G. L.]

CALCA'RIA, in Britain, distant, in the second Itinerary, 9 miles from Eburacum (*York*). The termination *-caster*, the presence of Roman remains, and the geological condition of the country, all point to the present town of *Tadcaster*, as the modern equivalent. So does the distance. *Newton Kyme*, a little higher up the river, has by some writers been preferred: the general opinion, however, favours *Tadcaster*. [R. G. L.]

CALCUA. [NALCUA.]

CALE or CALEM (*Porto* or *Oporto*), a city on the S. border of Gallaecia, in Spain, on the N. side of the Durius (*Douro*) near its mouth; and on the high road from Olisipo to Bracara Augusta, 35 M. P. south of the latter place. (Sallust. *ap.* Serv. *ad Virg. Aen.* vii. 728, reading *Gallaecia* for *Gallia; Itin. Ant.* p. 421; Florez, *Esp. S.* xxi. 5, xiv. 70.) It may possibly be the CALADUNUM (Καλάδουνον) of Ptolemy, the termination denoting its situation on a hill (ii. 6. § 39). Though thus barely mentioned by ancient writers, its position must early have made it a considerable port; so that it came to be called *Portus Cale*, whence the name of *Portugal* has been derived. The modern city *O-Porto* (i. e. *the Port*) stands a little E. of the site of Cale, which is believed to be occupied by the market town of *Gaya*. [P. S.]

CALE-ACTE (Καλὴ Ἀκτή: *Eth.* Καλακτίτης, Καλοακτίτης, Καλακταῖος, Καλοάκτιος, Steph. B.: *Akté*), a city on the W. coast of Crete, whose domain was probably bounded on the N. by the Phalasarnian, and on the W. and S. by the Polyrrhenian territory. A district called *Akté*, in the region of *Mesoghia*, has been identified with it. (Pashley, *Trav.* vol. ii. p. 57.) This place has been by some commentators on the New Testament confounded with the Fair Havens (Καλοὶ Λιμένες), to which St. Paul came in his voyage to Italy (*Acts.* xxvii. 8), and which is situated on the S. of the island. (Hoeck, *Kreta*, vol. i. p. 440.) [E. B. J.]

CALEDO'NIA (*Eth.* Caledonius), the northern part of Britannia. The name is variously derived. In the present Welsh, *celydd* = *a sheltered place, a retreat, a woody shelter* (see Owen's Dict.), the

plural form of which is *celeddon*. In the same language *called* = *thistle stalks*. Name for name, the former of these words gives us the preferable etymology for Caledonia. Growth for growth, that of the *thistle* predominates over that of timber. As far as the opinion of the native critics goes, the former etymology is the more current.

Whatever may be its meaning, the root *Caled* (or *Caledon*) is British. It may or may not have been native as well, *i. e.* if we suppose (a doubtful point) that the Caledonii were notably different from the Britanni. Pliny (iv. 16. s. 30) is the first author in whose text it appears; but, as it appears in Ptolemy (ii. 3) also, and as Ptolemy's sources were in certain cases earlier than those of Pliny, or even Caesar, there is no reason for believing it to have been a name one whit newer than that of any other ancient nation. The Dicalidones of Ammianus Marcellinus (xxvii. 8) are most probably the same population under a designation augmented by a derivational or inflexional prefix.

The import of the term is not less doubtful than its etymology. With the later writers it is wide; and *Caledonia* is the term expressive of one of the great primary divisions of the populations of the Britannic islanders; coinciding, nearly, with the present kingdom of Scotland, as opposed to England and Ireland. But, assuredly, this was not its original power. Aristotle knows no distinction between southern and northern Britain. He merely knows the one between Albion (Great Britain) and Ierne (Ireland). Mela differs from Aristotle only in writing *Britannia* instead of *Albion*. The Orcades and the Hemodae (*Hebrides*) he knows; but he knows no *Caledonia*.

Pliny, as aforesaid, is the first author who mentions Caledonia; Tacitus (*Agr.* 11) the one who deals with it most fully. The authorities, however, are the same in both. The one wrote as the biographer of Agricola; the other evidently bases his statements on the information supplied by that commander, — "triginta prope jam annis notitiam ejus Romanis armis non ultra vicinitatem silvae Caledoniae propagantibus." (Plin. *l. c.*)

Solinus gives us the following mysterious passage. He speaks of the *Caledonicus angulus*, and continues — "in quo recessu Ulyxem Caledoniae appulsum manifestat ara Graecis litteris scripta votum" (c. 22). To refer this to a mistaken or inaccurate application of the well-known passage of Tacitus, wherein he speaks of Ulysses having been carried as far as Germany, of his having founded *Asciburgium*, of his having an altar raised to his honour, and of the name of Laertes being inscribed thereon (*Germ.* 3), would be to cut the Gordian knot rather than to unloose it; besides which, the explanation of the Caledonian Ulysses by means of the German would only be the illustration of *obscurum per obscurius*. Again, the traditions that connect the name of Ulysses with Lisbon (*Ulyssae pons*) must be borne in mind. Upon the whole, the statement of Solinus is inexplicable; though, possibly, when the history of Fiction has received more criticism than it has at present, some small light may be thrown upon it. It may then appear that Ulysses — and many other so-called Hellenic heroes like him — are only Greek in the way that Orlando or Rinaldo are Italian, *i. e.* referable to the country whose poems have most immortalised them. A Phoenician, Gallic, Iberic, or even a German Ulysses, whose exploits formed the basis of a Greek poem, is, in the mind of the present writer, no more improbable than the fact of a Welsh Arthur celebrated in the poems of France and Italy.

In continuing our notice of the earlier classical texts, Ptolemy will be taken before Tacitus. He presents more than one difficulty. When Ammianus Marcellinus (xxvii. 8) speaks of the Picts being divided into two *gentes*, the Di-*calidones* and Vecturiones, it is difficult to believe that he means by the former term any population different from that of the simple *Caledonians*. His whole text confirms this view. Equally difficult is it to separate the *Di*-calidones from the *Oceanus Deucaledonius* (Ὠκεανὸς καλούμενος Δουηκαληδόνιος) of Ptolemy (ii. 3); however difficult it may be to determine whether the ocean gave the name to the population or the population to the ocean. Now, the Deucaledonian ocean is on the *south-western* side of Scotland; at least, it is more west than east. The Chersonesus of the Novantae, and the estuary of the Clota (the mull of Galloway and the mouth of the Clyde) are among the first localities noticed in the *Description of the Northern Side of the Britannic Island Albion, above which lies the Ocean called Deucalidonian*.

Now the Caledonii of Ptolemy are to a certain extent the same as the coastmen of the Deucalidonian Ocean, and, to a certain extent, they are different. Their area begins at the *Lelamnonian Bay* and reaches to the *Varar Aestuary*, and, to the north of these, lies the *Caledonian Forest* (Καληδόνιος δρυμὸς, Ptol. *l. c.*). Dealing with *Loch Fyne* and the *Murray Firth* as the equivalents to the *Lelamnonian Bay* and the *Varar Aestuary*, the Caledonii stretch across Scotland from Inverary to Inverness. Still, in the eyes of Ptolemy, these are only one out of the many of the North British populations. The Cantae, the Vacomagi, and others are conterminous with them, and, to all appearances, bear names of equal value. There is no such thing in Ptolemy as *Caledonia* and the *divisions and sub-divisions of Caledonia* — there is nothing *generic*, so to say, in his phraseology.

The Caledonia of Tacitus is brought as far south as the Grampians at least, possibly as far south as the valleys of the Forth and Clyde. The Caledonia, too, of Tacitus is more or less *generic*, at least the Horesti seem to have been considered to be a people of Caledonia just as Kent is a part of England.

Putting the above statements together, looking at the same time to certain other circumstances, such as the physical condition of the country and the nature of the Ptolemaic authorities, we may probably come to the belief that, until the invasion of Agricola, *Caledonia* was a word of a comparatively restricted signification — that it denoted a woody district — that it extended from Loch Fyne to the Murray Firth — that the people who inhabited it were called *Caledonians* by the Britons, and *Di-caledonians* (Black Caledonians?) by the Hibernians — that Ptolemy took his name for the *ocean* from an Irish, for the *people* and the forest from a British, source — that the western extension of these proper Ptolemaic Caledonians came sufficiently near the western extremity of the rampart of Agricola to become known to that commander — and that it was extended by him to all the populations (east as well as west) north of that rampart, so becoming more and more general.

Such seems to be the history of the word. As to

the original tract itself, the question lies open to a refinement on one or two of the details. The *Silva Caledonia* of Ptolemy lies north of the *Caledonii*, i. e. north of Loch Ness, &c. But this is a country in the heart of the gneiss, where forests can scarcely have existed, except so far as there is a tract of the old red sandstone immediately to the north of Inverness. The true forest can scarcely have lain north of a line drawn from the mouth of the Clyde to Stonehaven — this being the southern limit of the barren and treeless gneiss. Again — though this is a mere point of detail — Loch Linhe may be a better equivalent to the Sinus Lelamnonius than Loch Fyne.

Caledonia, then, was in its general sense a *political* term, denoting the part of Albion north of Agricola's boundary. Beyond this, the Roman remains are next to none. (See Wilson's *Prehistoric Annals of Scotland*.)

How far does the following passage in Tacitus (*Agric.* 11) suggest an *ethnological* signification as well? — "Rutilae Caledoniam habitantium comae, magni artus Germanicam originem adseverant." In the first place, the German origin is an *inference* — the *facts* being the *large limbs* and the *sandy hair*. The interpretation of this passage is to be collected from its context in the *Agricola*, and from the ethnological principles that guided Tacitus, as collected from the *Germania*. The chief distinctive character of the German was his want of towns, and, at the same time, his settled habitations. The one separated him from the Gaul, the other from the Sarmatian. Where each occurred there was, *quoad hoc*, a German characteristic. Now there were fewer towns in North than in South Britain. This directed the attention of the historian towards Germany. Then, there were the limbs and hair. What was this worth? The Britons were not small men; so that if there were a notable difference in favour of the Caledonians, the latter must have been gigantic. Their military prowess, probably, magnified their stature. Nor yet were the Britons dark. The Silurians, who *were* so, are treated as exceptional. Hence their stature and complexion are mere questions of *more or less*. The combination of these facts should guard us against too hastily denying the Keltic origin of even the most Caledonian of the Caledonians.

Whether they were Britons or Gaels, is noticed under PICTI, SCOTI. Probably they were Britons.

The previous view favours the derivation from *Caledon = forest*, as opposed to *Called = Thistle stalk*.

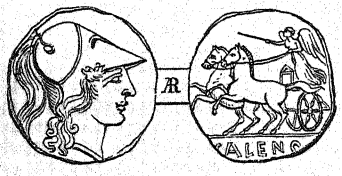
The further the Romans went north the ruder they found the manners. Xiphilinus, speaking after Dion Cassius, thus describes the chief tribes: — "Among the Britons," (observe, this name is continued beyond the wall), "the two greatest tribes are the Caledonii and Meatae; for even the names of the others may be said to be merged in these. The Meatae dwell close to the wall — the Caledonians beyond them — having neither walls, nor cities, nor tilth, but living by pasturage, by the chase, and on certain berries; for of their fish they never taste. They live in tents, naked and barefooted, having wives in common. Their state is democratical. They fight from chariots: their arms consist of a shield and a short spear with a brazen knob at the extremity; they use daggers also." (lxxvi. 12.)

For the chief populations of Caledonia, in the wider sense of the term, and for the history of the country, see BRITANNIA. [R. G. L.]

CALE'LA (Καλήλη), a place in Apulia, mentioned only by Polybius (iii. 101), who tells us that Minucius encamped there, when Hannibal had established himself at Gerunium. He calls it ἄκρα, by which he probably means a "castellum," or small fortified town, and tells us it was in the territory of Larinum; but its exact position cannot be ascertained. It appears from his narrative to have been somewhat more than 16 stadia from Gerunium. [E. H. B.]

CALENTES AQUAE. [AQUAE CALIDAE.]

CALENTUM (prob. *Cazalla* near *Alaniz*), a town of Hispania Baetica, famous for its manufacture of a sort of tiles light enough to swim on water (Plin. xxxv. 14. s. 49; Vitruv. ii. 3; comp. Strab. xiii. p. 615; Schneider, *ad Eclog. Phys.* p. 88; Caro, *Antig.* iii. 70). It is supposed to be the city of the Callenses Emanici, mentioned by Pliny (iii. 1. s. 3). [P. S.]



CALES (Κάλης: *Eth.* Καληνός, Calenus: *Calvi*), one of the most considerable cities of Campania, situated in the northern part of that province, on the road from Teanum to Casilinum. (Strab. v. p. 237.) When it first appears in history it is called an Ausonian city (Liv. viii. 16): and was not included in Campania in the earlier and more restricted sense of that term. [CAMPANIA.] Its antiquity is attested by Virgil, who associates the people of Cales with their neighbours the Aurunci and the Sidicini. (*Aen.* vii. 728.) Silius Italicus ascribes its foundation to Calais the son of Boreas. (viii. 514.) In B. C. 332, the inhabitants of Cales are first mentioned as taking up arms against the Romans in conjunction with their neighbours the Sidicini, but with little success; they were easily defeated, and their city taken and occupied with a Roman garrison. The conquest was, however, deemed worthy of a triumph, and the next year was further secured by the establishment of a colony of 2,500 citizens with Latin rights. (Liv. viii. 16; Vell. Pat. i. 14; Fast. Triumph.) From this time Cales became one of the strongholds of the Roman power in this part of Italy, and though its territory was repeatedly ravaged both by the Samnites, and at a later period by Hannibal, no attempt seems to have been made upon the city itself. (Liv. x. 20, xxii. 13, 15, xxiii. 31, &c.) It, however, suffered so severely from the ravages of the war that in B. C. 209 it was one of the twelve colonies which declared their inability to furnish any further supplies of men or money (Liv. xxvii. 9), and was in consequence punished at a later period by the imposition of heavier contributions. (Id. xxix. 15.) In the days of Cicero it was evidently a flourishing and populous town, and for some reason or other enjoyed the special favour and protection of the great orator. (Cic. *de Leg. Agr.* ii. 31, *ad Fam.* ix. 13, *ad Att.* vii. 14, &c.) He terms it a Municipium, and it retained the same rank under the Roman Empire (Tac. *Ann.* vi. 15; Plin. iii. 5. s. 9): its continued prosperity is attested by Strabo, who calls it a considerable city, though inferior to Teanum (v. p. 237; Ptol. iii. 1. § 68), as well as by inscriptions and existing remains: but no further mention of it occurs in history. It was the birthplace of M. Vinicius, the son-in-law of Germanicus, and patron of Velleius Paterculus. (Tac. *l. c.*) Cales was situated on a branch of the Via Latina, which led from Teanum direct to Casilinum, and there joined the Appian Way: it was rather more than five miles distant from Teanum, and above seven from Casilinum. Its prosperity was owing, in great

measure, to the fertility of its territory, which immediately adjoined the celebrated "Falernus ager," and was scarcely inferior to that favoured district in the excellence of its wines, the praises of which are repeatedly sung by Horace. (Hor. *Carm.* i. 20. 9, 31. 9, iv. 12. 14; Juv. i. 69; Strab. v. p. 243; Plin. xiv. 6. s. 8.) So fertile a district could not but be an object of desire, and we find that besides the original Roman colony, great part of the territory of Cales was repeatedly portioned out to fresh settlers: first in the time of the Gracchi, afterwards under Augustus. (Lib. Colon. p. 232.) Cales was also noted for its manufactures of implements of husbandry, and of a particular kind of earthenware vessels, called from their origin Calenae. (Cato, *R. R.* 135; Varr. *ap. Nonium*, xv. p. 545.)

After the fall of the Western Empire, Cales suffered severely from the ravages of successive invaders, and in the 9th century had almost ceased to exist: but was revived by the Normans.

The modern city of *Calvi* retains its episcopal rank, but is a very poor and decayed place. It, however, preserves many vestiges of its former prosperity, the remains of an amphitheatre, a theatre, and various other fragments of ancient buildings, of reticulated masonry, and consequently belonging to the best period of the Roman Empire, as well as marble capitals and other fragments of sculpture. The course of the Via Latina, with its ancient pavement, may still be traced through the town. A spring of acidulous water, noticed by Pliny, as existing "in agro Caleno" (ii. 106) is still found near *Francolisi*, a village about four miles W. of Calvi. (Romanelli, vol. iii. p. 437; Hoare's *Classical Tour*, vol. i. pp. 246—248; Craven's *Abruzzi*, vol. i. p. 27—30; Zona, *Memorie dell' Antichissima città di Calvi*, 4to., Napoli, 1820.)

The coins of Cales are numerous, both in silver and copper: but from the circumstance of their all having Latin legends, it is evident they all belong to the Roman colony. [E. H. B.]

COIN OF CALES.

CALES (Κάλης, Κάλλης), a river of Bithynia, 120 stadia east of Elaeus. (Arrian, p. 14; and Marc. p. 70.) This seems to be the river which Thucydides (iv. 75) calls Calex (Κάληξ), at the mouth of which Lamachus lost his ships, which were anchored there, owing to a sudden rise of the river. Thucydides places the Calex in the Heracleotis, which agrees very well with the position of the Cales. Lamachus and his troops were compelled to walk along the coast to Chalcedon. Pliny (v. 32) mentions a river Alces in Bithynia, which it has been conjectured, may be a corruption of Calex. There was on the river Cales also an emporium or trading place called Cales. [G. L.]

CALETI, or CALETES (Καλέτοι, Strab.; Καλεῖται, Ptol.) are reckoned by Caesar (*B. G.* ii. 4) among the Belgic nations, and consequently are north of the *Seine* (*B. G.* i. 1). In B. C. 57 it was estimated that they could muster 10,000 fighters. They are enumerated under the name of Caletes in our present texts, among the Armoric or maritime states of Gallia which joined in the attempt to relieve Vercingetorix when he was besieged by Caesar in Alesia in B. C. 52. The reading "Cadetes" may safely be rejected, nor are there any good reasons for distinguishing the Belgic Caleti from the Armoric Caletes. The Caleti also joined the Bellovaci and other tribes (B. C. 51) in a fresh attempt to resist Caesar. (*B. G.* viii. 7.) Strabo (pp. 189, 194) places the Caleti on the north side of the *Seine*, at the mouth of the river, and he observes that one of the usual lines of passage to Britain was from this country. Ptolemy's position for the Caleti is the same, and he informs us that Juliobona (*Lillebonne*) was their chief town. The position thus agrees with the *Pays de Caux*, the name *Caux* being a corruption of Caleti, conformable to a general principle in the French language. They were in the modern diocese of *Rouen*, the other part of which was occupied by their neighbours the Velocasses or Veliocasses, who are also mentioned by Caesar (*B. G.* ii. 4). In the geography of Pliny (iv. 17) the Caleti are included in the division of Gallia Lugdunensis. Harduin remarks that in this passage of Pliny all the MSS. have "Galletos." The Caleti are mentioned by Pliny among those peoples who cultivated flax largely. [G. L.]

CALETRA, an ancient city of Etruria, which appears to have ceased to exist at a very early period, but had left its name to a tract of territory called after it the "Caletranus ager." (Plin. iii. 5. s. 8.) The situation of this may be inferred from Livy, who tells us that the Roman colony of SATURNIA (in the valley of the *Albegna*) was established "in agro Caletrano," but he does not allude to the city itself (xxxix. 55). [E. H. B.]

CALINGAE, a considerable people of India intra Gangem, close to the sea (*i. e.* on the E. coast) with a capital PARTHALIS (Plin. vi. 17, 18. s. 21, 22). The promontory CALINGON, which we may assume to heve belonged to them, was 625 M. P. from the mouth of the Ganges, and upon it was the town of DANDAGULA. (Plin. vi. 20. s. 23.) This promontory and city are usually identified with those of *Calinapatnam*, about half way between the rivers *Mahanuddy* and *Godavery;* and the territory of the Calingae seems to correspond pretty nearly to the district of *Circars*, lying along the coast of *Orissa* between the two rivers just named.

Their wide diffusion, and their close connection with the Gangaridae, are shown by the facts that Pliny calls them CALINGAE GANGARIDES (18. s. 22), and mentions the MODOGALINGAE on a great island in the Ganges, and the MACCOCALINGAE on the upper course of the river (17, 19. s. 21, 22). Ptolemy does not mention them; but their position seems to correspond to his district of Maesolia, in which he places the inland city of *Calliga* (Καλλίγα), which is supposed to correspond to the modern *Coolloo*, above *Kuttack*, on the *Mahanuddy*, and to the Parthalis of Pliny. (Ptol. vii. 1. § 93.) There are other traces of the name, along the E. coast, even to the S. extremity of the peninsula, where Ptolemy calls the promontory opposite to *Ceylon* Καλλιγικόν (vii. 1. § 11: CORY). [P. S.]

CALINIPAXA (prob. *Kanouge*), a city of India intra Gangem, made known to the Greeks by the expedition of Seleucus Nicator. It stood on the Ganges considerably above its confluence with the Jomanes (*Jumna*), 625 M. P. above, according to

the itineraries of the expedition, in which however the numbers were evidently confused. (Plin. vi. 17. s. 21.) [P. S.]

CALLAICI. [GALLAECI.]

CALLAS (Κάλλας), a smaller river on the north coast of Euboea, flowing into the sea near Oreus. (Strab. x. p. 445.)

CALLATE'BUS (Καλλάτηβος). Xerxes, on his march from Colossae to Sardes, crossed the Maeander and came to Callatebus, a city of Lydia, where men make honey, that is sugar, out of the tamarisk and wheat (Herod. vii. 31). Stephanus (*s. v.* Καλλάτηβος) merely copies Herodotus, and adds the Ethnic name Καλλατήβιος, probably his own invention. The tamarisk grows in great abundance in the valley of the Cogamus near *Aineh Ghieul* (Hamilton, *Researches*, &c. vol. ii. p. 374), which is north of the Maeander and on the road to Sardes. It corresponds well enough to the probable position of Callatebus, but there is no evidence to identify it. [G. L.]

CALLA'TIS (Κάλλατις, Κάλατις, Καλλατία, or Καλλαντία), a large city of Thrace, on the coast of the Euxine. It was a colony of Miletus (Mela, ii. 2), and its original name Acervetis. (Plin. iv. 18.) The author of the *Etym. Mag.* describes it as a colony of Heracleia, which may mean nothing else but that, at a later period, fresh colonists were sent out from Heracleia. (Scyl. *Peripl.* p. 29; Strab. vii. p. 319; Scymn. *Frag.* 15; Diod. xix. 73, xx. 25; Anonym. *Peripl.* p. 12; Steph. B. *s. v.*; Procop. *de Aedif.* iv. 11; Ptol. iii. 10. § 8; Amm. Marc. xxvii. 4.) The town appears to have been flourishing down to a late period, and is now generally identified with the town of *Collat* or *Collati*. [L. S.]

CALLENSES. [CALENTUM].

CALLEVA, in Britain, distant 22 miles, according to the Itinerary, from Venta Belgarum, in the direction of the Thames. In the seventh *Iter* this town is specified as *Calleva Attrebatum*. In the twelfth it is simply *Calleva*. How far does this justify us in separating the two towns? It simply indicates the likelihood of there having been another Calleva somewhere. It by no means proves that the Calleva of the twelfth *Iter* was such a second one. Hence, the identity or difference is to be determined by the special evidence of the case. Now, a similar inconsistency—as is remarked by Horsley—occurs in the notice of Isurium. In one *Iter* it is *Isurium Brigantum*, in another, simply *Isurium*. Hence, the assumption of a second Calleva, *mentioned by any extant author*, is unnecessary. Of the one in question, *Silchester* is the generally recognised modern equivalent. [R. G. L.]

CALLIARUS (Καλλίαρος: *Eth.* Καλλιαρεύς), a town in eastern Locris mentioned by Homer, was uninhabited in Strabo's time, but its name was still attached to a tract of ground on account of the fertility of the latter. (Hom. *Il.* ii. 531; Strab. ix. p. 426; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. ii. p. 180.)

CALLI'CHORUS, a river of Bithynia mentioned by Pliny (vi. 1) and also by Scylax (*Peripl.* p. 34). [G. L.]

CALLI'CULA MONS, a range of mountains in the northern part of Campania. The name is found only in Livy (xxii. 15, 16), from whom we gather that it was the ridge which separates the great plain on the N. of the Vulturnus, known as the Falernus Ager, from the upper valley of that river, about Calatia and Allifae, which belonged to Samnium. This ridge is, in fact, the same of which the continuation S. of the Vulturnus was known as the Mons Tifata. Hannibal crossed it without opposition on his march from Samnium into Campania (B. C. 217), when he laid waste the Falernian Plain; but on his return Fabius occupied the passes of Mt. Callicula, as well as Casilinum, which commanded the passage of the Vulturnus, hoping thus to cut off his retreat. Hannibal, however, deceived him by a stratagem, and effected the passage of the mountain without difficulty (*Ib.* 16—18). Polybius, who relates the same operations (iii. 91—94), designates this mountain range by the name of Ἐριθιανόν, for which it has been proposed to read Τρεβιανόν, from Trebia or Trebula, a small town in this neighbourhood; but the position of Trebula is not well ascertained, and the "Trebianus Ager," mentioned by Livy in another passage (xxiii. 14), is placed by him S. of the Vulturnus. The name given by Polybius is, however, in all probability, corrupt. [E. H. B.]

CALLI'DROMUS. [OETA.]

CALLI'ENA (Καλλίενα, Arrian. *Peripl. Mar. Erythr.*, Καλλιανά, Cosmas Indicopl. ii. p. 337: *Kalliannee*, on the mainland, opposite *Bombay*), a considerable seaport and capital of a principality on the W. coast of India. [P. S.]

CALLIENSES. [CALLIUM.]

CA'LLIFAE, a town of Samnium, mentioned only by Livy (viii. 25) who relates that the consuls C. Petelius and L. Papirius in B. C. 323, took three towns of the Samnites, Callifae, Rufrium and Allifae. Cluver supposes Callifae to be represented by the modern *Carife*, in the country of the Hirpini, between *Frigento* and *Trevico:* but this position seems much too distant: and it is more probable that all the three towns were situated in the same neighbourhood. A local antiquarian has given strong reasons for placing Callifae on the site of *Calvisi*, a village about five miles E. of *Allife*, at the foot of the *Monte Matese*, where there exist some remains of an ancient town. (Trutta, *Antichità Allifane*, 4to., Napoli, 1776; Romanelli, vol. ii. p. 458; Abeken, *Mittel Italien*, p. 98.) [E. H. B.]

CALLIGA [CALINGAE].

CALLI'GERIS (Καλλιγερίς), an inland city of India intra Gangem, on the W. side of the peninsula, between the rivers Benda and Pseudostomus. (Ptol. vii. 1. § 83.) Some identify it with Calliena. (Mannert, vol. v. pt. i. p. 146.) [P. S.]

CALLIGICUM PROM. [CORY.]

CALLINI'CUS, CALLINI'CUM. [NICEPHORIUM.]

CALLINU'SA (Καλλίνουσα = Καλὴ Νῆσος?), a promontory to the NW. of Cyprus, which Ptolemy (v. 14. § 4) places to the W. of Soli. D'Anville (*Mém. de l'Acad. des Inscr.* vol. xxxii. p. 537), from one Venetian map, gives it the name of *Eleni*, and from another Venetian map, *Capo de Alessandreta*. (Engel, *Kypros*, vol. i. p. 74; Mariti, *Viaggi*, vol. i. 199.) [E. B. J.]

CALLI'OPE (Καλλιόπη, Pol. x. 31; Appian, *Syr.* 57; Steph. B.; Plin. vi. 17. s. 29), a town founded by Seleucus in Parthia. The situation is unknown; but it is mentioned by Appian as one of many towns built by Seleucus, and named by him after other Greek towns. [V.]

CALLI'POLIS (Καλλίπολις). 1. (*Gallipoli*), a maritime city of Calabria, situated on the Tarentine Gulf, about 30 miles from the Iapygian promontory, and between 50 and 60 from Tarentum. (Pliny gives the former distance at 32 M. P., and the latter

at 75.) Its name sufficiently attests its Greek origin, which is further confirmed by Mela (ii. 4), who calls it "Urbs Graia, Callipolis;" and we learn from Dionysius (Fr. Mai. xvii. 4) that it was founded by a Lacedaemonian named Leucippus, with the consent and assistance of the Tarentines, who had themselves previously had a small settlement there. Pliny tells us that it was called in his time Anxa ("Callipolis quae nunc est Anxa," iii. 11. s. 16), but it would seem to have never lost its Greek appellation, which it retains almost unaltered at the present day. The ancient city doubtless occupied the same site with the modern *Gallipoli*, on a rocky peninsula projecting boldly into the sea, and connected with the mainland only by a bridge or causeway. It is remarkable that we find in ancient times no allusion to the excellence of its port, to which it owes its present prosperity; it is now one of the most considerable trading towns in this part of Italy, and contains above 12,000 inhabitants. (Galateo, *De Situ Iapygiae*, p. 39; Romanelli, vol. ii. pp. 44—47; Swinburne, *Travels*, vol. i. p. 368; Giustiniani, *Diz. Geogr. s. v.*).

2. A city on the E. coast of Sicily, which was of Greek origin, and a colony from the neighbouring city of Naxos. (Scymn. Ch. 286; Strab. vi. p. 272.) It appears to have ceased to exist at an early period, as the only notice of it found in history is in Herodotus (vii. 154), who mentions it as having been besieged and reduced to subjection by Hippocrates, tyrant of Gela. It is probable that it was destroyed, or its inhabitants removed, either by that ruler, or his successor Gelon, according to a policy familiar to the Sicilian despots, as, from the absence of all mention of the name by Thucydides during the operations of the Athenians on the E. coast of Sicily, it seems certain that it was then no longer in existence. Nor is the name afterwards found in Diodorus; and it is only mentioned by Strabo as one of the cities of Sicily that had disappeared before his time. (Strab. vi. p. 272; Steph. B. *s. v.*) Silius Italicus, indeed, speaks of it as if it still existed during the Second Punic War (xiv. 249); but his accuracy on this point may well be questioned. It was probably situated on the coast between Naxos and Messana. [E. H. B.]

CALLI'POLIS (Καλλίπολις: *Gallipoli*), a town in the Thracian Chersonesus, opposite to Lampsacus. (Strab. xiii. p. 589; Steph. B. *s. v.*; Ptol. iii. 12. § 4; Procop. *de Aed.* iv. 9; Liv. xxxi. 16; Plin. iv. 18.) [L. S.]

CALLIPOLIS. [CALLIUM.]

CALLI'RRHOE (Καλλιρρόη), warm springs on the eastern side of the Jordan, and not far from the Dead Sea, to which Herod the Great resorted during his last illness, by the advice of his physicians. The stream flows into the Dead Sea. (Joseph. *Ant.* xvii. 6. § 5.) Pliny (v. 16) also describes it as "calidus fons medicae salubritatis." (Reland, *Palaest.* pp. 302, 303, 678, 679.) The place was visited by Captains Irby and Mangles in 1818, and is thus described by those intelligent travellers: "Looking down into the valley of Callirrhoe, it presents some grand and romantic features. The rocks vary between red, grey, and black, and have a bold and imposing appearance. The whole bottom is filled, and in a manner choked, with a crowded thicket of canes and aspens of different species, intermixed with the palm, which is also seen rising in tufts in the recesses of the mountain's side, and in every place whence the springs issue. In one place a considerable stream of hot water is seen precipitating itself from a high and perpendicular shelf of rock, which is strongly tinted with the brilliant yellow of sulphur deposited upon it. On reaching the bottom, we found ourselves at what may be termed a hot river, so copious and rapid is it, and its heat so little abated; this continues as it passes downwards, by its receiving constant supplies of water of the same temperature.... We passed four abundant springs, all within the distance of half-a-mile, discharging themselves into the stream at right angles with its course. We judged the distance from the Dead Sea by the ravine to be about one hour and a half. Maclean says that there was a cognominal city at Callirrhoe; in which we think, from the very nature of the place, he must be wrong, since there is not space or footing for a town in the valley, so far as we saw it. That Herod must have had some lodging when he visited these springs, is true, and there are sufficient remains to prove that some sort of buildings have been erected. The whole surface of the shelf, where the springs are, is strewed over with tiles and broken pottery; and, what is most surprising, within very few minutes, without any particular search, four ancient copper medals were found; all were too much defaced to be distinguishable, but they appeared to be Roman." (*Travels*, pp. 467—469.) Its course to the Dead Sea was explored in 1848 by the American expedition, and described by Lieut. Lynch. "The stream, 12 feet wide and 10 inches deep, rushes in a southerly direction, with great velocity into the sea. Temperature of the air 70°, of the sea 78°, of the stream 94°, one mile up the chasm 95°. It was a little sulphureous to the taste." It issues from a chasm 122 feet wide (the perpendicular sides of which vary from 80 to 150 feet in height), and runs through a small delta about 2 furlongs to the sea. (Lynch's *Expedition*, p. 371.) [G. W.]

CALLIRRHOE FONS. [ATHENAE, p. 292.]

CALLISTRA'TIA (Καλλιστρατία), a town in Asia, on the coast of the Euxine, 20 stadia east of Cape Carambis (Marcian. *Peripl.* p. 73): it was also called Marsilla, according to the anonymous author of the Periplus. As Carambis is well known, Callistratia may also be determined. [G. L.]

CALLITHE'RA, a town of Thessaly, in the district Thessaliotis, of uncertain site. (Liv. xxxii. 13.)

CA'LLIUM or CALLI'POLIS (Κάλλιον, Paus. x. 22. § 6; Καλλίπολις, Pol. *ap. Steph. B. s. v.* Κόραξ; Liv. xxx. 31: *Eth.* Καλλιεύς), the chief town of the Callienses (*οἱ* Καλλιῆς, Thuc. iii. 96), was situated on the eastern confines of Aetolia, on one of the heights of Mt. Oeta, and on the road from the valley of the Spercheus to Aetolia. It was by this road that the Gauls marched into Aetolia in B.C. 279, when they surprised and destroyed Callium, and committed the most horrible atrocities on the inhabitants. (Paus. x. 22.) Callium also lay on the road from Pyra (the summit of Oeta, where Hercules was supposed to have burnt himself) to Naupactus, and it was divided by Mt. Corax from lower Aetolia. (Liv. xxx. 31.)

CALO, a station in the north of Gallia, which is placed in the Antonine Itin. on the road between Vetera (*Xanten*) and Gelduba (*Geldub*, as D'Anville calls it, *Gelb* or *Gellep*). The distances fix the place tolerably well, and the passage over the stream called the *Kennelbach*, the same apparently that D'Anville names the *Kelnet*, *Kennelt*, or *Kendel*, seems to represent Calo. [G. L.]

CALOR (Κάλωρ). 1. A river of Samnium, one of the most considerable of the tributaries of the

Vulturnus, still called the *Calore*. It rises in the country of the Hirpini, in the same lofty group of mountains in which the Aufidus and the Silarus have their sources: from thence it flows first N. and then W., passes under the walls of Beneventum, and joins the Vulturnus a few miles SW. of Telesia. In this course it receives two tributary streams: the Sabatus or *Sabbato*, which joins it under the walls of Beneventum, and the Tamarus or *Tamaro*, about 5 miles higher up its course. It was on the banks of this river, about three miles from Beneventum, that the Carthaginian general Hanno was defeated by T. Sempronius Gracchus in B. C. 214; and some authors, also, represented it as the scene of the defeat and death of Gracchus himself two years later: which, however, according to Livy, really occurred at a place called Campi Veteres in Lucania. (Liv. xxiv. 14, xxv. 17; Appian. *Annib.* 36.)

2. A river of Lucania, flowing into the Silarus. Its name is known only from the Itin. Ant. (p. 110) which marks a station "Ad Calorem," on the road leading from Salernum into Lucania: the distances given are confused, but there is no doubt that the river meant is the one still called the *Calore*, which flows from the S. nearly parallel with the Tanagrus or *Tanagro*, and joins the Silarus (*Sele*) about 5 miles from its mouth. [E. H. B.]

CALOS (Καλὸς ποταμός), a river of Pontus, the position of which may be placed approximately from the fact of its being 120 stadia west of the river Rhizius, which is *Rizah* in the Pashalick of *Trebizond*. There was at its mouth a trading port called Cale Parembole. (Arrian, p. 7.) [G. L.]

CALPE (Κάλπη: Κάλπις, Philostr. *Vit. Apoll.* v. 1; *Gibraltar*), the ancient name of the precipitous rock, at the S. extremity of the Spanish coast, and at the E. end of the Fretum Gaditanum (*Straits of Gibraltar*), which formed the northern of the two hills called by the ancients the Pillars of Hercules; the southern pillar, on the African coast, being Abyla. [Abyla, Herculis Columnae]. Calpe is described by Strabo (iii. p. 139) as a mountain at the point where the Inner Sea joins the Outer, on the right hand of those sailing outwards, belonging to the Iberians called Bastetani or Bastuli, not large in circuit, but lofty and precipitous, so that from a distance it appears like an island (an appearance due also to the flatness of the isthmus which unites it to the mainland). He places it at distances of 750 or 800 stadia from Gadeira (*Cadiz*) on the W., and from Malaca (*Malaga*) on the E., and 2200 stadia from Carthago Nova (iii. pp. 156, 168, comp. i. p. 51, ii. p. 108, iii. pp. 148, 170; Philostr. *l. c.*; Marcian. Heracl. p. 37; Ptol. ii. 4. § 6). Mela (i. 5. § 3, ii. 6. § 8) adds that it was hollowed out into a great concavity on the W. side, so as to be almost pierced through; but whether this description refers to the general form of the rock, or to the numerous caves which exist in it, is not clear from Mela's words. Pliny mentions it as the outmost mountain of Spain, and the W. headland of that great gulf of the Mediterranean, of which the S. point of Italy forms the E. headland (iii. 1. s. 1, 3).

The name has been a fertile subject of conjecture. According to the practice of finding a significant Greek word in the most foreign names, some derived it from κάλπη, *an urn*, to which the form of the rock was fancied to bear some resemblance (Schol. *ad Juv. Sat.* xiv. 279; Avien. *Or. Mar.* 348, 349). More worthy of notice, though evidently confused, are the statements of Eustathius (*ad Dion. Perieg.* 64) and Avienus (*l. c.* 344—347). The former says that, of the two pillars of Hercules, that in Europe was called *Calpe* in the barbarian tongue, but *Alybe* (Ἀλύβη) by the Greeks; and that in Libya *Abenna* by the barbarians (comp. Philostr. *l. c.*) and *Cynegetice* (Κυνηγετική) in Greek, or, as he says lower down *Abyle* or *Abylyx* (Ἀβύλην ἢ Ἀβύλυκα). Avienus, confining the name *Abila* to the rock on the African shore, interprets the word to mean in Punic, *a lofty mountain*. Probably the words *Abila, Abyla, Alyba, Calpe*, were originally identical; the chief difference of form being in the presence or absence of the guttural; and it seems most likely that the root is Phoenician, though some would make it Iberian, and connect it with the well-known Celtic root *Alp*. (Salmas. *ad Solin.* p. 203; Tzsch. *ad Mel.* ii. 6. § 8; Wernsdorf, *ad Avien. l. c.*). Whatever may be the origin of the name of Calpe, it is probably the same word which we find used in reference to the S. of Spain in the various forms, *Carp*-e, *Cart*-eia, *Tart*-essus, as will appear under Carteia, where also will be found a discussion of Strabo's important statement respecting a city of the name of Calpe.

The rock is too proudly familiar to English readers to need much description. It is composed of grey limestone and marble; its length from N. to S. is about 3 miles; its circumference about 7; and its highest point about 1500 feet above the sea. It divides the Mediterranean from the *Bay of Gibraltar or Algesiras*, which opens up from the *Straits*, having 5 miles for its greatest width, and 8 for its greatest depth. At the head of this bay was the ancient city of Carteia.

The modern name is a corruption of *Jebel-Tarik*, i. e. *the hill of Tarik*, a name derived from the Moorish conqueror who landed here, April 30, 711. (Ford, *Handbook of Spain*, p. 107; Carter, *Journey from Gibraltar to Malaga;* Col. James, *Hist. of the Herculean Straits.*) [P. S.]

CALPE (Κάλπη), a river of Bithynia, the Chalpas of Strabo (p. 543). It lies between the Psilis, from which it is 210 stadia distant, and the Sangarius. There was also a port called the port of Calpe. Xenophon (*Anab.* vi. 4), who passed through the place on his retreat with the Ten Thousand, describes it as about half way between Byzantium and Heracleia: it is a promontory, and the part which projects into the sea is an abrupt precipice. The neck which connects the promontory with the mainland is only 400 feet wide. The port is under the rock to the west, and has a beach; and close to the sea there is a source of fresh water. The place is minutely described by Xenophon, and is easily identified on the maps, in some of which the port is marked *Kirpe Limán*. Apollonius (*Arg.* ii. 661) calls the river Calpe "deep flowing." [G. L.]

CALPIA. [Carteia.]

CALUCO'NES (Καλούκωνες), a tribe of the Lepontii in Rhaetia, the name of which is still preserved in that of the valley of *Kalanca*. (Plin. iii. 24; Ptol. ii. 12. § 3.) [L. S.]

CALVUS, a hill near Bilbilis, in Hispania Tarraconensis, mentioned by Martial (i. 49). [P. S.]

CALYCADNUS (Καλύκαδνος), one of the largest rivers of Cilicia. (Strab. p. 670.) It rises in the range of Taurus, and after a general eastern course between the range of Taurus and the high land which borders this part of the coast of Cilicia, it passes *Selefkieh*, the remains of Seleuceia, and enters

the Mediterranean north-east of the promontory of Sarpedon. "The most fertile and the only extensive level in (Cilicia) Tracheiotis is the valley of the Calycadnus, a district which was sometimes called Citis" (Leake, *Asia Minor*, p. 116.) The Calycadnus is about 180 feet wide, opposite to Seleuceia, where there is a bridge of six arches. The river is now called the *Ghiuk-Su*. It enters the sea through a low sandy beach. In the treaty between Antiochus and the Romans (Polyb. xxii. 26) the Syrian king was not to navigate west of the promontory Calycadnum, except in certain cases. Livy (xxxviii. 38) mentions the same terms, but he speaks both of Calycadnum and the Sarpedon (promontoria); and Appian (*Syr.* 39) also mentions the two promontories Calycadnum and Sarpedonium, and in the same order. Now if the Sarpedon of Strabo were the lofty promontory of *Cape Cavaliere*, as Beaufort supposed (*Karamania*, p. 235), the Calycadnum, which we may fairly infer to be near Sarpedon, and near the river, might be the long sandy point of *Lissan el Kahpeh*, which is between *Cape Cavaliere*, and the mouth of the river Calycadnus. Beaufort supposes this long sandy point to be the Zephyrium of Strabo. It is correctly described in the Stadiasmus "as a sandy narrow spit, 80 stadia from the Calycadnus," which is about the true distance; but in the Stadiasmus it is called Sarpedonia. According to the Stadiasmus then the cape called Calycadnum must be, as Leake supposes, the projection of the sandy coast at the mouth of the Calycadnus. This identification of Sarpedon with *Lissan el Kahpeh*, and the position of Zephyrium at the mouth of the Calycadnus, agree very well with Strabo's words; and the Zephyrium of Strabo and Calycadnum of Livy and Polybius and Appian, may be the same. Ptolemy going from west to east mentions Sarpedon, the river Calycadnus and Zephyrium; but his Zephyrium may still be at the mouth of the Calycadnus. [G. L.]

CALYDNAE INSULAE (Κάλυδναι νῆσοι). 1. A group of islands off the coast of Caria, mentioned by Homer (*Il.* ii. 677), of which the principal one was Calymna. For details, see CALYMNA.

2. Two small islands off the coast of Troas, said to be situated between Tenedos and the promontory Lectum. (Strab. xiii. p. 604; Quint. Smyrn. xii. 453; Eustath. *ad Hom. Il.* ii. 677; Tzetz. *ad Lycophr.* 25.) But no islands are found in this position; and it is not impossible that they may owe their name to the passage in Homer mentioned above, though the Calydnae of Homer are in an entirely different position.

CA'LYDON (Καλυδών: *Eth.* Καλυδώνιος, Calydonius: *Kurt-agá*), the most celebrated city of Aetolia, in the heroic age, was founded by Aetolus in the land of the Curetes, and was called Calydon, after the name of his son. Calydon and the neighbouring town of Pleuron are said by Strabo to have been once the ornament (πρόσχημα) of Greece, but to have sunk in his time into insignificance. Calydon was situated in a fertile plain near the Evenus, and at the distance of 7½ (Roman) miles from the sea, according to Pliny. It is frequently mentioned by Homer, who gives it the epithet of πετρήεσσα and αἰπεινή, from which we might conclude that the city was situated on a rocky height; but Strabo says that these epithets were to be applied to the district and not to the city itself. Homer also celebrates the fertility of the plain of the "lovely" (ἐρατεινή) Calydon. (Apollod. i. 7. § 7; Plin. iv. 3; Hom. *Il.* ii. 640, ix. 577, xiii. 217, xiv. 116; Strab. pp. 450, seq., 460.) In the earliest times the inhabitants of Calydon appear to have been engaged in incessant hostilities with the Curetes, who continued to reside in their ancient capital Pleuron, and who endeavoured to expel the invaders from their country. A vivid account of one of the battles between the Curetes and Calydonians is given in an episode of the Iliad (ix. 529, seq.). The heroes of Calydon are among the most celebrated of the heroic age. It was the residence of Oeneus, father of Tydeus and Meleager, and grandfather of Diomedes. In the time of Oeneus Artemis sent a monstrous boar to lay waste the fields of Calydon, which was hunted by Meleager and numerous other heroes. (See *Dict. of Myth.* art. *Meleager.*) The Calydonians took part in the Trojan war under their king Thoas, the son (not the grandson) of Oeneus. (Hom. *Il.* ii. 638.)

Calydon is not often mentioned in the historical period. In B. C. 391 we find it in the possession of the Achaeans, but we are not told how it came into their hands; we know, however, that Naupactus was given to the Achaeans at the close of the Peloponnesian war, and it was probably the Achaeans settled at Naupactus who gained possession of the town. In the above-mentioned year the Achaeans at Calydon were so hard pressed by the Acarnanians that they applied to the Lacedaemonians for help; and Agesilaus in consequence was sent with an army into Aetolia. Calydon remained in the hands of the Achaeans till the overthrow of the Spartan supremacy by the battle of Leuctra (B. C. 371), when Epaminondas restored the town to the Aetolians. In the civil war between Caesar and Pompey (B. C. 48) it still appears as a considerable place; but a few years afterwards its inhabitants were removed by Augustus to Nicopolis, which he founded to commemorate his victory at Actium (B. C. 31). It continues however to be mentioned by the later geographers. (Xen. *Hell.* iv. 6. § 1; Paus. iii. 10. § 2; Diod. xv. 75; Caes. *B. C.* iii. 35; Mel. ii. 3. § 10; Plin. iv. 3; Ptol. iii. 15. § 14.) Calydon was the head-quarters of the worship of Artemis Laphria, and when the inhabitants of the town were removed to Nicopolis, Augustus gave to Patrae in Achaia the statue of this goddess which had belonged to Calydon. (Paus. iv. 31. § 7, vii. 18. § 8.) There was also a statue of Dionysus at Patrae which had been removed from Calydon. (Paus. vii. 21.) Near Calydon there was a temple of Apollo Laphrius (Strab. p. 459, with Kramer's note); and in the neighbourhood of the city there was also a lake celebrated for its fish. [See p. 64, a.]

In the Roman poets we find *Calydōnis*, a woman of Calydon, i. e. Deïanīra, daughter of Oeneus, king of Calydon (Ov. *Met.* ix. 112); *Calydonius heros*, i. e. Meleager (*Ibid.* viii. 324); *Calydonius amnis*, i. e. the Achelous, separating Acarnania and Aetolia, because Calydon was the chief town of Aetolia (*Ibid.* viii. 727, ix. 2); *Calydonia regna*, i. e. Apulia, because Diomedes, the son of Tydeus, and grandson of Oeneus, king of Calydon, afterwards obtained Apulia as his kingdom. (*Ibid.* xiv. 512.)

There has been some dispute respecting the site of Calydon. The Peutingerian Table places it east of the Evenus, and 9 miles from this river; but this is clearly a mistake. It is evident from Strabo's account (p. 450, seq.), and from all the legends relating to Calydon, that both this city and Pleuron lay on the western side of the Evenus, between this

river and the Achelous.* Leake supposes the ruins which he discovered at *Kurt-agá*, a little to the E. of the Evenus, to be those of Calydon. They are distant a ride of 1 hour and 35 minutes from *Mesolonghi*, and are situated on one of the last slopes of Mt. Aracynthus at the entrance of the vale of the Evenus, where that river issues from the interior valleys into the maritime plain. They do not stand on any commanding height, as the Homeric epithets above mentioned would lead us to suppose, and it is perhaps for this reason that Strabo supposes these epithets to apply to the surrounding country. The remains of the walls are traceable in their whole circuit of near two miles and a half; and outside the walls Leake discovered some ruins, which may have been the peribolus of the temple of Artemis Laphria. (Leake, *Northern Greece*, vol. iii. p. 533, seq.)

CA'LYDON or CA'LIDON, a place in Gallia, mentioned by Ammianus Marcellinus (xxvii. 1). D'Anville was not able to assign its position. Hadrian Valesius, who changed the reading of the MSS. to Cabilona, takes the place to be *Châlon-sur-Saône*; but there is no MS. authority for this alteration. The narrative of Ammianus does not help us in determining the position. Walckenaer (*Géog.* vol. i. p. 516), relying on the resemblance of name which he finds in the forest of *Caldnoven*, in the French department of the *Moselle*, in the arrondissement of *Thionville*, places Calydon near the forest, and at *Thionville*, or, as he adds, rather at 3000 feet distant from *Thionville*, at *Yentz*, on the right bank of the Mosel, where many medals have been found; but he does not say what kind of medals. [G. L.]

CALYMNA (Κάλυμνα, Καλύμνα: *Eth.* Καλύμνιος: *Kalimno*), an island off the coast of Caria between Leros and Cos. It appears to have been the principal island of the group which Homer calls Calydnae (νῆσοι Κάλυδναι, *Il.* ii. 677): the other islands were probably Leros, Telendos, Hypseremos (Hypsereisma) and Plate. (Comp. Strab. x. p. 489.) Calymna is the correct orthography, since we find it thus written on coins and inscriptions. (Böckh, *Inscr.* No. 2671.) This form also occurs in Scylax, Strabo, Ovid, Suidas, and the Etymologicum Magnum; but out of respect for Homer, whose authority was deemed paramount, most of the ancient writers call the island Calydna, and some were even led into the error of making two different islands, Calydna and Calymna. (Plin. iv. 12. s. 23; Steph. B. *s. vv.*)

The island was originally inhabited by Carians, and was afterwards colonised by Thessalian Aeolians or Dorians under Heraclid leaders. It also received an additional colony of Argives, who are said to have been shipwrecked on the island after the Trojan war. (Diod. v. 54; Hom. *Il.* ii. 675.) At the time of the Persian war it was subject to Artemisia of Halicarnassus, together with the neighbouring islands of Cos and Nisyrus. (Herod. vii. 99.)

Calymna is an island of some size, and contains at present 7000 inhabitants. A full account of it, together with a map, is given by Ross in the work cited below. The description of Ovid (*de Art. Am.* ii. 81) — "silvis umbrosa Calymne" — does not apply to the present condition of the island, and was probably equally inapplicable in antiquity; since the island is mountainous and bare. It produces figs, wine, barley, oil, and excellent honey; for the latter it was also celebrated in antiquity. ("Fecundaque melle Calymne," Ov. *Met.* viii. 222; Strab. *l. c.*)

With respect to the ancient towns, Pliny in one passage (iv. 12. s. 23) mentions only one town, Coos; but in another (v. 31. s. 36) he mentions three, Notium, Nisyrus, Mendeterus. The principal ancient remains are found in the valley above the harbour *Linária* on the western side of the island; but Ross found no inscriptions recording the name of the town. The chief ruins are those of a great church τοῦ Χριστοῦ τῆς Ἱερουσαλήμ, built upon the site of an ancient temple of Apollo, of which there are still remains. Stephanus (*s. v.* Κάλυδνα) speaks of Apollo Calydneus. South of the town there is a plain still called Argos, as in the island of Casus. [CASUS.] (Ross, *Reisen auf den Griechischen Inseln*, vol. ii. p. 92, seq., vol. iii. p. 139.)

CALYNDA (Κάλυνδα: *Eth.* Καλυνδεύς), a town of Caria, according to Stephanus, is placed by Strabo 60 stadia from the sea (p. 561), west of the Gulf of Glaucus, and east of Caunus. The MSS. of Strabo appear to have Calymna, which, however, is an error of the copyists. It appears, from a passage in Herodotus (i. 172), that the territory of Caunus bordered on that of Calynda. Damasithymus (Herod. viii. 87), king of Calynda, was at the battle of Salamis with some ships on the side of Xerxes; from which we may conclude that Calynda was near the coast, or had some sea-port. Calynda was afterwards, as it appears from Polybius (xxxi. 17), subject to Caunus; but having revolted from Caunus, it placed itself under the protection of the Rhodians.

Fellows supposes Calynda to be under a range of mountains near the sea, between two ridges of rocks; "many large squared stones lie in heaps down the slope facing the east, and the valley is guarded by walls of a very early date of Greek workmanship." He concludes, from the style of the tombs, that the city was in Lycia. The place is near the gulf of Glaucus or *Makri*, and east of the river *Talaman-su*. The remains which he saw are assigned to Daedala by Hoskyn. (Spratt's *Lycia*, vol. i. p. 42.) But Fellows discovered a city which is proved by inscriptions to be Cadyanda, a name otherwise unknown to us. It lies NNE. of *Makri*, on the Gulf of Glaucus or *Makri*, at a place called *Hoozoomlee*, situated on an elevated plain, immediately above which are the ruins of Cadyanda. There are many rock tombs and sculptures, one of which is represented in the frontispiece to Fellows' *Lycia*. "The ruins of the city are seated on the level summit of a high mountain; a great street, bordered with temples and public buildings, runs down the centre." (Spratt's *Lycia*.) Hoskyn, who discovered Caunus, looked in vain for ruins between that place and Cadyanda. Accordingly it is suggested that the mountains of *Hoozoomlee* may be the Calyndian mountains. (Spratt's *Lycia*, vol. i. p. 43.) But these Calyndian mountains are a modern invention, perhaps originating in a misunderstanding of Herodotus (i. 132), who speaks of the "Calyndian frontiers" (οὔρων τῶν Καλυνδικῶν). Between *Hoozoomlee* and *Makri*, a distance of about 9 miles, there are no ruins; "but in the centre of the plain of *Makri* there is a burial ground, where some large inscribed blocks, apparently the remains of a building which stood on

* The passage in Strabo (p. 459, sub fin.), in which Pleuron and Calydon are both described as E. of the Evenus, does not agree with his previous description, and cannot have been written as it now stands. (See Kramer's note.)

the spot, have the name 'Cadyanda' included in their inscriptions." (Spratt's *Lycia*, vol. i. p. 44.) It is stated in another passage in this work that the monumental inscription was found five or six miles south of Cadyanda.

The name Calynda occurs in Ptolemy (v. 3) as a Lycian city, and it is the nearest Lycian city to Caunus in Caria. Pliny (v. 28) mentions "Flumen Axon, Oppidum Calynda." It is plain that Ptolemy's Calynda will not suit the position of Cadyanda; nor can the position of Cadyanda be reconciled with Strabo's position of Calynda. It is certain that Calynda is not Cadyanda. None of the inscriptions of Cadyanda which are given by Fellows and in Spratt's *Lycia* are of an early period. There is little or no doubt that Calynda is in the basin of the large river *Talaman-Su*, which seems to be the Calbis of Strabo, and the same river that Pliny and Livy call the Indus. [G. L.]

CA'MACHA (Κάμαχα: *Kemákh*), a strong fortress of Armenia, called in Armenian GAMAKH, and also ANI, was well known in history, but it was not till lately that its site could be identified. Mr. Brant (*Journ. Geog. Soc.* vol. vi. p. 203) places it at about 26 miles SW. from *Ersingán*, on the left bank of the W. Euphrates (*Karâ-Sû*). It is a singular place; an elevated portion of the town is within a wall of very ancient structure, but commanded by mountains rising close to it. The remainder is situated on a slope amidst gardens ascending from the river bank. It enclosed a celebrated temple of the god Aramazd, containing a great number of literary monuments, which were destroyed by the orders of St. Gregory of Armenia. Here were deposited the treasures of the Armenian kings, as well as many of their tombs: hence the name,—the word *Gamakh* signifying "a corpse." The Byzantine emperors kept a strong garrison here to defend the eastern part of their empire from the attacks of the Moslems, up to the commencement of the 11th century.

(Comp. Const. Porph. *de Adm. Imp.* 50; St. Martin, *Mém. sur l'Armenie*, vol. i. p. 72; Ritter, *Erdkunde*, vol. x. p. 782; Chesney, *Exped. Euphrat.* vol. i. p. 41.) [E. B. J.]

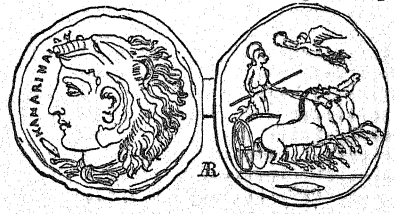
CAMARA (Καμάρα: *Eth.* Καμαραῖος, Steph. B.), a city of Crete, situated to the E. of Olus (Ptol. iii. 17. § 5), at a distance of 15 stadia according to the Maritime Itinerary. Xenion, a Cretan historian quoted by Steph. B. (*s. v.*), says that it was once called Lato. (Hoeck, *Kreta*, vol. i. pp. 10, 394, 416.) [E. B. J.]

CAMARACUM (*Cambray*), in Gallia, a town of the Nervii, on the road from Bagacum (*Bavay*) to Taruenna (*Terouenne*). It is first mentioned in the Antonine Itin. and in the Table. *Cambray* is on the right bank of the Escaut or Schelde, in the French department of *Nord*. Its position is easily fixed by the Itineraries. [G. L.]

CAMARI'NA (Καμάρινα or Καμαρῖνα: *Eth.* Καμαριναῖος, Camarinensis: *Camarana*), a celebrated Greek city of Sicily, situated on the S. coast of the island, at the mouth of the little river Hipparis. It was about 20 miles E. of Gela, and 40 from Cape Pachynum. Thucydides tells us that it was a colony of Syracuse, founded 135 years after the establishment of the parent city, i. e. 599 B.C., and this date is confirmed by the Scholiast on Pindar, which places its foundation in the 45th Olympiad. (Thuc. vi. 5; Schol. *ad Pind. Ol.* v. 16; Euseb. *Chron. ad Ol. XLV.*) It must have risen rapidly to prosperity, as only 46 years after its first foundation it attempted to throw off the yoke of the parent city, but the effort proved unsuccessful; and, as a punishment for its revolt, the Syracusans destroyed the refractory city from its foundations, B.C. 552. (Thuc. *l. c.*; Scymn. Ch. 294—296; Schol. *ad Pind. l. c.*) It appears to have remained desolate until about B.C. 495, when Hippocrates, tyrant of Gela, by a treaty with Syracuse, obtained possession of the territory of Camarina, and recolonised the city, himself assuming the title of its founder or oekist. (Thuc. *l. c.*; Herod. vii. 154; Philist. *ap. Schol. ad Pind. Ol.* v. 19.) This second colony did not last long, having been put an end to by Gelon, the successor of Hippocrates, who, after he had made himself master of Syracuse, in B.C. 485, removed thither all the inhabitants of Camarina, and a second time destroyed their city. (Herod. vii. 156; Thuc. *l. c.*; Philist. *l. c.*) But after the expulsion of Thrasybulus from Syracuse, and the return of the exiles to their respective cities, the people of Gela, for the third time, established a colony at Camarina, and portioned out its territory among the new settlers. (Diod. xi. 76; Thuc. *l. c.*, where there is no doubt that we should read Γελῴων for Γέλωνος; Schol. *ad Pind. Ol.* v. 19.) It is to this third foundation, which must have taken place about B.C. 461, that Pindar refers in celebrating the Olympic victory of Psaumis of Camarina, when he calls that city his newly-founded abode (*τὰν νέοικον ἕδραν, Ol.* v. 19). In the same ode the poet celebrates the rapidity with which the buildings of the new city were rising, and the people passing from a state of insignificance to one of wealth and power (*ἀπ' ἀμαχανίας ἐς φόος, Ib.* 31). The new colony was indeed more fortunate than its predecessors, and the next 50 years were the most flourishing period in the history of Camarina, which retained its independence, and assumed a prominent rank among the Greek cities of Sicily. In their political relations the Camarinaeans appear to have been mainly guided by jealousy of their powerful neighbour Syracuse: hence they were led to separate themselves in great measure from the other Dorian cities of Sicily, and during the war between Syracuse and Leontini, in B.C. 427, they were the only people of Dorian origin who took part with the latter. At the same time there was always a party in the city favourable to the Syracusans, and disposed to join the Dorian alliance, and it was probably the influence of this party that a few years after induced them to conclude a truce with their neighbours at Gela, which eventually led to a general pacification. (Thuc. iii. 86, iv. 25, 65.) By the treaty finally concluded, Thucydides tells us, it was stipulated that the Camarinaeans should retain possession of the territory of Morgantia (Μοργαντίνη), an arrangement which it is not easy to understand, as the city of that name was situated far away in the interior of Sicily. [MORGANTIA.] A few years later the Camarinaeans were still ready to assist the Athenians in supporting the Leontines by arms (Thuc. v. 4); but when the great Athenian expedition appeared in Sicily, they were reasonably alarmed at the ulterior views of that power, and refused to take part with either side, promising to maintain a strict neutrality. It was not till fortune had declared decidedly in favour of the Syracusans that the Camarinaeans sent a small force to their support. (Thuc. vi. 75, 88; Diod. xiii. 4, 12.)

A few years later the great Carthaginian invasion of Sicily gave a fatal blow to the prosperity of Camarina. Its territory was ravaged by Himilco in the spring of B.C. 405, but the city itself was not

attacked; nevertheless, when Dionysius had failed in averting the fall of Gela, and the inhabitants of that city were compelled to abandon it to its fate, the Camarinaeans were induced or constrained to follow their example; and the whole population, men, women, and children, quitted their homes, and effected their retreat to Syracuse, from whence they afterwards withdrew to Leontini. (Diod. xiii. 108, 111, 113; Xen. *Hell.* ii. 3. § 5.) By the treaty concluded soon after between Dionysius and the Carthaginians, the citizens of Camarina, as well as those of Gela and Agrigentum, were allowed to return to their homes, and continue to inhabit their native cities, but as tributaries to Carthage, and prohibited from restoring their fortifications. (Diod. xiii. 114.) Of this permission it is probable that many availed themselves; and a few years later we find Camarina eagerly furnishing her contingent to support Dionysius in his war with the Carthaginians. (Id. xiv. 47.) With this exception, we hear nothing of her during the reign of that despot; but there is little doubt that the Camarinaeans were subject to his rule. After the death of the elder Dionysius, however, they readily joined in the enterprise of Dion, and supported him with an auxiliary force in his march upon Syracuse. (Id. xvi. 9.) After Timoleon had restored the whole of the eastern half of Sicily to its liberty, Camarina was recruited with a fresh body of settlers, and appears to have recovered a certain degree of prosperity. (Id. xvi. 82, 83.) But it suffered again severely during the wars between Agathocles and the Carthaginians, and was subsequently taken and plundered by the Mamertines. (Id. xix. 110, xx. 32, xxiii. 1.)



During the First Punic War, Camarina early espoused the Roman cause; and though in B.C. 258 it was betrayed into the hands of the Carthaginian general Hamilcar, it was quickly recovered by the Roman consuls A. Atilius and C. Sulpicius, who, to punish the citizens for their defection, sold a large part of them as slaves. (Diod. xxiii. 9; Polyb. i. 24.) A few years later, B.C. 255, the coast near Camarina was the scene of one of the greatest disasters which befel the Romans during the war, in the shipwreck of their whole fleet by a violent tempest; so complete was its destruction, that out of 364 ships only 80 escaped, and the whole coast from Camarina to Cape Pachynum was strewed with fragments of the wrecks. (Polyb. i. 37; Diod. xxiii. 18.) This is the last notice of Camarina to be found in history. Under the Roman dominion it seems to have sunk into a very insignificant place, and its name is not once found in the Verrine orations of Cicero. Strabo also speaks of it as one of the cities of Sicily of which in his time little more than the vestiges remained (vi. p. 272); but we learn from Pliny and Ptolemy that it still continued to exist as late as the 2nd century of the Christian era. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 15.) From this period all trace of it disappears: it was never rebuilt in the middle ages, and the site is now perfectly desolate, though a watch-tower on the coast still retains the name of *Torre di Camarana*.

From the remains still extant, it is evident that the city occupied a slight eminence between the two small streams now called the *Fiume di Camarana* and the *F. Frascolari*. The former, which is much the most considerable of the two, is evidently the HIPPARIS (Ἵππαρις) of Pindar (*Ol.* v. 27), which he describes as flowing past the town, and supplying the inhabitants with water by means of artificial canals or aqueducts. It is a copious stream of clear water, having its principal source in a large fountain at a place called *Comisò*, supposed by some writers to be the Fons Dianae of Solinus, which he places near Camarina. (Solin. 5. § 16.) There is, however, another remarkable fountain at a place called *Favara*, near the town of *Santa Croce*, which has, perhaps, equal claim to this distinction. (Fazell. v. 1. p. 225; Cluver. *Sicil.* p. 191; Hoare, *Class. Tour*, vol. ii. pp. 261—263.) The *Frascolari* is probably the OANIS (Ὦανις), known to us only from the same passage of Pindar. More celebrated than either of these streams was the Lake of Camarina (called by Pindar, *l. c.*, ἐγχωρίαν λίμνην; Palus Camarina, Claudian), which immediately adjoined the walls of the city on the N. It was a mere marshy pool, formed by the stagnation of the Hipparis near its mouth, and had the effect of rendering the city very unhealthy, on which account we are told that the inhabitants were desirous to drain it, but, having consulted the oracle at Delphi, were recommended to let it alone. They nevertheless executed their project; but by so doing laid open their walls to attack on that side, so that their enemies soon after availed themselves of its weakness, and captured the city. The period to which this transaction is to be referred is unknown, and the whole story very apocryphal; but the answer of the oracle, Μὴ κίνει Καμάριναν· ἀκίνητος γὰρ ἀμείνων, passed into a proverbial saying among the Greeks. (Virg. *Aen.* iii. 700; Serv. *ad loc.*; Suid. *s. v.* Μὴ κίνει Κ.; Steph. B. *s. v.* Καμάρινα; Sil. Ital. xiv. 198.)

The remains still extant of Camarina are very inconsiderable: they consist of scattered portions of the ancient walls, and the vestiges of a temple, now converted into a church; but the site of the ancient city is distinctly marked, and the remains of its port and other fragments of buildings on the shore were still visible in the 17th century, though now for the most part buried in sand. (Hoare, *l. c.* p. 260; Fazell. v. 2; Cluver. *Sicil.* p. 192; Amico, *Lex. Topogr. Sicil.* vol. i. p. 147.)

The coins of Camarina are numerous: they belong for the most part to the flourishing period of its existence, B.C. 460—405. Some of them have the head of the river-god Hipparis, represented, as usual, with horns on his forehead. Others (as the one annexed) have the head of Hercules, and a quadriga on the reverse, probably in commemoration of some victory in the chariot race at the Olympic games.

[E. H. B.]

COIN OF CAMARINA.

CAMATULLICI. The "regio Camatullicorum" is mentioned by Pliny (iii. 4) between Portus Citharista and the Suelteri. The position must be on or near the coast, east of *Marseille*. It is supposed by Harduin (note on the passage of Pliny) that a place called *Ramatuelle*, near the coast, south of the Gulf of *Grimaud*, represents the ancient name; and D'Anville and others adopt this opinion. [G. L.]

CAMBADE'NE (Καμβαδηνή, Isid. *Charax.* p. 6), a district of Greater Media, in which was a place called Baptana, containing a statue and pillar of Semiramis. [BAGISTANUS MONS.] [V.]

CAMBALA (Κάμβαλα), in the district of Hyspiratis, to which Alexander the Great sent Menon with troops to examine for gold; the detachment was entirely destroyed. (Strab. xi. p. 529.) St. Martin (*Mém. sur l'Armenie*, vol. i. p. 69) supposes the Hyspiratis of Strabo to refer to the district of *Isper*, NE. of *Erzrúm;* but in another place Strabo (p. 503) appears to denote the same district under the name of Syspiratis, and this he places to the S., beyond the limits of Armenia, and bordering on Adiabene, which will not suit the position of *Isper;* nor did the troops of Alexander at any time approach the neighbourhood of *Erzrúm*. Major Rawlinson suspects that these mines may be recognised in the metallic riches of the mountainous country on the *Asped-Rúd* or *Kizil-Uzen*. (*Journ. Geog. Soc.* vol. x. p. 148.) [E. B. J.]

CAMBALIDUS MONS. [BAGISTANUS MONS.]

CAMBES, a place in Gallia, according to the Anton. Itin. and the Table, on the road from Augusta Rauracorum (*Augst*) to Argentovaria, on the left bank of the Rhine. Cambes is *Gros Kembs*, on the Rhine, in the department of *Haut Rhin*. There is a Little *Kembs* on the opposite side of the river. [G. L.]

CAMBIOVICENSES, a name of a people that appears in the Table; but the indication of their position, as usual with the names of peoples in the Table, is too vague to enable us to fix the position of the Cambiovicenses. (D'Anville, *Notice*, &c.; Walckenaer, *Géog.* vol. i. p. 372.) [G. L.]

CAMBODU'NUM, in Britain. The second Itinerary presents the difficulty which attends so many of the others, viz., a vast difference between, not only the shortest route, but between the recognised roads and the line of the stations. Thus the line is from the Vallum to Rutupiae (*Richborough*): nevertheless, when we reach Calcaria (*Tadcaster*), though there is one road due south and another south-east, the route of the Itinerary takes us round by Manchester, Chester, and Wroxeter. Besides this, the sum of miles at the heading of the *Iter*, and the sum of the particular distances, disagree. Again, some of the numbers vary with the MS.; and this is the case with the present word. From Eboracum (*York*) to

	M. P.
Calcaria (*Tadcaster*) - -	ix.
Cambodunum - - -	xx. al. xxx.
Mancunium (*Manchester*) -	xviii. al. xxiii.

The neighbourhood of Elland, between Halifax and Huddersfield, best satisfies these conditions; and, accordingly, Gretland, Sowerby, Almondbury, Grimscar, Stainland (at all of which places Roman remains have been found), have been considered as the representatives of Cambodunum. In the *Monumenta Britannica* its modern equivalent is *Slack*. [R.G.L.]

CAMBOLECTRI. Pliny (iii. 5) mentions Cambolectri Atlantici in Gallia Narbonensis, but it is difficult to say where he supposes them to be. He also, under the Aquitanic nations (iv. 19), mentions "Cambolectri Agesinates Pictonibus juncti," as Harduin has it; but "Cambolectri" ought to be separated from Agesinates, as Walckenaer affirms, and he places them about *Cambo*, in the arrondissement of *Bayonne*, in the department of *Basses Pyrénées*. It appears from Pliny mentioning these peoples and distinguishing them, that they are two genuine names. It has been conjectured that the name Cambonum [CAMBONUM] may be geographically connected with the Cambolectri. [G. L.]

CAMBO'NUM, a place in Gallia, mentioned in the Jerusalem Itin., on the road from Civitas Valentia (*Valence*), through Civitas Vocontiorum (*Die*), to Mansio Vapincum (*Gap*). The route is very particularly described. From *Die* it goes to Mansio Luco (*Luc*), then to Mutatio Vologatis (*Vaugelas*); then the Gaura Mons is ascended, and the traveller comes to Mutatio Cambonum; the next station beyond Cambonum is Mons Seleucus (*Saléon*). Walckenaer (vol. iii. p. 46) places Cambonum at *La Combe*, to the south of *Montclus*. D'Anville did not venture to assign a site for Cambonum; but if the road has been well examined, the place ought not to be doubtful. [G. L.]

CAMBORICUM, in Britain. Another reading is *Camboritum*, and perhaps this is preferable, — the *-rit-* having the same power with the *Rhed-* in *Rhedyuna* (Ox-*ford*) = *ford*. In this case the word would mean a *ford over the Cam*. The name occurs in the fifth Itinerary, and the difficulties which attend it are of the same kind as those noticed under CAMBODUNUM.

The line, which is from London to Carlisle, runs to Caesaromagus (*Writtle*), Colonia (*Colchester* or *Maldon*), Villa Faustini, Iciani, Camboricum, Durolipons, Durobrivae, Causennae, Lindum, — this latter point alone being one of absolute certainty, i. e. *Lincoln*. That *Ancaster* = Causennae is *nearly* certain; but the further identifications of Villa Faustini with *Dunmow*, of Iciani with *Chesterford*, and Durolipons with *Cambridge* or *Godmanchester*, and of Durobrivis with *Caistor* or *Water-Newton*, are uncertain. Add to this the circuitous character of any road from London to Lincoln *viâ* either Colchester or Maldon. The two localities most usually given to Camboricum are *Cambridge* and *Icklingham* (near Mildenhall in Suffolk). In the former place there are the *castra* of *Chester*-ton and Grant-*chester*, in the latter a *Camp*-field, a *Rom*-pit-field, and numerous Roman remains. Again, — as Horsley remarks, — the river on which Icklingham stands runs into the Cam, so that the first syllable may apply to the one place as well as the other. Probably, the true identification has yet to be made. [R.G.L.]

CAMBU'NII MONTES a range of mountains forming the boundary between Macedonia and Thessaly, is a continuation of the Ceraunian mountains and terminates at Mt. Olympus on the east. The name of these mountains contains the root Βουνός. The principal pass through these mountains is called Volustana by Livy, the modern pass of Servia. Leake remarks, that "in the word Volustana the V represents probably the B, which was so common an initial in Macedonian names of places; the two last syllables, στανὰ, are perhaps the Macedonian form of στενὰ, and have reference to the pass, the entire name in Greek being Βολοῦ στενά." (Liv. xlii. 53, xliv. 2; Leake, *Northern Greece*, vol. iii. p. 338.)

CAMBYSE'NE. [ALBANIA].

CAMBY'SES (*Yori* or *Gori*), a river of Albania, rising in the Caucasus, or, according to Mela, in the Coraxici M., flowing through the district of Cambysene, and falling into the Cyrus (*Kur*), after uniting with the Alazonius (*Alasan*). Pompey marched along its banks, on his expedition into these regions in pursuit of Mithridates, B. C. 65. Its water was remarkable for its coldness. (Mel. iii. 5. § 6; Plin.

vi. 13. s. 15; Dion Cass. xxxvii. 3; Epit. Strab. *ap.* Hudson, *Geogr. Min.* vol. ii. p. 148.) [P. S.]

CAMBYSES (Καμβύσης, Ptol. vi. 2. § 1; Amm. Marc. xxiii. 6), a river of Media Atropatene, which appears, from the notice in Ptolemy, to have flowed into the Caspian Sea. It is not possible to determine its exact locality; but if the order in Ammianus be correct, it would seem to have been near the Amardus, now *Sefid-Rúd*. In the Epitome of Strabo (xi.) a nation of the Caspians is spoken of *περὶ τὸν Καμβύσην ποταμόν*. [V.]

CAMEIRUS. [Rhodus.]

CAMELOBOSCI (Καμηλοβοσκοί, Ptol. vi. 8. § 12), a wild tribe of Carmania, placed by Marcian (p. 20) on the banks of the river Dora or Dara, eastwards towards the Desert. [V.]

CAME'RIA or CAME'RIUM (Καμερία: *Eth.* Καμερῖνος, Camerinus), an ancient city of Latium, mentioned by Livy among the towns of the Prisci Latini taken by Tarquinius Priscus. (Liv. i. 38.) In accordance with this statement we find it enumerated among the colonies of Alba Longa, or the cities founded by Latinus Silvius. (Diod. vii. *ap. Euseb. Arm.* p. 185; *Origo Gentis Rom.* 17.) Dionysius also says that it received a colony from Alba, but had previously been a city of the Aborigines. According to him it engaged in a war against Romulus and Tatius, but was taken by their arms, and a Roman colony established there (ii. 50). But, notwithstanding this, he also mentions it as one of the independent Latin cities reduced by Tarquin (iii. 51). After the expulsion of the kings from Rome, Cameria was one of the foremost to espouse the cause of the exiled Tarquins, for which it was severely punished, being taken and utterly destroyed by the Consul Verginius, B. C. 502. (Dionys. v. 21, 40, 49.) This event may, probably, be received as historically true: at least it explains why the name of Cameria does not appear in the list of the cities of the Latin League shortly afterwards (Dionys. v. 61): nor does it ever again appear in history: and is only noticed by Pliny (iii. 5. s. 9) among the once celebrated cities of Latium, which were in his time utterly extinct. Tacitus has recorded that the ancient family of the Coruncanii derived its origin from Cameria (*Ann.* xi. 24.), and the cognomen of Camerinus borne by one of the most ancient families of the Sulpician gens, seems to point to the same extraction.

The site of Cameria, like that of most of the other towns of Latium that were destroyed at so early a period, must be almost wholly conjectural. *Palombara*, a small town on an isolated hill, near the foot of the lofty *Monte Gennaro*, and about 22 miles from Rome, has as fair a claim as any other locality. (Abeken, *Mittel Italien*, p. 78.) [E. H. B.]

CAMERI'NUM (Καμαρῖνον, Ptol.; Καμερία, Appian; Καμέρτη, Strab.: *Eth.* Camerinus or Camers, -ertis: *Camerino*), a city of Umbria, situated in the Apennines, near the frontiers of Picenum. It occupied a lofty position near the sources of the river Flusor (*Chienti*), and a few miles on the E. of the central ridge of the Apennines. No mention of the *city* is found before the Roman Civil Wars, when it appears as a place of some consequence, and was occupied by one of the Pompeian generals with six cohorts, who, however, abandoned it on the advance of Caesar. (Caes. *B. C.* i. 15; Cic. *ad Att.* viii. 12, B.) Again, during the outbreak of L. Antonius at Perusia, it was seized by Plancus with two legions. (Appian, *B. C.* v. 50.) At a later period, probably under Augustus, its territory was portioned out among military colonists; but it continued to be a municipium, and appears to have been under the empire a tolerably flourishing town. (*Lib. Colon.* pp. 240, 256; Ptol. iii. 1. § 53; Orell. *Inscr.* 920, 2172.)

But while we find but little mention of the city the *people* of the Camertes are noticed from an early period as one of the most considerable in Umbria. As early as B. C. 308, the Roman deputies, who were employed to explore the Ciminian forest and the regions beyond it, are said to have advanced as far as to the Camertes ("usque ad Camertes Umbros penetrasse dicuntur," Liv. ix. 36), and established friendly relations with them. These probably became the first foundation and origin of the peculiarly favourable position in which the Camertes stood towards the Roman republic. Thus in B. C. 205, we find them mentioned among the allied cities that furnished supplies for the fleet of Scipio, when they are contrasted with the other states of Etruria and Umbria as being on terms of *equal* alliance with the Romans ("Camertes cum *aequo foedere* cum Romanis essent," Liv. xxviii. 45). Cicero also more than once alludes to the treaty which secured their privileges ("Camertinum foedus sanctissimum atque aequissimum," *pro Balb.* 20; Val. Max. v. 2. § 8; Plut. *Mar.* 28). And at a much later period we find the "Municipes Camertes" themselves recording their gratitude to the emperor Septimius Severus for the confirmation of their ancient rights ("jure aequo foederis sibi confirmato," Gruter, *Inscr.* p. 266. 1; Orell. *Inscr.* 920).

A question has indeed been raised, whether the Camertes of Livy and Cicero are the same people with the inhabitants of Camerinum, who, as we learn from the above inscription and others also found at *Camerino*, were certainly called Camertes. The doubt has been principally founded on a passage of Strabo (v. p. 227), in which, according to the old editions, that writer appeared to distinguish Camerinum and *Camerte* as two different towns; but it appears that Καμαρινον is certainly an interpolation; and the city he calls Camerte, which he expressly places "on the very frontiers of Picenum," can certainly be no other than the Camerinum of the Romans. (See Kramer and Groskurd, *ad loc.*; and compare Du Theil's note at vol. ii. p. 60 of the French translation of Strabo.) Pliny also, who inserts the Camertes among the "populi" of Umbria, makes no other mention of Camerinum (iii. 14. s. 19). There can therefore be no doubt that at this period the Camertes and the people of Camerinum were the same; but it certainly seems probable that at an earlier epoch the name was used in a more extensive sense, and that the tribe of the Camertes was at one time more widely spread in Umbria. We know that the Etruscan city of Clusium was originally called Camers or Camars, and it is a plausible conjecture of Lepsius that this was its *Umbrian* name. (*Tyrrhener Pelasger*, p. 33.) It is remarkable that Polybius speaks of the battle between the Romans and the Gauls in B. C. 296, as fought in the territory of the Camertes (*ἐν τῇ Καμερτίων χώρᾳ*, ii. 19), while the same battle is placed by Livy *at Clusium* (x. 26). Again, the narrative of Livy (ix. 36) would seem to imply that the Camertes there mentioned were not very remote from the Ciminian forest, and were the first Umbrian people to which the envoys came. Even Cicero speaks of the "ager Camers" in common with Picenum and Gaul (Gallia Togata) (*pro Sull.* 19) in a manner that can hardly be

understood of so limited a district as the mere territory of Camerinum. Perhaps the fact of the recurrence of the name in different forms among the modern towns and villages of this part of Italy—*Camero* near *Foligno*, *Camerata* between *Todi* and *Amelia*, &c.,—may be a remnant of this wider extension of the Camertes.

The CAMERINI mentioned by Valerius Maximus (vi. 5. § 1) as having been conquered and reduced to captivity by P. (?) Claudius can be no other than the people of Camerinum; but it is difficult to reconcile his account with the rest that we know of their history. Probably Appius Claudius, the consul of B. C. 268, who reduced the neighbouring province of Picenum, is the person meant. [E. H. B.]

CAMERTES. [CAMERINUM.]

CAMICUS (Καμικός), a city or fortress of Sicily, which, according to the mythical history of that island, was constructed by Daedalus for Cocalus, the king of the Sicanians, who made it his royal residence, and deposited his treasures there, the situation being so strong and so skilfully fortified as to be altogether impregnable. According to the same legend, it was here also that Minos, king of Crete, who had pursued Daedalus to Sicily, was treacherously put to death by Cocalus, and secretly buried; his bones were said to have been discovered in the time of Theron. (Diod. iv. 78, 79; Strab. vi. pp. 273—279; Arist. *Pol.* ii. 10; Steph. Byz. *v.* Καμικός; Tzetz. *Chil.* i. 506—510.) The same story is alluded to by Herodotus (vii. 170), who tells us that the Cretans sent an expedition to Sicily to avenge the death of Minos, and besieged Camicus for five years, but without success. It was also chosen by Sophocles as the subject of one of his tragedies, now lost, called the Καμίκιοι (Athenae. iii. p. 86, ix. p. 388; Soph. fr. 299—304, ed. Dind.). From the words of Herodotus it has been erroneously inferred that Camicus occupied the site on which Agrigentum was afterwards founded, and the citadel or acropolis of that city has been regarded by many writers as the fortress of Daedalus. (Smyth's *Sicily*, p. 204; Swinburne's *Travels*, vol. ii. p. 273.) But we find mention in historical times of a fortress named Camicus, as existing in the territory of Agrigentum, but quite apart from the city. It was occupied by Hippocrates and Capys, the cousins of Theron, when they were expelled by him from Agrigentum (Schol. *ad Pind. Pyth.* vi. 4.), and is again mentioned among the fortresses reduced by the Romans in the First Punic War, *after* the conquest of Agrigentum. (Diod. xxiii. Exc. Hoesch. p. 503.) We are told also that it was situated on a river of the same name (Steph. Byz. *v.* Ἀκράγας; *Vib. Sequest.* p. 7), which is supposed by Cluverius to be the one now called *Fiume delle Canne*, which flows into the sea about 10 miles W. of *Girgenti;* and the fortress may probably have stood in the neighbourhood of the modern town of *Siculiana*, but its precise site is unknown. (Cluver. *Sicil.* p. 221; Serra di Falco, *Ant. della Sicilia*, vol. iii. pp. 76, 80; Siefert, *Akragas*, pp. 17, 18.) [E. H. B.]

CAMISA (τὰ Κάμισα), a fortress of Camisene or Comisene (comp. Strab. xi. p. 528) in Lesser Armenia, which was destroyed in Strabo's time (xii. p. 560). [E. B. J.]

CAMISE'NE (Καμισηνή). Strabo mentions Culupene or Calupene and Camisene as bordering on the Lesser Armenia, and he includes them within his Pontus. Rock-salt was dug in these districts, and there was a strong place Camisa, which was ruined in Strabo's time (p. 560). In another place (p. 546) he says that the Halys rises in Great Cappadocia, near Pontice, and in Camisene (Καμυσήνη in Casaubon's text). Camisa was on the road from Sebastia to Nicopolis, and 24 Roman miles from Sebastia (*Sevas*). The Camisene, then, is in the upper basin of the Halys or *Kizil Ermak*. [G. L.]

CAMMANE'NE (Καμμανηνή), a division of Cappadocia. (Strab. pp. 534, 540.) Ptolemy (v. 6), who enumerates six places in the division, calls it Cammanene. Zama, one of the towns, is on the road from Tavium to Mazaca or Caesareia. [G. L.]

CAMPAE (Κάμπαι, Ptol.), and Cambe in the Table, is in the Praefectura Ciliciae of Cappadocia, 16 miles N. or NW. of Mazaca or Caesarea; it has been conjectured to be a place called *Enba*. [G. L.]

CAMPA'NIA (Καμπανία), a province or region of Central Italy, bounded on the N. by Latium, on the E. by the mountains of Samnium, on the S. by Lucania, and on the W. by the Tyrrhenian Sea. Its exact limits varied at different periods. The Liris appears to have been at first recognised as its northern boundary, but subsequently the district south of that river, as far as the Massican hills and the town of Sinuessa, was included in Latium, and the boundaries of Campania diminished to the same extent. (Strab. v. p. 242.) On the S. also, the territory between the Silarus, which formed the boundary of Lucania, and the ridge of the Apennines that bounds the Gulf of Posidonia on the N., was occupied by the people called PICENTINI (a branch of the inhabitants of Picenum on the Adriatic), and was not reckoned to belong to Campania, properly so called, though united with it for administrative purposes.

Originally, indeed, the name of Campanians appears to have been applied solely to the inhabitants of the great plain, which occupies so large a portion of the province; and did not include the people of the hill country about Suessa, Cales, and Teanum, which was occupied by the Aurunci and Sidicini. But Campania, in the sense in which the term is used by Strabo and Pliny, was bounded on the N. by the low ridge of the Massican hills, which extend from the sea near Sinuessa to join the more lofty group of volcanic mountains that rise between Suessa and Teanum, and comprised the whole of the latter range. Venafrum and the territory annexed to it, in the valley of the Vulturnus, which had been originally Samnite, were afterwards included in Campania; though Strabo appears in one passage (v. p. 238) to assign them to Latium. The eastern frontier of Campania is clearly marked by the first ridges of the Apennines, the MONS CALLICULA N. of the Vulturnus, and the MONS TIFATA S. of that river, while other ranges of still greater elevation continue the mountain barrier towards the SE. to the sources of the Sarnus. Near this latter point, a side arm or branch is suddenly thrown off from the main mass of the Apennines, nearly at right angles to its general direction, which constitutes a lofty and narrow mountain ridge of about 24 miles in length, terminating in the bold headland called the Promontory of Minerva, but known also as the Surrentine Promontory. It is this range which separates the Gulf of Cumae or Crater, as the *Bay of Naples* was called in ancient times, from that of Posidonia, and which constituted the limit also between Campania in the stricter sense of the term, and the territory of the Picentini. The latter occupied the district S. of this range along the shores of the Posidonian Gulf, as far as the mouth of the Silarus.

The region thus limited is one of the most beautiful and fertile in the world, and unquestionably the fairest portion of Italy. Greek and Roman writers vie with one another in celebrating its natural advantages,—the fertility of its soil, the beauty of its landscape, the softness of its climate, and the excellence of its harbours. Pliny calls it "felix illa Campania—certamen humanae voluptatis." Florus is still more enthusiastic: "Omnium non modo Italia, sed toto orbe terrarum pulcherrima Campaniae plaga est. Nihil mollius caelo. Denique bis floribus vernat. Nihil uberius solo, ideo Liberi Cererisque certamen dicitur. Nihil hospitalius mari." Even the more sober Polybius and Strabo are loud in its praises; and Cicero calls the plains about Capua "fundum pulcherrimum populi Romani, caput pecuniae, pacis ornamentum, subsidium belli, fundamentum vectigalium, horreum legionum, solatium annonae." (Pol. iii. 91; Strab. v. pp. 242, 243; Plin. iii. 5. s. 9; Flor. i. 16; Cic. *de Leg. Agr.* i. 7, ii. 28.) The greater part of Campania is an unbroken plain, of almost unequalled fertility, extending from the foot of the Apennines to the sea. But its uniformity is broken by two remarkable natural features: the one a group of volcanic hills of considerable extent, but of moderate elevation, rising abruptly from the plain between Cumae and Neapolis, and constituting a broken and hilly tract of about 15 miles in length (from E. to W.), and from 8 to 10 in breadth. One of the most considerable of these hills is the MONS GAURUS, so celebrated in ancient times for its wines. The whole range, as well as the neighbouring islands of Aenaria and Prochyta, is of volcanic origin, and preserves evident traces of the comparatively recent action of subterranean fires. These were recognised by ancient writers in the Forum Vulcani, or *Solfatara*, near Puteoli (Strab. v. p. 246; Lucil. *Aetn.* 431; Sil. Ital. xii. 133); but we have no account of any such eruption in ancient times as that which, in 1538, gave rise to the *Monte Nuovo*, near the same town. On the other side of Neapolis, and wholly detached from the group of hills already described, as well as from the chain of the Apennines, from which it is separated by a broad girdle of intervening plain, rises the isolated mountain of VESUVIUS, whose regular volcanic cone forms one of the most striking natural features of Campania. Its peculiar character was noticed by ancient observers, even before the fearful eruption of A. D. 79 gave such striking proof that its subterranean fires were not, as supposed by Strabo (v. p. 247), "extinct for want of fuel." But the volcanic agency in Campania, though confined in historical times to the two mountain groups just noticed, must have been at one period far more widely extended. The mountain called *Rocca Monfina* or *Mte di Sta Croce*, which rises above Suessa, and was the ancient seat of the Aurunci [AURUNCI], is likewise an extinct volcano; and the soil of the whole plain of Campania, up to the very foot of the Apennines, is of volcanic origin, from which circumstance is derived the porous and friable character to which it owes its great fertility. It was, in all probability, from the evidences of subterranean fire so strongly marked in their neighbourhood, that the Greeks of Cumae gave the name of the Phlegraean plains (Campi Phlegraei: τὰ Φλεγραῖα πεδία) to the part of Campania adjoining their city. (Diod. iv. 21; Strab. v. p. 245.) Another appellation by which the same tract appears to have been known, was that of CAMPI LABORINI (Plin. iii. 5. s. 9), from which is probably derived the modern name of *Terra di Lavoro*, now used to designate the whole district of Campania.

It is this extensive plain which was so celebrated in ancient, as well as modern, times for its extraordinary fertility. Strabo calls it the richest plain in the world (πεδίον εὐδαιμονέστατον τῶν ἁπάντων), and tells us that it produced wheat of the finest quality; while some parts of it yielded four crops in the year,—two of spelt (ζειά), one of millet, and the fourth of vegetables (λάχανα). (Strab. v. p. 242.) Pliny also relates that it grew two crops of spelt and one of millet every year; while those parts of it that were left fallow produced abundance of roses, which were employed for the ointments and perfumeries for which Capua was celebrated. The spelt of the Campanian plain was of particularly fine quality, so that it was considered to be the only one fit for the manufacture of "alica," apparently a kind of *pasta*, called by Strabo χόνδρος. (Plin. xviii. 8. s. 9, 11. s. 29.) Virgil also selects the plains around the wealthy Capua and the tract at the foot of Vesuvius as instances of soils of the best quality for agricultural purposes, adapted at once for the growth of wine, oil, and corn. (Virg. *G.* ii. 224.) From the expressions of Cicero already cited, it is evident that the "ager Campanus,"—the district immediately around the city of Capua,—while it continued the public property of the Roman state, was one of the chief quarters from whence the supplies of corn for the public service were derived. There is no doubt that vines were cultivated (as they are at the present day) all over the plain (see Virg. *l. c.*), but the choicest wines were produced on the slopes of the hills; the Massican and Falernian on the sides of the Mons Massicus and the adjoining volcanic hills near Suessa and Cales, the Gauran on the flanks of Mt. Gaurus and the other hills near Puteoli, and the Surrentine on the opposite side of the bay. All these were reckoned among the most celebrated wines then known. Nor was the olive-oil of Campania less distinguished: that of Venafrum was proverbial for its excellence (Hor. *Carm.* ii. 6. 16), and the other hilly tracts of the province were scarcely inferior to it. (Plin. iii. 5. s. 9; Strab. v. p. 243; Flor. i. 16.)

The maritime advantages of Campania were scarcely less remarkable than those which it derived from the natural fertility of its territory. Its coast-line has a tolerably uniform direction towards the SE. from the mouth of the Liris to Cumae: but S. of that city it is interrupted by the bold and isolated group of volcanic hills already described, which terminate towards the S. in the lofty and abrupt headland of Misenum. Between this point and the Promontory of Minerva, which is itself (as already pointed out) but the extremity of a bold and lofty arm of the Apennines, the coast is deeply indented by the beautiful bay, known in ancient times as the CRATER, from its cup-like form, but called also the SINUS CUMANUS and PUTEOLANUS, from the neighbouring cities of Cumae and Puteoli,—and now familiarly known to all as the *Bay of Naples*. (Strab. v. pp. 242, 247.) The two ranges which constitute the two headlands bounding this gulf are farther continued by the outlying islands adjoining them: those of AENARIA and PROCHYTA, off Cape Misenum, being, like the hills on the adjacent mainland, of volcanic origin; while that of CAPREAE, with its precipitous cliffs and walls of limestone, is obviously a continuation of the calcareous range of the Apennines, which ends in the Surrentine Promontory. The shores of this beautiful gulf, so nearly land-locked,

and open only to the mild and temperate breezes from the SW., were early sought by the Romans, as a place of retirement and luxury; and in addition to the numerous towns that had grown up around it, the houses, villas, and gardens, that filled the intervals between them were so numerous, that, according to Strabo, they presented the aspect of one continuous city. (Strab. *l. c.*) Tacitus also calls it "pulcherrimus sinus," though in his time it had not yet recovered from the frightful devastation caused by the great eruption of Vesuvius in A. D. 79. On the N. shore of this extensive bay, immediately within the headland of Misenum, was another smaller bay, known as the SINUS BAIANUS, or Gulf of Baiae; and here were situated two excellent harbours,—that of Misenum itself, close to the promontory of the same name; and, on the opposite side of the bay, that of Puteoli, which, under the Roman empire, became one of the most frequented ports of Italy.

Strabo speaks of the coast of Campania from Sinuessa to Cape Misenum, as forming a gulf (p. 242); but this is incorrect, that portion of the coast presenting but a slight curvature, though it may be considered (if viewed on a wider scale) as forming a part of the great bay that extends from the Circeian Promontory on the N., to Cape Misenum, or rather to the island of Aenaria (*Ischia*), on the S. On the southern side of the Surrentine Promontory opens out another extensive bay, wider than that of *Naples*, but less deep: this was known in ancient times as the Gulf of Posidonia or Paestum (Sinus Posidoniates, or Paestanus, Strab. v. p. 251; Plin. iii. 5. s. 10); but only its northern shores, as far as the mouth of the Silarus, belonged to Campania.

The climate of Campania was celebrated in antiquity for its soft and genial character, an advantage which it doubtless owed to its exposure to the SW., and to the deep bays with which its coast was indented. It was, indeed, thought that the climate had an enervating influence, and it was to the effect of this, as well as the luxurious habits engendered by the richness of the country, that ancient writers ascribed the unwarlike character of the inhabitants and the frequent changes of population that had taken place there. Besides the beauty of its landscape and the mildness of its climate, the shores of Campania had a particular attraction for the Romans in the numerous thermal waters with which they abounded, especially in the neighbourhood of Baiae, Puteoli, and Neapolis. For these it was doubtless indebted to the remains of volcanic agency in these regions; and the same causes furnished the sulphur, which was found in such abundance in the Forum Vulcani (or *Solfatara*), near Puteoli, as to become a considerable article of commerce. (Lucil. *Aetn.* 433.) A peculiar kind of white clay (*creta*) used in the preparation of *alica*, was procured from the hills near the same place, which bore the name of Colles Leucogaei; while the volcanic sand of other hills in the immediate neighbourhood of Puteoli formed a cement of extraordinary hardness, and which was known in consequence by the name of *Puteolanum*. (Plin. xviii. 11. s. 29, xxxv. 6. s. 26.)

All ancient writers are agreed that the Campanians were not the original inhabitants of the country to which they eventually gave their name. Indeed, Campania appears, as might have been expected from its great fertility, to have been subject to repeated changes of population, and to have been conquered by successive swarms of foreign invaders. (Pol. iii. 91.) The earliest of these revolutions are involved in great obscurity: but it seems, on the whole, pretty clear that the original population of this fertile country (the first at least of which we have any record) was an Oscan or Ausonian race. Antiochus of Syracuse spoke of it as inhabited by the Opicans, "who were also called Ausonians." Polybius, on the contrary, attempted to establish a distinction between the two, and described the shores of the Crater as occupied by Opicans *and* Ausonians: while others carried the distinction still farther, and represented the Opicans, Ausonians, and Oscans, as separate races which successively made themselves masters of the country. (Strab. v. p. 242.) The fallacy of this statement is obvious: *Opicans* and *Oscans* are merely two forms of the same name, and there is every reason to believe that the Ausonians were a branch of the same race, if not absolutely identical with them. [AUSONES.] It appears certain that the first Greek settlers in these regions found them occupied by the people whom they called Opicans, whence this part of Italy was termed by them Opicia (Ὀπικία); and thus Thucydides distinguishes Cumae as Κύμη ἡ ἐν Ὀπικίᾳ (vi. 4). At the same time we find numerous indications of Tyrrhenian (i. e. Pelasgic) settlements, especially on the coast, which appear to belong to a very early period, and cannot be referred to the later Etruscan domination. (Niebuhr, vol. i. p. 45; Abeken, *Mittel Italien*, p. 102.) Whether these were prior to the establishment of the Oscans, or were spread along the coasts, while that people occupied principally the interior, is a point on which it is impossible for us to pronounce an opinion.

The earliest fact that can be pronounced *historical* in regard to Campania, is the settlement of the Greek colony of Cumae; and though we certainly cannot receive as authentic the date assigned to this by late chronologers (B. C. 1050), there seems good reason to believe that it was really, as asserted by Strabo, the most ancient of all the Greek settlements in Italy. [CUMAE.] The Cumaeans soon extended their power, by founding the colonies of Dicaearchia, Palaepolis, and Neapolis; and, according to some accounts, it would seem that they had even formed settlements in the interior at Nola and Abella. (Justin. xx. 1.) But it is probable that their progress was checked by the establishment of a new and more formidable power in their immediate neighbourhood. The conquest of Campania by the Etruscans is a fact which we cannot refuse to receive as historical, imperfect as is the information we have concerning it. Polybius tells us that at the same time that the Etruscans held possession of the plains of Northern Italy, subsequently occupied by the Gauls, they possessed also those of Campania about Capua and Nola; and Strabo says that they founded in this part of Italy twelve cities, the chief of which was Capua. (Pol. ii. 17; Strab. v. p. 242.) The Tuscan origin of Capua and Nola is confirmed by the testimony of Cato; and Livy tells us that the original name of the former city was Vulturnum, an obviously Etruscan form. (Liv. iv. 37; Mela, ii. 4; Cato, *ap. Vell. Pat.* i. 7.) The period at which this Etruscan dominion was established is, however, a very doubtful question. If we adopt the date assigned by Cato for the foundation of Capua (Vell. Pat. i. 7), which he places as late as B. C. 471, we cannot suppose that the period of Etruscan rule lasted much above fifty years,—a space apparently much too short: on the other hand, those who placed the origin of Capua more than three centuries earlier (Vell. Pat. *l. c.*)

may not improbably have erred as much in the contrary direction. Whatever may have been the actual date, we are told that these Tuscan cities rose to great wealth and prosperity, but gradually became enervated and enfeebled by luxury, so that they were unable to resist the increasing power of their warlike neighbours the Samnites. The fate of their chief city of Capua, which was first compelled to admit the Samnites to the privileges of citizenship and a share of its fertile lands, and ultimately fell wholly into their power [CAPUA], was probably soon followed by the minor cities of the confederacy. But neither these, nor the metropolis, became Samnite: they seem to have constituted from the first a separate national body, which assumed the name of Campani, "the people of the plain." It is evidently this event which is designated by Diodorus as the "first rise of the Campanian people" (τὸ ἔθνος τῶν Καμπανῶν συνέστη, Diod. xii. 31), though he places it as early as B. C. 440; while, according to Livy (iv. 37), Capua did not fall into the hands of the Samnites till B. C. 423. So rapidly did the new nation rise to power, that only three years after the occupation of Capua they were able to take by storm the Greek city of Cumae, which had maintained its independence throughout the period of the Etruscan dominion. (Liv. iv. 44; Diod. xii. 76, who, however, gives the date B. C. 428.)

The people of the Campanians thus constituted was essentially of Oscan race. The Samnite or Sabellian conquerors appear to have been, like the Etruscans whom they supplanted, a comparatively small body: and it is probable that the original Oscan population, which had continued to subsist, though in a state of subjection, under the Etruscans, was readily amalgamated with a people of kindred race like their new conquerors, so that the two became completely blended into one nation. It is certain that the language of the Campanians continued to be Oscan: indeed it is from them that our knowledge of the Oscan language is mainly derived. Their *name*, as already observed, probably signified only the inhabitants of the plain, and it was at this period confined to that part only of what was afterwards called Campania. Nor does there appear to have been any distinct organisation or national union among them. The Ausones or Aurunci, and the Sidicini, on the N. of the Vulturnus, still continued to exist as distinct and independent tribes. The minor towns around Capua—Acerra, Atella, Calatia, and Suessula—seem to have followed the lead, and probably acknowledged the supremacy of that powerful city: but Nola stood aloof, and appears to have preserved a closer connection with Samnium: while Nuceria in the southern part of the Campanian plain belonged to the Alfaterni, who were probably an independent tribe. Hence the Campanians with whom the Romans came into connection in the fourth century B. C. were only the people of Capua itself with its surrounding plain and dependent cities. They were not the less a numerous and powerful nation: Capua itself was at this time the greatest and most opulent city of Italy (Liv. vii. 31.): but though scarcely 80 years had elapsed since the establishment of the Samnites in Campania, they were already so far enervated and corrupted by the luxurious habits engendered by their new abode, as to be wholly unequal to contend in arms with their more hardy brethren in the mountains of Samnium.

In B. C. 343 the petty people of the Sidicini, attacked by the powerful Samnites, applied for aid to the Campanians. This was readily furnished them: but their new allies were in their turn defeated by the Samnites, in a pitched battle, at the very gates of Capua, and shut up within the walls of their city. In this distress they applied to Rome for assistance; and, in order to purchase the aid of that powerful republic, are said to have made an absolute surrender of their city and territory (*deditio*) into the hands of the Romans. The latter now took up their cause, and the victories of Valerius Corvus at Mt. Gaurus, and Suessula, soon freed the Campanians from all danger from their Samnite foes. (Liv. vii. 29—37.) It is very difficult to understand the events of the two next years, as related to us; and there can be little doubt that the real course of events has been distorted or concealed by the Roman annalists. The Campanians, though nominally subjects of Rome, appear to act a very independent part; and at length openly espoused the cause of the Latins when these broke out into declared hostilities against Rome. The great battle in which the combined forces of the Latins and Campanians were defeated by the Roman consuls T. Manlius and P. Decius was fought near the foot of Mt. Vesuvius, B. C. 340; and was quickly followed by the submission of the Campanians. They were punished for their revolt, by the loss of the whole of that portion of their fertile territory which lay N. of the Vulturnus, and which was known by the name of the "Falernus ager." The knights of Capua (equites Campani), who had throughout opposed the defection from Rome, were rewarded with the full rights of Roman citizens; while the rest of the population obtained only the "civitas sine suffragio." The same relations were established with the cities of Cumae, Suessula, and Acerrae. (Liv. viii. 11, 14, 17; Vell. Pat. i. 14.) Hence we find during the period that followed this war for above 120 years the closest bonds of union subsisting between the Campanians and the Roman people: the former were admitted to serve in the regular legions, instead of the auxiliaries: and for this reason Polybius, in reckoning up the forces of the Italian nations in B. C. 225, classes the Romans and Campanians in one body; while he enumerates the Latins and other allies separately. (Pol. ii. 24.)

The period from the peace which followed the war of B. C. 340, to the beginning of the Second Punic War, was one of great prosperity to the Campanians. Their territory was indeed necessarily the occasional theatre of hostilities during the protracted wars of the Romans with the Samnites: and some of the cities not immediately connected with Capua were even rash enough to expose themselves to the enmity of the Romans, by taking part with their adversaries. But the capture of the Greek city of Palaepolis in B. C. 326, led the neighbouring Neapolitans to conclude a treaty with Rome, which secured them for ever after as its faithful allies; and the conquest of Nola in B. C. 313, and of Nuceria in 308, firmly established the Roman dominion in the southern portion of Campania. This seems to have been admitted and secured by the peace of B. C. 304, which terminated the Second Samnite War. (Liv. viii. 22—26, ix. 28, 41; Niebuhr, vol. iii. p. 259.)

In B. C. 280, Campania was traversed by the armies of Pyrrhus, but his attempts to possess himself of either Capua or Neapolis were ineffectual. (Zonar. viii. 4.) The successes of that monarch do not appear to have for a moment shaken the fidelity of the Campanians. But it was otherwise with those of Hannibal. Immediately after the battle of Cannae

(B. C. 216) the smaller towns of Atella and Calatia declared in favour of the Carthaginian general, and shortly after the powerful city of Capua itself opened its gates to him. (Liv. xxii. 61, xxiii. 2—10.) This was not however followed, as might have been perhaps expected, by the reduction of the rest of Campania. Hannibal took Nuceria and Acerrae, but was foiled in his attempts upon Neapolis and Nola: and even the little town of Casilinum was not reduced till after a long protracted siege. From this time Campania became one of the chief seats of the war, and during several successive campaigns was the scene of operations of the rival armies. Many actions ensued with various success: but the result was on the whole decidedly favourable to the Roman arms. Hannibal never succeeded in making himself master of Nola, while the Romans were able in the spring of B. C. 212 to form the siege of Capua, and before the close of the following year that important city once more fell into their hands. From this time the Carthaginians lost all footing in Campania, and the war was transferred to other quarters of Italy. The revolted cities were severely punished, and deprived of all municipal privileges; but the tranquillity which this part of Italy henceforth enjoyed, together with the natural advantages of its soil and climate, soon restored Campania to a state of prosperity equal, if not superior, to what it had before enjoyed: and towards the close of the Republic Cicero contrasts its flourishing and populous towns and its fertile territory with the decayed Municipia and barren soil of Latium. (*De Leg. Agr.* ii. 35.)

This interval of repose was not however altogether uninterrupted. The Campanians took no part in the outbreak of the Italian nations which led to the Social War: but they were in consequence exposed to the ravages of their neighbours the Samnites, and Papius Mutilus laid waste the southern part of the province with fire and sword, and took in succession Nola, Nuceria, Stabiae, and Salernum: but was defeated by Sex. Julius under the walls of Acerrae. The next year fortune turned in favour of the Romans, and L. Sulla recovered possession of the whole of Campania, with the exception of Nola, which continued to hold out long after all the neighbouring cities had submitted, and was the last place in Italy that was reduced by the Roman arms. (Appian. *B. C.* i. 42, 45, 65; Vell. Pat. ii. 17, 18.) During the civil wars between Sulla and Cinna, Campania was traversed repeatedly by both armies, and was the scene of some conflicts, but probably suffered comparatively little. In B. C. 73 it was the scene of the commencement of the Servile War under Spartacus, who breaking out with only 70 companions from Capua, took refuge on Mt. Vesuvius, and from thence for some time plundered the whole surrounding country. (Appian. *B. C.* i. 116; Plut. *Crass.* 8; Flor. iii. 20.) During the contest between Caesar and Pompey Campania was spared the sufferings of actual war: and neither this nor the subsequent civil wars between Octavian and Antony brought any interruption to its continued prosperity.

Under the Roman Empire, as well as during the later period of the Republic, Campania became the favourite resort of wealthy and noble Romans, who crowded its shores with their villas, and sought in its soft climate and beautiful scenery a place of luxurious retirement. Whole towns thus grew up at Baiae and Bauli: but the neighbourhood of Neapolis, Pompeii, and Surrentum were scarcely less favoured, and the beautiful shores of the Crater were surrounded with an almost continuous range of palaces, villas, and towns. The great eruption of Vesuvius in A. D. 79, which buried under heaps of ashes the flourishing towns of Herculaneum and Pompeii, and laid waste great part of the fertile lands on all sides of it, gave for a time a violent shock to this prosperity; but the natural advantages of this favoured land would soon enable it to recover even so great a disaster: and it appears certain that Campania continued down to the very close of the Western Empire to be one of the most flourishing and populous provinces of Italy.

According to the division of Augustus, Campania together with Latium constituted the First Region of Italy (Plin. iii. 5); but at a later period, probably under Hadrian, Beneventum, with the extensive territory dependent on it, and apparently the other cities of the Hirpini also, were annexed to Campania; while, on the other hand, the name seems to have gradually been applied to the whole of the First Region of Augustus. Hence we find the "Civitates Campaniae," as given in the Liber Coloniarum (p. 229), including all the cities of Latium, and those of Samnium and the Hirpini also; and the Itineraries place the boundary of Campania on the side of Apulia, between Equus Tuticus and Aecae. (*Itin. Ant.* p. 111; *Itin. Hier.* p. 610.) This latter extension of the term does not, however, seem to have been generally adopted: we find Samnium generally separated from Campania for administrative purposes (Treb. Poll. *Tetricus*, 24; Not. Dign. ii. pp. 63, 64), and the name was certainly retained in common usage. On the other hand, the name of Campania appears to have come into general use as synonymous with the whole of the First Region of Augustus, so as to have completely superseded that of Latium; and ultimately, by a change analogous to what we find in several other instances, came to designate Latium *exclusively*, or the country round Rome, which retains to the present day the appellation of *La Campagna di Roma*. The exact period and progress of the change cannot be traced; it was certainly completed in the time of the Lombards; but on the Tabula Peutingeriana Campania already extends from the Tiber to the Silarus. (Tab. Peut.; P. Diac. ii. 17; Pellegrini, *Discorsi della Campania*, vol. i. p. 45—85.)

Ancient writers have left us scarcely any information concerning the national characteristics or habits of the Campanians during the period of their existence as an independent people, with the exception of vague declamations concerning their luxury. But a fact, strangely at variance with the accounts of their unwarlike and effeminate habits, is, that we find Campanians extensively employed as mercenary troops, especially by the despots of Sicily. Here they first appear as early as B. C. 410, in the service of the Carthaginians (Diod. xiii. 44—62), and were afterwards of material assistance to the elder Dionysius. But, not satisfied with serving as mere mercenaries, they established themselves in the two cities of Aetna and Entella, of which they held possession for a long period. (Id. xiv. 9, 58, xvi. 82.) Again the mercenaries in the service of Agathocles, who rendered themselves so formidable under the name of Mamertines [MAMERTINI], were in great part of Campanian origin. It is singular that we find these mercenaries, in the cases of Entella and Messana, repeating precisely the same treacherous conduct by which the Samnites had originally made themselves masters of Capua; and even a Cam-

panian legion in the Roman service was guilty of the same crime, and possessed itself of Rhegium by the massacre of the inhabitants. (Diod. xxii. Fr. 1, 2; Dionys. xix. 1. Fr. Mai.) It is probable, however, as observed by Niebuhr, that these formidable mercenaries were not exclusively natives of Campania, but were recruited also from the Samnites and other tribes of Sabellian and Oscan origin. (Niebuhr, vol. iii. p. 112, note 211.)

In other respects the Campanians, from their being so mixed a race, had probably less marked peculiarities of character than the Samnites or Etruscans. The works of art discovered in Campania, with the exception of such as belong to a late period and show the Roman influence, are almost exclusively Greek. The Greek coins of Nola, as well as the beautiful painted vases discovered there in enormous numbers, and which are all of the purest Greek style, prove that this influence was by no means confined to the cities on the coast. On the other hand the inscriptions are almost all either Latin or Oscan, and the writings on the walls of Pompeii prove that the latter language continued in use down to a late period. It is certainly true, as Niebuhr observes (vol. i. p. 76), that we find no trace among existing remains of the period of Etruscan rule, though this circumstance is hardly sufficient to warrant us in adopting the views of that historian and rejecting altogether the historical accounts of the Etruscan dominion in Southern Italy.

The principal natural features of Campania have been already described. Its only considerable river is the VULTURNUS, which rises in the mountains of Samnium, and enters Campania near Venafrum; it traverses the whole of the fertile plain of Capua, and formed the limit between the "Ager Campanus," the proper territory of Capua, on the S., and the Ager Falernus on the N. It is a deep and rapid stream, on which account Casilinum, as commanding the principal bridge over it, must have been in all times a point of importance. The LIRIS, which originally formed the boundary of Campania on the N., was by the subsequent extension of Latium included wholly in that country, and cannot therefore be reckoned a Campanian river. Between the two was the SAVO, a small and sluggish stream (*piger Savo*, Stat. Silv. iv. 3. 66; Plin. iii. 5. s. 9) still called the *Savone*, which has its mouth little more than two miles N. of that of the Vulturnus. A few miles S. of the same river is the CLANIUS, in ancient times a more considerable stream, but the waters of which have been now diverted into an artificial channel or canal called the *Lagno*. The mouth of this is about 10 miles from that of a small stream serving as the outlet of the *Lago di Patria* (the Literna Palus), which appears to have been called in ancient times the river LITERNUS. (Liv. xxxii. 29; Strab. v. p. 243.) The SEBETHUS or SEBETHIS, which bathed the walls of Neapolis, can be no other than the trifling stream that flows under the *Ponte della Maddalena*, a little to the E. of the modern city of *Naples*, and is thence commonly known as the *Fiume della Maddalena*. The VESERIS, which is mentioned as flowing not far from the foot of Vesuvius (Liv. viii. 9; Vict. *de Vir. Ill.* 26, 28), if it be not identical with the preceding, must have been a very small stream, and all trace of it is lost. The SARNUS, still called *Sarno*, which rises at the foot of the Apennines near the modern city of *Sarno*, between *Nola* and *Nocera*, is a more considerable stream, and waters the whole of the rich plain on the S. of Mt. Vesuvius (quae rigat aequora Sarnus, Virg. *Aen.* vii. 738). The paucity of rivers in Campania is owing to the peculiar nature of the volcanic soil, which, as Pliny observes, allows the waters that descend from the surrounding mountains to percolate gradually, without either arresting them, or becoming saturated with moisture. (Plin. xviii. 11. s. 29.)

The principal mountains of Campania have already been noticed. The arm of the Apennines which separates the two Gulfs of *Naples* and *Salerno*, and rises above *Castellamare* to a height of near 5000 feet, was called in ancient times the MONS LACTARIUS (Cassiod. *Ep.* xi. 10), from its abundant pastures, which belonged to the neighbouring town of Stabiae, and were much frequented by invalids for medical purposes. [STABIAE.] Several of the minor hills belonging to the volcanic group of which Mt. Gaurus was the principal, were known by distinguishing names, among which those of the COLLIS LEUCOGAEUS between Puteoli and Neapolis (Plin. xviii. 11. s. 29), and the MONS PAUSILYPUS in the immediate neighbourhood of the latter city, have been preserved to us.

Campania contains several small lakes, of which the lake AVERNUS is a volcanic basin, in the deep hollow of a crater; the rest are mere stagnant pools formed by the accumulation of sand on the sea shore preventing the outflow of the waters. Such were the LITERNA PALUS, near the town of the same name, now called the *Lago di Patria*; and the ACHERUSIA PALUS, now *Lago di Fusaro*, a little to the S. of Cumae. The Lucrine Lake (LACUS LUCRINUS) was, in fact, merely a portion of the sea shut in by a narrow dike or bar, apparently of artificial construction; similar to the part of the Port of Misenum, which is now called the *Mare Morto*.

The principal islands off the coast of Campania, AENARIA, PROCHYTA, and CAPREAE, have already been noticed. Besides these there are several smaller islets, most of them, indeed, mere rocks, of which the names have been recorded in consequence of their proximity to the flourishing towns of Puteoli and Neapolis. The principal of these is NESIS, still called *Nisida*, opposite the extremity of the Mons Pausilypus; itself the crater of an extinct volcano, which seems in ancient times to have still retained some traces of its former activity. (Lucan. vi. 90.) MEGARIS, called by Statius MEGALIA, appears to be the rock now occupied by the *Castel dell' Uovo*, close to Naples; while the two islets mentioned by the same poet as Limon and Euploea (Stat. *Silv.* iii. 1, 149) are supposed to be two rocks between *Nisida* and the adjoining headland, called *Scoglio del Lazzaretto* and *la Gajola*. [NEAPOLIS.] South of the Surrentine Promontory, and facing the Gulf of Posidonia lie some detached and picturesque rocks, a short distance from the shore, which were known as the SIRENUSAE INSULAE, or the Islands of the Sirens; they are now called *Li Galli*.

The towns and cities of Campania may be briefly enumerated. 1. Beginning from the frontier of Latium and proceeding along the coast were, VULTURNUM at the mouth of the river of the same name, LITERNUM, and CUMAE; MISENUM adjoining the promontory of the same name, and immediately within it BAULI, BAIAE, and PUTEOLI, originally called by the Greeks Dicaearchia. From thence proceeding round the shores of the Crater were the flourishing towns of NEAPOLIS, HERCULANEUM,

POMPEII, STABIAE, and SURRENTUM; besides which we find mention of Retina, now *Resina*, at the foot of Mt. Vesuvius (Plin. *Ep.* vi. 16), and Aequa, still called *Equa*, a village near *Vico*, about half way between Stabiae and Surrentum. (Sil. Ital. v. 464.) Neither of these two last places ranked as towns; they were included among the populous villages or *vici* that lined the shores of this beautiful bay, the names of most of which are lost to us.

2. In the interior of the province, N. of the Vulturnus were: VENAFRUM in the upper valley of the Vulturnus, the most northerly city of Campania, bordering on Latium and Samnium; TEANUM at the foot of the mountains of the Sidicini and Aurunci; SUESSA on the opposite slope of the same group, and CALES on the Via Latina between Teanum and Casilinum. In the same district must be placed TREBULA, probably near the foot of Mons Callicula, and FORUM POPILII, also of uncertain site. URBANA, where Sulla had established a colony, lay on the Appian Way between Sinuessa and Casilinum; and Caedia, a mere village incidentally mentioned by Pliny (xiv. 6. s. 8), on the same road, 6 miles from Sinuessa. AURUNCA, the ancient capital of the people of that name, had ceased to exist at a very early period.

3. S. of the Vulturnus were CASILINUM (immediately on that river), CAPUA, CALATIA, ATELLA, ACERRAE, SUESSULA, NOLA, ABELLA, and NUCERIA, called, for distinction's sake, ALFATERNA. The site of Taurania, which had already ceased to exist in the time of Pliny (iii. 5. s. 9) is wholly unknown, as well as that of HYRIUM or HYRINA, a city known only from its coins.

4. In the territory of the PICENTINI (which, as already observed, was comprised in Campania in the official designation of the province), were: SALERNUM and MARCINA on the coast of the Posidonian Gulf, and PICENTIA in the interior, on the little river still called *Bicentino*. EBURI (*Eboli*), though situated on the N. side of the Silarus, is assigned by Pliny to Lucania. (Plin. iii. 11. s. 15.)

Campania was traversed by the Appian Way, the greatest high road of Italy: this had, indeed, in its original construction by Appius Claudius, been carried only from Rome to Capua; the period at which it was extended from thence to Beneventum is uncertain, but this could hardly have taken place before the close of the Samnite Wars. [VIA APPIA.] This road led direct from Sinuessa (the last city in Latium), where it quitted the sea shore, to Casilinum, and thence to Capua; from whence it was continued through Calatia and Caudium (in the Samnite territory) to Beneventum. It entered the Campanian territory at a bridge over the little river Savo, 3 miles from Sinuessa, called from this circumstance the Pons Campanus. (*Itin. Hier.* p. 611; *Tab. Peut.*) The Via Latina, another very ancient and important line of road, entered Campania from the N. and proceeded from Casinum in Latium by Teanum and Cales to Casilinum, where it fell into the Via Appia. The line of road, which proceeded in a southerly direction from Capua by Nola and Nuceria to Salernum, was a part of the great high road from Rome to Rhegium, which is strangely called in the Itinerary of Antoninus the Via Appia. An inscription still extant records the construction of this line of road from Capua to Rhegium, but the name of its author is unfortunately lost, though it is probable that he was a praetor of the name of Popilius. [FORUM POPILII.] Besides this, another road, given in the Tabula, led direct from Capua to Neapolis, and from thence by Herculaneum and Pompeii to Nuceria, where it joined the preceding; while another branch quitted it at Pompeii and followed the shores of the bay through Stabiae to Surrentum.

Lastly, another great road, which as we learn from Statius (*Silv.* iv. 3) was constructed by the emperor Domitian, proceeded along the coast from Sinuessa to Cumae, and thence by Puteoli to Neapolis. There is no doubt, from the flourishing condition of Campania under the Roman Empire, that all these roads continued in use down to a late period. Milestones and other inscriptions attest their successive restorations from the reign of Trajan to that of Valentinian III. (Mommsen, *Inscr. Neap.* pp. 340, 341.)

Concerning the topography of Campania, see Pellegrini, *Discorsi della Campania Felice* (2 vols. 4to. Napoli, 1771), who is much superior to the common run of Italian topographers. His authority is for the most part followed by Romanelli. (*Topografia Istorica del Regno di Napoli*, vol. iii.)

There exist coins with the name of the Campanians and Greek legends (ΚΑΜΠΑΝΩΝ), but most of these belong to the Campanians who were settled in Sicily at Entella and other cities. There are, however, silver coins with the inscription ΚΑΜΠΑΝΟ (or sometimes ΚΑΠΠΑΝΟ), which certainly belong to Campania, and were probably struck at Capua. (Eckhel, *Num. Vet. Anecd.* p. 19; Millingen, *Numism. de l'Italie*, p. 140.) [E. H. B.]

CAMPI LABORINI. [CAMPI PHLEGRAEI.]

CAMPI MACRI (Μακροὶ Κάμποι, Strab.), a place in Cisalpine Gaul, on the Via Aemilia, between Regium and Mutina. Strabo speaks of it as a small town (*v.* p. 216), where a great fair (*πανήγυρις*) was held every year: and Varro notices it as the scene of a large cattle and sheep fair, the neighbouring plains being indeed among the most celebrated in Italy for the excellence of their wool. (Varr. ii. Praef.; Colum. vii. 2. § 3.) But this fair appears to have fallen into disuse soon after; for a curious inscription, discovered at Herculaneum, dated in A. D. 56, speaks of it as having then ceased to be held, so that the buildings adapted for it were fallen into decay, and the place was become uninhabited. (Orell. *Inscr.* 3115; Cavedoni, *Marmi Modenesi*, p. 60.) It is evident from this that there never was properly a *town* of the name, but merely a collection of buildings for the purposes of the fair. The name of the Campi Macri was originally given to the extensive plains at the foot of the Apennines, extending along the Via Aemilia from Mutina to Parma. They are repeatedly mentioned in this sense by Livy during the wars of the Romans with the Ligurians, who at that time still held possession of the mountains immediately adjoining. (Liv. xli. 18, xlv. 12.) Columella also speaks of the "Macri campi," not as a particular spot, but a tract of country about Parma and Mutina. (*R. R.* vii. 2. § 3.) It is supposed that the village of *Magreda*, on the banks of the *Secchia*, about 8 miles from *Modena*, retains some traces of the ancient name. (Cavedoni, *l. c.* p. 62.) [E. H. B.]

CAMPI PHLEGRAEI (*τὰ Φλεγραῖα πεδία*) was the name given by the Greeks to the fertile plains of Campania, especially those in the neighbourhood of Cumae. The origin of the name was probably connected with the volcanic phenomena of

the neighbouring country, which gave rise to the fable of the giants being buried beneath it (Strab. v. p. 245; Diod. v. 71), though others derived it from the frequent wars of which this part of Italy was in early times the scene, on account of its great fertility. (Pol. iii. 91; Strab. *l. c.*) Pliny considers the Phlegraean plains of the Greeks to be synonymous with what were called in his time the CAMPI LABORINI, or LABORIAE; but the latter term appears to have had a more limited and local signification, being confined, according to Pliny, to the part of the plain bounded by the two high roads leading respectively from Cumae and from Puteoli to Capua. (Plin. iii. 5. s. 9, xviii. 11. s. 29.) The Greek name, on the other hand, was probably never a local term, but was applied without discrimination to the whole neighbourhood of Cumae. Hence Silius Italicus calls the Bay of Baiae and Puteoli "Phlegraei sinus" (viii. 540), and in another passage (xii. 143), he distinctly connects the legend of the Phlegraean giants with the volcanic phenomena of the Forum Vulcani or *Solfatara*. [E. H. B.]

CAMPI RAU'DII, or CAMPUS RAU'DIUS, a plain in Cisalpine Gaul, which was the scene of the great victory of Marius and Catulus over the Cimbri, in B.C. 101. But though this battle was one of the most memorable and decisive in the Roman annals, the place where it was fought is very imperfectly designated.

Florus and Velleius, who have preserved to us the name of the actual battle field ("in patentissimo, quem Raudium vocant, campo," Flor. iii. 3. § 14; "in campis, quibus nomen erat Raudiis," Vell. Pat. ii. 12; Vict. *de Vir. Ill.* 67), afford no clue to its situation. Orosius, who has described the action in more detail (v. 16), leaves us wholly in the dark as to its locality. Plutarch, without mentioning the name of the particular spot, which had been chosen by Marius as the field of battle, calls it the plain about Vercellae (*τὸ πεδίον τὸ περὶ Βερκέλλας*, Plut. *Mar.* 25). There is no reason to reject this statement, though it is impossible for us, in our total ignorance of the circumstances of the campaign, to explain what should have drawn the Gauls from the banks of the Athesis, where they defeated Catulus not long before, to the neighbourhood of Vercellae. Many authors have nevertheless rejected Plutarch's evidence, and supposed the battle to have taken place in the neighbourhood of Verona. D'Anville would transfer it to *Rhò*, a small town about 10 miles NW. of Milan, but this is not less incompatible with the positive testimony of Plutarch; and there is every reason to believe that the battle was actually fought in the great plain between Vercellae and Novaria, bounded by the *Sesia* on the W., and by the *Agogna* on the E.

According to Walckenaer, a part of this plain is still called the *Prati di Rò*, and a small stream that traverses it bears the name of *Roggia*, which is, however, a common appellation of many streams in Lombardy. About half way between *Vercelli* and *Mortara*, is a large village called *Robio* or *Robbio*. Cluver was the first to point out this as the probable site of the Raudii Campi: the point has been fully discussed by Walckenaer in a memoir inserted in the *Mémoires de l'Académie des Inscriptions* (2d series, vol vi. p. 361—373; see also Cluver. *Ital.* p. 235; D'Anville, *Géogr. Anc.* p. 48). [E. H. B.]

CAMPI VE'TERES, a place in Lucania, which, according to Livy (xxv. 16), was the real scene of the death of Tib. Sempronius Gracchus during the Second Punic War (B. C. 212), though other annalists transferred it to the banks of the Calor, near Beneventum. He gives us no further clue to its situation than the vague expression "in Lucanis;" and it is impossible to fix it with any certainty. The resemblance of name alone has led local topographers to assign it to a place called *Vietri*, in the mountains between *Potenza* and the valley of the *Tanagro*. (Romanelli, vol. i. p. 438.) [E. H. B.]

CAMPODU'NUM (*Καμβόδουνον*), a town in the country of the Estiones in Vindelicia. It was situated on the road from Brigantium to Augusta Vindelicorum, and is identified with the modern *Kempten*, on the river *Iller*. (Ptol. ii. 13. § 3; Itin. Ant. p. 258; *Vita S. Magni*, c. 18.) [L. S.]

CAMPO'NI, a people of Aquitania (Plin. iv. 19), perhaps in the valley of *Campan* in the *Bigorre*. [G. L.]

CAMPSA. [CROSSAEA.]

CAMPUS DIOME'DIS. [CANUSIUM.]

CAMPUS FOENICULA'RIUS. [TARRACO.]

CAMPUS JUNCA'RIUS. [EMPORIAE.]

CAMPUS SPARTA'RIUS. [CARTHAGO NOVA.]

CAMPUS STELLA'TIS. [CAPUA.]

CAMPYLUS, a tributary of the Achelous, flowing from Dolopia. [ACHELOUS.]

CAMULODU'NUM. [COLONIA.]

CAMU'NI (*Καμοῦνοι*), an Alpine people, who inhabited the valley of the Ollius (*Oglio*), from the central chain of the Rhaetian Alps to the head of the Lacus Sebinus (*Lago d' Iseo*). This valley, which is still called the *Val Camonica*, is one of the most extensive on the Italian side of the Alps, being above 60 miles in length. Pliny tells us that the Camuni were a tribe of Euganean race; while Strabo reckons them among the Rhaetians.

The name of the Camuni appears among the Alpine tribes who were reduced to subjection by Augustus: after which the inhabitants of all these valleys were attached, as dependents, to the neighbouring towns of Gallia Transpadana ("finitimis attributi municipiis," Plin. iii. 20. s. 24; Strab. iv. p. 206; Dion Cass. liv. 20). At a later period, however, the Camuni appear to have formed a separate community of their own, and we find mention in inscriptions of the "Res Publica Camunorum." (Orell. *Inscr.* 652, 3789.) In the later division of the provinces they came to be included in Rhaetia. [E. H. B.]

CAMUNLODU'NUM, in Britain, mentioned by Ptolemy as a town of the Brigantes. Identified—though, perhaps, on insufficient grounds—by Horsley with the Cambodunum of the Itinerary. [CAMBODUNUM.] [R. G. L.]

CANA (*Κανᾶ*). 1. A village of Galilee, the scene of our Lord's first miracle. (*S. John*, ii.) A village of this name in Galilee is mentioned by Josephus, as his temporary place of residence during his command in that country, and his notices of it appear to indicate that it was not far distant from Sepphoris. (*Vita*, § 16, seq.) The village of *Kephr Kenna*, 1½ hour NE. of Nazareth, is pointed out to modern travellers as the representative of "Cana of Galilee;" but it appears that this tradition can be traced back no further than the 16th century. An earlier, and probably more authentic tradition, current during the period of the Crusades, assigns it to a site 3 miles north of Sepphoris on the north of a fertile plain, now called *el-Büttauf*; where, a little east of *Kephr Menda*, are still found on a hill side

ruins of an extensive village, to which a wavering and uncertain local tradition gives the name of *Kana*. (Robinson, *B. R.* iii. p. 204—207.)

2. There appears to have been another village of this name not far from Jericho, where the army of Antiochus Dionysus perished with hunger after their defeat by the Arabs (Joseph. *B. J.* i. 4. § 7, comp. *Ant.* xiii. 15. § 1), and where Herod the Great was encamped in his war with Antigonus. (*B. J.* i. 17. § 5.) [G. W.]

CANAAN. [PALAESTINA.]

CANAE (Κάναι: *Eth.* Καναῖος), a small place founded by the Locri of Cynus (Strab. p. 615) in Aeolis, opposite to the most southern part of Lesbos, in a district called Canaea. The district extended as far as the Arginusae islands northward, and to the promontory rising above them, which some called Aega. The place is called Cane by Mela (i. 18). Pliny mentions it as a ruined place (v. 32): he also mentions a river Canaeus; but he may mean to place it near Pitane. In the war of the Romans with Antiochus (B. C. 190, 191), the Roman fleet was hauled up at Canae for the winter, and protected by a ditch and rampart. (Liv. xxxvi. 45, xxxvii. 8.)

Mela places the town of Cane at the promontory Cane, which is first mentioned by Herodotus (vii. 42). The army of Xerxes, on the march from Sardes to the Hellespont, crossed the Caicus, and leaving the mountain of Cane on the left, went through Atarneus. The position of Cane or Canae, as Strabo (pp. 615, 581, 584) calls the promontory, is, according to him, 100 stadia from Elaea, and Elaea is 12 stadia from the Caicus, and south of it; and he says that Cane is the promontory that is opposite to Lectum, the northern limit of the Gulf of Adramyttium, of which gulf the Gulf of Elaea is a part. He therefore clearly places the promontory Cane on the south side of the Gulf of Elaea. In another passage (p. 581) he says, "From Lectum to the river Caicus, and the (place) called Canae, are the parts about Assus, Adramyttium, Atarneus, and Pitane, and the Elaeatic Bay, opposite to all which extends the island of the Lesbians." Again, he says, "The mountain (Cane or Canae) is surrounded by the sea on the south and the west; on the east is the level of the Caicus, and on the north is the Elaeitis." This is all very confused; for the Elaeitis is south of the Caicus, and even if it extended on both sides of the river, it is not north of Canae, unless Canae is south of Elaea. Mela, whose description is from south to north, clearly places Cane on the coast after Elaea and Pitane; Pliny does the same; and Ptolemy's (v. 2) Caene is west of the mouth of the Caicus. The promontory then is *Cape Coloni*, west of the mouth of the Caicus. Strabo's confusion is past all explanation. He could not have had any kind of map, nor a clear conception of what he was describing.

Cane was both a mountain tract and a promontory. The old name was Aegā (Αἰγᾶ), as Strabo remarks, and he finds fault with those who wrote the name Aegă (Αἴγα), as if it was connected with the name "goat" (comp. Steph. *s. v.* Αἰγά), or Aex (Αἴξ). Strabo says that the mountain (Cane) is of no great extent, but it inclines towards the Aegean, whence it has its name; afterwards the promontory was called Aegă, as Sappho says, and the rest was Cane or Canae. See the note in Groskurd's Strabo (vol. ii. p. 601). [G. L.]

CANARIA. [FORTUNATAE INSULAE.]

CANAS, a town of Lycia, mentioned by Pliny (v. 27. s. 28). The site is not known. He mentions it next before Candyba. [CANDYBA.] [G. L.]

CANASIS (Κανάσις, Arrian, *Ind.* 29), a small port on the shore of Gedrosia to which the fleet of Nearchus came. Vincent identifies it with a small place called *Tiz*. The country seems to have been then, as now, nearly deserted, and exposed to much suffering from drought. (Vincent, *Voyage of Nearchus*, vol. i. p. 267.) [V.]

CANASTRAEUM (Καναστραῖον, Κάναστρον: *Eth.* Καναστραῖος: *Cape Paliuri*), the extreme point of the peninsula of Pallene. (Herod. vii. 123; Thuc. iv. 110; Strab. vii. p. 330; Apollon. Rhod. i. 599; Ptol. iii. 13; Liv. xliv. 11; Plin. iv. 10; Pomp. Mel. ii. 3. § 1; Leake, *Northern Greece*, vol. iii. p. 156.) [E. B. J.]

CANATE (Κανάτη, Arrian, *Ind.* 29), a desert shore of Gedrosia, the next station to Canasis made by the fleet of Nearchus. Vincent, by some ingenious arguments, has given reasons for supposing it the same as the present promontory of *Godeim*. (Vincent, *Voyage of Nearchus*, vol. i. p. 269. [V.]

CANATHA (Κάναθα). In Josephus (*Ant.* xv. 5. § 1), Κάναθα is a various reading for Κανᾶ, and is apparently the same place as that referred to in the preceding article. In the parallel passage in the War (i. 19. § 2) the reading is Κάναθα τῆς Κοίλης Συρίας, and both Ptolemy (v. 15. § 23) and Pliny (v. 18) mention a city of that name in Coelesyria, which the latter reckons among the cities of the Decapolis. [G. W.]

CANCANORUM PROM. [GANGANI.]

CANDACE (Κανδάκη, Isid. Char. p. 8), a town placed by Isidore in Asia. Nothing is known about it, nor is it mentioned elsewhere. Forbiger thinks it without doubt the same as Cotace (Κοτάκη) in Ptolemy (vi. 17. § 8), but gives no reason for this supposition, which is a mere conjecture. [V.]

CANDARA (Κάνδαρα: *Eth.* Κανδαρηνός), a place "in Paphlagonia, three schoeni from Gangra, and a village Thariba." (Steph. B. *s. v.*) This is a quotation from some geographer, and it is worthy of notice that the distance is given in schoeni. Stephanus adds that there was a temple of Hera Candarene. As the site of Gangra is known, perhaps Candara may be discovered. [G. L.]

CANDARI (Κάνδαροι, Ptol. vi. 12. § 4), a tribe in the NW. part of Sogdiana. They are mentioned by Pliny (vi. 26) in connection with the Chorasmii; but they would appear to be to the E. of the *Kharezm* country. It seems probable that the name is derived from the Sanscrit Gandháras, a tribe beyond the Indus, mentioned in the Mahabhárat. [V.]

CA'NDASA (Κάνδασα), a fort in Caria, according to Stephanus (*s. v.*) who quotes the 16th book of Polybius. He also gives the Ethnic name Κανδασεύς. [G. L.]

CANDA'VIA (Κανδαουΐα, Hierosol. Itin.; Peut. Tab.: *Elbassán*), a mountain of Illyria. The Egnatian Way, commencing at Dyrrhachium, crossed this mountain, which lies between the sources of the river Genusus and the lake Lychnitis, and was called from this Via Candavia. (Strab. vii. p. 323.) Its distance from Dyrrhachium was 87 M. P. (Plin. iii. 33; comp. Cic. *ad Att.* iii. 7; Caes. *B. C.* iii. 79; Sen. *Ep.* xxxi.) Colonel Leake (*Northern Greece*, vol. i. p. 343, iii. p. 280) found its bearing N. 23 W. by compass. [E. B. J.]

CANDIDIA'NA (Κανδιδιανά), a fort on the Danube in Lower Moesia, in which a detachment of

light troops was garrisoned. (Procop. *de Aed.* iv. 7; Itin. Ant. 223.) It was situated near the modern *Kiliman*, and was perhaps the same place as the Nigriniana of the Tab. Peut. and the Geog. Rav. (iv. 7). [L. S.]

CA'NDIDUM PROMONTORIUM (*Ras-el-Abiad, C. Blanco:* all three names meaning *White*), a lofty headland of chalk and limestone, on the N. coast of Zeugitana in Africa, N. of Hippo Regius, and forming the W. headland of the Sinus Hipponensis. (Mela, i. 7. § 2; Plin. v. 4. s. 3; Solin. 27; Shaw, *Travels in Barbary*, p. 74, 2d ed.) Shaw takes it for Livy's PULCHRUM PROMONTORIUM, where Scipio landed; but that headland is the same as the APOLLINIS PROMONTORIUM. [P. S.]

CA'NDYBA (Κάνδυβα: *Eth.* Κανδυβεύς), a town in Lycia (Plin. v. 27) with a forest Oenium near it. Its site is now ascertained to be a place called *Gendevar*, east of the Xanthus, and a few miles from the coast. (Spratt's *Lycia*, vol. i. p. 90, &c. and Map.) The resemblance of the name is pretty good evidence of the identity of the places; but a Greek inscription containing the Ethnic name Κανδυβεύς was copied on the spot. Some of the rock tombs are beautifully executed. One perfect inscription in Lycian characters was found. The forest of Oenium "probably may be recognised in the extensive pine forest that now covers the mountain above the city." A coin procured on the spot from the peasantry had the letters KAND (so in Spratt's *Lycia*, vol. i. p. 95) on it. In the MSS. of Ptolemy the name, it is said, is Κόνδυβα, but this is a very slight variation, arising from the confusion of two similar letters. In the old Latin version of Ptolemy it is Condica. [G. L.]

CANE. [CANAE.]

CANE (Κάνη), an emporium and promontory on the south coast of Arabia, in the country of the Adramitae (Ptol. vi. 7. § 10), which was, according to Arrian, the chief port of the king of the incense country, identified by D'Anville with *Cava Canim* bay, which Lieut. Wellstead and Capt. Haines find at *Hissan Ghorab*, "a square dreary mountain of 456 feet in height, with very steep sides." "It appears to have been formerly insulated, although now connected with the main by a low sandy isthmus." At its base, "which is a dark, greyish-coloured, compact limestone," are ruins of numerous houses, walls, and towers; and ruins are thickly scattered along the slope of the hill on the inner, or north-eastern side, where the hill, for one-third of its height, ascends with a moderate acclivity. A very narrow pathway, cut in the rock along the face of the hill, in a zigzag direction, led to the summit of the hill, which is also covered with extensive ruins; and on the rocky wall of this ascent are found the inscriptions which have so long baffled the curiosity of the learned. They are "on the smooth face of the rock, on the right, about one-third the ascent from the top.... The characters are 2½ inches in length, and executed with much care and regularity." (Wellstead's *Travels in Arabia*, vol. ii. pp. 421—426, cited with Capt. Haines's MS. Journal in Forster's *Arabia*, vol. ii. pp. 183—191, and notes.) [G. W.]

CANE'THUS. [CHALCIS.]

CANGI, a people of Britain, against whom Ostorius Scapula led his army, after the reduction of the Iceni. Their fields were laid waste; and, when this had been effected, the neighbourhood of the Irish Sea was approached ("ductus in *Cangos* exercitus —vastati agri—jam ventum haud procul mari quod *Hiberniam* insulam aspectat, Tac. *Ann.* xii. 32). This was A. D. 50, during the *first* (not the Boadicean) war against the Iceni. Ptolemy has a *Cancanorum* (*Ganganorum*) *Promontorium*, and the Geographer of Ravenna a town called *Canca*. Lastly, there is a station of the *Notitia* called *Concangii*. None of these exactly explain the *Cangi* of Tacitus. The *Canca civitas* is unknown; the *Ganganorum Prom.* is a headland of *North Wales;* the *Concangii* are generally fixed in *Westmoreland*. Ptolemy's promontory, however, is the nearest. All that can be said is that the Cangi lay somewhere between the Iceni (East Anglia) and the Irish Sea. The Index of the *Monumenta Britannica* places them in *Somerset*. *North Wales* is a likelier locality. For remarks on the value of the different statements of Tacitus in respect to Britain, see COLONIA. [R.G.L.]

CANINI CAMPI, a district of Rhaetia Prima, corresponding to the modern *Graubündten*. (Amm. Marc. xv. 4; Sidon. Apollin. *Paneg. Maior.* 376; Greg. Turon. x. 3.) [L. S.]

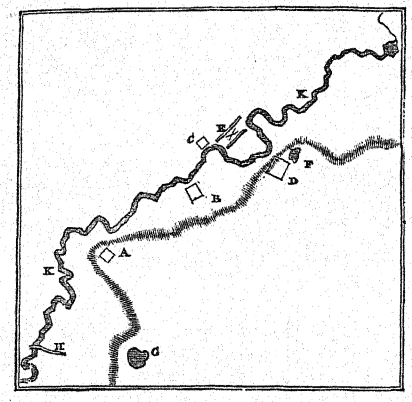
CANIS FLUMEN, a river of Arabia mentioned by Pliny (vi. 28. s. 32), supposed by Forster to be identical with the "Lar fluvius" of Ptolemy in the country of the Nariti, at the south of the Persian Gulf, now called the Zar, which he takes to be equivalent to Dog River. (*Geog. of Arab.* vol. ii. pp. 222, 236.) One great difficulty of identifying the places mentioned by the classical geographers arises from the fact, that they sometimes translate the native name, and sometimes transcribe it, especially if it resembled in sound any name or word with which they were familiar; nor did they scruple to change the orthography in order to form a more pronounceable name than the original. The inconvenience of representing the Semitic names in Greek characters deterred Strabo (xv. p. 1104) from a minute description of the geography of Arabia, and involves endless difficulty in a comparison of the ancient and modern geography of the peninsula, particularly as the sites are not at all clearly defined, and even Ptolemy, the best informed of the ancient geographers, had a very indistinct notion of the outline of the coast. To illustrate this in the name before us. On the south coast of Arabia are two promontories *Ras Kelb* (i. e. *Cape Dog*) a little east of *Hissan Ghorab;* and *Ras Akanis* a little west of *Ras-el-Hadd*. Either of these names might be represented by Pliny as Canis Promontorium. So with Canis flumen. There can be little doubt that he thought its name was "Dog river," for he also calls it by its Greek equivalent "Cynos flumen" (κύνος πόταμος). But, perhaps, a more probable conjecture can be offered than that of Mr. Forster, as it seems very doubtful whether Lar or Zar can mean Dog. Near the "Canis flumen" Pliny places the "Bergodi" and the "Catharrei;" the former have been already found (*s. v.*) to the west of the Zar river, and the latter are doubtless identical with the *Kadara* of Ptolemy in the same situation, between which and the river Lar Ptolemy places "Canipsa civitas." (Κάνιψα πόλις) next to the river's sources. There can be little doubt that the "Canis flumen" was named by Pliny, from Canipsa, which stood near it. [G. W.]

CANNAE (Κάνναι, Strab. et al. Κάννα, Polyb.: *Eth.* Cannensis: *Canne*), a small town of Apulia on the S. bank of the Aufidus, about 6 miles from its mouth, celebrated for the memorable defeat of the Romans by Hannibal, B. C. 216. Although no doubt exists as to the site of Cannae itself, the ruins of which are still visible on a small hill about 8 miles from *Canosa* (Canusium), and the battle was certainly

fought on the banks of the Aufidus in its immediate neighbourhood, much question has been raised as to the precise locality of the action, which some have placed on the N., some on the S. of the river: and the previous operations of the Roman and Carthaginian armies have been interpreted so as to suit either view. But if the narrative of Polybius (who is much the most clear and definite upon this question) be carefully examined, it is difficult to see how any doubt can remain, and that of Livy, though less distinct, is in no respect contradictory to it. The other accounts of the battle in Appian, Zonaras, and Plutarch afford no additional information on the topographical question.

Hannibal had wintered at Gerunium, and it was not till early in the summer that he abandoned his quarters there, and by a sudden movement seized on Cannae. The town of that name had been destroyed the year before, but the citadel was preserved, and the Romans had collected there great magazines of corn and other provisions, which fell into the power of the Carthaginians. Hannibal occupied the citadel, and established his camp in its immediate neighbourhood. (Pol. iii. 107; Liv. xxii. 43.) The Roman generals, having received orders to risk a general engagement, followed Hannibal after some interval, and encamped at first about 50 stadia distant from the enemy: but the next day Varro insisted upon advancing still nearer, and the Romans now established two camps, the one on the same side of the Aufidus, where they previously were, (that is evidently the S. side), and the other, containing a smaller division of the forces, on the opposite bank, a little lower down the river, about 10 stadia from the larger Roman camp, and the same distance from that of Hannibal. (Pol. iii. 110.) The Aufidus at this season of the year* is readily fordable at almost any point, and would therefore offer no obstacle to their free communication.

On the day of the battle we are distinctly told that Varro *crossed the river* with the main body of his forces from the *larger* camp, and joining them to those from the smaller, drew up his whole army *in a line facing the south.* Hannibal thereupon *also crossed the river* to meet him, and drew up his forces in a line, having its left wing resting on the river, where they were opposed to the Roman cavalry, forming the right wing of the consular army. (Ib. 113; Liv. xxii. 45, 46.) From this account it seems perfectly clear that the battle was fought on the *north* bank of the Aufidus, and this is the result arrived at by the most intelligent travellers who have visited the locality (Swinburne's *Travels*, vol. i. pp. 167—172; Chaupy, *Découv. de la Maison d'Horace*, vol. iii. p. 500), as well as by General Vaudoncourt, who has examined the question from a military point of view. (*Hist. des Campagnes d'Annibal*, vol. ii. p. 9—34, 48—57.) The same conclusion appears clearly to result from the statement of Livy, that after the battle a body of 600 men forced their way from the lesser camp to the greater, and from thence, in conjunction with a larger force, to Canusium (xxii. 50).



The only difficulty that remains arises from the circumstance that Polybius tells us distinctly that the Roman army faced the S., and the Carthaginian the N. (iii. 114): and this is confirmed by Livy, who adds that Hannibal thereby gained the advantage of having the wind, called the Vulturnus, behind him, which drove clouds of dust into the face of the enemy (xxii. 47). There seems little doubt that the Vulturnus is the same with the Eurus, or SE. wind, called in Italy the *Scirocco*, which often sweeps over the plains of Apulia with the greatest violence: hence this circumstance (to which some Roman writers have attached very exaggerated importance) tends to confirm the statement of Polybius. Now, as the general course of the Aufidus is nearly from SW. to NE., it seems impossible that the Roman army, resting its right wing on that river, could have faced the S., if it had been drawn up on the N. bank, and Chaupy, in consequence, boldly rejects the statement of Polybius and Livy. But Swinburne tells us that "exactly in that part of the plain where we know, with moral certainty, that the main effort of the battle lay, the Aufidus, after running due E. for some time, makes a sudden turn to the S., and describes a very large semicircle." He supposes the Romans to have forded the river at the angle or elbow, and placing their right wing on its bank at that point, to have thence extended their line in the plain to the E., so that the battle was actually fought within this semicircle. This bend of the river is imperfectly expressed on Zannoni's map (the only tolerable one) of the locality; and the space comprised within it would seem too confined for a battle of such magnitude: but there is no reason to doubt the accuracy of Swinburne, who took his notes, and made drawings of the country upon the spot. "The scene of action (he adds) is marked by the name of *Pezzo di Sangue*, the 'Field of Blood;'" but other writers assign a more recent origin to this appellation.

Notwithstanding the above arguments, the scene of the battle has been transferred by local antiquarians and topographers to the S. side of the river, between Cannae and Canusium, and their authority has been followed by most modern historians, including Arnold. Niebuhr, on the contrary, has adopted Swinburne's view, and represents the battle as taking place within the bend or sweep of the river above described. (*Vorträge über Röm. Geschichte*, vol. ii. pp. 99, 100.) It may be added that the objection arising from the somewhat confined space thus assigned as the scene of the battle, applies with at least equal force to the opposite view, for the plain on the right bank of the Aufidus is very limited in extent, the hills on which Canusium and Cannae both stand flanking the river at no great distance, so that the interval between them does not exceed half a mile in breadth. (Chaupy, *l. c.*; Swinburne, *l. c.*) These hills are very slight eminences, with gently sloping sides, which would afford little obstacle to the movements of an army, but still the testimony of all writers is clear, that the battle was fought *in the plain.*

The annexed plan has no pretensions to topographical accuracy, there being no good map of the locality in sufficient detail: it is only designed to assist the reader in comprehending the above narrative.

We have little other information concerning Cannae, which appears to have been, up to this time, as it is termed by Florus, "Apuliae ignobilis vicus," and probably a mere dependency of Ca-

* The battle of Cannae was fought, as we learn from Gellius (v. 17; Macrob. *Sat.* i. 16), on the 2nd of August; but it is probable that the Roman calendar was at this time much in advance of the truth, and that the action really took place early in the summer. (Fischer, *Röm. Zeittafeln*, p. 89.)

PLAN OF CANNAE.

A. First camp of the Romans.
B. Second camp of the greater part of the forces; called the larger camp.
C. The smaller do.
D. Camp of Hannibal.
E. Scene of the actual battle.
F. Town or citadel of Cannae.
G. Canusium.
H. Bridge of Canusium.
KK. The Aufidus.

nusium. But its name occurs again during the Social War, B. C. 89, when it was the scene of an action between the Roman general Cosconius and the Samnite Trebatius. (Appian, *B. C.* i. 52.) It appears to have been at this time still a fortress; and Pliny enumerates the Cannenses "nobiles clade Romana" among the municipal towns of Apulia (iii. 11. s. 16). It became the see of a bishop in the later period of the Roman Empire, and seems to have continued in existence during the middle ages, till towards the close of the 13th century. The period of its complete abandonment is unknown, but the site, which is still known by the name of *Canne*, is marked only by the ruins of the Roman town. These are described by Swinburne, as consisting of fragments of altars, cornices, gates, walls, and vaults, in themselves of little interest. Little or no value can be attached to the name of *Pozzo di Emilio*, said to be still given to an ancient well, immediately below the hill occupied by the town, and supposed to mark the spot where the Roman consul perished. (Romanelli, vol. ii. p. 273; Vaudoncourt, *l. c.* p. 49.) [E. H. B.]

CANNAR (*C. Quilates*), a headland on the N. coast of Mauretania Tingitana, between Abyla and Rusaddi, 50 M. P. from the latter. (*Itin. Ant.* p. 11.) [P. S.]

CANNINEFATES, inhabited a part of the Insula Batavorum, and they were a tribe of the same stock as the Batavi, or only a division of the Batavi. (Tacit. *Hist.* iv. 15; Plin. iv. 15.) They probably occupied the western part of the Insula, the *Rhynland, Delftland*, and *Schieland;* but Walckenaer, who extends the limits of the Insula Batavorum, on the authority of Ptolemy, north of Leyden to a place called *Zandwoort*, gives the same extension to the Canninefates. The orthography of the name is given with some variations. The Canninefates were subdued by Tiberius in the time of Augustus (Vell. Pat. ii. 105), according to Velleius, who places them in Germania; but no safe inference can be drawn from such an expression as to their limits. The Canninefates, with the Batavi and Frisii, rose against the Roman authority in the time of Vitellius (Tac. *Hist.* iv. 15—79), under the command of Civilis. [BATAVORUM INSULA.] [G. L.]

CANO'BUS or CANO'PUS (Quint. *Inst. Or.* i. 5. § 13; Κάνωπος, Steph. B. p. 355 *s. v.*; Herod. ii. 15, 97, 113; Strab. xvi. p. 666, xvii. p. 800 *seq.*; Scylax, pp. 44, 51; Mel. ii. 7. § 6; Eustath. *ad Dionys. Perieg.* v. 13; Aeschyl. *Supp.* 312; Caes. *B. Alex.* 25; Virg. *Georg.* iv. 287; Juv. *Sat.* vi. 84, xv. 46; Senec. *Epist.* 51; Tac. *Ann.* ii. 60; Amm. Marc. xxii. 41, &c.: *Eth.* Κανωβίτης; *Adj.* Κανωβικός, *fem.* Κανωβίς), a town of Egypt, situated in lat. 31° N. upon the same tongue of land with Alexandreia, and about 15 miles (120 stadia) from that city. It stood upon the mouth of the Canobic branch of the Nile [NILUS], and adjacent to the Canobic canal (Κανωβικὴ διῶρυξ, Strab. xvii. p. 800). In the Pharaonic times it was the capital of the nome Menelaïtes, and, previous to the foundation of Alexandreia, was the principal harbour of the Delta. At Canobus the ancient geographers (Scylax; Conon. *Narrat.* 8; Plin. v. 34; Schol. *in Dict. Cretens.* vi. 4) placed the true boundary between the continents of Africa and Asia. According to Greek legends, the city of Canobus derived its name from the pilot of Menelaus, who died and was buried there on the return of the Achaeans from Troy. But it more probably owed its appellation to the god Canobus—a pitcher with a human head—who was worshipped there with peculiar pomp. (Comp. Nicand. *Theriac.* 312.) At Canobus was a temple of Zeus-Canobus, whom Greeks and Egyptians held in equal reverence, and a much frequented shrine and oracle of Serapis. (Plut. *Is. et Osir.* 27.) As the resort of mariners and foreigners, and as the seat of a hybrid Copto-Hellenic population, Canobus was notorious for the number of its religious festivals and the general dissoluteness of its morals. Here was prepared the scarlet dye—the *Hennah*, with which, in all ages, the women of the East have been wont to colour the nails of their feet and fingers. (Herod. ii. 113; Plin. xii. 51.) The decline of Canopus began with the rise of Alexandreia, and was completed by the introduction of Christianity into Egypt. Traces of its ruins are found about 3 miles from Aboukir. (Denon, *Voyage en Egypte*, p. 42; Champollion, *l'Egypte*, vol. ii. p. 258.) [W.B.D.]

CANO'NIUM, in Britain, distant, in the ninth Itinerary, 8 miles from Camulodunum, and 12 from Caesaromagus; the road being from Venta Icenorum (the neighbourhood of *Norwich* to *London*). For all these parts the criticism turns so much upon the position given to CAMELODUNUM and COLONIA, that the proper investigation lies under the latter of these two heads. [COLONIA.] *North Fambridge* is Horsley's locality for Canonium; the neighbourhood of *Kelvedon* that of the *Monumenta Britannica*. Roman remains occur in both. [R. G. L.]

CA'NTABER OCEANUS (Καντάβριος ὠκεανός: *Bay of Biscay*), the great bay of the Atlantic, formed by the W. coast of Gaul and the N. coast of Spain, and named after the CANTABRI on the latter coast. (Claudian. xxix. 74; Ptol. ii. 6. § 75, viii. 4. § 2.) [P. S.]

CANTABRAS, a river of India (in the *Panjab*), mentioned by Pliny as one of the chief tributaries of the Indus, carrying with it the waters of three other tributaries. (Plin. vi. 20. s. 23.) Some assume that it must be the HYDRAOTES, because the latter is not otherwise mentioned by Pliny; but the name

leaves little doubt that Pliny had heard of the ACESINES by its Indian name *Chandrabagha*, and out of this he made another river. The same remark applies to the SANDABAL of Ptolemy (vii. 1. §§ 26, 27, 42). [P. S.]

CANTA'BRIA (Καντάβρια), the country of the CANTABRI (Κάνταβροι; sing. Κάνταβρος, Cantaber, *Adj.* Cantabricus), a people of Hispania Tarraconensis, about the middle of the N. side of the peninsula, in the mountains that run parallel to the coast, and from them extending to the coast itself, in the E. of *Asturias*, and the N. of *Burgos*, *Palencia*, and *Toro*. They and their neighbours on the W., the Astures, were the last peoples of the peninsula that submitted to the Roman yoke, being only subdued under Augustus. Before this, their name is loosely applied to the inhabitants of the whole mountain district along the N. coast (Caes. *B. G.* iii. 26, *B. C.* i. 38), and so, too, even by later writers (Liv. *Epit.* xlviii.; Juv. xv. 108 compared with 93). But the geographers who wrote after their conquest give their position more exactly, as E. of the Astures, the boundary being the river Salia (Mela, iii. 1), and W. of the Autrigones, Varduli, and Vascones. (Strab. iii. p. 167, *et alib.*; Plin. iii. 3. s. 4, iv. 20. s. 34; Ptol. ii. 6. §§ 6, 51.) They were regarded as the fiercest and rudest of all the peoples of the peninsula,—"savage as wild beasts," says Strabo, who describes their manners at some length (iii. pp. 155, 166; comp. Sil. Ital. iii. 329, 361; Hor. *Carm.* iii. 4.) They were subjugated by Augustus, after a most obstinate resistance, in B. C. 25; but they soon revolted, and had to be reconquered by Agrippa, B. C. 19. In this second war, the greater part of the people perished by the sword, and the remainder were compelled to quit their mountains, and reside in the lower valleys. (Dion Cass. liii. 25, 29, liv. 5, 11, 20; Strab. iii. pp. 156, 164, 287, 821; Horat. *Carm.* ii. 6. 2, 11. 1, iii. 8. 22; Flor. iv. 12, 51; Liv. xxviii. 12; Suet. *Octav.* 20, et seq., 29, 81, 85; Oros. vi. 21.) But still their subjugation was imperfect; Tiberius found it necessary to keep them in restraint by strong garrisons (Strab. p. 156); their mountains have afforded a refuge to Spanish independence, and the cradle of its regeneration; and their unconquerable spirit survives in the *Basques*, who are supposed to be their genuine descendants. (Ford, *Handbook of Spain*, p. 554, foll.)

The ethnical affinities, however, both of the ancient and the modern people, have always presented a most difficult problem; the most probable opinion is that which makes them a remnant of the most ancient Iberian population. (W. von Humboldt, *Urbewohner von Hispanien*, Berlin, 1821, 4to.) Strabo (iii. p. 157) mentions a tradition which derived them from Laconian settlers, of the period of the Trojan war.

Under the Roman empire, Cantabria belonged to the province of Hispania Tarraconensis, and contained seven tribes. (Plin. iii. 3. s. 4.) Of these tribes the ancient geographers apologise for possessing only imperfect information, on the ground of the barbarian sound of their names. (Strab. iii. pp. 155, 162; Mela, iii. 1.) Among them were the Pleutauri (Πλεύταυροι); the Bardyetae or Bardyali (Βαρδυῆται, Βαρδύαλοι), probably the VARDULI of Pliny (iii. 3. s. 4, iv. 20. s. 34); the Allotriges (Ἀλλότριγες), probably the same as the AUTRIGONES; the Conisci (Κονίσκοι), probably the same as the Coniaci (Κωνιακοί) or Concani (Κωνκανοί), who are particularly mentioned in the Cantabrian War (Mela, iii. 1; Horat. *Carm.* iii. 4. 34; Sil. Ital. iii. 360, 361); and the Tuïsi (Τουΐσοι), about the sources of the Iberus. These are all mentioned by Strabo (iii. pp. 155, 156, 162). Mela names also the Origenomesci or ARGENOMESCI (iii. 1), and some minor tribes are mentioned by Ptolemy and other writers.

Of the nine cities of Cantabria, according to Pliny, JULIOBRICA alone was worthy of mention. (Plin. iii. 3. s. 4, iv. 20. s. 34.) Ptolemy mentions these nine cities as follows: near the sea-coast, Noegaucesia (Νοιγαουκεσία), a little above the mouth of a river of the same name (ii. 6. § 6); and, in the interior, Concana (Κόγκανα), Ottaviolca (Ὀτταουιόλκα), Argenomescum (Ἀργενομέσκον), Vadinia (Οὐαδινία), Vellica (Οὐέλλικα), Camarica (Καμάρικα), Juliobriga (Ἰουλιόβριγα), and Moroeca (Μόροικα, ii. 6. § 51). Pliny also mentions Blendium (prob. *Santander*); and a few places of less importance are named by other writers. (Ukert, vol. ii. pt. i. pp. 443, 444.)

Strabo places among the Cantabri the sources of the rivers Iberus (*Ebro*) and Minius (*Minho*), and the commencement of Mt. Idubeda, the great chain which runs from NW. to SE. between the central table-land of Spain and the basin of the *Ebro*. (Strab. iii. pp. 153, 159, 161.) [P. S.]

CANTAE, a people of Britain, mentioned by Ptolemy as lying to the NE. of the Caledonian Wood, between that district and the Logi. This gives them the tract between the Murray and Dornoch Firths. As the Kentish CANTIUM PROMONTORIUM was the *North Foreland*, so was the Scottish CANTAE, probably, *Tarbet Ness*. [R. G. L.]

CANTANUS (Κάντανος, Steph. B.; Καντανία, Hierocles: *Eth.* Καντάνιος, Steph. B.), a city of Crete, which the Peutinger Table fixes at 24 M. P. from Cisamos. It was a bishop's see under the Byzantine emperors, and when the Venetians obtained possession of the island they established a Latin bishop here, as in every other diocese. Mr. Pashley (*Trav.* vol. ii. p. 116) found remains of this city on a conical hill about a mile to the S. of *Khádros*. The walls can be traced for little more than 150 paces; the style of their masonry attests a high antiquity. [E. B. J.]

CA'NTHARUS PORTUS. [ATTICA, p. 307, a.]

CANTHI SINUS (Κάνθι κόλπος: *Gulf of Cutch*), a great gulf, on the W. coast of India intra Gangem, between Larice and the mouths of the Indus. (Ptol. vii. 1. §§ 2, 55, 94.) The country on its shores was called SYRASTRENE; and Ptolemy mentions the island of Barace (*Cutch*) as lying in it. The pseudo-Arrian calls it the Irinus Sinus (Εἰρινόν), and the interior portion, behind the island of Cutch (now known as the *Runn*), he calls Baraces (Βαράκης), and states that it contains seven islands (they are, in fact, more numerous); and he describes the dangers of its navigation (*Peripl. Mar. Erythr.* p. 23, Hudson). The *Runn* is now a mere morass. [P. S.]

CANTI'LIA, a place in Gallia, which the Table fixes on the road between Aquae Nerae (*Néris*) and Augustonemetum (*Clermont*). D'Anville supposes that it may be one of the two places called *Chantelle-la-Vieille* and *Chantelle-le-Châtel*, for the name is the same, and the distances agree very well. [G.L.]

CA'NTIUM (Κάντιον), in Britain. Name for name, the county *Kent*. Probably the two areas coincide as well, or nearly so. Mentioned by Caesar as being that part of the coast where the traffic with Gaul was greatest, and where the civilisation was highest. The *North Foreland* was called Cantium

Promontorium. (Caes. *B. G.* v. 13, 14, 22; Strab. i. p. 63, iv. pp. 193, 199; Ptol. ii. 3. § 27; comp. CANTAE.) [R. G. L.]

CANU'SIUM (Κανύσιον, Pol.; Strab.; Steph. B.; Κανούσιον, Ptol.; *Eth.* Κανυσῖνος or Καννσίτης, Canusinus: *Canosa*), one of the most ancient and important cities of Apulia, situated near the right bank of the Aufidus, about 15 miles from its mouth. It was on the line of the high road from Beneventum to Brundusium, and was distant 26 miles from Herdonia, and 23 from Rubi. (*Itin. Ant.* p. 116.) The foundation of Canusium, as well as that of the neighbouring city of Arpi, was generally ascribed to Diomed (Strab. vi. p. 284; Hor. *Sat.* i. 5. 92), though the legends relating to that hero seem to have been in general more intimately connected with the latter city. It is probable that they were both of them of Pelasgian origin, and were the two most powerful cities of the Daunian or Pelasgian Apulians; but there is no historical account of either of them having received a Greek colony, and there seem good reasons for believing that the strong infusion of Hellenic civilisation which we find prevailing at Canusium was introduced at a comparatively late period. The first historical mention of Canusium is during the wars of the Romans with the Samnites, in which the Canusians took part with the latter, until the repeated devastations of their territory by the Romans induced them to submit to the consul L. Plautius in B. C. 318. (Liv. ix. 20.) From this time they appear to have continued steadfast in their attachment to Rome, and gave the strongest proofs of fidelity during the Second Punic War. After the great disaster of Cannae, the shattered remnants of the Roman army took refuge in Canusium, where they were received with the utmost hospitality and kindness; nor did Hannibal at any time succeed in making himself master of the city. (Liv. xxii. 52—54, 56; Appian, *Annib.* 26; Sil. Ital. x. 389.) But in the Social War Canusium joined the other cities of Apulia in their defection from Rome; and during the second campaign of the war (B. C. 89) it was besieged without success by the Roman praetor Cosconius, who was obliged to content himself with ravaging its territory. (Appian, *B. C.* i. 42, 52.) A few years afterwards (B. C. 83) it was the scene of an important battle between Sulla and C. Norbanus, in which the latter was defeated with great loss, and compelled to evacuate the whole of Apulia, and fall back upon Capua. (Id. i. 84.) It probably suffered severely from these wars; and Strabo speaks of it as in his day much fallen from its former greatness. But its name is more than once mentioned during the Civil Wars, and always as a place of some consequence: we learn from other sources that it not only continued to maintain its municipal existence, but appears to have been almost the only city of Apulia, besides the two Roman colonies of Luceria and Venusia, which retained any degree of importance under the Roman empire. (Hor. *l. c.*; Caes. *B. C.* i. 24; Cic. *ad Att.* viii. 11; Appian, *B. C.* v. 57; Capit. *M. Ant.* 8; Plin. iii. 11. s. 16; Ptol. iii. 1. § 72; Mela, ii. 4.) It appears to have received a Roman colony for the first time under M. Aurelius, whence we find it bearing in an inscription the titles of "Colonia Aurelia Augusta Pia." Its deficiency of water, alluded to by Horace, was supplied by the munificence of Herodes Atticus, who constructed a splendid aqueduct, some remains of which are still visible. (*Lib. Colon.* p. 260; Philostr. *Vit. Sophist.* ii. 1. § 6; Orelli, *Inscr.* 2630; Zumpt, *de Coloniis*, p. 427.) Canusium is mentioned both by Procopius and P. Diaconus as one of the principal cities of Apulia (Procop. *B. G.* iii. 18; P. Diac. *Hist.* ii. 22), and appears to have preserved its importance until a late period of the middle ages, but suffered severely from the ravages of the Lombards and Saracens. The modern city of *Canosa*, which contains about 5000 inhabitants, is situated on a slight eminence that probably formed the citadel of the ancient city, which appears to have extended itself in the plain beneath. Strabo speaks of the great extent of the walls as attesting in his day the former greatness and prosperity of Canusium; and the still existing remains fully confirm his impression. Many of these, however, as the aqueduct, amphitheatre, &c., are of Roman date, as well as an ancient gateway, which has been erroneously described as a triumphal arch. (Romanelli, vol. ii. pp. 262—267; Swinburne, *Travels*, vol. i. p. 401.) Great numbers of inscriptions of Imperial date have also been discovered; one of which is curious, as containing a complete list of the municipal senate, or Decurions of the colony, with their several gradations of rank. It has been published with an elaborate commentary by Damadeno. (*Aes Redivivum Canusinum*, fol. Lugd. Bat.) But the most interesting relics of the ancient city are the objects which have been found in the numerous tombs in the neighbourhood, especially the painted vases, which have been discovered here in quantities scarcely inferior to those of Nola or Volci. They are, however, for the most part of a later and somewhat inferior style of art, but are all clearly of Greek origin, and, as well as the coins of Canusium, prove how deeply the city was imbued with Hellenic influences. It is even probable that, previous to the Roman conquest, Greek was the prevailing language of Canusium, and perhaps of some other cities of Apulia. The expression of Horace, "Canusini bilinguis" (*Sat.* i. 10. 30), seems to be rightly explained by the scholiast to refer to their speaking *Greek* and *Latin*. (Mommsen, *U. I. Dialekte*, p. 88.)

The extensive and fertile plain in which Canusium was situated, and which was the scene of the memorable battle of Cannae, is called by some writers CAMPUS DIOMEDIS (Liv. xxv. 12; Sil. Ital. viii 242), though this is evidently rather a poetical designation than a proper name. The whole plain S. of the Aufidus, and probably for some distance on the left bank also, appears to have belonged to the Canusians, and we learn from Strabo (p. 283) that they had a port or emporium on the river at a distance of 90 stadia from its mouth. The territory of Canusium was adapted to the growth of vines as well as corn, but was especially celebrated for its wool, which appears to have been manufactured on the spot into a particular kind of cloth, much prized for its durability. (Varr. *R. R.* i. 8; Plin. viii. 48. s. 73; Martial, ix. 22. 9, xiv. 127; Suet. *Ner.* 30.) The stony or gritty quality of the bread at Canusium, noticed by Horace, has been observed also by modern travellers (Swinburne, p. 166): it doubtless results from the defective quality of the millstones employed. [E. H. B.]

CA'PARA (Κάπαρα: *Eth.* Caparenses: *las Ventas de Caparra*, large Ru. E. of *Plasencia*), a city of the Vettones in Lusitania, on the high road from Emerita to Caesaraugusta. (*Itin. Ant.* p. 433; Plin. iv. 21. s. 35; Ptol. ii. 5. § 8; Florez, *Esp. S.* xiv. p. 54.) [P. S.]

CAPE'NA (*Eth.* Capenas, -ātis), an ancient city

of Etruria, which is repeatedly mentioned during the early history of Rome. It was situated to the NE. of Veii, and SE. of Falerii, about 8 miles from the foot of Mt. Soracte. From an imperfect passage of Cato, cited by Servius (*ad Aen.* vii. 697), it would seem that Capena was a colony of Veii, sent out in pursuance of the vow of a sacred spring. (Niebuhr, vol. i. p. 120; Müller, *Etrusker*, vol. i. p. 112.) It however appears, when we first find it mentioned in history, as an independent city, possessing a considerable extent of territory. It is not till the last war of the Romans with the Veientines, that the name of the Capenates appears in the Roman annals; but upon that occasion they took up arms, together with the Faliscans, in defence of Veii, and strongly urged upon the rest of the Etruscan confederation the necessity of combining their forces to arrest the fall of that city. (Liv. v. 8, 17.) Their efforts were, however, unsuccessful, and they were unable to compel the Romans to raise the siege, while their own lands were several times ravaged by Roman armies. After the fall of Veii (B. C. 393), the two cities who had been her allies became the next object of hostilities on the part of the Romans; and Q. Servilius invaded the territory of Capena, which he ravaged in the most unsparing manner, and by this means, without attempting to attack the city itself, reduced the people to submission. (Liv. v. 12, 13, 14, 18, 19, 24.) The blow seems to have been decisive, for we hear no more of Capena until after the Gaulish War, when the right of Roman citizenship was conferred upon the citizens of Veii, Falerii, and Capena (or such of them at least as had taken part with the Romans), and the conquered territory divided among them. Four new tribes were created out of these new citizens, and of these we know that the Stellatine tribe occupied the territory of Capena. (Liv. vi. 4, 5; Fest. *s. v. Stellatina.*) From this time Capena disappears from history as an independent community, and only a few incidental notices attest the continued existence of the city. Cicero mentions the "Capenas ager" as remarkable for its fertility, probably meaning the tract along the right bank of the Tiber (*pro Flacc.* 29); and on this account it was one of those which the tribune Rullus proposed by his agrarian law to portion out among the Roman people. (Cic. *de Leg. Agr.* ii. 25.) This design was not carried out; but at a later period it did not escape the rapacity of the veterans, and all the more fertile parts of the plain adjoining the river were allotted to military colonists. (Cic. *ad Fam.* ix. 17; *Lib. Colon.* p. 216, where it is, by a strange corruption, called "Colonia Capys.") Numerous inscriptions attest the continued existence and municipal rank of Capena under the Roman empire down to the time of Aurelian (Orell. *Inscr.* 3687, 3688, 3690; Nibby, *Dintorni*, vol. i. p. 377), but from this date all trace of it is lost: it probably was altogether abandoned, and the very name became forgotten. Hence its site was for a long while unknown; but in 1756 a Roman antiquarian of the name of Galetti was the first to fix it at a spot still called *Civitucola* (now more frequently known as *S. Martino*, from a ruined church of that name), about 24 miles from Rome, between the Via Flaminia and the Tiber. The ancient city appears, like those of Alba Longa and Gabii, to have occupied a steep ridge, forming part of the edge of an ancient crater or volcanic basin, now called *Il Lago*, and must have been a place of great strength from its natural position. No remains are visible, except some traces and foundations of the ancient walls; but these, together with the natural conformation of the ground, and the discovery of the inscriptions already cited, clearly identify the spot as the site of Capena. It was about 4 miles on the right of the Via Flaminia, from which a side road seems to have branched off between 19 and 20 miles from Rome, and led directly to the ancient city. It was situated on the banks of a small river now called the *Grammiccia*, which appears to have been known in ancient times as the Capenas. (Sil. Ital. xiii. 85.) Concerning the site and remains of Capena, see Galetti, *Capena Municipio dei Romani*, 4to., Roma, 1756; Gell, *Top. of Rome*, pp. 149—151; Nibby, *Dintorni*, vol. i. pp. 375—380; Dennis's *Etruria*, vol. i. pp. 183—185.

In the territory of Capena, and near the foot of Mount Soracte, was situated the celebrated sanctuary and grove of FERONIA, called by Roman writers Lucus Feroniae and Fanum Feroniae, which seems to have in later times grown up into a considerable town. [FERONIA.] [E. H. B.]

CAPERNAUM (Καφαρναούμ), a town of Galilee, situated on the northern shore of the Sea of Tiberias, frequently mentioned in the Gospel narrative, and so much resorted to by our Lord as to be called "His own city." (*St. Matth.* ix.) It was situated on the borders of Zabulon and Naphthali, and is joined with Chorazin and Bethsaida in the denunciations of our Lord. (*St. Matth.* xi. 23.) It is probably the Κεφαρνώμη of Josephus, to which he was carried when injured in a skirmish near the Jordan. (*Vita*, § 72.) The name, as written in the New Testament, occurs in Josephus only in connection with a fountain in the rich plain of Gennesareth, which he says was supposed to be a branch of the Nile. (*B. J.* iii. 9. § 8.) The fountain of this name has not unnaturally led some travellers to look for the town in the same plain as the synonymous fountain; and Dr. Robinson finds the site of Capernaum at *Khan Minieh* (vol. iii. pp. 288—294), and the fountain which Josephus describes as fertilising the plain, he finds at *'Ain-et-Tin*, hard by the *Khan*, which rises close by the lake and does not water the plain at all. The arguments in favour of this site, and against *Tell Hûm*, appear equally inconclusive, and there can be little doubt that the extensive ruins so called, on the north of the lake, about two miles west of the embouchure of the Jordan, retain traces both of the name and site. As to the former, the Kefr (*village*) has been converted into Tell (*heap*) in accordance with fact, and the weak radical of the proper name dropped, has changed Nahum into Hûm, so that instead of "Village of Consolation," it has appropriately become "the ruined heap of a herd of camels." That *Tell Hûm* is the site described as Capernaum by Arculphus in the 7th century, there can be no question. It could not be more accurately described. "It was confined in a narrow space between the mountains on the north and the lake on the south, extending in a long line from west to east along the sea shore." The remains of Roman baths and porticoes and buildings, still attest its former importance. (Described by Robinson, vol. iii. pp. 298, 299; see also Reland's *Palestine*, pp. 882—884.) [G. W.]

CAPHA'REUS, or CAPHE'REUS (Καφήρευς), a rocky and dangerous promontory, forming the south-eastern extremity of Euboea, now called *Kavo Doro* or *Xyloftigo;* it was known by the latter name in the middle ages. (Tzetzes, *ad Lycophr* 384.) It was off this promontory that the Grecian

fleet was wrecked on its return from Troy. (Eurip. *Troad.* 90, *Helen.* 1129; Herod. viii. 7; Strab. viii. p. 368; Paus. ii. 23. § 1, iv. 36. § 6; Virg. *Aen.* xi. 260; Prop. iii. 5. 55; Ov. *Met.* xiv. 472, 481, *Trist.* i. 1. 83, v. 7. 36; Sil. Ital. xiv. 144; Leake, *Northern Greece*, vol. ii. p. 423.)

CA'PHYAE (Καφύαι: *Eth.* Καφυάτης, Καφυεύς), a town of Arcadia situated in a small plain, NW. of the lake of Orchomenus. It was protected against inundations from this lake by a mound or dyke, raised by the inhabitants of Caphyae. The city is said to have been founded by Cepheus, the son of Aleus, and pretended to be of Athenian origin. (Paus. viii. 23. § 2; Strab. xiii. p. 608.) Caphyae subsequently belonged to the Achaean league, and was one of the cities of the league, of which Cleomenes obtained possession. (Pol. ii. 52.) In its neighbourhood a great battle was fought in B. C. 220, in which the Aetolians gained a decisive victory over the Achaeans and Aratus. (Pol. iv. 11, seq.) The name of Caphyae also occurs in the subsequent events of this war. (Pol. iv. 68, 70.) Strabo (viii. p. 388) speaks of the town as in ruins in his time; but it still contained some temples when visited by Pausanias (*l. c.*). The remains of the walls of Caphyae are visible upon a small insulated height at the village of *Khotússa*, which stands near the edge of the lake. Polybius, in his description of the battle of Caphyae, refers "to a plain in front of Caphyae, traversed by a river, beyond which were trenches (τάφροι), a description of the place which does not correspond with present appearances. The τάφροι were evidently ditches for the purpose of draining the marshy plain, by conducting the water towards the katavóthra, around which there was, probably, a small lake. In the time of Pausanias we find that the lake covered the greater part of the plain; and that exactly in the situation in which Polybius describes the ditches, there was a mound of earth. Nothing is more probable than that during the four centuries so fatal to the prosperity of Greece, which elapsed between the battle of Caphyae and the visit of Pausanias, a diminution of population should have caused a neglect of the drainage which had formerly ensured the cultivation of the whole plain, and that in the time of the Roman empire an embankment of earth had been thrown up to preserve the part nearest to Caphyae, leaving the rest uncultivated and marshy. At present, if there are remains of the embankment, which I did not perceive, it does not prevent any of the land from being submerged during several months, for the water now extends very nearly to the site of Caphyae." (Leake.)

Pausanias says that on the inner side of the embankment there flows a river, which, descending into a chasm of the earth, issues again at a place called NASI (Νάσοι); and that the name of the village where it issues is named RHEUNUS (Ῥεῦνος). From this place it forms the perennial river TRAGUS (Τράγος). He also speaks of a mountain in the neighbourhood of the city named CNACALUS (Κνάκαλος), on which the inhabitants celebrate a yearly festival to Artemis Cnacalesia. Leake remarks that the mountain above *Khotússa*, now called *Kastanià*, seems to be the ancient Cnacalus. The river *Tara* is probably the ancient Tragus. (Leake, *Morea*, vol. iii. p. 118, seq., *Peloponnesiaca*, p. 226; Boblaye, *Recherches*, p. 150.)

CAPIDA'VA (Καπίδαβα), a town in Moesia, where a garrison of Roman cavalry was stationed. It is perhaps to be identified with the modern *Tscher-nawode*. (Itin. Ant. 224; Notit. Imp. c. 28; Geogr. Rav. iv. 5; Hierocl. p. 637.) [L. S.]

CAPISA (Κάπισα or Κάπισσα, Ptol. vi. 18. § 4; Capissa, Plin. vi. 23. s. 25), a city of a district probably named after it, CAPISSENE, and included in the wider district of the Paropamisus or *Hindu Kush* mountains. According to Pliny, it was destroyed by Cyrus; but we have no reason for supposing that Cyrus ever got so far NE., and, if it had been, it would hardly have been noticed by Ptolemy. It is probably the same as the Caphusa of Solinus (c. 54), which was near the Indus. It has been suspected that Capissene represents the valley of the *Kábul* river, and Capisa the town on the Indus now called *Peshâwar*. It is not *Kábul*, which has been satisfactorily proved by Professor Wilson to occupy the site of the ancient Ortospanum. Lassen (*Zur Gesch. d. Kon. Bactr.* p. 149) finds in the Chinese annals a kingdom called *Kiapiche* in the valley of Ghurbend, to the E. of Bamian. It is very probable that Capisa and Kiapiche are identical. [V.]

CAPISSE'NE. [CAPISA.]

CAPI'TIUM (Καπίτιον: *Eth.* Capitinus: *Capizzi*), a city of Sicily, mentioned only by Cicero and Ptolemy, but which appears from the former to have been a place of some importance. He mentions it in conjunction with Haluntium, Enguium, and other towns in the northern part of the island, and Ptolemy enumerates it among the inland cities of Sicily. This name has evidently been retained by the modern town of *Capizzi*, the situation of which on the southern slope of the mountains of *Caronia*, about 16 miles from the Tyrrhenian Sea, and the same distance from *Gangi* (Enguium), accords well with the above indications. (Cic. *in Verr.* iii. 43; Ptol. iii. 4. § 12; Cluver. *Sicil.*) [E. H. B.]

CAPITO'LIAS, a town of Peraea, or Coelesyria, exhibited in the Peutinger Tables, between Gadara and Adraa, and placed in the Itinerary of Antoninus on the road between Gadara and Damascus, between Neue and Gadara, 16 miles from the latter and 38 from the former. It is otherwise unknown, except that we find an Episcopal see of this name in the Ecclesiastical Records. (Reland, p. 693.) [G.W.]

CAPITULUM (Καπίτουλον, Strab.), a town of the Hernicans, which, though not noticed in history, is mentioned both by Pliny and Strabo among the places still existing in their time. (Plin. iii. 5. s. 9; Strab. v. p. 238.) We learn also from the Liber Coloniarum (p. 232) that it had been colonised by Sulla, and it seems to have received a fresh accession of colonists under Caesar. (Zumpt, *de Colon.* pp. 252, 306.) An inscription, in which it is called "Capitulum Hernicorum," proves it to have been a place of municipal condition under the empire. This inscription was discovered on the road from *Palestrina* (Praeneste) to a place called *Il Piglio* a small town in the mountains, about 20 miles from *Palestrina*, and 8 from *Anagni*, which may plausibly be supposed to occupy the site of Capitulum. (Muratori, *Inscr.* p. 2049. 4; Nibby, *Dintorni di Roma*, vol. i. p. 383.) [E. H. B.]

CAPORI. [GALLAECIA.]

CAPOTES (*Dújik Tágh*), a mountain of Armenia, from the spurs of which Pliny (v. 20. s. 24), on the authority of Licinius Mucianus, describes the Euphrates as taking its rise. He fixes its position 12 M. P. above Zimara. Pliny (*l. c.*) quotes Domitius Corbulo in placing the sources of the Euphrates in Mt. Aba, the same undoubtedly as the Abus of Strabo (xi. p. 527). Capotes therefore fo ed

part of the range of Abus. St. Martin (*Mém. sur l'Armenie*, vol. i. p. 43) derives the name Capotes from the Armenian word *Gaboïd*, signifying *blue*, an epithet commonly given to high mountains. Ritter (*Erdkunde*, vol. x. pp. 80, 653, 801, 823) identifies Capotes with the *Dújik* range or great water-shed between the E. and W. branches of the Euphrates. The *Murád-chái*, the E. branch or principal stream of the Euphrates, takes its rise on the S. slope of *Alá-Tágh*. (Chesney, *Exped. Euphrat.* vol. i. p. 42; *Journ. Geog. Soc.* vol. vi. p. 204, vol. x. p. 369.) [E. B. J.]

CAPPADO'CIA (Καππαδοκία: *Eth.* Καππαδόκης, Καππάδοξ, -δοκος). This extensive province of Asia lies west of the Euphrates, and north of Cilicia: its limits can only be defined more exactly by briefly tracing its history.

The names Cappadox and Cappadocia doubtless are purely Asiatic, and probably Syrian names, or names that belong to the Aramaic languages. The Syri in the army of Xerxes, who were armed like the Paphlagones, were called Cappadocae by the Persians, as Herodotus says (vii. 72); but this will not prove that the name Cappadocae is Persian. These Cappadocae (Herod. i. 72) were called Syri or Syrii by the Greeks, and they were first subject to the Medi and then to the Persians. The boundary between the Lydian and the Median empires was the Halys, and this river in that part of its course where it flows northward, separated the Syrii Cappadocae on the east of it from the Paphlagones on the west of it. We may collect from Herodotus' confused description of the Halys, that the Cappadocae were immediately east of that part of the river which has a northern course, and that they extended to the Euxine. In another passage (v. 49) the Cappadocae are mentioned as the neighbours of the Phrygians on the west, and of the Cilicians on the south, who extended to the sea in which Cyprus is, that is to the Mediterranean. Again (v. 52) Herodotus, who is describing the road from Sardes to Susa, makes the Halys the boundary between Phrygia and Cappadocia. But in another passage he places Syrians on the Thermodon and the Parthenius (ii. 104), though we may reasonably doubt if there is not some error about the Parthenius, when we carefully examine this passage. It does not seem possible to deduce anything further from his text as to the extent of the country of the Cappadocians as he conceived it. The limits were clearly much less than those of the later Cappadocia, and the limits of Cilicia were much wider, for his Cilicia extended north of the Taurus, and eastward to the Euphrates. The Syrii then who were included in the third nome of Darius (Herod. iii. 90) with the Paphlagones and Mariandyni were Cappadocae. The name Syri seems to have extended of old from Babylonia to the gulf of Issus, and from the gulf of Issus to the Euxine (Strab. p. 737). Strabo also says that even in his time both the Cappadocian peoples, both those who were situated about the Taurus and those on the Euxine, were called Leucosyri or White Syrians, as if there were also some Syrians who were black; and these black or dark Syrians are those who are east of the Amanus. (See also Strab. p. 542.) The name Syria, and Assyria, which often means the same in the Greek writers, was the name by which the country along the Pontus and east of the Halys was first known to the Greeks, and it was not forgotten (Apoll. *Argon.* ii. 948, 964; Dionys. Perieg. v. 772, and the comment of Eustathius).

Under the Persians the country called Cappadocia in its greatest extent, was divided into two satrapies; but when the Macedonians got possession of it, they allowed these satrapies to become kingdoms, partly with their consent, and partly against it, to one of which they gave the name of Cappadocia, properly so called, which is the country bordering on Taurus; and to the other the name of Pontus, or Cappadocia on the Pontus. (Strab. p. 534.) The satrapies of Cappadocia of course existed in the time of Xenophon, from whom it appears that Cappadocia had Lycaonia on the west (*Anab.* i. 2. § 20); but Lycaonia and Cappadocia were under one satrap, and Xenophon mentions only one satrapy called Cappadocia, if the list at the end of the seventh book is genuine.

Cappadocia, in its widest extent, consisted of many parts and peoples, and underwent many changes; but those who spoke one language, or nearly the same, and, we may assume, were one people, the Syri, were bounded on the south by the Cilician Taurus, the great mountain range that separates the table land of Cappadocia from the tract along the Mediterranean; on the east they were bounded by Armenia and Colchis, and by the intermediate tribes that spoke various languages, and these tribes were numerous in the mountain regions south of the Black Sea; on the north they were bounded by the Euxine as far as the mouth of the Halys; and on the west by the nation of the Paphlagones, and of the Galatae who settled in Phrygia as far as the borders of the Lycaonians, and the Cilicians who occupy the mountainous (τραχεῖα) Cilicia. (Strab. p. 533.) The boundaries which Strabo here assigns to the Cappadocian nation agree very well with the loose description of Herodotus, and the only difference is that Strabo introduces the name of the Galatae, a body of adventurers from Gaul who fixed themselves in Asia Minor after the time of Herodotus. The ancients, however (*οἱ παλαιοί*), distinguished the Cataones from the Cappadocians as a different people, though they spoke the same language; and in the enumeration of the nations, they placed Cataonia after Cappadocia, and then came the Euphrates and the nations east of the Euphrates, so that they placed even Melitene under Cataonia, which Melitene lies between Cataonia and the Euphrates, and borders on Commagene. Ariarathes, the first man who had the title of king of the Cappadocians, attached Cataonia to Cappadocia. (Strab. p. 534, in whose text there is some little confusion, but it does not affect the general meaning; Groskurd's note on the passage is not satisfactory.) The kings of Cappadocia traced their descent from one of the seven who assassinated the usurper Smerdis, B.C. 521. The Persian satraps who held this province are called kings by Diodorus; but their power must have been very insecure until the death of Seleucus, the last of the successors of Alexander, B.C. 281. Ariarathes I., as he is called, died in B.C. 322. He was defeated by Perdiccas, who hanged or impaled him. Ariarathes II., a son of Holophernes, brother of Ariarathes I., expelled the Macedonians from Cappadocia, and left it to Ariamnes, one of his sons, called the second; for the father of Ariarathes I. was called Ariamnes, and he had Cappadocia as a satrapy. Ariamnes II. was followed by Ariarathes III., and he was succeeded by Ariarathes IV., who joined King Antiochus in his war against the Romans, who afterwards acknowledged him as an ally. He died B.C. 162. His successors were Ariarathes V. and VI., and with Ariarathes VI. the royal family of Cappadocia became extinct, about

B. C. 93. Upon this the Romans gave the Cappadocians permission to govern themselves as they liked, but they sent a deputation to Rome to say that they were not able to bear liberty, by which they probably meant that nothing but kingly government could secure tranquillity; upon which the Romans allowed them to choose a king from among themselves, and they chose Ariobarzanes I., called Philoromaeus on his coins. (Strab. p. 540; Justin. xxxviii. 2.) The new king was driven out of his country by Mithridates the Great, but he was restored by L. Sulla (B. C. 92). Again he was expelled (B. C. 88), and again restored, B. C. 84. But this king had no rest. In B. C. 66, this "socius populi Romani atque amicus" (Cic. *pro Leg. Manil.* 2, 5) was again expelled by his old enemy Mithridates. He was restored by Cn. Pompeius, and resigned his troublesome throne to his son Ariobarzanes II. in B. C. 63. This Ariobarzanes II. was king of Cappadocia when Cicero was proconsul of Cilicia, B. C. 51. Cicero gave him his support (*ad Att.* v. 20). It seems, however, that the king whom Cicero protected may have been not Ariobarzanes II., but Ariobarzanes III. If this be so, Ariobarzanes II. died before Cicero was proconsul of Cilicia, and the reigning king in B. C. 51 was a third Ariobarzanes. (*Dict. of Biogr.* vol. i. p. 286.) Cicero had some very unpleasant business to transact with this king, who was a debtor to Cn. Pompeius the Great and M. Junius Brutus, the patriot. The proconsul, much against his will, had to dun the king for his greedy Roman creditors. The king was very poor; he had no treasury, no regular taxes. Cicero got out of him about 100 talents for Brutus, and the king's six months' note for 200 talents to Pompeius (*ad Att.* vi. 1. 3). This Ariobarzanes joined Pompeius against Caesar, who, however, pardoned him, and added to his dominions part of Armenia. (Dion Cass. xli. 63.) When L. Cassius was in Asia (B. C. 42) raising troops for the war against Antonius and Octavius, he sent some horsemen, who assassinated Ariobarzanes, on the pretext that he was conspiring against Cassius. (Appian, *B. C.* iv. 63.) The assassins robbed the dead king, and carried off his money and whatever else was moveable. This king was succeeded by Ariarathes VII.; but Sisinnas disputed the title with him, and M. Antonius, while passing through Asia after the battle of Philippi, gave a judgment in favour of Sisinnas, on account of the beauty of his mother Glaphyre. In B. C. 36, Antonius expelled and murdered Ariarathes, and gave the kingdom to Archelaus, a descendant of the Archelaus who was a general of Mithridates (in B. C. 88). All the kings of Cappadocia up to this Archelaus have Persian names, and probably were of Persian stock. (See Clinton, *Fasti*, on the kings of Cappadocia; *Dict. of Biogr.* vol. i. pp. 284, 285.)

Archelaus received from Augustus (B. C. 20) some parts of Cilicia on the coast, and the Lesser Armenia. (Dion Cass. liv. 9.) In A. D. 15, Tiberius treacherously invited him to Rome, and kept him there. He died probably about A. D. 17, and his kingdom was made a Roman province. (Tac. *Ann.* ii. 42; Dion Cass. lvii. 17; Strab. p. 534.) When Strabo wrote his description of Cappadocia, Archelaus was dead, and Cappadocia was a Roman province. It was governed by a Procurator. (Tac. *Ann.* xii. 49.)

Cappadocia, in its widest extent, is considered by Strabo to be what he calls an isthmus of a great peninsula, this isthmus being contracted by the Gulf of Issus on the south — as far west as Cilicia Trachea or Mountainous Cilicia,—and by the Euxine on the north, between Sinope and the sea-coast of the Tibareni who were about the river Thermodon. The part west of this isthmus is called the Chersonesus, which corresponds to the country which Herodotus calls within (ἐντός), that is, west of, the Halys. But in Strabo's time it was the fashion to designate this western tract as Asia within Taurus, in which he even includes Lycia (p. 534). This isthmus is called a neck (αὐχήν) by Herodotus; but the dimensions which he assigns to it, as they stand in our texts, are very inexact, being only five days' journey to an active man (i. 72). He reckons a day's journey at 200 stadia (iv. 101), and at 150 stadia in another place (v. 53).

The dimensions of Cappadocia from the Pontus, that is, the province of Pontus, to the Taurus, its southern limit, are stated by Strabo to be 1800 stadia; and the length from Phrygia, its western boundary, to the Euphrates and Armenia, the eastern boundary, about 3000 stadia. These dimensions are too large. The boundary between Pontus and Cappadocia is a mountain tract parallel to the Taurus, which commences at the western extremity of Cammanene, where the hill fort Dasmenda stands (it is incorrectly printed Commagene in Casaubon's *Strab.* p. 540), to the eastern extremity of Laviniasene. Commagene and Laviniasene are divisions of Cappadocia. These limits do not include Cilicia Trachea, which was attached to Cappadocia; and Strabo describes this division of Cilicia under CILICIA.

The ten divisions of Cappadocia (Strab. p. 534) are, Melitene, Cataonia, Cilicia, Tyanitis, and Garsauritis, which is incorrectly written Isauritis in Casaubon's text. He calls these the divisions at or about Taurus (*αἱ πρὸς τῷ Ταύρῳ*); and he enumerates them from east to west. For Melitene was on the west bank of the Euphrates, which separated it from Sophene on the east of the river. South-west of Melitene is the basin of Cataonia, which lies between the range of Amanus on the south, and the Antitaurus on the north. The district of Cilicia bordered on Cataonia, and it contained the town of Mazaca, afterwards Caesareia, and the lofty mountain Argaeus [ARGAEUS], the highest point of Cappadocia. The Tyanitis, so called from Tyana, is south-west of Cilicia. Tyana was at the northern base of Taurus, and near the pass into Cilicia, called the Cilician gates. Cilicia and Tyanitis, according to Strabo, were the only divisions of Cappadocia that contained cities. Garsauritis was on the west, on the borders of Phrygia. The other five districts named by Strabo are, Laviniasene, Sargarausene, Saravene, Cammanene, and Morimene; and he names them also from east to west, or nearly so. They occupied the northern part of Cappadocia, bordering on Pontus. The position of Laviniasene is not easy to fix; but, according to Strabo's words, already cited, it must be in the north-east part of Cappadocia. It is wrongly placed in some maps. To these ten divisions were added by the Romans an eleventh, which comprised the country to the south-west about Cybistra and Castabala, and as far as Derbe, which is in Lycaonia.

Armenia Minor did not originally belong to the Roman province of Cappadocia, the limits of which Strabo has described. The Greek geographer fixes the position of Armenia Minor (p. 555) thus. South of Pharnacia and Trapezus, on the Euxine, are the Tibareni and Chaldaei, as he calls them, who extend as far south as Armenia the Less, which is a tolerably

fertile country. The people of this Armenia were governed by a king, like the people of Sophene; and these kings of the small Armenia were sometimes in league with the other Armenians, and sometimes they were not. They extended their dominions even to Pharnacia and Trapezus, but the last of them surrendered to Mithridates the Great. Some time after the defeat of Mithridates this Armenia was attached to the Cappadocian kingdom of Ariobarzanes, as stated above. The Euphrates was the eastern boundary of this Armenia, and separated it from Acilisene.

This boundary seems to have begun about the point where the Euphrates takes a southern course. The northern boundary of Armenia Minor extended to the Paryadres range, and the upper part of the basin of the Halys, and even comprised part of that of the Lycus; for Nicopolis was probably on the Lycus, though it is not certain. Melitene was south of Armenia Minor, and also on the west side of the Euphrates. Ptolemy (v. 7) includes both Melitene and Cataonia in Armenia Minor. It is very difficult to fix any boundary of this Armenia, except that on the side of the Euphrates; and the modern writers on ancient geography do not help us much. Armenia Minor was given by Caligula to Cotys in A.D. 38, and by Nero in A.D. 54 to Aristobulus. It was afterwards attached to the province of Cappadocia, but it is not certain at what time; by Vespasian, as some suppose, or at the latest by Trajan. Its position on the north-east border of Cappadocia, and west of the Euphrates, made it a necessary addition to the province for defence. Melitene was now reckoned a part of Armenia Minor, which had, for the metropolis of the northern part, Nicopolis, the probable position of which has been mentioned; and for the southern part, the town of Melitene, near the west bank of the Euphrates. Cappadocia Proper, so poor in towns, was enriched with the addition of Archelais in Garsauritis, near the western frontier of Cappadocia, by the emperor Claudius; and with Faustinopolis, in the south-western part of Cappadocia, by M. Aurelius.

Pliny's (vi. 3) divisions of Cappadocia do not agree with Strabo; nor can we understand easily whether he is describing Cappadocia as a Roman province or not. He correctly places Melitene as lying in front of Armenia Minor, and Cataonia as bordering on Commagene. He makes Garsauritis, Sargarausene, and Cammanene border on Phrygia. He places Morimene in the NW., bordering on Galatia, "where the river Cappadox separates them (the Galatians and Cappadocians), from which they derived their name, being before called Leucosyri." If the position of the Cappadox can be determined, it fixes the boundary of Cappadocia on this side. Ainsworth (*London Geog. Journal*, vol. x. p. 290) supposes it to be the small river of *Kir-Shehr*, or the *Kalichi-Su*, which joins the Halys on the right bank, a little north of 39° N. lat. *Mojur*, which is in N. lat. 39° 5′, and at an elevation of 3140 feet above the sea, may be Mocissus (Ainsworth). Some geographers place Mocissus at *Kir-Shehr*, which is NW. of *Mojur*.

The Cappadocia of Ptolemy (vi. 1.) comprises a much larger extent of country than Cappadocia Proper. He makes it extend on the coast of the Euxine from Amisus to the mouth of the Apsarus; and this coast is distributed among Pontus Galaticus, Pontus Polemoniacus and Pontus Cappadocicus. All this is excluded from the Cappadocia of Strabo. The praefecturae Cappadocicae which Ptolemy names are seven: Chamanene, Sargarausene (Sargabrasene), Garsaouria (Gardocreta), Cilicia; Lycaonia; Antiochiana, containing Derbe, Laranda and Olbasa; and Tyanitis (Tyanis). These are the divisions as they stand in the old Latin version of Ptolemy: some of the names are corrupt. Ptolemy, as already observed, places Melitene and Cataonia under Armenia Minor, and he gives to Cataonia a greater extent than Strabo does.

The districts of MELITENE, and CATAONIA, are described in separate articles; and also PONTUS GALATICUS, POLEMONIACUS, and CAPPADOCICUS.

Cappadocia in its limited sense comprised part of the upper basin of the Halys, as far west as the river Cappadox. The country to the north of the Halys is mountainous, and the plains that lie between this northern range and the southern range of Taurus, are at a great elevation above the sea. The plain of Caesareia (*Kaisariyeh*) at the foot of the Argaeus is 3236 feet high, according to Ainsworth (*London Geog. Journal*, vol. x. p. 310). Hamilton (*Researches*, &c. vol. ii. p. 280) makes it 4200 feet. The difference between these two estimates is 1000 feet, and one of them must be erroneous. However the great elevation of this part of the country is certain. The plain of Caesareia is covered with corn fields and vineyards. (Hamilton.) Strabo describes the plains around Caesareia in his time as altogether unproductive and uncultivated, though level; but they were sandy and rather stony. The level of the Halys in the longitude of Caesareia must also be at a very considerable elevation above the sea, though much less than that of the plain of Caesareia.

Strabo observes (p. 539) that Cappadocia, though further south than Pontus, is colder; and the country which he calls Bagadania, the most southern part of Cappadocia, at the foot of Taurus, though it is level, has scarcely any fruit-bearing trees; but it is pasture land, as a large part of the rest of Cappadocia is. That part of Strabo's Cappadocia, which is not drained by the Halys, belongs to two separate physical divisions. That to the west and SW. of Caesareia belongs to the high plateaus of Lycaonia and Phrygia, the waters of which have no outlet to the sea. The other part which contains the country east and south-east of Caesareia, belongs to the basins of the Pyramus, and the Sarus, which rivers pass through the gaps of the Taurus to the plains of Cilicia.

Cappadocia was generally deficient in wood; but it was well adapted for grain, particularly wheat. Some parts produced excellent wine. It was also a good grazing country for domesticated animals of all kinds; and it produced good horses. Some add wild asses to the list of Cappadocian animals (Groskurd, Strab. ii. p. 457), in which case they must read *ὀναγρόδοτος* instead of *ἀγρόδοτος* in Strab. (p. 539). But Strabo's observation would be very ridiculous if he were speaking of wild asses. The mineral products were (Strab. p. 540) plates of crystal, as he calls it; a lapis Onychites found near the border of Galatia; a white stone fitted for sword handles; and a lapis specularis, or plates of a translucent stone, which was exported. There are salt beds of great extent near the west side of the Halys, at a place called *Tuz Koi*, probably within the limits of the Garsauritis of Strabo. The great salt lake of Tatta is west of Tuz Koi, and within the limits of Great Phrygia, but the plateau in which it is situated is part of the high land of Cappadocia. The level of the lake is about 2500 feet above the sea. It is

nearly dry in summer. Strabo (p. 568) places the lake immediately south of Galatia, and bordering on Great Cappadocia, and the part of Cappadocia called Morimene. This lake then must be viewed as near the common boundary of Galatia, Phrygia, and Cappadocia.

The routes of Hamilton in Asia Minor (*Researches*, &c.), and of Ainsworth from *Angora* by *Kaisariyeh* to *Bir* (*London Geog. Journal*, vol. x.) contain much valuable information on the geology, and the physical geography of Cappadocia. [G. L.]

CAPPADOX RIVER. [CAPPADOCIA.]

CAPRA'RIA (Καπραρία), a small island in the Tyrrhenian Sea, between Corsica and the coast of Etruria, still called *Capraia*. It is distant about 30 geographical miles from Populonium, the nearest point of the mainland, and is a rocky and elevated island, forming a conspicuous object in this part of the Tyrrhenian Sea, though only about 5 miles long by 2 in breadth. Varro, who writes the name Caprasia, tells us it was derived from the number of wild goats with which it abounded; whence also the Greeks called it AEGILIUM; but it must not be confounded with the island of IGILIUM, now *Giglio*, which is much further south. (Plin. iii. 6. s. 12; Ptol. iii. 1. § 78; Mela, ii. 7; Varr. *R. R.* ii. 3. § 3.) Rutilius tells us that it was inhabited in his time by a number of monks. (*Itin.* i. 435.) [E. H. B.]

CAPRA'RIA. [BALEARES; FORTUNATAE.]

CAPRASIA, a town of Bruttium, placed by the Itineraries on the road from Muranum to Consentia, and distant 28 miles from the latter city. (*Itin. Ant.* pp. 105, 110; *Tab. Peut.*) It is probably the modern *Tarsia*, on the left bank of the Crathis, about the required distance from *Cosenza*. [E. H. B.]

CA'PREAE (Καπρέαι; *Capri*), an island off the coast of Campania, lying immediately opposite the Surrentine Promontory, from which it was separated by a strait only 3 miles in width. (Tac. *Ann.* iv. 67.) Pliny tells us it was 11 miles in circuit, which is very near the truth. (Pliny, iii. 6. s. 12.) Like the mountain range, which forms the southern boundary of the Bay of Naples, and of which it is, in fact, only a continuation, Capreae consists wholly of limestone, and is girt almost all round with precipitous cliffs of rock, rising abruptly from the sea, and in many places attaining to a great elevation. The western portion of the island, now called *Anna Capri* (a name probably derived from the Greek αἱ ἄνω Καπρέαι), is much the most elevated, rising to a height of 1,600 feet above the sea. The eastern end also forms an abrupt hill, with precipitous cliffs towards the mainland; but between the two is a depression, or saddle, of moderate height, where the modern town of *Capri* now stands. The only landing places are two little coves on either side of this.

Of the history of Capreae very little is known prior to the time of Augustus. A tradition alluded to by several of the Latin poets, but of the origin of which we have no explanation, represents it as occupied at a very early period by a people called Teleboae, apparently the same whom we find mentioned as a piratical race inhabiting the islands of the Echinades, off the coast of Acarnania. (Schol. ad Apoll. Rhod. i. 747.) Virgil speaks of them as subject to a king, named Telon, whence Silius Italicus calls Capreae "antiqui saxosa Telonis insula." (Virg. *Aen.* vii. 735; Sil. Ital. viii. 543; Stat. *Silv.* iii. 5; Tac. *Ann.* iv. 67.) In historical times we find that the island passed into the hands of the Neapolitans, and its inhabitants appear to have adopted and retained to a late period the Greek customs of that people. But Augustus having taken a fancy to Capreae, in consequence of a favourable omen which he met with on landing there, took possession of it as part of the imperial domain, giving the Neapolitans in exchange the far more wealthy island of Aenaria. (Suet. *Aug.* 92; Dion Cass. lii. 43.) He appears to have visited it repeatedly, and spent four days there shortly before his death. (Suet. *Aug.* 98.) But it was his successor Tiberius who gave the chief celebrity to Capreae, having, in A.D. 27, established his residence permanently on the island, where he spent the last ten years of his life. According to Tacitus, it was not so much the mildness of the climate and the beauty of the prospect that led him to take up his abode here, as the secluded and inaccessible character of the spot, which secured him alike from danger and from observation. It was here accordingly that he gave himself up to the unrestrained practice of the grossest debaucheries, which have rendered his name scarcely less infamous than his cruelties. (Tac. *Ann.* iv. 67, vi. 1; Suet. *Tib.* 40, 43; Dion Cass. lviii. 5; Juv. *Sat.* x. 93.) He erected not less than twelve villas in different parts of the island, the remains of several of which are still visible. The most considerable appears to have been situated on the summit of the cliff facing the Surrentine Promontory, which, from its strong position, is evidently that designated by Pliny (iii. 6. s. 12) as the "Arx Tiberii." It is supposed also to be this one that was called, as we learn from Suetonius (*Tib.* 65), the "Villa Jovis." Near it are the remains of a pharos or light-house, alluded to both by Suetonius and Statius, which must have served to guide ships through the strait between this headland and the Surrentine Promontory. (Suet. *Tib.* 74; Stat. *Silv.* iii. 5. 100.)

Strabo tells us that there were formerly two small towns in the island, but in his time only one remained. It in all probability occupied the same site as the modern town of *Capri*. (Strab. v. p. 248.)

The name of Taurubulae, mentioned by Statius (iii. 1. 129), appears to have been given to some of the lofty crags and rocks that crown the island of *Capri*: it is said that two of these still bear the names of *Toro grande* and *Toro piccolo*. From its rocky character and calcareous soil *Capri* is far inferior in fertility to the opposite island of *Ischia*: the epithet of "dites Capreae," given it in the same passage by Statius, could be deserved only on account of the imperial splendour lavished on the villas of Tiberius. Excavations in modern times have brought to light mosaic pavements, bas-reliefs, cameos, gems, and other relics of antiquity. These, as well as the present state of the island, are fully described by Hadrava. (*Lettere sull' Isola di Capri*. Dresden, 1794.) [E. H. B.]

CAPRIA LAKE. [ASPENDUS.]

CAPRUS. (Κάπρος: *Lybtzádha*), the port and island of Stageirus to the SW. of the Strymonic Gulf. (Strab. vii. p. 331; comp. Leake, *Northern Greece*, vol. iii. p. 166.) [E. B. J.]

CAPRUS. 1. (Κάπρος, Strab. xvi. p. 738; Polyb. v. 51; Ptol. vi. 1. § 7), a river of Assyria which flowed into the Tigris, not many miles below Nineveh. Its modern name is the *Lesser Zâb*. It is probable that the name of this, and that of the *Greater Zâb*, the Lycus, were imported into Assyria by the Greeks from Phrygia, in which were two rivers of the same names in close propinquity the one to the other. [V.]

2. A tributary of the Maeander, rising in Phrygia. [MAEANDER.]

CAPSA (Κάψα: *Cafsa* or *Ghafsah*, Ru.), an important city in the extreme S. of Numidia (aft. in Byzacium), standing in a fertile and well-watered oasis, in the midst of an arid desert abounding in serpents, SW. of Thelepte, and NW. of Tacape. Its foundation was ascribed to the Libyan Hercules, and it seems to be the Hecatompylos of Polybius (i. 73) and Diodorus (iv. 18; comp. Frag. Lib. xxiv). In the Jugurthine War it was the treasury of Jugurtha, and was taken and destroyed by Marius; but it was afterwards rebuilt, and made a colony. Its names are found on inscriptions at *Cafsa*. (Sallust. *Jug.* 89, et seq.; Flor. iii. 1; Strab. xvii. p. 831; Plin. v. 4; *It. Ant. l.c.; Tab. Peut.*; Ptol. iv. 3. § 39; *Notit. Afr.*; Shaw, p. 124, 2nd ed.). [P. S.]

CA'PUA (Καπύη: *Eth.* Καπυανός, or Καπυήσιος: in Latin Capuensis and Capuanus; but originally, Campanus, which is the only form found in Livy or Cicero: *Sta Maria di Capoua*), the capital of Campania, and one of the most important and celebrated cities of Italy. It was situated about 2 miles from the river Vulturnus, and little more than one from the foot of Mount Tifata. The origin and etymology of the name are much disputed. The most probable derivation is that adopted by Livy, from "Campus," on account of its situation in a fertile plain; it is certain that the name of *Capua* is found inseparably connected with that of *Campania;* the citizens of Capua are constantly called Campani, and the territory "Campanus ager." Thus also Virgil uses "Campana urbs" for Capua. (*Aen.* x. 145.) Strabo, on the other hand, derives it from "caput," as the *chief* city or *head* of the surrounding region; while others, according to custom, derived it from a founder of the name of Capys, whom some represented as the leader of the Samnite conquerors in B. C. 423, while others made him a contemporary of Aeneas, or connected him with the kings of Alba Longa. (Liv. iv. 37; Strab. v. p. 242; Festus, *s.v. Capua;* Virg. *Aen.* x. 145; and Servius *ad loc.*; Stat. *Silv.* iii. 5. 77.)

There is much uncertainty also as to the time when the city first received this name: Livy expressly tells us that its Etruscan name was Vulturnum, and that it first received that of Capua from the Samnites: other writers represent Capua itself as a word of Tuscan origin. (Intpp. ap. Serv. *l. c.*) The name must certainly be of greater antiquity than the date assigned to it by Livy, if we may trust to the accuracy of Stephanus of Byzantium, who cites it as used by Hecataeus, and it is not improbable that it was the *Oscan* name of the city long before the period of the Samnite conquest, and was only revived at that period.

Ancient writers are generally agreed in ascribing the foundation of Capua to the Etruscans: this was the statement of Cato, as well as of those authors who differed from him widely as to its date (Vell. Pat. i. 7); and is confirmed by Strabo (v. p. 242); at the same time it is not improbable that there was already an Oscan town upon the site which was selected by the Tuscans for that of their new capital of Vulturnum. The period of this foundation was a subject of great uncertainty among the ancients themselves. Cato, as we learn from Velleius, referred it to so late a period as B. C. 471; while other authors (whose names are not mentioned) assigned to it a greater antiquity than Rome, and placed the foundation about 800 B. C. The latter may very probably have been adopted with a view to make it agree with the supposed date of its heroic founder Capys; but, on the other hand, it is almost impossible to reconcile the date given by Cato with what we know from other sources of the Etruscan history, or to believe, as Velleius himself observes, that Capua had risen within so short a period to so high a pitch of prosperity and power. The earlier date is adopted by Müller (*Etrusker*, vol. i. p. 172), while Niebuhr follows Cato (vol. i. p. 75). It seems certain that under the Etruscan rule Capua was not only the chief city of the twelve which are said to have been founded by that people in this part of Italy, and as such exercised a kind of supremacy over the rest (Strab. *l. c.*); but that it had attained to a degree of wealth and prosperity surpassing that of most cities in Italy. But the luxurious and effeminate habits which resulted from their opulent condition, unfitted the inhabitants for war, and they were unable to cope with their more hardy neighbours the Samnites, who harassed them with continual hostilities. The Etruscans were at length reduced to purchase peace by admitting the Samnites to all the privileges of citizens, and sharing with them their lands as well as their city. But the new comers were not long contented with a part only of these advantages; and they took the opportunity of a solemn festival to surprise and massacre their Tuscan associates, and thus became sole masters of the city, B. C. 423. (Liv. iv. 37, vii. 38.) The circumstances of this revolution, as related to us, would in themselves prove that the Etruscan occupants of Capua were little more than a dominant aristocracy: the original Oscan population were so far from being expelled or destroyed by the Samnites, that they were probably restored to greater liberty, and were blended together with their new rulers into the Campanian people. Thus it is clearly to this event that Diodorus refers when he uses the phrase that the Campanian nation now first rose into being (*συνέστη*, Diod. xii. 31). He places it, however, seventeen years earlier than Livy, or in B. C. 440.

Capua from henceforth became an essentially Oscan city; but it is probable that the difference of origin between the Samnite rulers and the purely Oscan populace continued to influence its political condition, and that the strongly marked opposition which we find existing on many occasions between the knights or aristocracy and the popular party, in this as well as other cities of Campania, proceeded originally from this cause. The change of rulers did not affect the prosperity of the city, which appears to have continued to exercise a kind of supremacy over those in its neighbourhood, and increased so much in wealth and population that it is called by Livy, in B. C. 343, "urbs maxima opulentissimaque Italiae." (Liv. vii. 31.) But this wealth was not without its disadvantages: eighty years' possession of Capua and its fertile territory reduced the Samnite conquerors to a state of luxury and effeminacy similar to that of their Etruscan predecessors, and rendered them equally unfit to contend with their more hardy brethren who had continued to inhabit their native mountains. (Liv. vii. 29—32.) Hence, when in B. C. 343 their assistance was invoked by the neighbouring petty tribe of the Sidicini, to protect them against the aggressions of the Samnites, though they readily undertook the task, they were totally defeated by the Samnites in the plain between Mt. Tifata and their city; and compelled to shut them-

selves up within their walls, and in their turn implore the assistance of the Romans. The latter speedily relieved them from their Samnite enemies; but the citizens of Capua were very near falling victims to the treachery of a Roman garrison stationed in their city, who are said to have meditated making themselves masters of it by a massacre similar to that by which the Samnites had themselves obtained its possession. (Liv. vii. 38.) The subsequent revolt of the Campanians, their alliance with the Latins, and the defeat of their combined armies have already been related under CAMPANIA. By the treaty which followed, Capua lost the possession of the rich Falernian plain; but obtained in return the right of Roman citizenship; the knights, who had been throughout opposed to the war, receiving apparently the full franchise, while the rest of the population obtained only the "civitas sine suffragio." (Liv. viii. 11, 14; Madvig, *de Colon.* pp. 240, 241.) At the same time it is clear that Capua did not (like some of the cities in this condition) lose its separate municipal organisation; it continued to be governed by its own magistrates, the chief of whom bore the Oscan title of "Meddix Tuticus," and though we are told that in B. C. 317 they were reduced by internal dissensions to apply for the interference of the Roman senate, the new regulations then introduced by the praetor L. Furius appear to have been successful in restoring tranquillity. (Id. ix. 20.)

There was nothing in the condition of Capua as thus constituted to check its internal prosperity, and accordingly it was so far from declining under the Roman rule that it continued to increase in opulence: and at the period of the Second Punic War, was considered to be scarcely inferior to the two great rival cities of Rome and Carthage. (Flor. i. 16. § 6). But this very power rendered its dependent condition more galling, and there were not wanting ambitious spirits who desired to place it on a footing at least of equality with Rome itself. The successes of Hannibal during the Second Punic War appeared to open to them a prospect of attaining this object: and shortly after the battle of Cannae (B. C. 216), the popular party in the city, headed by Pacuvius Calavius and Vibius Virrius, opened the gates of Capua to the Carthaginian general. (Liv. xxiii. 2—10.) Such was the power of Capua at this time that (including the forces of her dependent cities) she was deemed capable of sending into the field an army of 30,000 foot and 4000 horse (*Ib.* 5): yet Hannibal seems to have derived little real additional strength from her accession: the other most considerable cities of Campania, Nola, Neapolis, and Cumae, refused to follow her example, and successfully resisted the efforts of Hannibal. The ensuing winter spent by the Carthaginian troops within the walls of Capua is said to have produced a highly injurious effect upon their discipline, and though there is the grossest exaggeration in the statements of Roman writers on this subject, it is certain that Hannibal would never again expose his soldiers to the luxuries and temptations of a winter in the Campanian capital. The operations of the following campaigns were on the whole favourable to the Roman arms: and instead of the citizens of Capua finding themselves as they had hoped placed at the head of the cities of Italy, in the spring of B.C. 212, they were themselves besieged by the Roman armies. The arrival of Hannibal from Apulia this time relieved the city, and compelled the Romans to retreat: but no sooner had he again withdrawn his forces than the consuls Fulvius and Appius Claudius renewed the siege, and invested the city, notwithstanding its great extent, with a double line of circumvallation all round. All the efforts of Hannibal to break through these lines or compel the consuls to raise the siege, proved fruitless: famine made itself severely felt within the walls, and the Capuans were at length compelled to surrender at discretion B. C. 211.

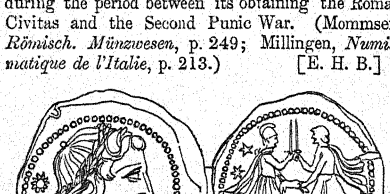
The revolt of the faithless city was now punished with exemplary severity. All the senators, and other nobles, were put to death, or thrown into dungeons, where they ultimately perished: the other citizens were removed to a distance from their homes, the greater part of them beyond the Tiber; and the whole territory of the city confiscated to the Roman state: all local magistracies were abolished, and the mixed population of strangers, artisans, and new settlers, which was allowed to remain within the walls was subjected to the jurisdiction of the Roman praefect. (Liv. xxvi. 15, 16, 33, 34; Cic. *de Leg. Agr.* i. 6, 11, 28, 32.) The city itself was only spared, says Livy, in order that the most fertile lands in Italy might not be left without inhabitants to cultivate them: but its political importance was for ever annihilated, and the proud capital of Campania reduced to the condition of a provincial town of the most degraded class. The policy of the Romans in this instance was eminently successful: while the advantages which Capua derived from its position in the midst of so fertile a plain, and on the greatest high road of the empire, soon raised it again into a populous and flourishing town, and virtually, though not in name, the capital of Campania, it continued to be wholly free from domestic troubles and seditions, and its inhabitants were remarkable for their fidelity and attachment to Rome, of which they gave signal proof during the trying period of the Social War. (Cic. *de Leg. Agr.* ii. 33.) It is probable that they were on this occasion restored to the possession of municipal privileges, for though Velleius represents them as first recovering these, when they became a colony under Caesar, they certainly appear to have been in possession of them in the time of Cicero. (Vell. Pat. ii. 44; Cic. *pro Sest.* 4, *in Pison.* 12.) Its importance at this period is sufficiently attested by the repeated notices of it that occur during the Civil Wars of Rome. Thus it was at Capua that Sulla had assembled his army for the Mithridatic War, and from whence he turned the arms of his legions against Rome: it was here, too, that the next year Cinna first raised the standard of revolt against the Senate. (Appian, *B. C.* i. 56, 57, 63, 65.) Again, on the outbreak of the war between Caesar and Pompey, the partisans of the latter at first made Capua a kind of head-quarters, which they were, however, soon constrained to abandon. (Id. *B. C.* ii. 29, 37; Caes. *B. C.* i. 14; Cic. *ad Att.* vii. 14.) It is also mentioned on occasion of the conspiracy of Catiline, as one of the places where his emissaries were most active: in consequence of which, after the suppression of the danger, the municipality spontaneously adopted Cicero as their patron. (Cic. *pro Sest.* 4.)

Capua is at this time termed by the great orator "urbs amplissima atque ornatissima." (Id. *de Leg. Agr.* 28.) But the territory which had once belonged to it, the fertile "ager Campanus," was retained by the Romans as the property of the state, and was guarded with jealous care as one of the

chief sources of the public revenue: so that it was exempted even in the general distributions of the public lands by the Gracchi, and by Sulla (Cic. *de Leg. Agr.* i. 7), though the latter seems to have at least trenched upon some portions of it. (*Lib. Colon.* p. 232; Zumpt, *de Colon.* p. 252.) In B. C. 63, the tribune, Servilius Rullus, brought in an agrarian law, of which one of the chief objects was the division of this celebrated district: but the eloquence of Cicero procured its rejection. (Cic. *in Pison.* 2; Plut. *Cic.* 12.) A few years later, however, the same measure was carried into effect by the Lex Julia Agraria passed by Caesar in his consulship, B. C. 59, and 20,000 Roman citizens were settled in the "ager Campanus," and the adjoining district, called the Campus Stellatis. (Dion Cass. xxxviii. 7; Caes. *B. C.* i. 14; Suet. *Caes.* 20; Appian, *B. C.* ii. 10; Vell. Pat. ii. 44; Cic. *ad Att.* ii. 16.)

Capua thus became a Roman colony, and from henceforth continued to enjoy a dignity corresponding to its real importance. But the colonists settled here by Caesar were not long permitted to retain their lands in tranquillity. Among the cities of Italy the possession of which the Triumvirs were compelled to promise to their legions in B. C. 43, Capua held a prominent place (Appian, *B. C.* iv. 3): it appears to have fallen to the lot of the veterans of Octavian, on which account the latter made it the head-quarters of his army previous to the war of Perusia, B. C. 41. (Id. v. 24.) We learn also that he further increased it by the establishment of fresh bodies of veterans after the battle of Actium: in consequence of which repeated accessions, the city appears to have assumed the titles of "Colonia Julia Augusta Felix," which we find it bearing in inscriptions. On the last of these occasions Augustus conferred an additional boon upon Capua (which he seems to have regarded with especial favour) by bestowing upon the municipality a valuable tract of land in the island of Crete, and by constructing an aqueduct, which added greatly to the salubrity of the city. (Vell. Pat. ii. 81; Dion Cass. xlix. 14.)

Under the Roman Empire we hear comparatively little of Capua, though it is clear from incidental notices, as well as from still extant inscriptions, that it continued to be a flourishing and populous city. Strabo calls it the metropolis of Campania, and says that it so far surpassed the other cities of the province, that they were merely small towns in comparison (v. p. 248). It received a fresh colony of veterans under Nero; but during the civil wars of A. D. 69 its steadfast adherence to the party of Vitellius involved many of the chief families of its citizens in ruin. (Tac. *Ann.* xiii. 31, *Hist.* iii. 57, iv. 3.) At a much later period Ausonius speaks of it as having greatly declined from its former splendour, but he still ranks it as the eighth city in the Roman Empire, and it is evident that there was no other in Southern Italy that could for a moment dispute its superiority. (Auson. *Ord. Nobil. Urb.* 6.) Its prosperity, however, probably rendered it an especial object of attack to the barbarians, who desolated Italy after the fall of the Western Empire. It was taken by Genseric, king of the Vandals, in A. D. 456, and, as we are told, utterly destroyed (*Hist. Miscell.* xiv. p. 98, ed. Mur.; Const. Porph. *de Adm. Imp.* 27); but though it appears to have never recovered this blow, it figures again, though in a very reduced condition, in the Gothic wars of Belisarius (Procop. *B. G.* i. 14, iii. 18, 26), and must have subsequently much revived, as P. Diaconus in the eighth century terms it one of the three most opulent cities of Campania. (*Hist. Lang.* ii. 17.) Its final destruction dates from its capture by the Saracens in A. D. 840, who are said to have reduced it to ashes. Its defenceless position in the midst of the plain caused it to be at this period altogether abandoned, its inhabitants taking refuge in the neighbouring mountains: but a few years afterwards (A. D. 856) they were induced, by their bishop Landulfus, to return, and establish themselves on the site of the ancient Casilinum, a position which they converted into a strong fortress, and to which they gave the name of their ancient city. (Chron. Casinat. i. 31, ap. Murat. *Script.* vol. ii. p. 303; Constantin. Porphyr. *l. c.*) It is thus that the modern city of *Capoua* (one of the strongest fortresses in the Neapolitan dominions) has arisen on the site of Casilinum: that of the ancient Capua being occupied by the large village or *Casale*, called *Santa Maria di Capoua*, or *Sta Maria Maggiore*, which, though it does not rank as a town, contains near 10,000 inhabitants.



Ancient writers abound in declamatory allusions to the luxury and refinement of the Capuans, which is said even to have surpassed the fabulous extravagance of the Sybarites (Polyb. *ap. Athen.* xii. 36); but they have left us scarcely any topographical notices of the city itself. We learn from Cicero that in consequence of its position in a perfectly level plain, it was spread over a wide extent of ground, with broad streets and low houses. (Cic. *de Leg. Agr.* ii. 35.) Two of these streets or squares (plateae), called the Seplasia and Albana, are particularly celebrated, and seem to have been the most frequented and busy in the city. The former was occupied to a great extent by the shops of perfumers (unguentarii), a trade for which Capua was noted, so that the most luxurious Romans derived their supplies from thence. (Cic. *l. c.* 34; *pro Sest.* 8, *in Pison.* 11; Ascon. *ad Or. in Pis.* p. 10; Val. Max. ix. 1, *Ext.* 1; Athen. xv. p. 288, e. The "Unguentarii Seplasiarii" are mentioned also in inscriptions.) The aqueduct constructed by Augustus, and named the Aqua Julia, was a splendid work, and the pride of the town, for its magnificence as well as its utility. (Dion Cass. xlix. 14.) The amphitheatre, of which the ruins still remain, was certainly not constructed before the time of the Roman Empire: but Capua was already at a much earlier period celebrated for its shows of gladiators, and appears to have been a favourite place for their training and exercise. It was from a school of gladiators here that Spartacus first broke out with 70 companions; at the commencement of the civil war there was a large body of them in training here, in the service of Caesar. (Cic. *ad Att.* vii. 14; Caes. *B. C.* i. 14.) We learn from Suetonius that Capua, like many other cities of the Roman empire, had its Capitolium in imitation of that of Rome. (Suet. *Tib.* 40, *Cal.* 57.)

The existing remains of Capua are, for the most part, of but little interest, and though covering a great space of ground, are very imperfectly preserved. Some portions of the ancient walls, as well as the broad ditch which surrounded them, are still visible, and by means of these and other indications the circuit of the city may be traced with tolerable certainty. According to Pratilli, it was between five

and six miles in circumference, and had seven gates, the site of most of which may be still determined. The name of the Porta Jovis has been preserved to us by Livy (xxvi. 14), but without indicating its situation: it was probably on the E. side of the town, facing Mt. Tifata, on which stood a celebrated temple of Jupiter. The situation of the Porta Vulturnensis, Atellana, and Cumana, mentioned in inscriptions, is sufficiently indicated by their respective names. The remains of a triumphal arch are still visible near the amphitheatre, and those of another subsisted till the middle of the seventeenth century. Some slight traces only are found of the theatre, the existence of which is also recorded by an inscription. The ruins of the amphitheatre, on the contrary, are extensive, and show that it must have been, when perfect, one of the most magnificent structures of the kind existing in Italy. Mazzocchi, a Neapolitan antiquarian, has given an elaborate description of it, in a dissertation on the inscription which records its restoration by Hadrian. The date of its original construction is unknown. (Mazzocchi, *In mutilum Amphitheatri Campani Titulum Commentarius*, 4to. Neap. 1727.) The other remains at Capua are described by Pratilli (*Via Appia*, p. 260—318) and by Romanelli (vol. iii. p. 578—584); but neither the descriptions of the former writer, nor the inscriptions which he cites, can be received without caution. All the inscriptions found at Capua are collected by Mommsen (*Inscr. Regn. Neap.* p. 284—322).

Capua was possessed in the period of its prosperity and power of an extensive territory, extending apparently as far as the mouth of the Vulturnus. Of this the portion S. of that river was distinguished, in later times at least, by the name of the AGER CAMPANUS, as the proper territory of the city, while that on the N. side of the Vulturnus was known as the FALERNUS AGER, a name sometimes applied to the whole of the fertile tracts between the Vulturnus and the mountain ranges that bound the plain on the N.; sometimes restricted to the western portion of this tract, at the foot of the Massican Hills; while the eastern half of the plain, at the foot of Mons Callicula, extending from Cales to Casilinum, was distinguished as the CAMPUS STELLATIS. (Liv. xxii. 13; Cic. *de Leg. Agr.* i. 7, ii. 31; Suet. *Caes.* 20.)

The coins of Capua, with the name of the city, have all of them Oscan legends: they are almost all of copper, those of silver being of extreme rarity. But numismatists are agreed that certain silver coins which are found in considerable numbers, with the legend "Roma" and "Romano," but are certainly not of Roman fabric, were coined at Capua during the period between its obtaining the Roman Civitas and the Second Punic War. (Mommsen, *Römisch. Münzwesen*, p. 249; Millingen, *Numismatique de l'Italie*, p. 213.) [E. H. B.]

COIN OF CAPUA.

CAPUT BOVIS (Καπούδοες), a fort at one end of the famous bridge which the emperor Hadrian made in Moesia across the river Danube. It was situated near the modern *Severin*, between the ruined forts of *Zernigrad* and *Tschernetz*. (Procop. *de Aedif.* iv. 6. p. 288.) [L. S.]

CAPUT VADA. [BRACHODES.]

CARACCA. [ARRIACA.]

CARACA'TES. The "Triboci, Vangiones, et Caracates," are mentioned by Tacitus (*Hist.* iv. 70) in his history of the war of Civilis. Some of the commentators on Tacitus would alter the name, but there is no reason for altering such a name because it occurs nowhere else. D'Anville. finding no place for these people among the Triboci, Nemetes, and Vangiones, supposes that they may have occupied the tract between the Nava (*Nahe*) and the *Rhine*, and that Moguntiacum (*Mainz*) may have been their chief town; for it happens that we never find the name of the people mentioned who had *Mainz*. It may then have belonged to the Caracates. Walckenaer observes (*Géog.* vol. ii. p. 278) that in the environs of *Mainz* there occur the names *Karbach*, *Karlick*, *Karweiler*, *Karthäuser*, which may be taken to be some confirmation of D'Anville's conjecture. [G. L.]

CARACE'NI (Καρακηνοι), a tribe of the Samnites, which according to Ptolemy inhabited the most northern part of Samnium, bordering on the Peligni and the Frentani; but more especially the upper valley of the Sagrus (*Sangro*). The only city that he assigns to them is AUFIDENA, and their name is not mentioned by any other geographer. But it is generally supposed that the CARICINI (Καρίκινοι) of Zonaras, whom he speaks of as a Samnite people (viii. 7), are the same with the Caraceni of Ptolemy. He describes them as possessing a town or stronghold, which was not taken by the Roman consuls Q. Gallus and C. Fabius without difficulty. This town has been supposed by local topographers to be the same with the modern *Castel di Sangro*, which seems, from the inscriptions and other remains discovered there, to have been an ancient town, but there is no authority for this. Nor is there any ground for identifying the Carentini of Pliny (iii. 12. s. 17), whom that author seems to place among the Frentani, with the Caraceni. (Romanelli, vol. ii. pp. 483, 490.) [E. H. B.]

CARAE (Κάραι κώμαι, Diod. xvii. 27), a small place mentioned by Diodorus, and probably in Sittacene, one of the SE. districts of Assyria. It has been conjectured by Mannert (v. 2. p. 342) that it was situated in the neighbourhood of *Kesri-Shirin*, on the river Holwan. [V.]

CA'RALIS, or CA'RALES (the plural form is used by the best Latin writers: Καράλις: *Eth.* Caralitanus: *Cagliari*), a city of Sardinia, the most considerable in the whole island, situated on the S. coast, on the extensive gulf which derived from it the name of Sinus Caralitanus (Καραλιτανὸς κόλπος, Ptol. iii. 3. § 4). Its foundation is expressly assigned to the Carthaginians (Paus. x. 17. § 9; Claudian, *B. Gild.* 520); and from its opportune situation for communication with Africa as well as its excellent port, it doubtless assumed under their government the same important position which we find it occupying under the Romans. No mention of it is found on the occasion of the Roman conquest of the island; but during the Second Punic War, it was the head-quarters of the praetor, T. Manlius, from whence he carried on his operations against

Hampsicora and the Carthaginians (Liv. xxiii. 40, 41), and appears on other occasions also as the chief naval station of the Romans in the island, and the residence of the praetor (Id. xxx. 39). Florus calls it the "urbs urbium," or capital of Sardinia, and represents it as taken and severely punished by Gracchus (ii. 6. § 35), but this statement is wholly at variance with the account given by Livy, of the wars of Gracchus, in Sardinia, according to which the *cities* were faithful to Rome, and the revolt was confined to the mountain tribes (xli. 6, 12, 17). In the Civil War between Caesar and Pompey, the citizens of Caralis were the first to declare in favour of the former, an example soon followed by the other cities of Sardinia (Caes. *B. C.* i. 30); and Caesar himself touched there with his fleet on his return from Africa. (Hirt. *B. Afr.* 98.) A few years later, when Sardinia fell into the hands of Menas, the lieutenant of Sex. Pompeius, Caralis was the only city which offered any resistance, but was taken after a short siege. (Dion Cass. xlviii. 30.) No mention of it occurs in history under the Roman Empire, but it continued to be regarded as the capital of the island, and though it did not become a colony, its inhabitants obtained the rights of Roman citizens. (Plin. iii. 7. s. 13; Strab. v. p. 224; Mela, ii. 7; *Itin. Ant.* pp. 80, 81, 82, &c.) After the fall of the Western Empire it fell, together with the rest of Sardinia, into the hands of the Vandals, but appears to have retained its importance throughout the middle ages, and is still, under the name of *Cagliari*, the capital of the island.

Claudian describes the ancient city as extending to a considerable length towards the promontory or headland, the projection of which sheltered its port: the latter affords good anchorage for large vessels; but besides this, which is only a well-sheltered roadstead, there is adjoining the city a large salt-water lake, or lagoon, called the *Stagno di Cagliari*, communicating by a narrow channel with the bay, which appears from Claudian to have been used in ancient times as an inner harbour or basin. (Claud. *B. Gild.* 520—524.) The promontory adjoining the city is evidently that noticed by Ptolemy (Κάραλις πόλις καὶ ἄκρα, *l. c.*), but the CARALITANUM PROMONTORIUM of Pliny can be no other than the headland, now called *Capo Carbonara*, which forms the eastern boundary of the Gulf of *Cagliari*, and the SE. point of the whole island. Immediately off it lay the little island of FICARIA (Plin. *l. c.*; Ptol. iii. 3. § 8), now called the *Isola dei Cavoli*.

Considerable remains of the ancient city are still visible at *Cagliari*, the most striking of which are those of the amphitheatre (described as extensive, and in good preservation), and of an aqueduct; the latter a most important acquisition to the city, where fresh water is at the present day both scarce and bad. There exist also ancient cisterns of vast extent: the ruins of a small circular temple, and numerous sepulchres on a hill outside the modern town, which appears to have formed the Necropolis of the ancient city. (Smyth's *Sardinia*, pp. 206, 215; Valery, *Voyage en Sardaigne*, c. 57.) [E. H. B.]

CARALITIS. [CARALLIS.]

CARALLIS (Κάραλλις, Καράλλεια: *Eth.* Καραλλεώτης: Steph. *s. v.*), a city of Isauria, supposed by Cramer to be the same which Hierocles and the Councils assign to Pamphylia. There are imperial coins of Carallis with the epigraph Καραλλιωτων. The place appears to be *Kereli* on the north side of the lake of *Bey Sheher*, which is west of Iconium. This lake is that which Strabo (p. 568, ed. Casaub.) calls Coralis (Κώραλις), and Hamilton (*Researches*, &c. vol. ii. p. 349) supposes it to be the same as the Pusgusa or Pasgusa of the Byzantine writers. It is a large lake, and contains many islands. Many modern writers call this lake Caralis or Caralitis, but it does not appear on what authority. Livy (xxxviii. 15) mentions a Caralitis palus, but it is near the Cibyratis. [G. L.]

CARAMBIS (Κάραμβις: *Kerempe*), a promontory of Asia Minor, in the Paphlagonia of Strabo (p. 545), who describes it as a great headland, turned to the north and to the Scythian or Tauric Chersonesus. He considers this promontory and the promontory of Criou Metopon in the Tauric Chersonesus as dividing the Euxine into two seas. He states (p. 124) the distance between the two promontories at 2500 stadia; but this must be an error in the text for 1500 stadia, as a comparison with another passage (p. 309) seems to show; and the fact that many navigators of the Euxine are said to have seen both promontories at once (see Groskurd's note in his *Transl. of Strabo*, vol. i. p. 204). Pliny (iv. 12) makes the distance 170 M. P. This promontory of Carambis is mentioned by all the ancient geographers, and by many other writers. Pliny (vi. 2) makes the distance of Carambis from the entrance of the Pontus 325 M. P., or 350 M. P. according to some authorities. The direct distance from Sinope, which is east of it, was reckoned 700 stadia; but the true distance is about 100 English miles. Carambis is in 42° N. lat. and a little more; and it is not so far north as the promontory Syrias or Lepte, which is near Sinope.

There was also a place called Carambis near the promontory, mentioned by Scylax and Pliny, though the name in Scylax is an emendation of the MS. reading Caramus; but it appears to be a certain emendation. [G. L.]

CARANI'TIS (Καρηνῖτις, Strab. xi. p. 528; Καρανῖτις, Strab. xii. p. 560; Plin. v. 20. s. 24), a canton of Upper Armenia, added by Artaxias to his dominions. This district is at the foot of the mountains which separated the Roman from the Persian Armenia. Carana (Κάρανα, now *Erzrúm* or *Garen*) was the capital of this district. (Strab. xii. p. 560.) It was afterwards called Theodosiopolis, which was given it in honour of the emperor Theodosius the Younger by Anatolius, his general in the East, A. D. 416. (Procop. *de Aedif.* iii. 5; Le Beau, *Bas Empire*, vol. v. p. 446.) It was for a long time subject to the Byzantine emperors, who considered it the most important fortress of Armenia. (Procop. *B. P.* i. 10, 17; Const. Porph. *de Adm. Imp.* c. 46; Cedren. vol. i. pp. 324, 463.) About the middle of the 11th century it received the name of *Arze-el-Rúm*, contracted into *Arzrúm* or *Erzrúm*. (St. Martin, *Mém. sur l'Armenie*, vol. i. p. 67; Ritter, *Erdkunde*, vol. x. pp. 81, 271.) It owed its name to the circumstance that when ARZEK was taken by the Seljuk Turks, A. D. 1049, the inhabitants of that place, which, from its long subjection to the Romans, had received the epithet of *Rúm*, retired to Theodosiopolis, and gave it the name of their former abode. (St. Martin, *l. c.*) [E. B. J.]

CARA'NTONUS, a river of Gallia, which flowed through the territory of the Santones:—

"Santonico refluus non ipse Carantonus aestu."
Auson. *Mosell.* v. 463.

Ptolemy (ii. 7) and Marcianus (p. 47) call it Ca-

nentelus, or Canentellus, if it be the same stream, which may be doubted. The name is enough to show that the Carantonus of Ausonius is the *Charente*, for the names are the same. Ptolemy's Canentelus, according to his geography, is certainly not the *Charente*, but north of it. [G. L.]

CARANUSCA. The Antonine Itin., says D'Anville, gives only xxxiiii between Divodorum Mediomatricorum (*Metz*), on the Mosel, and Augusta Trevirorum (*Trier* or *Trèves*), also on the Mosel but lower down. There must have been intermediate stations between two such important positions, and the Table marks Caranusca and Ricciacum. D'Anville was not able to make anything of the road. Walckenaer (*Géog. &c.* vol. iii. p. 89) has restored the route from the Itin. and the Table. He makes the distance between *Metz* and *Trier* 42 Gallic leagues, or 63 Roman miles; and he places on the road from Divodurum, Theodonis Villa (*Thionville*) 18 M. P.; then Caranusca (*Canach*), 24 M. P.; then Ricciacum (*Munscheeker*), 10 M. P.; and then *Trier*, 10 M. P. But other geographers give quite a different account of the matter. [G. L.]

CARASA, a place in Aquitania, according to the Antonine Itin., on the route from Pompelo (*Pampelona*), in Spain, through the western Pyrenees to Aquae Tarbellicae (*Dax*). After passing the Summus Pyrenaeus and the Imus Pyrenaeus (*St. Jean Pied-de-Port*), we come to *Garis*, a name which corresponds very well to Carasa. The distance, 18 M. P., from *St. Jean Pied-de-Port* seems to fit pretty well, as far as we can judge from the ordinary maps. D'Anville observes that 39 M. P., which the edition of the Itinerary by Surita and that by Wesseling give as the distance between Carasa and Aquae Tarbellicae, is a great deal too much. Walckenaer gives the distance at 28½ M. P., according to the Naples MS. [G. L.]

CARAVIS (Καράουϊς: *Mallen?*), a city of Hispania Tarraconensis, on the right bank of the Iberus (*Ebro*), 37 M. P. above Caesaraugusta. (Appian, *de Reb. Hisp.* 43; *Itin. Ant.* p. 443.) [P. S.]

CARBAE (Καρβαί), a people of Arabia, named by Diodorus Siculus (iii. 46), after Agatharcides, as being contiguous to the Debae, Alilaei, and Gasandi. They are perhaps identical with the warlike Cerbani of Pliny (vi. 28. s. 32), and are assigned by Forster to the great *Harb* tribe, which name he also finds in the classical forms. They extended, he thinks, "eastward of the Tehama, the entire length of the Hedjaz, or at least between the latitudes of Yembo and Haly (the seat of the Alilaei), where Burckhardt found "the mighty tribe of Harb." (Forster's *Geog. of Arabia*, vol. ii. pp. 134—136.) [G. W.]

CA'RBANA (Κάρβανα: *Eth.* Καρβανεύς, Steph. B. *s. v.*), a city of Lycia, the name of which may be worth recording, as other discoveries may be made in that country. [G. L.]

CARBANTORIGUM, in Britain, mentioned by Ptolemy, and probably, under the name Carbantium, by the Geographer of Ravenna. The word is evidently a compound of the British term *Caer*. Its locality is in the south-western part of Scotland, as, along with Uxelum, Corda, and Trimontium, it is one of the four towns of the Selgovae. It has been variously identified with *Caerlaverock*, with *Drumlanrig*, and with *Kirkcudbright*. [R. G. L.]

CARBINA (Κάρβινα), a city of the Messapians, mentioned by Clearchus (*ap. Athen.* xii. p. 522), as having been destroyed by the Tarentines, on which occasion they inflicted such outrages on the inhabitants as subsequently brought down the divine vengeance upon all persons concerned in their perpetration. No subsequent notice of it is found; but the conjecture which identified it with *Carovigno* (a considerable modern town about 12 miles W. of *Brindisi*), derives some plausibility from the fact that inscriptions have been discovered there in the Messapian dialect, thus proving it to have been an ancient Messapian town. (Romanelli, vol. ii. p. 142; Mommsen, *U. I. Dialecte*, p. 63.) [E. H. B.]

CARBIS (Καρβίς, Arrian, *Ind.* 26), the name of a shore of the sea-coast of Gedrosia which was visited by the fleet of Nearchus. It does not appear to have been identified with any modern name. [V.]

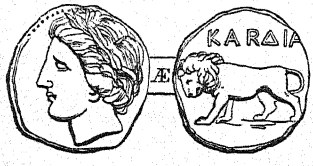
CA'RCASO (*Carcassone*), a town in the Provincia of Caesar (*B. G.* iii. 20), and the Gallia Narbonensis of Pliny (iii. 4), who calls it "Carcasum Volcarum Tectosagum." Ptolemy (ii. 10) also mentions it as one of the towns of the Volcae Tectosages. It is on the Atax (*Aude*), and is now the capital of the department of *Aude*. In the campaign of P. Crassus in Aquitania during Caesar's government of Gaul, B. C. 56, Carcaso, Tolosa, and Narbo, furnished many brave soldiers for Crassus. They were summoned by the general from a muster roll. A column a few feet high, erected in honour of M. Numerius Numerianus, supposed to be the same as the son of the emperor Carus, was found a few miles from *Carcassone*, and is said to be the only monumental evidence that this was once a Roman town. But Numerianus was named M. Aurelius. In the Jerusalem Itinerary it is called Castellum Carcaso. [G. L.]

CARCATHIOCERTA (Καρκαθιόκερτα: *Kharpút*), the capital of SOPHENE, one of the cantons of Armenia. (Strab. xi. p. 527; Plin. vi. 10.) St. Martin (*Mém. sur l'Armenie*, vol. i. p. 188) considers that this was the ancient and heathen name of the city of Martyropolis [MARTYROPOLIS]; but Ritter (*Erdkunde*, vol. x. p. 811) has shown satisfactorily that this cannot be the case. Carcathiocerta does not occur in the Byzantine writers, but must be the same as the strong fortress which Cedrenus (*Hist. Comp.* vol. ii. p. 686) calls Χάρτοσε, and which commanded Mesopotamia. It was called by the Syrians Kortbest (*Chartbist*, D'Anville; *Khartabist*, Herbelot; *Haretbaret*, Assemann; comp. Von Hammer, *Gesch. der Osman*, vol. i. p. 226, vol. ii. p. 345). *Kharpút* is placed on an eminence at the termination of a range of mountains, commanding a beautiful and extensive plain. At no great distance is a lake, which, though described as salt, is really freshwater (*Lake Goljik*), which Kinneir (*Geog. Mem. Pers. Emp.* p. 335) conjectures to be the lake Colchis of the ancients. (Comp. Ptol. v. 13.) The word *Kol*, *Kul*, or *Gul* frequently occurs in the interior of Asia, and signifies a tarn or mountain lake. (Ritter, *Erdkunde*, vol. x. p. 103; *Journ. Geog. Soc.* vol. vi. p. 207, vol. x. p. 365.) [E. B. J.]

CARCICI, for so D'Anville affirms that we ought to read the name in the Maritime Itinerary instead of Carsici. His authority for Carcici is an inscription which Barthelemi read on the spot. The measures are very confused along this part of the coast of Gallia, but D'Anville contends that the Carsicis Portus is *Cassis*, a place on the coast of France between *Toulon* and *Marseille*. (D'Anville, *Notice*, &c.; Walckenaer, *Géog.*, &c., vol. iii. p. 120.) [G. L.]

CA'RCINA (Κάρκινα, Ptol. iii. 5. § 27), CAR-

CINE (Plin. iv. 12. s. 26), CARCINI'TIS (Καρκινῖτις, Herod. iv. 55, 99; Hecat. *ap.* Steph. B. *s. v.*: *Eth.* Καρκινῖται), a city of Sarmatia Europaea (or Scythia, according to Herodotus), near the mouth of the river Hypacyris (Herod. iv. 55), or, as later writers name the river, Carcinites (Καρκινίτης, Strab. vii. p. 307; Ptol. iii. 5. §§ 8, 9; Plin. *l. c.*) This river fell into the gulf of the same name (Καρκινίτης κόλπος, Strab. *l. c.*; Mela, ii. 1. § 40; Plin. *l. c.*; Marcian. p. 55; Anon. *Per.* pp. 7, 9; formerly called Ταμυράκης κόλπος: *Gulf of Perekop*), which lies on the W. side of the isthmus of the Chersonesus Taurica (*Crimea*). The river was regarded as the boundary between the "Old Scythia" of Herodotus (iv. 99) and Taurica (comp. Plin. *l. c.*, who calls the country W. of the river Scythia Sendica). The river is generally supposed to be the small stream of *Kalantchak*. The site of the city cannot be determined with any certainty. (Eichwald, *Geogr. d. Kasp. Meer.* p. 305; Ukert, vol. iii. pt. ii. pp. 164, 193, 438, 458.) [P. S.]



CARCINI'TES FL. et SIN. [CARCINA.]

CARCINI'TIS. [CARCINA.]

CA'RCORAS (Καρκόρας: *Gurk*), a river of southern Pannonia, flowing from the heights of Illyricum into the Savus. (Strab. vii. p. 314; Geog. Rav. iv. 21, where it is called Corcac.) [L. S.]

CARDAMYLE (Καρδαμύλη: *Eth.* Καρδαμυλίτης), a town of Messenia, and one of the seven places offered by Agamemnon to Achilles. (*Il.* ix. 150, 292.) It was situated on a strong rocky height at the distance of seven stadia from the sea, and sixty from Leuctra. (Paus. iii. 26. § 7; Strab. viii. p. 360, seq.) It is called a Laconian town by Herodotus (viii. 73), since the whole of Messenia was included in the territories of Laconia at the time of the historian. It again became a town of Messenia on the restoration of the independence of the latter; but it was finally separated from Messenia by Augustus, and annexed to Laconia. (Paus. *l. c.*) Pausanias mentions at Cardamyle sanctuaries of Athena and of Apollo Carneius; and in the neighbourhood of the town a temenus of the Nereids. There are considerable ruins of the town to the NE. of the modern *Skardhamúla*, at the distance of 1300 (French) metres from the sea. (Comp. Plin. iv. 5. s. 8; Ptol. iii. 16. § 22; Steph. B. *s. v.*; Leake, *Morea*, vol. i. p. 329, seq.; Boblaye, *Recherches*, p. 93.)

CA'RDIA (Καρδία: *Caridia*), one of the chief towns of the Thracian Chersonesus, situated at the head of the gulf of Melas. It was originally a colony of the Milesians and Clazomenians; but subsequently, in the time of Miltiades, the place also received Athenian colonists. (Herod. vii. 58, vi. 33, ix. 115; Scym. Chius, 699; Dem. *c. Philip.* i. p. 63, *de Halon.* pp. 87, 88, and elsewhere.) The town was destroyed by Lysimachus (Paus. i. 9. § 10), and although it was afterwards rebuilt, it never again rose to any degree of prosperity, as Lysimachia, which was built in its vicinity and peopled with the inhabitants of Cardia, became the chief town in that

COIN OF CARDIA.

neighbourhood. (Strab. vii. p. 331; Paus. i. 10. § 5, iv. 34. § 6; Appian, *B. C.* iv. 88; Ptol. iii. 12. § 2; Steph. B. *s. v.*) Cardia was the birthplace of king Eumenes (Nep. *Eum.* 1) and of the historian Hieronymus. (Paus. i. 9. § 10.) [L. S.]

CARDU'CHI (Καρδοῦχοι, Xen.). The wild tribes who occupied the high mountainous tract, which lies between the great Upland or Plateau of Persia, and the low-lying plains of Mesopotamia, went in antiquity under the different names of Καρδοῦχοι, Γορδυαῖοι (Strab. xvi. p. 747), Κάρδακες from a Persian word, signifying manliness (Strab. xv p. 734), Κύρτιοι (Strab. xi. p. 523), Carduchi, and Cordueni (Plin. vi. 15). They are now the *Kúrds* inhabiting the district of *Kúrdistan*, who are proved by their peculiar idiom to be a branch of the Arian race. (Prichard, *Nat. Hist. of Man*, p. 178.) These barbarous and warlike tribes owed no allegiance to the Great King, though he possessed some control over the cities in the plains. They were separated from Armenia by the Centrites (*Bohtan-Chai*), an eastern affluent of the Tigris, which constitutes in the present day a natural barrier between *Kúrdistan* and Armenia. (Grote, *Hist. of Greece*, vol. ix. p. 157.) Xenophon in his retreat performed a seven days' march through the mountains of the Carduchians under circumstances of the utmost danger, suffering, and hardship. (*Anab.* iv. 1—3; Diod. xiv. 27.) They dwelt in open villages, situated in the valleys, and enjoyed an abundant supply of corn and wine. Every attempt to subdue them had proved fruitless, and they had even annihilated mighty armies of invaders. The neighbouring satraps could only secure a free intercourse with them by means of previous treaties. Their bowmen, whose arrow resembles that of the *Kúrd* of the present day (comp. Chesney, *Exped. Euphrat.* vol. i. p. 125), exhibited consummate skill: and the sufferings of the Greeks were far more intolerable than anything they had experienced from Tissaphernes and the Persians. For a description of the country occupied by these nomad tribes, and their further history, see CORDUENE. [E. B. J.]

CA'REIAE, a station on the Via Clodia in Etruria, probably a mere village, is placed by the Itineraries 15 M. P. from Rome; and appears, therefore, to have occupied the site of the modern village of *Galera*. It was here that the aqueduct from the Lacus Alsietinus was joined by a branch from the Lacus Sabatinus. (*Itin. Ant.* p. 300; *Tab. Peut.*; Frontin. *de Aquaeduct.* § 71.) [E. H. B.]

CARE'NE, or CARINE (Καρήνη, Καρίνη: *Eth.* Καρηναῖος), a town of Mysia. The army of Xerxes, on the route from Sardis to the Hellespont, marched from the Caicus through the Atarneus to Carine; and from Carine through the plain of Thebe, passing by Adramyttium and Antandrus (vii. 42). In the text of Stephanus (*s. v.* Καρήνη) the name is written Carene, and he quotes Herodotus, and also Craterus (περὶ Ψηφισμάτων) for the form Καρηναῖοι. In the text of Pliny (v. 32) the name is also written Carene; and he mentions it as a place that had gone to decay. Carene is also mentioned in a fragment of Ephorus (Steph. *s. v.* Βέννα) as having sent some settlers to Ephesus, after the Ephesians had sustained a defeat from the people of Priene. There seems no doubt that the true name of the place is Carene. There appear to be no means of fixing the site any nearer than Herodotus has done. [G. L.]

CARE'NI, a people in Britain, mentioned by Ptolemy as lying to the east of the CARNONACAE.

and west of the Carnavii. This gives them the NE. parts of the county of *Sutherland*. [R. G. L.]

CARENTOMAGUS, a town in Gallia, is placed by the Theodosian Table between Divona (*Cahors*), and Segodunum (*Rhodez*). It is XV. from Segodunum. The site is not known. [G. L.]

CARES. [CARIA.]

CARESE'NE (Καρησήνη), a mountainous tract in the Troad, which contained many villages, and was well cultivated. (Strab. p. 602.) It bordered on the Dardanice as far as the parts about Zeleia and Pityeia. It was named from the Caresus, a river mentioned by Homer (*Il.* xii. 20), which flows into the Aesepus. The Caresus has a considerable valley (αὐλῶν), but less than that of the Aesepus. Strabo says that the Andrius, which flows into the Scamander, also rises in the Caresene, part of which is therefore probably a high plateau, on which the Andrius and Caresus rise. The Caresus springs between Palaescepsis and Achaeum, which is opposite to the island Tenedos. There was a city Caresus, but it was ruined before Strabo's time. [G. L.]

CARE'SUS (Κάρησος). [CARESENE.]

CA'RIA (ἡ Καρία: *Eth.* Κάρ, Κᾶρος, *fem.* Κάειρα: *Adj.* Καρικός, Κάριος), a country in the south-west angle of Asia Minor. Strabo (p. 632) makes the southern boundary of Ionia to be the promontory Poseidion, in the territory of Miletus, and the Carian mountains, as the text stands (τῶν Καρικῶν ὀρῶν). Groskurd (*Transl. Strab.* vol. iii. p. 2) writes ὄρων for ὀρῶν; and so Strabo is made to say that the southern boundary of Ionia is the Poseidium and the Carian boundaries; but as Caria borders on Ionia, if Strabo wrote so, he has in this passage fixed no boundary, except Poseidion, which is south of the Maeander. If by the Carian mountains he means the range of Messogis, which forms the northern boundary of the basin of the Maeander, he does not seem to have expressed his meaning very accurately; for if the Messogis which is north of the Maeander is the southern boundary of Ionia, it appears inconsistent to speak of a promontory south of the Maeander also as a boundary. But Strabo's text is still capable of explanation. Miletus, which was south of the Maeander, and in a tract once occupied by the Carians, was an Ionian city, and the whole coast line from Phocaea and the Hermus to Poseidion, according to Strabo, was Ionia. It is therefore consistent to make Ionia extend to Poseidium along the coast, and yet to speak of the Carian mountains as a boundary, if he means the Messogis, the mountain range that terminates on the coast in the promontory of Mycale. The Messogis, which lies between the basin of the Cayster and the basin of the Maeander, would form a natural boundary between Caria and the country to the north of the Messogis. Strabo, in another passage (p. 648), says that the plain of the Maeander is occupied by Lydians, Carians, Ionians, Milesians, the people of Myus, and also the Aeolians, who had Magnesia on the Maeander. Again (p. 577), after describing the source of the Maeander, he says that it flows through Phrygia, and then separates Lydia and Caria in the plain of the Maeander; and near the lower part of its course it flows through Caria itself (καὶ Καρίαν αὐτὴν, according to the emended text), that part which is now occupied by the Ionians, and enters the sea between Miletus and Priene. Herodotus places in Caria not only Miletus and Myus, but also Priene, which is north of the Maeander (i. 142). It seems, then, a fair conclusion that the Carians once possessed all the plain of the Maeander in its middle and lower course, and that the Messogis was their northern limit. Immediately south of the Maeander, says Strabo (p. 650), all is Carian, the Carians there not being mingled with the Lydians, but being by themselves, except as to the sea-coast parts which the Myusii and Milesians have appropriated. In Strabo's time, then, or according to the authorities that Strabo followed, the stock of purer Carians commenced immediately south of the Maeander, and there were only traces of the former population in the plain on the north side of the river. On the north-east Caria bordered on Phrygia. Strabo (p. 663) makes Carura on the upper Maeander the boundary between Phrygia and Caria. The range of Cadmus forms a natural boundary to Caria on the north-east, occupying the country between the upper basin of the Maeander and of the Indus, one of the large rivers which enters the sea on the south coast of Caria. The natural limit of Caria on the east would be the high land that bounds the basin of the Indus on the west, and not the range of Daedala, which is in Lycia (Strab. p. 664), and forms the eastern boundary of the basin of the Indus or Calbis of Strabo. But the most eastern place on the coast of Caria, according to Strabo, is Daedala, east of the Indus, and north of Daedala is the mountain range that has the same name. According to this geographer, the small river Glaucus, which enters the bay of Glaucus, is the eastern boundary of Caria on the south coast, and thus he includes within Caria, at least the lower part of the valley of the Indus or Calbis, and the towns of Daedala, Araxa, and that of Calynda, though the site of Calynda is not certain. [CALYNDA.]

The whole coast of Caria, including the bays, is estimated at 4900 stadia. (Strab. p. 651.) The part of the south coast from Daedala westward to Mount Phoenix, opposite to the small island Elaeussa, and to the northern extremity of Rhodes, 1500 stadia in length, was called the Peraea. This Peraea belonged to the Rhodians, and is accordingly sometimes called ἡ περαία τῶν Ῥοδίων (Polyb. xvii. 2), who appear to have had part of this coast at least from a very early period; for Scylax (p. 38) mentions a tract south of Cnidus as belonging to the Rhodians.

The Carians maintained that they were an autochthonous continental people, the original inhabitants of Caria, and that they had always this name. As a proof of it, they pointed to the temple of the Carian Zeus at Mylasa, which was open to the Lydians and Mysians also, for Lydus and Mysus were the brothers of Car. (Herod. i. 171.) The proof might show that there was some fraternity among these three nations, but certainly it would not prove that the Carians were autochthonous in Caria. But the Cretans had a different story. They said that the Cares inhabited the islands of the Aegean, and were subject to Minos, king of Crete, being then called Leleges, but they paid no tribute. They were a warlike race, and manned the ships of Minos. They were afterwards driven from the islands by the Dorians and Ionians, and so came to the mainland. Strabo (p. 661) follows this tradition, and adds that the continental people whom they displaced were themselves Leleges and Pelasgi. But this tradition does not explain the origin of the name Carians. In the Iliad (x. 428), Cares, Leleges, Caucones, and Pelasgi are mentioned among the Trojan auxiliaries; and we may assume them all to be continental

people. The Leleges [LELEGES] seem to have once occupied a considerable part of the west coast of Asia Minor. Strabo (p. 611) observes, that "in all Caria and in Miletus tombs of the Leleges, and forts and vestiges of buildings, are shown." The true conclusion seems to be that Cares and Leleges are different peoples or nations, whatever relationship there may have been between them. In proof of the former occupation of some of the islands of the Aegean by Carians, Thucydides (i. 8) states that when the Athenians, in the Peloponnesian war, removed all the dead bodies from the sacred island of Delos, above half appeared to be Carians, who were recognised by their arms, which were buried with them, and by the manner of their interment, which was the same that they used when Thucydides wrote. He states that the early inhabitants of the islands of the Aegean were pirates, and they were Carians and Phoenicians. According to him, Minos expelled the Carians from the Cyclades (i. 4), which is not the tradition that Herodotus followed. The Carians of Homer occupied Miletus, and the banks of the Maeander, and the heights of Mycale; and consequently, according to Homer, they were both north and south of this river. Strabo even makes the original inhabitants of Ephesus to have been Cares and Leleges.

Within the limits of Caria was a people named Caunii, who had a town Caunus, on the south coast. Herodotus (i. 171) believed them to be autochthonous, but they said that they came from Crete. Herodotus also says that they approximated in language to the Carian nation, or the Carians to them; he could not tell which. But in customs they differed from the Carians and from every other people. The remark about the language is not very clear, but as Herodotus was a native of Caria, he may be supposed to be right as to the fact of some resemblance between the languages of these two people.

The settlements of the Ionians in Asia displaced the Carians from Mycale, near which Priene was built, from Myus on the south side of the Maeander, and from the territory of Miletus, which, according to Homer, was a Carian city (*Il.* ii. 866). The Dorians drove them from Halicarnassus, from Cnidus and the Triopia, and probably the Dorians found the Carians in the island of Cos, which they also seized. The possessions of the Rhodians on the south coast probably belong to the same epoch. But it was only the sea-coast that the early Greek settlers occupied, according to their usual practice, and not all the sea-coast, for in the time of Xerxes (B. C. 480), the Carians contributed 70 ships to the Persian fleet, and the Dorians of Caria supplied only thirty. Homer designates the Carians by the epithet Βαρβαροφώνων (*Il.* ii. 865), the exact meaning of which is a difficulty to us, as it was to Strabo and others of his countrymen (p. 661). We may conclude that there was some intermixture between the Greek settlers and the Carians, as is always the case when two peoples live near one another. But the Carians maintained their language, though many Greek words were introduced into it, as Strabo says (p. 662), on the authority of Philippus, who wrote a history of the Carians. The Carians lived in small towns or villages (κῶμαι), united in a kind of federation. Their place of meeting was a spot in the interior, where the Macedonians, after the time of Alexander, founded the colony of Stratonicea. They met at the temple of Zeus Chrysaoreus to sacrifice and to deliberate on their common interests. The federation was called Chrysaoreum, consisting of the several comae; and those who had the most comae had the superiority in the vote, an expression that admits more interpretations than one. This federation existed after the Macedonian conquest, for the people of Stratonicea were members of the federation, by virtue of their territorial position, as Strabo observes (p. 660), though they were not Carians. The Carians may have formed this confederation after they were driven into the interior by the Ionians and Dorians. This temple was at least purely Carian, and not a common temple like that at Mylasa, mentioned above. The Carians, at the time of the Persian conquest of Caria, had also a Zeus Stratios, whose temple was at Labranda. (Herod. v. 119.)

The Carians were included in the Lydian kingdom of Croesus (Herod. i. 28), as well as the Dorians who had settled in their country. On the overthrow of Croesus by Cyrus, they passed under Persian dominion, without making any great resistance (Herod. i. 174); and they were included in the first nome of Darius with the Lycians and others. (Herod. iii. 90.) In the Ionian revolt (B. C. 499) the Carians made a brave resistance to the Persians. They fought a great battle with the Persians south of the Maeander, on the river Marsyas, and though the Carians were defeated, the enemy lost a great number of men. In a second battle the Carians fared still worse, but the Milesians, who had joined them, were the chief sufferers. At last, the Persian commander Daurises fell into an ambuscade by night, which the Carians laid for him in Pedasus, and perished with his men. The commander of the Carians in this ambuscade was Heracleides, of Mylasa, a Greek. In this war we see that Carians and Greeks fought side by side (Herod. v. 119—121). After the capture of Miletus (B. C. 494), the Persians received the submission of some of the Carian cities, and compelled the submission of the rest. (Herod. vi. 25.)

The Persians established kingly government in Caria, and under their protection there was a dynasty of Carian princes, who may, however, have been of Greek stock. Halicarnassus was the residence of these kings. [HALICARNASSUS.] Artemisia, the daughter of Lygdamis, and of a Cretan mother, accompanied Xerxes to the battle of Salamis with five ships (Herod. vii. 99). She was more of a man than a woman. The Athenians, during their naval supremacy, made the people of the Carian coast tributary, but they did not succeed in establishing their tyranny in the interior. (Thucyd. ii. 9, iii. 19.) When Alexander, in his Persian expedition, entered Caria, Ada, queen of the Carians, who had been deprived of the royal authority, surrendered to him Alinda, a town in the interior, and the strongest place in Caria. Alexander rewarded her by re-establishing her as queen of all Caria, for she was entitled to it as the sister and widow of her brother Idrieus. (Arrian, *Anab.* i. 23; Diod. xvii. 24.) It seems that the early Macedonian kings of Egypt somehow got a footing somewhere in Caria. (Polyb. iii. 2.) After the Romans had finally defeated Antiochus, king of Syria (B. C. 190), who seems to have added Caria to his dominions, the Romans gave part of Caria to Eumenes, king of Pergamus, and part to the Rhodians. (Polyb. xxii. 27; Liv. xxxvii. 56; Appian, *Syr.* c. 44.) According to the terms of the Senatusconsultum, as reported by Livy, the Romans gave to Eumenes, Caria called Hydrela, and the

territory of Hydrela which lies towards Phrygia, with the forts and villages on the Maeander, with the exception of such places as were free before the war with Antiochus. They gave to the Rhodians the part of Caria which was nearest to them, and the parts towards Pisidia, except those towns which were free before the war with king Antiochus in Asia. But the Romans took from the Rhodians their Carian possessions after the war with king Perseus (B. C. 168); or, as Polybius (xxx. 5) expresses it, they made those Carians free whom they had put under the Rhodians after the defeat of Antiochus. (Liv. xliv. 15.) About B. C. 129 the Romans added Caria to their province of Asia; but the Peraea was reserved for the Rhodians, if Strabo's statement applies to his own time. Caunus at least was given to the Rhodians by Sulla. (Cic. *ad Q. Fr.* i. 1. § 11.)

The Carians are represented by the Greeks as a warlike race; and Herodotus (i. 171), whom Strabo copies, says that the Greeks adopted the fashion of helmet plumes from them, handles for the shields, and devices on the shields They were not a nation of traders, like the Greeks. They served as mercenary troops, and, of course, would serve anybody who would pay them well; and they were reproached with this practice by the Greeks, who, however, followed it themselves. Apries, the king of Egypt, had a body of Carians and Ionians in his service (Herod. ii. 163); and Psammenitus, the son of Amasis, had also Hellenic and Carian troops (Herod. iii. 11).

The great plain of Caria is the valley of the Maeander, bounded on the north by the range called Messogis The range of Cadmus, or some high range that is connected with it, appears to run through Caria southward, then west, and to terminate in the peninsula in which Halicarnassus is situated. This high land, called Lide, forms the northern boundary of the Gulf of Ceramicus, and is parallel to the south coast of Caria and near it; for there are only a few small streams that flow from the southern slope to the south coast, while three considerable streams run from the north slope and join the Maeander on the left bank, the *Kara Su*, perhaps the Mossinus or Mosynus, the *Arpa Su*, the Harpasus, and the *Tshina Chi*, the Marsyas, which rises in the tract called Idrias (Herod. v. 118). The valley of the Calbis or Indus is separated by the high lands of Cadmus and by its continuation from the basin of the Meander, though the lower part of this valley is included in Caria by the ancient geographers. The valleys of these three streams, which run at right angles to the direction of the Maeander, are separated by tracts of high land which are offsets from the central range of Caria. One of these transverse ranges, which forms the western boundary of the valley of the Marsyas, is the Latmus; and the high lands called Grion occupy the peninsula between the bay of Iasus and the bay of Latmus.

This general direction of the mountain ranges has determined the irregular form of the western coast of Caria. On the north side of the peninsula of Miletus was the bay of Latmus, so called from the neighbouring range of Latmus, but the bay has disappeared, and a large tract of sea has been filled up by the alluvium of the Maeander, which once entered the sea on the north side of the bay of Latmus. (Chandler, *Travels in Asia Minor, &c.* vol. i. ch. 53, French ed.; MAEANDER.) South of the bay of Latmus was the bay of Iasus, also called Sinus Bargylieticus, the northern side of which terminated in the promontory Posidium, and the southern side was the north coast of the peninsula of Halicarnassus. The Ceramicus (Κεραμεικὸς κόλπος, Herod. i. 174), or Doris of Pliny, now the Gulf of *Boodroom*, is a deep inlet, the north side of which is formed by the mountain range already described as running through Caria from east to west, and terminating in the peninsula of Halicarnassus. The southern side of the bay is bounded by the long Triopian peninsula, at the western extremity of which Cnidos was situated; and in the mouth of the gulf is the long narrow island of Cos, which looks like a fragment of the mountains of the continent. The peninsula of Cnidos is contracted to a narrow neck in two places, and thus is divided into two peninsulas. The more eastern of these two necks seems to be the termination of the Triopian peninsula [BUBASSUS], which forms the northern boundary of the picturesque gulf of *Syme*. The south side is formed by another peninsula, a continuation of a mountain range from the interior of Caria, which terminates on the coast, opposite to the island Elaeussa, in Mount Phoenix, which Ptolemy (v. 2) enters in his list as one of the great mountains of the western side of Asia; and it is the highest mountain in those parts (Strab. p. 652). The Peraea of the Rhodians commenced at Phoenix and ran eastward along the coast between the mountains of the interior and the sea (Strab. pp. 651, 652). The bay of Syme has a rugged and uneven coast, and itself contains several other bays, which Mela, proceeding from east to west in his description of the coast of Caria (i. 16), names in the following order: — Thymnias, Schoenus, and Bubessius. The Thymnias, then, is the bay right opposite to the island of Syme, bounded on the north side by the promontory Aphrodisium; the Schoenus is the next bay further north; and the bay of Bubassus is the bay north of the Schoenus, and the termination of the gulf of Syme. Close to this bay of Bubassus is the narrow neck of land which connects the Cnidian peninsula with the mainland. (See Hamilton's *Asia Minor, &c.* vol. ii. p. 77.) Some geographers place the bay of Bubassus on the south side of the Triopian peninsula, where also the land is contracted to a narrow neck; but if the Cnidian isthmus of Herodotus is rightly determined, this is not the bay of Bubassus. [BUBASSUS.] If this is the right position of the Bubassus, the Bubassie of Herodotus (i. 174) is the long peninsula to the east of the Triopia, or the rocky tract that contains the mountain Phoenix. And this peninsula is what Diodorus (v. 60, 62) calls the Chersonesus opposite to the Rhodians; Pliny also (xxxi. 2) speaks of the Chersonesus Rhodia. This peninsula, or Rhodian Chersonese, terminates in the Dog's Tomb (Cynossema) or Ass' jaw (Onugnathos), right opposite to the island of Rhodes, and in the Paridion promontory perhaps of Pliny opposite to the island of Syme. (Comp. Plin. v. 28, and Mela, i. 16.)

The neck of this Rhodian Chersonese is the narrow tract between the head of the gulf of Syme and a land-locked bay on the east, at the head of which was the town of Physcus. Between this last-mentioned bay and another small bay, Panormus, to the east, is another Chersonesus; and further east, between the mouth of the Calbis and the gulf of Glaucus, *Macri*, is another Chersonesus, which terminates in the promontory Pedalium or Artemisium. The irregular coast of Caria is most picturesque,

and in some parts the rocks rise abruptly from the sea.

There was a road from Physcus in the Peraea of the Rhodians to Ephesus. The distances were, from Physcus to Lagina, in the territory of Stratonicea, 850 stadia; to Alabanda, 250; to the passage of the Maeander, 80 stadia: in all 1180 stadia from Physcus to the Maeander (Artemidorus, quoted by Strabo, p. 663). At the Maeander Strabo places the limits (*ὅροι*) of Caria, an expression which may seem to support Groskurd's emendation mentioned at the beginning of this article.

Though a large part of Caria is mountainous, it contains some extensive valleys and a great deal of good land in the basin of the Maeander and its tributary streams. The Peraea is a beautiful country, and contains some fertile tracts. There is still a good deal of timber on the hills in many parts of Caria, firs, oaks, and many fine plane trees. The country produces good grain and fruits, the fig and the olive. The vine grows to the top of the highest trees. Oil is made in Caria. The variation in altitude causes a great difference in climate, for the higher tracts are cold, wintry, and snow-covered, while it is hot in the lower grounds. In the upper valley of the Mosynus it is still winter in the month of March. Some sheep are fed in Caria; and we may conclude that, as Miletus was noted for its wool, the high lands of Caria formerly fed a great number of sheep. The green slopes near Alabanda, *Arab Hissá*, in the valley of the Marsyas, are now covered with flocks. The limestone of the country furnished excellent building material; and there are hot springs and gaseous flames. (Fellows, *Discoveries in Lycia, Asia Minor, &c.*) The palm tree grows luxuriantly, and the orange about the ancient Halicarnassus. The wine of Cnidus was highly esteemed in ancient times.

The islands off the Carian coast are too remote to be considered as appendages of the mainland, with the exception perhaps of Cos, already mentioned, and the island of Syme, which is off the bay of Thymnias. There are many small rocky islands along the coast. The numerous towns are described under their several heads. [G. L.]

CARIATAE (*Καρίατα*, Strab. xi. p. 517), a small town of Bactriana which was destroyed by Alexander the Great. It is said by Strabo to have been the place where Callisthenes was secured by Alexander's guards. (Arrian, *Anab.* iv. 14; Curt. viii. 5. § 8; Plut. *Alex.* 55.) [V.]

CARILOCUS (*Charlieu*), a town of the Aedui, according to some of the Latin texts of Ptolemy; but the name is said not to appear in any of the Greek texts, which is suspicious. Nor is it mentioned by any ancient writer. It appears under the name of Carus locus in the documents of the 10th century. *Charlieu* is near the right bank of the Loire, between *Semur* and *Roanne*. [G. L.]

CARINE. [CARENE.]

CARISA or CARISSA (Coins: *Κάρισσα*, Ptol. ii. 4. § 13: Regia Carissa cognomine Aurelia, Plin. iii. 1. s. 3: Rn. with inscriptions at *Carixa*, near *Bornos*, in the neighbourhood of *Seville*), a city of the Turdetani in Hispania Baetica, in the conventus of Gades, having the *civitas Latina*. Several of its coins are extant. (Caro, *Ant. Hisp.* iii. 19; Morales, *Antig.* p. 8, b.; Florez, *Med. de Esp.* vol. i. p. 285, vol. iii. p. 30; Mionnet, vol. i. p. 8, Suppl. vol. i. p. 16; Sestini, pp. 20, 38; Eckhel, vol. i. p. 16). [P. S.]

CARMAEI, a tribe of the Minaei [MINAEI], mentioned by Pliny (vi. 28. s. 32), probably the same as the *Ἀκαρμὰν βασίλειον* of Ptolemy (vi. 16), which Forster identifies with the modern town *Karn-al-Manzil* in the *Hedjaz* between *Tayif* and *Mekka*, about 50 miles SE. of the latter (*Arabia*, vol. i. pp. 133, 134, vol. ii. pp. 255—258). [G.W.]

CA'RMALAS (*Καρμάλας*), a Cappadocian river. Strabo (p. 537) says that in Cataonia there is a hill fort, Dastarcum, round which the river Carmalas runs. Then he says, in Sargarausene of Cappadocia, there is a small town Herpa, and a river Carmalas, "which *also* flows into Cilicia;" that is like the Pyramus, which he has described a little before. And again, king Ariarathes dammed up the Carmalas, but it burst the dike and damaged some land about Mallus in Cilicia, which is near the coast (p. 539). There is great confusion here, for Sargarausene is one of the northern divisions of Cappadocia. In another passage (p. 663) Strabo fixes a place called Herphae, which seems to be the same name as Herpa, in Melitene, near the Euphrates. Finally, Ptolemy (v. 6, 7) places a town Carmala in Melitene and near the junction of the Melas and the Euphrates. Some geographers have assumed from this that the Carmalas and the Melas are the same river: and that Strabo is mistaken about the Carmalas flowing into Cilicia. This cannot be admitted, though it is true that there is confusion in the passages quoted from Strabo. If the Carmalas is a river of Cataonia, it must be a branch of the Pyramus, and one of the branches of the Pyramus is marked *Charma Su* in some maps. [G. L.]

CARMA'NA. [CARMANIA.]

CARMA'NIA (*Καρμανία*, Strab. xv. p. 726; Arrian, *Anab.* vi. 28, *Ind.* 32; Pol. xi. 32; Steph. B.; Plin. vi. 23; Marcian, *Peripl.* p. 20; Ptol. vi. 8; Amm. Marc. xxiii. 6), an extensive province of Asia along the northern side of the Persian Gulf, extending from Carpella (either *C. Bombareek* or *C. Iask*) on the E. to the river Bagradas (*Nabend*) on the W. According to Marcian, the distance between these points was 4250 stadia. It appears to have comprehended the coast line of the modern *Laristán*, *Kirman*, and *Moghostán*. (Burnes' Map, 1834.) It was bounded on the N. by Parthia and Ariana, on the E. by Drangiana and Gedrosia, on the S. by the Persian Gulf, and on the W. by Persis. It was a district but little known to the ancients, though mentioned in Alexander's expedition against India, in Nearchus's voyage, and in the wars of Antiochus and Ptolemy.

Ptolemy divides Carmania into Carmania Deserta and Carmania. In the former, which was the inland country, now called *Kirman*, he mentions no towns or rivers, but gives simply a list of places which are otherwise unknown to us. In Carmania, or Carmania Vera, as it has been called by the old geographers, he mentions many rivers and places, which have been identified with more or less certainty. The principal mountain ranges were the Mt. Semiramidis (*ὄρος Σεμιραμίδος*, Arrian, *Peripl.*; Marcian, p. 20), perhaps that now called *Gebal Shemil*, a high land on the coast at the narrowest part of the Persian Gulf; and on the confines of Gedrosia, a mountain named Strongylus. The principal capes were Carpella (either *C. Bombareek* or *C. Iask*), the eastern extremity of a mountain which terminated at the entrance of Paragon Bay; Harmozon (*Kohistug?*), and Tarsia, near the Persian frontier (*C. Sertes* or *Ras-el-Jerd?*). The chief

rivers were the Anamis, Andanis, or Addanis (*Ibrahim Rud*), which flows down from the Persian mountains, and falls into the Persian Gulf near Harmozon; the Corius or Carius (either the *Shur* or *Div Rud*), and the Bagrada (*Nabend*).

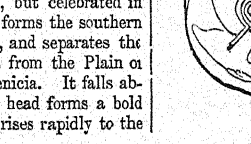
Ptolemy divides the territory of Carmania into several subdivisions, the names of which are not met with in other authors; they are the Rudiana or Agdinitis, Cabedena, Paraepaphitis, and Modomastite. Other names which he mentions, as the Camelobosci, are merely descriptive of the occupation or mode of life of particular tribes. The inhabitants of Carmania were called Carmanii (Καρμάνιοι, Diod. ii. 2, Tacit. vi. 36) or Carmani (Καρμανοί, Polyb. v. 79; Mel. iii. 8; Plin. vi. 26, &c.), and comprehended several nations, or probably tribes, whose names are given by Ptolemy. They appear to have been a warlike independent race, exhibiting, according to Strabo (xv. p. 727) and Arrian (*Ind.* 38), a great resemblance in their manners and customs to the Medians and Persians. Little more is known of the various cities which are placed in Carmania by ancient writers than of the subdivisions of that territory, according to its nations or races. Ptolemy mentions Harmuza, whose name implies a Persian origin, and which was visited, if not founded, by Nearchus (Arrian, *Ind.* 33), and Tarsiana, on the coast; and Arrian (*Ind.* 37) adds Sidodone; and in the interior of the country, Ora, Cophanta, Throasca or Oroasca, Sabis, Alexandreia, and Carmana. The latter is called by Ptolemy Metropolis (μητρόπολις), and is without doubt the town now called *Kirman*, which gives its name to the whole province of *Kirman*. It was in the time of Ammianus (xxiii. 6) a place of wealth and luxury.

Along the coast of Carmania were several islands, Organa, Cataea, Aphrodisias, and Ooracta or Ooractha, Carmana or Carminna, about which, however, little more is known than their names.

The ancient accounts of the province of Carmania speak of it as a land fruitful in corn and wine (Strab. xv. p. 726; Arrian, *Anab.* vi. 28, *Ind.* i. 32; Amm. Marc. xxiii. 6; Curt. ix. 10), but it appears that the olive could not be cultivated there (Strab., Arrian, *ll. cc.*); but from its mountainous and rugged character its wealth in minerals was probably the greatest. Silver, copper, and cinnabar are mentioned among its productions, and even gold was found in some of its water-courses. (Strab. *l. c.*; Plin. vi. 23. s. 26.) The land also possessed abundance of wild asses, but few horses. (Strab. *l. c.*; Vincent, *Voyage of Nearchus*, vol. i. p. 370, &c.) [V.]

CARMEL, a city of Judah, mentioned between Maon and Ziph, in Joshua (xv. 55), the same that occurs with Maon in the history of David. (1 *Sam.* xxv. 2.) The three sites retain their ancient names, and are found two or three hours south of Hebron, *Kurmel* lying between the other two 1½ hour distant from *Zif*, and only half an hour from *Mâin*. The ruins of *Kurmel* are very extensive. (Robinson, *Bib. Res.* vol. ii. pp. 196—200.) [G. W.]

CARMELUS MONS (Χερμήλ, Κάρμηλος, LXX.; Κάρμηλος, Strab. xvi. p. 758; Καρμήλιον ὄρος, Joseph. *Ant.* xiii. 15. § 4), a mountain in Palestine, insignificant in height and extent, but celebrated in history, sacred and profane. It forms the southern extremity of the Gulf of Khaifa, and separates the great western plain of Philistia from the Plain of Esdraelon and the coast of Phoenicia. It falls abruptly to the sea, and its bluff head forms a bold promontory. From this point it rises rapidly to the elevation of about 1,500 feet, and runs in a south-easterly direction for about 18 miles, where it is connected by a range of lower hills with the great range that passes down the whole of Palestine, known in its various parts under various appellations, as the Mountain of Samaria, Mount Ephraim, the Hill country of Judaea, and the Mountains of Hebron. It is a limestone formation, and was formerly celebrated for its fertility, as its name implies.



In the division of the land among the 12 tribes, it formed the southern boundary of Asher (*Josh.* xix. 68), and is chiefly celebrated in Holy Scriptures for the sacrifice of Elijah (2 *Kings*, xxiii.), and there can be little doubt that it owes its fame for sanctity among the Pagans to the tradition of that miracle.

It is mentioned by Iamblichus, in his life of Pythagoras, as a mountain of pre-eminent sanctity, where this philosopher passed some time in solitude, in a temple. He was seen there by the crew of an Egyptian vessel, descending from the summit of the Mount, walking leisurely, without turning back, unimpeded by the precipitous and difficult rocks. He went on board their vessel and sailed with them for Egypt (cap. 3).

It was on this mountain that Vespasian consulted the oracle (Oraculum Carmeli Dei, Suet. *Vesp.* 5). Tacitus also informs us that there was a god synonymous with the mountain. He adds "Nec simulacrum Deo aut templum, sic tradidere majores: aram tantum et reverentiam" (*Hist.* ii. 78). The altar was doubtless the traditional site of that erected by Elijah, the memory of which has been preserved by the natives to this day, at the south-eastern extremity of the range. The celebrated convent at the north-western extremity is said to mark the spot where Elijah and Elisha had their abode. (Reland, *Palest.* p. 327—330; Ritter, *Erdkunde von Asien*, vol. viii. p. 705, &c.)

Pliny speaks of "Promontorium Carmelum et in monte oppidum eodem nomine, quondam Acbatana dictum" (v. 19. s. 17). Possibly he means the town of PORPHYRIUM, now *Khaifa*, at the foot of the mountain. [G. W.]

CARMO (Κάρμων, Strab. iii. p. 141: *Eth.* Carmonensis: *Carmona*), a strongly fortified city of Hispania Baetica, ENE. of Hispalis, at the distance of 22 M.P. on the road to Emerita (*Itin. Ant.* p. 414), on a hill by the side of a S. tributary of the Baetis, now called the *Corbones*. It is first mentioned as one of the headquarters of the rebellion in Baeturia, B. C. 197 (Liv. xxxiii. 21; *validas urbes, Carmonem et Bardonem*), and again in the Julian Civil War, when Caesar calls it by far the strongest city in the whole province of Further Spain (*B. C.* ii. 19; comp. Hirt. *B. Alex.* 57, 64, where it is called Carnona). It is probably the place mentioned by Appian (*Hisp.* 25, 58, where the name has been corrupted into Καρεώνη or Καρβώνη, and Καρμένη); and also the

COIN OF CARMO.

Carmelis of Livy. (Freinsheim, Epit. Lib. xlviii. 24.) Several of its coins are extant; all, with one exception, being of the type here represented, namely, on the obverse the heads of various deities; on the reverse, the name of the city between two ears of corn placed horizontally. (Florez, *Esp. Sagr.* vol. ix. pp. 113—115; *Med. de Esp.* vol. i. p. 288. vol. iii. p. 31; Caro, *Ant. Hispal.* iii. 41; Mionnet. vol. i. p. 9, Suppl. vol. i. p. 17; Sestini, p. 40; Eckhel, vol. i. p. 17). [P. S.]

CARMYLESSUS (Καρμυλησσός), a town of Lycia, placed by Strabo (p. 665) between Telmissus and the mouth of the Xanthus. After Telmissus he says, "then Anticragus, an abrupt mountain on which is the small place Carmylessus, lying in a ravine." The site is unknown. (Fellows, *Lycia*, p. 247; Leake, *Asia Minor*, p. 182.) [G. L.]

CARNA (Κάρνα), the capital of the Minaei, a tribe of Arabia Felix (Strab. xvi. p. 768), mentioned also by Ptolemy (vi. 16) as an inland town; probably the same as Pliny's "Carnon" (vi. 28. s. 22). [G. W.]

CARNASIUM. [Oechalia.]

CARNE. [Antaradus.]

CARNI (Κάρνοι), an Alpine tribe, who inhabited the ranges of those mountains which separated Venetia from Noricum, extending from Rhaetia on the W. to the confines of Istria on the E. Their limits, however, are not very clearly defined. Strabo appears to confine them to the mountain country, and regards the plain about Aquileia as belonging to Venetia (iv. p. 206, v. p. 216). Ptolemy, on the contrary, divides the province into two portions, distinguishing the territory of the Carni from Venetia, and assigning to the former the two cities of Aquileia and Concordia near the coast, as well as Forum Julii in the interior. (Ptol. iii. 1. § 29.) Pliny also calls the district about Aquileia "Carnorum regio," but no mention is found of the Carni in the account given by Livy of the foundation of that city, which he certainly appears to have regarded as situated in Venetia. (Liv. xxxix. 22, 45, 55.) The proper abode of the Carni would therefore seem to have been the mountain ranges that sweep in a kind of semicircle round the plain of the *Frioul;* and which were thence distinguished as the Alpes Carnicae, though in later times better known as the Alpes Juliae. [Alpes.] Here they were bounded by the Rhaetians on the W., by the Noricans on the N., and by the Taurisci and Iapodes on the E. Tergeste, on the very confines of Istria, was, before it became a Roman town, a village of the Carni. (Strab. vii. p. 314.) We have no express statement in any ancient author, concerning their origin, but there seem to be good reasons for believing them to be a Celtic race; and the Fasti Triumphales record the triumph of M. Aemilius Scaurus in B. C. 115, "de Galleis Karneis." (Gruter. *Inscr.* p. 298. 3.) This is the only notice we have of the period of their conquest by the Romans, none of the extant historians having deemed the event worthy of mention; nor have we any account of the period at which they were reduced to a state of more complete subjection; but the names of Julium Carnicum, and Forum Julii, given to the two Roman towns which were established within their territory, sufficiently point out that this took place either under Caesar himself, or (more probably) under Octavian. The construction of a Roman road through the heart of this territory, which led from Aquileia up the valley of the Tilavemptus (*Tagliamento*) to Julium Carnicum (*Zuglio*), and thence across the southern chain of the Alps to Aguntum (*Innichen*), in the valley of the *Drave*, must have completely opened out their mountain fastnesses. But the Carni continued to exist as a distinct tribe, down to a late period of the Roman Empire, and gave to the mountain region which they occupied the name of Carnia or Carniola. The latter form, which first appears in Paulus Diaconus (*Hist.* vi. 52), has been retained down to the present day, though the greater part of the modern duchy of *Carniola* (called in German *Krain*), was not included within the limits of the Carni, as these are defined by Strabo and Pliny. The name of the adjoining province of *Carinthia* (in German *Kärnthen*) is evidently also derived from that of the Carni. The name of that people may very probably be derived from the Celtic root *Carn*, a point or peak (connected with the German *Horn*), and have reference to their abode among the lofty and rugged summits of the Alps. (Zeuss, *Die Deutschen*, p. 248.)

The topography of the land of the Carni is given under the general head Venetia: it being impossible to define with certainty the limits of the Carni and Veneti, the distinction established by Ptolemy having certainly not been generally observed. The only two towns of any consideration which we can assign with certainty to the Carni, are Julium Carnicum (*Zuglio*), and Forum Julii (*Cividale*), the latter of which became, towards the close of the Roman Empire, a place of great importance, and gave to the whole surrounding province the name, by which it is still known, of the *Friuli*, or *Frioul*. Pliny mentions two other towns, named Ocra and Segeste, as belonging to the Carni, but which no longer existed in his time. (Plin. iii. 18. s. 23.) [E. H. B.]

CARNIA (Καρνία), a city of Ionia, mentioned by Nicolaus of Damascus in the fourth book of his history. It is otherwise unknown. (Steph. *s. v.* Καρνία.) [G. L.]

CARNONACAE, a people in Britain, mentioned by Ptolemy as lying between the Creones and the Careni. This gives them the NW. parts of the county of *Sutherland*. [R. G. L.]

CARNUNTUM (Καρνοῦς), an ancient and important Celtic town in the north of Pannonia, on the southern bank of the Danube. Extensive ruins of the place are still visible near *Haimburg*, between *Deutsch-Altenburg* and *Petronell*. Even before Vindobona rose to eminence, Carnuntum was a place of arms of great importance to the Romans; for the fleet of the Danube, which was subsequently transferred to Vindobona, was originally stationed there, together with the *legio xiv gemina*. In some inscriptions we find it stated that the town was raised to the rank of a colony, and in others, that it was made a municipium. (Orelli, *Inscript.* Nos. 2288, 2439, 2675, 4964; Vell. Pat. ii. 109; Plin iv. 25.) The town appears to have reached its highest prosperity during the war of the Marcomanni, when the emperor M. Aurelius made it the centre of all his operations against the Marcomanni and Quadi, on which occasion he resided there for three years, and there wrote a portion of his Meditations. (Eutrop. viii. 13.) Carnuntum also contained a large manufactory of arms, and it was there that Severus was proclaimed emperor by the army. (Spartian. *Sever.* 5.) In the fourth century Carnuntum was taken and destroyed by German invaders, in consequence of which the Danubian fleet and the fourteenth legion were transferred to Vindobona. (Amm. Marc. xxx. 5.) It was, however, rebuilt; and in the reign of Valentinian,

who made there his preparations against the Quadi, it seems to have quite recovered from the catastrophe, for it again became the head-quarters of the fourteenth legion. The town does not seem to have been finally destroyed until the wars against the Magyars, in the middle ages. Whether the fort Carnus mentioned by Livy (xliii. 1) is the same as Carnuntum, or a place in Illyricum, cannot be determined. [L.S.]

CARNUS (*Kálamo*), a small island off the coast of Acarnania, inhabited in the most ancient times by the Teleboae and Taphii. (Scylax, p. 13; Steph. B. *s. v.*; Leake, *Northern Greece*, vol. iv. p. 16.)

CARNUS. [CARNUNTUM.]

CARNU'TES or CARNU'TI (Καρνοῦτοι). Tibullus (i. 7, 12) has the form Carnūti. Plutarch (*Caes.* c. 25) calls them Carnutini. A Celtic people who are mentioned by Livy (v. 34), among the tribes that invaded Italy under Bellovesus, in the time of Tarquinius Priscus. In Caesar's time, the Carnutes occupied a considerable territory, extending from the *Seine* to the *Loire*, and south of the *Loire*. Their principal town, Genabum (*Orléans*), was on the north side of the Loire (*B. G.* vii. 11); and they had another town, Autricum (*Chartres*, Ptol. ii. 8), which derives its modern name from that of Carnutes, which was the name of Autricum under the later Roman empire. Strabo (p. 191) describes the position of *Orléans* pretty correctly by saying that it is about the middle of the course of the *Loire*. Caesar says, that the territory of the Carnutes was reckoned the central part of all Gallia (*B. G.* vi. 13), and that the Gallic Druids met in this country once a year in a consecrated place. The territory comprehended the dioceses of *Chartres*, *Orléans*, and *Blois*. Two places called *Fins* (Fines), on the borders of the diocese of *Chartres* and *Orléans*, and a place called *Terminier*, show that the division of the territory of the Carnutes belongs to the Roman period. The *Chartrain* of the ante-revolutionary divisions of France, in which *Chartres* was included, is derived from the ancient Celtic name.

The Bituriges were the neighbours of the Carnutes on the south, and the Senones on the east. The Carnutes had kings before Caesar's invasion, but it seems that they had got rid of them. Tasgetius, a member of the royal family, did Caesar service in the early part of his Gallic war, and he set up Tasgetius on the seat of his ancestors. The new king was murdered by his subjects in the third year of his reign. (*B. G.* v. 25.) The Carnutes afterwards gave Caesar hostages (*B. G.* vi. 4), and the Remi interceded for them with the Roman proconsul. At this time they are described by Caesar as being dependent on the Remi (in clientela), the meaning of which we are not told, but it may be conjectured from comparing this with other passages in his history of the Gallic war, that Caesar had assigned them (attribuit) to his friends the Remi, who would get something out of them. Yet the Remi were not the neighbours of the Carnutes, for the Senones and some other tribes lay between them. Perhaps this clientela did not exist till after the death of Tasgetius. In the seventh year of the war (B. C. 52), the Carnutes began the general rising against Caesar (vii. 8), by murdering the Roman negotiatores at Genabum, and a Roman eques who was in Caesar's commissariat department. The proconsul paid them back very soon by burning Genabum, and giving the plunder to his soldiers (vii. 11). The Carnutes sent 12,000 men with the other Galli to relieve Vercingetorix, when Caesar was besieging him in Alesia (vii. 75), and they were routed with the rest of the Gallic army. They were in arms again in the following winter (*B. G.* viii. 5), and had to endure the horrors of war in a campaign with the Romans during a very severe season. Again they submitted and gave hostages, and their example induced the Celtae west of them finally to yield to the Roman governor (viii. 31). The last event in the history of the Carnutes mentioned by the author of the eighth book of the Gallic War, is Caesar's flogging to death Gutruatus, a Carnut, who had excited his countrymen to rise against the Romans in B. C. 52.

Pliny (iv. 18) places the Carnuti, as he calls them, in the division of Gallia Lugdunensis, and he entitles them "foederati," a term which we know the meaning of in the time of Cicero; but as we have no records of the history of Gallia of this period, it is difficult to say what is the precise import of the term in Pliny.

The territory of the Carnutes contained a few other small places: Durocasis (*Dreux*); Diodurum; the places called Fines; and Belca. [G. L.]

CAROCOTINUM, a place in Gallia, the commencement of a road in the Antonine Itin., which passes through *Paris* to Augustobona (*Troyes*). The first station from Carocotinum is Juliobona (*Lillebone*), at the distance of 10 Gallic leagues, or 15 M. P. The place thus indicated seems to be *Harfleur*, on the north side of the outlet of the *Seine*. Carocotinum was therefore in the country of the Caleti. [G. L.]

CARON PORTUS (Καρῶν λιμήν), a port town in Moesia, on the coast of the Euxine, in a district called Caria or Cariae, and to the SE. of the modern town of *Gülgrad*. (Mela, ii. 2; Arrian, *Peripl.* p. 24; Anonym. *Peripl.* p. 13.) As to the probability of Carians having established colonies in those parts, see Raoul-Rochette, *Hist. des Colon.* vol. iii. p. 318. [L. S.]

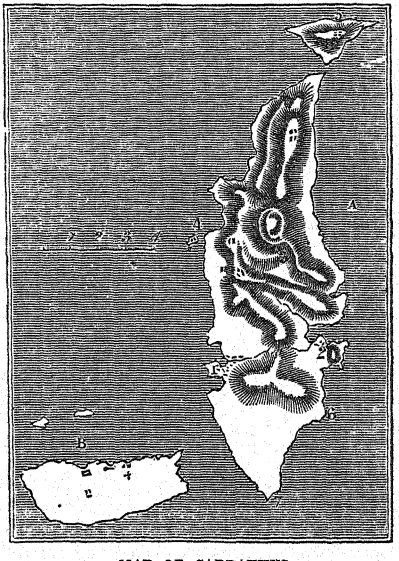
CARO'POLIS (Καρόπολις: *Eth.* Καροπολίτης), or the city of the Carians, a place in Caria, mentioned by Alexander in the first book of his Carica. (Steph. *s. v.* Καρόπολις.) [G. L.]

CARPA'SIA (Καρπασία, Strab., Ptol., Diod., Steph. B.; Καρπασεία, Stadiasm.; Καρπάσιον, Hierocl.; Plin. v. 31. s. 35; Κάρπασος, Const. Porph.: *Eth.* Καρπασεώτης, Καρπασεύς, Steph. B.: *Carpas*), a town and port of Cyprus, to the NE. of the island, facing the promontory of Sarpedon on the Cilician coast. (Strab. xiv. p. 682; Ptol. v. 14. § 4; Scylax.) According to legend, it was founded by Pygmalion. (Steph. B. *s. v.*) It was taken by Demetrius Poliorcetes, together with a neighbouring place called Urania. (Diod. xx. 48.) Pococke (*Trav.* vol. ii. p. 219) speaks of remains at *Carpas*, especially of a wall nearly half a mile in circumference, with a pier running into the sea. (Engel, *Kypros*, vol. i. pp. 83, 174; *Mém. de l'Acad. des Inscrip.* vol. xxxii. p. 543; Mariti, *Viaggi*, vol. i. p. 163.) [E. B. J.]

CARPATES MONS (ὁ Καρπάτης ὄρος: *Carpathian Mountains*). The *name* first occurs in Ptolemy, who applies it to a range of mountains beginning in 46° long and 48° 30′ lat., about 1° W. of the source of the river Tibiscus (*Theiss*), and extending to the E. as far as the source of the Tyras (*Dniester*), forming a portion of the boundary between Dacia on the S. and Sarmatia on the N. (Ptol. iii. 5. §§ 6, 15, 18, 20, 7. § 1, 8. § 1). This description corresponds tolerably well to the *W. Carpathian Moun-*

tains, but Ptolemy insulates the range, taking no notice of its prolongation to the SE. through Dacia (the *E. Carpathian Mountains*), and expressly separating it, on the W., from the Sarmatici M. The earlier writers accurately describe the range as a continuation of the Hercynia Silva, and as running through Dacia, but they do not call it by any specific name (Caes. *B. G.* vi. 25; Strab. vii. p. 295; Plin. iv. 12. s. 25). In the Peutingerian Table it is called Alpes Bastarnicae. It contains the sources of the great rivers flowing through Dacia, southward, into the Danube. (Ukert, vol. iii. pt. 2. pp. 126, 355, 602.) [P. S.]

CARPA'THIUM MARE. [CARPATHUS.]



CA'RPATHUS (Κάρπαθος; Carpathum, Plin.; in Hom. *Il.* ii. 676, Κράπαθος: *Eth.* Καρπάθιος: *Scarpanto*), an island in the sea between Crete and Rhodes, which was named after it the Carpathian sea. (Καρπάθιον πέλαγος, Strab. x. p. 488; Carpathium mare, Hor. *Carm.* i. 35. 8.) Carpathus is described by the ancient authorities as 100 stadia in length (Scylax, p. 56), and 200 stadia in circuit (Strab. p. 489); but according to Bondelmonte, the old Italian traveller, it is 70 Italian miles in circumference. The island consists for the most part of lofty and bare mountains, full of ravines and hollows; and the coast is generally steep and inaccessible. The principal mountain, which is in the centre of the island, and is called *Lastos*, appears to be 4000 feet in height.

Carpathus is said to have been subject to Minos and to have been afterwards colonized by Argive Dorians. (Diod. v. 54.) It always remained a Doric country. At the time of the Trojan war it is mentioned along with Nisyrus, Casus and Cos (Hom. *Il.* ii. 676); but at a later period it was under the rule of the Rhodians. It would seem never to have possessed complete independence, as no autonomous coins of Carpathus have been discovered; while Rhodian coins are commonly found in the island.

Carpathus appears to have been well peopled in antiquity. According to Scylax it contained three towns; according to Strabo, four. The only name which Strabo gives is Nisyrus (Νίσυρος). Ptolemy (v. 2. § 33) mentions another town, called Poseidium (Ποσείδιον). The name of a third, Arcesine (Ἀρκεσίνη), is only preserved in an inscription containing the tribute of the Athenian allies. The site of Arcesine has been determined by Ross. It is now called *Arkássa*, and is situated upon a promontory in the middle of the west coast of the southern part of the island. Poseidium was situated upon a corresponding cape upon the eastern side of the island, and is now called *Pigadin* or *Posin*.

There are ruins of an ancient town upon a rock, *Sókastron*, off the western coast, and of another town upon the island *Saría*, which is ten miles in circuit, and is separated by a narrow strait from the northern extremity of Carpathus. The ruins in *Saría*, which are called *Palátia*, may possibly be those of Nisyrus. (Comp. the names Σαρία, Νισυρία.)

Ptolemy (*l. c.*) mentions two promontories, one called Thoanteium (Θοάντειον), probably the southern extremity of the island, the modern *Akrotéri*, and the other Ephialtium (Ἐφιάλτιον), which Ross conjectures to be a promontory S. of Poseidium, of which the modern name *Aphiartis* is perhaps a corruption. The accompanying map of Carpathus is taken from Ross, who is the only modern traveller that has given an account of the island. (Comp. Herod. iii. 45; Dionys. Per. 500; Plin. iv. 12. s. 23, v. 31. s. 36; Pomp. Mel. ii. 7; Steph. B. *s. v.*; Ross, *Reisen auf den Griech. Inseln*, vol. iii. p. 50.)

MAP OF CARPATHUS.

A. Carpathus.
B. Casus.
1. Arcesine (*Arkássa*).
2. Poseidium.
3. *Mt. Lastos.*
4. *Sókastron.*
5. *Saria.*
6. Prom. Epialtium.
7. Prom. Thoanteium (*Akrotéri*).

CARPE'IA. [CARTEIA.]

CA'RPELLA. [CARMANIA.]

CARPENTORACTE (*Carpentras*), a town of Gallia Narbonensis, mentioned only by Pliny (iii. 4), who calls it Carpentoracte Meminorum: the Memini would therefore be between the Cavares and Vulgientes. *Carpentras* is in the department of *Vaucluse*, NE. of *Avignon*. There is a Roman triumphal arch at *Carpentras*, situated in the highest part of the town. Some time back it was built up in the kitchens of the palace of Bichy, but it is said that it is now set free. It is not known when or on what occasion this arch was erected. Antiquities found at *Carpentras* are mentioned by Caylus (vol. viii. p. 252, pl. 72).

Ptolemy (ii. 10) mentions the Memini, and a place called Forum Neronis. The Memini are otherwise unknown. It seems unlikely that these obscure people—who, if they were really a distinct people, must have had a very small territory—should have had two towns; and it is not easy to explain why Ptolemy should not mention Carpentoracte. The probable conclusion seems to be that Carpentoracte and Forum Neronis are the same place. D'Anville, however, supposes Forum Neronis to be *Forcalquier*, relying on a small resemblance of name; and Walckenaer (*Géog.* &c. vol. ii. p. 219) thinks that "the conjecture which tends to fix Forum Neronis at *Mornas* is preferable to that which fixes it at *Forcalquier*." Carpentoracte kept its name to the sixth century of our æra, which is an argument against it being identical with Forum Neronis. At *Vénasque*, a village about two leagues south of

Carpentras, there are some remains of a Roman temple. This place also is probably within the limits of the Memini. There is also cited an inscription, Col. Jul. Meminorum, which may belong to Carpentras, or to some other place of the Memini.

Strabo (p. 185) speaks of two streams which flow round πόλιν Καουάρων καὶ Οὐάρων, a passage which has caused the critics great difficulty. Groskurd (*Trans. Strab.* vol. i. p. 319) changes καὶ Οὐάρων into Καρπένταρον or Καρπεντάρωνα. It is obvious that καὶ Οὐάρων is only Καουάρων written over again, and divided into two words. It is not likely that Strabo would thus speak of a city without naming it, and we may therefore conclude that in place of καὶ Οὐάρων there should be the name of the city; but the emendation of Groskurd is not accepted by the writer of this article. [G. L.]

CARPE'SII. [CARPETANI.]

CARPESSUS. [CARTEIA.]

CARPETA'NI, CARPE'SII (Καρπήσιοι, Polyb. iii. 14; Liv. xxiii. 26; Steph. B.; Καρπητανοί, Polyb. x. 7; Strab. iii. pp. 139, 141, 152, 162; Ptol. ii. 6. § 57; Liv. xxi. 5; Plin. iii. 3. s. 4), a people of Hispania Tarraconensis, one of the most numerous and most powerful in the whole peninsula, in the very centre of which they inhabited the great valley of the Upper Tagus, and the mountains on its S. margin, to the Anas, from the borders of Lusitania on the W. to the Oretani and Celtiberi on the S. and E., having on the N. the Vaccaei and Arevacae and some smaller tribes. Their country, called CARPETANIA (Καρπητανία), extended over great part of *Old and New Castile*, and a portion of *Estremadura*. (Appian. *Hisp.* 64; Polyb., Liv., Strab., &c. *ll. cc.*) Their chief city was TOLETUM (*Toledo*), and Ptolemy mentions 17 others, most of them upon the great road from Emerita to Caesaraugusta, along the Tagus, which was crossed at Titulcium, above Toletum, by another running from Asturica Augusta to Laminium near the source of the Anas. There was also a road from Toletum to Laminium. On the first of these roads no town is named below Toletum: above it were Titulcia, 24 M. P., the Tituacia (Τιτουακία) of Ptolemy (*Getafe* or *Bayona*); COMPLUTUM (Κόμπλουτον), 30 M. P.; ARRIACA, 22 M. P., the Caracca (Κάρακκα) of Ptolemy, between which and Caesada, 24 M P. the road passed into Celtiberia. (*Itin. Ant.* pp. 436, 438.) On the second road, 24 M.P. NW. of Titulcia, and the same distance from Segovia, and at the foot of the mountains, was Miacum, of which it is not clear whether it belonged to the Carpetani or the Arevacae (*Itin. Ant.* p. 435). Some identify this place with the modern capital *Madrid*, which others take for the Mantua (Μάντουα) of Ptolemy: but both opinions are probably wrong: Mantua is perhaps *Mondejar*. Again, to the SE. of Titulcia, on the road to Laminium, was Vicus Cuminarius, 18 M. P., the name of which is illustrated by Pliny's statement, that the cumin of Carpetania was the best in the world (xix. 8. s. 47): cumin is still grown at *Santa Cruz de la Zarza*, which has therefore been identified with Vicus Cuminarius, but the numbers of the Itinerary better suit *Ocaña*, SE. of Aranjuez: Alce 24 M. P. (near *Alcazar:* comp. Liv. xi. 48, 49); 40 M. P. from Alce was LAMINIUM (*Itin. Ant.* p. 445). On the road from Toletum to Laminium, were Consabrum, 44 M.P. (*Consuegra*), a municipium, belonging to the conventus of Carthago Nova (*Itin. Ant.* p. 446; Plin. iii. 3. s. 4; Geogr. Rav. iv. 44; Frontin. *Stratag.* iv. 5. § 22; Inscr. *ap.* Grnter, p. 402, no. 5, p. 909, no. 14): and Murus (prob. *Morotales*) 28 M. P. from Laminium, and 28 from Consabrum (*Ant. Itin. l. c.*). Among the other cities of the Carpetani were AEBURA (probably the Λιέβρα of Ptolemy); HIPPO; Alea (Ἀλέα, Steph. B.; prob. *Alia*, E. of *Truxillo*); and other places of less importance. The name of Varcilenses is mentioned in inscriptions at *Varciles*, where Roman ruins are found (Morales, *Antig.* pp. 17, 26, 28). Besides the dwellers in these cities, there was a people, called Characitani (Χαρακιτανοί), whose only abodes were the caverns in the hills on the banks of the Tagonius (*Tajuña*), and whose conquest by Sertorius by the stratagem, not of *smoking*, but of *dusting* them out of their caves is related with admiration by Plutarch (*Sertor.* 17) and Mr. Landor (*Fawn of Sertorius*). Their caves are seen in the neighbourhood of *Alcalá* and *Cuenca*, and their name is preserved in that of the town of *Caracena*, W. of the latter place. (Ukert, vol. ii. pt. i. p. 429; Laborde, *Itin.* vol. iii. p. 323.)

At the time of Hannibal's campaigns in Spain, before the breaking out of the second Punic War, the Carpetani are mentioned as the most powerful people beyond the Iberus. United with the Olcades and Vaccaei, they brought 100,000 men into the field against Hannibal, who had some trouble in defeating them (Polyb. iii. 14; Liv. xxi. 5), and found them ready to seize the least opportunity for revolt (Liv. xxi. 11), a disposition which they again showed during the war between Hasdrubal and the Scipios (Liv. xxiii. 26; Polyb. x. 7. § 5), and also towards the Romans in the Celtiberian War, of which their country was one of the chief seats (Liv. xxxix. 30, xl. 30, 33). Their country, which is described as being very productive, suffered much in the war with Viriathus (Appian. *Hisp.* 64).

The names of this people suggest an interesting inquiry. According to general analogy, the *Carpetani* would be the people of *Carpe*, that is, they should have a chief city Carpe. Now we find a city of that name, in the celebrated place on the Straits, variously called Calpe, Carpeia, Carteia, &c. [CARTEIA]; and, moreover, in the other, and apparently more ancient form of the name, *Carpesii*, we may fairly trace a connection with *Carpessus*, which is only another form of *Tartessus*, the still more ancient name of Calpe or Carteia. The obvious inference would be that the Carpetani had been displaced, in the course of time, probably by the growing power of the Phoenician settlers, from their original possessions in the S. of the peninsula, and driven back over the mountains into the great table-land of the centre. But, without doubting that such a process may have taken place, it deserves consideration whether the people may not have originally possessed the central districts in which history finds them, as well as the southern regions in which the names above referred to mark their former presence; whether, in short, the name which we find in the earliest records in the various forms of Tarshish, Tartessus, Carpessus, Carpe, Calpe, Carteia, &c., was not applied to the peninsula as far as those who have recorded the names possessed any knowledge of it. Nay, we even find a people Calpiani beyond the boundary of the peninsula, near the *Rhone* (Herodor. *ap.* Const. Porph. *de Adm. Imp.* ii. 23; Ukert, vol. ii. pt. 1. p. 252). At all events, there can be little doubt that the Carpetani were a part of the old Iberian population of Spain, notwithstanding the vague statement of Stephanus (*s. v.* Ἀλέα) that they were a Celtic race. [P. S.]

CARPI, CARPIA'NI (Καρπιανοί, Ptol. iii. 5.

§ 24), CARPIDES (Κάρπιδες, Anon. *Per. Pont. Eux.* p. 3), a people of Sarmatia Europaea, with whom the Romans were frequently at war (Capitol. *Maxim. et Balb.* 16; Vopisc. *Aurel.* 30; Eutrop. ix. 25; Aurel. Vict. 39, 43; Herodian. viii. 18, et seq.; Zosim. i. 20, 27). They are placed in different positions by different writers. The anonymous author of the *Periplus* places his Carpides, on the authority of Ephorus, immediately N. of the Danube, near its mouth; while Ptolemy places his Carpiani N. of the Carpates M., near the Amadoca Palus, and between the Peucini and Basternae. The latter position agrees well enough with the notices of the Carpi by the historians of the empire. (Ukert, vol. iii. pt. 2. p. 436). [P. S.]

CA'RPIA. [CARTEIA.]

CARPIA'NI. [CARPI].

CARPIS (Κάρπις, Ptol. iv. 3. § 7) or CARPI (Plin. v. 3. s. 4), a town of Zeugitana, on the Gulf of Carthage, NE. of Maxula, and probably identical with AQUAE CALIDAE. [P. S.]

CARPIS (Καρπίς), a river which, according to Herodotus (iv. 49), flowed from the upper country of the Ombricans northward into the Ister, whence it has been supposed that this river is the same as the Dravus. [L. S.]

CA'RREA POTE'NTIA, a town of Liguria, mentioned only by Pliny (iii. 5. s. 7), who enumerates it among the "nobilia oppida" which adorned that province on the N. side of the Apennines. No other trace is found of it; and its site has been variously fixed at *Chieri* near *Turin*, and at *Carrù* on the *Tanaro*, a few miles S. of *Bene;* the latter has perhaps the best claim. [E. H. B.]

CARRHA FLUMEN. [CARRHAE.]

CARRHAE (Κάρραι, Dion Cass. xxxvii. 5, xl. 25; Strab. xvi. p. 747; Ptol. v. 18. § 12; Steph. B.; Amm. Marc. xxiii. 3; Plin. v. 24; Flor. iii. 11; Eutrop. vi. 15; Lucan. i. 104; Κάραι, Isid. Char.; HARAN or CHARRAN, O. T.; Κοραία ἡ ἐν Βαπάνῃ LXX., *Genes.* xi. 31, xxiv. 10; Joseph. *Ant.* i. 16; Zonar. *Annal.* p. 14), a town in the NW. part of Mesopotamia, which derived its name, according to Stephanus, from a river Carrha in Syria, celebrated in ancient times for its Temple of Lunus or Luna (*Anaitis*, Spartian. *Carac.* 7; Amm. Marc. xxiii. 3; Herodian. iv.), and a colony said to have been founded by the Macedonians, and still more as the scene of the celebrated overthrow of Crassus by the Parthian general Suraena. (Strab., Dion Cass., Plut., *ll. cc.*) Ammianus states that Julian here secretly invested Procopius with the purple, in case that fate should befall him.

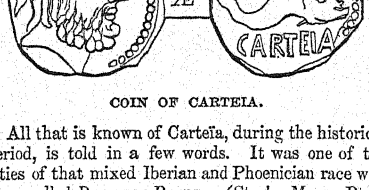
It has been generally supposed that Carrhae represents the place which in Sacred history is called Haran or Charran; a view which seems to be supported by the spelling of the name in Josephus, Zonaras, &c. (*ll. cc.*) It is also stated that the name still remains in the country, though the place is now deserted. (Niebuhr, vol. ii. p. 410; Pococke, vol. ii. p. 235.) Several coins exist, in which Carrhae is spoken of as a colony and a metropolis. They belong to the times of Alexander Severus and the Gordians. One of M. Aurelius is curious, as it bears the inscription Καῤῥηνων φιλορωμαιων. There appears to be some doubt about the correct name of the neighbourhood on which the town of Carrhae was situated. Stephanus (*s. v.* Βόγχαι) speaks of a river Cyrus, between which and the Euphrates this place stood. It is most likely that Carrha was the true name, and Cyrus the mistake of some transcriber of the MSS. [V.]

CARRHODU'NUM (Καῤῥόδουνον). 1. A town of the Lygians in Germania Magna, probably the modern *Zarnowice*, on the *Pilica*, in *Poland*. (Ptol. ii. 11. § 29.)

2. A town in Pannonia, also called Cardunum (Itin. Hier. p. 562), and probably the modern *Sandrovecz*. (Ptol. ii. 15. § 5.)

3. A town in European Sarmatia, the situation of which is unknown. (Ptol. iii. 5. § 30.) [L. S.]

CARRU'CA, a city of Hispania Baetica, only mentioned in the *Bellum Hispaniense* (c. 27). It lay somewhere to the N. of Munda. [P. S.]



CA'RSEAE (Κάρσεαι), a town so called, as it is supposed, by Polybius (v. 77). But perhaps Polybius uses the Ethnic name (πρὸς Καρσέας), as one may infer from the words which follow. King Attalus, with some Galatae, made an incursion against this place or people, and he reached them after crossing the river Lycus. A reading Καρησέας instead of Καρσέας is mentioned by Bekker (ed. Polyb.). There is some probability in Cramer's conjecture, that the place which is meant is the Caresus of Strabo [CARESUS]; and there is nothing in the narrative of Polybius that is inconsistent with this supposition. This river Lycus is unknown. [G. L.]

CARSE'OLI (Καρσέολοι, Strab.; Καρσίολοι, Ptol.: *Eth.* Carseolanus), a city of the Aequians or Aequiculi, situated on the Via Valeria, between Varia and Alba Fucensis: it was distant 22 miles from Tibur and 42 from Rome. (Strab. v. p. 238; Itin. Ant. p. 309.) Livy expressly tells us that it was a city of the Aequiculi, and this is confirmed both by Pliny and Ptolemy, but when in B. C. 301 it was proposed to establish a colony there, the Marsians occupied its territory in arms, and it was not till after their defeat and expulsion that the Roman colony (to the number of 4,000 men) was actually settled there. (Liv. x. 3, 13.) Its name appears in B. C. 209, among the thirty Coloniae Latinae enumerated by Livy: it was one of the twelve which on that occasion declared their inability to furnish any further contingents: and were punished in consequence at a later period by being subjected to increased burdens. (Liv. xxvii. 9, xxix. 15.) It appears to have been a strong fortress, and was hence occasionally used as a place of confinement for state prisoners. (Id. xlv. 42.) It is next mentioned by Florus (iii. 18) during the Social War, when it was laid waste with fire and sword by the Italian allies. But it must have quickly recovered from this blow: it received a fresh accession of colonists under Augustus, and is noticed both by Pliny and Ptolemy as one of the chief towns of the Aequiculi; its continued existence as a flourishing town can be traced throughout the period of the Roman Empire, and we learn from inscriptions that it retained its colonial rank. As late as the 7th century P. Diaconus speaks of it as one of the chief cities of the province of Valeria. (Plin. iii. 12. s. 17; Ptol. iii. 1. § 56; Lib. Colon. p. 239; Orell. *Inscr.* 994; Murat. *Inscr.* p. 515. 2; P. Diac. ii. 20.) The period of its decay or destruction is unknown; but the modern town of *Carsoli* is distant above 3 miles from the site of the ancient one, the remains of which are still visible at a place called *Civita* near the *Osteria del Cavaliere*, a little to the left of the modern road from Rome to *Carsoli*, but *on* the Via Valeria, the remains of which may be distinctly traced. Great part of the walls of Carseoli are still visible, as well as portions of towers, an aqueduct, &c. These ruins were overlooked by Cluverius, who erroneously placed Carseoli

at *Arsoli*, but were pointed out by Holstenius (*Not. in Cluv.* p. 164); they are described in detail by Promis (*Ant. d'Alba Fucense*, p. 57, &c.). The upper part of the valley of the *Turano*, in which Carseoli was situated, is at a high level, and hence its climate is cold and bleak, so that, as Ovid tells us (*Fast.* iv. 683), it would not produce olives, though well suited for the growth of corn. [E. H. B.]

CARSULAE (Κάρσουλοι), a city of Umbria, situated on the Via Flaminia between Mevania and Narnia. (Strab. v. p. 227.) Tacitus tells us that it was 10 miles from the latter city, and was occupied by the generals of Vespasian when advancing upon Rome by the Flaminian Way, while the Vitellians had posted themselves at Narnia. (Tac. *Hist.* iii. 60.) This is the only notice of it in history, but we learn from Strabo and Pliny that it was a place of consideration under the Roman Empire, and this is confirmed by the ruins still visible at a spot about half way between *S. Gemino* and *Acqua Sparta*, and just about 10 miles N. of *Narni*. According to Holstenius the site was still called in his time *Carsoli*, and there existed remains of an amphitheatre and a triumphal arch in honour of the emperor Trajan. (Strab. *l. c.*; Plin. iii. 14. s. 19; Plin. *Ep.* i. 4; Holsten. *Not. in Cluv.* p. 99.; D'Anville, *Anal. Geogr. de l'Italie*, p. 151.) [E. H. B.]

CARTE'ĬA (Καρτηία: *Eth.* Carteïenses), a very ancient city in the S. of Hispania Baetica, near M. Calpe (*Gibraltar*). Its exact site has been much disputed; but there can be no doubt that it stood upon the small bay which opens out of the straits immediately on the W. of the rock of *Gibraltar*, and which is called the Bay of *Gibraltar* or *Algesiras*. It is true that Livy describes it as on the shore of the Ocean, where it first expands outside of the straits; but his words will, by themselves, quite bear, and indeed the context shows that they require, the interpretation which the statements of other writers compel us to put upon them, that, when he speaks of the narrow straits (*e faucibus angustis*), he refers to the mere passage between the opposite rocks of Calpe and Abila, and assigns all W. of them to the Ocean. (Liv. xxviii. 30, xliii. 3.) The mistaken interpretation, which makes Livy place Carteïa really outside of the straits in the wider sense, only deserves notice as being the opinion of Cellarius, who identifies Livy's Carteïa with the Besippo of other writers (*Geogr. Ant.* vol. i. p. 88). Similarly, but with greater accuracy of expression, Florus describes the place as *in ipso ostio Oceani* (Flor. iv. 2. § 75, compared with Dion Cass. xliii. 31, where the name is corrupted into Κραντία). Strabo, who only mentions it incidentally, at least under the name of Carteia (but see below), says that Munda is distant from it 460 stadia (iii. p. 141, with Casaubon's emendation), and Hirtius (*B. H.* 32) places it 170 M. P. from Corduba (*Cordova*). Mela, whose testimony is the more important in this case from his having been born in the neighbourhood, expressly places it on the bay to the W. of Calpe (ii. 6). Pliny mentions it in conjunction with M. Calpe and the straits (iii. 1. s. 3: *fretum ex Atlantico mari, Carteïa, Tartessos a Graecis dicta, mons Calpe*). The Antonine Itinerary names Calpe and Carteïa together, as one position, Calpe Carteïa, 10 M. P. from Barbariana, and 6 from Portus Albus (*Algesiras*); and Marcian reckons 50 stadia (5 geog. miles) by sea from M. Calpe to Carteïa, which he describes as lying on the right hand to a person sailing from Calpe "into the strait and the Ocean," and 100 stadia from Carteïa to Barbesula, the Barbariana of the Itinerary. (Marcian. Heracl. *Peripl.* p. 39, Hudson.) Ptolemy also mentions it between Barbesula and Calpe (ii. 4. § 6). These numbers, and the evidence of ruins and coins, fix the site of Carteïa, with tolerable certainty, at the very head of the bay, on the hill of *El Rocadillo*, about halfway between *Algesiras* and *Gibraltar*. (Conduit: *A Discourse tending to show the situation of the ancient Carteïa*, in the *Philosophical Transactions*, vol. xxx. pp. 903, foll., 1719; Carter, *Journey from Gibraltar to Malaga*, Lond. 1777, 2 vols.) Ford describes the position as follows:—"The bay is about 5 miles across by sea, and about 10 round by land. The coast road is intersected by the rivers *Guadaranque* and *Palmones:* on crossing the former is the eminence *El Rocadillo*, now a farm, and corn grows where once was Carteïa. . . . The remains of an amphitheatre exist, and part of the city may yet be traced. The Moors and Spaniards destroyed the ruins, working them up as a quarry in building *San Roque* and *Algesiras*. The coins found here are numerous and beautiful. Mr. Kent, of the port-office at Gibraltar, has formed quite a Carteïan museum.....From *El Rocadillo* to *Gibraltar* is about 4 miles." (Ford, *Handbook of Spain*, pp. 19, 20.) The coins belong, for the most part, to the times of the early Roman emperors. They bear the epigraphs CAR. KAR. CART. CARTEIA. In addition to other types, we find on some of them the club, as a symbol of the worship of Hercules, the instrument with which he severed the neighbouring rocks of Calpe and Abila from one another. (Florez, *Med. de Esp.* vol. i. p. 293, vol. ii. p. 637, vol. iii. p. 36; Mionnet, vol. i. pp. 9, 10; Sestini, *Med. Isp.* p. 41; Eckhel, vol. i. pp. 17, 18; Rasche, *Lex. Rei Num. s. v.*)

COIN OF CARTEIA.

All that is known of Carteïa, during the historical period, is told in a few words. It was one of the cities of that mixed Iberian and Phoenician race who were called Bastuli Poeni. (Strab., Marc., Ptol., *ll. cc.*) It is mentioned in the Second Punic War as an important naval station, and as the scene of a sea-fight, in which Laelius defeated Adherbal, B. C. 206. (Liv. xxviii. 30, 31.) In the year of the city 583, B. C. 171, it was assigned by the senate as the residence of above 4000 men, the offspring of Roman soldiers and Spanish women, who had not been united by the *connubium*, upon their manumission by the praetor, L. Canuleius: such of the Carteïans as pleased to remain were enrolled in the number of the colonists, and took their share of the lands; and the city was made a *Latina colonia libertinorum*. (Liv. xliii. 3.) Clear as this testimony is, it is curious that Carteïa is never styled a colony on its coins; but they bear frequent reference to the well-known chief magistrates of a colony, the *quatuorviri*. In the civil war in Spain, Carteïa appears to have been the chief naval station of Cn. Pompeius, who took refuge there after his defeat at Munda, but was compelled to leave it on account of the disaffection of a

party in the city, B. C. 45. (Strab. iii. p. 141; Hirt. *B. H.* 32—37; Appian, *B. C.* ii. 105; Dion Cass. xliii. 40, who also mentions a previous naval engagement off Κραντία, where Carteïa is evidently the place meant, c. 31; comp. Flor. iv. 2. § 75.) These events are alluded to in a letter of Cicero's (*ad Att.* xii. 44. § 4), and in a subsequent letter he refers to the reception of Sextus Pompeius at Carteïa, after the murder of Caesar (*ad Att.* xv. 20. § 3).

A very interesting discussion has been long since raised by the different names under which this city appears to be mentioned by the ancient writers. In the first place, we have the slightly varied form Καρθαία. (Appian, *B. C.* ii. 105; Artemidor. *ap. Steph. B. s. v.*) Strabo mentions a city of the name of Calpe, in a position exactly corresponding with Carteïa (iii. p. 140). Adjacent, he says, to the mountain of Calpe, at the distance of 40 stadia (4 geog. miles or 5 M. P.), is the important and ancient city of Calpe, which was formerly a naval station of the Iberians; and some, too, say that it was founded by Heracles, among whom is Timosthenes, who states that it was anciently named Heracleia (Ἡρακλείαν), and that the great circuit of its walls, and its docks (νεωσοίκους) are shown." Here the distance from M. Calpe corresponds exactly to that given by Marcian (see above), and to the site of the ruins at *El Rocadillo;* the connection of the city with the worship of Heracles is a fact already established in the case of Carteïa, and we know that Carteïa was a great seaport. In fact, so striking are the points of identity, that Casaubon altered the reading from Κάλπη to Καρτηία; and this emendation is supported by the argument that, in each of the subsequent passages in which Strabo mentions Carteïa, he refers to it incidentally as he would to a place he had already mentioned (pp. 141, 145, 151), while he never again speaks of Calpe as a city. That the emendation should not be too hastily admitted, will appear presently; but meanwhile most of the commentators have overlooked an important difficulty in the way of identifying Calpe and Carteïa. When Strabo describes the ancient city and port, on the authority of an old writer, would he omit to mention its identity with Carteïa, a place so well known, as we have seen, in the events of his own times? The most reasonable answer seems to be that Strabo fell, by the necessary fate of compilers, even the most careful, into the mistake of not seeing the identity of an object through the disguise of the different names applied to it by different authorities; and that thus, Timosthenes having mentioned the place by what seems to have been its usual Greek name, Strabo quotes his description, without perceiving the identity of the place with the well-known Roman colony of Carteïa. Why he omits to mention the latter here, remains an unsolved difficulty. Groskurd, who, with some other scholars, maintains a distinction between the cities of Calpe and Carteïa, contends that Strabo also mentions the former in the following passages:—iii. pp. 51, 141, 142; but it seems far more natural to understand each of them as referring to the mountain. An inference of some importance seems fairly deducible from the passage (iii. p. 140), compared with those in which Strabo mentions Carteïa, namely, that Calpe was the prevailing form of the name of the city among the *Greeks*, when Timosthenes wrote, about 100 years before its colonization by the Romans, and that Carteïa was the form commonly used by the Romans. The Antonine Itinerary, as we have seen, uses both names in conjunction, CALPE CARTEÏAM, where all the MSS. but one have *Carpe*, and the great majority have *Carceïam* (one has *Cartegam*, a form also found in the Geogr. Rav.). Nicolaus Damascenus (p. 482, Vales., p. 103, Orelli) and Tzetzes (*Chil.* viii. 217) have the form Καλπία. Stephanus names the harbour of Κάλπη, and adds that some call the people Καρπηιανοί (Καρπηιανοὺς ὡς Καλπεινούς), and the city Καρπήια or Κάρπεια. (Steph. B. *s. vv.* Κάλπαι and Καρπήϊα.) Pausanias calls the city *Carpia* (vi. 19. § 3: Καρπίαν Ἰβήρων πόλιν). Thus, then, we have, chiefly in the Greek writers, the various forms, *Calpe*, *Calpia*, *Carpia*, *Carpeïa*, all connected with one another, and the last with *Carteia*, by the easiest and simplest laws of etymological change. *l* = *r*, *p* = *t*. (In Ptol. ii. 4. § 6, the Palatine Codex reads Κάρπη for Κάλπη, the name of the mountain.) Besides this, a medal is cited by Spanheim and others, bearing the inscription C. I. CALPE (Colonia Julia Calpe), but the legend is confessedly very indistinct, and the fact of its being a medal of Philip the Younger is regarded by Eckhel as decisive against its belonging to Calpe in Spain. (Spanheim, *de Usu et Praest. Numism.* vol. ii. p. 600; Eckhel, vol. i. p. 16.)

But there is a still more interesting identification of the city with the renowned TARTESSUS Strabo, while adopting the theory which placed Tartessus at the mouth of the Baetis, tells us that some identified it with Carteïa (iii. p. 151: ἔνιοι δὲ Ταρτησσὸν τὴν νῦν Καρτηίαν προσαγορεύουσι), and Pausanias (*l. c.*) makes the same statement respecting his city Carpia (εἰσὶ δ' οἳ Καρπίαν Ἰβήρων πόλιν καλεῖσθαι νομίζουσι τὰ ἀρχαιότερα Ταρτησόν). Strabo elsewhere quotes the statement of Eratosthenes, that the country adjacent to Calpe was called Tartessis (p. 148). Mela says: "Carteïa, ut quidam putant, aliquando Tartessus (ii. 6. § 8, where some of the MSS. read *Cartheïa* and *Tartheïa* for *Carteïa*, and *Tarthessus* for *Tartessus*). Pliny: "Carteïa, Tartesos a Graecis dicta" (iii. 1. s. 3: *VRR. Cartheïa, Cartegia, Cartesus, Carthesos, Carchesos*). Pherecydes (*Fr.* 33, ed. Didot) and Apollodorus (ii. 5. § 10) seem clearly to place Tartessus *on the Straits* and close to the Pillars of Hercules (Calpe and Abila). Lastly, Appian (*Iber.* 3) gives it as his opinion that the Tartessus of ancient legends was that city on the sea-coast which, in his time, was called *Carpessus* (Καρπησσός, an etymological mean between *Tartessus* and Carpeïa or Carteïa). He adds that the temple of Hercules, at the Columns (τὸ ἐν στήλαις), appeared to him to have been founded by the Phoenicians; that the worship was still conducted in the Phoenician manner; and that the people regarded their Hercules as the Tyrian deity, not the Theban. It is in this worship of Hercules (already noticed from other sources) that Bochart seeks the original root of the name of the city, in all its various forms, that original root being the name of the Phoenician deity, whom the Greeks and Romans identified with Hercules *Mel-*CARTH. (Bochart, *Canaan*, i. 34, p. 615.) Be this etymology sound or not, it is clear that one and the same root is the basis of all the forms of the name, which is thereby identified with the name by which the S. part of the peninsula was originally known to the Phoenicians, Hebrews (*Tarshish*), and Greeks; and hence that this city was a great seaport from the earliest period of history. (Comp. TARTESSUS.)

The extension of the name in the interior of the peninsula is noticed under CARPETANI; and we might perhaps find another indication of it in the Carteïa

mentioned by Livy as the chief city of the Olcades. (Liv. xxi. 5.) It is true that Greek writers call the place ALTHAEA; but if, as so often happens, the latter word has lost a guttural at the beginning, the forms are etymological equivalents,—Calthaea = Carthaea, one form, as we have seen, of Carteïa. (On the whole discussion, see Cellarius, *Geogr. Ant.* vol. i. p. 90; Wesseling, *ad Itin. Ant.* p. 406; Becker, in Ersch and Gruber's *Encyklopädie, s. v.*: the last writer suggests that *Calpe* was the ancient *Iberian* name, *Tartessus* (i. e. *Tarshish*) the *Phoenician*, and *Carteïa* the Punic; the last form being naturally adopted by the Romans from the Carthaginians, while *Calpe* remained in use through having been the form employed by the Greek writers.) [P. S.]

CARTENNA (Καρτέννα ἡ Κάρτιννα, Ptol. iv. 2. § 4; Cartinna, Mela, i. 6. § 1: *Tenez*), a considerable city on the coast of Numidia, or, according to the later division, of Mauretania Caesariensis; under Augustus, a colony and the station of the second legion. (Plin. v. 2. s. 1: VR. *Carcenna.*) The Antonine Itinerary (p. 14) places it 18 M. P., by sea, east of Arsenaria (*Arzeu*), and 70 M. P. west of Caesarea (*Zershell*). These numbers led Shaw to identify it with *Mostaghanem;* but an inscription found by the French places it without doubt at *Tenez*, much further to the E., and furnishes a striking proof of the danger of trusting implicitly to the *numbers* of the ancient geographers. In fact, the distances of the Itinerary and the longitudes of Ptolemy would have made the positions on this coast one mass of confusion, but for the remarkable clue furnished by the resemblance between the ancient and the modern names; the results deduced from which have been, for the most part, confirmed by the discoveries made since the French occupation. Of this we have a striking proof in the position of Caesarea Iol [IOL], which Shaw identified with *Zershell* on the evidence of the name only; the whole "weight of evidence" being against the site; and inscriptions have proved that he was right and all the ancient authorities wrong. Just so is it with *Tenez* and Cartenna; but in this case Shaw also is wrong. (Pellissier, in the *Exploration Scientifique de l'Algérie*, vol. vi. p. 330.) Ptolemy (*l. c.*) mentions a river Cartennus a little W. of Cartenna. He makes the longest day at Cartenna 14½ hours, and its distance above 3½ hours W. of Alexandreia. (Ptol. viii. 13. § 7.) [P. S.]

CARTHAEA. [CEOS.]

CARTHA'GO (ἡ Καρχηδών), in Africa, the renowned rival of Rome.

I. NAMES. — As there can be no doubt that the Greek and Roman names of the city are but forms of its native name, we must look to the Phoenician, or cognate languages, for the original form; and this is at once found in the Hebrew, where *Kereth* or *Carth* (קרת) is the poetical word which signifies *a city*, and which enters into the names of other cities of Phoenician (or Carthaginian) and Syrian origin, such as *Cirta*, in Numidia, and *Tigranocerta* in Armenia. On the coins of Panormus in Sicily, which was subject to Carthage, we find on the reverse the legend, in Phoenician, *Kereth-hadeshoth*, i. e. *New City*, which is in all probability the name of Carthage. Some read it as *Carth-hadtha*, which is merely a dialectic variety. This etymology is confirmed by a tradition preserved by Solinus, who says (c. 40): — "Istam urbem Carthadam Elissa dixit, quod Phoenicum ore exprimit *Civitatem Novam.*" The reason of the name can be conjectured with a near approach to certainty, for the name of the more ancient Phoenician city in the immediate neighbourhood, Utica, signifies, in Phoenician, the *Old City*, in contradistinction to which Carthage was called *New;* one among many examples of the permanence of an appellation the most temporary in its first meaning. In later times, this *New City* was called *Carthago Vetus*, to distinguish it from the celebrated *Carthago Nova* in Spain. (Bochart, *Phaleg*, p. 468; Gesen. *Gesch. d. Hebr. Sprache*, pp. 228, 229, and *Hebrew Lexicon, s. v.* קִרְיָת; Bayer, *ad Sallust.* p. 347; Mionnet, *Descript. des Médailles*, pl. 20.) Another explanation is given by Niebuhr, namely, that the *New City* (Carthada) was so called in contradistinction to Byrsa (Bozrah), the original city, "just as Neapolis arose by the side of Parthenope." (*Lectures*, vol. i. p. 104, 1st ed.) It is remarkable that, in transferring the name to their own languages, the Greeks changed one, and the Romans the other, of the dental consonants in the word into a guttural. The ancient Roman form, as seen on the *Columna Rostrata*, is CARTACO.

The ethnic and adjective forms are partly derived from the name of the city itself, and partly from that of the mother country. In Greek we have Καρχηδόνιος (*Eth.* and *Adj.*, but the commoner *Adj.* is Καρχηδονιακός, or Καρχηδονικός), and in Latin *Carthaginiensis* (*Eth.* and *Adj.*); but the more usual ethnic is *Poenus*, with the adjective form *Punicus* (equivalent to, and sometimes actually written, *Poenicus:* the poets used *Poenus* for the adjective); while in Greek also, the Carthaginians, as well as the original Phoenicians, are called Φοίνικες (Herod. v. 46; Eurip. *Troad.* 222; Böckh, *Expl. Pind. Pyth.* i. 72. s. 138).

The territory of Carthage is called *Carchedonia* (Καρχηδονία, Strab. ii. p. 131, vi. p. 267, xvii. pp. 831, 832), a term sometimes applied also to the city. (Strab. vi. pp. 272, 287).

II. AUTHORITIES. — This great city furnishes the most striking example in the annals of the world of a mighty power which, having long ruled over subject peoples, taught them the arts of commerce and civilization, and created for itself an imperishable name, has left little more than that name behind it, and even that in the keeping of the very enemies to whom she at last succumbed. Vast as is the space which her fame fills in ancient history, the details of her origin, her rise, her constitution, commerce, arts, and religion, are all but unknown.

Of her native literature, we have barely the scantiest fragments left. The treasures of her libraries were disdained by the blind hatred of the Roman aristocracy, who made them a present to the princes of Numidia, reserving only the 32 books of Mago *on Agriculture* for translation, as all that could be useful to the republic. (Plin. xviii. 4. s. 5: it is worthy of notice, as showing the value of the traditions preserved by Sallust respecting the early population of N. Africa, that he derived them from these Punic records, though through the medium of interpreters; *Jug.* 17.) Of the records respecting her, preserved at Tyre, we have only a single notice in Josephus. (See below, No. III.)

The Greeks and Romans relate only that part of her story with which they themselves were closely connected; a part only of her external fortunes, which does not commence till she has passed the acme of her prosperity, and the relation of which is distorted by political animosity. At the very

outset, we meet with a striking deficiency in the chain even of Greek and Roman testimony. The great historian, whose design so fortunately for us embraced an account of all that was known of the great nations of his day, for some reason or other omitted Carthage from his plan; but yet his few incidental references to her are of great value. Aristotle's brief notice of the Carthaginian constitution (*Polit.* ii. 11), precious and trustworthy as it is, only makes the want of fuller information the more apparent, and compels us the more to regret the loss of his treatise on Governments, in which that of Carthage was discussed at length. Among the historians of the wars of Carthage with the Greeks of Sicily and the Romans, Polybius stands first, in authority and accuracy, as well as in time. Commanding all the means of knowledge which the Romans possessed up to his time, he used them in a spirit above the narrow and selfish patriotism of the Romans. He gives abundant proofs of careful research into the internal state of Carthage, and he has preserved some genuine Punic documents. The chief value of Diodorus, in this inquiry, consists in his narrative of the wars with Syracuse. Livy relates the wars with Rome in the worst spirit of partizanship, and with utter indifference to the internal state, or even the distinctive character of one of the peoples who contended to the death in that "bellum maxime omnium memorabile quae unquam gesta sint." (Liv. xxi. 1.) With less literary power, Appian is a more faithful annalist; but the carelessness of the mere compiler sorely damages his work. In spite of glaring faults, Justin deserves mention as the only writer who has attempted a continuous narrative of the early history of Carthage; which he abridged from Trogus Pompeius, whose account seems to have been founded chiefly on Theopompus. (Heeren, *de Fontibus et Auctoritate Justini*, in the *Comment. Soc. Scient. Götting.* vol. xv. pp. 225, foll.)

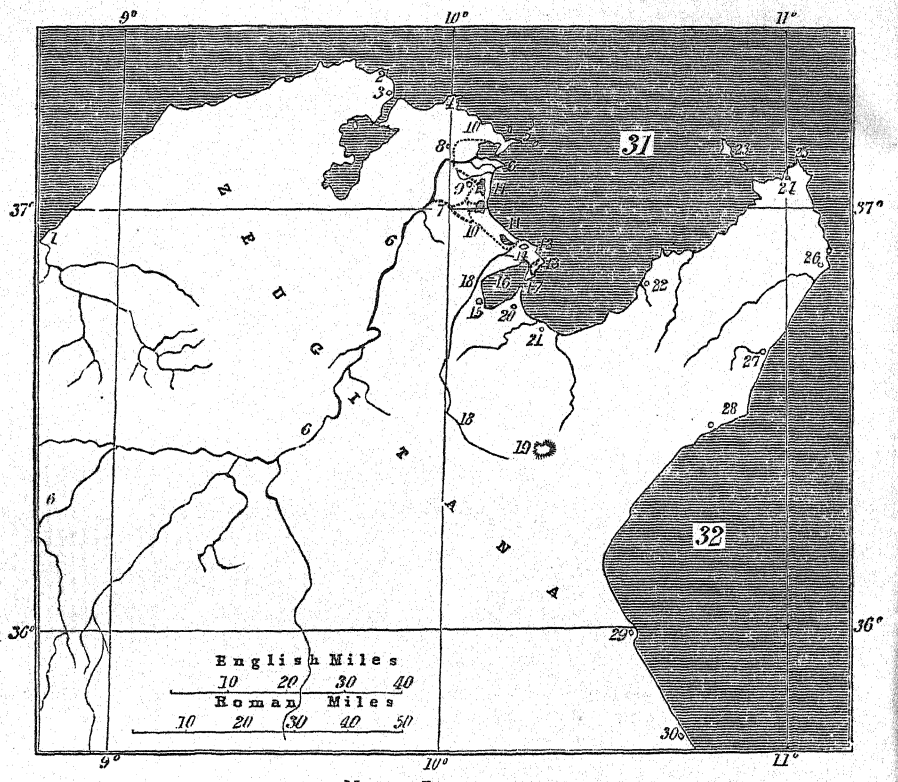
Among modern authorities, the following are the most important: — on the *History, Constitution, and Commerce* of the city, Böttiger, *Geschichte der Carthager*, Berlin, 1827; Campomanes, *Antiguedad Maritima de la Republica de Cartago;* Klnge, *Aristoteles de Politia Carthaginiensium;* Mövers, *Geschichte der Phoenizier;* Becker, in Ersch and Gruber's *Encyklopädie;* Barth, *Ueber die friedlichen Verhältnisse zwischen den Karthagern und Hellenen*, in the *Rheinisches Museum*, 3rd Series, vol. vii. p. 65, for 1850; Niebuhr, *Lectures on the History of Rome*, vol. ii. lect. ii. 1st edition; Arnold, *History of Rome*, vol. ii. c. 39; Grote, *History of Greece*, vol. x. pp. 539, foll.; and the chief writers on general history: on its *Mythology*, Münter, *Religion der Karthager*, Kopenh. 1821; and Gesenius, in Ersch and Gruber's *Encyklopädie;* on the *Geography and Topography*, besides the general works of Mannert, Georgii, Forbiger, and others, Shaw, *Travels in Barbary, &c.*, vol. i. pp. 150, foll., p. 80, 2nd ed.; Estrup, *Lineae Topographicae Carthaginis Tyriae*, Havn. 1821; Falbe, *Recherches sur l'Emplacement de Carthage*, Paris, 1835; Dureau de la Malle, *Recherches sur la Topographie de Carthage*, Paris, 1835; Chateaubriand, *Itinéraire*, vol. iii. p. 186; Temple, *Excursions in the Mediterranean, &c.*, Lond. 1835; Barth, *Wanderungen durch die Küstenländer des Mittelmeeres*, vol. i. pp. 80, foll., Berlin, 1849; Ritter, *Erdkunde*, vol. i. pp. 916, foll.; *Ausland*, 1836, Nos. 122, 124, 128, 1837, Nos. 110, 140: and on the whole subject, the admirable dissertation of Heeren, *Ideen*, vol. ii. pt. 1, or, in the English translation, *Historical Researches into the Politics, Intercourse, and Trade of the Ancient Nations of Africa*, vol. i pp. 21—285, and Appendix.

III. FOUNDATION.—No account of Carthage would be complete which should pass by in silence the legend related by the old chroniclers, and adorned by the muse of Virgil; how Dido, or Elissa, the daughter of a king of Tyre, escaped from the power of her brother Pygmalion, with the treasures for the sake of which he had murdered her husband, and with a band of noble Tyrians who shared her flight; how, having touched at Cyprus, and carried off thence eighty maidens to be the wives of her followers in their future home, she arrived at a spot on the coast of Africa marked out by nature for the site of a mighty city; how she entered into a treaty with the natives, and purchased from them, for an annual tribute, as much land as could be covered with a bull's hide, but craftily cut the hide into the thinnest strips possible, and so enclosed a space of 22 stadia, and on this ground built her city, which afterwards, as the place grew, became the citadel, and retained in its name BYRSA (Βύρσα, *a bull's hide*), the memory of a bargain which, however mythical, has many a counterpart for deceitfulness in later times; how, in the laying of the foundations of the city, its future power was presaged through the discovery, first of the head of a bull, and afterwards of that of a horse, a still better omen; how the city grew by the influx of colonists from the surrounding country, and by the friendship of the older Phoenician settlements, especially UTICA; how its growing prosperity excited the envy of Hiarbas, king of the surrounding Libyans, who offered Dido the choice of war or marriage; how, debarred from the latter alternative by her vow of fidelity to her late husband, but urged to embrace it by the importunities of her people, she stabbed herself to death before their eyes on a funeral pyre which she had erected to her husband's honour; and how the Carthaginians enrolled her among their deities (Justin, xviii. 4, foll.; Virg. *Aen.* i.—iv., with the commentaries of Servius; Appian. *Pun.* 1; Sil. Ital. *Pun.* i. ii.; Procop. *B. V.* ii. 10; Euseb. *Chron. ll. inf. cit.*; et alii; the introduction of Aeneas into the story is Virgil's poetic version, without any foundation in the original legend as related by the historians). Based as this legend plainly is, in part at least, on old traditions, it contains some points worthy of notice. It testifies to the Tyrian origin of the city, and to its inferiority in point of time to Utica and other Phoenician cities on the coast; it indicates that the impulse which originated the colony was not merely commercial activity, but civil dissension: it describes the relations of the new colony to the natives and older colonists in a manner perfectly consistent with later history, as to the occupation of the country by a comparatively civilized race of Libyans (comp. Sallust. *Jug.* 21), from whom the land for the city was acquired not by conquest but by a peaceful bargain, the tribute for which continued to be paid in the time of recorded history; and as to the friendship and support of the older colonies. The part of the tale about the ox-hide is a mere etymological legend arising from the hellenized form of the native Phoenician name, BOZRA, *a fortress*. [Comp. BOSTRA, p. 425, b.] It may be worth while to mention another etymological legend, which ascribes the foundation of the city to Tyrian colonists led by Ezorus, Azorus, or

Zorus, and Carchedon (Philist. *ap. Syncell.* p. 172, s. 324, Fr. 50, ed. Didot; Appian. *Pun.* 1; Euseb. *Chron. s. a.* 978). Dido's name, and that of the city too, are also given in the form of Carthagena, and Dido is represented as the daughter of Carchedon (Καρθαγένα; Syncell. p. 183, s. 345). The name of the city is also said to have been at the first Origo (Syncell. p. 181, s. 340).

All writers are agreed that Carthage was a colony of Tyre, and that it was one of the latest Phoenician settlements on the African coast of the Mediterranean (287 years later than Utica, according to Aristotle), but further than this we have no certain knowledge of its origin. Regard being had to the traditions of its peaceful settlement, and to the earlier establishment of great commercial cities by the Phoenicians on the same coast, and also to the fact, which may be regarded as pretty well established (see below), that the city was founded at the period of the highest commercial prosperity of Tyre, there would seem to be much probability in the conjecture (Becker, in Ersch and Gruber's *Encyklopädie*), that the city originated in a mere emporium (or, in modern language, a *factory*, like that in which the Anglo-Indian empire had its first beginning), established jointly by the merchants of the mother city and of Utica, on account of the convenience of its position; and that it rose into importance by the natural process of immigration, from Utica especially.

Such a gradual origin would in part account for the great variety of dates to which its foundation is ascribed; though another cause of this variety is, doubtless, to be sought in the assigned date from which the Greek and Roman authors have made their computations, sometimes from the fall of Troy, sometimes from the foundation of Rome, and sometimes from the commencement of the Olympiads. Besides these, and the era used by Eusebius, namely, from the birth of Abraham, there is an important computation, from the building of the temple by Solomon, which Josephus gives from old Phoenician documents preserved in his time at Tyre, as well as from Menander of Ephesus.



In order to exhibit the various statements in one view, they are here presented in a tabular form, showing the dates as actually given by the several authorities, and also the corresponding years B. C. To facilitate the comparison, the dates of the eras themselves are also stated.

IV. SITUATION.—A general description of that part of the coast of Africa on which Carthage stood has been given under AFRICA. On the W. side of the great gulf (anciently called Sinus Carthaginiensis, and now *G. of Tunis*), formed by the Apollinis Pr. (*C. Farina*) on the W. and Mercurii Pr. (*C. Bon*) on the E., there is a line of elevated ground between the salt marsh called *Sebcha-es-Sukara*, on the N., and the Lagoon which forms the harbour of *Tunis* on the S., terminating eastward in the two headlands of *Ras Ghamart* and *Ras Sidi Bou Said* (or *C. Carthage*, or *Carthagena*), of which the former lies a little NW. of the latter. *Ras Ghamart* is above 300 feet high, *C. Carthage* above 400 feet. The latter lies in 36° 52′ 22″ N. lat., and 10° 21′ 49″ E. long., and forms the culminating point of the ridge of elevated land just referred to, which sinks on the W. to the level of the adjacent plains. This ridge was in ancient times an isthmus, uniting the peninsula on which Carthage stood to the mainland. Its breadth at the time of the destruction of Carthage did not exceed 25 stadia (2½ geog. miles, Polyb. i. 73; Strab. xvii. p. 832), which still corresponds to the distance in some places between the salt-marsh on the N. and the port of *Tunis* on the S. The width, however, must have been much less at the time of the foundation of Carthage; for the same causes must have been continually acting to enlarge

the isthmus as those which ultimately effected its union on the N. side with the mainland, namely, the alluvial deposits of the river *Mejerdah* [BAGRADAS], and the casting up of silt by the force of the NW. winds, to which the coast of the gulf is exposed without a shelter. Through these influences, the sea which washed the peninsula on the N. has been converted partly into the salt-marsh already mentioned, and partly into firm land, upon which the village of *El-Mersa* (i. e. *the Port*), adorned with the villas of the Tunisians, bears witness by its name to the change that has taken place; and by the same causes, the port or bay of *Tunis*, once a deep and open harbour, has been converted into a mere lagoon, with only 6 or 7 ft. of water, and a narrow entrance called *Fum-el-Halk* or *Halk-el-Wad*, i. e. *Throat of the River*, or *Goletta*, i. e. the *Gullet*. (Shaw, p. 150, p. 80, 2nd ed.; Barth, *Wanderungen, &c.*, pp. 72, 80—82, 192.) Dr. Henry Barth, the latest and best describer of the site, is inclined to believe that the whole isthmus is of late formation, and that the peninsula once presented the appearance of two islands, formed by the heights of *Ras Ghamart* and *C. Carthage*; a conjecture which remains to be tested, as its author observes, by geological investigations. On one side, however, namely, at the SE. extremity of the peninsula, between *C. Carthage* and the mouth of the harbour of *Tunis*, the currents of the gulf have not only kept the coast clear of deposit, but have caused an encroachment of the sea upon the land, so that ruins are here found under water to the extent of nearly 3 furlongs in length, and a furlong or more in breadth (Shaw, *l. c.*). Shaw estimates the whole circuit of the peninsula at 30 miles.

On this commanding spot, just where the African

coast juts out into the very centre of the Mediterranean, and approaches nearest to the opposite coast of Sicily; between the old Phoenician colonies of UTICA and TUNIS (Polyb. i. 73), and in sight of both; stood the successive Punic, Roman, Vandal, and Byzantine cities, which have borne the renowned name of CARTHAGE; but not all of them within the same limits. The details of the topography are much disputed; and their discussion will be best postponed to the end of this article. Meanwhile the position of the peninsula, and its relation to the surrounding sites will be seen from the subjoined map, which gives an outline of the whole region known under the Romans as ZEUGITANA.

V. HISTORY AND ANTIQUITIES. — The history of Carthage is so interwoven with the general course of ancient history, especially in the parts relating to its wars with the Greeks of Sicily and with the Romans, that it would be alike impracticable and superfluous to narrate it here with any approach to fulness. We can only attempt a brief sketch, to be filled up by the reader from the well-known histories of Greece and Rome. The great work of composing a special history of Carthage, worthy of the present state of ancient scholarship, remains to be performed by some one who may superadd to a perfect knowledge of Greek and Roman history a thorough acquaintance with the language and antiquities of the Semitic races, and a vast power of critical research. The *History of Carthage* is usually divided into three periods:—the *first* extending from the foundation of the city to the beginning of the wars with Syracuse, in B. C. 480, and ending with the defeat of the Carthaginians by the Greeks under Gelon at Himera (but see just below); the *second* from this epoch to the breaking out of the wars with Rome, B. C. 480—265; the *third* is occupied with the Roman, or (as they are usually called, from the Roman point of view) the *Punic Wars*, and ends with the destruction of the city in B. C. 146. It seems a far better arrangement to extend the first period down to B. C. 410, when the Carthaginians resumed those enterprises in Sicily to which the battle of Himera had given a complete check; and thus to include in one view the great development of their power. The second period will then be devoted almost entirely to her struggle with the Greeks, during which her empire was not materially increased, and her decline can hardly be said to have begun. The third period is that of her "Decline and Fall." To these must be added the history of the restored city under the Romans, the Vandals, and the Byzantine rule, down to the Mohammedan conquest, and the destruction of the city by the Arabs in A.D. 698. In round numbers, and allowing for the uncertainty of the date of the original foundation, the histories of the two cities fill the respective spaces of 750 and 850 years.

i. *First Period.— Extension of the Carthaginian Empire.* 9th century—410 B. C.— The first period is by far the most interesting, but unfortunately the most obscure, from the want of native authorities. It embraces the important questions of the *Internal Constitution and Resources of the State*, its *Commerce, Colonies, and Conquests*, and its *Relations* to the surrounding *Native Tribes*, to the older *Phoenician Colonies*, and to its own *Mother City*.

1. *Relations to the Mother City.* — With respect to Tyre, Carthage seems to have been almost from its foundation independent; but the sacred bond which united a colony to her metropolis appears to have been carefully observed on both sides. For we find the Tyrians refusing to follow Cambyses when he meditated to attack Carthage by a naval expedition (B. C. 523), and appealing to the mighty oaths by which their paternal relation to her was sanctified. (Herod. iii. 17—19.) On the other hand, in the second commercial treaty with Rome, B. C. 348, the parties to the treaty are "the Carthaginians, *Tyrians*, Uticeans, and their allies." (Polyb. iii. 24: where the idea that either *Tysdrus* or some unknown *Tyrus* in Africa is intended is merely an arbitrary evasion of an imaginary difficulty.) Again, we find the Tyrians, when attacked by Alexander, turning their eyes naturally towards Carthage, first as a source of aid, and afterwards as a place of refuge, whither the women and children and old men were actually sent. (Diod. xvii. 40, 41, 46; Q. Curt. iv. 2.) The religious supremacy of the mother city was acknowledged by an annual offering to the temple of Hercules at Tyre of a tithe of all the revenues of Carthage, as well as of the booty obtained in war (Justin. xviii. 7); a custom, it is true, omitted in the period of prosperity, but at once resorted to again under the pressure of calamities, which were ascribed to the anger of the neglected deity. (Diod. xx. 14.)

2. *First steps towards Supremacy.*—At what time, and from what causes, Carthage began to obtain her decided pre-eminence over the other Phoenician colonies, is a point on which we have no adequate information. Much must doubtless be ascribed to her site, which, we may assume, was discovered to be better than those even of Utica and Tunes; and something to the youthful enterprise which naturally distinguished her as the latest colony of Tyre. The conquests of the Assyrian and Babylonian kings in Phoenicia, and their repeated attacks on Tyre [TYRUS], would naturally drive many of the inhabitants of the old country to seek a new abode in the colonies, and especially in the most recent, the strength of which would, at the same time, receive a new development from the diminished power of the metropolis; and, as the Greek maritime states obtained much of the lost commerce of Tyre in the Levant, so would Carthage in the West. But the want of historical records prevents our tracing the steps of this transference of power.

3. *Relations to the older Phoenician Colonies.* — A like obscurity surrounds the relations of Carthage to the older Phoenician colonies of N. Africa, such as UTICA, TUNES, HIPPO, LEPTIS (the Greater and the Less), HADRUMETUM, and others; all of which appear to have been at an early period, like Carthage herself, practically independent of the mother country; and all of which are found, in the historical period, acknowledging, in some sense, the supremacy of Carthage. But that supremacy was not an absolute dominion, but rather the headship of a confederacy, in which the leading state exercised an undefined, but not always undisputed, controul over the other members, whose existence as independent states seems always to have been recognised, however much their rights may have been invaded. The treaties with Rome, already referred to, mention the *allies* of Carthage, by which we can hardly be wrong in understanding these cities, which therefore were not *subjects*. In the case of Utica especially, it is remarkable that her name is not mentioned in the first treaty; but in the second, she appears on an equality with Carthage, as one of the contracting

powers; which obviously suggests that, in the interval, changes had been effected in the position of the allies towards Carthage, which Utica alone had successfully resisted. It seems, in fact, that all these cities, except Utica, had been rendered tributary to Carthage, though preserving their municipal organization. Leptis Parva, for example, paid the enormous assessment of a talent a day, or 365 talents every year. (Liv. xxxiv. 62.) The period during which the change took place must have been that which followed the battle of Himera, when, induced by that defeat to abandon for a time her projects of further conquests in Sicily, she turned her attention to the consolidation of her power at home. As for Utica, to the very latest period of the existence of Carthage, she retained her separate political existence, in such a manner as to be able to side with Rome against Carthage, and to take her place as the capital of the new Roman province of Africa.

The temper in which Carthage used her supremacy over these allies is one of those points in her history on which we need the guidance of more impartial authorities than we possess. The Greek and Roman writers accuse her of arrogance and oppression; and we can easily believe that she pursued the selfish policy of a commercial aristocracy. In the hour of danger from the revolts of her African subjects, some of the chief Phoenician cities refused to abandon her; but their support may have been prompted by the motive of common safety. They were faithful to her cause in the Second Punic War, but in the Third most of them deserted her. Their fidelity in the former case is more to the credit of her rule than their ultimate defection is against it; for her cause in the final struggle was so hopeless, that self-interest is a sufficient motive for the course they pursued in abandoning her. But, even then, examples of fidelity were by no means wanting; and while the rewards obtained by Utica attest the selfish motives of her defection, the severe penalties inflicted on the allies of Carthage show that her deepest danger had called forth proofs of attachment to her, which indicate better antecedents than mere oppression on the one side, and resentment on the other.

But however exaggerated the statements of her enemies may be, and however little their own conduct gave them the right to become accusers; to deny that they contain much truth would not only be contrary to the laws of evidence, but inconsistent with all we know of the maxims of government pursued by even the best of ancient states. The chief difficulty is to distinguish, in such statements, what refers to her Phoenician allies, and to her African subjects: the strongly condemnatory evidence of Polybius, for example, applies primarily to her treatment of the latter; though the former may possibly be included under the denomination of ταῖς πόλεσι. (Polyb. i. 72.) On the whole, we may suppose that the case of Leptis gives a fair example of that of the Phoenician allies; and that the chief hardship they endured was the exaction of a heavy tribute, which their commerce enabled them, however reluctantly, to pay.

4. *Relations to the Peoples of Africa.* — With respect to the native tribes, we must carefully observe the distinction, which is made both by Herodotus and Polybius, between those who had fixed abodes and who practised agriculture, and those who were still in the nomad state. This distinction is confirmed by the curious tradition already mentioned as preserved by Sallust (*Jugurth.* 18); but it is probably to be accounted for, not by referring the two peoples to a different origin, but by a regard to the different circumstances of those who roamed over the scattered oases of the desert and semi-desert regions, and those who inhabited the fertile districts in the valley of the Bagradas and the terraces above the N. coast. (Comp. AFRICA and ATLAS.) Herodotus distinctly assigns the river Triton, at the bottom of the Lesser Syrtis, as the boundary between the Libyans who were nomads, and those who had fixed abodes and tilled the land; the former extending from the confines of Egypt to the Lesser Syrtis, the latter dwelling in the districts afterwards known as Byzacium and Zeugitana, a portion of which districts formed the original territory of Carthage. All these tribes are included by Herodotus under the general name of Libyans; the several peoples, whether nomad or agricultural, being called by their specific names, such as AUSENSES, MAXYES, ZAUECES, GYZANTES, &c. The distinction runs through the whole Carthaginian history, although different names are used to mark it. Polybius applies the name of *Libyans* to the immediate subjects of the Carthaginians and inhabitants of the original Carthaginian territory; while he designates the free people of Africa, who served in their armies as mercenaries, by the collective name derived from their mode of life, *Nomads* or *Numidians;* still calling each tribe by its proper name. That he does not, like Herodotus, distinguish those also whom he calls Libyans in general by the specific names of their tribes, may be taken as a proof that their very names had been lost in their complete subjection to Carthage. The new position taken up by certain of these nomad tribes, under Masinissa and other chieftains, in the later period of the Punic Wars, gave a territorial sense to the Numidian name; but the primary distinction, which we have here to observe, was between the comparatively civilized tribes of Zeugitana and Byzacium, with fixed abodes and agricultural pursuits, whom Polybius calls *Libyans*, and the *Nomad* tribes who surrounded them on the E., the S., and the W.

a. *The Libyans.* — With the former the Carthaginians were of course brought into contact from their first settlement on the tongue of land, for which tradition assures us they paid a tribute to the Libyans even down to the time of Darius the son of Hystaspes (Justin xviii. 5). But such a relation could no more be permanent than the treaties of white men with American Indians. As they increased in strength, the Carthaginians not only ceased to pay the tribute, but reduced the Libyans to entire subjection. The former lords of the country, driven back from the coast and pent up in the interior, tilled the soil for the profit of their new masters, whether as tenants or still as nominal owners we know not, nor does it matter, for all that they might call their own was held at the mere pleasure of the sovereign state. They were subject to the caprice of Carthaginian officers, and to any exaction of money and men which the exigencies of Carthage might seem to demand. Their youth formed the only regular army (as distinguished from mercenaries) which Carthage possessed; and, as a specimen of their taxation, they were made, in the first Punic War, to contribute fifty per cent. on the produce of their land, while those of them who inhabited the cities had to pay twice their former amount of tribute. No respite or remission was given to the poor, but their persons were seized in default of payment. Their

uneasiness under this heavy yoke is shown by the ardour with which they joined the mercenary soldiers in their revolt from Carthage. (Polyb. i. 72.)

This relation is continually dwelt upon, not only as the main cause of the ruin of Carthage, but as a decided proof of her short-sighted policy. On this point Arnold has the following excellent remarks (*History of Rome*, vol. i. pp. 480, foll.): — "The contrast between Carthage exercising absolute dominion over her African subjects, and Rome surrounded by her Latin and Italian allies, and gradually communicating more widely the rights of citizenship, so as to change alliance into union, has been often noticed, and is indeed quite sufficient to account for the issue of the Punic Wars. But this difference was owing rather to the good fortune of Rome and to the ill fortune of Carthage, than to the wisdom and liberality of the one and the narrow-mindedness of the other. Rome was placed in the midst of people akin to herself both in race and language; Carthage was a solitary settlement in a foreign land. The Carthaginian language nearly resembled the Hebrew; it belonged to the Semitic or Aramaic family. Who the native Africans were, and to what family their language belonged, are among the most obscure questions of ancient history... But whatever may be discovered as to the African subjects of Carthage, they were become so distinct from their masters, even if they were originally sprung from a kindred race, that the two people (peoples) were not likely to be melted together into one state, and thus they remained always in the unhappy and suspicious relation of masters and of slaves, rather than in that of fellow-citizens or even of allies."

b. *The Libyphoenicians.* — Besides these pure native Libyans, another race grew up in the land round Carthage (in Zeugitana and perhaps on the coast of Byzacium), from the mixture of the natives with the Phoenician settlers, or, as Mövers supposes, with a Canaanitish population, akin in race to the Phoenicians, but of still earlier settlement in the country. (Diod. xx. 55; Mövers, *Gesch. d. Phoenizier*, vol. ii. pt. ii. pp. 435—455, *ap.* Grote, vol. x. p. 543.) Of these half-caste people, called Libyphoenicians (Λιβυφοίνικες), our information is but scanty. They seem to have been the chief occupiers and cultivators of the rich land in the immediate vicinity of the city, especially in the valley of the Bagradas; while the Libyans in the S., towards the lake Triton, remained so free from Phoenician or Punic blood, that they did not even understand the Phoenician language. (Polyb. iii. 33.) Like all half-castes, however, the Libyphoenicians seem to have been regarded with suspicion as well as favour: and means were devised to dispose of their growing numbers with advantage to the state as well as to themselves, by sending them out as the settlers of distant colonies, in Spain, for instance, and the W. coast of Africa, beyond the Straits. (Scymn. 195, 196.) The voyage of Hanno, of which we still possess the record, had for its object the establishment of 30,000 Libyphoenician colonists on the last-named coast. (Hanno, *Peripl.* p. 1; comp. LIBYPHOENICES.)

The region occupied by the people thus described, and entirely subject to Carthage, never extended further than the lake of Triton on the S., nor than Hippo Regius (if so far) on the W.; and this district may therefore be considered as the *territory of Carthage*, properly so called, the περιοικίς of the city, as a Greek would say. It included at first the district of Zeugitana, and afterwards Byzacium also, and corresponded very nearly to the present Regency of *Tunis*. (Respecting the precise boundaries, see further under AFRICA, p. 68.) Its inhabitants were, as we have seen, the people of Cartnage herself and the other Phoenician colonies, the native Libyans who were not nomads, the mixed race of Libyphoenicians, and further, the people of colonial settlements which the Carthaginians established from time to time on the lands of the district, as a means of providing for her poorer citizens, to whom the Libyan cultivators were assigned with their lands. (Arist. *Polit.* ii. 8. § 9, vi. 3. § 5.) "This provision for poor citizens as emigrants (mainly analogous to the Roman colonies), was a standing feature in the Carthaginian political system, serving the double purpose of obviating discontent among their town population at home, and of keeping watch over their dependencies abroad." (Grote, *Hist. of Greece*, vol. x. p. 545.) All these, except the Phoenician cities, were in absolute subjection to Carthage. The marvellous density of the population within these limits is shown by the statement that, even in the last period of her decline, just before the third Punic War, when she had been stripped of all her possessions W. of the Tusca and E. of the Triton, Carthage still possessed 300 tributary cities in Libya. (Strab. xvii. p. 833.)

c. *The Nomads.*—Beyond these limits, along the coast to the E. and to the W., in the valleys of the Atlas, and in the oases of the half-desert country behind the sea-board, from the Pillars of Hercules and the W. coast to the frontier of Cyrenaica, the land was possessed (except where Phoenician and Carthaginian colonies were founded, and even in such cases up to their very walls) by the Nomad tribes, whom Carthage never attempted to subdue, but who were generally kept, by money and other influences, in a sort of rude and loose alliance. They were of service to Carthage in three ways: they furnished her army with mercenary soldiers, especially with the splendid irregular cavalry of whose exploits we read so much in the Punic Wars: they formed, on the E., a bulwark against Cyrene, and they carried on the important land traffic with the countries on the Niger and the Nile, which was a chief source of Carthaginian wealth. The nomad tribes of the country between the Syrtes were those most intimately connected with Carthage. It may be added that Diodorus expressly divides the inhabitants of Libya (meaning the part about Carthage) into four races, namely, the Phoenicians who inhabited Carthage; the Libyphoenicians, of whom his account is unsatisfactory; the Libyans, or ancient inhabitants, who still (in the time of Agathocles) formed a majority of the population, and who bore the greatest hatred to Carthage for the severity of her rule; and lastly the Nomads, who inhabited the great extent of Libya, as far as the deserts. (Diod. xx. 55.)

5. *Colonies of Carthage in Africa.*— It is evident that the rule of Carthage over the settled Libyans, and her influence over the Nomads, would have been confined within the limits of her immediate neighbourhood, but for the system of colonization, which gave her at least the appearance of imperial authority over the whole N. coast of Africa, W. of Cyrenaica. The original purpose of her colonies, as of every other part of her proceedings, was commercial; and accordingly, with the exception of those already referred to as established in her immediate territory

for her poor citizens, they were all on or near the coast. The most important of them were those on the E. coast of Byzacium, and along the shores from the Lesser to the Greater Syrtis, which were called pre-eminently the EMPORIA (*τὰ Ἐμπορεῖα* or *Ἐμπόρια*, Polyb. i. 82, iii. 23; Appian, *Pun.* 72; Liv. xxxiv. 62), and which were so numerous as to give the Carthaginians complete commercial possession of the region of the Syrtes, the proper territorial possession of which was comparatively worthless from the physical character of the region. The colonies on the W. portion of the coast, known as the Urbes METAGONITAE (*αἱ Μεταγωνῖται πόλεις*), were more thinly scattered: their number and positions are noticed under MAURETANIA and NÚMIDIA. Besides their commercial importance, these colonies formed so many points of command, in a greater or less degree according to their strength or skill, over the nomad tribes; they contributed regularly to the revenue of the mother city, and bore the chief expense of her wars. They contributed 4000 men to the armies of the republic; but, on the other hand, they often needed aid from the mother city in their contests with the neighbouring barbarians. Many of the cities on this coast were colonies, not of Carthage, but of Phoenicia, and their submission to Carthage seems never to have been with much good will. None of them seem to have had a territory of any considerable extent. The colonies in the neighbourhood of Carthage were in stricter subjection to her, as is denoted by the application of them of the significant Greek term *περιοικίδες*, the colonies in general being called *αἱ πόλεις*: they were kept unfortified, and hence fell an easy prey to the invader: Regulus and Agathocles, for example, whose operations did not extend beyond Zeugitana, are said each to have taken about 200 of them; and a single district, that on the Tusca, is mentioned as containing 50 towns. (Diod. xx. 17; Appian, *Pun.* 3, 68.)

6. *Extent of the Carthaginian Empire in Africa.* — Thus, at a period little subsequent to her first distinct appearance on the stage of recorded history, Carthage possessed an imperial authority, in a greater or less degree, over the N. coast of Africa, from the Pillars of Hercules to the bottom of the Great Syrtis, a space reckoned by Polybius at 16,000 stadia, or 160 geographical miles. (Polyb. iii. 39; comp. Scylax, pp. 51, 52: *ὅσα γέγραπται πολίσματα ἢ ἐμπόρια ἐν τῇ Λιβύῃ, ἀπὸ τῆς Σύρτιδος τῆς παρ' Ἑσπερίδας μέχρι Ἡρακλείων στηλῶν ἐν Λιβύῃ, πάντα ἐστὶ Καρχηδονίων.*) On the W. her power extended over her colonies on the Atlantic coast at least as far as the end of the Atlas range; and on the E., after a long contest with Cyrene, the only foreign power with which she came into contact in Africa, the boundary was fixed at the bottom of the Great Syrtis, at a period so early that the transaction had already acquired a mythic character in the age of Herodotus. [ARAE PHILAENORUM.]

But of all this extensive empire, it should be carefully remembered, the only part immediately and entirely subject to the dominion of Carthage was the territory which extended S. of the city to a distance of about 80 geographical miles, and the boundaries of which were about the same as those of ZEUGITANA; and further S. the strip of coast along which lay BYZACIUM and the EMPORIA. These two districts comprised nearly all the reliable resources of the state. Their fertile plains were cultivated to the highest pitch under the eyes of the nobles, who were always famous for their devotion to agriculture; and they supplied the greater part of the corn required for the consumption of the city.

7. *Earliest Foreign Conquests.* — Like every other great commercial state, both in ancient and modern times, Carthage found that her maritime enterprise led her on, by an inevitable chain of circumstances, to engage in foreign conquests; for effecting which she possessed remarkable opportunities. Surrounded by coasts and islands, which afforded an ample scope for her ambition; supplied with armies from her Libyan subjects and nomad mercenaries, she had likewise the advantage of that systematic traditional policy, which is always followed by governments composed of a few noble families, and in which the very steadfastness with which the end is kept in view is a motive for moderation in its pursuit. The end was the dominion of the western seas for the purposes of her commerce; and to it the means employed were admirably adapted.

Next to an insular position, like that of England, no object is of more consequence to a great maritime power than the possession of islands in the great highways of maritime intercourse; affording, as they do, stations for her fleets and factories, cut off from those attacks of powerful neighbours, and those incursions of vast and warlike peoples, to which continental settlements are exposed. Sensible of this, the Carthaginians turned their first efforts at conquest upon the islands of the W. Mediterranean, resisting the temptation presented by Spain to effect territorial aggrandisement on a much larger scale. Of these enterprises a very brief notice will suffice here, further details belonging rather to the articles on the respective countries.

It should be observed that these expeditions were naturally attended by a development of the military power of the Carthaginians, which manifested itself in successful wars with the Africans at home; and also that they brought Carthage into collision with foreign powers, and gradually involved her in the wars which ended in her ruin.

Of the earliest of these conquests we possess no other information than the brief notices in Justin, according to whom expeditions were undertaken both to Sicily and Sardinia, about the first half of the 6th century B. C., under a general whom he calls MALCHUS (which is simply the Phoenician for *king*), who had also performed great exploits against the Africans. After considerable successes in Sicily, Malchus transported his forces to Sardinia, where he suffered a great defeat, and was in consequence banished. Upon this he led his army against Carthage, and took the city, but made a moderate use of his victory. It was not long, however, before he was accused of a design to make himself king, and was put to death. It is worthy of notice that the first foreign wars of Carthage are associated with the first attempt to overthrow her constitution. (Justin. xviii. 7.)

The enterprise of Malchus was resumed with more success, in the latter half of the same century, by MAGO, the head of a family to whom the Carthaginians were indebted at the same time for the earliest organization of their military resources, and the foundation of their foreign empire. (Justin. xviii. 7: "*Huic [Malcho] Mago, imperator successit, cujus industria et opes Carthaginiensium, et imperii fines, et bellicae gloriae laudes creverunt;*" and directly after, "*Mago, . . . cum primus omnium, ordinata disciplina militari, imperium Poenorum condi-*

disset.") His sons, HASDRUBAL and HAMILCAR, carried on the wars both in Sardinia and in Africa. The cause of the latter war was the refusal of Carthage to continue the payment of tribute or ground-rent for their city; but the Africans were successful, and the Carthaginians had to purchase peace. In Sardinia the Punic arms were more fortunate: Hasdrubal fell in battle, after holding the chief military command in the republic (*dictator*) eleven times, and enjoyed four triumphs. He left the command to his brother Hamilcar, who afterwards fell in Sicily, B.C. 480. (Justin. xix. 1.) Each brother left three sons, who continued to lead the armies of the state, and, while striving to extend her foreign possessions, protected her at home against the Nomads, and compelled the Africans at length to remit the ground-rent for the city. Their names were HIMILCO, HANNO, and GISCO, the sons of Hamilcar; and HANNIBAL, HASDRUBAL, and SAPPHO, the sons of Hasdrubal. The details of their actions are not related further; and the chronology is uncertain, resting only on the probable identification of Justin's Hamilcar with the celebrated commander who fell in the battle of Himera. The following were the earliest foreign conquests of the Carthaginians:—

(1.) *Sardinia* was their earliest province. It belonged to them at the time of their first commercial treaty with Rome, B.C. 509. Its capital, CARALIS (*Cagliari*), and SULCI were founded by them. The island always ranked as the chief among their foreign possessions. It was the great emporium for their trade with W. Europe, and the chief source of their supply of corn, next to their own territory in Africa. There is reason to suppose that they worked gold and silver mines in the island, and that they obtained from it precious stones. They guarded all access to it with the greatest strictness. The Romans, it is true, were allowed to sail to it by the first treaty, under certain restrictions; but, by the second, even this limited permission was withdrawn, and Strabo (xvii. p. 802) informs us that the Carthaginians sank every foreign ship which ventured to touch at the island. It was occupied by a garrison, chiefly of mercenaries; and was governed, like the other foreign possessions of Carthage, by an officer called Boetharch (βοήθαρχος), that is, the commander of the auxiliaries (mercenaries) in time of peace, and in war by a commander (στρατηγός), specially sent out from Carthage. (Polyb. i. 79.) As the Carthaginian power declined, their possession of the island was frequently endangered by revolts of the mercenaries, and at length it fell into the hands of the Romans a little after the end of the First Punic War, B.C. 237. [SARDINIA.]

(2.) *Corsica* was early occupied, as Sardinia also is said to have been, by the Tyrrhenians; but the Carthaginians also obtained a footing in it very early; and the union of the two peoples to resist the enterprizes of other foreign settlers led to the first recorded collision of Carthage with a Greek state; when the combined fleets of the Tyrrhenians and Carthaginians yielded to the Phocaeans of Aleria a victory so dearly bought that the conquerors soon afterwards retired from the island, B.C. 536. [ALERIA.] The power of the two occupants seems to have long been pretty evenly balanced, but that of Carthage at length prevailed. In B.C. 450, Corsica is spoken of as belonging to the Tyrrhenians, but in the Punic Wars it appears as a Carthaginian province, like Sardinia, together with which it fell into the hands of the Romans. This poor, rugged, and sterile island could not, however, be compared to Sardinia in point of its value to its possessors. [CORSICA.]

(3.) *Sicily*, as we have seen, was one of the first objects of the military enterprize of Carthage. Phoenician colonies existed at an early period on all its coasts, especially on the commanding promontories; but many of them succumbed to the steadily advancing power of the Greek colonies; till the Phoenicians only retained their footing on the W. portion of the island, their principal settlements being MOTYA, PANORMUS, and SOLOEIS. As the power of Tyre declined, and that of Carthage grew, these colonies, like others in the W. Mediterranean, came under the power of the latter (Thucyd. vi. 2); but Carthage does not seem to have founded new colonies in Sicily. She appears to have obtained first those settlements which were nearest to her (Thucyd. *l. c.*); and their proximity to her resources enabled her to keep them from falling under the power of the Greeks. With this firm footing in the island, the Carthaginians proceeded to foment the dissensions of the Greek cities till they were prepared to venture on a great battle for the supremacy. They had already been engaged in war with Gelon, the tyrant of Syracuse, as we learn from Gelon's speech to the Greek envoys, who sought aid from him against the threatened Persian invasion (Herod. vii. 158); and, when they saw that that invasion was about to furnish the Greeks of the mother-country with full occupation, they determined on a grand effort against the Sicilian colonies. An occasion was furnished by the expulsion of Terillus, tyrant of Himera, a city in amity with Carthage, by Theron of Agrigentum, the ally of Syracuse, about B.C. 481. Terillus applied for aid to the Carthaginians, who sent over to Panormus a fleet of 3000 ships of war, which disembarked 300,000 men under the command of Hamilcar, B.C. 480. The list of the peoples who contributed to this army, given by Herodotus, is a remarkable testimony to the extent of the empire and alliances of Carthage at this epoch. They were Phoenicians, Libyans, Iberians, Ligyes (Ligurians from the Gulfs of *Lyon* and *Genoa*), Helisyci (which Niebuhr supposes to mean Volsci), Sardinians, and Corsicans. Hamilcar laid siege to Himera: Gelon advanced to raise the siege; and a battle ensued, in which Hamilcar was slain and his army was utterly defeated. (Herod. vii. 165—167; Diod. xi. 21—24.) This great battle of Himera was fought, according to Herodotus, on the very day of the battle of Salamis; according to Diodorus, on that of Thermopylae. The discrepancy may be taken as a proof that the Greeks, ignorant of the exact day of the battle, tried to improve on a coincidence which was sufficiently remarkable. For Himera, no less than Salamis, was one of "the decisive battles of the world;" and that in a sense of which no contemporary could form the least anticipation. Had the event of the day been different, there would seem to have been no obstacle to the establishment of a Carthaginian empire in Sicily and Italy, which might have advanced over all the shores of the Mediterranean. (See a similar observation, with reference to a later period, in Polyb. v. 104.) But, as it was, the Carthaginians were driven back upon their old limits in the W. part of the island, and they seem to have abandoned, for a time, further efforts there, and to have turned their attention to the complete establishment of their power in Africa, and to the extension of their colonies in the West. They did not resume their designs on Sicily till B. C. 410, and from that time the

wars with the Greek colonies, which are the chief events in the second period of the Carthaginian history, fully occupied their armies until Rome had acquired strength to engage in that contest which deprived Carthage not only of Sicily, but at last of her own existence. [SICILIA.]

(4.) *The Balearic and smaller islands*, most of which had been colonized by the Phoenicians, were all occupied by the Carthaginians as emporia or factories. [BALEARES]. Among the smaller islands referred to, were Melita (*Malta*), Gaulos (*Gozo*), and Cercina (*Karkenah*), besides others of less importance, as, for example, Lipara. (Polyb. i. 24.) These islands afforded naval stations of importance, and some of them furnished valuable articles of produce. Malta was made the seat of flourishing manufactories, especially of fine cloth. In fine, we are distinctly told by Polybius that all the islands of the Western Mediterranean belonged to Carthage at the commencement of the Punic Wars. (Polyb. i. 10.)

(5.) *Spain* was long an object of peaceful commerce, rather than of conquest, to the Carthaginians. Phoenician settlements had existed on its shores from a time earlier than history records; and to these Carthage added colonies of her own; but her relations with the natives were peaceful, and she does not appear to have attempted the subjugation of the country till after the loss of Sardinia and Sicily. But around her colonies and marts she doubtless obtained possession of considerable tracts of land; and hence Polybius (*l. c.*) tells us that "many parts of Spain" belonged to her when she entered on her contest with Rome. The Spanish mines were a most important source of wealth to the republic.

Of the general character of the rule of Carthage over her foreign possessions, we have very little information, beyond the fact that the oppressions of their governors disposed them continually to revolt. In this respect their sufferings seem to have been far less than those of the Roman provinces; but they were likewise borne with far less patience at the hands of a state whose authority was sustained only by a mercenary soldiery, who were themselves in a condition of chronic discontent.

8. *Foreign Colonies.*—Beyond the limits of the countries or districts of which Carthage took possession, she established many colonies on distant shores, to serve as harbours for her ships, marts for her commerce, and outlets for her surplus population. These settlements occupied many points on the coasts of the W. Mediterranean, not only in Africa, the islands, and Spain, but also in Gaul and Liguria (see above); and beyond the Pillars of Hercules they extended far both N. and S. along the shores of Europe and Africa, and into some of the islands of the Atlantic. Of the colonies in Africa we have had occasion to speak in describing the Carthaginian empire in that continent. Especial interest attaches to those founded on the W. coast of Africa by Hanno, on account of the Greek translation which we still possess of the narrative of his voyage, which he suspended, on his return, in the temple of Cronos at Carthage (Hudson, *Geographi Graeci Minores*, vol. i. Oxon. 1798). Simultaneously with this expedition, another was sent out under Himilco to explore the western shores of Europe. The narrative of this voyage, which the ancient geographers possessed, has been lost to us; but several particulars of it are preserved in the *Ora Maritima* of Festus Avienus, and some of the chief points have been noticed under ATLANTICUM MARE. Of the colonies which Himilco, like Hanno, doubtless planted, no traces have come down to us: the supposition that they reached as far as the British islands can neither be positively accepted nor rejected without more evidence than we possess. As to the time of these two great expeditions, there seems good reason to believe that their leaders were the Hanno and Himilco who are mentioned by Justin (*vid. suprà*) as sons of Hamilcar, and that the date is therefore about the end of the 6th century B. C.

9. *Relations to Foreign States.*—The points of connection or collision between Carthage and other states during this first period, though few, are very interesting.

(1.) *Greeks.*—The sea-fight with the Phocaeans off the coasts of Corsica, and her wars with the Greeks of Sicily, have already been noticed.

(2.) *Persians.*—The time of her great enterprise in Sicily coincided so remarkably with the attacks of Persia upon Greece, as to cause some of the ancient writers to ascribe it to an understanding with the Persian kings. Justin (xix. 1) tells of an embassy, which Darius I. sent to the Carthaginians, in the assumption of that supreme authority which he was at the same time claiming over Greece, requiring them to discontinue the offering of human sacrifices and the practice of burying their dead instead of burning them, and also demanding aid in his war against the Greeks. The wars of Carthage with the neighbouring tribes furnished her with a reason, or pretext, for refusing the desired military aid; but, not to offend the king, she readily complied with his other requests. (The well-ascertained inaccuracy of this last statement is an example of the care required in following the authority of Justin.) The Persian claim of supremacy over Carthage, as a colony of Tyre, is one very likely to have been made; and Ephorus represents the Phoenicians as united with the Persians in another embassy which Xerxes sent to the Carthaginians, to induce them to fit out a great fleet against the Greeks of Sicily and Italy, and so to disable those colonies from affording to the mother-country that aid which she was at the same time seeking at the hands of Gelon. (Ephor. *ap. Schol. Pind. Pyth.* i. 146, Fr. 111, ed. Didot; Diod. xi. 1, 2, 20.) Doubts are raised respecting the whole transaction by the silence of Herodotus; but, at all events, it would seem that a direct request from Persia was not needed to induce the Carthaginians to seize the opportunity of pushing her schemes in Sicily when the Greek colonies could receive no aid from the mother-country. That the *first* wars did not originate in the agreement with Xerxes is clear from the narrative of Justin, and from the allusion made by Gelon, in his reply to the Greek ambassadors, to a war in which he had already been engaged with Carthage (Herod. vii. 158). The war thus alluded to would seem to be the "*grave bellum*" (Justin. xix. 1), in which the Greek cities made a united application for assistance to the Spartans; but we have no information of any collision from this cause between Carthage and Sparta.

(3.) *Cyrene.*—Another Grecian state, Cyrene, was the only civilized neighbour of Carthage in Africa; but they were almost separated naturally by the deserts which come down to the sea-coast between the Syrtes; and the only collision between them was the obscure and petty war which led to the settlement of their frontier at the bottom of the Great Syrtis. [ARAE PHILAENORUM.]

(4.) *Egypt and Ethiopia.* — The relations of Carthage with Egypt and Ethiopia were entirely commercial, and chiefly indirect, as will be seen presently. But that much was known of Carthage in Egypt may be inferred from the incidental notices of Herodotus, who no doubt obtained his information from Carthaginians in Egypt.

(5.) *Tyrrhenians.* — On the side of Europe, Carthage had relations with other peoples besides the Greeks. The *Tyrrhenians* appear as her allies in Corsica; and Aristotle alludes incidentally to well-known treaties between the two peoples. These treaties evidently arose out of the common interests of the two great maritime powers of the W. Mediterranean, and also from the desire of Carthage to protect herself by treaties against the piratical habits of the Tyrrhenians. (Aristot. *Polit.* iii. 5. §§ 10, 11, where the threefold description deserves attention: συνθῆκαι περὶ τῶν εἰσαγωγίμων καὶ σύμβολα περὶ τοῦ μὴ ἀδικεῖν καὶ γραφαὶ περὶ συμμαχίας).

(6.) *Rome.—First Treaty.* — Somewhat similar to these conventions was the treaty which furnishes the first instance of any relations between Rome and Carthage. This celebrated document is preserved by Polybius (iii. 22), who tells us that it was made in the consulship of L. Junius Brutus and M. Horatius, the first consuls after the expulsion of the kings, and 28 years before the invasion of Greece by Xerxes, that is, in B. C. 509. It was still preserved, inscribed on tablets of bronze, among the archives of the aediles in the temple of Jove in the Capitol (c. 26), but its old Latin idiom was, in some passages, hardly intelligible to the most learned antiquarians. Its substance is as follows:— That there shall be friendship between the Romans and their allies, and the Carthaginians and their allies, on these conditions: the Romans and their allies are restricted from sailing beyond (*i. e.* to the W. or S. of) the Fair Promontory (τὸ καλὸν ἀκρωτήριον), which seems here to indicate the Mercurii Pr., *C. Bon*, the E. headland of the Gulf of Carthage, rather than, as elsewhere in Polybius, Apollinis Pr., *C. Farina*, its W. headland, the object of this restriction being, in the opinion of Polybius, to keep foreigners from a share in the trade of the colonies on the coast of Byzacium and the Emporia on the Lesser Syrtis: if forced into the forbidden seas by weather or war, they are neither to buy nor take anything except necessaries for refitting the ship, and offering sacrifice, and they must depart within five days: but they are allowed to trade with Carthage herself, and the part of Africa immediately adjacent (at least this seems to be the meaning), with Sardinia, and with the part of Sicily possessed by Carthage, under certain conditions, the object of which was as much to give additional security to such commerce, as to impose restrictions on it, namely, the goods must be sold by public auction, and then the public faith was pledged to the foreigner for his payment: on the other hand, the Carthaginians are bound to refrain from injuring the cities of Ardea, Antium, Laurentum (or more probably Aricia), Circeii, and Terracina, or any other Latin cities which were subject to the Romans, and not to meddle with (*i. e.* not to make their own) the cities which were not under the Roman dominion, but if they shall have taken any of the latter, they are to restore such uninjured to the Romans: they are to build no fort on the Latin territory, nor, if they should land there in arms, to remain a single night. This treaty clearly indicates the respective dominions, and the relative positions of the two states at the end of the sixth century B. C.; for it is ridiculous to suppose that it was designed to anticipate relations which might occur at some future time, and not to settle questions which had actually arisen. Rome, at the height of the prosperity which she attained in the regal period, and in possession of the chief cities on the Latin coast, even beyond the later limits of Latium, is beginning to extend her commerce over the W. parts of the Mediterranean; while Carthage is pushing hers to the very coasts of Latium, and is also carrying on military operations there for its defence. It is an interesting fact, as Polybius observes (c. 23), that the treaty is wholly silent respecting the parts of Italy beyond the Roman territory: the Tyrrhenians and the Greeks are not referred to, unless tacitly as among the enemies against whose interference with their commerce the Carthaginians may have to conduct military operations. With the Tyrrhenians we have seen that the Carthaginians dealt, as with Rome, by separate treaties, as the occasion arose: of their relations with Magna Graecia it is much to be regretted that history is almost silent; but we may fairly conjecture that any serious efforts of commerce or conquest in that quarter were postponed until Sicily should be made their own.

The genuineness of the first treaty with Rome has been disputed on the very ground which affords its strongest confirmation; the position, namely, to which it represents Rome as having already attained at this early period of her history. The only difficulty arises from the mis-statements of the Roman annalists, who refused to acknowledge the depression which Rome suffered as the first consequence of the revolution which made her a republic; and from which she was so long in recovering. (Niebuhr, *History of Rome*, vol. i. pp. 533, foll.) Accordingly, when, a century and a half later, B. C. 348, the Roman republic was sufficiently recovered from its long struggle for existence, to have a foreign commerce worth the protection of a second treaty with Carthage, we find, amidst a general similarity to the provisions of the first treaty, this important difference, that the Romans are excluded from Sardinia and Libya as rigidly as from the seas beyond the Fair Promontory, with the exception that their traders may expose their goods for sale at Carthage; and the same privilege is granted to the Carthaginians at Rome.

The date assigned to this treaty is on the authority of Livy (vii. 27), who only just refers to it. Polybius, who recites it in full (iii. 24), does not mention its date. Several of the best critics hesitate to assume the identity of the treaty in Polybius with that referred to by Livy. Grote (vol. x. p. 541) supposes that the former was made somewhere between 480—410 B. C., chiefly on the ground that it "argues a comparative superiority of Carthage to Rome, which would rather seem to belong to the latter half of the fifth century B. C., than to the latter half of the fourth." Niebuhr (vol. iii. p. 87), on the other hand, thinks that Polybius was not acquainted with the transaction mentioned by Livy, and that the treaty which he speaks of as the second, was the one of the year 447, B. C. 306. It is seldom fair to play off great authorities against each other; but it may be done in this case, for there is really no good ground for doubting that Livy and Polybius each meant by the second treaty that which really was the second and the same.

This *Second Treaty between Rome and Carthage* belongs chronologically to the second period of Carthaginian history; but the natural connection of the events demands the notice at one view of the relations between the states, from the beginning, to their quarrel about Sicilian affairs. Livy, with his usual partiality, represents the Carthaginians as sending ambassadors to Rome, to sue for this alliance. But we know that Carthage was mistress of the Tyrrhenian seas, along the coasts of Italy (Diod. xvi. 66); and that the coasts of Latium were insulted and plundered by a Greek fleet. Against such invaders, Niebuhr supposes, the Romans sought protection from the great maritime power of Carthage (Niebuhr, vol. iii. pp. 85—87); and they would readily consent to renounce a commerce, which they had already lost, with Sardinia and Africa, for the sake of safety on their own coasts.

The amicable relations between the two republics, and the concord of their views respecting Italy, are further attested by the congratulations which the Carthaginians sent to Rome, on the conclusion of the first Samnite War (B.C. 342), with the present of a gold crown of 25 pounds' weight for the shrine of Jupiter in the Capitol. (Liv. vii. 38.) And again, in B.C. 306, the ancient treaty between Rome and Carthage was renewed for the third time, with a fresh offering of rich presents. (Liv. ix. 43.)

But such friendships between ambitious republics necessarily involve jealousies, the sure presage of alienation, quarrel, and internecine war; and both the friendship and the jealousy are further shown in the history of the more intimate alliance which was formed by Rome and Carthage in view of a common danger. Each state had evidently come to regard Grecian Italy as its future prize, when the aid brought by Pyrrhus to the Tarentines raised an obstacle to their designs, which they at once united to remove, with a cordiality precisely measured and limited by the interests of each. Carthage had doubtless viewed the progress of the Roman arms in S. Italy with feelings which her own position in Sicily compelled her to dissemble; and Rome, on her part, showed no disposition to seek aid from Carthage, till the war with Pyrrhus became very critical. In the third year of the war, B.C. 279, Rome and Carthage concluded a close defensive alliance, which Livy (*Epit.* xiii.) expressly calls the *fourth*, and Polybius (iii. 25) the *last*, treaty between the two republics. The provisions of the former treaties were renewed, with additional articles, which, with the events that ensued, we give in Niebuhr's words (vol. iii. p. 506):—"It was provided, that neither should make a treaty of friendship with Pyrrhus without the accession of the other, in order that if he attacked the latter, the former might still have the right of sending succours. The auxiliaries were to be paid by the state, which should send them; the ships to convey them to and fro were to be given by Carthage. The latter was also to afford assistance with ships of war, in case of need; but the marines were not to be compelled to land against their will. This clause in 'case of need' Carthage, with the wish of compelling Pyrrhus to return to Epirus, may probably have interpreted in such a way that, without waiting for a summons from Rome, a fleet of one hundred and thirty galleys under Mago cast anchor near Ostia, at the disposal of the senate. It was dismissed with thanks without being used, probably because Rome did not wish the Poenians to carry off the population and wealth of Italian towns, or because it feared lest they should establish themselves in Italy. There was no need of their assistance. The Punic admiral now went to Pyrrhus as a neutral and unsuccessful mediator of peace, as the latter was already known to have directed his thoughts to Sicily. (Justin. xviii. 2.)" The events which followed the transference of the war to that country belong to the history of the Carthaginian affairs in Sicily; but they may be dismissed here, partly because they led to no permanent result, and partly because their progress furnishes another proof of the deeply rooted jealousy which now existed between Rome and Carthage. Pyrrhus spent three years in Sicily, B.C. 278—276, attempting to do his part to fulfil the bright prospects held out by the Greeks who had called him thither, of a Greek kingdom over which he was to rule after the expulsion of the Carthaginians. The faithlessness of the Greeks to their promises and their interests alone spoiled the scheme; and, after wasting his efforts on the impregnable fortress of Lilybaeum, he abandoned the enterprize in disgust. During these three years Rome was steadily pursuing her own interests in Italy, by subduing the states which had aided Pyrrhus, and Carthage was left to fight her own battle in Sicily. "That there prevailed a deeply founded mistrust between the two republics," says Niebuhr (vol. iii. p. 511), "is clear even from the fact, that Roman auxiliaries were either not demanded, or else were not given for the defence of the Punic province: though Carthage, it is true, raised soldiers in Italy." (Zonaras, viii. 5.)

From this view of the relations of the two republics, during their state of amity, it is impossible not to be struck with the fact, remarked by Niebuhr elsewhere, how the order in which Rome was called to deal with her successive enemies contributed to fulfil the designs of providence for her advancement to universal empire, and how different would have been her fate, and that of Carthage, and of the world, had Carthage deserted her during her struggles with the Etruscans and other peoples of Italy, with the Gauls, and with Pyrrhus.

(7.) *Athens.*—There was another foreign power, with whom Carthage never came actually in contact, but whom nevertheless she watched with deep interest and anxiety (Thucyd. vi. 34), and whose fortunes had no small influence on her own. Had the Athenian expedition to Sicily been successful, a conflict must have ensued with Carthage; but she was relieved from this danger, and left the more free to pursue her own designs in Sicily by the destruction of that ill-fated armament, B.C. 411.

10. *Summary.*—Such was the growth of the Carthaginian empire, and such her relations to foreign states, during a time partly extending into the second period of her history, though belonging chiefly to the first. To sum up, in a few words, her position at the great historical epoch marked by the renewal of her wars with the Greeks of Sicily:—In *Africa* she had subdued the Libyans immediately round the city; formed relations with the Nomads, which enabled her to purchase their services as mercenaries in her wars, and carriers for her inland commerce; planted agricultural colonies in the fertile districts about the city, and others, both commercial and agricultural, along the coasts of Byzacium and the Lesser Syrtis, and even to the Great Syrtis, so far as the physical character of the district permitted; as well as on the W. portion of the N. coast, to the Pillars of Her-

rules. Beyond these limits she held possession of Sardinia, Corsica (at least in part), the W. part of Sicily, and all the islands of the W. Mediterranean; and her colonies extended along the Mediterranean coasts of Iberia and Liguria, and beyond the Pillars far towards the Equator on the one side, and the Arctic regions on the other. Towards her mother city she continued to acknowledge the filial duties of a colony: with her nearest neighbour, Cyrene, she had settled a disputed boundary line: she had met the Greeks in a sea-fight off Corcyra; and had retired from a brief struggle with them in Sicily, which she was about to renew, after an interval of 70 years spent in improving her resources; she had avoided the double dangers of Persian alliance and resentment, and had seen the naval force of her most formidable rival for the empire of the seas destroyed in the Syracusan expedition: in the Tyrrhenian seas she had protected her own commerce by treaties with the Italian states, one of which laid the foundation of an intercourse destined to end in her destruction.

To complete the review of this first period of her history, it is necessary to turn to her internal condition and resources. On this subject, as well as in the preceding account of her empire, it is well to bear in mind the remark of Grote, that all "our positive information, scanty as it is, about Carthage and her institutions, relates to the fourth, third, and second centuries B. C.; yet it may be held to justify presumptive conclusions as to the fifth century B. C., especially in reference to the general system pursued." (*Hist. of Greece*, vol. x. p. 542.)

11. *Political Constitution.* — Our information on this subject is of the most tantalizing kind; just enough to show us how interesting is the problem, which we have no sufficient materials to solve. The brief account of Aristotle, and the incidental notices of Polybius (especially vi. 51, et seq.), and other writers, are very elaborately discussed by Heeren (*African Nations*, vol. i. chap. 3), and Kluge (*Aristoteles de Politia Carthaginiensium*, Wratisl. 1824); whose dissertations the inquirer should study, with Grote's caution that "their materials do not enable them to reach any certainty." As a summary of the subject, it would be fruitless to attempt to improve on the condensed account of Grote (vol. x. pp. 548, foll.): — "Respecting the political constitution of Carthage, the facts known are too few, and too indistinct, to enable us to comprehend its real working. The magistrates most conspicuous in rank and precedence were, the two Kings or Suffetes, who presided over the Senate. There were in like manner two Suffetes in Gades, and each of the other Phoenician colonies (Liv. xxviii. 37)." The name of these Suffetes is probably identical with the Hebrew *Shofetim*, i. e. *Judges*. "They seem to have been renewed annually, though how far the same persons were reeligible or actually re-chosen, we do not know; but they were always selected out of some few principal families or Gentes. There is reason for believing that the genuine Carthaginian citizens were distributed into three tribes, thirty curiae, and three hundred gentes, — something in the manner of the Roman patricians. From these gentes emanated a Senate of three hundred, out of which again was formed a smaller council or committee of thirty *principes* representing the *curiae* (Mövers, *die Phönizier*, vol. ii. pt. 1. pp. 483—499); sometimes a still smaller of only ten *principes*. These little councils are both frequently mentioned in the political proceedings of Carthage; and perhaps the Thirty may coincide with what Polybius calls the Gerusia or Council of Ancients, — the Three Hundred, with that which he calls the Senate. (Polyb. x. 18; Liv. xxx. 16.) Aristotle assimilates the two Kings (Suffetes) of Carthage to the two Kings of Sparta, and the Gerusia of Carthage also to that of Sparta (Pol. ii. 8. § 2); which latter consisted of thirty members, including the Kings, who sat in it. But Aristotle does not allude to any assembly at Carthage analogous to what Polybius calls the Senate. He mentions two councils, one of one hundred members, the other of one hundred and four (comp. Niebuhr, vol. i. p. 85); and certain Boards of Five — the Pentarchies. He compares the Council of one hundred and four to the Spartan Ephors; yet again, he talks of the Pentarchies as invested with extensive functions, and terms the Council of one hundred the greatest authority in the state. Perhaps this last Council was identical with the assembly of one hundred Judges (said to have been chosen from the Senate as a check upon the generals employed), or Ordo Judicum; of which Livy speaks after the second Punic war, as existing with its members perpetual, and so powerful that it overruled all the other assemblies and magistracies of the state. Through the influence of Hannibal, a law was passed to lessen the overweening power of this Order of Judges; causing them to be elected only for one year, instead of being perpetual. (Liv. xxxiii. 46; Justin. xix. 2, mentions the 100 select Senators set apart as judges.)

"These statements, though coming from valuable authors, convey so little information, and are withal so difficult to reconcile, that both the structure and working of the political machine at Carthage may be said to be unknown. But it seems clear that the general spirit of the government was highly oligarchical; that a few rich, old, and powerful families divided among themselves the great offices and influence of the state; that they maintained themselves in pointed and even insolent distinction from the multitude (Val. Max. ix. 5. § 4); that they stood opposed to each other in bitter feuds, often stained by gross perfidy and bloodshed; and that the treatment with which, through these violent party antipathies, unsuccessful generals were visited, was cruel in the extreme. (Diod. xx. 10, xxiii. 9; Val. Max. ii. 7. § 1.) It appears that wealth was one indispensable qualification, and that magistrates and generals procured their appointments in a great measure by corrupt means. Of such corruption, one variety was, the habit of constantly regaling the citizens in collective banquets of the *curiae*, or the political associations; a habit so continual, and embracing so wide a circle of citizens, that Aristotle compares these banquets to the *Phiditia*, or public mess of Sparta. (*Pol.* iii. 5. § 6.) There was a Demos or people at Carthage, who were consulted on particular occasions, and before whom propositions were publicly debated, in cases where the Suffetes and the small Council were not all of one mind. (Aristot. *Pol.* ii. 8. § 3.) How numerous this Demos was, or what proportion of the whole population it comprised, we have no means of knowing. But it is plain that, whether more or less considerable, its multitude was kept under dependence to the rich families by stratagems such as the banquets, the lucrative appointments, with lots of land in foreign dependencies, &c. The purposes of government were determined, its powers

wielded, and the great offices held, — Suffetes, Senators, Generals, or Judges, — by the members of a small number of wealthy families; and the chief opposition they encountered was from their feuds against each other. In the main, the government was conducted with skill and steadiness, as well for internal tranquillity, as for systematic foreign and commercial aggrandisement. Within the knowledge of Aristotle, Carthage had never suffered either the successful usurpation of a despot, or any violent intestine commotion. (Aristot. *Pol.* ii. 8. § 1.) He briefly alludes to the abortive conspiracy of Hanno (v. 6. § 2), which is also mentioned in Justin (xxi. 4). Hanno is said to have formed the plan of putting to death the Senate, and making himself despot. But he was detected, and executed under the severest tortures; all his family being put to death along with him, B. C. 340." His attempt is compared by Aristotle to that of Pausanias at Sparta. The other attempt was that of Bomilcar, B. C. 308. (*Dict. of Greek and Roman Biog.*, arts. *Bomilcar* and *Hanno*.) The resemblance of the Carthaginian constitution to that of Venice is by no means so close as some writers fancy.

In the later ages of the republic, when bitter factions divided the state, we read of popular tumults which are compared to those of Alexandria for their violence, as well as for the strange spectacle of boys joining in them as eagerly as the men. (Polyb. xv. 30.)

12. *Military Resources and Organization.* — In order to understand both the progress and the decline of Carthage, no part of her polity requires more attentive consideration than her military system. Founded as the state was without difficulty, at a distance from any formidable enemies, and soon raised by commerce to the highest prosperity, it would have been strange if her citizens had displayed any great measure of military spirit, such as that which is inseparably identified with the Roman character. There are not wanting examples of the greatest devotion in times of extreme danger; but how little occasion there was for their display, in the age during which the military system was formed, is clear from the consideration that the first invasion of the Carthaginian territory was made by Agathocles in B. C. 316, more than five centures from the foundation of the city. As to the Libyan tribes, their predatory incursions on the cultivators of the soil were curbed by the simple defence of a line of ditch. (Appian. *Pun.* 32, 54, 59; Phlegon, *Mirab.* 18: this trench must not be confounded with that dug by the younger Scipio Africanus for a boundary between the Carthaginian and Numidian territory: AFRICA.) The military system of Carthage therefore grew entirely out of that necessity for foreign conquest which was entailed upon the state, as we have seen, by the extension of her commerce. Men do not risk their lives in war merely for the acquisition of wealth, least of all when a force of dependents and mercenaries can easily be found to fight their battles for them. Nay, it would at first sight seem good policy thus to throw the burthen upon others, while the state reaped the profit; and it required the bitter lessons of experience to prove that such a force was a broken reed, in the double sense of the Hebrew prophet, piercing the hand which it failed to support. Such a resource was at hand for the Carthaginians in a threefold form: the enforced service of her Libyan subjects; the mercenary aid of the Nomad tribes; and the labour of her slaves.

(1.) *Naval Forces.* — From the nature of the case, the earliest warlike enterprizes of Carthage were upon the sea. She not only required a powerful navy to transport her forces to Sardinia and Sicily; but she must be prepared to encounter the fleets of the Tyrrhenians and those of the Greeks of Sicily and Massilia; and, as we have seen, her first actual encounter was with the Phocaeans of Sardinia. Fortunately, our information on her naval resources and arrangements is tolerably complete: we derive most of it from Polybius and Appian. (On the general subject, see especially Polyb. i. 20, 39, vi. 52.)

One of the earliest works of the first settlers was the excavation of a spacious harbour (Cothon), within the city; with an outer harbour for transports and merchant vessels; and with docks and magazines containing everything required for the outfit of the ships. (See below under *Topography*.) The number of vessels of war (besides transports) thus provided for is stated at 220 (Appian. *Pun.* 96); but it is natural to suppose that extra arrangements could be made for a much larger number. Accordingly, we find the Carthaginians, in their Sicilian wars, with from 150 to 200 ships of war; but, in the first Punic War, they had 350 ships of war, carrying 150,000 men, at the great sea-fight with Regulus, B. C. 254. This was at the climax of their naval power; which not only suffered greatly from its repeated defeats by the Romans, but must also have lost very much of its importance when the state was deprived of its possessions in Sicily (B. C. 241), Sardinia, and Corsica (B. C. 238); besides which it was always the policy of the Barcine family (whose ascendancy dates from B. C. 247) to fight the battles of Carthage by land rather than by sea.

Triremes seem to have constituted the Carthaginian fleet during their Sicilian wars; and it seems probable that they followed the Syracusan models. (Heeren, p. 246.) A tradition preserved by Pliny from Aristotle makes them the inventors of quadriremes. (Plin. vii. 57.) The war with Pyrrhus in Sicily naturally led them to adopt the larger vessels which had been introduced by the Greeks (especially by Demetrius Poliorcetes); and in the wars with Rome they generally used quinqueremes (Polyb. i 20, 27, 59, 63, *et alib.*; Liv. xxi. 22): and the same form was adopted by the Romans from a Punic model. (Polyb. i. 20.) The admiral's ship in the battle with Duilius, which had seven banks of oars, had been taken from Pyrrhus. (Polyb. i. 23.) Polybius computes the ships *lost* in the First Punic War at 500 quinqueremes on the side of the Carthaginians, and 700 on that of the Romans (i. 63). Fire ships were used in the defence of the city in the Third Punic War. (Appian. *Pun.* 99.) The complement of men to a quinquereme was 420, namely 120 fighting men, and 300 rowers. (Polyb. i. 26.*) The rowers were public slaves, who were procured chiefly from the interior of Africa, in such numbers

* Polybius makes this statement of the numbers of the Roman crews; but it agrees with the totals of ships and men given for the Carthaginian fleet. Heeren ascribes to a larger number of rowers in the Punic ships, that superiority over the Syracusans and Romans in manoeuvre, which his authorities refer expressly to greater skill. (Polyb. i. 22, 51; Diod. xx. 5.) The models being alike, the number of rowers could not well be different; but those of the Carthaginians were thoroughly trained galley slaves.

that Hasdrubal, in the Second Punic War, bought 5000 at one time (Appian. *Pun.* 9); and they were doubtless kept in constant exercise: hence the rapidity with which Carthage prepared her fleets. The accounts in Polybius of the sea-fights in the First Punic War should be carefully studied, especially that with Regulus, in which the Romans adopted the manoeuvre now so well known under the name of "breaking the line." In combined operations, the admiral acted under the commander of the land forces, as in the case of Hamilcar and Hasdrubal (Polyb. ii. 1); but sometimes he took out sealed orders from the senate or the commander-in-chief. (Diod. xiv. 55; Polyaen. v. 10. § 2.) The ships of Carthage were placed under the protection of her sea-deities, whose images seem to have been carved upon the sterns. (Sil. Ital. xiv. 572; Munter, pp. 97, foll.)

(2.) *Land Forces.* — The bulk of the Carthaginian army was composed of their Libyan subjects and of mercenaries, not only from Africa, but from nearly all the shores of Western Europe. Small, however, as was the purely Punic portion, it deserves particular attention. The chief commands were assigned, of course, to Carthaginian citizens; but, besides this, motives of honour were held out to lead them into the service, each citizen wearing as many rings as he had served campaigns. (Aristot. *Pol.* vii. 2. § 6: as Heeren observes, this custom gives significance to Hannibal's message sent to Carthage with the rings of the Roman knights who were slain at Cannae.) It would even seem, if we are to trust Diodorus, that the honour to be reaped from the Sicilian wars moved the citizens of Carthage so strongly, as to lead considerable bodies of them into destruction, and to induce the state to be more sparing of their lives. (Diod. xvi. 70, 71, xix. 106.) The expensive service of the cavalry seems to have had a strong attraction for the higher classes. But, above all, we generally find in a Punic army a small body of 2500 citizens, called the *Sacred Band*, chosen for their station, wealth, and courage, and distinguished by the splendour of their arms and by their vessels of gold and silver plate. They appear to have fought on foot, and to have formed the general's body-guard. (Diod. xvi. 80, xx. 10, *et seq.*; Plut. *Timol.* 27, 28; Polyb. xv. 13.) In the extreme danger of the state, all the citizens formed a Sacred Band, and could furnish an army as formidable for its numbers as for its desperate bravery. The city poured out 40,000 heavy-armed infantry, with 1000 cavalry and 2000 war-chariots, to meet Agathocles (Appian. *Pun.* 80); and the desperate defence of the city, at the close of the Third Punic War, showed that the Carthaginians would have made no mean soldiers.

Of their other forces, for the full detail of which our space is inadequate, Heeren has given an admirable account. He remarks the resemblance between the Persian and Carthaginian armies, the former uniting nearly all the nations of the East, and the latter of the West: had their league with Xerxes against Greece succeeded, and had the two armies joined on the soil of Sicily, "they would have presented the remarkable exhibition of a muster of nearly all the varieties of the human species at that time known." (*African Nations*, vol. i. p. 252.) Polybius ascribes this mixture of peoples to design, that the difference in their languages might be an obstacle to conspiracies and revolt, which, however, when they did occur, were for the same reason the more difficult to allay. (Polyb. i. 67.) The main dependence was placed on the subject Libyans, who, armed with long lances, formed the bulk of the infantry and heavy cavalry. Next came the Iberians, equipped with white linen vests, and swords fit both to cut or thrust; of whose conspicuous valour many examples occur: and then their rude and savage neighbours, the Gauls, from the Gulf of Lyon, who fought naked, with a sword only made for striking, and were renowned for their perfidy: both peoples served as infantry and cavalry. (Polyb. ii. 7, iii. 114; Liv. xxii. 46; Diod. v. 33.) Besides these, there were Campanian mercenaries, who had deserted the Greeks in the Sicilian wars; Ligurians, who are first mentioned in the Punic Wars; and Greeks, who appear about the same time, and who may have been introduced into the service through the campaigns of Pyrrhus in Sicily. To these must be added two descriptions of force peculiar to the Carthaginian armies; the Balearic slingers, who skirmished in front [BALEARES], and the light cavalry of the Nomads, who were levied by deputations sent out by the senate, from the Maurusii near the Pillars of Hercules, to the frontiers of Cyrenaica. Mounted without a saddle on small active horses, so well trained as not to need even the rush halter, which formed their only bridle; equipped with a lion-skin for dress and bed, and a piece of elephant-hide for a shield; rapid alike in the charge, the flight, the rally; they were to the Carthaginians far more than the Cossacks are to the Russians. (Diod. xiii. 80; Strab. xvii. p. 828; Polyb., Liv., *passim.*) *Chariots*, derived doubtless from their Phoenician ancestors, were used by the Carthaginians in their wars with Timoleon and Agathocles (Diod. xvi. 80, xx. 10); but they were superseded by the *elephants* of whom we hear so much in the wars with Rome. Having borrowed from Pyrrhus, as is supposed, the idea of training these beasts to war, they kept up the supply by means of their inland trade with Africa, and also by demanding them as tribute from some of the subject cities. A tract of land near the city was set apart for their maintenance; and vaulted chambers were provided in the triple landward wall for 300 elephants and their food. Another row of such chambers contained stables for 4000 horses, and stores for their food; and in the same line of defences there were barracks for 20,000 infantry and 4000 cavalry, besides immense magazines of provisions and military stores. The total force, which Carthage could raise with ease, may be computed at 100,000 men. Though the *standing armies* of modern states were then unknown, a military force must always have been kept on foot to garrison the city and the foreign possessions; and in both cases these garrisons were composed of mercenaries.

Such was the army of Carthage, equally wanting in consistence and security. The discipline of such a motley host was as difficult as it was necessary; and Livy justly adduces, as one proof of Hannibal's genius, his maintenance of authority over his troops. (Liv. xxviii. 12.) The general results of the system are well summed up by Grote: — "Such men had never any attachment to the cause in which they fought, seldom to the commanders under whom they served; while they were often treated by Carthage with bad faith, and recklessly abandoned to destruction. (Polyb. i. 65—67; Diod. xiv. 75—77.) A military system such as this was pregnant with danger, if ever the mercenary soldiers got footing in Africa; as happened after the First Punic War, when the city was brought to the brink of ruin. But on

foreign service in Sicily, these mercenaries often enabled Carthage to make conquest at the cost only of her money, without any waste of the blood of her own citizens. The Carthaginian generals seem generally to have relied, like Persians, upon numbers—manifesting little or no military skill; until we come to the Punic wars with Rome, conducted under Hamilcar Barca and his illustrious son Hannibal." (*Hist. of Greece*, vol. x. pp. 547, 548.) Another source of danger in the system is pointed out by Heeren: — "Upon the whole, however, this system could afford the republic but little internal security. The impossibility of calling an army like this together in a short time must have made every sudden attack dreadful. Their enemies soon found this out; and repeated examples have shown that their fleets were not always sufficient to repel invasion. As often as this happened, a struggle for life or death must have ensued; and although they might easily make good the loss of a foreign defeat, yet, in every war upon their own ground, their ALL rested upon the cast of a die." (Heeren, *African Nations*, vol. i. pp. 259, 260.)

13. *Financial Affairs.* — One of the obscurest parts of the whole subject is the mode of raising and administering those enormous revenues, which must have been required to support the colonial and military expenses, as well as the home government of the state.

(1.) *Sources of Wealth in general.*— It is wrong to think of Carthage as a purely commercial state. Her prosperity rested, as already intimated in speaking of her territory, on the solid basis of the land. *Agriculture* was the favourite pursuit of her nobles, citizens, and colonists; her immediate territory was so fertile, that the soil of Byzacium is said to have yielded a hundred-fold return (Plin. v. 4. s. 3.); and her foreign possessions, especially Sardinia and Sicily, were made to contribute large supplies of corn for the consumption of the city. The devotion of her chief men to agriculture is indicated by the great work of Mago, in 28 books, which alone of all the treasures of Punic literature the Romans thought worth preserving. That the taste for agriculture declined with the growth of commerce, is affirmed by Cicero, who regards the change as a main cause of the decline of Carthage (*Repub.* ii. 4) ; but the decline was only comparative, as is shown by the great prosperity of the city in the period preceding the Third Punic War, when she was shut up to her own immediate territory. Neither were *manufactures* and the *mechanical arts* neglected; and great wealth flowed into the city by the *import of the precious metals* from Spain and other parts. It is true that the mines were generally reserved by the state, but that they were sometimes private property is proved by the example of Hannibal. (Plin. xxxiii. 6. s. 31: unless the passage refers to Hannibal in his public capacity.)

(2.) *Expenses of the State.* — The chief offices of state being held without a salary, the expenses of the home government were probably light. The great demands upon the public resources were for the maintenance of her military forces, and the expenses of her colonial and commercial expeditions; but in both cases the actual demands in money were partly lightened by payments in kind, and the use of barter in commercial intercourse with foreigners.

(3.) *Revenue.* — The following were the chief sources of the public revenue.

a. The *Tribute* paid by the subject nations and allies. In Africa the country districts paid taxes in produce, and the cities in money, the greatest contributions being derived from the rich district of Emporia. It is supposed that the amount of the assessment, in both cases, was ordinarily fixed: reference has already been made to its great increase upon emergencies. The same system appears to have been pursued in the provinces, among which Sardinia was the chief contributor. In this case we have ample proof that the tribute was raised for the most part in produce, of which a portion was retained for the maintenance and pay of the garrison, and the remainder was remitted to Carthage, where large magazines were provided for its reception.

b. *Customs.* — In all the ports of the colonies and provinces, as well as of the city, import duties were rigorously levied. The importance attached to this branch of revenue is attested by the existing treaties with Rome, and by those with the Tyrrhenians referred to by Aristotle. (See above.) The heavy amount of the customs is shown by the active contraband trade which was carried on across the desert frontier of Cyrenaica. (Strab. xvii. p. 836.) In the last age of the republic, and as the result of the financial reforms made by Hannibal after the Second Punic War, the customs seem to have been the principal source of revenue. (Liv. xxxiii. 47, assuming, with Heeren, that *vectigalia* here means *customs.*)

c. *Mines.* — A chief branch of the Punic, as of the Phoenician, trade was the import of the precious and useful metals; gold, silver, tin, &c. Where they could obtain a secure footing on the soil, they worked the mines themselves, partly by the labour of the natives and partly by slaves. The Spanish mines were the great source of the precious metals; and Diodorus tells us that all of them, known in his time, had been opened by the Carthaginians during their possession of the country. (For further particulars, see HISPANIA.) The produce of these mines was enormous; and it sufficed to pay the military expenses of the state, probably with a large surplus. The possession of these resources dates chiefly from the conquests of the Barcine family in Spain (a certain importation, especially from Baetica, had been made from very early times); and accordingly, while the want of money, during and after the First Punic War, forced Carthage to make terms with Rome, and involved her in the war with her mercenaries, her pecuniary resources, during the Second War, seem to have had no limit.

d. *Extraordinary Resources.*—Under this head, Heeren mentions an attempt to obtain a loan from Ptolemy Philadelphus, during the First Punic War, which, though unsuccessful, is worthy of notice as an early example of the financial expedient so familiar to modern states; and also a system of privateering, which seems, however, to rest on the false reading of Καρχηδόνιοι for Καλχηδόνιοι in Aristotle. (*Oecon.* ii. 2. § 10.)

(4.) *Financial Administration.* — Under this head, unfortunately, there is nothing to be said but what we do *not* know. That the management of the finances was entrusted to one of the committees or *Pentarchies*, under the controul of the senate, and by means of an executive officer, whom the Romans call *Quaestor*, are rather conjectures from the general character of the government than facts established by evidence. "But how many questions still remain which we either cannot answer at all, or at best only by conjecture? Before whom did the managers lay their accounts? Who fixed the taxes;

was it the people, or, as seems most probable, the senate? But it is better to confess our ignorance than to advance empty conjectures. Even the little that might be deduced from the passage of Livy, already mentioned (xxxiii. 45, 46), would only perhaps lead us to false conclusions; since he only speaks of *abuses*, from which we cannot infer the state of things during the flourishing period of the republic." (Heeren, *African Nations*, vol. i. pp. 154, 155.)

(5.) *Money.*—The entire absence of Punic coins (for those which are extant belong to the restored Roman city) has raised the interesting question, whether this great power was without a mint of her own. Gold and silver were the standard of value at Carthage, as elsewhere, but we have no evidence that the republic coined money. Some of the Sicilian states which were subject to Carthage, especially Panormus, struck coins with epigraphs in the Punic language, which are still extant; and such money was doubtless current at Carthage, as well as other foreign coinages. The only money we hear of as peculiar to Carthage was a sort of token, consisting of a substance enclosed in leather, sealed, and bearing the stamp of the state, the whole being of the size and value of a tetradrachm: the exact composition of the enclosed substance was kept secret. (Aesch. *Dial. Socrat.* p. 78, ed. Fischer; Aristid. *Orat. Platon.* ii. p. 145; Eckhel, *Doctr. Num. Vet.* vol. iv. pp. 136, 137, where the whole subject of the Punic money is discussed.)

14. *Trade of Carthage.*—On this subject, which is fully discussed by Heeren in two of the best chapters of his most valuable essay, we have only space for a few brief remarks. The whole foreign trade of Carthage was, as far as possible, a rigid system of monopoly. Other great maritime states have generally sought to develope the commerce of their colonies; but Carthage regarded her colonies and possessions merely as staples for her own trade; and made every effort, as the treaties with Rome show, to exclude foreign merchants from all ports except her own.

(1.) Her *Maritime commerce* of course included all her colonies and possessions, and extended also to the shores of other states. The chief scene of its activity was the W. Mediterranean, including, besides her own ports, those of the Greek states of Sicily and Southern Italy, whence she imported oil and wine for her own use and for the market of Cyrene; giving in return the agricultural produce and cloth manufactures of her own territory, with gold, silver, and precious stones, and negro slaves from Inner Africa. Among her other chief imports were linen cloths from Malta for the African market; alum from Lipara; from Corsica, wax and honey, and slaves, who were most highly esteemed; iron from Aethalia (*Elba*); and from the Balearic islands mules and fruits, giving in return the commodities of which the islanders were fondest, wine and women. [BALEARES.] But these islands were chiefly of importance as a station off the coast of Spain, for the trade with the peninsula in oil and wine, as well as in the precious metals. This trade is thought by Heeren to have been the channel also for that with Gaul, on the coast of which the Carthaginians had no colonies, and where the only foreign maritime state, Massilia, was always at enmity with Carthage; for that the Carthaginians had relations with Gaul, directly or indirectly, is proved by the lists of mercenaries in their armies. Beyond the Straits, their trade extended northwards as far as the CASSITERIDES, whence they imported tin, and even to the amber-producing coasts of N. Europe (Fest. Avien. *Or. Marit.* 95, foll., 375, foll.; comp. BRITANNICAE INSULAE). On the W. coast of Africa, their colonies extended as far S. as the island of CERNE, the great mart of their trade, in which they exchanged ornaments, vessels, wine, and Egyptian linen, for elephants' teeth and the hides of beasts. They seem even to have reached the gold-producing countries about the Niger. (See the curious account in Herod. iv. 196, as illustrated by the narratives of recent travellers in Heeren, *Afr. Nat.* vol. i. pp. 175. foll.) Beyond the parts they had reached, they pretended that the Atlantic became unnavigable through fogs, shallows, and sea-weed; tales founded doubtless upon the marine vegetation which surrounds the Azores and other islands of the Atlantic; but exaggerated for the purpose of deterring other mariners from dividing with them a lucrative commerce. [ATLANTICUM MARE.]

(2.) *Land Trade.*—By the agency of the Nomad tribes, especially the NASAMONES, Carthage carried on a very extensive trade in Inner Africa, to the banks of the Nile, on the one side, and of the Niger on the other, and in the intervening space to the oases of Augila, the Garamantes (*Fezzan*), and others; whence their chief importations seem to have been a few precious stones and a vast number of negro slaves. But this subject is so mixed up with the caravan routes over the desert, and with the geography of Africa in general, that it cannot be discussed here.

15. *Religion.*—Those who wish to study this most interesting but obscure branch of Carthaginian antiquities may consult the works of Munter and Gesenius mentioned above. Not having space for speculation, we here set down merely the few ascertained facts. The Punic worship, though influenced by foreign elements, especially the Greek, was doubtless at first identical with that of the Phoenicians, which was a form of the Sabaeism so generally prevalent in the East. They adored the following divinities, who are mentioned, of course, by the ancient writers, under the names of their supposed equivalents in the Greek and Roman systems.

(1.) *Kronos* or *Saturn*, who is generally identified with the *Moloch* of the Canaanites, and by some with *Baal*, and whose natural manifestation is supposed by some to be the Sun, as the chief power of Nature; by others the planet Saturn, as the most malignant of celestial influences. To him they had recourse in the disasters of the state, propitiating him with human sacrifices, sometimes of captives taken in war, and at others, as the most acceptable offering, of the best beloved children of the noblest citizens. (Diod. xiii. 86, xx. 14, 65; Justin. xviii. 6; Oros. iv. 6.) Certainly the description of this deity and his rites answers exactly to that of

> "Moloch, horrid king, besmeared with blood
> Of human sacrifice and parents' tears;
> Though, for the noise of drums and timbrels loud,
> Their children's cries unheard, that passed through fire
> To his grim idol." (Milton, *Par. Lost*, ii.)

(2.) The *Tyrian Hercules*, the patron deity of the mother city and all her colonies, whose Phoenician name was *Melcarth*, i. e. *King of the City*, is by some identified with Baal and the Sun, by others with the Babylonish Bel and the planet

Jupiter, the most genial of celestial influences. On account of her worship of this her tutelar deity, Carthage is personified as the daughter of Hercules. (Cic. *N. D.* iii. 16.)

(3.) The female deity associated with him is the Phoenician Astarte, or Tanith, the goddess of the elements, whom the Romans commonly mention by the name of Coelestis. She was sometimes identified with Vesta, sometimes with Diana, on account of her symbol, the crescent moon, and sometimes with Venus, on account of her worship which was celebrated with the most lascivious abominations, as in Phoenicia, so also at Carthage and other places in the territory, especially SICCA VENERIA. (Val. Max. ii. 6. § 16; Appul. *Met.* xi. p. 257, Bip.; Salvian, *de Prov.* viii. p. 95; Morcelli, *Afr. Christ. s. aa.* 399, 421; Augustin. *Civ. Dei*, ii. 4, iv. 10; Tertull. *Apol.* 12, *et alib.*)

(4.) *Esmun*, the god of the celestial vault, whose temple occupied a conspicuous place in the city, is identified by the Greeks and Romans with Aesculapius.

(5.) *Apollo*, whose temple and golden shrine stood near the form, is supposed to be Baal-Hamman. (Barth, p. 96.)

(6.) *Poseidon* and *Triton* are mentioned by Herodotus as Libyan deities; but he does not give their native names. (Herod. ii. 50, iv. 179.) The latter deity had an oracle, with a sacred tripod, like that at Delphi. [Comp. TRITON, TRITONIS PALUS.]

(7.) Among *Genii* and *Heroes*, we find that the following were worshipped: a *Genius of Death*, to whom also hymns were sung at Gades (Philostr. *Vit. Apoll.* v. 4); *Dido*, as the foundress of the city (Justin. xviii. 6); *Hamilcar*, who fell at Himera, and whose worship was connected with the story of his supernatural disappearance on that day (Herod. vii. 167); the brothers *Philaeni* [ARAE PHILAENORUM]; and *Iolaüs*, a hero of Sardinia (Polyb. vii. 9.)

(8.) *Foreign Deities.* — The influence upon Carthage of intercourse with Greece is shown by her adoption, from Sicily, of the worship of Demeter and Persephone. (Diod. xiv. 77.) The motive to this step was the fearful pestilence which had destroyed their victorious army before Syracuse (B. C. 395), and which they attributed to the wrath of the goddesses for the pillage by Himilco of their temple in the suburb of Achradina.

There seems to have been no sacerdotal caste at Carthage; but the offices of the priesthood were filled by the highest persons in the state; and in war we find the generals offering sacrifices, sometimes during the heat of battle. (Herod. vii. 167; Diod. xiv. 77; Justin. xvii. 7.) The armies were attended by prophets, whose voice controuled their movements. The enterprizes of commerce and colonization were placed under the sanction of religion, monuments of them being dedicated in the temples, as in the cases of the voyage of Hanno, which has come down to us, and the memorials of the mysterious death of Hamilcar at Himera, which were dedicated in all the colonies, as well as at Carthage. (Herod. vii. 167.) Of the sanctuaries which they established in connection with their colonies, we have examples in that of Hercules at CARTHAGO NOVA, and that of Poseidon founded by Hanno on the W. coast of Africa. [SOLOEIS.]

Such was the state of Carthage during the time of her greatest prosperity; and such the system which seems to have been fully developed at the epoch which we have marked as the termination of the first period of her history, B. C. 410. The two remaining periods are so closely mixed up with the Hellenic and Roman histories, and are so fully treated of in the works of our great historians, that the briefest possible outline will serve the purpose of this work.

ii. *Second Period of Carthaginian history*, B. C. 410—264.—The wars with the Greeks of Sicily, which were renewed in B. C. 410, by the appeal of EGESTA to Carthage for aid in her quarrel with SELINUS, occupied nearly all the century and a half which intervenes till the commencement of those with Rome. The most marked epochs in them are the conflicts in Sicily with Dionysius I. (B. C. 410—368), and Timoleon (B. C. 345—340), and in Africa with Agathocles (B. C. 311—307), whose invasion, though ultimately defeated, pointed out where the power of Carthage was most vulnerable, and gave the precedent for the fatal enterprizes of the Scipios. Our chief ancient authority for this period is Diodorus, compared with Plutarch, Appian, and Justin. The chief details are related in this work, under SICILIA, SYRACUSAE, EGESTA, SELINUS, AGRIGENTUM, &c., in the several articles in the *Dictionary of Greek and Roman Biography* (HANNIBAL, HIMILCON, MAGO, DIONYSIUS, TIMOLEON, AGATHOCLES, &c.), and in the histories of Greece, especially Grote (vol. x. chaps. 81, 82), whose very full narrative, however, only extends as yet to the destruction of the victorious Carthaginian army before Syracuse by pestilence rather than by the arms of Dionysius, B. C. 394. The ultimate issue of these campaigns was in favour of the Carthaginians, whose conquest of the island seemed about to be completed, when the invasion of Pyrrhus effected a brief diversion (B. C. 277—275). His retreat seemed to leave the Carthaginians, at length, free to snatch the prize, which they had coveted as their first foreign conquest, and had so perseveringly pursued. But the Roman eagle was already watching the same rich prize from the other bank of the narrow straits; the affair of Messana and the Mamertines gave a pretext for interposition; and the landing of a Roman host in Sicily, B. C. 264, sealed the fate both of the island and of Carthage.

The other principal events of this period were the second, third, and fourth treaties with Rome, the revolutionary attempts of Hanno (B. C. 340) and Bomilcar (B. C. 308), already mentioned, and a dangerous revolt of the subject Libyans after the great disaster before Syracuse in B. C. 394. To this period belongs also the reception at Carthage of the fugitives from the destruction of Tyre by Alexander, already noticed. The success of the Macedonian conqueror and his alliance with Cyrene, seem to have excited some alarm at Carthage; and the republic is said to have sent an embassy to Alexander, to congratulate him on his return from India. (Diod. xvii. 113; comp. Justin. xxi. 6; Oros. iv. 6.)

iii. *Third Period.— Wars with Rome*, B. C. 264—146.

1. The *First Punic War* was a contest for the dominion of Sicily. Though virtually decided in its second and third years by Hiero's adhesion to the Romans (B. C. 263), and by the fall of Agrigentum (B. C. 262), the great resources of Carthage prolonged it for twenty-three years (B. C. 264—241), and it was only brought to a close by the exhaustion of her finances. Besides the loss of Sicily, it cost

her the dominion of the W. Mediterranean, and placed Rome on more than an equality with her as a naval power. But there were two results of the war still more fatal to the republic.

2. The total want of money at the end of the war led to the *Revolt of the Mercenaries*, who were joined by most of the subject Libyans and allied cities in Africa, and carried on for three years and a half a civil war which reduced the city to the brink of ruin (B. C. 240—237), and, extending to Sardinia, it gave the Romans a pretext for taking possession of that island, and soon afterwards of Corsica and the smaller islands.

3. From the very source, whence Carthage obtained her salvation in this war, sprang the baneful feud which infected all her subsequent being; that of the house of Hamilcar Barca and Hanno. In this great party struggle we first trace the breaking up of Carthage into an aristocratic and democratic faction, which not only distracted her councils, but exposed her to the danger, which a divided state always incurs in presence of a powerful enemy, of her intestine parties either strengthening themselves by the foreign influence, or determining their relations of war or peace by selfish, instead of patriotic, considerations. The influence of these factions on the fate of Carthage is admirably traced by Heeren, in his chapter on her *Decline and Fall*.

4. Closely connected with these party contests is the event which gives a deceitful appearance of prosperity to the period between the First and Second Punic Wars, the *Conquest of Spain* by Hamilcar Barca and his son-in-law, Hasdrubal, B. C. 237—221. [HISPANIA.] This great enterprize, while advancing the power of the Barcine family, was acceptable to the people as a compensation for the loss of Sicily and Sardinia; but it committed them, as Hamilcar desired, to a final struggle for the mastery with Rome.

5. The *Second Punic War* was a decisive conflict which, like the war of 1793 between England and France, may have been the inevitable consequence of the relative positions of the states, but of which, as of that war, the immediate occasion was the supposed interest of one of the two parties in the state; and the same motives which led Hannibal to plunge into it, induced him to prolong it to the utmost. It lasted seventeen years, B. C. 218—201, and resulted in the utter prostration of Carthage before her rival. She lost her fleet and all her possessions out of Africa, and even there Masinissa was planted as a thorn in her side, at the head of a powerful new state, and restlessly eager to pick a new quarrel, which might give Rome a pretext for her destruction. [AFRICA, NUMIDIA].

6. Still the *Administration of Hannibal* shed one ray of hope upon the dark prospects of the devoted state. He overthrew the despotism of the *Ordo Judicum*, notwithstanding that its undue power had been the creation of the democratic party which supported his family, by confining to a year the term of office, which had before been for life; and he introduced such order into the finances, that ten years sufficed to pay the tribute imposed by the peace with Rome. Meanwhile, a new rival of Rome was rising in the East; and if, as Hannibal meditated, Carthage could have brought what force she yet had to the aid of Antiochus the Great, the career of the triumphant republic might perhaps yet have been checked. But, denounced by the opposite faction, and proscribed by Rome, Hannibal was compelled to fly to Antiochus, B. C. 195. With his departure his party became extinct, and the influence of Rome became supreme even within the state.

7. After this it could not be doubted that the tongue of Cato uttered the decree of fate as much as the voice of hatred, in the celebrated sentence *Carthago delenda est*. Amidst the conflicts which Rome had yet before her in the East, Carthage, fallen as she was, and though daily suffering more and more from the encroachments of Masinissa [AFRICA], might yet be troublesome if not formidable. The chance of such a danger was exaggerated in the reports carried back to Rome by Cato from his embassy to settle the disputes with Masinissa, his failure in which added the stimulus of personal resentment to the hatred which his party bore to Carthage; and the pretext of the armed resistance, to which Masinissa at length drove the Carthaginians, was eagerly seized for commencing the *Third Punic War*. The affecting story of that heroic struggle almost obliterates the memory of the faults for which Carthage was now doomed to suffer. It lasted three years, B. C. 150—146, and ended with the utter destruction of the city, in the very same year in which the fall of Corinth completed the conquest of Greece. Thus the two peoples who had so long contended on the plains of Sicily for the dominion of the Mediterranean, fell at once before the rival, whose existence they had then hardly recognised. It is not within the province of this work to meditate on such a fall.

The statistics given by Strabo (xvii. p. 833; comp. Polyb. xxxvi. 4; Appian. *Pun.* 80), of the resources and efforts of Carthage at the time of this war are very valuable. At the commencement of the war, she had 300 subject cities in Libya, and the population of the city was 700,000. When, in the first instance, she accepted the terms imposed by the Romans, in the vain hope of their being satisfied with this submission, she gave up 200,000 stand of arms and 3000 (or 2000) catapults. When war broke out again, manufactories of arms were established, which turned out daily 140 shields, 300 swords, 500 spears, and 1000 missiles for catapults, while the female servants gave their hair to make strings for the catapults. Though, as bound by the treaty at the end of the Second Punic War, they had for fifty years possessed only twelve ships of war, and though they were now besieged in the Byrsa, they built 120 decked vessels in the space of two months, from the old stores of timber remaining in the dockyards; and, as the mouth of their harbour was blockaded, they cut a new entrance, through which their fleet suddenly put to sea.

VI. ROMAN CARTHAGE. — The final destruction of the city, the curse pronounced upon her site, the constitution of her territory as the new Roman province of Africa, and the history of that province down to its final conquest by the Arabs, are treated of under AFRICA. It remains to state a few facts relating specifically to the city.

Notwithstanding the prohibition of any attempt to rebuild Carthage, its admirable site and the fertility of the surrounding country rendered its remaining long desolate unlikely; and its restoration seems to have been a favourite project with the democratic party in Rome. Only twenty-four years had elapsed, B. C. 122, when C. Gracchus sent out a colony of 6000 settlers to found on the site of Carthage the new city of JUNONIA, a name to which old traditions would seem to give a peculiar significance. But

evil prodigies at its foundation gave the sanction of superstition to the decision of the senate, annulling this with the other acts of Gracchus. (Appian. *Pun.* 136; Plut. *C. Gracch.* 13; Liv. *Epit.* lx.; Vell. Paterc. i. 15; Solin. 27). The project was revived by Julius Caesar, who with a sort of poetical justice planned the restoration of Carthage and of Corinth in the same year, B. C. 46; but, by his murder, the full execution of his design devolved upon his successor. (Appian. *l. c.*; Plut. *Caes.* 57; Strab. xvii. p. 833; Dion Cass. xliii. 50, comp. lii. 43; Paus. ii. 1.) Lepidus seems to have deprived the new colony of its privileges, during his short rule in Africa; but it was restored by Augustus (B. C. 19), under whom 3000 colonists were joined with the inhabitants of the neighbouring country to found the new city of Carthage, which, already when Strabo wrote, was as populous as any city of Africa (*καὶ νῦν εἴ τις ἄλλη καλῶς οἰκεῖται τῶν ἐν Λιβύῃ πόλεων*: Strab., Dion, Appian., Solin., *ll. cc.*). It was made, in place of the Pompeian Utica, the seat of the proconsul of Old Africa. [AFRICA.]

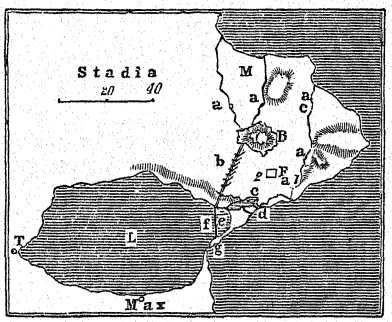
It continued to flourish more and more during the whole period till the Vandal invasion. Herodian (vii. 6) calls it the next city after Rome, in size and wealth; and Ausonius thus compares it with Rome and Constantinople (*Carm.* 286): —

> "Constantinopoli adsurgit Carthago priori,
> Non toto cessura gradu, quia tertia dici
> Fastidit."

Ecclesiastically, it was one of the most important of the numerous bishoprics of Africa: among the great names connected with it, are Cyprian, as its bishop, and Tertullian, who was probably a native of the city. In A. D. 439, it was taken by Genseric, and made the capital of the Vandal kingdom in Africa. It was retaken by Belisarius, in 533, and named Justiniana. It was finally taken and destroyed, in 647, by the Arabs under Hassan. (Clinton, *Fasti Romani, s. aa.*; Gibbon, vol. vi. p. 26, vol. vii. pp. 180, foll., 350—352, vol. ix. pp. 450, 458.) "Whatever yet remained of Carthage was delivered to the flames, and the colony of Dido and Caesar lay desolate above two hundred years, till a part, perhaps a twentieth of the old circumference, was repeopled by the first of the Fatimite caliphs. In the beginning of the sixteenth century, the second capital of the West was represented by a mosque, a college without students, twenty-five or thirty shops, and the huts of five hundred peasants, who, in their abject poverty, displayed the arrogance of the Punic senators. Even that paltry village was swept away by the Spaniards, whom Charles V. had stationed in the fortress of Goletta. The ruins of Carthage have perished; and the place might be unknown if some broken arches of an aqueduct did not guide the footsteps of the inquisitive traveller." (Gibbon.)

COINS OF CARTHAGE.

Very few of its coins are extant, a large number of those ascribed to it being spurious. Among the genuine ones, besides those of the Roman emperors, there is a very rare and valuable medal of Hilderic, the Vandal king, with the legend FELIX KART. (Eckhel, vol. iv. pp. 136, &c.) The cuts above represent a gold coin, the actual size, and one of bronze, two-thirds the size of the original.



VII. TOPOGRAPHY OF CARTHAGE.—The general situation of the city has already been described; but, when we come to the details of its topography, we find the same tantalizing want of certain information, which renders all else respecting her so difficult.

The present remains are insufficient to guide us to an understanding of the obscure and often apparently contradictory statements of the ancient writers; and the inquirer often sighs over the loss of that picture, representing the site and size of Carthage, which Mancinus, the commander of the fleet in the Third Punic War (B. C. 148), exhibited to the Roman people in the forum, and won the consulship by his zeal in explaining its details. Appian (*Pun.* 95, foll.) is almost the only ancient author who has left any considerable details; and he is, as usual, very inexact, and in some points evidently quite wrong. Of the main difficulty, it is scarcely an exaggeration to compare it with a doubt among the future antiquaries twenty-five centuries hence, whether London or Southwark stood on the N. side of the Thames. We know that the old Punic city grew up round the original Bozra or Byrsa (whether the citadel called Byrsa in historical times stood on the old site is even doubtful), and that it gradually covered the whole peninsula; aud we know that it had a large suburb called Megara or Magalia, and also the New City (Diod. xx. 44). We also know that the Roman city stood on a part of the ancient site, and was far inferior to the Old City in extent. But, whether the original Punic city, with its harbours, was on the N. or S. part of the peninsula; on which side of it the suburb of Megara was situated; and whether the Roman city was built on the site of the former, or of the latter; are questions on which some of the best scholars and geographers hold directly opposite opinions.

Upon the whole, comparing the statements of the ancient writers with the present state of the locality and the few ruins of the Punic city which remain, it seems most probable that the original city was on the SE. part of the peninsula about *C. Carthage*. The subjoined ground-plan from Mannert is given merely as an approximation to the ancient positions. For the details of the topography, the latest and best authority is Dr. H. Barth, who has compared the researches of Falbe with his own observations. (*Wanderungen*, &c. pp. 80, foll.)

The following are the most important details of the topography:—

1. The *Taenia* (*ταινία*), was a tongue of land of a considerable length, and half a stadium in breadth, mentioned again and again by Appian in

PLAN OF CARTHAGE (MANNERT).

C. The Punic city.
M. The suburb of Megara.
L. Lagoon, anciently the bay of Tunis.
T. City of Tunis.
Max. City of Maxula.
B. The byrsa.
F. The forum.
aa. Walls towards the sea.
b. Triple wall on the land side.
c. The Cothon, with its island.
d. Entrance to Cothon, made when Scipio had blocked up the proper entrance.
e. Outer harbour.
f. Scipio's mole.
g. The *Goletta* or present mouth of the Lagoon of Tunis.
1. Temple of Aesculapius (Esmun).
2. Temple of Apollo.

such a manner that the determination of its position goes far to settle the chief doubt already referred to. It jutted out from the isthmus (ἀπὸ τοῦ αὐχένος), towards the W., *between the lake and the sea* (μέσῃ λίμνης τε καὶ τῆς θαλάσσης), and in the closest proximity to the harbours, and also at the weaker extremity of the strong landward wall of the city. (See below.) All the particulars of Appian's description seem to point to the sandy tongue of land which extends SW. from the S. extremity of the peninsula to the *Goletta*, or mouth of the Lagoon of Tunis, and divides in part this lagoon (the λίμνη of Appian) from the open sea. That this tongue of land is larger than he describes it, is a confirmation of the identity, considering the changes which we know to have been going on; and the slight discrepancy involved in his making the *taenia* jut out from the *isthmus*, whereas it actually proceeds from the *peninsula*, is surely hardly worthy of discussion. No room would have been left for doubt, had Appian told us *what lake* (λίμνη) he meant; but that he omits to tell us this, seems of itself a strong proof that he meant the Lagoon of Tunis. The other and much less probable opinion is that the *lake* was on the N. side of the isthmus, where we now find the salt marsh of *Sebcha-es-Sukara:* this view of course inverts the whole topography of the peninsula, by involving the necessity of seeking the Byrsa and the harbours on its N. side. Those writers, including even Ritter, who have adopted the latter view, seem to have been misled by Shaw, who, finding on the N. side the village now called *El-Mersa*, i. e. *the Port*, in a position which, though now inland, must anciently have been on the sea shore, proceeds to identify this site (though indeed rather by implication than positive assertion) with the ancient harbour of Carthage. (Shaw, *Travels*, &c., p. 150.)

2. The *Walls* are especially difficult to trace with any certainty. At the time when the city was most flourishing, it is pretty clear that they encompassed, as might have been expected, the whole circuit of the peninsula, speaking generally; and Appian informs us that on one side (evidently towards the sea, but the words are wanting) there was only a single wall, because of the precipitous nature of the ground; but that on the S., towards the land-side, it was threefold. But when we come to particulars, first, as to the sea-side, it is not certain whether the two eminences of *C. Ghamart* and *C. Carthage* were included within the fortifications, or were left, either wholly or in part, unfortified on account of their natural strength. In the final siege, we find Mancinus attacking from the side of the sea a part of the wall, the defence of which was neglected on account of the almost inaccessible precipices on that side, and establishing himself in a fort adjacent to the walls (Appian. *Pun.* 113). On the whole, it seems probable that on both the great heights the walls were drawn along the summit rather than the base, so that they would not include the N. slope of *C. Ghamart*, nor the E. and S. slopes of *C. Carthage*. (Barth, pp. 83, 84.)

The land side presents still greater difficulties. The length of the wall which Scipio drew across the isthmus to blockade the city, and which was 25 stadia (or 3 M. P.) from sea to sea (Appian. *Pun.* 95, 119; Polyb. i. 73; Strab. xvii. p. 832), gives us only the measure of the width of the isthmus (probably at its narrowest part), not of the landface of the city, which stood on wider ground. Strabo (xvii. p. 832) assigns to the whole walls a circumference of 360 stadia, 60 of which belonged to the wall on the land side, which reached from sea to sea. Explicit as this statement is, it seems impossible to reconcile it with the actual dimensions of the peninsula, for which even the 23 M. P. assigned to it by Livy (Epit. li.; Oros. iv. 22, gives 22 M. P.) would seem to be too much (Barth, p. 85). Attempts have been made to obtain the 60 stadia of Strabo by taking in the walls along the N. and S. sides of the peninsula, as well as that across it on the land side, which is quite inconsistent with the plain meaning of the writer; or by supposing that Strabo gives the total length of the triple line of wall, a most arbitrary and improbable assumption. Besides, the language of Strabo seems obviously to refer to the actual width of that part of the isthmus across which the wall was built (τὸ ἑξηκονταστάδιον μῆκος αὐτὸς ὁ αὐχὴν ἐπέχει, καθῆκον ἀπὸ θαλάττης ἐπὶ θάλατταν). The only feasible explanation seems to be, that the wall was not built across the narrowest part of the isthmus, but was thrown back to where it had begun to widen out into the peninsula; and it seems also fair to make some allowance for deviations from a straight line. A confirmation of the length assigned to the wall by Strabo is found in Appian's statement, that Scipio made simultaneous attacks on the land defences of Megara alone at points 20 stadia distant from each other, the whole breadth of the isthmus being, as we have seen, only 25 stadia.

Be this as it may, we know that this land wall formed by far the most important part of the defences of the city. It consisted of three distinct lines, one behind the other, each of them 30 cubits high without the parapets. There were towers at the distance of 2 plethra, 4 stories high, and 30 feet deep. Within each wall were built two stories of vaulted chambers, or casemates, in the lower

range of which were stables for 300 elephants, and in the upper range stables for 4000 horses, with ample stores of food for both. In the spaces between the walls (*τόπος εὐρυχωρής*, Strab. xvii. p. 832), there were barracks for 20,000 infantry, and 4000 cavalry, with magazines and stores of proportionate magnitude; forming, in fact, a vast fortified camp between the city and the isthmus. It would seem from Appian (viii. 95) that this description applies only to the S. part of the landward wall, behind which lay Byrsa (*τὰ πρὸς μεσημβρίαν ἐς ἤπειρον, ἔνθα καὶ ἡ Βύρσα ἦν ἐπὶ τοῦ αὐχένος*). The N. part of the landward wall, surrounding the suburb of Megara, seems to have been less strongly fortified, and accordingly we find some of the chief attacks of Scipio directed against it. Appian adds to his description of the triple wall, that its corner which bent round towards the harbours, by the *Taenia*, or tongue of land mentioned above, was the only part that was weak and low; and on this point also we find the Romans directing their attacks.

The limits of the Roman city can be defined with greater certainty. It remained, indeed, without a fortified enclosure, down to the fourteenth year of Theodosius II. (B. C. 424), when the increasing dangers of the African province both from the native and foreign barbarians suggested the policy of fortifying its capital. The remains of the wall then built can still be traced, and sufficient ruins of the city are visible to indicate its extent; while the limits are still further marked by the position of the great reservoirs, which we know to have been without the walls. But as the city was far gone in its decline when these walls were built, it might be supposed that the limits indicated by them were narrower than the original boundaries, were it not for a most interesting discovery made by Falbe, to whose researches during a long residence at Tunis, we owe most of our knowledge of Carthaginian topography. Struck by the fact, that the land W. and NW. of the Roman city is divided into regular rectangles by roads utterly different from the crooked ways which are common in Mohammedan countries, he suspected that these roads might mark out the divisions of the land among the Roman colonists; and, upon measuring the rectangles, he found that they were of equal area, each containing 100 *haeredia*, or 200 *jugera*. Of such plots, 28 are clearly visible, and the land which has been broken up to form the gardens of *El-Mersa* furnishes space for 2 more; so that we have the land without the walls of the Roman city divided into 30 centuries of *haeredia*, precisely the proper quantity for the 3000 colonists whom Augustus settled in the new city. (Appian. *Pun.* 138.)

That Roman Carthage stood on the site of the ancient Punic city, and not, as some maintain, on that of the suburb of Megara, seems tolerably clear. Not to lay too much stress on Pliny's phrase (v. 2), "in vestigiis magnae Carthaginis," it appears that the new city was supplied from the same aqueduct and reservoirs, and had its citadel and chief temples on the same sites, as of old. The restored temple of Aesculapius was again the chief sanctuary, and that of the goddess Coelestis became more magnificent than ever. (Barth, p. 83.)

3. *Harbours.* — In accordance with that view of the topography which we follow, the double harbour of Carthage must be looked for on the S. side of the peninsula, at the angle which it forms with the *Taenia* described above, within the *Lagoon of Tunis* The fact that Scipio Africanus the elder could see from Tunis the Punic fleet sailing out of the harbour (Appian. *Pun.* 24), seems a decisive proof of the position, which is confirmed by many other indications. (Barth, p. 88.)

The port consisted of an outer and an inner harbour, with a passage from the one into the other; and the outer had an entrance from the sea* 70 feet wide, which was closed with iron chains. The outer harbour was for the merchantmen, and was full of moorings. The inner harbour was reserved for the ships of war. Just within its entrance was an island called Cothon (*Κώθων*, whence the harbour itself was called Cothon also), rising to a considerable elevation above the surrounding banks, and thus serving the double purpose of a mask to conceal the harbour from without, and of an observatory for the port-admiral (*ναύαρχος*), who had his tent upon it, whence he gave signals by the trumpet and commands by the voice of a herald. The shores of the island and of the port were built up with great quays, in which were constructed docks for 220 ships (one, it would seem, for each), with storehouses for all their equipments. The entrance of each dock was adorned with a pair of Ionic columns, which gave the whole circuit of the island and the harbour the appearance of a magnificent colonnade on each side.† So jealously was this inner harbour guarded, even from the sight of those frequenting the outer, that, besides a double wall of separation, gates were provided to give access to the city from the outer harbour, without passing through the docks. (Appian. *Pun.* 96, 127.) That the inner harbour at least, and probably both, were artificial excavations, seems almost certain from their position and from the name *Cothon* (Gesen. *Mon. Phoen.* p. 422), to say nothing of Virgil's phrase (*Aen.* i. 427):—"hic portus alii *effodiunt*," which, remembering the poet's antiquarian tastes, should hardly be regarded as unmeaning.

The remains of two basins still exist, near the base of the tongue of land, the one more to the S. being of an oblong shape, and the other of a rounder form, with a little peninsula in the middle; both divided from the sea on the E. by a narrow ridge. These basins would be at once identified as the harbours of Carthage, but for their apparently inadequate size; an objection which, we think, Barth has successfully removed. (pp. 88—90). Whatever size the harbours had at first, was necessarily preserved, for the adjacent quarter was the most populous in the city. A calculation made by Barth of the circuit of the inner basin and island (now a penin-

* The general term *ἐκ πελάγους* which Appian here uses is not inconsistent with the view that the port opened into the lagoon.

† When Appian (*Pun.* 127) distinguishes the *square* part of the Cothon (*τὸ μέρος τοῦ Κώθωνος τὸ τετράγωνον*) from its *round* (or *surrounding*) part *on the opposite side* (*ἐπὶ θάτερα τοῦ Κώθωνος ἐς τὸ περιφερὲς αὐτοῦ*), he seems to mean by the former the island, and by the latter the bank on the land side. The Punic fleet, which had put out to sea by the new mouth (see below), being destroyed, Scipio naturally first storms the island in the Cothon; meanwhile Laelius seizes the opportunity for a sudden attack upon the other bank, which proves successful, and the Romans, thus possessed of the whole enclosure of the Cothon, are prepared to attack the Byrsa.

sula) shows at least a probability that they could contain the 220 vessels; while, for the general traffic, the *Lagoon of Tunis* could be used as a roadstead: and that it was so used in later times is proved by the fact that Misua, on its opposite shore, was the port of Carthage under the Vandals. (Procop. *B. V.* i. 16.) Further, we know that extra accommodation was provided, at some early period, for the merchantmen, in the shape of a spacious quay on the *sea*-shore (not that of the lagoon) outside of the city walls (Appian. *Pun.* 123), of which the foundations are still visible; the ancient purpose of the existing substructions being confirmed by their resemblance to those at Leptis Magna.

But what, then, has become of all the masonry of the quays and docks and colonnades which surrounded the Cothon and its island, but of which the present inner basin exhibits no remains? The doubt is easily removed. Carthage, like Rome, has been the quarry of successive nations, but for a much longer period, for doubtless even the Roman city was built in great measure from the remains of the Punic one; and the masonry of the docks, lying in the very midst of the city, and at the part which would be the first rebuilt to form a port, would naturally be among the first used. The substructions on the sea-coast, on the contrary, have been preserved, and afterwards in part uncovered, by the waves of the Mediterranean.

The manner in which the harbours ran up close along the SE. shore of the peninsula enables us to understand the resource adopted by the Carthaginians when Scipio, in the Third Punic War, shut up the common outer entrance of their harbours by a mole thrown across from the *Taenia* to the *isthmus:* they cut a new channel from the Cothon into the deep sea, where such a mode of blockade was impracticable, and put out to sea with their newly constructed fleet. (Appian. *Pun.* 121, 122; Strab. xvii. p. 833.) Whether, after the restoration of the city, Scipio's mole was removed, and the ancient entrance of the port restored, we are not informed. Probably it was so: but the new mouth cut by the Carthaginians would naturally remain open, and this, with the part of the Cothon to which it gave immediate access, seems to be the *Mandracion* or *Portus Mandracius*, of later times. (Procop. *B. V.* i. 20, ii. 8.)

4. *Byrsa.* — This name is used in a double sense, for the most ancient part of the city, adjoining to the harbours, and for the citadel or *Byrsa*, in the stricter sense. When Appian (*Pun.* 95) speaks of the triple land wall on the S., *as where the Byrsa was upon the isthmus* (ἔνθα καὶ ἡ Βύρσα ἦν ἐπὶ τοῦ αὐχένος), it may be doubted in which sense he uses the term; but, when he comes to describe the storming of the city (c. 127, foll.), he gives us a minute description of the locality of the citadel.

Close to the harbours stood the Forum, from which three narrow streets of houses six stories high ascended to the Byrsa, which was by far the strongest position in the whole city. (Appian. *Pun.* 128.) There can be little doubt of its identity with the *Hill of S. Louis*, an eminence rising to the height of 188 Paris feet (about 200 English), and having its summit in the form of an almost regular plateau, sloping a little towards the sea. Its regularity suggests the probability of its being an artificial mound (probably about a natural core) formed of the earth dug up in excavating the harbours; a kind of work which we know to have been common among the old Semitic nations. (Barth, pp. 94, 123; comp. Strab. ix. p. 512.) The obvious objection, that it could not then be the post first occupied by the Phoenician colonists, Barth boldly and ingeniously meets by replying that *it was not;* that they would naturally establish themselves first on the lofty eminence of *C. Carthage;* and that, when they descended to the lower ground, there built their city, and excavated their port, and made a new citadel in its neighbourhood, they still applied to it the ancient name. The summit of the hill is now occupied by a chapel to the memory of S. Louis, the royal crusader who died in his expedition against *Tunis;* and, in the mutations of time, the citadel of Carthage has become a possession of the French! The chambers which surround the chapel contain an interesting museum of objects found at Carthage and among other ruins of Africa.

On the sides of the hill there are still traces of the ancient walls which enclosed the Byrsa and made it a distinct fortress, and which seem to have risen, terrace above terrace, like those of the citadel of Ecbatana. (Herod. i. 98.) Orosius (iv. 22) gives 2 M. P. for the circuit of the Byrsa, meaning, it is to be presumed, the base of the hill.

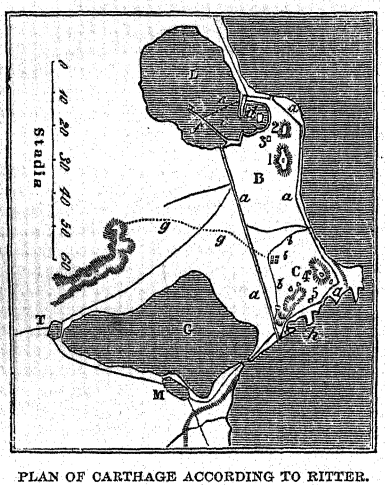
On the summit stood the temple of Aesculapius (Esmun), by far the richest in the city (Appian. *Pun.* 130), raised on a platform which was ascended by sixty steps, and probably resembling in its structure the temple of Belus at Babylon. (Herod. i. 181; Barth, p. 95). It was in this temple that the senate held in secret their most important meetings.

The Byrsa remained the citadel of Carthage in its later existence; and the temple of Aesculapius was restored by the Romans. (Appul. *Florida*, pp. 361, foll.) On it was the *praetorium* of the proconsul of Africa, which became successively the palace of the Vandal kings and of the Byzantine governors. (*Passio Cypriani*, ap. Ruinart, *Acta Martyrum*, pp. 205, foll.; Barth, p. 96.)

5. *Forum and Streets.* — As we have just seen, the forum lay at the S. foot of the hill of Byrsa, adjacent to the harbours. It contained the senate house, the tribunal, and the temple of the god whom the Greeks and Romans call Apollo, whose golden image stood in a chapel overlaid with gold to the weight of 1000 talents. (Appian. *Pun.* 127). The three streets already mentioned as ascending from the forum to the Byrsa formed an important outwork to its fortifications; and Scipio had to storm them house by house. The centre street, which probably led straight up to the temple of Aesculapius, was called, in Roman Carthage, *Via Salutaris*. The other streets of the city seem to have been for the most part straight and regularly disposed at right angles. (Mai, *Auct. Class.* vol. iii. p. 387.)

6. *Other Temples.* — On the N. side of the Byrsa, on lower terraces of the hill, are the remains of two temples, which some take for those of Coelestis and Saturn; but the localities are doubtful. We know that the worship of both these deities was continued in the Roman city. (Barth, pp. 96—98.)

7. On the W. and SW. side of the Byrsa are ruins of *Baths*, probably the *Thermae Gargilianae*, a locality famous in the ecclesiastical history of Carthage; of a spacious *Circus*, and of an *Amphitheatre*. (Barth, pp. 98—99.)



8. *Aqueduct and Reservoirs* — The great aqueduct, fifty miles long, by which Carthage was supplied with water from *Jebel Zaghwan* (see Map, p. 532), is supposed by some to be a work of the Punic age; but Barth believes it to be Roman. It

is fully described by Shaw (p. 153) and Barth (pp. 100. foll.). The *Reservoirs* are among the most interesting remains of Carthage, especially on account of the peculiarly constructed vaulting which covers them. They are probably of Punic workmanship. Besides some smaller ones, there are two principal sets; those on the W. of the city, where the aqueduct terminated, and those on the S., near the Cothon. (Shaw; Barth.)

9. Besides the above, there are ruins which seem to be those of a *Theatre*, and also the remains of a great building, apparently the largest in the city, which Barth conjectures to be the temple of Coelestis. These ruins consist, like the rest, only of broken foundations. (Barth, 105, 106.)

10. The Suburb of Megara, Magar, or Magalia, afterwards considered as a quarter of the city, under the name of the New City (Νεάπολις), was surrounded by a wall of its own, and adorned with beautiful gardens, watered by canals. (Diod. xx. 44; Appian. viii. 117; Serv. *ad Virg. Aen.* i. 372; Isidor. *Etym.* xv. 12.) It seems to have occupied the site on the NW. side of the peninsula, now called *El-Mersa*, and still the site of the beautiful gardens of the wealthy citizens of Tunis.

11. *Necropolis.*—From the few graves found in the rocky soil of the hill of *C. Ghamart*, it seems probable that here was the ancient necropolis, N. of the city, a position in which it is frequently, if not generally, found in other ancient cities. There is, however, some doubt on the matter, which the evidence is insufficient to decide. (Tertullian. *Scorp.* 42; Barth, p. 107.)

PLAN OF CARTHAGE ACCORDING TO RITTER.

B. BYRSA, the ancient Phoenician city.
C. MEGARA, afterwards CARTHAGO NOVA and MAGNA CARTHAGO, the Roman city.
L. Lagoon, formerly an open bay of the sea, now partly firm land and partly a salt-marsh.
G. Gulf of Tunis, now a lagoon, and much diminished.
T. The city of TUNES.
M. The city of MAXULA.
aa. Carthaginian walls.
bb. Roman walls.
c. Outer harbour.
d. Inner harbour and island.
e. Scipio's mole.
f. Taenia.
g. Aqueduct.
h. Portus Mandracius.
1. The citadel (Byrsa) and temple of Aesculapius.
2. Cothon.
3. Forum and temple of Apollo.
4. Other temples.
5, 6. Reservoirs.

It has been already intimated that the views now stated are those only of one party among the geographers and scholars who have studied the topography of Carthage. Of their general correctness, we are more and more convinced; but it seems only fair to those who desire to pursue the subject further to exhibit the results of the opposite views, in the form of the above ground-plan, copied from the *Atlas Antiquus* of Spruner, who has taken it from the *Erdkunde* of Karl Ritter.

A very complete plan of the ruins in their present state, by Falbe, is given in the periodical entitled *Ausland*, for 1836, No. 122. [P. S.]

CARTHA'GO NOVA (Καρχηδὼν ἡ νέα, Polyb., Strab., Ptol., Liv., Mel., Plin., Steph. B., *s. v.*, &c.; Καίνη πόλις, Polyb. ii. 13, iii. 13, &c., Steph. B. *s. vv.* Ἀλθαία, Καρχηδών; ἡ κατὰ τὴν Ἰβηρίαν Καρχηδών, Polyb. x. 15, Ath. iii. p. 92; Hispana Carthago, Flor. ii. 6; Καρχηδὼν σπαρταγενής, Appian. *Iber.* 12, Steph. B.; Carthago Spartaria, Plin. xxxi. 8. s. 43, *Itin. Ant.* pp. 396, 401; Isidor. *Orig.* xv. 1; very often simply Carthago: *Eth.* and *Adj.* Καρχηδόνιος, Carthaginiensis: *Cartagena*), a celebrated city of Hispania Tarraconensis, near the S. extremity of the E. coast, in the territory of the Contestani (Ptol. ii. 6. § 14) on the frontiers of the Sidetani. (Strab. iii. p. 163.) It was a colony of Carthage, and was built B.C. 242 by Hasdrubal, the son-in-law of Hamilcar Barca, and his successor in Spain. (Strab. iii. p. 158; Polyb. ii. 13; Mela, ii. 6. § 7; Solin. 23; Diod. Sic. xxv. 2; Polyaen. *Strateg.* viii. 16, πόλις Φοινίσσα.) There was a legend of an older settlement on its site by Teucer, in his wanderings after the Trojan War. (Justin. xliv. 3. § 3; Sil. Ital. iii. 368, xv. 192.) The epithet *Nova* was added to distinguish it from Carthage in Africa the double introduction of the word *New* (*New New City*) thus made has been mentioned under CARTHAGO.

Its situation was most admirable, lying as it did near the middle of the Mediterranean (or, as the ancients choose to call it, the S.) coast of Spain, at a most convenient position for the passage to Africa (*i. e.* the Carthaginian territory), and having the only good harbour on that coast. (Polyb. ii. 13, x. 8; Strab. iii. p. 158; Liv. xxvi. 42.) Polybius estimates its distance from the Columns of Hercules at 3000 stadia, and from the Iberus (*Ebro*) 2600 (iii. 39). Scipio's army took seven days to reach it from the Ebro, both by land and sea (Polyb. x. 9; Liv. xxvi. 42); but at another time ten days. (Liv. xxviii. 32.) Strabo makes its distance along the coast from Calpe 2600 stadia (iii. p. 156), and from Massilia (*Marseille*) above 6000; and, across the Mediterranean, to the opposite cape of Metagonium, on the coast of the Massaesyli, 3000 stadia (xviii. pp. 827, 828, from Timosthenes; Liv. xxviii. 17). Pliny (iii. 3. s. 4) gives 187 M. P. for the distance from the neighbouring headland Saturni Pr. (*C. de Palos*) to Caesareia in Mauretania. The Maritime Itinerary gives 3000 stadia to Caesareia, and 400 stadia to the island of Ebusus (*Itin. Ant.* pp. 496, 511).

New Carthage stood a little W. of the promontory just named (*C. de Palos*), at the bottom of a bay looking to the S., in the mouth of which lay an island (Herculis or Scombraria I.*), which sheltered

* Σκομβραρία, Strab. iii. p. 159; Σκομβρασία,

it from every wind except the SW. (*Africus*), and left only a narrow passage on each side, so that it formed an excellent harbour. (Sil. Ital. xv. 220:—

"Carthago impenso Naturae adjuta favore,
Excelsos tollit pelago circumflua muros.")

Polybius gives twenty stadia for the depth of this bay, and ten for its breadth at the mouth. Livy, who copies the description of Polybius, gives by some mistake 500 paces (instead of 2500) for the depth, and a little more for the breadth. The city was built on an elevated tongue of land, projecting into the bay, surrounded by the sea on the E. and S., and on the W., and partly on the N. by a lake having an artificial communication with the sea, the remaining space, or isthmus, being only 250 paces wide; and it was only accessible from the mainland by a narrow path along the ridge. The city stood comparatively low, in a hollow of the peninsula, sloping down to the sea on the S.; but on the land side it was entirely surrounded on all sides by heights, the two at the extremities being mountainous and rugged, and the three between them lower, but steep and rocky. On the eastern height, which jutted out into the sea, stood the temple of Aesculapius (Esmun), the chief deity here, as Carthage; on the western, the palace built by Hasdrubal; of the intervening hills, the one nearest to the E. was sacred to Hephaestus, that on the W. to Saturn, and the middle one to Aletes, who received divine honours as the discoverer of the silver mines in the neighbourhood. Livy mentions also a hill sacred to Mercury, perhaps that of Aletes (xxvi. 44). We see here an interesting example of the worship on "high places" practised by the race. On the W., the city was connected with the mainland by a bridge across the channel cut from the sea to the lake. (Polyb. x. 10; Liv. xxvi. 42; Strab. iii. p. 158.) The city was most strongly fortified, and was twenty stadia in circumference. (Polyb. x. 11.) Polybius distinctly contradicts those who gave it double this circuit on his own evidence as an eye-witness; and he adds that, in his time (under the Romans), the circuit was still more contracted.

Besides all these advantages, New Carthage had in its immediate vicinity the richest silver mines of Spain, which are incidentally mentioned by Polybius in the preceding account, and were more fully described by him in another passage (xxxiv. 9), a part of which is preserved by Strabo (iii. pp. 147, 148, 158). The description is taken from their condition under the Romans, who probably only continued the operations of their predecessors. The mines lay twenty stadia (two geog. miles) N. of the city in the mountain spur, which forms the junction of M. Idubeda and M. Orospeda (Strab. iii. p. 161); and extended over a space 400 stadia in circumference. They employed 40,000 men, and brought into the Roman treasury 25,000 drachmae daily. After condensing Polybius's description of the mode of extracting the silver, Strabo adds that in his time the silver mines were no longer the property of the state, but only the gold mines; the former belonged to individuals.

Such was the city founded by the second head of the great house of Barca, not perhaps without some view to its becoming the capital of an independent kingdom, if the opposite faction should prevail at Carthage (Polyb. x. 10, says that the palace there was built by Hasdrubal *μοναρχικῆς ὁρενόμενον ἐξουσίας*). During their government of Spain, it formed the head-quarters of their civil administration and their military power. (Polyb. iii. 15. § 3: *ὡσανεὶ πρόσχημα καὶ βασίλειον ἦν Καρχηδονίων ἐν τοῖς κατὰ τὴν Ἰβηρίαν τόποις*; Liv. xxvii. 7, *caput Hispaniae*.) There we find Hannibal regularly establishing his winter quarters, and receiving the ambassadors of Rome (Polyb. iii. 13. § 7, 15. § 4, 5, 33. § 5; Liv. xxi. 5, 6); and thence he started on the expedition which opened the Second Punic War, B. C. 218. (Polyb. iii. 39. § 11.) It remained the Punic head-quarters during the absence of Hannibal (Polyb. iii. 76. § 11), who had taken care, before setting out, to make every provision for its safety (iii. 33). Here were deposited the treasures, the baggage of the Punic army, and the hostages of the Spanish peoples. (Polyb. x. 8. § 3; Liv. xxvi. 42.) The military genius of P. Scipio (afterwards the elder Africanus) at once, on his arrival in Spain, B. C. 211, pointed out the capture of New Carthage as a stroke decisive of the war in Spain; and, as soon as spring opened*, seizing an opportunity when, by some fatal oversight, the garrison was reduced to 1000 men fit for service, he made a rapid march from the Ebro with nearly all his forces, 25,000 infantry and 2500 cavalry, at the same time sending round his fleet under Laelius, who alone was in the secret, and took the city by storm, with frightful slaughter, and the gain of an immense booty, B. C. 210. (Polyb. x. 8—19; Liv. xxvi. 42—51.) It was on this occasion that Scipio gave that example of continence, which is so often celebrated by ancient writers. (Polyb.; Liv.; Val. Max. iv. 3; Gell. vi. 8.)

The important city thus gained by the Romans in Hispania Ulterior naturally became the rival of Tarraco, their previous head-quarters in Hispania Citerior. We find Scipio making it his head-quarters (in addition to Tarraco), and celebrating there the games in honour of his father and uncle, B. C. 206. (Liv. xxviii. 18, 21, *et alib.*) Under the early emperors it was a colony (Plin. iii. 3. s. 4), with the full name of COLONIA VICTRIX JULIA NOVA CARTHAGO (coins), and the seat of a conventus juridicus, including 65 peoples, besides those of the islands. (Plin. *l. c.*; BALEARES.) It shared with Tarraco the honour of the winter residence of the Legatus Caesaris, who governed the province of Tarraconensis. (Strab. iii. p. 167.) Its territory is called by Strabo Carchedonia (*Καρχηδονία*, p. 161; ager Carthaginiensis, Varr. *R. R.* i. 57. § 2). It was the point of meeting of two great roads, the one from Tarraco, the other from Castulo on the Baetis; it was 234 M. P. from the former place, and 203 from the latter. (*Itin. Ant.* pp. 396, 401.) As has been seen, its size was already diminished in the time of Polybius; but still it was, in the time of Strabo, a great emporium, both for the export and the import trade of Spain, and the most flourishing

Ptol. ii. 6. § 14, from the shores abounding in the fish called *σκόμβρος*, a kind of tunny or mackerel, from which was made the best sort of the sauce called *garon*. (Strab. *l. c.*; Plin. xxxi. 8. s. 41.) It is still called *Escombrera*, as well as simply *La Islota*, *the Islet*. Strabo mentions just above the extensive manufacture of cured fish at New Carthage and its neighbourhood (*πολλὴ ἡ ταριχεία*, iii. p. 158).

* There was, among the contemporary historians, some doubt respecting the true date, which Polybius removes by authority (x. 9; Liv. xxvii. 7).

city of those parts. (Strab. iii. p. 158.) It continued to rival TARRACO in importance, till it was almost entirely destroyed by the Goths. S. Isidore, who was a native of the place, speaks of it as desolate in A.D. 595. (*Orig.* xv. 1.)

Among the natural productions of the land around New Carthage, Strabo mentions a tree, the spines off which furnished a bark, from which beautiful fabrics were woven (iii. p. 175). This was the *spartum* (σπάρτος: a sort of broom), which was so abundant as to give to the city the name of CARTHAGO SPARTARIA (see names above), and that of *Campus Spartarius* (τὸ Σπαρτάριον πέδιον, Strab. p. 161) to the surrounding district, for a length of 100 M. P., and a breadth of 30 M. P. from the coast: it also grew on the neighbouring mountains. It was used for making ropes and matted fabrics, first by the Carthaginians, and afterwards by the Greeks and Romans; its manufacture being similar to that of flax. (Plin. xix. 2. s. 7, 8; comp. Plat. *Polit.* p. 280, c.; Xen. *Cyn.* ix. 13; Theophr. *H. P.* i. s. 5. § 2.)

New Carthage was one of Ptolemy's points of recorded astronomical observation, having its longest day 14 hrs. 20 min., and being distant 10 hrs. 3 min. W. of Alexandria. (Ptol. viii. 4. § 5.)

Numerous coins are extant, with epigraphs which are interpreted as those of New Carthage; but many of them are extremely doubtful. Those that are certainly genuine all belong to the early imperial period, under Augustus, Tiberius, and Caligula. Their types are various. The usual epigraphs are V. I. N. K. or C. V. I. N. K. (explained above), and more rarely V. I. N. C. (Florez, *Med. de Esp.* vol. i. p. 316; Mionnet, vol. i. p. 36, Suppl. vol. i. p. 70; Sestini, p. 123; *Num. Goth.*; Eckhel, vol. i. pp. 41, foll.) [P. S.]

CARTHA'GO VETUS (Καρχηδὼν παλαιά, Ptol. ii. 6. § 64: prob. *Carta la Vieja*), an inland city of the Ilercaones, in the neighbourhood of Tarraco, in Hispania Tarraconensis. From its name we may safely conjecture that it was an old Punic settlement, and that the epithet *old* was added, after the building of New Carthage, to distinguish it from that far more famous city. (Marca, *Hisp.* ii. 8; Ukert, vol. ii. pt. ii. p. 419.) [P. S.]

CARU'RA (τὰ Καρουρά), a town which was on the north-eastern limit of Caria (Strab. p. 663); its position east of the range of Cadmus assigns it to Phrygia, under which country Strabo describes it. It was on the south side of the Maeander, 20 M. P. west of Laodiceia, according to the Table, and on the great road along the valley of the Maeander from Laodiceia to Ephesus. The place is identified by the hot springs, about 12 miles NW. of *Denizli*, which have been described by Pococke and Chandler. Strabo (p. 578) observes that Carura contained many inns (πανδοχεῖα), which is explained by the fact of its being on a line of great traffic, by which the wool and other products of the interior were taken down to the coast. He adds that it has hot springs, some in the Maeander, and some on the banks of the river. All this tract is subject to earthquakes; and there was a story, reported by Strabo, that as a brothel keeper was lodging in the inns with a great number of his women, they were all swallowed up one night by the earth opening. Chandler (*Asia Minor*, c. 65) observed on the spot a jet of hot water, which sprung up several inches from the ground; and also the remains of an ancient bridge over the river. On the road between Carura and Laodiceia was the temple of Men Carus, a Carian deity; and in the time of Strabo there was a noted school of medicine here, under the presidency of Zeuxis. This school was of the sect of Herophilus. (Strab. p. 580.) Chandler discovered some remains on the road to Laodiceia, which, he supposes, may be the traces of this temple; but he states nothing that confirms the conjecture.

Herodotus (vii. 30) mentions a place called Cydrara, to which Xerxes came on his road from Colossae to Sardes. It was the limit of Lydia and Phrygia, and King Croesus fixed a stele there with an inscription on it, which declared the boundary. Leake (*Asia Minor*, &c. p. 251) thinks that the Cydrara of Herodotus may be Carura. It could not be far off; but the boundary between Lydia and Phrygia would perhaps not be placed south of the Maeander in these parts. [G. L.]

CARUS VICUS, a place in Bithynia, on a route of the Antonine Itin., which runs from Claudiopolis in Bithynia through Cratia or Flaviopolis, and Carus Vicus to Ancyra in Galatia. Carus Vicus was 30 M. P. from Flaviopolis. [G. L.]

CARU'SA (Καροῦσα or Κάρουσσα), a Greek trading place on the coast of Paphlagonia, south of Sinope, and 150 stadia from it. (Arrian, p. 15; Marcian. p. 73.) It is also mentioned by Scylax as a Greek city; and by Pliny (vi. 2). The place is *Gherséh* on the coast, which is identified by the name, and the distance from Sinope, *Sinab*. (Hamilton, *Asia Minor*, &c. vol. i. p. 304.) He observes that it is a good harbour when the wind blows from the west, and he thinks that this must be the meaning of the somewhat ambiguous words of the anonymous Periplus, though they are rendered differently in the Latin version. [G. L.]

CARVANCAS (Καρουάγκας), a mountain forming the northern bonudary between Pannonia and Noricum. It extended from Mount Ocra in the W. to Mount Cetius in the E., in the neighbourhood of Aemona. It must accordingly be identified with the range between the *Sömmering* and *Schöckl*. (Ptol. ii. 14. § 1, iii. 1. § 1, where, however, the common reading is Καρουσαδίᾳ.) [L. S.]

CARVENTUM (Καρούεντον: *Eth.* Carventanus), an ancient city of Latium, mentioned in the list given by Dionysius of the thirty states of the Latin League (v. 61, where the reading Καρνεντανοί for Κορνεντανοί is clearly proved by Steph. B *s. v.*). No subsequent mention occurs of the city, which was probably destroyed at an early period by the Aequians or Volscians, but the citadel, Arx Carventana, which appears to have been a fortress of great strength, is repeatedly mentioned during the wars of the Romans with the Aequians. It was twice surprised by the latter people; the first time it was retaken by the Romans, but on the second occasion, B. C. 409, it defied all the efforts of the consul, and we are not told when it was subsequently recovered. (Liv. iv. 53, 55.)

From the circumstances in which the Arx Carventana here occurs, it seems probable that it was situated not far from Mount Algidus, or the northern declivities of the Alban Hills; but there is no clue to its precise position. Nibby and Gell incline to place it at *Rocca Massima*, a castle on a rocky eminence of the Volscian mountains, a few miles from Cora. (Nibby, *Dintorni*, vol. iii. p. 17; Gell, *Top. of Rome*, p. 374.) [E. H. B.]

CARVETII, in Britain. An inscription now lost, but one which Cambden expressly states to have seen from the neighbourhood of Old Penrith, in Cumberland, ran thus:

D. M.
FL MARTIO SEN
IN C. CARVETIOR.
QVESTORIO
VIXIT AN XXXXV
MARTIOLA FILIA ET
HERES PONEN
. . CVRAVIT.

(Horseley, *Britannia Romana*, ii. 3.) [R. G. L.]

CARVO, a place on the road from Lugdunum Batavorum (*Leyden*) to Vemania (*Immenstadt*). The Antonine Itin. makes one station between *Leyden* and Trajectum (*Utrecht*), and another between *Utrecht* and Carvo. The Itin. places Harenatio or Arenacum next after Carvo; but the Table makes Castra Herculis the next station, and the distance from Carvo to Castra Herculis is xiii., which is assumed to be M. P. D'Anville affirms that we cannot look for this place lower down than *Wageningen*, on the right bank of the *Neder Rhyn*. Walckenaer places it a little lower at *Rhenen*, which must be near the mark. Some other geographers have fixed Carvo where it cannot be. [G. L.]

CARYAE (Κάρυαι: *Eth.* Καρυάτης), a town of Laconia upon the frontiers of Arcadia. It was originally an Arcadian town belonging to Tegea, but was conquered by the Spartans and annexed to their territory. (Phot. *Lex. s. v.* Καρυάτεια; Paus. viii. 45. § 1.) Caryae revolted from Sparta after the battle of Leuctra (B. C. 371), and offered to guide a Theban army into Laconia; but shortly afterwards it was severely punished for its treachery, for Archidamus took the town and put to death all the inhabitants who were made prisoners. (Xen. *Hell.* vi. 5. §§ 24—27, vii. 1. § 28.) Caryae was celebrated for its temple of Artemis Caryatis, and for the annual festival of this goddess, at which the Lacedaemonian virgins used to perform a peculiar kind of dance. (Paus. iii. 10. § 9; Lucian. *de Salt.* 10.) This festival was of great antiquity, for in the second Messenian war, Aristomenes is said to have carried off the Lacedaemonian virgins, who were dancing at Caryae in honour of Artemis. (Paus. iv. 16. § 9.) It was, perhaps, from this ancient dance of the Lacedaemonian maidens, that the Greek artists gave the name of Caryatides to the female figures which were employed in architecture instead of pillars. The tale of Vitruvius respecting the origin of these figures, is not entitled to any credit. He relates (i. 1. § 5) that Caryae revolted to the Persians after the battle of Thermopylae; that it was in consequence destroyed by the allied Greeks, who killed the men and led the women into captivity; and that to commemorate the disgrace of the latter, representations of them were employed in architecture instead of columns.

The exact position of Caryae has given rise to dispute. It is evident from the account of Pausanias (iii. 10. § 7), and from the history of more than one campaign that it was situated on the road from Tegea to Sparta. (Thuc. v. 55; Xen. *Hell.* vi. 5. §§ 25, 27; Liv. xxxiv. 26.) If it was on the direct road from Tegea to Sparta, it must be placed, with Leake, at the *Khan of Krevatá:* but we are more inclined to adopt the opinion of Boblaye and Ross, that it stood on one of the side roads from Tegea to Sparta. Ross places it NW. of the *Khan of Krevatá*, in a valley of a tributary of the Oenus, where there is an insulated hill with ancient ruins, about an hour to the right or west of the village of *Arákhova*. Although the road from Tegea to Sparta is longer by way of *Arákhova*, it was, probably, often adopted in war in preference to the direct road, in order to avoid the defiles of *Klisura*, and to obtain for an encampment a good supply of water. Boblaye remarks, that there are springs of excellent water in the neighbourhood of *Arákhova*, to which Lycophron, probably, alludes (Καρικῶν or Καρικῶν ποτῶν, Lycophr. 149). (Leake, *Peloponnesiaca*, p. 342, seq.; Boblaye, *Recherches*, p. 72; Ross, *Reisen im Peloponnes*, p. 175.)

CARYANDA (Καρύανδα: *Eth.* Καρυανδεύς). Stephanus (*s. v.* Καρύανδα) says that Hecataeus, made the accusative singular Καρύανδαν. He describes it as a city and harbour (λίμην) near Myndus and Cos. But λιμήν, in the text of Stephanus, is an emendation or alteration: the MSS. have λίμνη "lake." Strabo (p. 658) places Caryanda between Myndus and Bargylia, and he describes it, according to the common text, as "a lake, and island of the same name with it;" and thus the texts of Stephanus, who has got his information from Strabo, agree with the texts of Strabo. Pliny (v. 31) simply mentions the island Caryanda with a town; but he is in that passage only enumerating islands. In another passage (v. 29) he mentions Caryanda as a place on the mainland, and Mela (i. 16) does also. We must suppose, therefore, that there was a town on the island and one on the mainland. The harbour might lie between. Scylax, supposed to be a native of Caryanda, describes the place as an island, a city, and a port. Tzschucke corrected the text of Strabo, and changed λίμνη into λίμην: and the last editor of Stephanus has served him the same way, following two modern critics. It is true that these words are often confounded in the Greek texts; but if we change λίμνη into λίμην in Strabo's text, the word ταύτῃ, which refers to λίμνη, must also be altered. (See Groskurd's note, *Transl. Strab.* vol. iii. p. 53.)

Leake (*Asia Minor*, p. 227) says "there can be little doubt that the large peninsula, towards the westward end of which is the fine harbour called by the Turks *Pasha Limáni*, is the ancient island of Caryanda, now joined to the main by a narrow sandy isthmus." He considers *Pasha Limáni* to be the harbour of Caryanda "noticed by Strabo, Scylax, and Stephanus." But it should not be forgotten that the texts of Strabo and Stephanus speak of a λίμνη, which may mean a place that communicated with the sea. The supposition that the island being joined to the main is a remote effect of the alluvium of the Maeander, seems very unlikely. At any rate, before we admit this, we must know whether there is a current along this coast that runs south from the outlet of the Maeander.

Strabo mentions Scylax "the ancient writer" as a native of Caryanda, and Stephanus has changed him into "the ancient logographus." Scylax is mentioned by Herodotus (iv. 44): he sailed down the Indus under the order of the first Darius king of Persia. He may have written something; for, if the Scylax, the author of the Periplus, lived some time after Herodotus, as some critics suppose, Strabo would not call him an ancient writer. [G. L.]

CARYSIS (Κάρυσις) an island off the coast of Lycia, belonging to the town of Crya. (Steph. *s. v.* Κρύα.) [G. L.]

CARYSTUS. 1. (Κάρυστος: *Eth.* Καρύστιος: *Karysto*), a town of Euboea, situated on the south coast of the island, at the foot of Mt. Oche. It is mentioned by Homer (*Il.* ii. 539), and is said to

have been founded by Dryopes. (Thuc. vii. 57; Diod. iv. 37; Scymn. 576.) Its name was derived from Carystus, the son of Cheiron. (Steph. B. *s. v.*; Eustath. *ad Hom. l. c.*) The Persian expedition under Datis and Artaphernes (B. C. 490) landed at Carystus, the inhabitants of which, after a slight resistance, were compelled to submit to the invaders. (Herod. vi. 99.) Carystus was one of the towns, from which Themistocles levied money after the battle of Salamis. (Herod. viii. 112.) A few years afterwards we find mention of a war between the Athenians and Carystians; but a peace was in the end concluded between them. (Thuc. i. 98; Herod. ix. 105.) The Carystians fought on the side of the Athenians in the Lamian war. (Diod. xviii. 11.) They espoused the side of the Romans in the war against Philip. (Liv. xxxii. 17; Pol. xviii. 30.)

Carystus was chiefly celebrated for its marble, which was in much request at Rome. Strabo places the quarries at Marmarium, a place upon the coast near Carystus, opposite Halae Araphenides in Attica; but Mr. Hawkins found the marks of the quarries upon Mt. Ocha. On his ascent to the summit of this mountain he saw seven entire columns, apparently on the spot where they had been quarried, and at the distance of three miles from the sea. This marble is the Cipolino of the Romans, — a green marble, with white zones. (Strab. x. p. 446; Plin. iv. 12. s. 21, xxxvi. 6. s. 7; Plin. *Ep.* v. 6; Tibull. iii. 3. 14; Senec. *Troad.* 835; Stat. *Theb.* vii. 370; Capitol. *Gordian.* 32; Hawkins in Walpole's *Travels*, p. 288.) At Carystus the mineral asbestus was also obtained, which was hence called the Carystian stone (λίθος Καρύστιος, Plut. *de Def. Orac.* p. 707; Strab. *l. c.*; Apoll. Dysc. *Hist. Mirab.* 36.) There are very few remains of the ancient Carystus. (Fiedler, *Reise durch Griechenland*, vol. i. p. 428.)

Antigonus, the author of the Historiae Mirabiles, the comic poet Apollodorus, and the physician Diocles were natives of Carystus.

COIN OF CARYSTUS IN EUBOEA.

2. A town in Laconia, in the district Aegytis, near the frontiers of Laconia. Its wine was celebrated by the poet Alcman. Leake supposes that Carystus stood at the *Kalývia* of *Ghiorghitzi*. (Strab. x. p. 446; Athen. i. p. 31, d.; Steph. B. *s. v.* Κάρυστος; Leake, *Peloponnesiaca*, pp. 350, 366.)

CASCANTUM. [VASCONES.]

CASCI. [LATINI.]

CASEIRO'TAE (Κασειρῶται, Ptol. vi. 17. § 3), one of the ten tribes into which Ptolemy divides Aria. They lived in the south part, on the confines of Drangiana. [V.]

CA'SIA RE'GIO (ἡ Κασία χώρα), a district of Scythia extra Imaum, SW. of the Issedones, touching on the W. the Imaus and the caravan station for merchants going from the Sacae to Serica [ASCATANCAS], and extending E. as far as the CASII M. (Ptol. vi. 15. § 3.) [P. S.]

CA'SII MONTES (τὰ Κάσια ὄρη: *Khara M.*), a range of mountains in the E. of Central Asia, being a continuation of the ASCATANCAS range, and forming part of the S. boundary of Scythia extra Imaum and of Serica. The range intersects the great desert of Gobi in a line from W. to E. Ptolemy places the W. extremity of the chain in 152° long. and 44° lat., and its E. extremity in 171° long. and 40° lat. It contained the N. source of the river BAUTIS. (Ptol. vi. 15. § 2, 16. §§ 3, 5.) [P. S.]

CASILI'NUM (Κασιλῖνον: *Eth.* Casilinas: *Capoua*), a town of Campania, situated on the river Vulturnus, about 3 miles W. of Capua. We have no account of it prior to the Roman conquest of Campania, and it was probably but a small town, and a dependency of Capua. But it derived importance as a military position, from its guarding the principal bridge over the Vulturnus, a deep and rapid stream which is not fordable; and on this account plays a considerable part in the Second Punic War. It was occupied by Fabius with a strong garrison, in the campaign of B. C. 217, to prevent Hannibal from crossing the Vulturnus (Liv. xxii. 15); and the following year, after the battle of Cannae, was occupied by a small body of Roman troops (consisting principally of Latins from Praeneste, and Etruscans from Perusia), who, though little more than a thousand in number, had the courage to defy the arms of Hannibal, and were able to withstand a protracted siege, until finally compelled by famine to surrender. (Liv. xxiii. 17, 19; Strab. v. p. 249; Val. Max. vii. 6. §§ 2, 3; Sil. Ital. xii. 426.) Livy tells us on this occasion that Casilinum was divided into two parts by the Vulturnus, and that the garrison, having put all the inhabitants to the sword, occupied only the portion on the *right* bank of the river next to Rome: such at least is the natural construction of his words, "partem urbis quae *cis* Vulturnum est;" yet all his subsequent accounts of the operations of the siege imply that it was the part *next to Capua* on the *left* bank which they held, and this is in fact the natural fortress, formed by a sharp elbow of the river.

Casilinum was recovered by the Romans in B. C. 214 (Liv. xxiv. 19), and from this time we hear no more of it until the period of the Civil Wars. It appears that Caesar had established a colony of veterans there, who, after his death, were, together with those settled at Calatia, the first to declare in favour of his adopted son Octavian. (Appian, *B. C.* iii. 40; Cic. *Phil.* ii. 40.) This colony appears to have been strengthened by M. Antonius (Cic. *l. c.*), but did not retain its colonial rights; and the town itself seems to have fallen into decay; so that, though Strabo notices it among the cities of Campania, Pliny speaks of it as in his time going fast to ruin. (Strab. *l. c.*; Plin. iii. 5. s. 9.) It however continued to exist throughout the Roman empire, as we find its name both in Ptolemy and the Tabula. (Ptol. iii. 1. § 68; *Tab. Peut.*) The period of its final decline or destruction is uncertain; but in the 9th century there appears to have been no town on the spot, when the citizens of Capua, after the destruction of their own city, established themselves on the site of Casilinum, and transferred to the latter the name of Capua, which it continues to retain at the present day. [CAPUA.] The importance of its bridge, and the facilities which it afforded for defence, were probably the reasons of the change, and have led to the modern *Capoua* becoming a strong fortress, though a poor and unimportant city. [E. H. B.]

CASINOMAGUS, in Transalpine Gaul, is placed by the Table on a road from Mediolanum Santonum (*Saintes*) to Ausritum, Augustoritum (*Limoges*), 25½ Roman miles from *Limoges*. It seems to be *Chassenon*, on the left bank of the *Vienne*, which is a probable corruption of Casinomagus. D'Anville discusses the position of another Casinomagus somewhere between *Auch* and *Toulouse*, but nothing can be made of it. [G. L.]

CASI'NUM (Κάσινον: *Eth.* Casinas, -ātis: *San Germano*), a considerable city of Latium, in the more extended use of the term, situated on the Via Latina, 7 miles from Aquinum, and 16 from Venafrum. It was distant about 5 miles from the left bank of the river Liris, and was the last city of Latium towards the frontier of Campania. (Strab. v. p. 237; *Itin. Ant.* p. 303.) From its situation it must have been included in the Volscian territory, and probably belonged originally to that people; but it was subsequently occupied by the Samnites, from whom it was wrested by the Romans. (Varr. *de L. L.* vii. 29.) In B. C. 312 a Roman colony was sent there, at the same time as to Interamna, both evidently for the purpose of securing the rich valley of the Liris. (Liv. ix. 28.) As its name is not found in the list of the thirty Latin colonies given by Livy in B. C. 209, it is probable that it was a "colonia civium" (Madvig. *de Colon.* p. 264), but no subsequent notice is found of it as such. Its name is repeatedly mentioned during the Second Punic War, and on one occasion Hannibal encamped in its territory, which he ravaged for two days, but did not attempt to reduce the town itself. (Liv. xxii. 13, xxvi. 9.) After this we hear no more of it as a fortress, but it became a flourishing and opulent municipal town, both under the Republic and the Empire. (Cic. *pro Planc.* 9; Strab. v. p. 237.) Its territory, like that of the neighbouring Venafrum, was particularly favourable to the growth of olives, but the broad level tract from the city to the banks of the Liris was in all respects very rich and fertile. (Varr. *R. R.* ii. 8. § 11, Fr. p. 207; Cic. *de Leg. Agr.* ii. 25, iii. 4.) These favoured lands were among those which it was proposed by the agrarian law of Rullus to portion out among the Roman citizens (Cic. *l. c.*); they actually underwent that fate a little later, when a military colony was established there by the Second Triumvirate. (*Lib. Colon.* p. 232; Zumpt, *de Colon.* p. 336.) Casinum is not termed a colony by Pliny, though it bears that title in several inscriptions (Murat. *Inscr.* p. 1104. 7, 8; Orell. 2797); but whatever may have been its rank, it is clear, both from inscriptions and extant remains, that it must have continued a flourishing and considerable town under the Roman Empire. It appears to have been destroyed, at least in great part, by the Lombards in the 6th century; the modern city of *San Germano* has grown up on its ruins, while the name of *Monte Casino* has been retained by the celebrated monastery founded (A. D. 529) by St. Benedict on the lofty hill which towers immediately above it.

San Germano, however, occupies but a part of the site of the ancient Casinum, the ruins of which spread over the lower slopes of the hill for a considerable distance. Among them are the remains of an amphitheatre, of small size but in unusually perfect preservation, which was erected, as we learn from an inscription still extant, at her own private cost by Ummidia Quadratilla, the same person celebrated by the younger Pliny. (*Ep.* vii. 24; further notices of the same family are found in Varro *de R. R.* iii. 3. 9; and an inscription given by Hoare, p. 270.) Some ruins of a temple erected at the same time are also visible; as well as fragments of a theatre, a small temple or sepulchral monument of a remarkable style, considerable portions of a paved road, and some parts of the ancient walls. The monastery of *Monte Casino*, on the summit of the mountain, is said to have replaced a temple of Apollo which occupied the same lofty site. (P. Diac. i. 26; Gregor. Magn. *Dial.* ii. 8.)

In the plain below *S. Germano*, and on the banks of the little river now called *Fiume Rapido*, are some fragments of ruins that are considered with much probability to have belonged to the villa of Varro, of which he has left us a detailed description; it contained a museum, an aviary, and various other appendages, while a clear and broad stream of water, embanked with stone and crossed by bridges, traversed its whole extent. (Varr. *R. R.* iii. 5.) It was this same villa that M. Antonius afterwards made the scene of his orgies and debaucheries. (Cic. *Phil.* ii. 40.) The stream just mentioned was probably not the *Rapido* itself, but one of several small but clear rivulets, which rise in the plain near Casinum. The abundance of these springs is alluded to by Silius Italicus, as well as the foggy climate which resulted from them, and which at the present day renders the town an unhealthy residence. (Sil. Ital. iv. 227, xii. 527.) Pliny also notices one of these streamlets, under the name of Scatebra (ii. 96), for the coldness and abundant flow of its waters.

The name of VINNIUS, found in some editions of Varro, appears to be a false reading (Schneider, *ad loc.*), nor is there any authority for the name CASINUS as applied to the river *Rapido*, which has been introduced into the text of Strabo. (Kramer, *ad loc. cit.*) The ruins, still visible at *S. Germano*, are described by Romanelli (vol. iii. pp. 389—394), Hoare (*Class. Tour*, vol. i. pp. 268—277), and Keppel Craven (*Abruzzi*, vol. i. pp. 40—46.) [E. H. B.]

CA'SIUS MONS (Κάσιον: *Jebel-el-Akrá*), a mountain of N. Syria, near Nymphaeum (Strab. xvi. p. 751) and Seleuceia (Plin. v. 22). Its base was bathed by the waters of the Orontes. (Amm. Marc. xiv. 8. § 10.) This great mass of rock, rising abruptly from the sea, with the exception of some highly crystalline gypsum near its foot on the E. side, and some diallage rocks, serpentine, &c. towards the SE., is entirely composed of supracretaceous limestone. The height has been ascertained to be 5318 feet, falling far short of what is implied by Pliny's (*l. c.*; comp. Solin. 39) remark, that a spectator on the mountain, by simply turning his head from left to right, could see both day and night. The emperor Hadrian, it was said, had passed a night upon the mountain to verify this marvellous scene; but a furious storm prevented his gratifying his curiosity. (Spartian. *Hadrian*, 14.) A feast in honour of Zeus was celebrated in the month of August at a temple situated in the lower and wooded region, at about 400 feet from the sea. Julian, during his residence at Antioch, went to offer a sacrifice to the god. (Amm. Marc. xxii. 14. § 8; Julian, *Misop.* p. 361; Le Beau, *Bas Empire*, vol. iii. p. 6.) A feast in honour of Triptolemus was also celebrated on this mountain by the people of Antioch. (Strab. p. 750.)

Coins of Trajan and Severus have the epigraph ZEYC KACIOC CEΛEYKEΩN ΠΕΙΕΡΙΑC. (Rasche, vol. i. pt. ii. p. 428.) The upper part of

Mons Casius is entirely a naked rock, answering to its expressive name *Jebel-el-Akrá*, or the bald mountain. (Chesney, *Exped. Euphrat.* vol. i. p. 386.) [E. B. J.]

CA'SIUS MONS (Κάσιος ὄρος, Strab. i. p. 38, seq. xvii. pp. 758—796; Mel. i. 10, iii. 8; Plin. v. 11. s. 12, xii. 13; Lucan. *Phars.* viii. 539, x. 433), the modern *El. Katieh*, or *El. Kas*, was the summit of a lofty range of sandstone hills, on the borders of Egypt and Arabia Petraea, immediately south of the Lake Sirbonis and the Mediterranean Sea. Near its summit stood a temple of Zeus-Ammon, and on its western flank was the tomb of Cn. Pompeius Magnus. The name of Mons Casius is familiar to English ears through Milton's verse.

"A gulf profound as that Serbonian bog,
'Twixt Damiata and mount Casius old."

[W. B. D.]

CA'SIUS FL. [Albania.]

CA'SMENAE (Κασμένη, Herod. Steph. B., Κασμέναι, Thuc.: *Eth.* Κασμεναῖος, Steph.), a city of Sicily founded by a colony from Syracuse, 90 years after the establishment of the parent city, or B. C. 643. (Thuc. vi. 5.) It is afterwards mentioned by Herodotus as affording shelter to the oligarchical party called the Gamori, when they were expelled from Syracuse; and it was from thence that they applied for assistance to Gelon, then ruler of Gela. (Her. vii. 155.) But from this period Casmenae disappears from history. Thucydides appears to allude to it as a place still existing in his time, but we find no subsequent trace of its name. It was probably destroyed by some of the tyrants of Syracuse, according to their favourite policy of removing the inhabitants from the smaller towns to the larger ones. Its site is wholly uncertain: Cluverius was disposed to fix it at *Scicli*, but Sir R. Hoare mentions the ruins of an ancient city as existing about 2 miles E. of *Sta Croce* (a small town 9 miles W. of *Scicli*), which may very possibly be those of Casmenae. They are described by him as indicating a place of considerable magnitude and importance; but do not appear to have ever been carefully examined. (Cluver. *Sicil.* p. 358; Hoare's *Class. Tour*, vol. ii. p. 266.) [E. H. B.]

CASPATYRUS (Κασπάτυρος, Herod. iii. 102, iv. 44) or CASPAPYRUS (Κασπάπυρος, Hecat. ap. Steph. B. *s. v.*, Fr. 179, ed. Didot: πολίς Γανδαρικὴ, Σκυθῶν ἀκτή), a city on the N. confines of India, in the district of Pactyïce, whence Scylax of Caryanda commenced his voyage down the Indus, at the command of Dareius, the son of Hystaspes; in which voyage he sailed to the E. down the river into the sea, crossing which to the W. he arrived at the head of the Red Sea in the thirtieth month. (Herod. iv. 44.) In the other passage, Herodotus tells us that those Indians, who are adjacent to the city of Caspatyrus and the district of Pactyïce, dwell to the N. of the other Indians (who are described just before), have customs similar to the Bactrians, and are the most warlike of the Indians. These also are the Indians who obtain gold from the ant-hills of the adjoining desert, in the marvellous manner which he proceeds to relate (iii. 102, foll.).

On these simple data great discussions have been conducted, which our space prevents our following. The two chief opinions are, that Caspatyrus is *Cabul*, and again, that it is *Kashmir*. On the whole, the latter seems most probable, but certainty seems almost unattainable. The Sanscrit name of *Kashmir* is *Kasyapa pur*, which, condensed to *Kaspapur*, gives us the form found in Hecataeus; and further, the very similar name Caspeiria certainly designates the country of *Kashmir*. As to the expedition of Scylax, remembering that the true source of the Indus in *Tibet* was unknown to the ancients, and therefore that the voyage must have commenced near the source of one of the chief tributaries, assuredly no better starting point could be found than the *Jelum*, at the lake formed by it below *Kashmir*. The eastward course of the voyage is the great difficulty. (Heeren, *Ideen*, vol. i. pt. i. p. 371; Ritter, *Erdkunde*, vol. iii. pp. 1087, foll.; Bohlen, *Alte Indien*, vol. i. p. 64; Schlegel, *Berlin Taschenbuch*, 1829, p. 17; Von Hammer, *Annal. Vien.* vol. li. p. 36; Bähr, *Excurs. ad Herod.* iii. 102; Mannert, *Geogr. d. Griech. u. Röm.* vol. x. pt. i. pp. 7, foll.; Forbiger, *Alte Geogr.* vol. ii. p. 511.) [P. S.]

CASPEI'RIA (Κασπειρία), a district of India intra Gangem, about the sources of the rivers Hydaspes (*Jelum*), Sandabal (which is no doubt the Acesines, *Chenab;* see Cantabras), and Adris or Rhoadis. (Ptol. vii. 1. § 42.) The people called Caspeiraei (Κασπειραῖοι) are presently afterwards mentioned as E. of those on the Hydaspes, and W. of the Gymnosophistae, who are near the Upper Ganges. They have numerous cities (Ptolemy names 18), one of which is Caspeira (Κάσπειρα), evidently the capital (§§ 47—50). The name, the position, and the number of cities, all concur to identify Caspeiria with the rich valley of *Kashmir*, which is watered by the upper courses of the *Jelum* and *Chenab*, besides smaller rivers; and Caspeira is probably, therefore, the city of *Kashmir* or *Srinagar*. Mannert would read Κασμειρια (μ and π being letters easily confused); but the alteration is unnecessary, for a reason stated under Caspatyrus.

Caspeira is one of Ptolemy's points of recorded astronomical observations, having 14 hrs. 5 min. in its longest day, and being distant about 4½ hrs. E. of Alexandria. The latter number, compared with those assigned to Bucephala and neighbouring places, confirms the position given to Caspeira, viz., *Kashmir*. (Ptol. viii. 26. § 7.) [P. S.]

CASPEI'RIA INS. [Fortunatae.]

CASPE'RIA, a town of the Sabines, known only from the mention of its name by Virgil (*Aen.* vii. 714), and by his imitator Silius Italicus (viii. 416). The latter tells us it derived its name from the Bactrians, probably connecting it absurdly with the Caspian Sea. Both authors associate it with Foruli, and it seems probable that its site is correctly fixed at *Aspra*, a village about 15 miles SW. of *Rieti*, and 13 N. of *Correse* (Cures). (Cluver. *Ital.* p. 676; Westphal, *Röm. Kampagne*, p. 133.) Vibius Sequester (p. 11) tells us that the river Himella, mentioned by Virgil in the same line, flowed near Casperia; it is supposed to be the small stream now called the *Aia*. [Himella.] [E. H. B.]

CA'SPIAE PORTAE. [Caspii Montes.]

CA'SPIAE PYLAE (αἱ Κάσπιοι πύλαι, Pol. v. 44; Strab. xi. pp. 522, 526; αἱ Κάσπιαι πύλαι, Hecat. *Fr.* 171; Ptol. vi. 2. § 7; Arrian, *Anab.* iii. 19; Κασπίαδες πύλαι, Dionys. P. 1064), a narrow pass leading from North-Western Asia into the NE. provinces of Persia: hence, as the course which an army could take, called by Dionysius (1036) Κληῖδες γαίης Ἀσιήτιδος. Their exact position was at the division of Parthia from Media, about a day's journey from the Median town Rhagae. (Arrian, iii. 19.) According to Isidorus Charax, they were immediately below M. Caspius. As in the case of the people

called Caspii, there seem to have been *two* mountains, each called *Caspius*, one near the Armenian frontier, the other near the Parthian. It was through the pass of the Caspiae Pylae that Alexander the Great pursued Dareius. (Arrian, *Anab.* iii. 19; Curt. vi. 14; Amm. Marc. xxiii. 6.) It was one of the most important places in ancient geography, and from it many of the meridians were measured. (Strab. i. p. 64, xi. pp. 505, 514, xv. p. 720, &c.) The exact place corresponding with the ancient Caspiae Pylae is probably a spot between *Hark-a-Koh* and *Siah-Koh*, about 6 parasangs from *Rey*, the name of the entrance of which is called *Dereh*. (Morier, *Second Journey.*) [V.]

CASPIA'NA. [CASPII.]

CA'SPII (Κάσπιοι), a nation apparently originally inhabiting a district of Media, near the mouth of the Cyrus (*Kur*), and adjacent to a mountain which bore the name of M. Caspius. Their exact position and their extent are equally uncertain and indefinite, as the name might apply to any of the tribes who lived near the Caspian Sea, which derived its own name from them. Hence it is that we find mention of a similar named people in another locality on the eastern confines of Media near Hyrcania, and at the Caspian gates (Herod. iii. 29; Strab. *Epit.* xi.), and also in Albania (Strab. xi. p. 502), occupying a district which bore the technical name of CASPIANE, and to whom Strabo attributes the name of the Sea. According to Strabo (xi. pp. 517—520), the manners of these people were of the most barbarous character, and resembled those of the people of Bactriana and Sogdiana. Ptolemy placed the Caspii rather more to the SE. than other geographers. (Ptol. vi. 2. § 5; Mel. i. 2, iii. 5; Curt. iv. 12.) [V.]

CA'SPII MONTES (Κάσπια ὄρη), a western portion of the great chain of the Orontes and Coronus (*Demawend*), which extended along the SE. shores of the Caspian Sea, on the borders of Media, Hyrcania, and Parthia, about 40 miles N. of the modern town of Teheran. They doubtless derived their name from one of the tribes who lived on the borders of that sea. [CASPII.] [V.]

CASPI'NGIUM, is placed by the Table on a road from Lugdunum Batavorum (*Leyden*) to Noviomagus (*Nymegen*). It is 45 Roman miles from Noviomagus. Walckenaer fixes it at *Gorkum* and *Spyck*; other geographers fix it at *Aspern*. [G. L.]

CA'SPIUM MARE (ἡ Κασπία θάλαττα, Herod. i. 203; Ptol. v. 9. § 7, vii. 5. § 4; Strab. ii. p. 71, xi. pp. 502, 506, &c.; τὸ Κάσπιον πέλαγος, Strab. xi. p. 508), the largest of the inland seas of Asia, extending between lat. 48° and 37° N., and long. 48° and 55° E., and the shores of which were Scythia intra Imaum, Hyrcania, Atropatene, and Sarmatia Asiatica. It derived its name, according to Strabo, from the Caspii. [CASPII.] It bore also the name of the MARE HYRCANIUM (Plin. vi. 13; M. Hyrcanum, Prop. ii. 23, 66; Sinus Hyrcanus, Mela, iii. 5; ἡ Τρικανία θάλαττα, Hecat. *Fragm.* ex Athen. ii.; Polyb. v. 44; Strab. ii. p. 68, xi. p. 507; Ptol. v. 13. § 6; Diod. xvii. 75.) In many authors these names are used indifferently the one for the other; they are, however, distinguished by Pliny (vi. 13), who states that this sea commences to be called the Caspian after you have passed the river Cyrus (*Kur*), and that the Caspii live near it; and, in vi. 16, that it is called the Hyrcanian Sea from the Hyrcani who live along its shore. The western side would, therefore, in strictness, be called the Caspian, the Eastern, the Hyrcanian. Of the size, form, and character of this inland sea, there was a great variety of opinions among the ancients; and it is not a little remarkable that the earliest account of it which we have in Herodotus (i. 202, 203) is by far the most accurate. According to him, it took a vessel with oars 15 days to traverse its length, and 8 days to cross its broadest part. Herodotus maintained that it was a truly inland sea, having no connection with the external ocean. It seems clear, also, that Herodotus made its greatest length from S. to N. (which is its true direction), and not, as the later writers supposed, from W. to E. The real length of the sea is 740 miles from its most N. to its most S. point; its average breadth is about 210 miles.

In the earliest times (as would appear from a fragment of Hecataeus, p. 92, ed. Klausen) it was supposed that the Caspian Sea was connected with the Pontus Euxinus by means of the river Phasis, and still later through the Palus Maeotis (Strab. xi. p. 509), a view which has also been taken by some modern writers and travellers. (Kant, *Phys. Geogr.* i. 1. p. 113, and iii. 1. p. 112; F. Parrot's *Reise z. Ararat*, i. p. 24, Berl. 1834.) Aristotle (*Meteor.* i. 13. § 29, and ii. 1. § 10) appears to have been acquainted with the true nature of this sea; yet the majority of writers certainly held opinions more or less erroneous. The prevalent one was that it was connected with the Northern Ocean, and even Strabo (xi. p. 519) seems to have sanctioned this view (compare also Mela, iii. 5; Plin. vi. 13; Curt. vi. 4), an error which perhaps arose from a statement of Eratosthenes. (Strab. xi. p. 507.) Diodorus (xviii. 5), however, described this sea correctly, and Ptolemy (vii. 5. § 4,) confirmed his view. It seems extremely probable that much of the confusion which appears to have existed in antiquity with regard to this sea may have arisen from indistinct accounts of the connection between it and the Oxiana Palus (*Sea of Aral*). There seems to be no doubt that these seas were originally connected by an arm of the Oxus (*Gihon*), and it is not unlikely that the Caspian and Aral Sea were considered by many as the basins of one and the same sea, following the indistinct and uncertain accounts which prevailed respecting them, and perhaps thereby originating the distinctive names of M. Hyrcanium and M. Caspium for the Eastern and Western Seas, which were strictly true of one only. (Malte-Brun, *Gesch. d. Erdkunde*, i. p. 71; Kephalides, *Comm. de Mari Caspio*, Gotting. 1814; Eichwald, *Alte Geogr. d. Casp. Meeres*, Berlin, 1838.) [V.]

CASSANDREIA (Κασσάνδρεια, Κασάνδρεια: *Eth.* Κασσανδρεύς: *Pinaka*), a town situated on the narrow isthmus which connects the peninsula of Pallene with the main land, on which formerly stood the rich and flourishing city of Potidaea. (Strab. vii. p. 330; Plin. iv. 10.) POTIDAEA (Ποτίδαια: *Eth.* Ποτιδαιάτης, Ποτιδαιεύς) was a Dorian city originally colonised from Corinth (Thuc. i. 56; Scymn. Ch. v. 628), though at what period is not known; it must have existed before the Persian wars. It surrendered to the Persians on their march into Greece. (Herod. vii. 123.) After the battle of Salamis it closed its gates against Artabazus, who at the head of a large detachment had escorted Xerxes to the Hellespont. On his return this general laid siege to the place of which he would probably have obtained possession through the treachery of one of its citizens, had not the plot been accidentally discovered. An attempt afterwards

made against it by the Persians was unsuccessful, from a sudden influx of the sea, while the troops were crossing the bay to attack the town; a great part of the Persian force was destroyed, the remainder made a hasty retreat. (Herod. viii. 127.) There was a contingent of 300 men sent by Potidaea to the united Greek forces at Plataea. (Herod. ix. 28.) Afterwards Potidaea became one of the tributary allies of Athens, but still maintained a certain metropolitan allegiance to Corinth. Certain magistrates under the title of Epidemiurgi were sent there every year from Corinth. (Thuc. i. 56.) In B. C. 432 Potidaea revolted from Athens, and allied itself with Perdiccas and the Corinthians. After a severe action, in which the Athenians were finally victorious, the town was regularly blockaded; it did not capitulate till the end of the second year of the war, after going through such extreme suffering from famine that even some who died were eaten by the survivors. (Thuc. ii. 70.) A body of 1,000 colonists were sent from Athens to occupy Potidaea and the vacant territory. (Diod. xii. 46.) On the occupation of Amphipolis and other Thracian towns by Brasidas, that general attempted to seize upon the garrison of Potidaea, but the attack failed. (Thuc. iv. 135.) In 382, Potidaea was in the occupation of the Olynthians. (Xen. *Hell.* vii. § 16.) In 364, it was taken by Timotheus the Athenian general. (Diod. xv. 81; comp. Isocr. *de Antid.* p. 119.) Philip of Macedon seized upon it and gave it up to the Olynthians. (Diod. xvi. 8.) The Greek population was extirpated or sold by him. Cassander founded a new city on the site of Potidaea, and assembled on this spot not only many strangers but also Greeks of the neighbourhood, especially the Olynthians, who were still surviving the destruction of their city. He called it after his own name Cassandreia. (Diod. xix. 52; Liv. xliv. 11.) Cassandreia is the natural port of the fertile peninsula of Pallene (*Kassándhra*), and soon became great and powerful, surpassing all the Macedonian cities in opulence and splendour. (Diod. *l. c.*) Arsinoe, widow of Lysimachus, retired to this place with her two sons. (Polyaen. viii. 57.) Ptolemy Ceraunus, her half-brother, succeeded by treachery in wresting the place from her. Like Alexandreia and Antioch, it enjoyed Greek municipal institutions, and was a republic under the Macedonian dominion, though Cassander's will was its law as long as he lived. (Niebuhr, *Lectures on Ancient History*, vol. iii. pp. 231, 253.) About B. C. 279 it came under the dominion of Apollodorus, one of the most detestable tyrants that ever lived. (Diod. *Exc.* p. 563.) Philip, the son of Demetrius, made use of Cassandreia as his principal naval arsenal, and at one time caused 100 galleys to be constructed in the docks of that port. (Liv. xxviii. 8.)

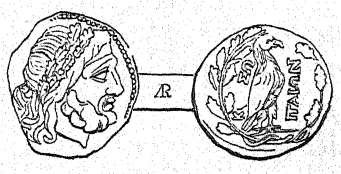
In the war with Perseus his son (B. C. 169), the Roman fleet in conjunction with Eumenes, king of Pergamus, undertook the siege of Cassandreia, but they were compelled to retire (Liv. xliv. 11, 12.) Under Augustus a Roman colony settled at Cassandreia. (Marquardt, in Becker's *Handbuch der Röm. Alt.* vol. iii. pt. i. p. 118; Eckhel, *D. N.* vol. ii. p. 70.) This city at length fell before the barbarian Huns, who left hardly any traces of it. (Procop. *B. P.* ii. 4, *de Aedif.* iv. 3; comp. Leake, *Northern Greece*, vol. iii. p. 152.)

For coins of Cassandreia, both autonomous and imperial, see Eckhel (*l. c.*). The *type* constantly found is the head of Ammon, in whose worship they seem to have joined with the neighbouring people of Aphytis. [E. B. J.]

CASSANDRES, CASSANITAE. [GASANDI.]

CASSI, in Britain. The name of a population sufficiently eastward to be mentioned by Caesar (*B. G.* v. 21); indeed, *Cassi*-velaunus was their king, and the Oppidum Cassi-velauni (Caes. *l. c.*) was a stockaded village, probably, in the present Hundred of *Cassio*-bury. [R. G. L.]

CASSI'OPE (Κασσιόπη). 1. A town and promontory of Corcyra. [CORCYRA.]



2. A town of Epeirus, more usually called Cassope. [CASSOPE.]

CASSIO'TIS (Κασσιῶτις), a district of northern Syria, containing, according to Ptolemy (v. 15. § 16), the cities of ANTIOCHEIA, DAPHNE, BACTAIALLA, LYDIA, SELEUCEIA, EPIPHANEIA, RAPHANEA, ANTARADUS, MARATHUS, MARIAME, and MAMURGA. It probably was never considered as a political division (comp. Marquardt, *Handbuch der Röm. Alt.* p. 176), but was rather a district marked out by the natural features of the country. [SYRIA.] (Chesney, *Exped. Euphrat.* vol. i.; Thomson, *Bibl. Sacr.* vol. v.) [E. B. J.]

CASSITE'RIDES, in Britain. The tin-county of Cornwall, with which the Scilly Isles were more or less confused. For details see BRITANNICAE INSULAE. pp. 433—435. [R. G. L.]

CASSO'PE (Κασσώπη, Steph. B. *s. v.*; Κασσωπία πόλις, Diod.; Κασσιόπη, Ptol.), the chief town of the CASSOPAEI (Κασσωπαῖοι), a people of Epirus, occupying the coast between Thesprotia and the Ambracian gulf, and bordering upon Nicopolis. (Scylax, p. 12; Strab. vii. p. 324, seq.) Scylax describes the Cassopaei as living in villages; but they afterwards rose to such power as to obtain possession of Pandosia, Buchaetium, and Elateia. (Dem. *de Halon.* 33.) We learn from another authority that Batiae was also in their territory. (Theopomp. *ap. Harpocr. s. v.* Ἐλάτεια.) Their own city Cassope or Cassopia is mentioned in the war carried on by Cassander against Alcetas, king of Epirus, in B. C. 312. (Diod. xix. 88.)

Cassope stood at a short distance from the sea, on the road from Pandosia to Nicopolis upon the portion of the mountain of *Zálongo*, near the village of *Kamarina*. Its ruins, which are very extensive, are minutely described by Leake. The ruined walls of the Acropolis, which occupied a level about 1000 yards long, may be traced in their entire circuit; and those of the city may also be followed in the greater part of their course. The city was not less than three miles in circumference. At the foot of the cliffs of the Acropolis, towards the western end, there is a theatre in good preservation, of which the interior diameter is 50 feet. Near the theatre is a subterraneous building, called by the peasants *Vasilóspito*, or King's House. "A passage, 19 feet in length, and 5 feet in breadth, with a curved roof one foot and a half high, leads to a chamber 9 feet 9 inches square, and having a similar roof 5 feet 7 inches in

COIN OF CASSOPE.

height. The arches are not constructed on the principles of the Roman arch, but are hollowed out of horizontal courses of stone." Leake found several tombs between the principal gate of the city and the village of *Kamarina*. The ruins of this city are some of the most extensive in the whole of Greece. (Leake, *Northern Greece*, vol. i. p. 247, seq.)

CA'SSOTIS. [DELPHI.]

CASTA'BALA (Καστάβαλα: *Eth.* Καστα-βαλεύς), a city of Cilicia, one of the praefectures of Cappadocia. Strabo (p. 537) describes Castabala and Cybistra, as not far from Tyana, but as still nearer to the mountain (Taurus). Pliny (vi. 3) enumerates Castabala with Tyana among the Cappadocian towns. In Castabala there was a temple of Artemis Perasia, where they said that the priestesses walked with bare feet over live coals unhurt. (See Groskurd's *Note*, Strabo, *Transl.* ii. p. 453, on the proposals to amend the reading Perasia, which the context of Strabo shows to be his genuine reading.) The site of this place has not yet been fixed satisfactorily, but it may be at *Nigde*, NE. of *Bor*. The epigraph on the coins of Castabala is ἱεροπολις κασταβ. [G. L.]

CASTA'BALA (τὰ Καστάβαλα), as it is called by Appian (*Mithrid.* c. 105), by Ptolemy (v. 8), and by Pliny (v. 27), who mentions it among the towns of the interior of Cilicia. Alexander marched from Soli to the Pyramus, which he crossed to Mallus, and he reached Castabalum, as Curtius (iii. 7) calls it, on the second day. In order to reach Issus from Castabala, it was necessary to pass through a defile, which Alexander had sent Parmenio forward to occupy. This defile, then, was east of Castabala, and it would seem to be the Amanides Pylae of Strabo (p. 676), now *Dêmir Kapú*.

The Antonine Itin. places Catabolum, which is Castabalum, east of Aegeae or *Ayas*, 26 M. P., or 20 geog. miles. The distance from *Ayas* to a place called *Kara Kaya* is 16 geog. miles, and from *Ayas* to some ruins is 19 geog. miles. This would identify the ruins with Castabalum. But the Itin. gives 16 M. P., or 12 geog. miles from Castabalum to Baiae, and the distance from *Kara Kaya* to *Bayas*, which is Baiae, was determined by Lieut. Murphy to be 13 geog. miles, while the distance from the ruins to *Bayas* is 15 geog. miles. Ainsworth prefers the shorter of the two distances, "as it was determined by Itinerary, while the other distance from *Ayás* to the ruins was determined by a boat survey." Accordingly he identifies Castabala with *Kara Kaya* (Ainsworth, *Travels in the Track*, &c., p. 56; Ainsworth, *London Geog. Journ.*, vol. x. p. 510, &c.) [G. L.]

CASTA'LIA (Κασταλία: *Eth.* Κασταλιώτης, which Steph. *s. v.* observes, is a common form in Cilician names), a place in Cilicia, mentioned by Theagenes in his Carica. [G. L.]

CASTA'LIA FONS. [DELPHI.]

CA'STAMON (*Castamouni*), a town of Paphlagonia, often mentioned by the Byzantine historians. *Castamouni* is a considerable town, which is placed in the maps on the Amnias, a branch of the Halys. (Cramer, *Asia Minor*, vol. i. p. 239.) [G. L.]

CASTAX (Κάσταξ), a city of Baetica, probably identical with CASTULO. [P. S.]

CASTELLA'NI (Καστελλανοί), a people of Hispania Tarraconensis, at the foot of the Pyrenees, W. of the AUSETANI, and E. of the IACCETANI, with the following towns: Sebendunum (Σεβένδουνον), also mentioned on a coin, in conjunction with Ilerda (Sestini, p. 164); Beseda (Βέσηδα: *S. Juan de las Badesas*, coins *ap.* Sestini, p. 183); Egosa (Ἐγῶσα), and Basi (Βάσι: Ptol. ii. 6. § 71; Ukert, vol. ii. pt. 1, p. 426). [P. S.]

CASTELLUM AMERINUM. [AMERIA].

CASTELLUM CARACENORUM. [CARACENI.]

CASTELLUM FIRMANUM. [FIRMUM.]

CASTELLUM MENAPIORUM, mentioned by Ptolemy (ii. 9), who says, "then after the Mosa, the Menapii, and a city of theirs Castellum." It is also supposed by D'Anville that it may be the "Castellum Oppidum quod Mosa fluvius praeterlambit" of Ammianus (xvi. 25). But the words "Castellum Oppidum quod" are said not to be in the MSS. (See the note of Valesius.) As there is a place called *Kessel* on the left bank of the Maas, between *Ruremonde* and *Venloo*, it is supposed that this may be the Castellum Menapiorum; for it would come within the limits of the Menapii. [G. L.]

CASTELLUM (MORINORUM). There are many routes which end at or branch from a place called Castellum, in the northern part of Gallia. On the inscription of the column of Tongern, a road leads from Castellum, through Fines Atrebatum, to Nemetacum (*Arras*). Another route in the Antonine Itin. runs from Castellum, through Minariacum, to Turnacum (*Tournay*); and another from Castellum, through Nemetacum, to Bagacum (*Bavay*). The Table has a route through Taruenna (*Terouenne*) to Castellum Menapiorum, which, as the rest of the route shows, is not the Castellum on the *Maas*, but the Castellum of the Itinerary. This place must be the hill of *Cassel*, in the department of Nord, south of *Dunkerque*, which rises above the flat country, and commands a view of immense extent. It was certainly a Roman station. Many medals have been dug up there. (Bast, *Recueil d'Antiquités*, &c. *trouvées dans la Flandre.*) There appears to be no authority for the name Morinorum; but this place would be within the limits of the Morini. The name Castellum Menapiorum in the Table cannot be right; for if we were to admit that the Menapii extended as far as *Cassel*, which is improbable, we should not expect to find their Castellum there; and it is just the place where we might expect to find the Castellum of the Morini. [G. L.]

CASTELLUM VALENTINIA'NI, a fortress built by the emperor Valentinian, on the river Nicer. (Amm. Marc. xxviii. 2.) Ammianus relates that, as the river was destroying the foundations of the fort, the emperor, in A. D. 319, caused the river to be led in a different direction. It is believed that the place was situated between *Leckenheim* and *Manheim*. (Wilhelm, *German.* p. 69; Kreutzer, *Zur Gesch. altröm. Kultur am Oberrhein*, p. 38, foll.) [L. S.]

CASTHANAEA (Κασθαναία, Strab.; Καστανάια, Lycophr., Steph. B., Mel., et alii: *Eth.* Κασθαναῖος), a town of Magnesia in Thessaly, at the foot of Mt. Pelium, with a temple of Aphrodite Casthanitis. It is mentioned by Herodotus in his account of the terrible storm which the fleet of Xerxes experienced off this part of the coast. Leake places it at some ruins, near a small port named *Tamúkhari*. It was from this town that the chesnut tree, which still abounds on the eastern side of Mt. Pelium, derived its name in Greek and the modern languages of Europe. (Herod. vii. 183, 184; Strab. ix. pp. 438, 443; Plin. iv. 9. s. 16; Pomp. Mel. ii. 3; Lycophr. 907; Nicandr. *Alexiph.* 271; Etym. M. *s. v.* Leake, *Northern Greece* vol. iv. p. 383.)

CA'STNIUM (Κάστνιον), a mountain at Aspendus of Pamphylia. (Steph. *s. v.*) [G. L.]

CASTO'LI CAMPUS (Καστωλοῦ πεδίον). Xenophon (*Anab.* i. 1. § 2), says that king Artaxerxes appointed his brother Cyrus the younger, commander of all the forces that muster at the plain of Castolus. Stephanus (*s. v.* Καστωλοῦ πεδίον) says that Castolus was a city of Lydia, and that the Ethnic name is Καστώλιος. He quotes Xenophon, and adds after Καστωλοῦ πεδίον the words Δωριέων ὡς Ξενοφῶν: and also, "it was so called because the Lydians call the Dorians Castoli;" all which is unintelligible. It does not appear that Stephanus could get his information, except from Xenophon, who simply says of the place what has been stated above. If there were any meaning in the remark of Stephanus, the place would be the plain of the Dorians. It has been proposed to change Καστωλοῦ into Παστωλοῦ, the name of a branch of the Hermus, but there is no authority for this alteration. The place is unknown. [G. L.]

CASTRA, a station on the Candavian or Egnatian way,—the great line of communication by land between Italy and the East. In the Antonine Itinerary it is fixed at 12 M. P. from Heracleia. In the Jerusalem Itinerary, a place called Parembole, which Cramer (*Anc. Greece*, vol. i. p. 83) identifies with the Castra of Antoninus, appears at a distance of 12 M. P. from Heracleia. In the first of the two routes which the Antonine Itinerary gives in this part, a place called Nicia is marked at 11 M. P from Heracleia. The Peutinger Tables mention a town of the same name, and assign to it the same distance. Leake (*Northern Greece*, vol. iii. p. 313) considers that these names, Castra, Parembole, Nicia (Nicaea? comp. Steph. B. *s. v.* Νίκαια) have reference to the military transactions of the Romans in Lyncestis, who not many years after those events constructed a road which passed exactly over the scene of their former achievements. Castra or Parembole, therefore, indicates the first encampment of Sulpicius on the Bevus (Liv. xxxi. 33), and Nicaea (Nicia) the place where he obtained the advantage over Philip's cavalry near Octoluphus, which was 8 M. P. distant from the first encampment (Liv. xxx. 36). It appears, therefore, that Nicaea (Nicia), Parembole or Castra, and Heracleia, formed a triangle of which the sides were 8, 11, and 12 M. P. in length; that the N. route from Lychnidus descended upon Nicaea or Octoluphus, and the two S. routes upon Parembole or Castra on the river Bevus. [E. B. J.]

CASTRA ALA'TA, in Britain. This is the rendering of the Πτερωτὸν στρατόπεδον of Ptolemy. It is twice mentioned by this author (ii. 3. § 13, viii. 3. § 9), and by him only; once as having "its longest day of 18 hours, and one-half," and being "distant from Alexandria to the westward 2 hours and one-sixth;" and again, as being, along with Banatia, Tameia, and Tuaesis, one of the four towns of the Vacomagi,—these lying north of the Caledonians, and north-east of the Venicontes. It has been variously identified, viz. with *Tayne* in Ross, with *Burghead* in Murray, and with *Edinburg*. None of these are certain. [R. G. L.]

CASTRA CAECI'LIA (*Caceres*), a town of Lusitania, in Spain, on the high road from Emerita to Caesaraugusta, 46 M. P. from the former, and 20 M. P. from Turmuli (*Alconeta*) on the Tagus. (*Itin. Ant.* p. 433.) It belonged to the conventus of Emerita, and formed one community with Norba Caesarea (Plin. iv. 22. s. 35, *contributa in Norbam*). It is generally supposed to be identical with the Caecilia Gemellinum of Ptolemy (ii. 5. § 8, Καικιλία Γεμέλλινον ἡ Μετέλλινα: Bivar. *ad Dextri Chron.* p. 179, ap. Wesseling. *ad Itin. l. c.*). [P. S.]

CASTRA CORNE'LIA (Mela. i. 7. § 2; Plin. v. 4. § 3; C. Corneliana, Caes. *B. C.* ii. 24, 25; C. Scipionis, Oros. iv. 22; Κάστρα Κορνηλίων, *Peripl. ap.* Iriart. p. 488; Κορνηλίου παρεμβολή, Ptol. iv. 3. § 6; ὁ Σκίπιωνος χάραξ, Appian. *B. C.* ii. 44: *Ghellah*), a place (*locus*, Plin. *l. c.*) on the E. coast of the Carthaginian territory in N. Africa (Zeugitana), which derived its name from the camp established there by the elder Scipio Africanus immediately after his landing in Africa, B. C. 204. It is fully described by Caesar, in his narrative of Curio's operations against Utica (*B. C.* ii. 24, 25). It lay on the N. side of the Bagradas (*Mejerdah*), between the river and Utica, being distant from the latter place a little more than a mile by the direct road, which was, however, subject to inundation from the sea, and then the route made a circuit of six miles. The site of the camp was a straight ridge, jutting out into the sea, broken and rugged on both its slopes, but the less steep on the side towards Utica. (Comp. Lucan. iv. 589, 590, where, speaking of Curio, he says:—

"Inde petit tumulos, exesasque undique rupes,
Antaei quae regna vocat non vana vetustas:"

the last line appears to refer to some legend which made these hills the tomb of Antaeus.) In this description we have no difficulty in recognizing, in spite of great physical changes, the summit of a chain of hills which rise up to the height of from 50 to 80 feet above the alluvial plain formed by the *Mejerdah* between Utica and Carthage. The alterations made by the deposits of the *Mejerdah* have left this ancient promontory some distance inland, and have so changed the course of the river, that it now flows between Utica (*Bou-shater*) and the Castra (*Ghelluh*), instead of to the S. of the latter. (See BAGRADAS and the map under CARTHAGO.)

The unaccountable neglect of the Carthaginians, in leaving so important a point undefended, seems, however, to be clearly established. Not the least mention is made of any town or fort there; and Scipio establishes his camp without opposition. So in the Roman period: Curio finds the place unoccupied; and Lucan tells us that the traces of Scipio's camp were just discernible in his time (iv. 659: *en veteris cernis vestigia valli*). An obscure passage in Tertullian (*de Pallio*, 3) is supposed to give a doubtful indication of a town or village having grown up and been already destroyed before his time. No traces of ruins is now found. (Shaw, *Travels, &c.* p. 150; Barth, *Wanderungen, &c.*, p. 199.) [P. S.]

CASTRA EXPLORATO'RUM, in Britain, mentioned in the second Itinerary as being the first station between the Vallum and Rutupium, distant 12 miles from *Blatum Bulgium*, and 12 from Lugu-vallum (*Carlisle*). *Netherby* best meets these conditions. [R. G. L.]

CASTRA HANNI'BALIS, a town or port of Bruttium, mentioned by Pliny as situated on the Gulf of Scyllacium, at the point where the two bays, the Sinus Terinaeus and Scyllacinus, approach nearest to one another, so that the isthmus between them is the narrowest part of Italy. (Plin. iii. 10. s. 15; Solin. ii. § 23.) It is evident from the name that the place derived its origin from having been a permanent station of Hannibal during the latter years

of the Second Punic War, when he was shut up within the Bruttian peninsula; but we have no mention of it in the history of that period. It has, however, been suggested that the Castra mentioned by Livy (xxxii. 7: "Castrorum portorium, quo in loco nunc oppidum est") as a seaport, without indicating its locality, may probably be the place in question; and that the small colony of 300 settlers was established there soon after the Second Punic War (B.C. 199), with a view to retain it in being. (Zumpt, *de Colon.* p. 236.) It subsequently appears to have served as the seaport of Scyllacium, where a more considerable Roman colony was established in B. C. 122. (Zumpt, *l. c.*; Mommsen, in *Berichte der Sächsisch. Gesellschaft der Wiss.* 1849, p. 49, foll.) Its name is still found under the corrupt form "Annibali" in the Tabula, which places it 36 M. P. from the Lacinian Promontory. (*Tab. Peut.* The other distances are evidently corrupt.) Its exact site has not been determined, but it was probably situated near the mouth of the little river *Corace.* Earlier topographers had placed it at a spot now called *Le Castelle,* near the north-east extremity of the Gulf of *Squillace;* but this is inconsistent with Pliny's statement, though it would accord better with the accounts of Hannibal's operations in Bruttium, which represent him as generally making his headquarters near Crotona and the Lacinian Promontory. (Liv. xxviii. 46, xxix. 36, xxx. 19, 20; Barrius, *de Sit. Calabr.* iv. 4; Romanelli, vol. i. p. 185.) [E. H. B.]

CASTRA HE'RCULIS. This is one of the seven places on the frontier of the Rhine which Julian repaired; and Ammianus Marcellinus, who enumerates them, places Castra Herculis first, and Bingium (*Bingen*) last. [BINGIUM.] From this we may conclude that it was on the Lower Rhine, and the Itins. place it there. [CARVO.] Castra Herculis may be *Hervelt.* [G. L.]

CASTRA NOVA. [DACIA.]

CASTRA POSTUMIA'NA, a fortified hill 4 M.P. from Attegua and Ucubis, in Hispania Baetica. (*Bell. Hisp.* 8: ATTEGUA.) [P. S.]

CASTRA PYRRHI, a place in Greek Illyria near the river Aous, is placed by Leake at *Ostanitza,* where, however, there are no remains of antiquity. (Liv. xxxii. 13; Leake, *Northern Greece,* vol. i. pp. 387, 396.)

CASTRA TRAJANA. [DACIA.]

CASTRA VETERA, or VETERA, as Ptolemy (ii. 9) and others call it, a Roman camp near the Lower Rhine, in Germania Inferior, which was formed in the time of Augustus, for when Germanicus was in those parts (A.D. 14), Vetera was the station of the mutinous fifth and twenty-first legions (Tacit. *Ann.* i. 48). Indeed, it appears from Tacitus (*Hist.* iv. 23), that Augustus had considered this to be a good post for keeping the Germaniae in check; and during the long period of peace that had existed when Civilis, with the Batavi and Germans, attacked the place, a town had grown up at a short distance from the camp. (*Hist.* iv. 22.) Part of the camp was on rising ground, and part in the plain. Civilis here blockaded two legions that had escaped thither after being defeated by him. The Romans in the camp of Vetera finally surrendered to Civilis (A.D. 70), who afterwards posted himself there as a safe position against the attack of Cerialis. Vetera was protected by the wide and swampy plains, and Civilis had carried a mole into the Rhine for the purpose of keeping the water back and flooding the adjacent grounds. The place was, therefore, near the Rhine, in some spot where there is an elevation in the midst of a level country. It is placed in the table at the distance of 13 M. P. from Asciburgia (*Asburg*). D'Anville places Vetera at *Xanten* in the Rhenish provinces of Prussia, near the Rhine, on the left bank, and the eminence he supposes to be Vorstenberg, where Roman antiquities have been found. This position seems to be more likely to be the true one than Büderich, in an angle of the Rhine, opposite to *Wesel,* where some geographers fix Vetera. This important post was always occupied by one or two legions, while the Romans were in the possession of these parts. [G. L.]

CASTRIMOE'NIUM, a town of Latium, at the foot of the Alban hills about 12 miles from Rome, now called *Marino.* It does not appear to have been in ancient times a place of importance, but we learn from the Liber Coloniarum that it received a colony under Sulla, and that its territory was again assigned to military occupants by Nero. (*Lib. Colon.* p. 233.) Pliny also mentions the Castrimonienses among the Latin towns still existing in his time (iii. 5. s. 9. § 63); but it seems probable that the Munienses enumerated by him among the extinct "populi" of Latium (Ib. § 69), are the same people, and that we should read Moenienses. If this be so, the name was probably changed when the colony of Sulla was established there, at which time we are told that the city was fortified (oppidum lege Sullana est munitum, *Lib. Colon. l. c.*). The form Castrimonium is found both in Pliny and the Liber Colon.; but we learn the correct name to have been Castrimoenium from inscriptions, which also attest its municipal rank under the Roman Empire. (Gruter, *Inscr.* p. 397. 3; Orelli, *Inscr.* 1393). The discovery of these inscriptions near the modern city of *Marino,* renders it almost certain that this occupies the site of Castrimoenium: it stands on a nearly isolated knoll, connected with the Alban hills, about 3 miles from *Albano,* on the road to *Frascati.* (Nibby, *Dintorni,* vol. ii. p. 315; Gell, *Top. of Rome,* p. 310.) [E. H. B.]

CASTRUM ALBUM. [ILICI.]

CASTRUM INUI, an ancient city of Latium, the foundation of which is ascribed by Virgil to the Alban kings. (*Aen.* vi. 772.) No mention of it is found in any historical or geographical writer, and Pliny does not even include it in his list of the extinct cities of Latium; but it is repeatedly alluded to by the Roman poets. Silius Italicus assigns it to the Rutuli, and Ovid places it on the coast between Antium and Lavinium. (Sil. Ital. viii. 361; Ovid, *Met.* xv. 727.) Both these writers call it Castrum simply, Virgil being the only author who has preserved its full name. It is clear that the town had ceased to exist at a very early period, which may account for the error of Servius (*ad Aen. l. c.*) and Rutilius (*Itin.* i. 232), who have confounded it with Castrum Novum on the coast of Etruria. But it left its name to the adjoining district, which is mentioned by Martial under the name of the "Castrana rura," as a tract noted, like the adjacent Ardea, for its insalubrity. (Mart. iv. 60. 1: where, however, some editions read Paestana.) The passage of Ovid is the only clue to its position. Nibby supposes it to have occupied a height on the left bank of the little river called *Fosso dell' Incastro,* which flows by Ardea, immediately above its mouth; a plausible conjecture, which is all that can be looked for in such a case. (Nibby, *Dintorni,* vol. i. p. 440.) [E. H. B.]

CASTRUM MINERVAE, a town or fortress on

the coast of Calabria, between Hydruntum and the Iapygian Promontory. It derived its name from an ancient temple of Minerva, of which Strabo speaks (vi. p. 281) as having been formerly very wealthy. This is evidently the same which Virgil mentions as meeting the eyes of Aeneas on his first approach to Italy; he describes the temple itself as standing on a hill, with a secure port immediately below it. (*Aen.* iii. 531, foll., and Serv. *ad loc.*) Dionysius gives the same account; (i. 51) he calls the spot τὸ καλούμενον Ἀθηναῖον, and says that it was a promontory with a port adjacent to it, to which Aeneas gave the name of the Port of Venus (λιμὴν Ἀφροδίτης), but he adds that it was only fit for summer anchorage (θερινὸς ὅρμος), so that it is evident we must not take Virgil's description too literally. No mention is found either in Strabo or Dionysius of a *town* on the spot; but Varro (as cited by Probus, *ad Virg. Ecl.* vi. 31) distinctly speaks of Castrum Minervae as a town (oppidum) founded by Idomeneus at the same time with Uria and other cities of the Sallentines. It seems to have been but an inconsiderable place under the Romans; but the Tabula marks the "Castra Minervae" at the distance of 8 M. P. south of Hydruntum; and there is every probability that the modern town of *Castro*, which stands on a rocky eminence near the sea-shore, about 10 Roman miles S. of *Otranto*, occupies the site in question. There is a little cove or bay immediately below it, which answers to the expressions of Dionysius: though the little port now called *Porto Badisco*, more than 5 miles further north, would correspond better with the description of Virgil.

The spot is called by the geographer of Ravenna "Minervium," and hence some modern writers (Mannert, Forbiger) have been led to regard this as the colony of Minervium, established by the Romans in B.C. 123. (Vell. Pat. i. 15.) But it is now well established that that name was only a new designation for the previously existing city of Scylacium. [SCYLACIUM.] [E. H. B.]

CASTRUM NOVUM. 1. (Κάστρον νέον, Ptol.: *Eth.* Castronovani, *Inscr.*), a city on the sea-coast of Etruria, between Pyrgi and Centumcellae. We have no account of it prior to the establishment of a Roman colony there, and from the name we may presume that this was a new foundation, and that there was no Etruscan town previously existing on the site. But the period at which this colony was established is unknown; we first find it mentioned in Livy (xxxvi. 3), in B.C. 191, as one of the "coloniae maritimae," together with Fregenae, Pyrgi, Ostia, and other places on the Tyrrhenian Sea. There can therefore be no doubt that the Tuscan town is here meant, and not the one of the same name in Picenum. Mela, Pliny, and Ptolemy all mention it as one of the towns on the coast of Etruria, but it had in their time lost its character of a colony, in common with its neighbours Fregenae, Pyrgi, and Graviscae. (Plin. iii. 5. s. 8; Mela, ii. 4; Ptol. iii. 1. § 4.) Yet we find it termed, in an inscription of the third century, "Colonia Julia Castro Novo" (Orell. *Inscr.* 1009), as if it had received a fresh colony under Caesar or Augustus. Its name is still found in the Itineraries (*Itin. Ant.* pp. 291, 301; *Itin. Marit.* p. 498); but in the time of Rutilius it had fallen into complete decay, and only its ruins were visible, which that author erroneously identifies with the Castrum Inui of Virgil. (Rutil. *Itin.* i. 227—232.) Servius appears to have fallen into the same mistake (*ad Aen.* vi. 776). The site of Castrum Novum seems to have been correctly fixed by Cluver at a place called *Torre di Chiaruccia*, about 5 miles S. of *Civita Vecchia* (Centumcellae), — where considerable remains of it were still visible, — though this distance is less than that given in the Itineraries. (Cluver. *Ital.* p. 488; D'Anville, *Anal. Géogr. de l'Italie*, pp. 122, 123.)

2. (Καστρο'νοουν, Strab.; Κάστρον, Ptol.), a city on the sea-coast of Picenum, which was, as well as the preceding, a Roman colony. There can be little doubt that this is the Castrum, the foundation of which as a colony is mentioned both by Livy and Velleius, though there is much discrepancy between them as to the date. The latter represents Firmum and Castrum as founded at the beginning of the First Punic War, while Livy assigns Castrum to the same period with Sena and Adria, about B.C. 282. (Liv. *Epit.* xi.; Vell. Pat. i. 14; Madvig, *de Colon.* pp. 265, 299.) No subsequent mention of it is found as a colony, the Castrum Novum of which the name occurs in Livy (xxxvi. 3) as a "colonia maritima," being evidently, as already observed, the Tuscan town of the name. But it is mentioned among the maritime towns of Picenum by Strabo, Pliny, and Ptolemy, and we learn from the Liber Coloniarum (p. 226) that its territory, the "ager Castranus," was portioned out to fresh colonists under Augustus, though it did not resume the rank of a colony. The Itineraries place it 12 M.P. from Castrum Truentinum, and 15 from Adria (*Itin. Ant.* pp. 101, 308, 313), from which we may infer that it was situated near *Giulia Nuova*, a little to the N. of the river *Tordino*, the Batinus of Pliny. It probably occupied the site of the now deserted town of *S. Flaviano*, near the bank of the river, and below the modern town of *Giulia Nuova*, the foundation of which dates only from the fifteenth century. (D'Anville, *Anal. Géogr. de l'Italie*, p. 181; Romanelli, vol. iii. p. 303.) [E. H. B.]

CASTRUM TRUENTI'NUM, called also TRUENTUM, from the name of the river on which it stood (Plin. iii. 13. s. 18; Troento civitas, *Itin. Ant.* p. 101), was a maritime city of Picenum, situated at the mouth of the river Truentus (*Tronto*). From the name it would appear to have been a Roman town, though we have no account of its settlement, and it certainly never ranked as a colony. But according to Pliny there was a town previously existing on the spot, which was a Liburnian settlement, and the only one of that people still remaining in Italy. (Plin. *l. c.*) Castrum Truentinum is mentioned during the Civil Wars as one of the places occupied by Caesar during his advance through Picenum from Ariminum (Cic. *ad Att.* viii. 12. B); but this is the only occasion on which its name occurs in history. Its territory (the "ager Truentinus") was among those portioned out by Augustus (*Lib. Colon.* p. 226); and its continued existence throughout the Roman empire is attested by the geographers and the Itineraries. (Strab. v. p. 241; Mel. ii. 4; Sil. Ital. viii. 434; *Itin. Ant.* pp. 308, 313; *Tab. Peut.*) All authorities agree in placing it near the mouth of the Truentus, but its exact site has not been determined. D'Anville placed it at *Monte Brandone*, on the N. bank of the river, a short distance from the sea; but according to Romanelli some vestiges of it are still visible on the right bank of the *Tronto*, at a spot called *Torre di Martin Sicuro*. (D'Anville, *Anal. Géogr. de l'Ital.* p 169; Romanelli, vol. iii. p. 294.) [E. H. B.]

CASTRUM VERGIUM. [BERGISTANI.]

CA'STULO (Καστὰλών, Polyb., Strab. &c., contracted into Κάστλων, Plut. *Sert.* 3, and VRR. to Strabo; Καστουλών, Ptol. ii. 6. § 59, and VRR. to Strabo; Καστολῶν, Appian. *Hisp.* 16: Castulonensis: *Cazlona*), the chief city of the Oretani, in Hispania Tarraconensis, and one of the most important places in the S. of Spain. (Ptol. *l. c.*; Artemidor. *ap.* Steph. Byz.; Strab. iii. p. 152, where the words καὶ Ὠρία are supposed by Ukert to be a later addition; see ORETANI: Plutarch, *l. c.*, assigns it to the Celtiberi.) It lay very near the boundary of Baetica (Strab. iii. p. 166), on the upper course of the Baetis (Strabo, iii. p. 152, observes that above Corduba, towards Castulo, ἐπὶ Καστλῶνος, the river was not navigable), and on the great Roman road from Carthago Nova to Corduba. (Strab. p. 160.) It stood at the junction of four roads, one leading to Carthago Nova, from which it was distant 203 M. P.: two others to Corduba, the distances being respectively 99 M. P. and 78 M. P.; and the fourth to Malaca, the distance being 291 M. P. As to the places near it, it was 22 M. P. from MENTESA BASTIA, 20 M. P. from ILITURGIS, 32 M. P. from UCIENSIS, and 35 M. P. from TUGIA (*Itin. Ant.* pp. 396, 402, 403, 404). A further indication of its position is given by the fact, twice stated by Polybius, that BAECULA was in its neighbourhood. (Polyb. x. 38, xi. 20.) Again, it was near the silver-mines which Strabo mentions as abounding in the mountains along the N. side of the Baetis (*Guadalquivir*), and the term SALTUS CASTULONENSIS seems to have been the general name of a considerable portion of that chain. (Polyb. *ll. cc.*; Liv. xxii. 20, xxvi. 20, xxvii. 20; Cic. *Ep. ad Fam.* x. 31; Strab. iii. p. 142: there were also lead-mines near Castulo, p. 148: Caesar, *B. C.* i. 38, speaks of the Saltus Castulonensis as dividing the upper valleys of the Anas and the Baetis: it corresponds to the *Sierra de Cazorla*, or E. part of the *Sierra Morena*.) All the evidence respecting its site points to the small place still called *Cazlona**, about half a league from *Linares*, on the right bank of the *Guadalimar*, a little above its junction with the *Guadalquivir;* and the site is further identified by ruins with inscriptions, and by the mutilated sculptures frequently found there. "At *Palazuelos* are the supposed ruins of the *palace* of Himilce, the rich wife of Hannibal," who was a native of Castulo (Liv. xxiv. 41; Sil. Ital. iii. 97); and "the fine fountain of *Linares* is supposed to be a remnant of the Roman work which was connected with Castulo." The mines of copper and lead close to the place are still very productive; and in the hills N. of *Linares*, the ancient silver-mines called *Los Pozos de Aníbal* may not improbably have preserved the memory of the rich mine which Hannibal is known to have possessed in Spain, and which has been conjectured to have come to him through his wife. (Plin. xxxiii. 31; Morales, *Antig.* pp. 58—62; Florez, *Esp. S.* vol. vii. p. 136, vol. v. pp. 4, 40; Ford, *Handbook*, p. 166.)

The valley of *Cazlona* has also a certain resemblance to that on the side of Parnassus above Delphi, which is evidently referred to in the epithet applied to it by Silius Italicus (iii. 392, "Fulget praecipuis *Parnasia* Castulo signis"), and in the tradition, preserved by the same poet, that its first inhabitants (hence called *Castalii*) were colonists from Phocis (iii. 97, foll.: whether the name of the place was derived from the tradition or aided its invention, can hardly be determined). It stands on the slope of a mountain of the *Sierra Morena* which has two summits, with a narrow valley between, through which the *Guadalimar* flows, and on the side of the mountain is a spring, like that of Castalia on Parnassus. (Morales, p. 59.)

The close alliance of Castulo with the Carthaginians, implied in the circumstance of Hannibal's marriage, did not prevent its revolt to the Romans, at the time of the successes of P. and Cn. Scipio, in the Second Punic War, B. C. 213 (Liv. xxiv. 41). P. Scipio seems to have made Castulo his headquarters, and was slain under its walls (Appian. *Hisp.* 16), his brother's fate following only 29 days later, and at no great distance, B. C. 212 (Liv. xxv. 36). Upon this, Castulo, and its neighbour Illiturgi (*maxime insignes et magnitudine et nova*, Liv. xxviii. 19), besides other smaller cities, returned to the Punic alliance; and their punishment was one of young P. Scipio's first acts after the Carthaginians were expelled from Spain, B. C. 206 (that is, as we have a story in Livy's somewhat doubtful version). Illiturgi was sacked with the last extremities of military cruelty; but the Spaniards in Castulo, warned by the example, and less obnoxious for the manner of their revolt, hoped to make their peace by a voluntary surrender of their city and of its Punic garrison, and their submission purchased a fate so little milder than that of Illiturgi that Livy seems to labour in shading off the due gradation. (Liv. xxviii. 19, 20.)

Under the Roman empire, Castulo was a *municipium*, with the *jus Latinum*, belonging to the *conventus* of New Carthage; and its inhabitants were called *Caesari venales*. (Plin. iii. 3. s. 4; Inscr. *ap.* Gruter. pp. 323, no. 12, 325, no. 2.) Its coins all belong to the period of its independence: they resemble those of the ancient cities of Baetica (to which, in fact, the city naturally belonged, though politically assigned to Tarraconensis): their usual type is a winged sphinx (Florez, *Med. de Esp.* vol. i. p. 342, vol. iii. p. 44; Mionnet, vol. i. p. 37, Suppl. vol. i. p. 74; Sestini, p. 128; Eckhel, vol. i. p. 44.)

It is not quite certain whether the CASTAX (Κάσταξ) of Appian (*Hisp.* 32) is meant for Castulo. (Comp. Liv. xxiv. 41; Steph. B. *s. v.* Κάσταξ; Wesseling. *ad Itin. Ant.* p. 403; Schweighäuser, *ad Appian.* p. 242.) [P. S.]

CASTULONENSIS SALTUS. [CASTULO.]

CASUA'RIA, in Gallia, is placed in the Antonine Itin. on a road from Darantasia (*Moutiers en Tarentaise*) to Geneva. It is 24 M. P. from Darantasia to Casuaria, which D'Anville fixes near the source of a small river called *La Chaise*, and in the canton of *Ceserieux*, which seems to be the name Casuaria. From Casuaria the road is continued through Bautae [BAUTAE] to Geneva. [G. L.]

CASUARII. [CHASNARI.]

CASUENTUS, a river of Lucania, mentioned only by Pliny (iii. 11. s. 16), who places it between the Acalandrus and Metapontum. It is evidently the river now called *Basiento*, a considerable stream, which runs nearly parallel to the Bradanus (*Bradano*), and flows into the Gulf of Tarentum about 5 miles from the mouth of that river, and a short distance S. of the site of Metapontum. [E. H. B.]

CASUS (Κάσος: *Eth.* Κάσιος), an island between

* Reichard and others, who identify it with *Cazorla*, E. of *Jaen*, seem to have been misled by the idea that Strabo (iii. p. 142) placed it *near the source* of the Baetis, whereas his language refers only to the *upper course* of the river.

Carpathus and Crete, is, according to Strabo, 70 stadia from Carpathus, 250 from Cape Sammonium in Crete, and is itself 80 stadia in circumference. (Strab. x. p. 489.) Pliny (iv. 12. s. 23) makes it 7 M. P. from Carpathus, and 30 M. P. from Sammonium. It is mentioned by Homer (*Il.* ii. 676). It is said to have been formerly called Amphe (Achne) and Astrabe; and it was supposed in antiquity that the name of Mt. Casium in Syria was derived from this island. (Steph. B. *s. vv.* Κάσος, Κάσιον; Plin. v. 31. s. 36.)

Casus has been visited by Ross, who describes it as consisting of a single ridge of mountains of considerable height. On the N. and W. sides there are several rocks and small islands, which Strabo calls (*l. c.*) *αἱ* Κασίων *νῆσοι*. Ross found the remains of the ancient town, which was also called Casus, in the interior of the island, at the village of *Polin* (a diminutive instead of Πόλιον or Πολίδιον). The ancient port-town was at *Emporeion*, where Ross also discovered some ancient remains: among others, ruins of sepulchral chambers, partly built in the earth. He found no autonomous coins, since the island was probably always dependent either upon Cos or Rhodes. In the southern part of the island there is a small and fertile plain surrounded by mountains, called *Argos*, a name which it has retained from the most ancient times. We find also an Argos in Calymna and Nisyrus. Before the Greek revolution, Casus contained a population of 7500 souls; and though during the war with the Turks it was at one time almost deserted, its population now amounts to 5000. Its inhabitants possessed, in 1843, as many as 75 large merchant vessels, and a great part of the commerce of the Christian subjects in Turkey was in their hands. (Ross, *Reisen in den Griech. Inseln*, vol. iii. p. 32, seq.)

CASYSTES (Κασύστης), a port of Ionia. Strabo (p. 644), whose description proceeds from south to north, after describing Teos, says, "before you come to Erythrae, first is Gerae, a small city of the Teians, then Corycus, a lofty mountain, and a harbour under it, Casystes; and another harbour called Erythras" (see Groskurd's *Transl.* vol. iii. p. 24, 25, and notes). It is probably the Cyssus of Livy (xxxvi. 43), the port to which the fleet of Antiochus sailed (B. C. 191) before the naval engagement in which the king was defeated by Eumenes and the Romans. Leake supposes this port to be *Latzáta*, the largest on this part of the coast. [G. L.]

CATABANI (Καταβανεῖς), a people of Arabia, named by Pliny (vi. 28. s. 32), and Strabo (xvi. p. 768), and placed by the latter at the mouth of the Red Sea, i. e., on the east of the Straits of *Bab-el-Mandeb*, and west of the Chatramotitae. Their capital was Catabania, perhaps the same as the Bana of Ptolemy. Forster takes the name to be simply the classical inversion of *Beni Kahtan*, the great tribe which mainly peoples, at this day, Central and Southern Arabia (*Arabia*, vol. ii. p. 155, more fully proved in vol. i. pp. 83, 84, 131, 132), and finds in them the descendants of the patriarch Joktan (*Gen.* x. 25, 26), the recognised father of the primitive tribes of Arabia (*Ib.* i. p. 77). [G. W.]

CATACECAU'MENE (*ἡ* Κατακεκαυμένη, or "the burnt country"), a tract in Asia Minor. Strabo (p. 628), after describing Philadelphia, says, "Next is the country called Catacecaumene, which is about 500 stadia in length, and 400 in width, whether we must call it Mysia or Maeonia, for it is called both names. It is all without trees, except the vine, which produces the wine called Catacecaumenites, which is inferior in quality to none of the wines that are in repute. The surface of the plain country is of ashes, but the mountainous part is rocky, and black, as if it had been burnt." Rejecting certain fanciful conjectures the geographer concludes that this appearance had been caused by internal fires, which were then quenched. He adds, "three pits, or cavities, are pointed out, which they call blast-holes (*φῦσαι*), about 40 stadia from one another; rough hills rise above them, which it is probable have been piled up from the liquid matter that was ejected." Strabo correctly distinguishes the ashes or cinders of this country from the hard rugged lava.

The volcanic region is traversed by the upper Hermus, and contains the modern town of *Koula*. There are three cones, which are more recent than others. They are about five miles apart, and answer to Strabo's description. They are "three remarkable black conical hills of scoriae and ashes, all with deep craters, and well defined. From each of them a sea of black vesicular lava has flowed forth, bursting out at the foot of the cones, and after encircling their bases, rushing down the inclined surface of the country through pre-existing hollows and valleys, until it has reached the bed of the Hermus, flowing from E. to W. to the north of the volcanic hills" (Hamilton). The cones, and their lava streams, seem to be of comparatively recent origin; the surfaces are not decomposed, and contrast with the rich surrounding vegetation. The most eastern of these cones, *Kara Devlit*, near *Koula*, is 2,500 ft. above the sea, and 500 feet above the town of *Koula*. The second is seven miles distant from this cone to the west, in the centre of a large plain. The crater of this cone is perfect. In a ridge between these two cones is a bed of crystalline limestone, which has been subject to the influence of the lava stream. The third, and most westerly of these recent craters, has a cone consisting chiefly of loose cinders, scoriae and ashes; and the crater, which is the best preserved of the three, is about half a mile in circumference, and 300 or 400 feet deep. These three craters lie in a straight line in the tract of country between the Hermus and its branch the Cogamus. Streams of lava have issued from all these cones; and the stream from this third crater, after passing through a narrow opening in the hills, has made its way into the valley of the Hermus, and run down the narrow bed until it has emerged into the great plain of Sardis. There are numerous cones of an older period, and lavas that lie beneath those of the more recent period. This country still produces good wine.

Major Keppel found at *Koula* an inscription with the name Μηιονες, said to have been brought from *Megné*, which lies between the second cone and the most westerly; and Hamilton saw there a large stone built into the walls of a mosque with Μαιωνων in rude characters. The country, as we learn from Strabo, was called Maeonia, and there was a town of the same name, which *Megné* may represent. (Hamilton, *Researches*, &c., vol. i. p. 136, ii. p. 131 &c.) [G. L.]

CATADUPA. [Nilus.]

CATAEA (Καταία, Arrian, *Ind.* 37), an island on the western limit of Carmania, about 12 miles from the shore. It was, according to Arrian, low and desert; a character which it still retains, according to Thevenot, though more modern authorities

(cited by Vincent) speak of its beauty and fertility. Nearchus found it uninhabited, but frequented by visitors from the Continent, who annually brought goats there, and, consecrating them to Venus and Mercury, left them to run wild. Hence the probability that it is the same island which is called Aphrodisias by Pliny (vi. 28), the situation of which is still further determined by his adding "*inde Persidis initium.*" Perhaps the ancient name is preserved in the modern *Keish* or *Ken.* (Vincent, *Voyage of Nearchus*, vol. i. p. 362; Ouseley, *Travels in the East*, i. p. 270.) [V.]

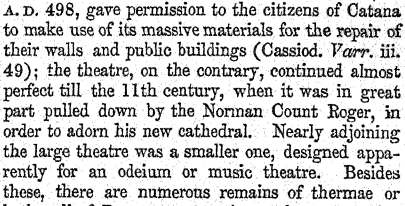
CATALAUNI or CATELAUNI. The Notitia of the provinces mentions the Civitas Catalaunorum among the cities of the Provincia of Belgica Secunda, and between the Civitas Suessionum and the Civitas Veromanduorum. Aurelian defeated Tetricus "apud Catalaunos." (Eutrop. ix. 13.) Ammianus Marcellinus (xv. 11) mentions Catelauni and Remi as states or peoples of Belgica Secunda. The Antonine Itin. places the Durocatelauni on a road from *Autun*, through *Auxerre* and *Troyes*, to Durocortorum (*Reims*); and the Durocatelauni are next to *Reims*, at the distance of 27 M. P. It is easy to see that this place is *Châlons-sur-Marne.* There seems to be no extant authority for the name Durocatalaunum; but as there is Durocortorum, there may have been Durocatalaunum. According to usage in Gallia, the simple name Catalauni finally designated both the people and the town; and *Châlons* is a corruption of Catalauni. At *Châlons* the Roman Aetius defeated Attila, A. D. 451.

It is probable that the Catalauni were dependent on the Remi, or included in their territory. The Catalauni are represented by the old bishopric of *Châlons.* There are medals with the name of this people on them. [G. L.]

CA'TANA or CA'TINA * (Κατάνη: *Eth.* Καταναῖος, Catanensis or Catinensis: *Catania*), a city on the E. coast of Sicily, situated about midway between Tauromenium and Syracuse, and almost immediately at the foot of Mt. Aetna. All authors agree in representing it as a Greek colony, of Chalcidic origin, but founded immediately from the neighbouring city of Naxos, under the guidance of leader named Euarchus. The exact date of its foundation is not recorded, but it appears from Thucydides to have followed shortly after that of Leontini, which he places in the fifth year after Syracuse, or 730 B. C. (Thuc. vi. 3; Strab. vi. p. 268; Scymn. Ch. 286; Scyl. § 13; Steph. B. *s. v.*) The only event of its early history which has been transmitted to us is the legislation of Charondas, and even of this the date is wholly uncertain. (See *Dict. of Biogr.* art. *Charondas.*) But from the fact that his legislation was extended to the other Chalcidic cities, not only of Sicily, but of Magna Graecia also, as well as to his own country (Arist. *Pol.* ii. 9), it is evident that Catana continued in intimate relations with these kindred cities. It seems to have retained its independence till the time of Hieron of Syracuse, but that despot, in B. C. 476, expelled all the original inhabitants, whom he established at Leontini, while he repeopled the city with a new body of colonists, amounting, it is said, to not less than 10,000 in number, and consisting partly of Syracusans, partly of Peloponnesians. He at the same time changed its name to Aetna, and caused himself to be proclaimed the Oekist or founder of the new city. As such he was celebrated by Pindar, and after his death obtained heroic honours from the citizens of his new colony. (Diod. xi. 49, 66; Strab. *l. c.*; Pind. *Pyth.* i., and Schol. *ad loc.*) But this state of things was of brief duration, and a few years after the death of Hieron and the expulsion of Thrasybulus, the Syracusans combined with Ducetius, king of the Siculi, to expel the newly settled inhabitants of Catana, who were compelled to retire to the fortress of Inessa (to which they gave the name of Aetna), while the old Chalcidic citizens were reinstated in the possession of Catana, B. C. 461. (Diod. xi. 76; Strab. *l. c.*)

The period which followed the settlement of affairs at this epoch, appears to have been one of great prosperity for Catana, as well as for the Sicilian cities in general: but we have no details of its history till the great Athenian expedition to Sicily. On that occasion the Catanaeans, notwithstanding their Chalcidic connections, at first refused to receive the Athenians into their city: but the latter having effected an entrance, they found themselves compelled to espouse the alliance of the invaders, and Catana became in consequence the headquarters of the Athenian armament throughout the first year of the expedition, and the base of their subsequent operations against Syracuse. (Thuc. vi. 50—52, 63, 71, 89; Diod. xiii. 4, 6, 7; Plut. *Nic.* 15, 16.) We have no information as to the fate of Catana after the close of this expedition: it is next mentioned in B. C. 403, when it fell into the power of Dionysius of Syracuse, who sold the inhabitants as slaves, and gave up the city to plunder; after which he established there a body of Campanian mercenaries. These, however, quitted it again in B. C. 396, and retired to Aetna, on the approach of the great Carthaginian armament under Himilco and Mago. The great sea-fight in which the latter defeated Leptines, the brother of Dionysius, was fought immediately off Catana, and that city apparently fell, in consequence, into the hands of the Carthaginians. (Diod. xiv. 15, 58, 60.) But we have no account of its subsequent fortunes, nor does it appear who constituted its new population; it is only certain that it continued to exist. Callippus, the assassin of Dion, when he was expelled from Syracuse, for a time held possession of Catana (Plut. *Dion.* 58); and when Timoleon landed in Sicily we find it subject to a despot named Mamercus, who at first joined the Corinthian leader, but afterwards abandoned his alliance for that of the Carthaginians, and was in consequence attacked and expelled by Timoleon. (Diod. xvi. 69; Plut. *Timol.* 13, 30—34.) Catana was now restored to liberty, and appears to have continued to retain its independence; during the wars of Agathocles with the Carthaginians, it sided at one time with the former, at others with the latter; and when Pyrrhus landed in Sicily, was the first to open its gates to him, and received him with the greatest magnificence. (Diod. xix. 110, xxii. 8, Exc. Hoesch. p. 496.)

In the first Punic War, Catana was one of the first among the cities of Sicily, which made their submission to the Romans, after the first successes of their arms in B. C. 263. (Eutrop. ii. 19.) The



* Roman writers fluctuate between the two forms Catana and Catina, of which the latter is, perhaps, the most common, and is supported by inscriptions (Orell. 3708, 3778); but the analogy of the Greek Κατάνη, and the modern *Catania*, would point to the former as the more correct.

expression of Pliny (vii. 60) who represents it as having been *taken* by Valerius Messala, is certainly a mistake. It appears to have continued afterwards steadily to maintain its friendly relations with Rome, and though it did not enjoy the advantages of a confederate city (foederata civitas), like its neighbours Tauromenium and Messana, it rose to a position of great prosperity under the Roman rule. Cicero repeatedly mentions it as, in his time, a wealthy and flourishing city; it retained its ancient municipal institutions, its chief magistrate bearing the title of Proagorus; and appears to have been one of the principal ports of Sicily for the export of corn. (Cic. *Verr.* iii. 43, 83, iv. 23, 45; Liv. xxvii. 8.) It subsequently suffered severely from the ravages of Sextus Pompeius, and was in consequence one of the cities to which a colony was sent by Augustus; a measure that appears to have in a great degree restored its prosperity, so that in Strabo's time it was one of the few cities in the island that was in a flourishing condition. (Strab. vi. pp. 268, 270, 272; Dion Cass. liv. 7.) It retained its colonial rank, as well as its prosperity, throughout the period of the Roman empire; so that in the fourth century Ausonius in his *Ordo Nobilium Urbium*, notices Catana and Syracuse alone among the cities of Sicily. In B. C. 535, it was recovered by Belisarius from the Goths, and became again, under the rule of the Byzantine empire, one of the most important cities of the island. (Plin. iii. 8. s. 14; Ptol. iii. 4. § 9; Itin. Ant. pp. 87, 90, 93, 94; Procop. *B. G.* i. 5.) At the present day *Catania* still ranks as the third city of Sicily, and is little inferior to *Messina* in population.

The position of Catana at the foot of Mount Aetna was the source, as Strabo remarks, both of benefits and evils to the city. For on the one hand, the violent outbursts of the volcano from time to time desolated great parts of its territory; on the other, the volcanic ashes produced a soil of great fertility, adapted especially for the growth of vines. (Strab. vi. p. 269.) One of the most serious calamities of the former class, was the eruption of B. C. 121, when great part of its territory was overwhelmed by streams of lava, and the hot ashes fell in such quantities in the city itself, as to break in the roofs of the houses. Catana was in consequence exempted, for 10 years, from its usual contributions to the Roman state. (Oros. v. 13.) The greater part of the broad tract of plain to the SW. of Catana (now called the *Piano di Catania*, a district of great fertility), appears to have belonged, in ancient times, to Leontini or Centuripa, but that portion of it between Catana itself and the mouth of the Symaethus, was annexed to the territory of the latter city, and must have furnished abundant supplies of corn. The port of Catana also, which is now a very small and confined one (having been in great part filled up by the eruption of 1669), appears to have been in ancient times much frequented, and was the chief place of export for the corn of the rich neighbouring plains. The little river AMENANUS, or Amenas, which flowed through the city, was a very small stream, and could never have been navigable.

Catana was the birth-place of the philosopher and legislator Charondas, already alluded to; it was also the place of residence of the poet Stesichorus, who died there, and was buried in a magnificent sepulchre outside one of the gates, which derived from thence the name of Porta Stesichoreia. (Suid. *s. v.* Στησίχορος.) Xenophanes, the philosopher of Elea, also spent the latter years of his life there (Diog. Laert. ix. 2. § 1), so that it was evidently, at an early period, a place of cultivation and refinement. The first introduction of dancing to accompany the flute, was also ascribed to Andron, a citizen of Catana (Athen. i. p. 22, c.); and the first sun-dial that was set up in the Roman forum was carried thither by Valerius Messala from Catana, B. C. 263. (Varr. ap. Plin. vii. 60.) But few associations connected with Catana were more celebrated in ancient times than the legend of the "Pii Fratres," Amphinomus and Anapias, who, on occasion of a great eruption of Aetna, abandoned all their property, and carried off their aged parents on their shoulders, the stream of lava itself was said to have parted, and flowed aside so as not to harm them. Statues were erected to their honour, and the place of their burial was known as the "Campus Piorum;" the Catanaeans even introduced the figures of the youths on their coins, and the legend became a favourite subject of allusion and declamation among the Latin poets, of whom the younger Lucilius and Claudian have dwelt upon it at considerable length. The occurrence is referred by Hyginus to the first eruption of Aetna, that took place after the settlement of Catana. (Strab. vi. p. 269; Paus. x. 28. § 4; Conon, *Narr.* 43; Philostr. *Vit. Apoll.* v. 17; Solin. 5. § 15; Hygin. 254; Val. Max. v. 4. Ext. § 4; Lucil. *Aetn.* 602—640; Claudian. *Idyll.* 7; Sil. Ital. xiv. 196; Auson. *Ordo Nob. Urb.* 11.)

The remains of the ancient city, still visible at *Catania*, are numerous and important; but it is remarkable that they belong exclusively to the Roman period, the edifices of the Greek city having probably been destroyed by some of the earthquakes to which it has been in all ages subject, or so damaged as to be entirely rebuilt. The most important of these ruins are those of a theatre of large size and massive construction, the architecture of which is so similar to that of the amphitheatre, at no great distance from it, as to leave no doubt that they were erected at the same period, probably not long after the establishment of the colony by Augustus. The ruin of the latter edifice dates from the time of Theodoric, who, in A. D. 498, gave permission to the citizens of Catana to make use of its massive materials for the repair of their walls and public buildings (Cassiod. *Varr.* iii. 49); the theatre, on the contrary, continued almost perfect till the 11th century, when it was in great part pulled down by the Norman Count Roger, in order to adorn his new cathedral. Nearly adjoining the large theatre was a smaller one, designed apparently for an odeium or music theatre. Besides these, there are numerous remains of thermae or baths, all of Roman construction, and some massive sepulchral monuments of the same period. A few fragments only remain of a magnificent aqueduct, which was destroyed by the great eruption of Aetna

COIN OF CATANA.

in 1669. The antiquities of *Catania* are fully described by the Principe di Biscari (*Viaggio per le Antichità della Sicilia*, chap. 5) and the Duca di Serra di Falco. (*Ant. della Sicilia*, vol. v. pp. 3—30.)

The coins of Catana are numerous, and many of them of very fine workmanship; some of them bear the head of the river-god Amenanus, but that of Apollo is the most frequent. We learn from Cicero that the worship of Ceres was of great antiquity here, and that she had a temple of peculiar sanctity, which was notwithstanding profaned by Verres. (Cic. *Verr.* iv. 45.) [E. H. B.]

CATA'NII (Κατάνιοι), a tribe of Arabia Deserta, bounded by Syria on the west and the Cauchabeni on the east. (Ptol. v. 19.) Burckhardt mentions the Bedouin tribe of *Kahtanys*, "who range the northern desert of Arabia, from Bosra to the neighbourhood of Hauran and Aleppo." These Mr. Forster takes to be the representatives of the ancient Catanii (*Arabia*, vol. ii. p. 238, seq.). [G. W.]

CATAO'NIA (ἡ Καταονία), one of the divisions of Cappadocia [CAPPADOCIA], is described by Strabo (p. 535), who had visited it. Cataonia, he says, is a level and hollow plain. The Greek term hollow (κοῖλον) means a plain surrounded by mountains. It is very productive, except that it has no evergreens. It is surrounded by mountains; on the south by the Amanus, and on the west by the Antitaurus which branches off from the Cilician Taurus in a direction different from that which the Amanus has, which itself is an offset of the Taurus. The Antitaurus turns to the north, a little to the east, and then terminates in the interior. The Antitaurus contains deep narrow valleys, in one of which is situated Comana, a considerable city on the river Sarus, which flows through the gaps of the Taurus into Cilicia and the Mediterranean. Through the plain of Cataonia flows the river Pyramus, which has its source in the middle of the plain, and also passes through the gaps of the Taurus into Cilicia. Strabo, in a corrupt passage, where there is evidently an omission of something in our present texts (p. 536; Groskurd, *Transl.* vol. ii. p. 451, note), speaks of a temple of Zeus Dacius, where there is a salt-lake of considerable extent with steep banks, so that the descent to it is like going down steps. It was said that the water never increased, and had no visible outlet.

The plain of Cataonia contained no city, but it had strong forts on the hills, such as Azamora and Dastarcum, round which the river Carmalas flowed [CARMALAS], which river may be the *Charma Su*, a branch of the Pyramus, which rises in the Antitaurus. It also contained a temple of Cataonian Apollo, which was in great repute in all Cappadocia. Ptolemy (v. 7) has a list of eleven places in his Cataonia, which he includes in his Armenia Minor. One of them is Cabassus [CABASSUS], a site unknown; and Cybistra, which is far beyond the limits of Strabo's Cataonia. In fact Ptolemy's Cataonia, if there is truth in it, is quite a new division of the country: it is, however, unintelligible to us. Cataonia also contains Claudiopolis. Cucusus, mentioned in the Antonine Itin., seems to be *Gogsyn*, on the *Gogsyn Su*, which flows from the west, and joins the Pyramus on the right bank lower down than the junction of the Carmalas and Pyramus. The upper valleys of the Sarus and the Pyramus require a more careful examination than they have yet had. The inhabitants of Cataonia were distinguished by the ancients (οἱ παλαιοί) from the other Cappadocians, as a different people. But Strabo could observe no difference in manners or in language. [G. L.]

CATAROCTONION, in Britain. This is the form of the Geographer of Ravenna, that of Ptolemy being Cat*u*ractonion. In the Itinerary it is Cataractoni (*Cattrick Bridge*). [R. G. L.]

CATARRHACTES (Καταῤῥάκτης), a river of Pamphylia, which entered the sea east of Attalia. Mela (i. 14) describes it as being so called because it has a great fall or cataract. He places the town of Perga between the Cestrus and the Catarrhactes. The Stadiasmus describes it by the term οἱ Καταῤῥάκται, or the Falls. Strabo (p. 667) also speaks of this river as falling over a high rock [ATTALIA]. This river, on approaching the coast, divides into several branches, which, falling over the cliffs that border this part of the coast, have formed a calcareous deposit. Through this calcareous crust the water finds its way to the sea, and the river has now no determinate outlet, "unless," adds Leake, "it be after heavy rains, when, as I saw it, in passing along the coast, it precipitates itself copiously over the cliffs near the most projecting point of the coast, a little to the west of Laara." (Leake, *Asia Minor*, &c., p. 191.) According to the Stadiasmus the outlet of the river was at a place called Masura, probably the Magydus of Ptolemy (v. 5); or the Mygdale of the Stadiasmus may be Magydus. This river, now the *Duden Su*, is said to run under ground in one part of its course, which appears to be of considerable length. It is represented in Leake's map, with the names of the travellers who have seen parts of its course, one of whom is P. Lucas. This river, indeed, is supposed to issue from the lake of *Egerdir*, NE. of *Isbarta*, and after disappearing, to show itself again in the lower country. But this requires better evidence. The ancient writers say nothing of its source and the upper part of it. [G. L.]

CATARRHACTES (Καταῤῥάκτης: *Súdsuro*), a river on the S. coast of Crete, which Ptolemy (iii. 17. § 4) places to the E. of Leben. (Hoeck, *Kreta*, vol. i. p. 394.) [E. B. J.]

CATARRHACTES. [MAEANDER.]

CATARZE'NE (Καταζηνή, Ptol. v. 13. § 9), a district of Armenia, lying near the mountains of the Moschi, by the Avanes. The name Cotacene occurs as a gloss upon Ptolemy, and St. Martin (*Mém. sur l'Armenie*, vol i. p. 108) identifies it with the Armenian name *Godaïkh*, one of the 16 districts of the province of Ararat. The capital of this district was Edschmiadzin, well known in the ecclesiastical history of Armenia. (St. Martin, *l. c.*; comp. Ritter, *Erdkunde*, vol. x. p. 514.) [E. B. J.]

CATENNEIS. [ETENNEIS.]

CATHAEI (Κάθαῖοι), a powerful and warlike people of India intra Gangem (in the *Panjab*) between the rivers Hydraotes (*Ravee*) and Hyphasis (*Gharra*), whose capital city, SANGALA, is supposed to have occupied the site of the modern Sikh capital, *Lahore*. This city was taken and destroyed by Alexander on his march into India, B. C. 326 (Arrian. *Anab.* v. 22, foll.; Diod. xvii. 91). Strabo, who is doubtful between which two rivers of the *Panjab* the people dwelt, relates some of their customs: how they had the highest regard for beauty in dogs and horses, and in men, so that, when a child was two months old, a solemn judgment was held, whether he was beautiful enough to be suffered to live: how they stained their beards

with the beautiful colours which their country produced in abundance: how marriage was contracted by the mutual choice of the bride and bridegroom, and how widows were burned with their deceased husbands, a custom for which he gives a merely imaginary reason. He calls their country Cathaea (Κάθαια: Strab. xv. p. 699.)

Some modern writers suppose the Cathaeans to have been a branch of the *Rajputs* (Mannert, vol. v. pt. i. p. 43), while others, including several of the best Orientalists, trace in their name that of the Hindu warrior caste, the *Kshátriyas*. (Lassen, *Pentapot.* p. 23; Schlegel, *Ind. Bibl.* vol. i. p. 249; Bohlen, *Alte Indien*, vol. ii. p. 22; Ritter, *Erdkunde*, vol. v. p. 461.) [P. S.]

CATHRAPS (Κάθραψ, Ptol. vi. 8. § 4; Marcian. p. 20), a small river of Carmania, about which little more is known than its name. It was 700 stadia NW. of the mouth of the Corius. Reichard considered the Salsus of Pliny to be identical with the Cathraps (or, as in some MSS. it is called, the Araps) of Ptolemy, and that it is represented by the modern *Shiur*; but this seems very doubtful. [V.]

CATOBRI'GA. [CAETOBRIX.]

CATORI'SSIUM, is placed in the Table on a road from Vienna (*Vienne*), in Gallia Narbonensis, through Cularo (*Grenoble*) to the Alpis Cottia (*Mont Genèvre*). It is xii M. P. from Cularo on the route to the Alpis Cottia. Walckenaer places Catorissium at *Petit Col d'Ornon et Quarele*. [G. L.]

CATTARUS (Κάτταρος: *Cattaro*), a fortress of Dalmatia in Illyricum, restored by Justinian, was situated on the east side of the bay called after it. (Procop. *de Aedif.* iv. 4.) It is probably the same as the Decadaron of the Geogr. Rav.

CATTI. [CHATTI.]

CATTIGARA (τὰ Καττίγαρα), a great city and port of the Sinae, S. of Thinae, near the mouth of the river COTTIARIS, on the E. side of the Sinus Magnus, opposite the Chersonesus Aurea. Ptolemy places it at the extreme E. and S. of the known world, in 177° E. long., and 8° 30′ S. lat., and Marcian calls it the southernmost city of the inhabited earth. It is one of Ptolemy's points of recorded astronomical observation, having 12½ hours in its longest day, and being 8 hours E. of Alexandria; and the sun being vertically over it twice in the year, namely, at the distance of about 70° on either side of the summer solstice (Ptol. i. 11. § 1, 14. §§ 1—10, 17. § 5, vii. 3. § 3, viii. 27. § 14; Marcian. p. 30). Following the numbers of Ptolemy, Mannert seeks the city in *Borneo*, while others, relying rather on his general descriptions, after correcting the obvious and gross errors in his views of the SE. part of Asia, identify the place with *Canton*. (Mannert, vol. v. pp. 188, fol.; Forbiger, vol. ii. pp. 478—480.) [P. S.]

CATUA'LIUM, in north Gallia, is placed in the Table on a road from Atuaca (Aduatuca, *Tongern*) to Noviomagus (*Nymegen*). The Table gives thirty Gallic leagues from *Tongern* to Catualium, and twelve leagues beyond Catualium is Blariacum (*Blerick*), which seems to be pretty well fixed; but the site of Catualium is uncertain. [G. L.]

CATUELLANI, a British population, under the dominion of the Boduni, reduced by Aulus Plautius. Dion Cassius (lx. 20) is the authority for this, and *Catuellani* and *Boduni* are his forms. For the likelihood or unlikelihood of the former of these being the Catyeuchlani, and the Dobuni of Ptolemy, see those articles. [R. G. L.]

CATU'RIGES (Κατύριγες). When Caesar crossed the Alps from Italy into Gallia the second time, in the early part of B. C. 58, he went by Ocelum (*Uxeau* or *Ocello*), the last town in Gallia Citerior, to one of the Alpine passes. His route was by the pass of the *Mont Genèvre*, or Alpis Cottia. The Centrones, Graioceli, and Caturiges, occupied the heights and attempted to prevent him from crossing the Alps. (*B. G.* i. 10.) The position of the Caturiges is determined by that of their town Caturiges or Caturigae, which the Itineraries place between Ebrodunum (*Embrun*), and Vapincum (*Gap*); and a place called *Chorges* corresponds to this position. Two inscriptions are reported as found on the spot, which contain the name Cat. or Cathirig. An old temple, called the temple of Diana, now serves as a church. There are also fragments of Roman columns; and a block of marble in front of the church contains the name of the emperor Nero. (*Guide de Voyageur, &c.*, par Richard et Hocquart.) In the Table this town is named Catorimagus, and is placed on the road from Brigantio (*Briançon*), to Vapincum. The Antonine Itin. has the same route, but the town is named Caturiges; and it has the same name in the Jerusalem Itin.

The name of the Caturiges is preserved in the inscription of the trophy of the Alps (Plin. iii. 20), and they are mentioned between the Uceni and Brigiani. Pliny also mentions the Vagienni, who were in Italy on the Tanarus, as sprung from the Caturiges (iii. 5); and in an obscure passage (iii. 17) he speaks of "Caturiges exsules Insubrum," as having disappeared from Gallia Transpadana. We may probably conclude that the Caturiges were among the Galli who entered Italy in the early period of Roman history. Besides the town of Caturiges, they had Ebrodunum (*Embrun*). They possessed, accordingly, part of the upper valley of the *Durance*. In Ptolemy the Caturiges (Κατυρ-γίδαι, iii. 1) are placed in the Alpes Graiae, which is a mistake; and he mentions only one town of the Caturiges, Ebrodunum. Strabo's description of the position of the Caturiges (p. 204) is also incorrect. D'Anville supposes that Brigantium was included in the territory of the Caturiges; but there is no evidence for this, though it seems likely enough. Ptolemy assigns it to the Segusini. [BRIGANTIUM.] [G. L.]

CATUSIACUM, a position in north Gallia, which appears in the Antonine Itin. on the road from Bagacum (*Bavay*) to Durocortorum (*Reims*). It is placed vi Gallic leagues or 9 Roman miles from Verbinum (*Vervins*), and it seems to be *Chaours* at the passage of the *Serre*, a small tributary of the *Oise*. The same route is in the Table, but Catusiacum is omitted. [G. L.]

CATVIACA, or, as it is sometimes written Catuica, in Gallia Narbonensis, is placed in the Table and the Antonine Itin. on the road from Vapincum (*Gap*) to Arelate (*Arles*); and it is xii M. P. from Catviaca to Apta Julia (*Apt*), a position which is known. Catviaca is between Alaunio and Apta Julia. These unimportant places can only be determined by the assistance of the best topographical maps, and even then with no certainty, unless the name has been preserved. [G. L.]

CATYEUCHLANI, in Britain, mentioned by Ptolemy (ii. 3. § 21) — whose geography for these parts is obscure — as next to the Coritani, whose towns were Lindum and Rhage; Salinae and Urolanium being those of the Catyeuchlani themselves.

Next come the Simeni, whose town is Venta; and then, more to the east, near the Imensa Aestuary, the Trinoantes, whose town is Camudolanum. Of all these texts and localities the only one wholly beyond doubt is Lindum = *Lincoln*. With this as a starting-point, Rhage = *Leicester*. Then the Simeni are considered to be the Iceni not otherwise mentioned by Ptolemy; and as Venta = *Norwich*, or the parts about it, we have a limit for the Catyeuchlani on the north and east. The Imensa Aestuary is generally considered to mean that of the *Thames;* the error being, perhaps, that of the MSS. Then come the Trinoantes (Trinobantes), generally placed in Middlesex, but whose capital is here the mysterious Camudolanum. [COLONIA.] Rutland, Hunts, Beds, and Northampton best coincide with these conditions, but they are by no means the counties which best justify us in identifying the Catuellani [CATUELLANI], whose relations were with the Boduni (= Dobuni = *Gloucestershire*), with the Catyeuchlani. [R. G. L.]

CAUCA (Καῦκα: *Eth.* Καυκαῖοι, Caucenses: *Coca*), a city at the extreme E. of the territory of the Vaccaei, in Hispania Tarraconensis; belonging to the *conventus* of Clunia; and lying on the great road from Emerita to Caesaraugusta, 22 M. P. from Nivaria and 29 M. P. from Segovia. (Appian. *Hisp.* 51, 89; *Itin. Ant.* p. 435; Plin. iii. 3. s. 4; Ptol. ii. 6. § 50; Zosim. iv. 24; Geog. Rav. iv. 44; Mariana, *Hist. Hisp.* iii. 2; Florez, *Esp. S.* v. 14; Ukert, vol. ii. pt. 1, p. 432.) [P. S.]

CAUCA'SIAE PORTAE. [CAUCASUS.]

CAU'CASUS, CAUCA'SII MONTES (ὁ Καύκασος, τὰ Καυκάσια ὄρη: also, ὁ Καυκάσις, Herod. iii. 97, Steph. B. *s. v.*; τὸ Καύκασον, Arrian. *Peripl.*; τὸ Καυκάσιον ὄρος, Herod. i. 104, Dion. Per. 663: *Eth.* Καυκάσιος and Καυκασίτης: region Καυκασία, whence *Adj.* and *Eth.* Καυκασιανός, Steph. B. *s. v.*: *Caucasus, Kaukas, Goffkas, Jalbus*), the great mountain chain which extends across the isthmus between the Euxine and Caspian Seas, and now forms the boundary between Europe and Asia, but belonged entirely to Asia in the ancient division of the continents.

This range forms the NW. margin of the great table-land of W. Asia. [ASIA.] It commences on the W. at the base of the tongue of low land (*Peninsula of Taman*), which divides the E. part of the *Sea of Azov* (Palus Maeotis) from the *Black Sea*, in 45° 10′ N. lat., and 36° 45′ E. long.; and it runs first along the NE. shore of the Black Sea, and then across the isthmus, with a general direction from NW. to SE., terminating on the W. coast of the Caspian, in the peninsula of *Apsheron* in 40° 20′ N. lat., and 50° 20′ E. long. Its length is 750 miles, its breadth from 65 to 150 miles. Its elevation varies greatly, the central portion forming some of the loftiest mountains in the world, higher than the Alps, while its extremities sink down into mere hills. The highest summit, *M. Elburz*, in 43° 20′ N. lat., and 42° 30′ E. long., attains a height of not much less than 18,000 feet; and the next in elevation, *M. Kazbek*, in 42° 50′ N. lat., and 44° 20′ E. long. is just 16,000 feet high. The part of the chain W. of *Elburz* sinks very rapidly, and along the shore of the Euxine its height is only about 200 feet; but the E. part of the chain preserves a much greater elevation till it approaches very near the Caspian, where it subsides rather suddenly. Nearly all the principal summits of the central part, from M. Elburz eastward, are above the line of perpetual snow, which is here from 10,000 to 11,000 feet above the sea. The central chain is bordered by two others, running parallel to it; that on the N., called by the inhabitants the *Black Mountains*, forms a sort of shoulder, by which the Caucasus sinks down to the great plain of Sarmatia and the basin of the Caspian; while that on the S., called in Armenian *Sdorin Goffkas*, i. e. the *Lower Caucasus*, branches off from the central mass in 44° E. long., and running between the rivers *Rion* (Phasis) and *Kur* (Cyrus), from WNW. to ESE., connects the main chain with the highlands of Armenia, and with the Taurus system. The mountains are chiefly of the secondary formation, with some primary rocks; and, though there are no active volcanoes, the frequent earthquakes, and the naphtha springs at the E. extremity, indicate much igneous action. The summits are flat or rounded, with an entire absence of the sharp peaks familiar to us in the Alps. The chief rivers of the Caucasus are on the N. side, the *Terek* (Alontas), and the *Kuban* (Hypanis or Vardanes), both rising in *M. Elburz*, and falling, the former into the *Caspian*, the latter into the *Sea of Azov;* and, on the S. side, the *Rion* (Phasis) falling into the Euxine, and the *Kur* (Cyrus) falling into the Caspian. This brief general description of the chain will render more intelligible the statements of the ancient writers respecting it. (The chief modern works on the Caucasus are, Reinegg, *Histor.-topograph. Beschreibung des Kaukasus*, St. Petersb. 1796, 1797, 2 vols. 8vo., and the works of Koch, especially his splendid Atlas, *Karte des Kaukasischen Isthmuss und Armeniens*, Berlin, 1850, consisting of four large maps, repeated in four editions, one coloured *politically*, another *ethnographically*, the third *botanically*, and the fourth *geologically*. The Atlas to Rennell's *Comparative Geography of W. Asia* is also very useful.)

In the early Greek writers, the Caucasus appears as the object of a dim and uncertain knowledge, which embraced little more than its name, and that vague notion of its position which they had also of other places about the region of the Euxine, and which they traced mythically to the Argonautic expedition (Strab. xi. p. 505). In Aeschylus, it is the scene of the punishment of Prometheus, who is chained to a rock at the extremity of the range overhanging the sea, but at a considerable distance from the summit "the Caucasus itself, highest of mountains" (Aesch. *Prom. Vinct.* 719, comp. 422, 89, 1088; *Prom. Sol.* Fr. 179, *ap.* Cic. *Quaest. Tusc.* ii. 10; comp. Hygin. *Fab.* 54; Apollon. Rhod. ii. 1246, et seq.; Val. Flacc. v. 155, where the Caucasus is called *Promethei cubile:* Strab. iv. p. 183, xi. p. 505, who expressly asserts that the Caucasus was the easternmost mountain known to the earlier Greeks; and adds that it was, in later myths, the scene of expeditions of Heracles and Dionysus.)

Hecataeus mentions the Caucasus twice, in connection with the Dandarii and Coli, peoples who dwelt about it; and he adds that the lower parts of the chain were called Colici Montes (Κωλικὰ ὄρη; Fr. 161, 186, *ap.* Steph. B. *s. vv.* Δανδάριοι, Κῶλοι; comp. Plin. vi. 5.) Herodotus shows a general knowledge of the chain, which is accurate as far as it goes: he derived it from the Persians, of whose empire the Caucasus was the N. boundary; a boundary, indeed, never passed by any Asiatic conqueror till the time of Zenghis Khan. (Herod. iii. 97; Heeren, *Ideen*, &c. vol. i. pt. 1. p. 148). He describes it as extending along the W. side of the Caspian Sea, and as the loftiest of mountains, and the greatest in

extent, containing in itself numerous peoples of all kinds (*παντοῖα, i. e.* of all known races), respecting whom, however, the Persians do not seem to have had any exact knowledge to communicate. (Herod. i. 203, 204, followed by Aristot. *Meteor.* i. 13.) He knew of the great pass at the E. extremity of the chain (*Pass of Derbend*), by which, he tells us, the Scythians invaded W. Asia (i. 104, iv. 12). After Herodotus the knowledge of the Greeks respecting Caucasus seems to have gone backward. Impressed with vague ideas of its magnitude and remoteness, they regarded its ascent as an achievement worthy of the greatest of conquerors (Strab. xi. pp. 505, 506); and so, when Alexander passed the Paropamisus, the honour of having scaled the heights of Caucasus was assigned to him by the flattery rather than the ignorance of his followers, who transferred the ancient name to the scene of his achievements. The name is used by the geographers rather more frequently for the Indian than the W. mountain; and the former still retains the name, as the *Hindoo Koosh*. [PAROPAMISUS.]

The glory of having reached, though not of actually crossing, the real Caucasus, was reserved for Pompey, when his pursuit of Mithridates led him into Iberia and Albania, B. C. 65. (Plut. *Pomp.* 34, et seq., *Lucull.* 14; Appian *Mithr.* 103.) The knowledge obtained in this expedition enabled Strabo to give a description of the Caucasus, to which very little was added by later writers (ii. p. 118). His chief passages are in the 11th Book. The mountain, he says, overhangs each of the two seas, the Pontic and the Caspian, and forms a wall across the isthmus which separates them. It is the boundary between ALBANIA and IBERIA on the S. and the plains of the SARMATIANS on the N. It is well wooded with all sorts of timber, including that fit for shipbuilding. It throws out branches towards the S., which surround Iberia, and join on to the mountains of ARMENIA and COLCHIS (comp. pp. 500, 527), and to those called MOSCHICI, and moreover to the chains of SCYDISES and PARYADRES, by which it is connected with the TAURUS system. The natives, according to Eratosthenes, called the Caucasus Caspius. (Strab. xi. p. 497.)

In another passage he gives a more particular description of the inhabitants (xi. p. 506). The loftiest parts of the chain are those on its S. side, adjacent to Albania, Iberia, and the Colchi and Heniochi. The inhabitants, whom he calls by the general name of **Κανκάσιοι**, and among whom he particularly mentions the PHTHEIROPHAGI and SOANES, frequent the city of DIOSCURIAS, chiefly to obtain salt. (Comp. pp. 498, 499.) Some of them inhabit the summits of the mountains (he must mean the lower summits) and others the wooded valleys, and they live for the most part on game, wild fruits, and milk. In winter the summits are inaccessible, but in summer they mount over the snow and ice by means of broad snow-shoes furnished with spikes (one almost wonders that the *alpenstock* does not appear), and they glide down again with their burthens on a hide as a sledge. As you descend the N. slopes, the climate, in spite of the nearer approach to the N., becomes milder, from its proximity to the plains of the Siracae. But there are some Troglodytes, who dwell in caves on account of the cold; and after them are the Chaeonoetae and Polyphagi, and the villages of the Eisadicae, who are able to till the soil, on account of not being too far N.: and thus you descend to the great plain of Sarmatia. Elsewhere he enumerates the peoples on the N. of the Caucasus, between the Euxine and Caspian, namely, the Sauromatae, Scythians (Aorsi and Siraci), Achaei, Zygi, and Heniochi, the last three peoples being within the Caucasus itself (ii. p. 129, xi. pp. 492, 495, 498, 499). In his account of certain extraordinary customs of the Caucasians and other mountaineers (xi. 519, 520), his language is so general, that it may apply to the tribes either of Caucasus Proper or of the Indian Caucasus.

The E. part of the chain, near the Caspian, and forming part of the N. boundary of Albania, he calls the Cerauuii Mtns. (**τὰ Κεραύνια ὄρη**), and in them he places the Amazons (xi. pp. 501, 504; Plut. *Pomp.* 35; comp. CERAUNII M.).

Mela merely makes a passing mention of the Caucasus as one of many names applied to the mountains of the Caucasian isthmus (i. 19); and Pliny scarcely notices them more particularly (v. 27, vi. 4, 5, 10. s. 11, &c.): he tells us that the Scythians called the mountains *Graucasis*, i. e. *white with snow* (vi. 17. s. 19). Seneca calls it *nivosus* (*Herc. Oet.* 1451). Its great height is often noticed (Aristot. *Meteor.* i. 13; Procop. *B. G.* iv. 3); and it is compared, in this respect, by Agathemerus (ii. 9) to the Rhipaean mountains, and by Arrian (*Peripl.* p. 12) to the Alps. To the notices in Ptolemy and Dionysius Periegetes a mere reference is sufficient. (Ptol. v. 9. §§ 14, 15, 22, 10. § 4, 12. § 4; Dionys. Per. 663, comp. Eustath. *ad loc.*: see also Ovid. *Met.* ii. 224, vii. 798: comp. CERAUNII M.)

In ancient times, as is still the case, the Caucasus was inhabited by a great variety of tribes, speaking different languages (Strabo says, at least 70), but all belonging to that family of the human race, which has peopled Europe and W. Asia, and which has obtained the name of Caucasian from the fact that in no other part of the world are such perfect examples of it found, as among the mountaineers of the Caucasus.

Passes of the Caucasus.—There are two chief passes over the chain, both of which were known to the ancients: the one, between the E. extremity of its chief NE. spur and the Caspian, near *Derbend*, was called Albaniae and sometimes Caspiae Pylae [ALBANIA]: the other, nearly in the centre of the range, was called Caucasiae, or Sarmaticae Pylae (*Pass of Dariel*). But there is so much confusion in the names used by the ancient writers, that it is often difficult to make out which of the two passes they mean. (Plin. v. 27, vi. 11. s. 12, 15; Ptol. v. 9. § 11; Suet. *Ner.* 19; Tac. *Hist.* i. 6, *claustra Caspiarum; Ann.* vi. 33, *via Caspia*). [P. S.]

CAUCASUS INDICUS. [PAROPAMISUS.]

CAUCHABE'NI (**Καυχάδηνοι**), a people of Arabia Deserta, bordering on the Euphrates. (Ptol. v. 19.) [G. W.]

CAUCHI. [CHAUCI.]

CAUCI, a population of the eastern coast of Ireland, contiguous to the Menapii. For the difficulties caused by this juxtaposition, see MENAPII. [R. G. L.]

CAUCO'NES (**Καύκωνες**), are mentioned by Homer, along with the Leleges and Pelasgians, as auxiliaries of the Trojans. (*Il.* x. 429, xx. 329.) According to Strabo, they dwelt near the Mariandyni, upon the sea-coast of Bithynia and Paphlagonia, and had possession of the city Tieium. The most different opinions prevailed respecting their origin; some supposing them to be Scythians, others Macedonians, and others again Pelasgians. (Strab. viii. p. 345, xii. p. 542.)

The Caucones are also mentioned among the most ancient inhabitants of Greece. (Strab. vii. p. 321.) As they disappeared in the historical period, little could be known respecting them; but according to the general opinion they were the most ancient inhabitants of that part of Peloponnesus, which was afterwards called Elis. Strabo says that they were a migratory Arcadian people, who settled in Elis, where they were divided into two principal tribes, of which one dwelt in Triphylia, and the other in Hollow Elis. The latter extended as far as Dyme in Achaia, in the neighbourhood of which there was a tributary of the Teutheas bearing the name of Caucon. (Strab. viii. pp. 342, 345, 353.) The Caucones in Triphylia are mentioned by Homer, and are called by Herodotus the Pylian Caucones. (Hom. *Od.* iii. 366; Herod. i. 147.) They were driven out of Triphylia by the Minyae. (Herod. iv. 148.)

CAUDI'NI, a tribe of the Samnites bordering upon Campania. The name is evidently connected with that of the town of Caudium, which must probably have been at one period the capital or chief city of the tribe. But it seems certain that the appellation was not confined to the citizens of Caudium and its immediate territory. Livy speaks in more than one passage of the Caudini as a tribe or people, in the same terms as of the Hirpini (Marcellus ab Nola crebras excursiones in agrum Hirpinum et *Samnites Caudinos* fecit, xxiii. 41; *Caudinus Samnis* gravius devastatus, Id. xxiv. 20), and Niebuhr supposes them to have been one of the four tribes of which the Samnite confederacy was composed. (Nieb. vol. i. p. 107, vol. ii. p. 85.) This is, however, very doubtful, and it is remarkable that we find no mention of the Caudini as a separate tribe during the wars of the Romans with the Samnites. Perhaps, however, they were included as a matter of course, whenever the Samnites were mentioned, as their country must have been continually the scene of hostilities; and Velleius Paterculus (ii. 1) speaks of the *Caudini* as the people with whom the treaty was concluded by the Romans after their defeat at the Forks, where Livy uniformly talks of the *Samnites*. It is impossible to determine with any accuracy the limits of their territory: the great mountain mass of the Taburnus, called by Gratius Faliscus (*Cyneget.* 509) "Caudinus Taburnus," was in the heart of it; and it is probable that it joined that of the Hirpini on the one side and of the Pentri on the other, while on the W. it bordered immediately on Campania. But the name is not recognised by any of the geographers as a general appellation, and appears to have fallen into disuse: the Caudini of Pliny (iii. 11. s. 16) are only the citizens of Caudium. [E. H. B.]

CAUDIUM (Καύδιον: *Eth.* Καυδῖνος, Caudinus), a city of Samnium, situated on the road from Beneventum to Capua. It seems probable that it was in early times a place of importance, and the capital or chief city of the tribe called the Caudini; but it bears only a secondary place in history. It is first mentioned during the Second Samnite War, B. C. 321, when the Samnite army under C. Pontius encamped there, previous to the great disaster of the Romans in the neighbouring pass known as the Caudine Forks (Liv. ix. 2); and again, a few years later, as the head-quarters occupied by the Samnites, with a view of being at hand to watch the movements of the Campanians. (Id. *ib.* 27.) The town of Caudium is not mentioned during the Second Punic War, though the tribe of the Caudini is repeatedly alluded to [CAUDINI]: Niebuhr supposes the city to have been destroyed by the Romans, in revenge for their great defeat in its neighbourhood; but there is no evidence for this. It reappears at a later period as a small town situated on the Appian Way, and apparently deriving its chief importance from the transit of travellers (Hor. *Sat.* i. 5. 51; Strab. v. p. 249): the same causes preserved it in existence down to the close of the Roman empire. (Ptol. iii. 1. § 67; *Itin. Ant.* p. 111; *Itin. Hier.* p. 610; *Tab. Peut.*) We learn that it received a colony of veterans; and it appears from Pliny, as well as from inscriptions, that it retained its municipal character, though deprived of a large portion of its territory in favour of the neighbouring city of Beneventum. (Plin. iii. 11. s. 16; Lib. Colon. p. 232; Orelli, *Inscr.* 128, 131.) The period of its destruction is unknown: the name is still found in the ninth century, but it is uncertain whether the town still existed at that time.

The position of Caudium is fixed by the Itineraries, which all concur in placing it on the Appian Way, 21 Roman miles from Capua, and 11 from Beneventum; and as the total distance thus given from Capua to Beneventum is perfectly correct, there can be no doubt that the division of it is so too. Yet Holstenius and almost all the Italian topographers have placed Caudium at *Arpaja*, which is less than 17 miles from Capua, as is proved by the discovery of the Roman milestone with the number xvi. a short distance from thence, on the road to Capua, as well as by the measurement of the distance. D'Anville is therefore certainly correct in placing the site of Caudium about 4 miles nearer Beneventum, between *Arpaja* and *Monte Sarchio*. It must have stood on or near the little river *Isclero*; though there are no ruins of it on the spot. *Arpaja*, the origin of which cannot be traced further back than the tenth century, probably arose, like so many other towns in Italy, in the stead of Caudium, when the latter was destroyed or abandoned by its inhabitants; which will account for its having been identified by tradition in early times with the latter city. (Holsten. *Not. in Cluver.* p. 267; Pellegrini, *Discorsi della Campania*, vol. i. p. 368; Romanelli, vol. iii. pp. 393—399; D'Anville, *Anal. Géog. de l'Italie*, p. 214—216.) The point is of importance from its connection with the much disputed question concerning the true position of the celebrated pass called the FURCULAE CAUDINAE* or Caudine Forks, the scene of one of the greatest disasters sustained by the Romans in the whole course of their history.

Livy's narrative of this celebrated event is the only one sufficiently detailed to throw any light upon the topographical question. He describes the place known as the Furculae Caudinae as a pass consisting of two narrow defiles or gorges (saltus duo alti, angusti, silvosique, — angustiae, ix. 2), united by a continuous range of mountains on each side, enclosing in the midst a tolerably spacious plain, with good grass and water. The Roman army, supposing the Samnites to be far distant, advanced incautiously through the first pass, but when they came to the second they found it blocked up with trees and stones, so as to be wholly impassable; and when they turned back and retraced their steps to the pass at the entrance of the valley, they found this similarly ob-

* This appears to be the correct form of the name, and is the only one found in prose writers: Lucan alone has "Furcae Caudinae" (ii. 137), for which Silius Italicus (viii. 566) employs "Caudinae Fauces."

structed: hereupon they abandoned themselves to despair, and after encamping in the valley between the two passes for some days, they were compelled by famine to surrender at discretion. (Liv. ix. 2—6.) The exaggeration of this account, so far as it represents the Romans as overcome by the difficulties of the ground alone, without even attempting to engage the enemy, is obvious; and Niebuhr has justly inferred that they must have sustained a defeat before they were thus shut up between the two passes. Cicero also twice alludes to the battle and defeat of the Romans at Caudium (Caudinum proelium, *de Sen.* 13; cum male pugnatum ad Caudium esset, *de Off.* iii. 30); but unless we are to reject Livy's account as wholly fabulous, we must suppose the enemy to have derived great advantage from the peculiarities of the locality; and the same thing is stated by all the other writers who have related, though more briefly, the same event. (Appian, *Samn.* Exc. 4; Flor. i. 16; Eutrop. ii. 9; Oros. iii. 15.)

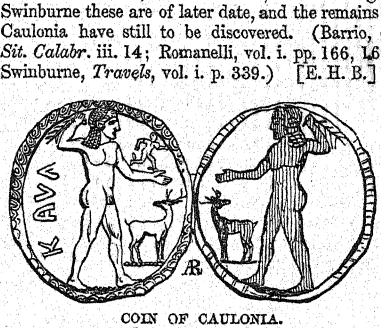
An ancient tradition, which has been followed by almost all writers on this subject, represents the valley of *Arpaja*, on the high road from Capua to Beneventum, as the scene of the action; and the name of *Forchia*, a village about a mile from *Arpaja*, affords some confirmation to this view. But almost all travellers have remarked how little this valley accords with the description of Livy: it is, indeed, as Keppel Craven observes, "nothing more than an oblong plain, surrounded by heights which are scarcely sufficient to give it the name of a valley, and broken in several parts so as to admit paths and roads in various directions." There is a narrow defile near *Arienzo*, which might be supposed to be the one at the *entrance* of the valley, but there is no corresponding pass at the other extremity; nor is there any stream flowing through the valley. And so far from presenting any extraordinary obstacles to troops accustomed to warfare in the Apennines, there are perhaps few valleys in Samnium which would offer less. (Eustace, *Class. Tour*, vol. iii. p. 69—73, 8vo. edit.; Swinburne's *Travels*, vol. i. p. 421; K. Craven, *Southern Tour*, p. 11—12.)

To this it may be added that it appears very improbable that a pass described as so peculiar in its character should have lain on the Appian Way, and in the great high road from Capua to Beneventum, where it must have been traversed again and again, both by Roman and Samnite armies, without any subsequent allusion being made to it. During the Second Punic War, and again in the Social War, such a pass on the great highway must have been a military position of the highest importance; yet the name of the Furculae Caudinae is never mentioned in history, except on this single occasion.

On the other hand, another pass in the same neighbourhood has been pointed out by an intelligent traveller, which appears to answer well to Livy's description of the Caudine Forks. (See a dissertation by Mr. Gandy, in Craven's *Tour through the Southern Provinces of the K. of Naples*, pp. 12—20.) This is the narrow valley between *Sta Agata* and *Moirano*, on the line of road from the former place to *Benevento*, and traversed by the little river *Isclero*. As this valley meets that of *Arpaja* just about the point where Caudium must have been situated, according to the Itineraries, it would have an equal right to derive its name from that town. And it is a strong argument in its favour that it lay on the direct route from the Samnite Calatia (*Caiazzo*) to Caudium: for we have every reason to believe that the Calatia where the Roman army was encamped at the commencement of the campaign (Liv. ix. 2) was the *Samnite* city of the name, which is mentioned on several other occasions during these wars, and commands the valley of the Vulturnus in a manner that must have given it importance in a military point of view. Those writers, however, who regard the valley of *Arpaja* as that of the Caudine Forks necessarily suppose the Romans to have been advancing from the *Campanian* Calatia on the road to Capua. If the valley of the *Isclero* were really the scene of the disaster, it would account for our hearing no more of the Furculae Caudinae, as this difficult pass would for the future be carefully avoided, armies acquainted with the country taking the comparatively easy and open route from Capua to Beneventum, along which the Via Appia was afterwards carried, or else that from the Via Latina, by Allifae and Telesia, to the same city.

The only argument of any force in favour of the valley between *Arienzo* and *Arpaja*, is that derived from the tradition which gave to it the name of the *Valle Caudina*, as well as to an adjoining village that of *Furculae*, now corrupted into *Forchia*. This tradition is certainly very ancient, as the name of Furculae or Furclae is already found in documents of the ninth and tenth centuries; and it is therefore undoubtedly entitled to much weight; but its credibility must in this case be balanced against that of the narrative of Livy, which is wholly inconsistent with the valley in question. It is singular that all those authors who regard the valley of *Arpaja* as the scene of the events narrated by Livy, at the same time aggravate the inconsistency by admitting *Arpaja* itself to occupy the site of Caudium, though it is quite clear from Livy that the *town* of Caudium was not *in the pass*, which is represented as uninhabited and affording no provisions; and Caudium itself evidently continued in the hands of the Samnites both before and after the action. (Liv. ix. 2, 4; Appian. *Samn. l. c.*) The arguments in favour of the received opinion are fully given by Daniele (*Le Forche Caudine Illustrate*, fol. Napoli, 1811), as well as by Pellegrini (*Discorsi*, vol. i. pp. 393—398), Romanelli (vol. ii. pp. 399—407), and Cramer (vol. ii. pp. 238—245). The same view is adopted by Niebuhr (vol. iii. p. 214), who was, however, apparently ignorant of the character of the valley of the *Isclero*, which may be said to have been brought to light by Mr. Gandy; Cluverius, who first suggested it as the site of the Furculae Caudinae, having misconceived the course of the Appian Way, and thus thrown the whole subject into confusion. Holstenius, on the contrary, supposes the valley beyond *Arpaja* on the road to *Benevento*, to be that of the Caudine Forks, a view still more untenable than the popular tradition. (Cluver. *Ital.* p. 1196; Holsten. *Not. in Cluv.* p. 269.) [E. H. B.]

CAUE (Καύη), a village, as Xenophon calls it (*Hellen.* iv. 1. § 20), in Asia Minor; but it is difficult to say even in what part it was, except that it was within the satrapy of Pharnabazus, and probably in Bithynia or Phrygia. [G. L.]



CAULARES. Livy (xxxviii. 15), in his history of the campaigns of Cn. Manlius in Asia, says that after leaving Cibyra he marched through the territory of the Sindenses, and having crossed the river Caulares, he encamped. On the next day he marched past the Lake Caralitis, and encamped at Mandropolis. In Spratt's Lycia (vol. i. p. 249) this lake or swamp (palus) is identified with "a great expanse

of water choked with reeds and rushes." It is named in the map *Soo Ood Guie*, and lies a little north of 37° N. lat. The position of Cibyra is fixed at *Horzoom*, on the upper part of the Indus in Lycia: and in marching past the north part of this swamp eastward from Cibyra, the Romans would cross a river which joins the Indus, a little below Cibyra. This river will certainly be the Caulares, if the palus is rightly identified, for it is less than a day's march from the swamp. [G. L.]

CAULO'NIA (Καυλὼν or Καυλωνία: *Eth.* Καυλωνιάτης), a city on the E. coast of Bruttium, between Locri and the Gulf of Scyllacium. All authors agree that it was a Greek colony of Achaean origin, but Strabo and Pausanias represent it as founded by Achaeans direct from the Peloponnese, and the latter author mentions Typhon of Aegium in Achaia as the Oekist or leader of the colony (Strab. vi. p. 261; Paus. vi. 3. § 12); while Scymnus Chius and Stephanus of Byzantium affirm that it was a colony of Crotona. (Scymn. Ch. 319; Steph. B. *s. v.* Αὐλών.) It is easy to reconcile both accounts; the Crotoniats, as in many similar cases, doubtless called in additional colonists from the mother-country. Virgil alludes to it as if it were already in existence *as a city* at the time of the Trojan War (*Aen.* iii. 552), but this is evidently a mere poetical license, like the mention of the Lacinian temple in the preceding line. Scylax and Polybius both mention it as one of the *Greek* cities on this part of the Italian coast. (Scyl. § 13, p. 5; Pol. x. 1.) We are told that its name was originally Aulonia (Αὐλωνία), from a deep valley or ravine (αὐλών), close to which it was situated (Strab. *l. c.*; Scymn. Ch. 320—322; Hecataeus, ap. Steph. B. *s. v.* Καυλωνία), and that this was subsequently altered into Caulonia: the change must, however, have taken place at a very early period, as all the coins of the city, many of which are very ancient, bear the name Caulonia.

We have very little information as to the early history of Caulonia: but we learn from Polybius that it participated in the disorders consequent on the expulsion of the Pythagoreans from Crotona and the neighbouring cities [CROTONA]; and was for some time agitated by civil dissensions, until at length tranquillity having been restored by the intervention of the Achaeans, the three cities of Caulonia, Crotona, and Sybaris, concluded a league together, and founded a temple to Zeus Homorius, to be a common place of meeting and deliberation. (Pol. ii. 39.) Iamblichus also mentions Caulonia among the cities in which the Pythagorean sect had made great progress, and which were thrown into confusion by its sudden and violent suppression (Iambl. *Vit. Pyth.* §§ 262, 267); and, according to Porphyry (*Vit. Pyth.* § 56), it was the first place where Pythagoras himself sought refuge after his expulsion from Crotona. The league just mentioned was probably of very brief duration; but the part here assigned to Caulonia proves that it must have been at this time a powerful and important city. Yet, with the exception of an incidental notice of its name in Thucydides (vii. 25), we hear no more of it until the time of the elder Dionysius, who in B. C. 389 invaded Magna Graecia with a large army, and laid siege to Caulonia. The Crotoniats and other Italian Greeks immediately assembled a large force, with which they advanced to the relief of the city: but they were met by Dionysius at the river Helorus or Helleporus, and totally defeated with great slaughter. (Diod. xiv. 103—105.) In consequence of this battle Caulonia was compelled to surrender to Dionysius, who removed the inhabitants from the city and established them at Syracuse, while he bestowed their territory upon his allies the Locrians. (*Ib.* 106.) The power of Caulonia was effectually broken by this disaster, and it never rose again to prosperity; but it did not cease to exist, being probably repeopled by the Locrians; as at the time of the landing of Dion in Sicily, we are told that the younger Dionysius was stationed at Caulonia with a fleet and army. (Plut. *Dion*, 26.) At a somewhat later period, during the wars of Pyrrhus in Italy, it was taken by a body of Campanian mercenaries in the Roman service, and utterly ruined. (Paus. vi. 3. § 12.) It is probably this event, to which Strabo also alludes when he says that Caulonia was laid desolate "by the barbarians" (vi. p. 261), though his addition that the inhabitants removed to Sicily would rather seem to refer to its former destruction by Dionysius. Both he and Pausanias evidently regard the city as having remained desolate ever after; but it appears again during the Second Punic War, on which occasion it followed the example of the Bruttians and declared in favour of Hannibal. An attempt was afterwards made to recover it by a Roman force, with auxiliaries from Rhegium, but the sudden arrival of Hannibal broke up the siege. (Liv. xxvii. 12, 15, 16; Plut. *Fab.* 22; Pol. x. 1.) We have no account of the occasion when it fell again into the hands of the Romans, nor of the treatment it met with: but there is little doubt that it was severely punished, in common with the rest of the Bruttians; and probably its final desolation must date from this period. Strabo tells us it was in his time quite deserted: and though the name is mentioned by Mela, Pliny speaks only of the "vestigia oppidi Caulonis," and Ptolemy omits it altogether. (Strab. *l. c.*; Mel. ii. 4; Plin. iii. 10. s. 15.) It must, however, have continued to exist, though in a decayed condition, as the name of Caulon is still found in the Tabula. (*Tab. Peut.*) An inscription, in which the name of the Cauloniatae is found as retaining their municipal condition under the reign of Trajan (Orelli, *Inscr.* 150), is of very doubtful authenticity.

The site of Caulonia is extremely uncertain: the names and distances given in this part of the Tabula are so corrupt as to afford little or no assistance. Strabo and Pliny both place it to the N. of the river Sagras, but unfortunately that river cannot be identified with any certainty. Many topographers place Caulonia at *Castel Vetere*, on a hill on the S. bank of the river *Alaro:* but those who identify the *Alaro* with the Sagras, naturally look for Caulonia N. of that river. Some ruins are said to exist on the left bank of the *Alaro*, near its mouth; but according to Swinburne these are of later date, and the remains of Caulonia have still to be discovered. (Barrio, *de Sit. Calabr.* iii. 14; Romanelli, vol. i. pp. 166, 168; Swinburne, *Travels*, vol. i. p. 339.) [E. H. B.]

COIN OF CAULONIA.

CAUNII. [CARIA, CAUNUS.]

CAUNO'NIUM. [CANONIUM.]

CAUNUS (ἡ Καῦνος: *Eth.* Καύνιος and Καυνάϊος), a city of Caria, in the Peraea. [CARIA.] Strabo (p. 651) places Caunus west of Calynda. Caunus had dockyards and a closed harbour, that is, a harbour that could be closed. Above the city, on a height, was the fort Imbrus. Diodorus (xx. 27) mentions two forts, Persicum and Heracleum. The country was fertile, but unhealthy in summer and autumn, owing to the air and the abundance of fruit, of which we must suppose the people ate too much, as the fruit alone could not cause unhealthiness. Strabo's description of the position is not clear. After mentioning Calynda, he says, "then Caunus, and a river near it, Calbis, deep, and having a navigable entrance, and between, Pisilis;" which means that Pisilis is between the Calbis and Caunus. It is clear, then, that Caunus, according to Strabo, is not on the Calbis, as it is represented in some maps. If the Calbis, which is the Indus, or the large river *Dalamon Tchy*, is east of Pisilis, it is of course still further east of Caunus. Caunus is placed in some maps a little distance south of a lake on a stream which flows from it, and four or five miles from the sea; but the river is usually incorrectly marked the Calbis. The site of Caunus is said to be now *Kaiguez*, or some similar name. But the ancient descriptions of the site of Caunus vary. Mela (i. 16) places Caunus on the Calbis. Ptolemy (v. 2) places it east of the Calbis, and his description of the coast of Caria is exact. But as he mentions no other river except the Calbis till we come to the Xanthus, he has omitted the *Dalamon Tchy*, unless this is his Calbis. Pliny (v. 28), who proceeds from east to west in his description of this part of the coast, mentions the great river Indus, supposed to be the Calbis, and then "Oppidum Caunus liberum." This confusion in the ancient authorities cannot be satisfactorily cleared by the aid of any modern authorities. This part of the coast seems to have been very imperfectly examined. Kiepert places Caunus on the west side of the entrance of Portus Panormus.

Herodotus (i. 172) says that the habits of the Caunii were very different from those of the Carians and other people. It was their fashion for men, women, and children to mingle in their entertainments. They had once some foreign deities among them, but they expelled them in singular fashion. The Caunii made a desperate resistance to the Persian general Harpagus, like their neighbours the Lycians. (Herod. i. 176.) The Caunii also joined the Ionians in their revolt against the Persians after the burning of Sardis, B. C. 499. (Herod. v. 103.) When Thucydides (i. 116) speaks of the expedition of Pericles to the parts about Caunus after the sea-fight at the island of Tragia (B. C. 440), he says, "he went towards Caria and Caunus," as if he did not consider Caunus to be included in Caria Proper. The place is mentioned several times in the eighth book of Thucydides, and in one passage (viii. 39) as a secure harbour against attack. As Caunus was in the Rhodian Peraea, it belonged to the Rhodians, but the islanders were not always able to hold it. There is a story recorded in Polybius (xxxi. 7) of the Rhodians having bought Caunus from the generals of Ptolemaeus for 200 talents; and they alleged that they had received, as a grant from Antiochus the son of Seleucus, Stratoniceia in Caria. Caunus was taken by Ptolemy in B. C. 309 (Diod. xx. 27), and the Rhodians may have bought it of him. A decree of the Roman senate ordered the Rhodians to take away their garrisons from Stratoniceia and Caunus. (Polyb. xxx. 19.) This was in B. C. 167. (Liv. xlv. 25.) The Romans appear to have given Caunus, with other places in Caria, to the Rhodians, after the defeat of Antiochus in Asia. (Liv. xxxvii. 56.) For Appian says that in the massacre of the Romans in Asia, which was planned by Mithridates Eupator, "the Caunii, who had been made tributary to the Rhodians after the war with Antiochus (B. C. 190), and had been set free by the Romans not long before (B. C. 167), dragged out the Italians who had fled for refuge to the Boulaea Hestia, or the hearth of Vesta, in the senate house, and after murdering the children before the eyes of their mothers, they killed the mothers and the husbands on the dead bodies." (Appian. *Mithrid.* c. 23.) This dreadful massacre happened in B. C. 88; and Sulla, after defeating Mithridates, repaid the Caunii by putting them again under their old masters the Rhodians. Strabo (p. 652) says that the Caunii once revolted from the Rhodians, and the case being heard by the Romans, they were brought back under the Rhodians; and there is an extant oration of Molo against the Rhodians. Apollonius Molo was in Rome, B. C. 81, as an ambassador from the Rhodians, and this seems to be the occasion to which Strabo refers (Cic. *Brut.* 90), and which is by some critics referred to the wrong time. Cicero (*ad Q. Fr.* i. 1. § 11) speaks of the Caunii as being still subject to the Rhodians in B. C. 59; but they had lately applied to the Romans to be released from the Rhodian dominion, and requested that they might pay their taxes to the Romans rather than to the Rhodians. Their prayer had not been listened to, as it seems, for they were still under the Rhodians. Though Cicero says lately (nuper) he may be speaking of the same event that Strabo mentions. When Pliny wrote, they had been released from the tyranny of the islanders, for he calls Caunus a free town.

Caunus was the birthplace of one great man, Protogenes the painter, who was a contemporary of Apelles, and therefore of the period of Alexander the Great; but he lived chiefly at Rhodes. Pliny (xxxv. 10) speaks of his birthplace as a city subject to the Rhodians; and though we cannot use this as historical evidence, Caunus may have been subject to the Rhodians at that time. Caunus was a place of considerable trade, and noted for its dried figs (Plin. xv. 19), a fruit that would not contribute to the unhealthiness of the place, even if the people eat them freely. They seem to have been carried even to Italy, as we may infer from a story in Cicero (*de Divin.* ii. 40). [G. L.]

CAUSENNIS, in Britain, mentioned in the 5th Itinerary, the difficulties of which are noticed under COLONIA and DUROBRIVIS. Being the first station south of Lindum, from which it is distant 12 miles, and Lindum (*Lincoln*) being one of the most certain identifications we have, it is safe to prefer *An*-caster to Boston, Nottingham, and other localities as its present equivalent. The termination *-caster*, the present existence of Roman remains, and even the syllable *An* (=caus-*Ennae castra*) all support this view. Besides which it stands upon the *Cliff* Road, which is a Roman one. [R. G. L.]

CAVARES, or CAVARI (Καούαροι, Καύαροι), a people of Gallia Narbonensis. Strabo (p. 186) says that the Volcae on the west bank of the Rhine have the Salyes and Cavari opposite to them on the east side;

and that the name of Cavari was given indeed to all the barbari in these parts, though they were in fact no longer barbari, but most of them had adopted the Roman language and way of living, and some had obtained the Roman citizenship. He says (p. 185), that as a man goes from Massalia (*Marseille*), into the interior, he comes to the country of the Salyes, which extends to the Druentia (*Durance*); and then having crossed the river at the ferry of Cabellio (*Cavaillon*), he enters the country of the Cavari, which extends along the river to the junction of the Rhone and the Isara (*Isère*), a distance of 700 stadia. But the extent which Strabo gives to the Cavari can only be considered correct by understanding him to comprehend other peoples under this name. The town of Valentia (*Valence*), which is south of the *Isère*, is placed by Ptolemy (ii. 10) in the country of the Segalauni, the Segovellauni of Pliny (iii. 4). Between the Segalauni and the Cavari most geographers place the Tricastini; and thus the territory of the Cavari is limited to the parts about *Cavaillon*, Avenio (*Avignon*), and Arausio (*Orange*); and perhaps we may add Carpentoracte (*Carpentras*), though this town is placed in the territory of the Memini [CARPENTORACTE]. But Ptolemy, who places the Cavari next to the Segalauni, assigns to them "Acusiorum Colonia," a place otherwise unknown. Walckenaer (*Geog. &c.* vol. ii. p. 209) endeavours to show, and with some good reason for his opinion, that the Acusiorum Colonia is *Montélimart* on the east bank of the Rhone, about half way between *Valence* and *Orange*, and that it is not another form or a corruption of Acunum, as D'Anville supposes. Accordingly, the Cavari would extend from the *Durance* to *Montélimart* at least. If this is right, the Tricastini are wrongly placed by D'Anville along the Rhone between the Segalauni and the Cavares; for they are east of the Segalauni [TRICASTINI]. Pliny (iii. 4), however, places Valentia in the territory of the Cavares, though it has been proposed to make him say something else by a different pointing of his text, the result of which is that Valentia is not placed anywhere, or, if it is, it is placed in the territory of the Allobroges, which is false. [G. L.]

CAVII, a people in Greek Illyria, between the rivers Panyasus and Genusus. (Liv. xliv. 30.)

CAYSTER, CAYSTRUS (Καΰστρος, and Καΰστριος, Hom. *Il.* ii. 461; *Kara-Su* and *Kutschuk Meinder*, or *Little Maeander*), a river of Lydia, which lies between the basin of the Hermus on the north, and that of the Maeander on the south. The basin of the Cayster is much smaller than that of either of these rivers, for the Cogamus, a southern branch of the Hermus, approaches very near the Maeander, and thus these two rivers and the high lands to the west of the Cogamus completely surround the basin of the Cayster. The direct distance from the source of the Cayster to its mouth is not more than seventy miles, but the windings of the river make the whole length of course considerably more.

The southern boundary of the basin of the Cayster is the Messogis or *Kestane Dagh*. The road which led from Physcus in Caria [CARIA] to the Maeander, was continued from the Maeander to Tralles; from Tralles down the valley of the Maeander to Magnesia; and from Magnesia over the hills to Ephesus in the valley of the Cayster. From Magnesia to Ephesus the distance was 120 stadia (Strab. p. 663). The northern boundary of the basin of the Cayster is the magnificent range of Tmolus or *Kisilja Musa Tagh*, over the western or lower part of which runs the road (320 stadia) from Ephesus to Smyrna. Strabo's notice of the Cayster is very imperfect. According to Pliny the high lands in which it rises are the "Cilbiana juga" (v. 29), which must be between the sources of the Cayster and the valley of the Cogamus. The Cayster receives a large body of water from the Cilbian hills, and the slopes of Messogis and Tmolus. Pliny seems to mean to say that it receives many streams, but they must have a short course, and can only be the channels by which the waters descend from the mountain slopes that shut in this contracted river basin. Pliny names one stream, Phyrites (in Harduin's text), a small river that is crossed on the road from Ephesus to Smyrna, and joins the Cayster on the right bank ten or twelve miles above Aiasaluck, near the site of Ephesus. Pliny mentions a "stagnum Pegaseum, which sends forth the Phyrites," and this marsh seems to be the morass on the road from Smyrna to Ephesus, into which the Phyrites flows, and out of which it comes a considerable stream. The upper valley of the Cayster contained the Cilbiani Superiores and Inferiores: the lower or wider part was the Caystrian plain. It appears that these natural divisions determined in some measure the political divisions of the valley, and the Caystriani, and the Lower and Upper Cilbiani, had each their several mints. (Leake, *Asia Minor*, &c. p. 257.) The lower valley of the Cayster is a wide flat, and the alluvial soil, instead of being skirted by a range of lower hills, as it is in the valleys of the Hermus and the Maeander, "abuts at once on the steep limestone mountains by which it is bounded." (Hamilton, *Asia Minor*, &c. vol. i. p. 541.) After heavy rains the Cayster rises suddenly, and floods the lower plains. The immense quantity of earth brought down by it was a phenomenon that did not escape the observation of the Greeks, who observed that the earth which was brought down raised the plain of the Cayster, and in fact had made it. (Strab. p. 691.) The alluvium of the river damaged the harbour of Ephesus, which was at the mouth of the river. [EPHESUS.]

The flat swampy level at the mouth of the Cayster appears to be the Asian plain (Ἄσιος λειμών) of Homer (*Il.* ii. 461), a resort of wild fowl. (Comp. Virg. *Georg.* i. 383, *Aen.* vii. 699.) Except Ephesus, the valley of the Cayster contained no great town. Strabo (p. 627) mentions Hypaepa on the slope of Tmolus, on the descent to the plain of the Cayster. It was of course north of the river. The ruins at *Tyria* or *Tyre*, near the river, and about the middle of its course, must represent some ancient city. Metropolis seems to lie near the road from Ephesus to Smyrna, and in the plain of the Phyrites; and the modern name of *Tourbali* is supposed to be a corruption of Metropolis. (Hamilton.) [G. L.]

CAYSTRI CAMPUS (τὸ Καΰστρου πεδίον) is Strabo's name for the plain of the Cayster. Stephanus (*s. v.* Καΰστριον πεδίον) assigns it to the Ephesia or territory of Ephesus, with the absurd remark that the Cayster, from which it takes its name, was so called from its proximity to the Catacecaumene or Burnt Region. Stephanus adds the Ethnic name Καϋστριανός; but this belongs properly to the people of some place, as there are medals with the legend Καυστριανων.

Xenophon, in his march of Cyrus from Sardis (*Anab.* i. 2. § 11), speaks of a Καΰστρου πεδίον. Before coming here, Cyrus passed through Celaenae, Peltae, and Ceramon Agora. The march from Celaenae to Peltae is 10 parasangs; from Peltae to

Ceramon Agora, 12 parasangs; and from Ceramon Agora to the plain of Cayster, which Xenophon calls an inhabited city, was 30 parasangs. From the plain of Cayster, Cyrus marched 10 parasangs to Thymbrium, then 10 to Tyraeum, and then 20 to Iconium, the last city of Phrygia in the direction of his march; for after leaving Iconium, he entered Cappadocia. Iconium is *Koniyeh*, a position well known. Celaenae is also well known, being at *Deenair*, on the Maeander. Now the march of Cyrus from Celaenae to Iconium was 92 parasangs, or 2760 stadia, according to Greek computation, if the numbers are right in the Greek text. Cyrus, therefore, did not march direct from Celaenae to Iconium. He made a great bend to the north, for the Ceramon Agora was the nearest town in Phrygia to Mysia. The direct distance from Celaenae to Iconium is about 125 English miles. The distance by the route of Cyrus was 276 geog. miles, if the Greek value of the parasang is true, as given by Xenophon and Herodotus; but it may be less.

The supposition that the plain of Cayster is the plain through which the Cayster flows cannot be admitted; and as Cyrus seems for some reason to have directed his march northwards from Celaenae till he came near the borders of Mysia, his route to Iconium would be greatly lengthened. Two recent attempts have been made to fix the places between Celaenae and Iconium, one by Mr. Hamilton (*Researches*, &c., vol. ii. p. 198, &c.), and another by Mr. Ainsworth (*Travels in the Track of the Ten Thousand*, &c., p. 24, &c.). The examination of these two explanations cannot be made here for want of space. But it is impossible to identify with certainty positions on a line of road where distances only are given, and we find no corresponding names to guide us. Mr. Hamilton supposes that the Caystri Campus may be near the village of *Chai Kieui*, "and near the banks of the *Eber Ghieul* in the extensive plain between that village and Polybotum." *Chai Kieui* is in about 38° 40′ N. lat. Mr. Ainsworth places the Caystri Campus further west at a place called *Surmeneh*, "a high and arid upland, as its ancient name designates," which is traversed by an insignificant tributary to the "*Eber Göl*," Mr. Hamilton's *Eber Ghieul*. The neighbourhood of *Surmeneh* abounds in ancient remains; but *Chai Kieui* is an insignificant place, without ruins. Both Mr. Hamilton and Mr. Ainsworth, however, agree in fixing the Caystri Campus in the basin of this river, the *Eber Ghieul*, and so far the conclusion may be accepted as probable. But the exact site of the place cannot be determined without further evidence. Cyrus stayed at Caystri Campus five days, and he certainly would not stay with his troops five days in a high and arid upland. As the plain was called the Plain of Cayster, we may assume that there was a river Cayster where Cyrus halted. One of Mr. Ainsworth's objections to Mr. Hamilton's conclusion is altogether unfounded. He says that the plain which Mr. Hamilton chooses as the site of the Caystri Campus is "an extensive plain, but very marshy, being in one part occupied by a perpetual and large lake, called *Eber Göl*, and most unlikely at any season of the year to present the arid and burnt appearance which could have led the Greeks to call it Caustron or Caystrus, the burnt or barren plain." But the word Caystrus could not mean burnt, and Stephanus is guilty of originating this mistake. It means no more a burnt plain here than it does when applied to the plain above Ephesus. Both were watery places; one we know to be so; and the other we may with great probability conclude to be. The medals with the epigraph Καυστριανων may belong to this place, and not to a city in the valley of the Lydian Cayster. [CAYSTER.] [G. L.]

CA'ZECA (Καζέκα, Arrian. *Peripl.* p. 20; Anon. *Peripl.* p. 5), a town of the Cimmerian Bosporus, 280 stadia from Theodosia, which has been identified with *Tasch-Katschik*. (Köler, *Mém. de l'Acad. de St. Petersb.* vol. ix. p. 670; Marigny, Taitbout Portulan, *de la Mer Noire*, p. 71; Pallas, *Reise in d. Südl. Statthalt Russlands*, vol. ii. p. 341.) [E. B. J.]

CEBA, a town of Liguria, mentioned by Pliny (xi. 42. s. 97) as celebrated for its cheeses, is evidently the modern *Ceva*, in the upper valley of the *Tanaro*, on the N. slope of the Apennines, near their junction with the Maritime Alps. [E. H. B.]

CEBENNA MONS, or CEVENNA, as it is generally written in the editions of Caesar (*B. G.* vii. 8: also called Gebenna, Plin. iii. 4; Cebennici Montes, Mela, ii. 5; τὸ Κέμμενον ὄρος, Strab. p. 177; τὰ Κέμμενα ὄρη, Ptol. ii. 8; and ἡ Κεμμένη, Strab. p. 177: *Cévennes*), a range of mountains in Southern Gallia which bounds the lower valley of the Rhone on the west, and separated Gallia Narbonensis from the part of Gallia, which is to the west and north-west. Strabo describes the Cebenna as running in a direction at right angles to the Pyrenees, through the plain country of Gallia, and terminating about the middle of the plain country near Lugdunum (*Lyon*). He makes the length 2000 stadia, or 250 Roman miles. He does not say that it is connected with the Pyrenees, as some modern writers misunderstand him; for he knew that there was an easy road from *Narbonne* by the valley of the Atax (*Aude*) to *Toulouse*, in the valley of the *Garonne*, and to the western ocean. This road is in the depression in which the canal of *Languedoc* is made. He says that the Cebenna approaches nearest to the Rhone at the part which is opposite to the junction of the Rhone and the Isara (*Isère*). Perhaps, however, he included the high lands south of the valley of the *Aude*, which belong to the Pyrenees, in the name Cebenna, for he mentions in order from S. to N. the rivers Atax, Obris or Orbis (*Orb*), and Araura, the Arauris or Araris (*Hérault*), as flowing from the Cebenna into Gallia Narbonensis. He correctly describes the Illiberris (*Tech*) and Ruscino (*Tet*), which are south of the valley of the *Aude* as flowing from the Pyrenees; but the *Aude* also has its sources in the Pyrenees. He had not, however, a very exact notion of the relative position of the Pyrenees and the Cebenna. He correctly describes the offsets or lower parts (ὑπάρειαι) of the Cebenna as extending eastward towards the Rhone. The high mountain Lesura (*La Lozère*, in the department of *Lozère*) is mentioned by Pliny, as a district famed for its cheese (xi. 42).

When Caesar commenced his winter campaign of B.C. 52, he crossed the Cebenna from Gallia Narbonensis, then called the Provincia. He describes the Cebenna as separating the Helvii, who were in the Provincia, from the Arverni, who were on the west side of the mountains. He cut his way through snow six feet deep and surprised the Arverni, who thought that the Cebenna protected them like a wall. (*B. G.* vii. 8.) The steep side of this rugged range is turned towards the valley of the Rhone. The Gallic tribes on the east side of the Cebenna in the Roman Provincia were the Helvii and the Volcae Tectosages. On the west side were the Vellavi and

Gabali, the chief part of whose territory was in the mountain region of the Cebenna; for the Gabali whom Caesar does not mention (*B. G.* vii. 8) were between the Helvii and the Arverni. South of the Arverni, on the west side of the Cebenna and in the basin of the *Garonne*, were the Ruteni, the southern part of whose territory, even in Caesar's time, was within the limits of the Roman Provincia.

The extent of the mountainous country comprehended under the name *Cévennes* is much less than the Cebenna of Strabo. The direct distance from the most southern source of the *Orb* to *La Lozère* (4890 ft. high), is about 80 miles. The sources of the *Allier*, a branch of the *Loire*, and of the *Lot* and the *Tarn*, branches of the *Garonne*, are in the mountain regions of the *Lozère*. The direct distance from *La Lozère* to *Mont Mezene*, which is as far north perhaps as we can extend the name of *Cévennes*, is about 45 miles. *Mont Mezene* (5820 feet high), near which are the sources of the *Loire*, is nearly in the latitude of the junction of the *Rhone* and the *Isère*, where Strabo states that the Cebenna approaches nearest to the Rhone. It is true that this part of the *Cévennes* is nearer to the *Rhone* than any part of the range to the south of it, for the direction of the range is from SW. to NE.; but Strabo, as already observed, makes the Cebenna extend further north to the latitude of *Lyon*. [G. L.]

CEBRE'NE (Κεβρήνη) or CEBREN, a town of Mysia, in a district Cebrenia (Κεβρηνία) There was a river Cebren (Κέβρην). The Ethnic names are Κεβρηνός, Κεβρηνεύς, and Κεβρήνιος (Steph. *s. v.* Κεβρηνία); but the Ethnic name is properly Κεβρηνιεύς, as Strabo has it. Cebrenia was below Dardania, and a plain country for the most part. It was separated from the Scepsia or territory of Scepsis by the river Scamander. The people of Scepsis and the Cebrenii were always quarrelling, till Antigonus removed both of them to his new town of Antigonia, afterwards called Alexandria Troas. The Cebrenii remained there; but the Scepsii obtained permission from Lysimachus to go home again. Strabo speaks of a tribe in Thrace called Cebrenii (p. 590), near a river Arisbus; but we cannot conclude any thing from this as to the origin of the Cebrenii. Ephorus, in the first book of his history (quoted by Harpocrat. *s. v.* Κέβρηνα), says that the Aeolians of Cumae sent a colony to Cebren. The city Cebren surrendered to Dercyllidas the Lacedaemonian (Xen. *Hell.* iii. 1. § 17), who marched from thence against Scepsis and Gergitha. Geographers have differed as to the position of Cebrenia. Palaescepsis was near the banks of the Aesepus, and the Scepsis of Strabo's time was 40 stadia lower down than Old Scepsis. Now, Old Scepsis was higher up than Cebrenia, near the highest part of Ida, and its territory extended to the Scamander, where Cebrenia began. Again, the territory of the Assii and the Gargareis was bounded by Antandria (on the east), and the territory of the Cebrenii, the Neandrieis, and the Hamaxiteis. Thus Cebrenia is brought within tolerably definite limits. Leake (*Asia Minor*, p. 274) supposes Cebrenia to have occupied the higher region of Ida on the west, and its plain to be the fine valley of the *Mendere* as far down as *Ene*, probably Neandria. This seems to agree with Strabo's description. Leake also supposes that the town Cebren may be a place called *Kushunlu Tepe*, not far from *Baramitsh*. Dr. E. D. Clarke found considerable remains at *Kushunlu Tepe*; but remains alone do not identify a site. [G. L.]

CEBRUS. [CIABRUS and CIBRUS.]

CECILIONI'CUM (*Itin. Ant.* p. 434; *VR.* Caecilio Vico; *Bannos*), a town of Lusitania, only mentioned in the Itinerary, as on the great road from Emerita to Caesaraugusta, 132 M. P. from the former; but remarkable also on account of the preservation in its neighbourhood of portions of the Roman road, with some of the milestones, on one of which the number CXXXI. is legible. (Laborde, vol. ii. p. 251; Ukert, vol. ii. pt. i. p. 430.) [P. S.]

CECRO'PIA. [ATHENAE, p. 257, a.]

CECRYPHALEIA (Κεκρυφάλεια; Cecryphalos, Plin.: *Kyra*), a small island in the Saronic gulf, between Aegina and the coast of Epidaurus, near which the Aeginetans were defeated by the Corinthians, about B. C. 458. (Thuc. i. 105; Diod. xi. 78; Plin. iv. 12. s. 19; Steph. B. *s. v.*; Boblaye, *Recherches*, &c. p. 63.)

CE'DREAE (Κέδρεαί, Κέδρειαι: *Eth.* Κεδρεάτης. Κεδραῖος), a city of Caria, mentioned by Hecataeus. (Steph. *s. v.* Κέδρεαί.) Lysander took the place, it being in alliance with the Athenians. The inhabitants were μιξοβάρβαροι, a mixture of Greeks and barbarians, as we may suppose. It was on the Ceramicus gulf in Caria; but the site is unknown. (Xen. *Hell.* ii. 1. § 15.) [G. L.]

CEDREI, an Arab tribe, mentioned by Pliny (v. 11), who places them on the confines of Arabia Petraea, to the south, which would correspond with the northern part of the modern district of the *Hedjaz*. Mr. Forster identifies them with the Canraitae or Cadraitae of Arrian, the Cerdanitae or Cedranitae of Stephanus, and the Darrae of Ptolemy, and traces their origin to Cedar, the Ishmaelite Patriarch (*Gen.* xxv. 13), represented by the modern Harb nation, and the modern town of *Kedeyre*. (Forster, *Arabia*, vol. i. pp. 75, 234, seq., 238, seq.) [G. W.]

CEDRISUS (Κεδρισός, Dicaearch. 128; Κέδριος, Theophrast. *Hist. Plant.* iii. 8. § 5: *Kentros*), a mountain of Crete, which forms the SW. spur of Mt. Ida. (Sieber, *Reise*, vol. ii. p. 14; Hoeck, *Kreta*, vol. i. p. 5.) [E. B. J.]

CELADUSSAE, a group of islands off the coast of Liburnia in Illyricum (Plin. iii. 26. s. 30), perhaps the same as the Dyscelados of Mela (ii. 7). Some writers, however, suppose that there were no islands or island of this name: that the name Celadussae in Pliny is a corruption of Dyscelados in Mela; and that the latter is invented from an epithet of Issa in a line of Apollonius (Ἴσσά τε δυσκέλαδός τε καὶ ἱμερτὴ Πιτύεια, Apoll. Rhod. iv. 565).

CELAENAE (Κελαιναί: *Eth.* Κελαινεύς), a city of Phrygia. Strabo (p. 577) says that the Maeander rises in a hill Celaenae, on which there was a city of the same name as the hill, the inhabitants of which were removed to Apameia. [APAMEIA, No. 5.] Hamilton, who visited the source (*Researches*, &c. vol. i. p. 499), says that "at the base of a rocky cliff a considerable stream of water gushes out with great rapidity." This source of the Marsyas, and the cliff above it, may have been within the city of Celaenae; but it did not appear to Hamilton that this cliff could be the acropolis of Celaenae which Alexander considered to be impregnable (Arrian, *Anab.* i. 29; Curt. iii. 1), and came to terms with the inhabitants. He supposes that the acropolis may have been further to the NE., a lofty hill about a mile from the ravine of the Marsyas (vol. ii. p. 366).

Herodotus speaks of Celaenae in describing the march of Xerxes to Sardis (B. C. 481). He says (vii. 26) that the sources of the Maeander are here,

and those of a stream not less than the Maeander: it is named Catarrhactes, and, rising in the Agora of Celaenae, flows into the Maeander. Xenophon, in describing the march of Cyrus (*Anab.* i. 2. § 7), says that Cyrus had a palace at Celaenae, and a large park, full of wild animals; the Maeander flowed through the park, and also through the city, its source being in the palace. There was also a palace of the Persian king at Celaenae, a strong place, at the source of the Marsyas, under the acropolis; and the Marsyas also flows through the city, and joins the Maeander. The sources of the Marsyas were in a cave, and the width of the river was 25 feet; within Celaenae perhaps he means. The Catarrhactes of Herodotus is clearly the Marsyas of Xenophon, and the stream which Hamilton describes, who adds, "it appeared as if it had formerly risen in the centre of a great cavern, and that the surrounding rocks had fallen in from the cliffs above." The descriptions of Herodotus and Xenophon, though not the same, are perhaps not inconsistent. The town, palaces, acropolis, and parks of Celaenae must have occupied a large surface. In Livy's description (xxxviii. 13), the Maeander rises in the acropolis of Celaenae, and runs through the middle of the city; and the Marsyas, which rises not far from the sources of the Maeander, joins the Maeander. When the people of Celaenae were removed to the neighbouring site of Apameia Cibotus, they probably took the materials of the old town with them. Strabo's description of the position of Apameia is not free from difficulty. Leake thinks that it clearly appears from Strabo that both the rivers (Marsyas and Maeander) ran through Celaenae, and that they united in the suburb, which afterwards became the new city Apameia. It is certain that Celaenae was near Apameia, the site of which is well fixed. [APAMEIA, No. 5.]

It was an unlucky guess of Strabo (p. 579), and a bad piece of etymology, to suggest that Celaenae might take its name from the dark colour of the rocks, in consequence of their being burnt. But Hamilton observed that all the rocks are, "without exception, of a greyish white or cream-coloured limestone." The rock which overhangs the sources of the Marsyas contains many nummulites, and broken fragments of other bivalve shells. [G. L.]

CELAENUS TUMULUS (Κελαινὸς λόφος), a mountain in Galatia, mentioned by Ptolemy (v. 4), south of Pessinus, probably. [G. L.]

CE'LEAE. [PHLIUS.]

CELEIA or CALEIA (Κέλεια), an important city in the south-eastern corner of Noricum (Ptol. ii. 14. § 3; Plin. iii. 27). In some inscriptions it is called a Roman colony by the name of Caleia Claudia (Orelli, *Inscript.* n. 501), and in others a municipium (Orelli, *l. c.* n. 3020). During the middle ages Celeia was the chief town of a Slavonian district called Zellia (Paul. Diac. iv. 40); and it still bears the name of *Cilly*, and is rich in ancient architectural remains. (Comp. Itin. Anton. p. 129; Itin. Hieros. p. 560; Muchar, *Noricum*, vol. i. p. 161.) [L. S.]

CELE'NDERIS (Κελενδερίς: *Eth.* Κελενδερίτης: *Chelendreh*), a town of Pamphylia, on the coast. The tradition was that it was a Phoenician settlement, which was afterwards occupied by the Samians. (Mela, i. 13.) There was a temple of Juno near the town, and a river Is. which flowed by them to the sea. (Scymnus, quoted by Herodian.) It is described by Tacitus (*Ann.* ii. 80) as a very strong place, on a high rock nearly surrounded by the sea. Piso attempted to take it. Celenderis had a fort (Strab. p. 670); and Artemidorus, with other geographers, considered this place, and not Coracesium, as the commencement of Cilicia.

Chelendreh has "a snug but very small port, from whence the couriers from Constantinople to Cyprus embark." (Beaufort, *Karamania*, p. 209.) The Turks call it *Gulnar*. None of the remains of Celenderis appear to be older than the early period of the Roman empire. The town "gave name to a region called Celenderitis (Plin. v. 27), and coined those silver tetradrachms, which supply some of the earliest and finest specimens of the numismatic art." (Leake, *Asia Minor*, &c. p. 116.) There are also coins of the Syrian kings, and of the later Roman emperors, with the epigraph Κελενδερίτων. [G. L.]

COIN OF CELENDERIS.

CELENNA, a town of Campania, mentioned only by Virgil (*Aen.* vii. 739) who appears to place it (in conjunction with Rufrae and Batulum) on the borders of the Campanian plain. Servius (*ad loc.*) says "locus est Campaniae, sacer Junoni." We find no other mention of it, and its situation is unknown. [E. H. B.]

CELETRUM (*Kastoriá*), a town of Orestis in Macedonia, situated on a peninsula which is surrounded by the waters of a lake, and has only a single entrance over a narrow isthmus which connects it with the continent. In the first Macedonian campaign of the Romans, in B. C. 200, the consul Sulpicius, after having invested this place, which submitted to him, returned to Dassaretia, and from thence regained Apollonia, the place from which he had departed on this expedition. (Liv. xxxi. 40.) The position is so remarkable that there is no difficulty in identifying it with the modern fortress of *Kastoriá*. The lake, which bears the same name, is about six miles long and four broad. The peninsula is nearly four miles in circumference, and the outer point is not far from the centre of the lake. The present fortification of *Kastoriá* consists only of a wall across the W. extremity of the isthmus, which was built in the time of the Byzantine empire, and has a wet ditch, making the peninsula an island. In the middle of the wall stands a square tower, through which is the only entrance to the town. The ruins of a parallel wall flanked with round towers, which in Byzantine times crossed the peninsula from shore to shore, excluding all the E. part of it. still divide the Turkish and Greek quarters of the town. In A. D. 1084 Alexis I. took Castoria (Καστορία), which was defended by the brave and faithful Bryennius. (Anna Comn. *Alexius*, vi. p. 152; Le Beau, *Bas Empire*, vol. xv. p. 155.) The accurate description of Castoria, as Colonel Leake (vol. i. p. 329) remarks, by Anna Comnena (*l. c.*) shows that no great change has occurred since that time. Forbiger (vol. iii. p. 1060) supposes that one of the numerous towns which derived their name from Diocletian [DIOCLETIANOPOLIS] afterwards stood upon the site of Celetrum, but the positions given by Procopius (*Aed.* iv. 3), and the

Itineraries, to Diocletianopolis are at variance with this statement. On the other hand, Celetrum has been identified with the Κελαινίδιον of Hierocles. (Wesseling *ap. loc.*; Leake, *Northern Greece*, vol. iii. p. 330, vol. iv. p. 121.) [E. B. J.]

CELLAE (Κέλλη, Hierocl.: *Ostrovo*), a town of Macedonia Consularis, and a station on the Via Egnatia in Eordaea, between Heracleia and Edessa (*Peut. Tab.*), at a distance of 28 M. P. from the latter place, according to the Jerusalem Itinerary and that of Antoninus. [E. B. J.]

CELNIUS (Κέλνιος), in Britain, mentioned by Ptolemy (ii. 3. § 5), between the Tuasis aestuary (Τούαισις εἴσχυσις) and the Taezalum Promontory. The former of these is next in order southwards to the Varar aestuary (*Murray Firth*), the latter is to the north of the Deva (*Dee*). Hence the *Spey* is the likeliest equivalent to the Celnius. [R. G. L.]

CELSA (Κέλσα: Celsensis: Ru. at *Velilla* near *Xelsa*), a city of the Ilergetes, in Hispania Tarraconensis, on the Iberus, which was here crossed by a stone bridge, ruins of which still remain. Under the Romans, it was a colony, with the surname *Victrix Julia*, and it belonged to the conventus of Caesaraugusta. Several of its coins are extant, belonging to the reigns of Augustus and Tiberius. (Strab. iii. p. 161; Plin. iii. 3. s. 4; Ptol. ii. 6. § 68; Marca, *Hisp.* ii. 28; Florez, *Esp. S.* vol. xxx. p. 39, *Med. de Esp.* vol. i. p. 349, vol. ii. p. 638, vol. iii. p. 45; Mionnet, vol. i. p. 37, Suppl. vol. i. p. 75: Eckhel, vol. i. pp. 44, foll.) [P. S.]

CELTAE. [GALLIA.]

CELTIBERIA (Κελτιβηρία, Polyb., Strab., Caes., Liv. &c.: *Eth.* Celtiber, pl. Celtiberi, Κελτίβηρες), was the name of a large inland district of Spain, comprising the central plateau (*media inter duo maria*, Liv. xxviii. 1), which divides the basin of the Iberus (*Ebro*) from the rivers flowing to the W., and corresponding to the SW. half of *Aragon*, nearly the whole of *Cuenca* and *Soria*, and a great part of *Burgos*. These were about the limits of Celtiberia Proper; but, the name was used in a much wider sense, through the power which the Celtiberians obtained over the surrounding tribes; so that, for example, Polybius made it extend beyond the sources of the Anas (*Guadiana*) even to those of the Baetis (*Guadalquivir*: Strab. iii. p. 148), and he mentions the mountain range which reaches the sea above Saguntum, as the boundary of Iberia and Celtiberia. (Polyb. iii. 17. § 2.) So we find both Hemeroscopium on the Pr. Dianium (*C. S. Martin*), and CASTULO on the Baetis, named as in Celtiberia. (Artemidor. ap. Steph. B. *s. v.* Ἡμεροσκοπεῖον; Plut. *Sertor.* 3.) In fact, it would seem that, under the Romans, Celtiberia was often used as a term equivalent to Hispania Citerior (excepting, perhaps, the NE. part, between the Pyrenees and the Ebro), and that, as the boundaries of the latter were extended, so was the signification of the former. (Plin. iv. 21. s. 36; Solin. 23; Salmas. *ad Solin.* p. 197; Ukert, vol. ii. pt. 1. p. 305.)

The Celtiberians were believed to have originated in a union of the indigenous Iberians with Celts from Gaul, who were the earliest foreign invaders of the peninsula, and whose union gave rise to a nation distinguished by the best qualities of both peoples, and which speedily became great and powerful. (Diod. v. 33; Strab. i. p. 33, iii. pp. 158, 162; Appian. *Hisp.* 2; Lucan. iv. 9:—

> "Profugique a gente vetusta
> Gallorum Celtae miscentes nomen Iberis:"

comp. CELTICI; and, on the whole subject, see HISPANIA.)

Strabo (iii. p. 162) describes their country as commencing on the SW. side of M. IDUBEDA, which divided it from the basin of the *Ebro*. It was large and irregular, the greater part of it being rugged and intersected with rivers; for it contained the sources of all the great rivers which flow W. across the peninsula, the ANAS, TAGUS, and DURIUS, except the BAETIS, and this too, as we have seen, is assigned by Polybius to Celtiberia. The Celtiberi were bounded on the N. by the BERONES and the Bardyitae or VARDULI; on the W. by some of the ASTURES, Callaïci [GALLAECI], VACCAEI, VETTONES, and CARPETANI; on the S. by the ORETANI and by those of the BASTETANI and EDETANI who inhabit M. OROSPEDA; and on the E. by M. IDUBEDA. This description applies to the Celtiberi in the widest sense of the name. They were divided, he adds, into four tribes, of whom he only mentions two, the AREVACAE, who were the most powerful, and the LUSONES. Pliny (iii. 3. s. 4) mentions, as Celtiberians, first the Arevacae (*Celtiberi Arevacae*), and afterwards the PELENDONES (*Pelendones Celtiberorum, quatuor populis, quorum Numantini clari*: where it is doubtful whether the *IV. populis* refers to *Pelendones* or *Celtiberorum*: if to the former, he disagrees with Strabo and others, who assign Numantia to the Arevacae). The BELLI and the TITTI (or Dittani) are also mentioned as Celtiberian peoples (Polyb. xxxv. 2; Appian. *Hisp.* 44). Ptolemy uses the name in a narrower sense: his Celtiberi are bounded on the N. by the Arevacae (whom he places S. of the Pelendones and Berones), on the W. by the Carpetani, on the S. by the Oretani, and on the E. by the Lobetani and Edetani.

The nature of the country and the habits of the people combined to prevent their having many considerable cities; and on this ground Strabo charges Polybius with gross exaggeration in stating that Tiberius Gracchus destroyed 300 cities of the Celtiberians (xxvi. 4), a number which could only be made up by counting every petty fort taken in the war (Strab. iii. p. 163). The chief cities, besides NUMANTIA, SEGEDA, and PALLANTIA, and others which belonged to the AREVACAE, BERONES, and PELENDONES, were the following:—The capital was SEGOBRIGA, which some identify with the Segeda just named, and with the Segestica of Livy (xxxiv. 17). On the great road which ran W. from Caesaraugusta (*Zaragoza*) to Asturica (*Itin. Ant.* pp. 442, 443), were: 37 M. P., CARAVIS; 18 M. P. TURIASO (Τουριασώ, Ptol. *l. c.*, *Tarazona*); and, on a branch road from Turiaso to Caesaraugusta were: 20 M. P. from the former BALSIO or Belliso (comp. *Itin.* p. 451: at or near *Boria*); and, 20 M. P. from Balsio, and 16 from Caesaraugusta, ALLOBON or Alavona (Ἀλαυῶνα: *Alagon*, Ptol. ii. 6. § 67), which Ptolemy assigns to the Vascones. On the road leading SW. from Caesaraugusta to Toletum and Emerita were: 16 M. P. from Caesaraugusta, SEGONTIA (at or near *Epila*), apparently the Segontia which belonged to the Arevacae, and to be distinguished from the other Segontia, to be mentioned directly (*Itin. Ant.* pp. 437, 439): 14 M. P. further, NERTOBRIGA (*Itin. ll. cc.* Νερτόβριγα, Ptol. *l. c.*: *Almunia*); then 21 M. P., BILBILIS, and, 24 M. P., AQUAE BILBITANORUM; then, 16 M. P., ARCOBRIGA; then, 23 M. P., SEGONTIA (*Siguenza*), apparently the *Segontia Celtiberum* of Livy (xxxiv. 19); then 23

M. P. CAESADA (Κέσαδα ἡ Καίσαδα, Ptol. *l. c.*), at or near *Brihuega* on the *Tajuna*, 24 M. P. from ARRIACA of the CARPETANI. Another road ran south through M. Idubeda from Caesaraugusta to LAMINIUM near the source of the Anas (*Itin. Ant.* p. 447), on which were: 28 M. P., SERMO (*Muel?*); CARAE (*Cariñena*); 10 M. P., AGIRIA (*Daroca*); 6 M. P. ALBONICA (probably *Puerta de Daroca*); 25 M. P. URBIACA, seemingly the Urbicua of Livy (xi. 16; but the reading is uncertain, see Drakenborch, *ad loc.*: now *Molina*, Lapie; others identify it with *Alcaroches* or *Checa*); 20 M. P. VALEBONGA or Valeponga (*Valsolebre*, Lapie; *Val de Meca*, Cortes); 40 M. P. AD PUTEA (*Cuenca*, Lapie); 32 M. P., SALTICI (*S. Maria del Campo*, Lapie; *Jorquera*, Cortes); 16 M. P., PARIETINIS (*S. Clemente*, Lapie; *Chinchilla*, Cortes); 22 M. P. LIBISOSIA (*Lezuza*), 14 M. P. from the source of the Anas: but the last place very likely belonged to the Oretani. Among the cities not mentioned in the Itinerary were: ERGAVICA (Plin. iii. 3. s. 4: Ἐργαούικα, Ptol. *l. c.*) or Ergavia (Liv. xi. 50), a municipium belonging to the conventus of Caesaraugusta (coins *ap.* Florez, *Med. de Esp.* vol. ii. p. 426; Mionnet, vol. i. p. 43, Suppl. vol. i. p. 86; Sestini, p. 145; Eckhel, vol. i. p. 50; Inscr. *ap.* Gruter, p. 382, No. 9), the considerable ruins of which, at the confluence of the *Guadiela* and the Tagus, are called *Santaver* (Morales, *Antig.* p. 102; Florez, *Esp. S.* vol. vii. p 61); BURSADA, (Βούρσαδα, Ptol. *l. c.*), near the last place (coins *ap.* Sestini, *Med. Isp.* p. 113); CENTOBRIGA, near Nertobriga, if not the same place [NERTOBRIGA]: ATTACUM: CONTREBIA: COMPLEGA: VALERIA (Οὐαλερία, Ptol. *Valera la Vieja*, in a very strong position near the Sucro, *Jucar*, S. of *Cuenca*, Ru.), a Roman colony, belonging to the conventus of New Carthage (Plin. iii. 3. s. 4: Florez, *Esp. S.* viii. p. 198, comp. v. p. 19, vii. p. 59); EGELASTA (Λάξτα, Ptol.); OCILIS (Ὄκιλις), the Roman headquarters in the Celtiberian war, probably in the SE. of the country (Appian. *Hisp.* 47, foll.); BELSINUM: MEDIOLUM (Μεδίολον) in the N., and CONDABORA (Κονδάβορα), ISTONIUM (Ἰστόνιον), ALABA (Ἄλαβα), LIBANA (Λίβανα), and Urcesa (Οὔρκεσα), in the S. are mentioned only by Ptolemy (*l. c.*); MUNDA and CERTIMA, on the borders of Carpetania, near Alces, only by Livy (xl. 46), and BELGEDA (Βελγήδη) or Belgida, only by Appian (*Hisp.* 44) and Orosius (v. 23). There are also a number of localities in the neighbourhood of Bilbilis, only named by Martial; such as the mountains Calvus and Badavero, and the towns or villages of Boterdum, Platea on the Salo, Tutela, "choros Rixamarum," Cardua, Peteron, Rigae, Petusiae, and others, for the barbarous sound of which to Roman ears he feels it necessary to apologize "Celtiberis haec sunt nomina crassiora terris." (Martial. i. 49, iv. 55, xii. 18, &c.) For the list of cities compare Ukert, vol. i. pt. i. pp. 458—464.)

Of the manners and customs of the Celtiberians, besides the notices in Strabo and other writers, we have an elaborate account by Diodorus (v. 33, 34). As warriors they attained the highest renown by their long and obstinate resistance to the Romans. They were equally distinguished as excellent cavalry, and as powerful and steady infantry, so that, when their cavalry had defeated that of the enemy, they dismounted and engaged the hostile infantry (comp. Polyb. *Fr. Hist.* 13). Their favourite order of battle was the wedge-shaped column, in which they were almost irresistible (Liv. xl. 40). They sang as they joined battle (Liv. xxiii. 16). Their weapons were a two-edged sword of the finest temper [BILBILIS], and the still national dagger (comp. Polyb. *Fr. Hist.* 14; Strab. iii. p. 154); their defensive armour consisted of a bronze helmet, with a purple crest, of greaves made of plaited hair, and a round wicker buckler (κυρτία), or the light but large Gallic targe. A rough black blanket, of wool not unlike goats' hair, formed their sole dress by day, and at night they slept, wrapped up in it, upon the bare ground. They were particularly attentive to cleanliness, with the exception of the strange custom, which is ascribed also to the Cantabri, of washing with urine instead of water. Though cruel to criminals and enemies (comp. Strab. iii. p. 155), they are gentle and humane to strangers; and those of them whose invitations are accepted are deemed favourites of the gods. Their food consists in abundance of various meats; and they drink must (οἰνομέλιτος πόματι), their country supplying plenty of honey, and wine being imported by merchants. Though the country was generally mountainous and sterile, it contained some fertile valleys, and the prosperity of some few of the cities is exemplified by the cases of BILBILIS, and especially NUMANTIA. It is thus that we must explain the statement of Diodorus respecting the excellence of their country, and the large tribute of 600 talents which, according to Poseidonius, M. Marcellus exacted from the country (Strab. iii. p. 162). As to their religion, Strabo says that the Celtiberians and some of their neighbours on the N. celebrated a festival to some nameless deity at the time of the full moon, assembling together in their families, and dancing all night long (iii. p. 164). Several other points in Strabo's description of the manners of the mountaineers of the N. may be regarded as applying to the Celtiberians among the rest. [HISPANIA.]

The Celtiberians are renowned in history for their long and obstinate resistance to the Romans. They had been subdued by Hannibal with great difficulty. In the Second Punic War, after giving important aid to the Carthaginians, they were induced by the generosity of Scipio to accept the alliance of Rome; but yet we find a body of them serving the Carthaginians as mercenaries in Africa. (Liv. xxv. 33, xxvi. 50; Polyb. xiv. 7, 8.) But the cruelty and avarice of later governors drove them, in B. C. 181, into a revolt, which was appeased by the military prowess and the generous policy of the elder Tiberius Gracchus, B. C. 179. The resistance of the city of SEGEDA to the demands of Rome led to a fresh war (B. C. 153), which was conducted on the part of the Romans with varying success by M. Marcellus, who would have made peace with the Celtiberians; but the Senate required their unconditional surrender. The diversion created in Lusitania by Viriathus caused the Celtiberian war to languish till B. C. 143, when the great war with Numantia began, and was not concluded till B. C. 133. [NUMANTIA.] In spite of this great blow, the Celtiberians renewed the war under Sertorius; and it was only after his fall that they began to adopt the Roman language, dress and manners. (Polyb. xxxv. 1, et seq.; Liv. xxi.—xxviii. passim; Strab. iii. p. 151.) [P. S.]

CE'LTICA. [GALLIA.]

CE'LTICA, CE'LTICI (ἡ Κελτική, οἱ Κελτικοί), in Hispania. The repeated occurrence of these names in the geography of Spain is at once

accounted for by the tradition that the population of the peninsula contained a large Celtic element [CELTIBERI; HISPANIA].

1. *Celtica*, the general and at first very vague name for the whole NW. of Europe, is applied specifically to Spain, as, on the other hand, that of Iberia was sometimes extended to Gaul. But the more particular reference of the term Celtica in Spain was to the northern and central portion of the peninsula. (Aristot. *de Mund.* i. p. 850, du Val; Ephor. ap. Strab. iv. p. 199, Fr. 43, Didot; Scymn. Ch. 168, foll.; Eratosthenes ap. Strab. ii. p. 107, gives a like extent to the Γαλαταί.)

2. Strabo mentions a tribe of Celtici in the S. of Lusitania, as inhabiting the country between the Tagus and the Anas, from the point where the latter river makes its great bend to the S., that is, in the S. of *Alemtejo*. (But the district was also partly peopled by Lusitanians.) Their chief city was CONISTORGIS: another was PAX AUGUSTA. On the authority of Polybius, he connects these Celtici with the TURDULI, in kindred as well as proximity. (Strab. iii. pp. 139, 141, 151; Polyb. xxxiv. 9. § 3.)

3. Pliny extends these Celtici into Baetica. The country called BAETURIA, on the left bank of the Anas, is divided, he says, into two parts and two nations, the Celtici, who border on Lusitania, and belong to the conventus of Hispalis, and the TURDULI, whose frontier extends along Tarraconensis as well as Lusitania, and whose judicial capital is Corduba. He considers these Celtici to have migrated from Lusitania, which he appears to regard as the original seat of the whole Celtic population of the peninsula, including the Celtiberians, on the ground of an identity of sacred rites, language, and names of cities; the latter in Baetica, bearing epithets to distinguish them from those in Celtiberia and Lusitania. (Plin. iii. 1. s. 3: this seems to be the general sense of the passage, supported by the names of the cities mentioned; but the phrase "Celticos *a Celtiberis ex Lusitania* advenisse manifestum est" is difficult to interpret precisely). The cities referred to are SERIA Fama Julia, NERTOBRIGA Concordia Julia, SEGIDA Restituta Julia, UCULTUNIACUM or CURIGA, LACONIMURGIS Constantia Julia, Tereses Fortunales, and Callenses Emanici: the last two names are those of the *inhabitants;* of the *cities*, the former is not elsewhere mentioned, the latter is called CALENTUM. The other cities of Celtica, as Pliny calls the district, were ACINIPO, ARUNDA, ARUCI, TUROBRIGA, LASTIGI, SALPESA, SAEPONE, SERIPPO. In like manner Ptolemy mentions the Celtici in Baetica (Βαιτικοὶ Κελτικοί) and assigns to them the cities of Aruci, Arunda, Curgia, Acinippo, and Vama (Οὔαμα), all but the last being included in Pliny's list. (Ptol. ii. 4. § 15.) Of the above names, those ending in *briga* indicate a Celtic dialect; and the remark applies to many other parts of Spain.

4. Celtici are again found in the extreme NW. of Spain, in Gallaecia, about the promontory of NERIUM (*C. Finisterre*), which was also called CELTICUM, in the very same district as the ARTABRI, whom Mela expressly calls a Celtic people. (Strab. iii. p. 153; Mela, iii. 1; Plin. iii. 3. s. 4, iv. 20, 22. s. 34, 35.) Strabo regards these Celtici as sprung from those upon the Anas; and relates how they marched northwards with the Turduli, but quarrelled, and separated from them at the river Limaea (*Lima*). Mela places the Celtici along the whole W. coast up to this Celtic promontory. Pliny refers these Celtici to the conventus of Lucus Augusti (iii. 3. s. 4.), and mentions the tribes, Celtici Neriae and Celtici Praesamarci (iv. 20. s. 34). [P. S.]

CELTICOFLA'VIA, a city of the Vettones in Spain, on the borders of Lusitania, at *Torrecilla de aldea Tejada*, near *Salamanca*, only known by inscriptions, but deserving of mention for the composition of its name, indicating Celtic origin and Roman patronage. [P. S.]

CEL'TICUM PROMONTORIUM. [CELTICI.]

CELURNUM, in Britain, mentioned in the Notitia as the station of the second wing of the Asti. Generally identified with *Walwick Chesters* in Northumberland *per lineam valli*. [R. G. L.]

CELYDNUS. [EPEIRUS.]

CEMA, an Alpine mountain which Pliny (iii. 4) names as the source of the Varus (*Var*); but it does not appear what mountain he means. [G. L.]

CEMENE'LIUM (Κεμενέλιον, Ptol.: *Eth.* Cemenelensis, Inscr.: *Cimiez*), a town of Liguria, at the foot of the Maritime Alps. It was only about two miles distant from Nicaea, on a hill, rising above the torrent of the Paulo, or *Paglione*, and six miles from the river Varus, which formed the boundary of Liguria. Both Pliny and Ptolemy term it the chief city of the Vediantii, apparently a Gaulish tribe, though it was necessarily included in Liguria as long as the Varus was considered the limit between Italy and Gaul. (Plin. iii. 5. s. 7; Ptol. iii. 1. § 43.) At a later period this limit being fixed at the Tropaea Augusti, on the pass of the Maritime Alps, Cemenelium and Nicaea were both included in Gaul. (*Itin. Ant.* p. 296.) It was thenceforth included in the jurisdiction of the "Praeses Alpium Maritimarum" (*Notit. Dign.* ii. p. 72), and was perhaps the seat of his government. Numerous inscriptions, as well as other ancient relics, prove it to have been a place of importance under the Roman Empire: and it seems probable that it was frequented by wealthy Romans, as *Nice* is at the present day, on account of the mildness and serenity of its climate in winter. The hill of *Cimiez* is now occupied by gardens and olive-grounds, but still retains the ruins of an amphitheatre, in tolerable preservation, but of small size: near it are some other Roman ruins, apparently those of a temple and of Thermae. The destruction of Cemenelium dates from the time of the Lombards. It was situated on the high road from Rome to Arelate and Narbo, which passed direct from the Tropaea Augusti (*Turbia*) to Cemenelium, and thence to the mouth of the Varus, leaving Nicaea on the left. (Roubaudi, *Nice et ses Environs*, pp. 54—67. Turin, 1843.) [E. H. B.]

CENABUM. [GENABUM.]

CENAEUM (Κήναιον: *Lithádha*), a promontory of Euboea, forming the north-western extremity of the island, and opposite the Malic gulf. On this promontory was a temple of Zeus, who was hence called Cenaeus. (Strab. x. pp. 444, 446; Thuc. iii. 93; Ptol. iii. 15. § 23; Plin. iv. 12. s. 21; Liv. xxxvi. 20; Hom. *Hymn. in Apoll.* 219; Soph. *Trach.* 238, 753; Ov. *Met.* ix. 136.)

CE'NCHREAE (Κεγχρεαί: *Eth.* Κεγχρεάτης). 1. A city of the Troad, "in which Homer lived while he was inquiring of the things that concerned the Troes," as Stephanus (*s. v.* Κεγχρεαί) says. Another tradition, of no more value, makes it the birthplace of Homer. (Suidas, *s. v.* Ὅμηρος.) The site of Cenchreae is supposed to be a place called *Tshigri*, where there are remains, near the left bank of the

Mendere (the Scamander), lower down than the supposed ruins of Cebrene [CEBRENIA], and near those of Neandria. [G. L.]

2. A town in the Argeia, south of Argos, and on the road from the latter city to Tegea. Pausanias says that it was to the right of the Trochus (*τρόχος*), which must not be regarded as a place, but as the name of the carriage road leading to Lerna. Near Cenchreae Pausanias saw the sepulchral monuments of the Argives, who conquered the Lacedaemonians at Hysiae. The remains of an ancient place, at the distance of about a mile after crossing the Erasinus (*Kephalári*), are probably those of Cenchreae; and the pyramid which lies on a hill a little to the right may be regarded as one of the sepulchral monuments mentioned by Pausanias. [For description of this pyramid, see p. 202.] It is supposed by some writers that the Hellenic ruins further on in the mountains, in a spot abounding in springs, called *τὰ Νερὰ* or *Skaphídaki*, are those of Cenchreae; and the proximity of these ruins to those of Hysiae is in favour of this view; but on the other hand, the remains of the pyramid appear to fix the position of Cenchreae at the spot already mentioned near the Erasinus. The words of Aeschylus (*Prom.* 676) — *εὔποτον Κερχνείας* [al. *Κεγχρείας*] *ῥέος Λέρνης ἄκρην τε* — would seem to place Cenchreae near Lerna, and the stream of which he speaks is perhaps the Erasinus. (Paus. ii. 24. § 7; Strab. viii. p. 376; Leake, *Morea*, vol. ii. p. 343; Boblaye, *Recherches*, &c. p. 46; Ross, *Reisen im Peloponnes*, p. 141, seq.)

3. The eastern port of Corinth. [CORINTHUS.]

CENDEVIA. [BELUS.]

CENICENSES. [CAENICENSES.]

CENIMAGNI, in Britain, mentioned by Caesar (*B. G.* v. 21) as having, along with the Segontiaci, Ancalites, Bibroci, and Cassi, sent ambassadors to Caesar, requesting protection against Cassivelaunus. They have somewhat gratuitously been identified with the Iceni. [R. G. L.]

CENION (*Κενίων*), in Britain, mentioned by Ptolemy (ii. 3. § 4), as a river between the Tamar and the Lizard Point. This may mean either the Grampound river, which falls into the sea at the head of Falmouth Bay, or the Fowey. [R. G. L.]

CENNATI, seems to be the name of a people in Cilicia Trachea. [CILICIA.]

CENNI (*Κέννοι*), a tribe of the Alemanni mentioned by Dion Cassius (lxxvii. 14), with whom the Romans carried on war in the reign of Caracalla. Reimarus believes them to be the same as the Chatti, while others are inclined to identify them with the *Senones* (Scenni, or *Semni*) mentioned by Florus (iv. 12); but nothing certain can be said. [L. S.]

CENOMANI, a Gallic nation of Celtica whom Caesar (vii. 75) names Aulerci Cenomani [AULERCI]. The position of the several peoples named Aulerci was west of the Carnutes, and between the *Seine* and the *Loire*. The Cenomani occupied part of the old diocese of *Mans;* and the town of *Mans* in the department of *La Sarthe* is on the site of the place called Cenomani in the Notitia, from the name of the people. As usual in the case of Gallic chief cities, the name of the people, Cenomani, prevailed in the later empire over that of the original name of the town, which however appears in the Table as Subdinnum. The Table gives two roads on which this name occurs: one passes from Caesarodunum (*Tours*) through Subdinnum to Alauna (*Alleaume à Valognes*); and the other runs from Subdinnum to Mitricum, that is, Autricum (*Chartres*), and to Durocassio (*Dreux*). Ptolemy (ii. 8) names the chief city of the Cenomani, Vindinum, which Valesius proposes that we should alter to Suindinum, a name which is nearer to that of the Table.

The Cenomani joined in the great rising against Caesar in B. C. 52, under Vercingetorix. The contingent that they sent to the siege of Alesia was five thousand men (*B. G.* vii. 75). This was one of the migratory Gallic tribes which at an early period crossed into Italy; and if the tradition recorded by Cato (Plin. iii. 19. s. 23) is true, that they formed a settlement near Massilia (*Marseille*), among the Volcae, this may indicate the route that the Cenomani took to Italy. [G. L.]

CENOMANI (*Κενομάνοι*, Strab. Ptol.; *Γονομάνοι*, Polyb.), a tribe of the Cisalpine Gauls, who occupied the tract N. of the Padus, between the Insubres on the W. and the Veneti on the E. Their territory appears to have extended from the river Addua to the Athesis. Both Polybius and Livy expressly mention them among the tribes of Gauls which had crossed the Alps within historical memory, and had expelled the Etruscans from the territory in which they established themselves and subsequently continued to occupy. (Pol. ii. 17; Liv. v. 35.) It is remarkable that they appear in history almost uniformly as friendly to the Romans, and refusing to take part with their kindred tribes against them. Thus, during the great Gaulish war in B. C. 225, when the Boii and Insubres took up arms against Rome, the Cenomani, as well as their neighbours the Veneti, concluded an alliance with the republic, and the two nations together furnished a force of 20,000 men, with which they threatened the frontier of the Insubres. (Pol. ii. 23, 24, 32; Strab. v. p. 216.) Even when Hannibal invaded Cisalpine Gaul they continued faithful to the Romans, and furnished a body of auxiliaries, who fought with them at the battle of the Trebia. (Liv. xxi. 55.) After the close of the Second Punic War, however, they took part in the revolt of the Gauls under Hamilcar (B. C. 200), and again a few years later joined their arms with those of the Insubres: but even then the defection seems to have been but partial, and after their defeat by the consul C. Cornelius (B. C. 197), they hastened to submit, and thenceforth continued faithful allies of the Romans. (Liv. xxxi. 10, xxxii. 30, xxxix. 3.) From this time they disappear from history, and became gradually merged in the condition of Roman subjects, until in B. C. 49 they acquired, with the rest of the Transpadane Gauls, the full rights of Roman citizens. (Dion Cass. xli. 36.)

The limits of the territory occupied by them are not very clearly defined. Strabo omits all notice of them in the geographical description of Gallia Cisalpina, and assigns their cities to the Insubres. Livy speaks of Brixia and Verona as the chief cities in their territory. Pliny assigns to them Cremona and Brixia: while Ptolemy gives them a much wider extent, comprising not only Bergomum and Mantua, but Tridentum also, which was certainly a Rhaetian city. (Strab. v. p. 213; Liv. v. 35; Plin. iii. 19. s. 23; Ptol. iii. 1. § 31.) It is singular that Polybius, in one passage (ii. 32), appears to describe the river Clusius (*Chiese*), as separating them from the Insubres: but this is probably a mistake. The limits above assigned them, namely, the Addua on the W., the Athesis on the E., and the Padus on the S., may be regarded as ap-

proximately correct. The Alpine tribes of the Camuni and the Triumpilini, which bordered on them on the N., are expressly described by Pliny as of Euganean race, and were not therefore nationally connected with the Cenomani, though in his time at least united with them for administrative purposes.

The topographical description of the country of the Cenomani, as it existed under the Roman Empire, is more conveniently given under the general head of GALLIA CISALPINA. [E. H. B.]

CENTOBRI'GA (or *-brica*), a city of the Celtiberians, in Hispania Tarraconensis, the siege of which, in the Celtiberian War, gave an occasion for a striking display of generosity on the part of Metellus (Val. Max. v. 1. § 5). Florus (ii. 17) relates the same incident as occurring at NERTOBRIGA. It is not clear whether the cities were identical. [P. S.]

CENTRI'TES (Κεντρίτης: *Buhtán Chái*), a river dividing the mountains of the Carduchians from the slopes and plains of Armenia, crossed by the Ten Thousand in their retreat. It is described by Xenophon (*Anab.* iv. 3. § 1) as 200 feet in breadth, above their breasts in depth, and extremely rapid, with a bottom full of slippery stones. The Centrites has been identified with the *Buhtán Chái*, an E. affluent of the Tigris, which falls into that river at the Armenian village of *Til*, and constitutes at the present day a natural barrier between *Kurdistán* and Armenia. (Ainsworth, *Trav. in the Track of the Ten Thousand*, p. 166; Koch, *Zug der Zehn Tausend*, p. 78; Chesney, *Exped. Euphrat.* vol. i. p. 18.) [E. B. J.]

CENTRO'NES (Κέντρωνες, Strab. p. 204). The Centrones were an Alpine people, who with the Graioceli and the Caturiges attempted to stop Caesar on his passage over the Alpes Cottiae in B. C. 58 (*B. G.* i. 10) from Gallia Cisalpina into the territory of the Allobroges. Caesar gives no exact determination of the position of the Centrones. Pliny (iii. 20) places the Centrones next to the Octodurenses, that is the people of Octodurus or *Martigny*. The Octodurenses are the Veragri. Ptolemy (iii. 1) assigns to the Centrones two towns, Forum Claudii and Axima. Axima is *Aisme* in the *Tarentaise* [AXIMA]; and a little place called *Centron* in the same valley retains the name of the people. The Centrones occupied the Alpes Graiae (Ptol. iii. 1) which Pliny (xi. 42) calls the Alpes Centronicae. In another passage (xxxiv. 2) he speaks of copper mines "in Centronum Alpino tractu."

The pass through the Centrones is mentioned by Strabo (p. 205). Those who cross the Alps into Gallia from the country of the Salassi, pass up the great valley of the Salassi, the valley of *Aosta*, which has a bifurcation: one road passes over the Pennine Alps, and the other, which is more westerly, through the Centrones. Both roads lead to Lugdunum, *Lyon* (p. 208). The road through the Centrones is the pass of the *Petit St. Bernard*. These and other Alpine tribes belong neither to Gallia nor Italy. Strabo gives them a separate description. But Ptolemy includes the Centrones with other Alpine peoples in Italy. [G. L.]

CENTUMCELLAE (Κεντουμκέλλαι, Procop.: *Civita Vecchia*), a town on the sea-coast of Etruria, between Pyrgi and Graviscae, and distant 47 miles from Rome. It appears to have owed its origin entirely to the construction of its magnificent port by Trajan, and there is no trace of the previous existence of a town upon the spot. The younger Pliny has left us an account of the construction of this port: and at a later period Rutilius gives a poetical but accurate description of it, which entirely coincides with its present appearance. It appears to have been almost wholly of artificial construction, and was formed by a breakwater or artificial island, with a mole running out towards each extremity of this, and leaving only a narrow entrance on each side of it: the basin within being of nearly circular form, so as to constitute what Rutilius calls a marine amphitheatre. At each end of the breakwater was a tower, serving for a lighthouse as well as for defence. (Plin. *Ep.* vi. 31; Rutil. *Itin.* i. 237—248.) It appears from Pliny that Trajan had a villa here, the existence of which is again mentioned in the time of M. Aurelius (Lamprid. *Commod.* 1): and by degrees a town grew up around the port, the importance of which continually increased, as that constructed by Trajan at the mouth of the Tiber became so choked with sand as to be rendered useless. In the time of Procopius Centumcellae was a large and populous city, and a place of strength as a fortress (Procop. *B. G.* ii. 7): on which account its possession was warmly contested between the Goths and Byzantine generals: it was captured by Belisarius, afterwards besieged and taken by Totila, but soon after recovered by Narses. (Id. *Ib.* iii. 36, 37, 39, iv. 34.) It continued to flourish till the year 812, when it was utterly destroyed by the Saracens: the remaining inhabitants withdrew into the interior where they founded a new settlement, and the ancient city obtained on this occasion the name of *Civita Vecchia*, which it has retained ever since. It soon became again inhabited, and is now one of the principal ports of the Roman States, with a population of about 8,000 inhabitants. The walls that surround the port are based throughout on those erected by Trajan: there exist, besides, the remains of an aqueduct, and numerous fragments of other Roman buildings. (Dennis's *Etruria*, vol. ii. p. 1—4.)

The Itineraries vary considerably in regard to the distance from Rome to Centumcellae, as well as the intermediate stations: the true distance by the line of the Via Aurelia was 47 miles: it was 5 miles from Castrum Novum, erroneously marked as viii. in the Itin. Ant. (D'Anville, *Anal. Géogr. de l'Italie*, p. 123; Dennis, *l. c.* p. 6.) [E. H. B.]

CENTURIONES, AD, a station in Gallia, mentioned in the Antonine Itin. It appears to be the Ad Centenarium of the Table. It lies on a road from Narbo (*Narbonne*), through Ruscino (*Castel* or *Tour de Rousillon*) and Illiberis (*Elne*) to Summus Pyrenaeus (*Bellegarde*). Ad Centuriones is between Illiberris and Summus Pyrenaeus, and 5 M. P. from Summus Pyrenaeus. Its position, therefore, is fixed within certain limits, and it is the chapel of *St. Martin sous le Boulou*, according to Walckenaer, a place on the Illiberris (*Tech*), where there are said to be remains; and this is exactly the point, where we must leave the banks of this river to ascend the valley which leads to *Bellegarde*. [G. L.]

CENTU'RIPA or CENTU'RIPI (τὰ Κεντόριπα, Thuc., Diod., Strab., &c.; Κεντούριπαι, Ptol.: *Eth.* Κεντοριπῖνος, Centuripinus: *Centorbi*), a city in the interior of Sicily, situated on a lofty hill, to the SW. of Mount Aetna, from which it was separated by the valley of the Symaethus (*Simeto*), and 24 miles NW. of Catana (Strab. vi. p. 272: Ptol. iii. 4. § 13; Itin. Ant. p. 93.) It is first mentioned by Thucydides, from whom we learn that it was a city of the Siculi, and appears to have been from a very early period one of the most important

of the strongholds of that people. Hence, at the time of the Athenian expedition (B. C. 414), its commanders thought it worth while to march with their whole force against Centuripa, which was induced to enter into a treaty of alliance with them, and subsequently rendered them good service by attacking the auxiliaries of the Syracusans on their march through the interior of the island. (Thuc. vi. 96, vii. 32.) We are told, indeed, that Gellias of Agrigentum, who was sent thither as ambassador by his countrymen, treated the Centuripans with contempt, as the people of a poor and insignificant city; but this must be understood only with reference to the great Greek colonies, not the Siculian cities. (Diod. xiii. 83.) Shortly after we find Dionysius the Elder, in B. C. 396, concluding an alliance with the ruler of Centuripa, a despot named Damon; but he does not appear to have ever reduced the city under his subjection. (Id. xiv. 78.) In the time of Timoleon it was governed by another despot named Nicodemus, who was expelled by the Corinthian general, and the city restored to liberty, B. C. 339 (Id. xvi. 82): but it subsequently fell into the power of Agathocles, who occupied it with a garrison. During the wars of that monarch with the Carthaginians however, Centuripa, after some ineffectual attempts to throw off his yoke, succeeded in recovering its independence, which it was thenceforth able to maintain. (Id. xix. 103, xx. 56.) Shortly before the First Punic War we find the Centuripans in alliance with Hieron of Syracuse, whom they assisted against the Mamertines, and from whom they received a grant of part of the territory of Ameselum, which that monarch had destroyed. (Id. xxii. 13, Exc. Hoesch. p. 499; Pol. i. 9.)

But this alliance had the effect of drawing upon them the Roman arms, and in the second campaign of the war Centuripa was besieged by the consuls Otacilius and Valerius Messala. It was during this siege that the envoys of numerous Sicilian cities hastened to make their submission to Rome, and though not expressly mentioned, it is evident that Centuripa itself must have early followed the example, as we find it admitted to peculiarly favourable terms, and Cicero speaks of it as having been the faithful ally of the Romans throughout their subsequent wars in Sicily. (Diod. xxiii. Exc. H. p. 501; Cic. *Verr.* v. 32.) In the time of the great orator it was one of the five cities of Sicily which enjoyed the privilege of freedom and immunity from all taxation: and so much had it prospered under these advantages, that it was one of the largest and most wealthy cities in the island. Its citizens amounted to not less than 10,000 in number, and were principally occupied with agriculture; besides the territory of the city itself which was extensive, and one of the most fertile corn-producing tracts in the whole island, they occupied and tilled a large part of the neighbouring territories of Aetna and Leontini, as well as other districts in more distant quarters of the island, so that the "aratores Centuripini" were the most numerous and wealthy body of their class in the whole province. (Cic. *Verr.* ii. 67, 69, iii. 6, 45, 48, iv. 23.) They suffered severely from the exactions of Verres, and still more at a somewhat later period from those of Sex. Pompeius. Their services against the latter were rewarded by Augustus, who restored their city, and it was doubtless at this period that they obtained the Latin franchise, of which we find them in possession in the time of Pliny. (Strab. vi. p. 272; Plin. iii. 8. s. 14.) But it seems probable that the prosperity of the city declined under the empire, and we hear little more of Centuripa from this time, though the name is found in Ptolemy and the Itineraries, and it seems to have continued to occupy the ancient site down to the 13th century, when it was destroyed by the emperor Frederic II. The modern town of *Centorbi* has, however, grown up again upon the ancient site, and still presents some ruins of the Roman city, especially the remains of the walls that crowned the lofty and precipitous hill, on the summit of which it stood: as well as the ruins of cisterns, thermae, and other ancient edifices. (Ptol. iii. 4. § 13; Itin. Ant. p. 93; Tab. Peut.; Fazell. *de Reb. Sic.* x. p. 429; Biscari, *Viaggio per la Sicilia*, p. 53.) Numerous painted vases of pure Greek style have been discovered in sepulchres in the immediate neighbourhood. (Biscari, *l. c.* p. 55; *Ann. d. Inst.* 1835, p. 27—47.)

Pliny speaks of the territory of Centuripa as producing excellent saffron, as well as salt, which last was remarkable for its purple colour. (Plin. xxi. 6. s. 17, xxxi. 7. s. 41; Solin. 5. §§ 13, 19.) It was the birth-place of the physician Appuleius Celsus. (Scribon. Larg. *de Comp. Medic.* c. 171.) [E. H. B.]

COIN OF CENTURIPA.

CEOS (Κέως; Ion. Κέος; Κία, Ptol. iii. 15. § 26; usually CEA by the Latin writers, Plin. iv. 12. s. 20: *Eth.* Κεῖος; Ion. Κήϊος: *Zea*), an island in the Aegaean sea, and one of the Cyclades, situated about 13 English miles SE. of the promontory of Sunium in Attica. The island is 14 English miles in length from north to south, and 10 in breadth from east to west. Pliny (iv. 12. s. 20) says that Ceos was once united to Euboea, and was 500 stadia in length, but that four-fifths of it were carried away by the sea. According to the legend, preserved by Heraclides Ponticus (*Pol.* c. 9), Ceos was originally called Hydrussa, and was inhabited by nymphs, who afterwards crossed over to Carystus, having been frightened away from the island by a lion; whence a promontory of Ceos was called Leon. Ovid apparently alludes to this legend (*Her.* xx. 221):

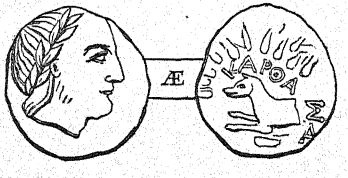
"Insula, Carthaeis quondam celeberrima Nymphis,
Cingitur Aegaeo, nomine Cea, mari."

Heraclides Pont. further states that a colony was afterwards planted in the island by Ceos from Naupactus. In the historical times it was inhabited by Ionians (Herod. viii. 46; Schol. *ad Dionys. Per.* 526); and the inhabitants fought on the side of the Greeks at the battles of Artemisium and Salamis. (Herod. viii. 1, 46.)

Ceos once possessed four towns, Iulis, Carthaea, Coressia, and Poecessa, but in the time of Strabo the two latter had perished, the inhabitants of Coressia having been transferred to Iulis and those

of Poeëssa to Carthaea. (Strab. viii. p. 486; comp. Plin. *l. c.*)

IULIS (Ἰουλίς: *Eth.* Ἰουλιήτης, Ἰουλιεύς), the most important town in Ceos, is celebrated as the birthplace of the two great lyric poets Simonides and Bacchylides, of the sophist Prodicus, of the physician Erasistratus, and of the peripatetic philosopher Ariston. From the great celebrity of Simonides he was frequently called emphatically the *Cean;* and Horace, in like manner, alludes to his poetry under the name of *Ceae Camenae* (*Carm.* iv. 9. 8), and *Cea Nenia* (*Carm.* ii. 1. 38). Iulis was situated on a hill about 25 stadia from the sea, in the northern part of the island, on the same site as the modern *Zea*, which is now the only town in the island. There are several remains of Iulis; the most important is a colossal lion, about 20 feet in length, which lies a quarter of an hour east of the town. The legend already quoted from Heraclides Pont. probably has a reference to this lion; and the more so as there is a fountain of water gushing from the spot where the lion stands.



The laws of Iulis were very celebrated in antiquity; and hence "Cean Laws" were used proverbially to indicate any excellent institutions. (Comp. Plat. *Prot.* p. 341, *Leg.* i. p. 638; Böckh, *ad Min.* p. 109.) These laws related to the morals of the citizens and their mode of life. One of them quoted by Menander was particularly celebrated:—

ὁ μὴ δυνάμενος ζῆν καλῶς οὐ ζῇ κακῶς.

It was said that every citizen above 60 years of age was obliged to put an end to his life by poison, for which we find two reasons assigned; one that there might be a sufficient maintenance left for the other inhabitants, and the other that they might not suffer from sickness or weakness in their old age. (Strab. *l. c.;* Steph. B. *s. v.* Ἰουλίς; Aelian, *V. H.* iii. 37; Val. Max. ii. 6. § 8; Heracl. Pont. *l. c.*) Other Cean laws are mentioned by Heraclides Pont. (*l. c.*) and Athenaeus (xiii. p. 610; comp. Müller, *Aeginetica*, p. 132).

CORESSIA (Κορησσία, Strab. *l. c.*; Coressus, Plin. *l. c.*), was the harbour of Iulis. Near it was a temple of Apollo Smintheus, and the small stream Elixus flowed by it into the sea. There are a very few remains of the town on the heights upon the west side of the bay. The harbour is large and commodious.

CARTHAEA (Κάρθαια: *Eth.* Καρθαεύς), was situated on the south-eastern side of the island. There are still considerable ruins of this town, called *'σ ταῖς Πόλαις.* (Pol. xvi. 41; Strab. Plin. *ll. cc.;* Steph. B. *s. v.;* Anton. Lib. 1; Ov. *Met.* vii. 368, x. 109.) The ancient road from Iulis to Ceos, broad and level, and supported in many places by a strong wall, may still be traced.

COIN OF CARTHAEA IN CEOS.

POEESSA (Ποιήεσσα) was situated on the south-western side of the island, on a high and steep promontory. Its ruins are inconsiderable and still preserve their ancient name. (Strab. Plin. *ll. cc.*; Steph. B. *s. v.*)

The population of the island in 1837 did not much exceed 3,000 souls. Its principal article of commerce is the Valonia acorn (the acorn of the Quercus Aegilops), which is exported in large quantities for the use of tanners. (Tournefort, *Travels*, vol. i. p. 252, transl.; Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 127; and especially Brönsted, *Reisen und Untersuchungen in Griechenland*, vol. i., who has given a very detailed account of every thing relating to the island.)

CEPHALAE (Κεφαλαὶ ἄκρον: *Cefalo* or *Msarata*, vulgo *Mesurata*), a lofty and well-wooded promontory of the Regio Syrtica on the N. coast of Africa, forming the western headland, as BOREUM PR. formed the eastern cape of the Greater Syrtis. [SYRTES.] Strabo makes it a little more than 5000 stadia from Carthage. (Strab. xvii. pp. 835. 836; Ptol. iv. 3. § 13; Blaquière, *Letters from the Mediterranean*, vol. i. p. 18; Della Cella, *Viaggio*, &c. p. 61; Barth, *Wanderungen*, p. 322.) [P.S.]

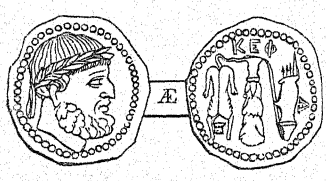
CEPHALE. [ATTICA, p. 332, b.]

CEPHALLE'NIA (Κεφαλληνία, Κεφαληνία: *Eth.* Κεφαλλήν, pl. Κεφαλλῆνες, Κεφαλλήνιος: *Cephalonia*), called by Homer SAME (Σάμη, *Od.* i. 246, ix. 24) or SAMOS (Σάμος, *Il.* ii. 634, *Od.* iv. 671), the largest island in the Ionian Sea, opposite the Corinthian gulf and the coast of Acarnania. Along the northern half of the eastern coast of Cephallenia lies the small island of Ithaca, which is separated from it by a narrow channel about three miles in breadth. (Comp. Hom. *Od.* iv. 671.) Strabo says that Cephallenia was distant from the promontory Leucata in the island of Leucas about 50 stadia (others said 40), and from the promontory Chelonatas, the nearest point in the Peloponnesus, about 80 stadia. (Strab. x. p. 456.) Pliny describes it as 25 (Roman) miles from Zacynthus. (Plin. iv. 12. s. 19.) The first of these distances is tolerably correct; but the other two are erroneous. From *C. Viscardo*, the most northerly point of Cephallenia, to *C. Dukato* (the ancient Leucata), the distance is 5 English miles, or about 40 stadia; but from *C. Scala*, the most southerly point in Cephallenia, to *C. Tornese*, the nearest point in the Morea, the distance is 23 miles, or about 196 stadia; while from *C. Scala* to the northernmost part of Zacynthus the real distance is only 8 miles.

The size of Cephallenia is variously stated by the ancient writers. Strabo (*l. c.*) makes it only 300 stadia in circuit. Pliny (*l. c.*, according to Sillig's edition) says that it is 93 miles in circumference; and Agathemerus (i. 5) that it is 400 stadia in length, both of which measurements are nearer the truth, though that of Agathemerus is too great. The greatest length of the island is 31 English miles. Its breadth is very unequal: in the middle of the island, where a bay extends eight miles into the land, the breadth is about 8 miles, but in the northern part it is nearly double that distance. The area of the island is about 348 square miles.

Cephallenia is correctly described by Strabo as a mountainous country. Homer in like manner gives to it the epithet of παιπαλοέσση (*Od.* iv. 671). A ridge of calcareous mountains runs across the island from NW. to SE., the lower declivities of which cover nearly the whole island. The highest summit of this range, which rises to the height of about 4000 feet, was called AENUS (Αἶνος), and upon it was a temple of Zeus Aenesius. (Strab. *l. c.*) From this

mountain, which is now covered with a forest of fir-trees, whence its modern name, *Elato*, there is a splendid view over Acarnania, Aetolia, and the neighbouring islands. There was also a mountain called BAEA (Βαία) according to Stephanus, said to have been named after the pilot of Ulysses. The principal plain in Cephallenia is that of Same, on the eastern side of the island, which is about 6 miles in length from N. to S., and about 3 miles in width at the sea. From the mountainous character of the island, it could never have been very productive. Hence Livy (xxxviii. 28) describes the inhabitants as a poor people. We read on one occasion of good crops of corn in the neighbourhood of Pale. (Pol. v. 5.) Leake observes that "the soil is rocky in the mountainous districts, and stony even in the plains; but the productions are generally good in their kind, particularly the wine. Want of water is the great defect of the island. There is not a single constantly flowing stream: the sources are neither numerous nor plentiful, and many of them fail entirely in dry summers, creating sometimes a great distress."



The island, as has been already remarked, is called Same or Samos in Homer. Its earliest inhabitants appear to have been Taphians, as was the case in the neighbouring islands. (Strab. x. p. 461.) It is said to have derived its name from Cephalus, who made himself master of the island with the help of Amphitryon. (Strab. x. p. 456; Schol. *ad Lycophr.* 930; Paus. i. 37. § 6; Heraclid. Pont. *Fragm.* xvii. p. 213, ed. Korai.) Even in Homer the inhabitants of the island are called Cephallenes, and are described as the subjects of Ulysses (*Il.* ii. 631, *Od.* xx. 210, xxiv. 355); but Cephallenia, as the name of the island, first occurs in Herodotus (ix. 28). Scylax (p. 13) calls it Cephalenia (Κεφαληνία, with a single λ), and places it in the neighbourhood of Leucas and Alyzia.

Cephallenia was a tetrapolis, containing the four states of Same, Pale, Cranii, and Proni. This division of the island appears to have been a very ancient one, since a legend derived the names of the four cities from the names of the four sons of Cephalus. (Etym. M. *s. v.* Κεφαλληνία; Steph. B. *s. v.* Κράνιοι.) Of these states Same was probably the most ancient, as it is mentioned by Homer (*Od.* xx. 288). The names of all the four cities first occur in Thucydides. (Thuc. ii. 30; comp. Strab. x. p. 455; Paus. vi. 15. § 7.) An account of these cities is given separately; but as none of them became of much importance, the history of the island may be dismissed in a few words. In the Persian wars the Cephallenians took no part, with the exception of the inhabitants of Pale, two hundred of whose citizens fought at the battle of Plataea. (Herod. ix. 28.) At the commencement of the Peloponnesian war a large Athenian fleet visited the island, which joined the Athenian alliance without offering any resistance. (Thuc. ii. 30.) In the Roman wars in Greece the Cephallenians were opposed to the Romans; and accordingly, after the conquest of the Aetolians, M. Fulvius was sent against the island with a sufficient force, B. C. 189. The other cities at once submitted, with the exception of Same, which was taken after a siege of four months. (Pol. iv. 6, v. 3, xxii. 13, 23; Liv. xxxvii. 13, xxxviii. 28, 29.) Under the Romans Cephallenia was a "libera civitas." (Plin. iv. 12. s. 19.) The island was given by Hadrian to the Athenians (Dion Cass. lix. 16); but even after that event we find Pale called in an inscription ἐλευθέρα καὶ αὐτόνομος. (Böckh, *Inscr.* No. 340.) In the time of Ptolemy (iii. 14. § 12) Cephallenia was included in the province of Epeirus. After the division of the Roman empire, the island was subject to the Byzantine empire till the 12th century, when it passed into the hands of the Franks. It formed part of the dominions of the Latin princes of Achaia till A. D. 1224, when it became subject to the Venetians, in whose hands it remained (with the exception of a temporary occupation by the Turks) till the fall of the Republic in 1797. It is now one of the seven Ionian islands under the protection of Great Britain. In 1833 the population was 56,447.

Of the four cities already mentioned, SAME and PRONI were situated on the east coast, CRANII on the west coast, and PALE on the eastern side of a bay on the west coast. Besides these four ancient cities, there are also ruins of a fifth upon *C. Scala*, the SE. point of the island. These ruins are of the Roman period, and probably those of the city, which C. Antonius, the colleague of Cicero in his consulship, commenced building, when he was residing in Cephallenia after his banishment from Italy. (Strab. x. p. 455). Ptolemy (*l. c.*) mentions a town Cephalenia as the capital of the island. This may have been either the town commenced by Antonius, or is perhaps represented by the modern castle of *St. George* in the middle of the plain of *Livadhó* in the south-western part of the island, where ancient remains have been found. Besides these cities, it appears from several Hellenic names still remaining, that there were other smaller towns or fortresses in the island. On a peninsula in the northern part of the island, commanding two harbours, is a fortress called *Asso*; and as there is a piece of Hellenic wall in the modern castle, Leake conjectures that here stood an ancient fortress named Assus. Others suppose that as Livy (xxxviii. 18) mentions the Nesiotae, along with the Cranii, Palenses, and Samaei, there was an ancient place called Nesus, of which *Asso* may be a corruption; but we think it more probable that Nesiotae is a false reading for Pronesiotae, the ethnic form of Pronesus, the name which Strabo gives to Proni, one of the members of the Tetrapolis. [PRONI.] Further south on the western coast is *Tafió*, where many ancient sepulchres are found: this is probably the site of TAPHUS (Τάφος), a Cephallenian town mentioned by Stephanus. *Rakli*, on the south-eastern coast, points to an ancient town Heracleia; and the port of *Viskárdho* is evidently the ancient Panormus (Πάνορμος), opposite Ithaca (*Anthol. Gr.* vol. ii. p. 99, ed. Jacobs). (Kruse, *Hellas*, vol. ii. pt. ii. p. 431, seq.; Leake, *Northern Greece*, vol. iii. p. 55, seq.)

CEPHALOE'DIUM (Κεφαλοίδιον, Diod., Strab., but Κεφαλοιδὶς, Ptol., and Pliny also has Cephaloedis: *Eth.* Cephaloeditanus: *Cefalù*), a town on the N. coast of Sicily, between Himera and Alaesa. It evidently derived its name from its situation on a lofty and precipitous rock, forming a bold headland (Κεφαλή) projecting into the sea. But though its name proves it to have been of Greek origin, no mention is found of it in Thucydides, who expressly says that Himera was the only Greek colony on this coast of the island (vi. 62); it is probable that Cephaloedium was at this time merely a fortress (φρούριον) belonging to the Himeraeans, and may very likely have been first peopled by refugees after the destruction of Himera. Its name first appears in history at the time of the Carthaginian expedition

under Himilco, B. C. 396, when that general concluded a treaty with the Himeraeans and the inhabitants of Cephaloedium. (Diod. xiv. 56.) But after the defeat of the Carthaginian armament, Dionysius made himself master of Cephaloedium, which was betrayed into his hands. (Id. *ib.* 78.) At a later period we find it again independent, but apparently on friendly terms with the Carthaginians, on which account it was attacked and taken by Agathocles, B. C. 307. (Id. xx. 56.) In the First Punic War it was reduced by the Roman fleet under Atilius Calatinus and Scipio Nasica, B. C. 254, but by treachery and not by force of arms. (Id. xxiii., Exc. Hoesch. p. 505.) Cicero speaks of it as apparently a flourishing town, enjoying full municipal privileges; it was, in his time, one of the "civitates decumanae" which paid the tithes of their corn in kind to the Roman state, and suffered severely from the oppressions and exactions of Verres. (Cic. *Verr.* ii. 52, iii. 43.) No subsequent mention of it is found in history, but it is noticed by Strabo, Pliny, and Ptolemy, among the towns of Sicily, and at a later period its name is still found in the Itineraries. (Strab. vi. p. 266; Plin. iii. 8. s. 14; Ptol. iii. 4. § 3; Itin. Ant. p. 92; Tab. Peut.) It appears to have continued to exist on the ancient site, till the 12th century, when Roger I., king of Sicily, transferred it from its almost inaccessible position to one at the foot of the rock, where there was a small but excellent harbour. (Fazell. *de Reb. Sic.* ix. 3.) Some remains of the ancient city are still visible, on the summit of the rock; but the nature of the site proves that it could never have been more than a small town, and probably owed its importance only to its almost impregnable position. Fazello speaks of the remains of the walls as still existing in his time, as well as those of a temple of Doric architecture, of which the foundations only are now visible. But the most curious monument still remaining of the ancient city is an edifice, consisting of various apartments, and having the appearance of a palace or domestic residence, but constructed wholly of large irregular blocks of limestone, in the style commonly called polygonal or Cyclopean. Rude mouldings approximating to those of the Doric order, are hewn on the face of the massive blocks. This building, which is almost unique of its kind, is the more remarkable, from its being the only example of this style of masonry, so common in Central Italy, which occurs in the island of Sicily. It is fully described and figured by Dr. Nott in the *Annali dell'Instituto di Corrispondenza Archeologica*, for the year 1831 (vol. iii. p. 270—287). [E. H. B.]

COIN OF CEPHALOEDIUM.

CEPHALONE'SUS (Κεφαλόνησος), a small island at the E. end of the ACHILLEOS DROMOS, in the mouth of the Carcinites Sinus, off the W. side of the isthmus of the Chersonesus Taurica (Plin. iv. 13. s. 27; Ptol. iii. 5. § 8). Ammianus Marcellinus erroneously makes it an inland city on the Borysthenes. [P. S.]

CEPHI'SSIA. [ATTICA, p. 326, b.]

CEPHISSIS LACUS. [BOEOTIA, p. 411, b.]

CEPHISSUS (Κήφισσος). 1. A river of Phocis and Boeotia, flowing into the lake Copais. [For details, see pp. 410—412.]

2. A river of Attica, flowing through the Athenian plain. [See p. 323, a.]

3. Also a river of Attica, flowing through the Eleusinian plain. [See p. 323, a.]

4. A river of Argolis, and a tributary of the Inachus. [See p. 200, b.]

5. A river in Salamis. [SALAMIS.]

CEPI MILESIO'RUM (Κῆποι, Κῆποι, Strab. xi. p. 494; Anon. *Peripl.*; Pomp. Mela, i. 19. § 15; Diod. xx. 24; Procop. *Bell. Goth.* iv. 5; Cepi, Cepos, *Peut. Tab.*; Ceppos, *Geog. Raven.*), a town of the Cimmerian Bosporus founded by the Milesians (Scymn.; Plin. vi. 6), and situated to N. of the Asiatic coast. Dr. Clarke (*Trav.* vol. ii. p. 77) identifies *Sienna* with this place, and the remarkable Milesian sepulchres found there in such abundance confirm this position. Near to this spot stood a monument raised by Comosarya, a Queen of the Bosporus, who as it appears from the inscription which has been preserved, was wife of Parysades, and dedicated it to the Syro-Chaldaic deities Anerges and Astara. (Köler, *Mém. sur le Monument de la Reine Comosarye.* St. Petersburg, 1805.) [E. B. J.]

CERAMEICUS (Κεραμεικὸς κόλπος), a bay in Caria (Herod. i. 174), now the gulf of *Boudroun*, so called from a town Ceramus (Κέραμος), which is on the gulf. Strabo (p. 656) places Ceramus and Bargasa near the sea, between Cnidus and Halicarnassus, and Ceramus comes next after Cnidus. D'Anville identifies Ceramus with a place called *Kéramo*, but this place does not appear to be known. (Leake, *Asia Minor*, p. 225.) Ptolemy seems to place Ceramus on the south side of the bay. Some modern maps place it on the north side, but this cannot be true, particularly if Bargasa is rightly determined. [BARGASA.] There are medals which are assigned to Ceramus by some numismatists.

Pliny mentions a Doridis Sinus. Now, as Doris is the country occupied by the Dorian colonies, this name is more appropriate to the Cerameicus, on the north side of which is Halicarnassus, and at the entrance is the island of Cos. Pliny's words are clear, though they have been generally misunderstood; for, after mentioning the bay of Schoenus and the Regio Bubassus [BUBASSUS; CARIA], he mentions Cnidus, and he says that Doris begins at Cnidus. Again, he says that Halicarnassus is between the Cerameicus and the Iasius: the Cerameicus of Pliny, then, is either different from the Sinus Doridis, or it is one of the bays included in the Sinus Doridis, and so called from the town of Ceramus. But Pliny places in the Doridis Sinus, Leucopolis, Hamaxitus, Elaeus, and Euthene; and Mela (i. 16) places Euthane, as he calls it, in a bay between Cnidus and the Cerameicus Sinus: from which it clearly appears that Euthane is in the Sinus Doridis of Pliny, and that Mela's Cerameicus is a smaller bay in the Sinus Doridis. Mela's Littus Leuca is between Halicarnassus and Myndus; and if this is Pliny's Leucopolis, as we may assume, the identity of the Cerameicus and the Sinus Doridis of Pliny is clearly established. [G. L.]

CERAMEICUS. [ATHENAE, pp. 295, 303.]

CE'RAMON AGORA (Κεραμῶν ἀγορά). The

position of this place is doubtful. It is one of the places which Cyrus came to (*Anab.* i. 2. § 10) in his march from Celaenae to Iconium. After leaving Celaenae, he came to Peltae, and then to Ceramon Agora, the nearest town of Phrygia to the borders of Mysia. If the Plain of Cayster can be determined [CAYSTRI CAMPUS], the position of Ceramon Agora may be approximated to. Hamilton (*Asia Minor, &c.*, ii. 204) supposes that it may be NE. of *Ushak*, "a place of considerable commerce and traffic in the present day: many of the high roads of Asia Minor pass through it." He also says, that to a person going to Mysia from Apamea (Celaenae), "and supposing, as Strabo says, that Mysia extended to *Ghiediz* (Cadi), *Ushak* would be the last town through which he would pass before entering Mysia, from which it is separated by a mountainous and uninhabited district." The position of *Ushak* seems a very probable one.

Pliny mentions Caranae in Phrygia (v. 32), which Cramer conjectures to be the Ceramon Agora. He mentions it between Cotyaion and Conium, that is, Iconium; but nothing can be concluded from this passage. Nor is it the Caris or Carides of Stephanus (*s. v.* Καρία), "a city of Phrygia," as it has been supposed; for that name corresponds to the Carina of Pliny (v. 32), or Caria, as it perhaps should be read. [G. L.]

CE'RAMUS. [CERAMEICUS.]

CE'RASAE or CERASSAE (Κέρασαι), in Lydia, is mentioned by Nonnus (xiii. 468) as a wine country. Major Keppel observed remains near *Sirghie*, which is opposite to Bagae. [BAGAE.] There were bishops of Cerasae (Cramer, *Asia Minor*, vol. i. p. 455); and as it was a Lydian bishopric, *Sirghie* may, as Cramer conjectures, be *Cerasae*. There is some resemblance between the names. [G. L.]

CE'RASUS (Κερασοῦς: *Eth.* Κερασούντιος). The Ten Thousand, in their retreat, came to Trapezus, and leaving Trapezus, "they arrive on the third day at Cerasus, an Hellenic city on the sea, a colony of the Sinopeis, in Colchis." (Xen. *Anab.* v. 3. § 2.) As there is a place called *Keresoun* on this coast, west of *Trebizond* (Trapezus), we should be inclined to fix Cerasus there. But it is impossible that the army could have marched through a mountainous unknown country, in three days, a direct distance of 70 miles; and we may conclude that the three days is a right reading, for Diodorus (xiv. 30), who copies Xenophon here, also states the distance at three days. Hamilton found a river called *Keresoun Dere Su*, which he takes to be the river of Cerasus, though he did not see any ruins near the river. The Anonymous geographer places Cerasus 60 stadia east of Coralla, and 90 west of Hieron Oros (*Yoros*), and on a river of the same name.

Keresoun or *Kerasunt* represents Pharnacia, a town which existed before the time of Mithridates the Great. Arrian's statement that Pharnacia was originally called Cerasus, and the fact of the modern name of Pharnacia resembling Cerasus, has led some modern geographers to consider the Cerasus of Xenophon the same as Pharnacia. It seems that the Cerasus of Xenophon decayed after the foundation of Pharnacia, and if the inhabitants of Cerasus were removed to Pharnacia, the new town may have had both names. Strabo indeed (p. 548) mentions Cotyora as a town which supplied inhabitants to Pharnacia, but his words do not exclude the supposition that other towns contributed. He speaks of Cerasus as a distinct place, a small town in the same gulf as Hermonassa; and Hermonassa is near Trapezus. This is not quite consistent with Hamilton's position of Cerasus, which is in a bay between Coralla and Hieron Oros. Pliny also (vi. 2) distinguishes Pharnacia and Cerasus; and he places Pharnacia 100 Roman miles from Trapezus, and it may be as much by the road. Ptolemy also (v. 6) has both Cerasus and Pharnacia, but wrongly placed with respect to one another, for his text makes Pharnacia east of Cerasus. Mela (i. 19) only mentions Cerasus, and he styles Cerasus and Trapezus "maxime illustres;" but this can hardly be the Cerasus of Xenophon, if the author's statement applies to his own time. The confusion between Cerasus and Pharnacia is made more singular by the fact of the name *Keresoun* being retained at Pharnacia, for which there is no explanation except in the assumption that the town was also called Cerasus, or a quarter of the town which some Cerasuntii occupied. Thus Sesamus was the name of a part of Amastris. [AMASTRIS.]

There is a story that L. Lucullus in his Mithridatic campaign sent the cherry to Italy from Cerasus, and that the fruit was so called from the place. (Amm. Marc. xxii. 8; Plin. xv. 25; and Harduin's note.) This was in B. C. 74; and in 120 years, says Pliny, it was carried to Britain, or in A. D. 46. [G. L.]

CERATA. [ATTICA, p. 322, a.]

CERAUNI'LIA (Κεραυνιλία), a town of Samnium or Apulia, mentioned by Diodorus (xx. 26) as taken by the Romans in the Second Samnite War, B. C. 311. The name is otherwise wholly unknown, as well as that of Cataracta (Καταράκτα) which accompanies it; Niebuhr suggests (*Hist. of Rome*, vol. iii. p. 245) that it may be the same with the Cesaunia which appears in the epitaph of Scipio Barbatus; but this is mere conjecture. Italian antiquaries identify it with the modern town of *Cerignola* in Apulia. (Romanelli, vol. ii. p. 259.) [E. H. B.]

CERAU'NII MONTES (τὰ Κεραύνια ὄρη), a range of mountains belonging to the system of Caucasus, at its E. extremity; but its precise relation to the main chain is variously stated. Strabo makes it the name of the E. portion of the Caucasus, which overhangs the Caspian and forms the N. boundary of Albania, and in which he places the Amazons (xi. pp. 501, 504). Mela seems to apply the name to the whole chain which other writers call Caucasus, confining the latter term to a part of it. His Ceraunii are a chain extending from the Cimmerian Bosporus till they meet the Rhipaean mountains; overhanging, on the one side, the Euxine, the Maeotis, and the Tanaïs, and on the other the Caspian; and containing the sources of the Rha (*Volga*); a statement which, however interpreted, involves the error of connecting the Caucasus and Ural chains. (Mela, i. 19. § 13, iii. 5. § 14.) Pliny gives precisely the same representation, with the additional error of making the Ceraunii (i. e. the Caucasus of others) part of the great Taurus chain. (Plin. v. 27, vi. 10. s. 11.) He seems to apply the name of Caucasus to the spurs which spread out both to the NE. and SE. from the main chain near its E. extremity, and which he regarded as a continuous range, bordering the W. shore of the Caspian (vi. 9. s. 10). Eustathius also seems to regard them as a chain running northwards from the Caucasus. (Comment. *ad Dion. Perieg.* 389.) Ptolemy uses the name for the E. part of the chain, calling the W. portion Caucasii M., and the

part immediately above Iberia Caucasus in a narrower sense. (Ptol. v. 9. §§ 14, 15, 20, 22.) On the whole, it would seem that the Greek name Ceraunius and the native Caucasus (*Kawkas*) were applied at first indifferently to the highest mountains in the centre of the Caucasian isthmus, and afterwards extended, in a somewhat confused manner, to the whole, or portions, of the chain; and that the more accurate writers, such as Strabo and Ptolemy, adopted a specific distinction of a somewhat arbitrary character. The Ceraunii M. of Strabo seem to be the great NE. branch which meets the Caspian at the pass of *Derbend*, or perhaps the whole system of NE. spurs of which that is only one. It may fairly be conjectured that Mela and Pliny were ignorant how soon these spurs meet the Caspian, and hence their error in extending to meet the Rhipaei M. [P. S.]

CERAU'NII MONTES (Κεραύνια ὄρη, Strab. pp. 21, 281, 285, 316, seq., 324, et alibi: *Khimára*), a lofty range of mountains in the northern part of Epeirus, said to have derived their name from the frequent thunder storms with which they were visited. (Eustath. *ad Dionys.* 389; Serv. *ad Virg. Aen.* iii. 508.) They are sometimes also called ACROCERAUNII or ACROCERAUNIA, though this is properly the name of the promontory (τὰ ἄκρα Κεραύνια, Dion Cass. xli. 44) running out into the Ionian sea, now called *Glossa*, and by the Italians *Linguetta*.

The Ceraunian mountains extended several miles along the coast from the Acroceraunian promontory southwards, and rendered the navigation very dangerous. Hence Horace (*Carm.* i. 3. 20) speaks of *infames scopulos Acroceraunia* (comp. Lucan, v. 652; Sil. Ital. viii. 632). Inland the Ceraunian mountains were connected by an eastern branch with the mountains on the northern frontier of Thessaly. The inhabitants of the mountains were called Ceraunii. (Caes. *B. C.* iii. 6; Plin. iii. 22. s. 26; Ptol. ii. 16. § 8.) (Leake, *Northern Greece*, vol. i. pp 2, seq., 88.)

CERAUSIUM. [LYCAEUS.]

CERBALUS, a river of Apulia, mentioned only by Pliny (iii. 11. s. 16), who makes it the northern boundary of the Daunians. It is now called the *Cervaro*, a considerable stream, which rises in the Apennines on the confines of Samnium, near *Ariano*, flows by *Bovino* (Vibinum), and after traversing the plain of Apulia, receives the waters of the *Candelaro* just before it enters the Adriatic near Sipontum. Procopius (*B. G.* iii. 18) speaks of a place called Cervarium (Κερβάριον) in Apulia, which derived its name from this river. [E.H.B.]

CERBANI. [CARBAE.]

CERBERION. [CIMMERIUM.]

CERBE'SII (Κερβήσιοι), a Phrygian tribe mentioned in a verse of Alcman, quoted by Strabo (p. 580), but the people were unknown in Strabo's time. He mentions also a hole or chasm, called Cerbesius, which emitted pestilential vapours; but he does not say where it is. [G. L.]

CE'RBIA (Κερβεία, Κερμία, Const. Porph. *de Them.* i. 39; Κιρβοία, Κιρβοΐα, Hierocl.), a town of Cyprus, which D'Anville places near the promontory of Crommyon. Wesseling (*ap. Hierocl. s. v.* Κιρβοΐα) supposes it to be the same place as the Cremaseia of the poet Nonnus (*Dionys.* xiii. 455). (Engel. *Kypros*, vol. i. pp. 77, 158.) [E. B. J.]

CERCASO'RUM, or CERCASO'RA (Κερκάσωρον, Herod. ii. 15, 17, 97; Κερκάσουρα, Strab. xviii. p. 806; Mela, i. 9. § 2: *El Arkas*), was, from its position, as the key of Middle and Lower Egypt, a town of great importance, both in a military and a commercial point of view. Cercasorum stood in lat. 30° 3′ N., at the apex of the Delta, and on the western or Canobic arm of the Nile. At this point, about ten miles below Memphis, the Nile ceases to be a simple stream, and branches off into numerous channels, while the hills which throughout the Thebaid and the Heptanomis embosom or skirt its banks, here diverge right and left, and sink gently down upon the Deltaic level. The Delta, in the present day, commences 6 or 7 miles lower down the river, at *Batn-el-Baharah*. (Rennell's *Geog. of Herod.* vol. ii. p. 133.) [W.B.D.]

CE'RCETAE (Κερκεταί, Strab. &c.; Κερκέτιοι, Dion. Perieg. 682; Κερκεταῖοι, Hellanic. fr. 91), one of the peoples of Sarmatia Asiatica, who occupied the NE. shore of the Euxine, between the Cimmerian Bosporus and the frontier of Colchis, but whose relative positions are not very exactly determined: their coast abounded in roadsteads and villages. (Hellanic. *l. c.*; Strab. xi. pp. 496, 497; Ptol. v. 9. § 25; Steph. B. *s. v.*; Mela, i. 19. § 4; Plin. vi. 5.) Their name is now applied to the whole western district of the Caucasus, in the well known forms of *Cherkas* for the people, and *Cherkaskaia*, or *Circassia*, for the country. [P. S.]

CERCI'NA, or CERCENNA (Κέρκινα, Κέρκιννα: *Karkenah*, or *Ramlah*); and CERCINI'TIS (Κερκινῖτις, Κερκιννῖτις: *Gherba*); two islands off the E. coast of Africa Propria, at the NW. extremity of the Lesser Syrtis, the opposite extremity of which was formed by the island of MENINX, which Strabo reckons about equal in size to Cercinna. The two islands lie NE. and SW. as to the direction of their length, Cercinna being on the NE. and Cercinitis on the SW. They were joined by a mole. Cercina, which was much the larger, is reckoned by Pliny 25 M. P. long, and half as broad. Upon it was a city of the same name. The Maritime Itinerary makes Cercenna (Cercina) 622 stadia from TACAPE at the bottom of the Syrtis (Strab. ii. p. 123, xvii. pp. 831, 834; Ptol. iv. 3. § 45; Dion. Perieg. 480; *Stadiasm.* p. 456; *Itin. Ant.* p. 518; Mela, ii. 7. § 7; Plin. v. 7). Cercina, to which the smaller island seems to have been considered a mere appendage, is often mentioned in history. (Plut. *Dion* 43; Diod. v. 12; Polyb. iii. 96; Liv. xxxiii. 48; Hirt. *Bell. Afr.* 34, comp. Strab. xvii. p. 831; Tac. *Ann.* i. 55, iv. 13; comp. CYRAUNIS.) [P. S.]

CERCINE (Κερκίνη, Thuc. ii. 98; Κερκετήσιον or Βερκετήσιον, Ptol. iii. 13. § 19: *Karadagh*), the uninhabited mountain chain which branched off from Haemus in a SE. direction, and formed the water-shed to the streams which feed the rivers Axius and Strymon. Sitalces, in his route from Thrace into Macedonia, crossed this mountain, leaving the Paeonians on his right, and the Sinti and Maedi on his left descending upon the Axius at Idomene. [E. B. J.]

CERCINI'TIS (Κερκινῖτις λίμνη, Arrian, *Anab.* i. 11. § 3: *Takhyno*), the large lake lying at the N. foot of the hill of Amphipolis, which Thucydides (v. 7) accurately describes by the words τὸ λιμνῶδες τοῦ Στρυμόνος, as it is, in fact, nothing more than an enlargement of the river Strymon, varying in size according to the season of the year, but never reduced to that of the river only, according to its dimensions above and below the lake. Besides the Strymon, the Augitas contributes to the inundation as well as some other smaller streams from the mountains on either side.

The lake PRASIAS (Πρασιάς), with its amphibious inhabitants who are described by Herodotus (v. 16) as living on the piles and planks procured from Mount Orbelus, with which they constructed their dwellings on the lake, was the same as the Strymonic lake, or Cercinitis. (Leake, *Northern Greece*, vol. iii. p. 211.) [E. B. J.]

CERCI'NIUM, a town in Thessaly, near the lake Boebeis. (Liv. xxxi. 41; Leake, *Northern Greece*, vol. iv. p. 449, seq.)

CERCO'PIA (Κερκωπία), a town of Phrygia Magna (Ptol. v. 2). Its site is unknown. [G. L.]

CERDY'LIUM. [AMPHIPOLIS.]
